\[\text{a; at (construct state)}\]
\[\text{all (article), al- and All- (even before the antero-palatals)}\]

PERSIAN, TURKISH AND URDU ADDITIONS TO THE ARABIC ALPHABET:

\[\text{P, z, zh} \]
\[\text{3, or 3 g} \]

Additional vowels:

a) Turkish: e, i, o, 3, a. Diacritical signs proper to Arabic are, in principle, not used in words of Turkish etymology.

b) Urdu: e, 3.

For modern Turkish, the official orthography adopted by the Turkish Republic in 1928 is used. The following letters may be noted:

\[c = \text{dj} \]
\[g = \text{sh} \]
\[j = \text{sh} \]
\[k = k and k \]
\[t = t and t \]
\[v = c \]
\[h = b, b, and kh \]
\[s = s, s, and sh \]
\[z = z, z, 3, d and dh \]

ADDENDA AND CORRIGENDA

P. 1h, ʿAḥbāb, l. 6 read limit.
P. 2h, read Aḥbāb.
P. 7b, l. 4 from below, for šah-i seven read šah-i seven.
P. 13b, l. 18, for ʿAḥbās Ḥilmi I read ʿAḥbās I.
P. 21b, l. 56, read A. H. 467 al-Muqtadī.
P. 41b, l. 29, for 68/686-8 read 68/687-8.
P. 45b, l. 26, for by al-Zubayr read by ʿAbd Allāh b. al-Zubayr.
P. 57b, l. 66, for Abu Hamara read Abū Ḥimāra.
P. 57b, add: ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān ibn Abī ʿĀmir [see ʿĀmirids].
add: ʿAbd al-ʿAzīz b. Abī Dulāf [see Dulāfids].
P. 58b, l. 59, for 30 March read 30 May.
P. 59b, l. 59, ʿAbd al-ʿAzīz al-Dīlāwī, read Ṣāḥēb.
P. 60, add ʿAbd al-Djalīl Abu ʿl-Maḥāsīn [see ʿAlīhīnīnt].
add ʿAbd al-Ghaffār b. ʿAbd al-Karīm [see al-Ṣawānīn].
add ʿAbd al-Ghaffār al-ʿĀkhrās [see al-ʿĀkhrās].
P. 61b, l. 46, after born Feb. 1852 add at Istanbul.
P. 61b, l. 30, for in 1937 read on 12 April 1937 at Istanbul.
P. 61b, l. 42, for Yādīgār-i Ḥarb read Yādīgār-i Ḥarb.
P. 63b, l. 7, for Waṣfī read Waṣīf.
P. 63b, ʿAbd al-Ḥamīd, II, l. 2, for 5th of 30 read 8th of 40.
P. 63b, l. 10 from below, for former read later.
P. 64b, l. 42, for ʿAmīdījī read ʿĀmīdījī.
P. 64b, l. 42, for 1894 read 1895.
P. 65, Bibliography, last line, for 1343 read 1443.
P. 71, add ʿAbd al-Karīm b. ʿAbdarrād [see ibn ʿAbdarrād].
P. 72b, l. 30, for Pārinda read Pārinda.
P. 73b, l. 15, after son of ʿAbd al-ʿAzīz [i.e.] add born 30 May 1868.
P. 76, add ʿAbd al-Malik b. Ḥīṣām [see ibn Ḥīṣām].
P. 78, add ʿAbd al-Malik b. Zuhr [see ibn Zuhr].
P. 80, add ʿAbd al-Raḥīm b. All [see al-Kādī al-Fāḍī].
P. 91, add ʿAbd al-Salām b. Ahmad [see ibn Qāsim].
P. 91b, in Bibliography, for Kumūshkhānāwī read Gūmūsh-ḵānawī.
P. 97b, ʿAḥrī Esfendī, I, 4, for 1764 read 1774.
P. 102b, l. 24, art. Abraha, for 640-650 A.D. read 540-550 A.D.
P. 103b, l. 20, after idem, le Musdon, 1953, 339-42, add idem, La persécution des chrétiens himyarites au sixième siècle, Istanbul 1956.

P. 109b, l. 8 from below, for 1136/1273 read 1136/1274.
P. 109b, l. 4, for below, for 1133/1272 read 1004/1596.
P. 109b, l. 3, from below, for ʿUṯmān III read ʿUṯmān II.
P. 111h, l. 66, for Nahāḥ [see nahāḫ].
P. 117h, l. 27, for al-Khaṭṭānī read al-Khaṭṭānī.
P. 117b, l. 15, read Akbar nāma, iii.
P. 118b, l. 30, after Nadjaf 1353, add and Cairo 1368/1949.
P. 119b, l. 63, for Ḥamāh read Ḥamāh.
P. 119b, l. 40, for Taḵḵwīm read Taḵḵwīm.
ADDENDA AND CORRIGENDA XV

P. 123. ABU HANIFA. F. Rosenthal points out that the name of the grandfather (Zwt or Zwtā) corresponds to the Aramaic word for “small”; Abu Hanifa was therefore probably of local, Aramaean descent.

P. 125. ABU HATIM YUSUF B. MUHAMMAD. [See Rustomids].

P. 126. l. 36, for al-Makdisi read al-Mu‘addas.

P. 141. l. 72, for (“the man with green spectacles”) read (“the man with blue spectacles”).

P. 143. l. 9, ABU NUWĀS, for (d. 198/873) read (d. 198/813).

P. 143. l. 35, for al-Kaṭīb ṣad al-Khaṣīb. 

P. 146. l. 1, for bā rād bā.

P. 182. l. 10, for zaman read zamān.

P. 183. l. 9, for Broquiere read Breoncourt.

P. 187. l. 48 read 1748, fasc. III, 91 f.

P. 190. l. 5, for 1725 read 1729-30.

P. 194. ḌAḤAB. Bibliography: Przeglad Orientalistyczny 1956/1 (17), 86 ff.

P. 199. ADIYAMAN. Bibliography: add Hüsss-nūnsur read Hissinmansūr.

P. 201. l. 41, for 355/972 read 355/976.

P. 207. AL-KAḤBAQ. l. 5, for 97/115 read 97/116.

P. 209. l. 68, add The seat of an administrative tribunal is therefore often called dār al-ṣā‘di.

P. 211. l. 5, for 338/944 read 338/949.

P. 214. l. 48, add On the Musta‘īn of Ibn Bilkārīsh, see Renaud, in Hesp., 1930, 135 ff.

P. 215. l. 15 for Bahā‘ read Bahrā‘.

P. 215. l. 65 for SHANANSHĀH read SHĀNANSHĀH.

P. 228. l. 7, from below, for Ghana read Kābūl.

P. 228. l. 9, from below, for 1003/1621 read 1003/1595.

P. 234. AFAK. At end, change full stop to comma and add by Tahsin Yanci, 2 vols., 1953-5.

P. 244. l. 34, for Persians read Aqīkoyunlus.

P. 244. APYUN KARA HISĀR. add after line 50: Kara Hisār formerly owed some of its importance to being a junction of the caravan routes between Izmir and the commercial centres in the interior (Ankara, Kayseri, Tolot, etc.) on the one hand, and between Constantinople, or rather Scutari (Usküdar), and Syria on the other: see F. Taeschner, Das anatolische Wegenetz nach osmanischen Quellen, i, Leipzig 1924, esp. 127; more recently it has become an important railway junction on the Izmir-Kasaba and Anatolian systems.

P. 249. l. 49, read Djiabriyya.

P. 305. l. 30, read 148/765.

P. 257. l. 29, read of the brother of ʿĀd.

P. 267. ḌAḤAB I. l. 4, for 22 January read 22 December.

P. 268. ḌAḤAB II. l. 4, for Rashīd read Raqīd.

P. 268. ḌAḤAB Bibliography, l. 1, for Rashīd read Raqīd.

P. 268. ḌAḤAB III. l. 4, for 21 August read 23 August.

P. 268. l. 35, for Köprülū read Köprülū-zade.

P. 277. ḌAḤAB B. ḌAḤAB. add to bibliography: H. Lautus, Les premières professions de foi hambalites, in Mélanges Masségnon, iii/1957, 7-36.

P. 279. l. 29, for as a magistrate in the Native Courts read as a kādī in the Shari‘a Courts.

P. 287. l. 32, read in 1891, and his memoirs appeared under the title.

P. 300. l. 32 and 33 from below, read the early Middle Ages.

P. 311. heading, for Ak Kirmān read Ak Kirmān-Ak Köyunlu.

P. 312. heading, for Ak Kirmān read Ak Köyunlu.

P. 312. Bibliography, for İnanc read Yinanç.

P. 312. AK KÖYUNLU, add to bibliography: J. Aubin, Notes sur quelques documents Aq Qoyyunlu, in Mélanges Masségnon, i/1956, 123-47.

P. 313. AK ŞEHIR, add to Bibliography: İbrahim Hakki Konyali, Akşehir, Istanbul; Rifki Melül Meric, Akşehir Turbe ve Kitâbeleri, TM, v, Istanbul.
P. 317\textsuperscript{a}, l. 8, after M. Roychoudhuri, *The Din-i-Ilahi*, Calcutta 1941, *add* 2nd edition, Calcutta 1952 (with different pagination and additional appendix "C" to Chapter V).

P. 321\textsuperscript{a}, l. 50, *add* tr. and annotated by Camara Lamine, Conakry 1950.

P. 321\textsuperscript{a}, l. 5, *Akund-Zaoda*, *delete* the words in his early days.

P. 332\textsuperscript{b}, l. 11 f., *read* in *AIOUN, N.S.*, 1 (Scritti in onore di Luigi Bonelli).

P. 332\textsuperscript{b}, l. 17 f., *read* The Hijri, 1958.

P. 337\textsuperscript{a}, l. 18, *add* [see DURÖ].

P. 355\textsuperscript{a}, *add* 'ALAWI, [see [RA 'ALAWI].

P. 358\textsuperscript{b}, *add* ALBANIA [see ARNAWUT].

P. 367\textsuperscript{a}, l. 55, *read* vanished, the future.

P. 368\textsuperscript{b}, 'ALI B. ABI TALIB, *Bibliography, add* Abd al-Maksud, *ALI B. ABI TALIB*, Abd al-Fattah

P. 374\textsuperscript{b}, l. 9-10, *read* spoken in the heart of the Oran region.

P. 375\textsuperscript{b}, l. 40, *read* biliteral.

P. 376\textsuperscript{b}, l. 16-17, *read* Only Old Tênês.

P. 377\textsuperscript{b}, l. 21, *read* vowels in open syllables.

P. 378\textsuperscript{a}, l. 50, *read* of the Oued Souf.

P. 380\textsuperscript{a}, l. 60, *read* Ghilan.

P. 381\textsuperscript{a}, l. 12, *read* Djiddjilians (elsewhere džg, džh).

P. 388\textsuperscript{b}, l. 8, from below, *read* 869-83.

P. 392\textsuperscript{a}, *add* 'ALI AL-ḤĀDI [see AL-'ASKARI, ABU 'L-ḤASAN].

P. 404, ALJAMIA. Circumstances beyond the control of the Editorial Committee have made it necessary for the text and the bibliography to appear as independent contributions by two different authors.

P. 425\textsuperscript{b}, l. 14, from below, *for* 1836-39 *read* 1836-99.

P. 426, ALWĀR, *read* ALWAR.

P. 433\textsuperscript{b}, l. 50, *add* For a confirmation of the term mōnhad in an inscription at Leptis Magna, see G. Levi Della Vida, in *Africa Italiana*, vi, 1933, 4-6; J. Friedrich, *Phonitisch-punische Grammatik*, 93 § 211.

P. 437\textsuperscript{a}, l. 16, AMĀN, *for economic* *read* economic.

P. 446\textsuperscript{a}, *add* AL-'ĀMIRI [see MUḤAMMAD B. YŪSUF, AL-'ĀMIRI].

P. 506\textsuperscript{a}, ANDJUMAN (India and Pakistan), *Bibliography, add* Sayyid Hāshim Ta’īrīkh-i Pāndjāb Sīlā-e-Andijūman-i Ta’īrīkh-i Urdu, Karachi 1953.

P. 519\textsuperscript{a}, l. 8-9 from the bottom, *delete* in October.

P. 519\textsuperscript{a}, l. 10 from the bottom, *for* June 1919 *read* September 1919.

P. 511\textsuperscript{a}, *add* AL-ANKUBARA, also al-Ankubura, name of Lombardy in Arabic geographical works. (Ed.)

P. 539\textsuperscript{a}, l. 43, DIAZIRRAT AL-'ĀRAB, *for* The boundary . . . . . . . . . . . general way, *read* The boundary between Saudi Arabia and Kuwait and the boundaries of their neutral zone were agreed upon between Britain and the then Sultan of Najd (later King of Saudi Arabia) in the convention of al-'Ukayr of 1922 but were not demarcated on the ground.

P. 548\textsuperscript{a}, l. 49, *add* Recently discovered inscriptions indicate that the hypothesis set forth in this article with respect to the starting point of the "Sabaean era" is untenable, and that certain changes should be made in the chronology for Southern Arabia; see G. Ryckmans in *Museon*, lxvi (1953); J. Ryckmans in *Museon*, lxvi (1953); idem, *La persécution des chrétiens himyarites au sixième siècle*, Istanbul 1956.

P. 554\textsuperscript{a}, l. 28, DIAZIRRAT AL-'ĀRAB, *for* In the latter part . . . . . . . . . . . two years of rule. *read* In the latter part of his reign he devoted most of his attention to his East African possessions, but their independence under a younger line of his descendants was recognised in 1277/1861 by an arbitration award of Lord Canning, Viceroy of India. The only Ibāḍī Imam elected during the century, 'Azzān
b. Kays, failed to win recognition by the British and was killed in battle in 1287/1871 after two years of rule.

P. 558. i. 15, ɒizραt ɒl-阿拉伯, for but in . . . . . . . . . . . sides, read though the Sultan did not relinquish his claim to sovereign rights over the whole of ʻUmān. Thus in 1955, when the Imam, ʻAbd b. ʻAll, sought independent membership of the Arab League, the Sultan held this to be an infringement of the terms of the Treaty of al-Sib and advanced into the interior of ʻUmān.

P. 558. i. 15, read A. C. Woolner.

P. 557. i. 8, read 3rd ed., Cairo 1950.

P. 557. i. 12, read 1202/1787.

P. 557. i. 25, read Ray.

P. 557. i. 26, read: add 1202/1787.

AARON [see HÄRÖN]
AB [see TÄMÄK]
‘ABÅÅ [see KISA’]

‘ABÅÅBA (sg. ‘ABBÂÅl), an Arabic-speaking tribe of Bedja [q.v.] origin in Upper Egypt with branches in the northern Sudan. The northern limits of their territory in Egypt is the desert road leading from Ken to Kusayr, and their nomad sections roam the desert to the east of Luxor and Aswān. The original ‘Ababda stock is most truly represented by the nomads but there are also sedentary sections who have intermarried with the faštâkin and adopted much of their way of life. On the Red Sea coast there is a small clan of fisher-folk, the Kirayjâb, who by some are not recognized as true ‘Ababda.

Like the rest of the Bedja the ‘Ababda claim Arab descent, and the genealogical table of ‘Abbad, their eponymous ancestor, begins with Zubayr b. al-‘Awrân, a famous companion of the Prophet. Some of the tribesmen living in the Sudan believe that they are descended from Salmân, an Arab of the Banû Hilâl. Though doubtlessly fictitious in respect of the tribe as a whole this claim to Arab descent yet embodies a genuine memory of the process by which Ḍūhayyana and Rabî’â Arabs acquired an ascendancy in the Sudan through marriages with the daughters of Bedja chiefs, amongst whom descent was originally reckoned in the female line. This process which according to Ibn Khaldûn led to the passing of the Nubian kingdom into the hands of the Ḍūhayyna must also have taken place in the case of the Bedja.

The Ababda have been affected by Arab influence more strongly than those Bedja who still retain their Hamitic tongue, so much so that in the Sudan they are not easily distinguished from the Sudan Arabs of the Ḍjâhiyyân group. They may in fact be held to occupy an intermediate position between the Bedja proper and the fully arabized elements who have become integrated in the Sudan Arabs. In their physical characteristics, nevertheless, the ‘Ababda together with the Tigré-speaking Banî ‘Amir bear a closer resemblance to the proto-Egyptian inhabitants of the Nile valley than the other Bedja. The Arabic spoken by the ‘Ababda is quite distinct from that of the faštâkin, and the word lists collected by H. A. Winckler contain an appreciable number of Bedja words.

In their material culture and their customs the ‘Ababda agree more closely with the Bedja proper than with the Arabs. Certain wide-spread customs which they share with the Sudan Arabs, such as the infibulation of girls and the ceremonial respect of in-law-relations, are of Hamitic origin. The ‘Ababda use the typically Bedja style of hairdressing (dirasa) which has given rise to the nickname Fuzzy-wuzzy, though this custom now tends to die out. Their tents of palm-matting are quite unlike the Arab “houses of hair”. Their marriages, like those of the Bedja proper, are matrilocal but their women do not enjoy the freedom which is allowed to their sisters of the Bishâriyyân. The ‘Ababda moreover share with the Bedja, but not the Arabs, certain taboos connected with milk: only men may do the milking, for which only gourds and wicker vessels may be used, and no man may drink of the milk he has drawn until someone else has drunk.

The influence of Islam, which nominally is the religion of all the ‘Ababda, has made a marked impression only on the more sophisticated elements; in the life of the majority religion, as distinct from traditional beliefs and superstitions, plays no important part. They venerate shaykh Abu ‘l-Hasan al-Shâdhîlî as their patron saint, and his tomb in the Atbai desert is a place of pilgrimage at which sacrifices are offered. It is also common to dedicate the milk of a beast to al-Shâdhîlî, and the milk of such animals is always milked into separate wicker vessels. When slaying an animal a piece of the victim’s right ear is reserved for al-Shâdhîlî or some other well-known saint and hung on the tent-pole. The celebration of the ‘Id al-kabir at the tomb of al-Shâdhîlî is the most important religious event of the year. Sacrifices are also offered at the tomb of the eponymous ancestor ‘Abbad near Edfû, and there is a cult of a female saint (jaḥira) who lived some fifty years ago and was famous for gifts of divination. The ‘Ababda like the Bishâriyyân believe that an animal sacrificed at the tomb of a ṣâli turns into a gazelle or ibex, and that such animals are protected by the wâlî. They also observe certain taboos about birds and will not eat the flesh of the sandgrouse or the desert-partridge, and both ‘Ababda and Bishâriyyân are particularly afraid of killing the bearded vulture (Gypaetus barbatus).

The most important section of the Egyptian ‘Ababda, of whom there are some 14,000, are the Ashshâbâh, who are divided into a number of clans. Their paramount shaykhs are descended from one Diabrân who flourished towards the end of the 18th century, and beyond whom there is no reliable historical tradition. The largest and best known sections in the Sudan are the Fuṣâra and the MiIlaykâb who, according to tradition, were brought to their present habitat by the Fundj kings of Sennâr in order to protect the caravan routes between Egypt and the Sudan. A small contingent of ‘Ababda, characterized by Cailliaud as the worst
soldiers in the army, were employed as irregulars by Ismacil Pasha during the invasion of the Sudan. During the 19th century the 'Abābda are often mentioned by travellers as guides and camel men between Korosko and Abū Hamad, and their chiefs of the Khalifa family held posts of distinction under the Egyptian government. Husayn Khalifa was mu'dir of Berber at the time of the Mahdist rebellion, and 'Abābda irregulars shared in the fighting against the Darwishes. Apart from traditions about wars with neighbouring tribes there are no data for their early history.

'Abād originally means time in an absolute sense and is synonymous with dāh (q.s.; see also Zāmān). When under the influence of Greek philosophy the problem of the eternity of the world (see Kīdām) was discussed in Islam, abad (or abadiyya) became a technical term corresponding to the Greek term ἄπαθετος, incorruptible, eternal a parte post, in opposition to asal (or asaliyya) corresponding to the Greek term ἀρχαιος, ungenerated, eternal a parte ante. (Ibn Rushd—cf. ed. Bouyges, index—uses asaliyya for "incorruptible"). [For asal see KIDAM]. As to the problem concerned, viz. if the world is incorruptible, the philosophers of Islam subscribed to the Aristotelian maxim that asal and abad imply each other, that what has a beginning must have an end and what has no beginning cannot have an end. According to this theory time, movement and the world in general are eternal in both senses. Among the theologians who all believe in the temporal creation of the world, only Abu 'l-Huṣayn, one of the earlier Mu'tazilites, admitted the Aristotelian maxim mentioned. (He applied the theory "that what has a first term must have a last one" even to God's knowledge and power, saying that God having arrived at the final term of His power, would not be able any more to create even an atom, to mould even a dead mosquito. See al-Khayyāt, al-Intisār, ed. Nyberg, 8 ff.; Ibn Hazm, iv, 192-3). The theologians opposed the Aristotelian dictum by the argument that if the world were without a beginning, at the present moment an infinite past would have been traversed, which is impossible [cf. KIDAM]; in the future, however, there is no such impossibility, since in the future no infinite will ever be traversed. Besides, the series of integers needs a first term but no final one, and a man may have eternal remorse, although his remorse must have a beginning (al-Badawi wa-l-Ta'rikh, ed. Huart, i, 125, cf. ii, 133). They concluded therefore that there is no rational proof either for the incorruptibility of the world or its opposite. According to the Kūrān, xxi, 67, on the Day of Judgment "the whole earth shall be His handful and the heavens will be rolled up in His right hand". It became the orthodox view that the annihilation of the whole world (including the destruction of heaven and hell, which, however, will not happen, as is known by revelation) is possible, dāh being considered as something in God's power (al-Baghdādi, Fark, 390). This world and (dāh) will be destroyed, but not heaven and hell.

**Bibliography:** The problem is treated in extenso by al-Ghazzālī in ch. ii of his Tahāfu' al-Falāsīfa, ed. Bouyges, 80 ff.; cf. Ibn Rushd, Ta-
much to his activity as an official in the service of the Umayyads as to his wonderful knowledge of Islamic traditions. The Kubd al-Maghdat, sometimes ascribed to him, is, however, according to Yskit (Irgad, i, 36) and al-Tust (Fihrist, 7) of Aban b. Ughman b. Yahya (see J. Horovitz, in OLZ, 1914, 183).

Aban was struck with apoplexy and died a year later at Madina in 105/723-4 according to report, at any rate during the reign of Yazid b. Abi al-Malik.

**Bibliography:** Ibn Sa'd, v, 112 ff.; Nawawi, 125 ff. (K. V. Zettnerstien)

**ABANOS (variants: Abinos, Abunos, Abnus and Abnos),** ebony. The word is derived from the Greek ebenos, which passed to the Aramean (ambusas) and from there to Arabic, Persian, Turkish etc. Although ebony had been already known in the old days in the East, where it was imported from India and Ethiopia, it was very little used at the early times of Islam, on account of its rarity and the scanty demand for artistic goods. Absolute faith must not be given to the story according to which, when the Mosque of the Rock was being built at Jerusalem under the Umayyad caliph Abd al-Malik, the venerable rock was enclosed with a palisade of ebony. It is certain that this wood had been already used under the caliphs together with ivory in the manufacture of chess-men [see Shtrandj] and dice, in mosaics of the sort very often used later with great skill on furniture, doors, lattice work and wainscots [see Kushab].

As a medicine, ebony was known to the Muslims as early as the ninth century from the translations of Dioscorides and Galen. It was considered to be a useful astringent for phylactenous inflammation and chronic catarrh of the eyes; it was also taken internally in the form of a powder for the bowels and stomach, and was dusted over burns. According to Dioscorides, Abyssinian ebony was generally considered to be more efficacious than Indian. To the former were ascribed the properties which at the present time are only found in the wood of the Diospyros and the Maba kinds of the East Indies, of Indonesia, of Madagascar, and of Mauritius, i.e. an intense black colour and a fineness of grain that almost makes it impossible to distinguish the fibre. The African species of ebony which the Arabs prefer are nowadays rightly held in little estimation. In the 8th/14th century Abarkuh is frequently mentioned in the history of the Muzzafarids. The oldest of the numerous ruins of Abarkuh is the mausoleum built in 443/1051 by Firuzan, a descendant of the well-known condottiere of the 4th/10th century, Firuzan of Agkawar (in Gilan). The so-called mausoleum of Tabas or Harem was built (or rebuilt) in 718/1318 by a descendant (in the fifth generation) of a Madj al-Dunya wa-l-Din Tadj al-Ma'ali Abi Bakr Muhammad (a Muzzafardi).

**Bibliography:** Le Strange, 284, 294, 297; P. Schwarz, Iran, i, 17; A. Godard, in Ahkari-Iran, 1935, 47-72; Mahmod Kubi, History of the Muzzafarids, in GMS, xiv, see Index in xiv/2; Kasm Ghani, Ta'vих-й-Apri-Hafiz, i, 1321/1942, index.

**ABARSHAHR.** the more ancient name of Nishapur [q.v.], was the capital of one of the four quarters of the province of Khorasan. Its name in Persian, according to the Muslim geographers, is said to mean "Cloud-city", but Marquart's etymology (Eranshahr, 74), the "district of the Aparvot" (comparing Armenian Apar ayard) is more reliable. It was sometimes given the honorific title of Iran-Shahr "City of Iran". Its mint-signature on Sassanian coins is Apr, Apris or Apris, forms which continue to appear on the dirhams of Arab-Sassanian type struck by the Muslim conquerors (from 5/673-4 to 6/668-9). Under the Umayyads its Arabic name appears on the Post-Reform dirhams from 91799-10 to 977155. The names of the Umayyad governors Ziyad b. Abi Sufyan and his sons Ubayd Allah and Salm as well as Abi Allah b. Kaham all figure on the coins of Abarshahr. The later mint activities of the place continued under the name of Nishabur.

**ABASKUN (or Aberskon),** a harbour in the south-eastern corner of the Caspian. It is described as a dependency of Djurgan/Gurgan (Yskit, i, 55: 3 days' distance from Djurgan; i, 91: 24 farsakhs). It might be located near the estuary of the Gurgan river (at Khodja-Nefes?). Al-Istakhri, 214 (Ibn Hawkal, 273) calls Abaskun the greatest of the (Caspian) harbours. The Caspian itself was sometimes called Bah Abaskun.

Abaskun possibly corresponds to Tolemy's Sanoavz in Hyrcania (Gurgan). Several times Abas-
kün was raided by Rūs pirates (some time between 250/764-84, and in 257/969, see Ibn Isfandiyār, Taʾrīkh-i Tabaristān, ed. A. Eghbal, 266 [E. G. Browne’s transl., 199], cf. also Mas’ūdī, ii. 18; circa 300/912). In 617/1220 the Khwarzm-Shāh ʿAlāʾ al-Dīn, tracked by the Mongols, sought refuge on “one of the islands of Abaskun”, (see al-Duwaynī, ii, 115), and died there. According to Ibn al-ʿĀǧīhī, xii, 242, he possessed in Ab-suḵūn (sic) a castle surrounded by water. The islands of Abaskun apparently correspond to the Agur-ad group of islands and spits of land, divided from the Gurgan estuary by a strait.

Bibliography: B. Dorn, Caspia, Über die Einfälle der alten Russen in Tabaristan, 1875, see index; Barthold, Istoriya orosheniya Turkestana, 1914, 33.

ʿĀBAZA, Turkish name for the Abazes (see ʿABAZA), given as a surname to many persons in Ottoman history who descended from those people.

1) ʿĀBAZA PASHA, taken prisoner at the defeat of the rebel ʿAlāʾ al-Dīn, whose treasurer he was, was brought before Murād Pasha and had his life spared only through the intercession of Khaṭṭ, ağa of the Janissaries, who, having become ḥafūdūn-pasha, gave him the command of a galley, and conferred upon him the government of Maḥrāf when he was promoted to the dignity of grand vizier. Later he became governor of Erzurūm and planned to destroy the Janissaries; those in his province lodged a complaint against him; he was deposed, but refused to obey the orders of the Porte (1032/1623); he levied taxes and raised troops on the pretext of avenging the death of the sultan ʿAlī Murād II, marched upon Anḵara and Siwās, and took Brus, but did not succeed in securing the citadel. In 1033/1624, the grand vizier Ḥāfiz Pasha defeated him in a battle near Kaysariyya, at the bridge across the Kārā-ṣā, owing to the defection of Ṭayyār Pasha and the Turkomans. ʿĀbaṇa took refuge at Erzurūm, of which he succeeded in having himself made governor on condition that he should admit a guard of Janissaries into the fortress. In 1036/1727, suspecting that the expedition against Aḥḵiṣa was in reality directed against himself, he massacred a great number of the Janissaries belonging to the army. His old master Khall seized Erzurūm in vain and was obliged to retreat because of the snow (1037/1627). In the following year, the Bosnian Khan, the last of whom had been made grand vizier, again besieged him and forced him to capitulate after a fortnight’s siege; the rebel was granted his pardon and the government of Bosnia. There he again persecuted his enemies, the Janissaries, was deposed and went to Belgrade, where on a hill to the south of the town he erected ʿAbaza Kūshkī. Then he was sent to Wiḍdīn and commanded the troops who invaded Poland (1633). Being honored with the confidence of Murād IV, he accompanied him to Adrianople when preparations were made for a new campaign against Poland; but his success excited envy; reports against him cleverly disseminated, estranged the sultan, who had him executed (29 Ṣaʿfar 1044/24 August 1634).

2) ʿĀBAZA ḤASAN had been given the command of the Turkomans of Asia Minor as a recompense for his capture of the rebel Ḥaydar-eggīlū. Having been dismissed for no reason, he revolted in his turn, held the country between Gerende and Bolu, defeated the old bandit Kāṭirdji-eggīlū who had been sent to fight against him, and submitted on condition that he should have the title of voivode of the Turkomans; later as the result of complaints lodged against him, he was imprisoned in the Seven Towers and was only released by the elevation of Behāyī to the position of Shāyḵ al-Īlmām (1062/1652); his friend conferred on him the sandjak of Okhri. When ʿIḍpr Pasha, who was also one of the Abaza nation, was made grand vizier by Muḥammad IV, he sent for him. At his execution he remained faithful to him, returned to Asia Minor with the remainder of his troops and regained the office of voivode of the Turkomans (1065/1655). He settled at Aleppo and committed such ravages in Syria that the Diwān wanted to have him banished from the empire; the grand vizier, Sulaymān Pasha, however, confirmed him in his position of governor and entrusted the defenses of the Dardanelles to him. In 1066/1656 he was sent to diyār Bakr as governor. Two years later he rebelled, put himself at the head of a considerable army under the pretext of demanding the dismissal of Muḥammad Kūprūlī, at that time grand vizier, and threatened Brus. In the neighborhood of Hāmid he completely defeated Murtaḍā Pasha, who had been sent against him (15 Rabīʿ I 1069/11 Dec. 1658); but he fell into a trap which had been set for him, left ʿAynṭāb for Aleppo to make terms for his submission and was treacherously assassinated there.

3) ʿĀBAZA MUḤAMMAD PASHA, had been given the beylerbey of Maḥrāf when, during the campaign against the Russians (1183/1769), he was ordered to act in concert with the khan of the Crimea. He commanded the fortress of Bender and received the third tāḥ in recompense for the part he had taken in raising the siege of Choczim. Having been entrusted with the defense of this place and having himself abandoned by the Ottoman troops, he fled and was commissioned to defend Moldavia, which he failed to accomplish. At the battle of Kaghul (1 Aug. 1770), he commanded the right wing; after the defeat of the Turks he fled to Ismāʿīl. Having been made governor of Silistria, he was dismissed after he had squandered the money given to him for the purpose of raising troops, and was exiled to Kustendil. At the time of the conquest of the Crimea and the flight of Selim-Girāy he refused to land the few troops he was bringing up and returned to Sinope; he was decapitated (1185/1771).

(Č. Huart) 'ABBĀD B. MUḤAMMAD [see 'ABBĀDIDS] 'ABBĀD B. SULAYMĀN AL-ŠAYMĀRĪ (or AL-DAYMARI), one of the Muṭāzila of Baṣra, died c. 250/864. He was a pupil of Ḥighām b. Ṭarīq al-Fuwaṭi (I. 210/825), like his father criticizing the main tendency of the school of Basra (that of Abu 'l-Hudhayl), and being in his turn criticized by Abu 'l-Hudhayl's successors, al-Diubā'll and Abū Ḥāṣim. Our knowledge of his distinctive views comes mainly from al-Ashtar’s Makālidī.
He eternally is must be independent of transient mundane things. Thus God is not eternally “hearing” and “seeing”, since that involves objects heard and seen (ib. 173, 493); He is not “before all things” (ib. 196, 519); no accident (such as an apparently supernatural event) can afford a proof of God, in view of its transient character (ib. 225). In this way he came to distinguish between God’s “active attributes” (sifāt al-fa‘il) and His eternal attributes (ib. 179, 186, 495-500), being perhaps the first to work out this distinction which was later adopted by orthodox theologians.

He went to extremes in insisting that God does nothing that is evil in any respect, even denying that God made unbelievers vile (kabīb; ib. 227-8, 557-9), and maintaining that His punishment of the wicked in Hell is not evil. His political views (ib. 454, 458-9, 467) seem to aim at a reconciliation of various contemporary political groups, but the point has not been adequately studied.

ABBAD B. ZIYAD u. ABU ṢU‘AYYAB, UMAYYAD GENERAL. Mu‘awiya appointed him governor of Sīdījātān, where he stayed seven years; in the course of his expeditions to the East, he conquered Kandahār. In 61/680-1 he was dismissed by Yazīd b. Mu‘awiya who appointed in his place his brother Salm b. Ziyād to be governor of Sīdījātān. (J. Schacht)

ABBAD, often called al- Ḥarām al-Murtada, was Arabian ruler, as ambitious as he was cruel, and with few scruples in the choice of means to achieve his ends. Immediately after his accession he continued his predecessors’ policy of Persianizing Arabic names, changed ‘Abbādān into Ābādān.

Al-ABBADĪ, ABU ʿĀSIM MUḤ. B. ʿABDALLAH B. MUḤ. B. ʿABBĀD, often called al-Kādī al-Harawi, a well-known Shafi‘ite juristconsult. He was born in 375/985 in Harat, studied there and in Nisābūr, and undertook extensive journeys on which he met numerous scholars. He finally became bāb of Harat and died there in 458/1066. He was notorious for his dark and difficult style of expression. Of his works, which al-Subkī enumerates, there have survived the Tabābāt al-Shafi‘īyyīn (used by al-Asnawī) in several manuscripts, and the Adab al-Kādā in the commentary which his disciple Abū Sa‘īd (or Sa‘īd) b. Abī ʿAbdāb b. ʿAbī Yūnuf al-Harawi (d. about 500) wrote under the title al-Adab al-Ṣafawī ‘alā al-Insānāt (Subkī, iv, 31). His son Abu l-Hasan is the author of a K. al-Rakm.

Bibliography: Subkī, Tabābāt, iii, 42 (with extracts from his works and a discussion of his style); Ibn Khallikān, no. 558; F. Wüstenfeld, Schafi‘iten, no. 408; Brockelmann, i, 484; I, 669. (J. Schacht)

ABBADIDS (BANU ʿABBĀD), DYNASTY OF ARAB RACE WHICH REigned FOR MOST OF THE 9TH/10TH CENTURY OVER THE S.-W. OF AL-ANDALUS, WITH ITS CAPITAL AT SEVILLE (cf. 19/4001).

It was at the moment of the disintegration of the Caliphate of Cordova and of the political dismemberment of the country by the petty kings known as the taifas (muluk al-taifahīn) that the bāb of Seville, Abu l-Kāsīm Muḥammad b. ʿAbbād, succeeded in being proclaimed ruler in 414/1023. The son of a celebrated Spanish-Muslim jurist of Lakhmid origin, Imsāfīl b. ʿAbbād, he began, on first seizing power, by recognizing the suzerainty of the Hammūdīd king Yahyā b. ʿAll, but soon threw off this wholly nominal mark of subordination. There is relatively little information on the details of his reign, which was mostly occupied in settling by force of arms his disputes with the Dīlahwārs [q.v.] of Cordova and the lesser baronies in southern Andalusia. He died in 433/1042.

His son, Abū ʿAmr Abū b. ʿAbbād b. Muḥammad succeeded, in a reign of nearly thirty years (433-460/1042-69), in enlarging the territory of the principality of Seville to a considerable size by posing the Caliphate of Cordova and of the political dismemberment of the country by the petty kings known as the taifas (muluk al-taifahīn) that the bāb of Seville, Abu l-Kāsīm Muḥammad b. ʿAbbād, succeeded in being proclaimed ruler in 414/1023. The son of a celebrated Spanish-Muslim jurist of Lakhmid origin, Imsāfīl b. ʿAbbād, he began, on first seizing power, by recognizing the suzerainty of the Hammūdīd king Yahyā b. ʿAll, but soon threw off this wholly nominal mark of subordination. There is relatively little information on the details of his reign, which was mostly occupied in settling by force of arms his disputes with the Dīlahwārs [q.v.] of Cordova and the lesser baronies in southern Andalusia. He died in 433/1042.

His son, Abū ʿAmr Abū b. ʿAbbād b. Muḥammad succeeded, in a reign of nearly thirty years (433-460/1042-69), in enlarging the territory of the principality of Seville to a considerable size by posing as the champion of the Andalusian Arabs against the Spanish Berbers, whose numbers, already large in the Iberian peninsula in the 10th century, had greatly increased since the period of the ʿAmirid dictators.

On succeeding his father, the new king of Seville, then 26 years of age, took the princely title of bābīb, following the custom of the time, but a little later adopted the honorific ʿibāb of al-Muṣṭārid bīʿllāh, by which he is generally known. Gifted with real political qualities, it was not long before he showed his true character, that of an authoritarian ruler, as ambitious as he was cruel, and with few scruples in the choice of means to achieve his ends. Immediately after his accession he conti-
nued the struggle opened by his father against the minor Berber dynasty of Carmona [cf. KIARMUNA], Muh. b. 'Abd Allāh al-Birrāl and the chiefs. At the same time al-Mu'tadid was preoccupied in extending his kingdom to the west, between Seville and the Atlantic Ocean. With this end in view he attacked and defeated successively Ibn Tayfūr, lord (ṣāhib) of Mertola, and Muh. b. Yaḥyā al-Yaḥṣūb, lord of Niebla [cf. LABLA], who, notwithstanding his Arab descent, had unblushingly allied himself with the Berber kings. In face of the success of the king of Seville, the other mulāk al-țamā'il, distrustful of him, formed against him a kind of league, which was joined by the princes of Badajoz [cf. KIARMUNA], Algeciras [cf. AL-DAQI'IRA AL-KHADRA'], Granada [cf. GHARNAṬA] and Malaga [cf. MĀLABA]. War broke out soon afterwards between the 'Abbadids of Seville and the Aftasid [q.v.] al-Mušafar of Badajoz; it was prolonged over many years, in spite of the efforts at mediation of the Djahwarid prince of Cordova, which bore fruit only in 443/1051. In the interval, while continuing to harass the frontiers of the kingdom of Badajoz, al-Mu'tadid did not remain inactive; he defeated, one after the other, Muh. b. Ayyūb al-Bakrī, lord of Huelva [cf. WELBA] and of Saltes [cf. SALTAṬA] (whose son was the celebrated erwās father), the Banū Muḥṣīn, lords of Silves [cf. SULBA], and Muh. b. Sa'īd b. Ḥārūn, lord of Santa María de Algarve [cf. SHILB] and annexed their principalities. In order to justify these annexations al-Mu'tadid employed a somewhat clumsy stratagem: he claimed to have found the caliph Hīḍhām II, who had died in obscurity some years earlier, and to be devoting himself tirelessly to restoring to him his former emirate, entirely submissive and pacified. In order to protect themselves against the assaults of the king of Seville, the majority of the minor Berber chiefs in the mountains in the south of Andalusia acquiesced in this theatrical pretence, and paid homage both to the 'Abbadids and to the Commander of the Faithful; miraculously restored to light to serve the interests of al-Mu'tadid but at the same time carefully kept in seclusion by him. But their efforts were in vain. One day the 'Abbadids invited all these minor Berber princes and their attendants together to his palace at Seville and suffocated them to death in a bath-house whose openings he had walled up; by this means he appropriated Arcos [cf. ARKUSH], seat of the principality of the Banū Ḥabūr, Moron [cf. MAWROD], ruled by the Banū Dammar, and Ronda [cf. RUNDA], capital of the Banū Ifrān (445/1053).

This action was enough to unloose the fury of the most powerful Berber prince in Spain, Bādīs b. Ḥabūr al-Zīrīd [q.v.] at Granada, who alone seemed capable of standing up to al-Mu'tadid. When the war began, however, the latter found his fortune still smiling on him and soon afterwards seized Algeciras from the Ḥamīdūd prince al-Kāsim b. Ḥamīdū. He then tried to capture Cordova, and for this purpose despatched an expedition under the command of his son Ismā'īll; but Ismā'īll sought to profit from the occasion to rebel and to create a kingdom of his own, with Algeciras as his capital. This venture the project cost him his life. It also opened the political career of al-Mu'tadid's other son, Muhammad al-Mutamid, who was to succeed him on his death. On his father's orders, Muhammad set out with an army to give support to the Arabs of Malaga, who had revolted against the tyrannical rule of the Berber despot of Granada, Bādīs. But Bādīs routed the army of Seville, and the prince, in sad plight, threw himself into Ronda, whence he solicited and obtained his father's pardon. Al-Mu'tadid had long since discarded the fable of the pseudo-Hīḍhām, which he no longer needed; he was by far the most redoubtable and most feared of the Christian neighbours of the north. In other places, he might have been given the title of Berberoktonos.

When the powerful sovereign of Seville died in 461/1069, his son, Muh. b. Shams ad dīn b. 'Abbād, better known by his honorific lakab of al-Muṭamid [q.v.], took possession of his greatly enlarged kingdom, which now embraced most of the S.W. part of the Iberian peninsula.

Already in the second year of his reign, al-Muṭamid was able, despite the ambitions of the king of Toledo, al-Muḥammad [q.v.], to annex to his kingdom the principality of Cordova, formerly ruled by the Djahwarid princes. The young prince 'Abbād was appointed governor of the former capital of the Umayyads. But on the instigation of the king of Toledo, an adventurer, named Ibn Ukkāshā, succeeded in seizing Cordova by surprise in 468/1075, and put the young 'Abbād prince and his general Muh. b. Martin to death. Al-Muḥammad took possession of the city, where he died six months later. Al-Muṭamid, wounded both in his paternal affections and his royal pride, endeavoured for three years in vain to reconquer Cordova. He gained his object only in 471/1078; Ibn Ukkāshā was put to death, and all that part of the kingdom of Toledo lying between the Guadalquivir and the Guadiana was conquered by the armies of Seville. Yet at the same time it needed all the skill of the vizier Ibn 'Ammār [q.v.] to bring an expedition of Alfonso VI of Castille against Seville to a peaceful conclusion, in return for the payment of a double tribute.

This was, in fact, the moment when, thanks to the tenacious vigour of the Christian princes in seeking to profit from the sanguinary conflicts waged against one another by the Muslim princes of al-Andalus, the reconquista—which had been arrested for a time and had even receded under the last Umayyads and the first 'Amīrid dictators—resumed its advance towards the south of the peninsula. Notwithstanding their successes, blazoned by the Muslim chroniclers, it must not be forgotten that from the middle of the eleventh century many Spanish Muslim dynasties were reduced to trying to gain, by means of heavy tributes, the temporary neutrality of their Christian neighbours. Shortly before the resounding capture of Toledo by Alfonso VI, in 478/1083, al-Muṭamid began to find himself enmeshed in serious difficulties. On the imprudent advice of Ibn 'Ammār, he attempted, after the annexation of Cordova, to annex further the principality of Murcia [cf. MURSIYA], then governed by a ruler of Arab origin, Muh. b. Aḥmad Ibn Tāhir. In 471/1080, Ibn 'Ammār paid a visit to the count of Barcelona, Ramon Berenguer II, and asked for his assistance in conquering Murcia in return for the sum of 10,000 dinars, as surety for the payment of which a son of al-Muṭamid, al-Rṣādīl, was to serve as hostage. After a series of agitated comings and goings, which ended in the payment to the count of Barcelona of a sum thrice as large, Ibn 'Ammār resumed his project of conquering Murcia, and soon realised it, thanks to the assistance of the lord of the castle of Bibi (now Vilches), Ibn Rashāk. It was not long,
however, before Ibn 'Ammār in Murcia made himself intolerable to his sovereign. Betrayed by Ibn Rashīk, he was forced to flee from Murcia, and sought refuge successively at Leon, Saragossa and Lerida. On returning to Saragossa he endeavoured to assist his prince, al-Mu'tamīn b. Hūd (cf. HŪDĪDS), in his expedition against Segura (cf. ṢHĀKHĀR), but was captured and handed over to al-Mu'tamid, who, notwithstanding the ties of friendship which had for so long bound them together, killed him with his own hand. In the meantime Alfonso VI began to disclose openly his designs on Toledo, which he had begun to invest since 473/1080. Two years later, having sent a deputation to collect the annual tribute which al-Mu'tamid was paying to him, he learned that its members had been molested and that the Jewish treasurer Ibn Shālib, who had accompanied it, had been put to death because of his refusal to accept money of low standard. Thereupon he made an incursion into the kingdom of Seville, raided the flourishing townships of the Aljarafe (cf. AL-SHARAF), struck across the district of Sidona (cf. SHADUNA) as far as Tarifa (cf. TARĪF, DJAZIRAT), where he pronounced a celebrated phrase in which he boasted of having trodden the furthest bounds of Spain. The capture of Toledo by Alfonso VI was a heavy blow to Islam in Spain. The king of Castile, having once demanded of al-Mu'tamid the return of his possessions which had formerly been part of the kingdom, of the Dhu 'l-Nūnids, i.e. part of the present provinces of Ciudad Real and Cuenca. Throughout Muslim Spain its ever-increasing demands caused a particularly difficult situation. In spite of their unwillingness, the princes of Spain, with al-Mu'tamid at their head, were compelled to pay direct from the royal treasury. With their aid, and by a successful conversion from Christianity a cavalry corps of the Ottoman army, he reaffirmed his allegiance to Muhammad Khudabanda.

The importance of the ghuldms gradually increased. al-Mu'tamīd, Fath al-Mu'amīn (killed), Carmona, and finally Seville, which was taken in spite of a heroic sortie by al-Mu'tamid. The vanquished prince, made prisoner by the Almoravid, was at first sent with his wives and children to Tangier, then to Melknes, and after several months to Aghmāt, not far from Marrākūsh. He passed a miserable existence there for some years, and died there in 487/1095, aged fifty-five years. With him, in these lamentable circumstances, ended the dynasty of the 'Abbāḍīd, which may be regarded, notwithstanding the excesses and cruelty of its princes, as the most brilliant of the dynasties of the taifa and indubitably that under which the arts and letters shone most brightly in Muslim Spain of the eleventh century.

'ABBĀS I, styled the Great, king of Persia of the Šafawī dynasty, second son and successor of Muhammad Khudabanda, was born on 1 Ramadān 978/27 January 1571, and died in Māzandarān on 24 Dūmād 1038/19 January 1629, after a reign of 42 solar (43 lunar) years. In 980/1572-3 he remained at Harāt when his father moved to Shahrūz. In 984/1576-7 ISMĀ'IL II put to death the lāla (tutor) of 'Abbās, and appointed 'All Khān Shāmlū governor of Harāt with orders to execute 'Abbās himself. 'All Kūlī procrastinated, and, when the death of ISMĀ'IL II (985/1577-8) rendered the order null and void, was made himself lāla to 'Abbās by Muhammad Khudabanda. Three years later 'All Kūlī read the Muḥāfa at Harāt in the name of 'Abbās, but, when threatened by the royal army, he re-affirmed his allegiance to Muhammad Khudabanda. Three years later 'All Kūlī read the Muḥāfa at Harāt in the name of 'Abbās, but, when threatened by the royal army, he re-affirmed his allegiance to Muhammad Khudabanda at Ghūrtyān. Shortly afterwards his protegé 'Abbās fell into the hands of his rival Mursīdīl Kūlī Khān Ustādīlī, governor of Turbat, and in 992/1587 the latter marched on Kazvin. Muhammad Khudabanda was deposed, and 'Abbās became Shāh at the age of 16, with Mursīdīl Kūlī as his wakīl-i dīwan-i tālī.

'Abbās, faced with the twofold task of enforcing his authority over the Kīfīlābī amirs, and of checking the encroachment on Persian territory of the Ottomans in the West and the Uzbegs in the East, at once created from the ranks of Georgian prisoners converted from Christianity a cavalry corps of the wulmān-i bhīṣa-yi gartīa, paid direct from the royal treasury. With their aid, and by a successful appeal to the loyalty of the šāhī-i-temen (q.v.), he crushed a revolt of amirs, and followed this by riding himself of the now too-powerful Mursīdīl Kūlī. The importance of the ḡulams gradually increased.
The appointment of Allahwardi Khan to be governor of Fars elevated a ghulam to equality of status with the Kizilbash amirs, and eventually ghulams filled some 20% of the high administrative posts. Abbas systematically pacified the provinces of 'Irāk-i 'Adjam, Fārs, Kirmān and Lurīstan. The local rulers of Gilān and Māzandarān were subjugated. In order to avoid fighting on two fronts, Abbas signed in Constantinople in 996/1589-90 a peace treaty most unfavourable to Persia. The regions of Āḏābarbāyjān, Karābāgh, Gandja, Karadāgh, with Georgia and parts of Lurīstan and Kurdistān, were to remain in Ottoman hands, and a interdict was placed on the Shi'ite objurgation of the early Caliphs.

Abbas entrusted to Allahwardi Khan the reorganisation of the army on the lines suggested by Robert Sherley, an English adventurer then at the Persian Court. A new corps of 12,000 musketeers (tuṭangī), for the most part mounted, was recruited locally from the peasantry; the strength of the ghulams was raised to 10,000 by further recruitment from the Georgian converts; 3000 more were selected as mulzmīn or personal bodyguard to the Shah; and a corps of artillery, comprising 12,000 men and 500 guns, was also recruited from the ghulams, cannon being supplied by Sherley. Abbas thus had a standing army of some 37,000 men.

After the death of the Shāybanids 'Abbās Allāh b. Iskandar [q.v.] and 'Abbās al-Mu'min, dynastic rivalries distracted the Uzbegs, and Abbas was able to inflict on them a severe defeat at Harāt (1007/1598-9), and to recover Maḥhād and Harāt after ten years of Uzbeg occupation. In a attempt to stabilise the North-East frontier, 'Abbās installed at Balkh, Marw and Astarābād Uzbeg chiefs subordinate to himself. But Bākī Muḥammad, the new khān of Transoxania, re-occupied Balkh (1009/1600-1), and though 'Abbās led a force of 50,000 men against him, he was outmanoeuvred and forced to retreat (1011/1602-3), losing large numbers of men through sickness, and abandoning most of his new artillery. At this point hostilities in the East were suspended, but in the West 'Abbās invaded Āḏābarbāyjān in 1012/1603-4, and occupied Nakhchivan and Erivan. The Ottomans under Cīghālāzāda suffered a signal defeat at Sīs near Tabrīz (214/1605-6), with the loss of 20,000 men. Gandja and Tiflis were taken by the Safawids. Internal disorders in Turkey contributed to the haphazard conduct of the war against Persia. Successful Turkish invasions of Āḏābarbāyjān were hampered by the Persian policy of devasting the regions of Cūkhur Sa'd and Nakhchivan and evacuating the inhabitants. Peace was eventually concluded at Sarāb in 1027/1617-8, but was broken by 'Abbās in 1032/1623-4, when he took Baghdād and Diyar Ḳurʿān from the Ottomans.

In other directions too 'Abbās expanded Šafawīd territory. Bahrān was annexed in 1010/1601-2, Shīrwān was reconquered in 1016/1607-8. With British aid, the island of Hūrnuz was taken from the Portuguese in 1020/1610-1, but a long series of bitter wars in Georgia failed to result in permanent annexation, and 'Abbās was finally forced to recognize the Georgian prince Tāynurāz. Military necessity was often the pretext for the transference of large bodies of people to other regions. Some 20,000 Armenians from the Erzerum region were enrolled in the ghulams: a further 3000 families were moved from Dīlūj to Iṣfahān; the Kāramānli tribe of Karābāgh was moved to Fārs in 1023/1614-5; and the influx of Georgians from Kakhētī—130,000 prisoners were taken in the expedition of 1025/1616-7 alone—was a major factor in achieving that admixture of races and creeds by which 'Abbās planned to offset the power of the Kızl ābāsh.

Diplomatic contacts with European countries and with India were numerous during 'Abbās's reign, but all his efforts to create a European alliance against the Ottomans failed. Though careful to keep on good terms with the Mogul Emperors Akbār and Dājāngir, he always regarded Kandahār, seized by Akbār in 999/1599-1, as Persian territory, and in 1031/1621-2 he re-occupied the city. 'Abbās maintained friendly relations with the princes of Muscovy and the Tatar khāns of the Crimea. Foreign monastic orders, like the Carmelites, the Augustinians and the Capuchins, friars, were accorded permission to operate without hindrance. In 1007/1598-9 Sir Anthony Sherley, brother of Robert, was dispatched to Europe accompanied by a Persian envoy, Husayn 'All Beg Bayāt, and visited Prague, Venice, Rome, Valladolid and Lisbon. Return embassies were sent by the Spaniards, the Portuguese and the English. The latter's envoy, Sir Dodmore Cotton, was the first accredited English ambassador to the Persian Court. 'Abbās improved communications by the construction of roads (notably the coast road through Mázandarān), bridges and caravanserais. He enriched Iṣfahān, which became his new capital in 1006/1597-8, with mosques, palaces and gardens: but he also built palaces at Kazzvin, and at Ashraf and Faraḥbād on the Caspian, where he spent an increasing amount of time in his later years. He explored the possibility of diverting some of the headwaters of the Kārūn into the basin of the Zāyanda-Rūd. Although endowed with great qualities, 'Abbās could be ruthless, and his family fell victims to his desire for security. His father, Muḥammad Khudābānda, and two brothers, Abū Tālib and Ṭāḥmās, were blinded and incarcerated at Alāmūt; a son, Muḥammad Bākīr Mīrzā, was executed on a charge of treason in 1022/1613, and another, Imām Kull, was made heir-apparent in 1030/1620 during an illness of 'Abbās, but was made heir-apparent in 1030/1620 on the latter's recovery. Throughout his reign, 'Abbās attached great importance to maintaining the pir u-murğāh relationship with his subjects: hence he made frequent visits to the Shi'ite shrines at Ardabīl, Maḥhād, Maqāzīsh, where he repaired the damage caused by the Uzbegs, and after their capture from the Ottomans, to those at Kārbālā and Nādījāf.

(R. M. Savory)
Djanab of al-Namir. The Abbasid dynasty took its name from him, being descended from his son 'Abd Allah. Consequently there was a tendency for historians under the Abbasids to glorify him, and in his case it is particularly difficult to distinguish fact from fiction. He was a merchant and financier, more prosperous than his half-brother Abū Tālib, who, in return for the extinction of a debt, surrendered to him the office of provisioning pilgrims to Mecca with water (ṣīḥāda) and permission also with food (rifāda). Though he owned a garden in al-Tā'if, he was not so wealthy as the leading men of the clans of 'Abd Shams and Makārim. There is no clear evidence of any rapportement between him and Muhammad until 762/7 (al-Khatīb al-Baghdadi, 133). Al-

...
'Abbas was born about 133/750. He grew up in Baghdad (this must be the meaning of the words of al-Sūfī quoted by al-Khalīfī, 128, or of those of al-Ashbaghī repeated in Aḥmān i, viii, 353). We do not know anything about his adolescence or his studies. He must have started writing poetry very early, as Bāshār b. Burd (d. 167/783) speaks of his beginnings and calls him fātā, or ẓulām (Aḥmān i, v, 210 and al-Khalīfī, 130). The only details we know about his career show him as a favourite of the caliph Hārūn al-Rašīd, who employed him, however, not as a panegyrist, but rather as one to amuse him in his hours of leisure (see e.g. Aḥmān i, vii, 355 ft., and al-Khalīfī, 131). It seems certain that the poet accompanied the caliph in his campaigns in Khūrāsān and Armenia, but, overcome by nostalgia, received his permission to return to Baghdad (Aḥmān ii, viii, 372). Al-'Abbās was also connected with the high officials of the Barmakīd family, especially with Yāḥyah b. Da'far (Aḥmān ii, v, 168, 241). One can assume that his verses were highly enjoyed by certain ladies of the caliph's harem, e.g. by Umm Da'far, who made him presents (Aḥmān ii, viii, 369). The favour shown to al-'Abbās by the men in power seems to have given him an influential position: a nephew of his, Ibrāhīm al-Suli (d. 243/857), himself a poet, was 'secretary' of the Chan- tacy (see on him al-Mas'ūdī, Murūdī, vii, 237-45 and al-Khalīfī, 129; it is to be noted that through al-Abbās was the great-uncle of the famous Abū Bakr al-Suli [q.v.]). Almost nothing has come down to us about the literary contacts of al-'Abbās. He seems to have been on bad terms with Muslim b. al-Walīd (al-Khalīfī, 128) and the Mu'tazilite Abu 'l-Hughayl al-Affāl (Aḥmān, v, 254). Various dates are given for his death: 188/803 according to Aḥmān, v, 254, repeated by al-Khalīfī, 133; or 192/807, idem 133 and Ṣākiyyū, IV, 283; or after 193/808, according to one of his friends who is said to have met him in Baghdad after the death of al-Rašīd, which occurred in that year (al-Khalīfī, 133 and Ibn Khalilikān). Al-'Abbās would have been at that time about 60 years old. He is said to have died while on pilgrimage and to have been buried in Baṣra (al-Khalīfī, 132-3 and al-Mas'ūdī, vii, 247).

The work of al-'Abbās was collected after his death by Zubūr, and subsequently, in the form of extracts, by Abū Bakr al-Suli (Fihrīst, 163, 151); al-Suli wrote also a biography of the poet (d. 151), which was extensively used by Abū 'I-Farādī al-Īṣahānī in the article in the Aḥmān. We have no information about the versions that circulated in Khūrāsān during the lifetime of 'Ubayd Allāh b. Tāhir (d. 300/912; cf. Aḥmān, viii, 353). One cannot exclude the hypothesis that verses by unknown authors were wrongly included in these versions; cf. the detail quoted by al-Marzūbānī, 252. At any rate Yākūt, iv, 284 points out that the manuscripts of his time were divergent. The work of al-'Abbās is preserved only in two manuscripts of the selection made by al-Suli; on a third one, now lost (?), was based the unsatisfactory edition, Istanbul 1298/1880 (reproduced in Cairo-Baghdad 1367/1947; cf. A. Khusrāji, Diwan d'al-'Abbās b. al-'Abbās, thesis submitted to the Faculty of Letters, Paris, in 1953). The existing collection consists of pieces that are generally short and some of which are perhaps only fragments of longer poems.

Al-'Abbās, as all his Muslim biographers have noted, cultivated only one genre, the ghānat [q.v.], i.e. erotic-elegiac poetry (cf. e.g. Ibn Kutayba, 525; Fihrīst, 132; Aḥmān ii, viii, 352). In their present state, the pieces that are available confirm this fact: Al-'Abbās appears in them as a follower of the poets of the Hīdājī, namely ʿUmar b. ʿAbd Rabbī and especially Djamīl, al-Ahwās and al-Ardā, in whose work the tendencies of the school began to take a fixed form. In his poems there reappears not only the psychological scheme of the submissive lover, but also the fictitious personalities of the rabbī and ʿawāṣī. The woman whom he extols is presented in a stylised manner, so that we are unable to say if the poet is merely combining clichés or starting from a real experience. On the whole, however, there are expressions of ideal love; we find (Diwan, Istanbul, 148-50), the description of an orgy with singing girls. On the whole, however, the poetry of al-'Abbās stands in contrast to that of Abū Nuwas [q.v.], which is permeated with the carnal cult of the beloved. The art of al-'Abbās is highly conventional and his inspiration is monotonous. On the other hand, his style avoids the use of gīrmanic rhetoric and his language, simple and fluent without being vulgar, is akin to that of Abū Nuwas.

The vogue enjoyed by the poetry of al-'Abbās from the very first cannot be explained solely by some helénnic influence or by respect for an old Arab tradition. The society in which the poet lived must also be taken into consideration. Chiming with the diletantism of al-Rašīd and the taste of the women of the court, the poems of al-'Abbās were ready-made material for composers and singers, like Ibrāhīm al-Mawṣīl (cf. Aḥmān ii, vi, 182, viii, 365, 354-6). Nevertheless the favour shown to them by men of letters like al-Dajīlī, Ibn Kutayba or al-Maṣūdī, by a music-lover like the caliph al-Wāthīq, by a bel esprit like Abū Bakr al-Suli, or finally by a rigorist like Saḥmā b. 'Āṣīm (cf. Ibn Kutayba, al-Shīr, 525 ff., and especially Aḥmān ii, viii, 354 ff.), shows that these poetical productions could be enjoyed by a public of greatly varying tastes.

It is difficult to define the importance of al-'Abbās b. al-'Abbās in the history of Arabic poetry. If Muslim Spain really appreciated this oriental poet (cf. Ibn Hazm, Taʾwīl al-Hamāmā (Bercher), 285; Péres, La poésie andalouse en arabe classique au Xe siècle, 54, 411), one might see in him one of the poets who influenced the erotic-elegiac poetry so highly valued in that country. In this case, his role in the development of the genre would be of the greatest importance. Recently, oriental critics like F. Rifaʿī and Bahbūṭī have tried to discover what in the work of al-'Abbās retains a lasting value. In two penetrating studies, Hei and Torrey placed the poet in his milieu and noted his influence in Arabic literature.

(R. Blachère)
AL-'ABBĀS b. 'AMR AL-GHANAWĪ — AL-'ABBĀS b. AL-MA'MŪN

AL-'ABBĀS b. 'AMR AL-GHANAWĪ, famous general and governor of the 'Abbasid caliphs at the end of the third century/900. In 286/899 he fought against the Arab tribes in 'Irāk. In 287/900 he was appointed by the caliph al-Mu'tadīd governor of Ya'māma and Bahrayn, with orders to fight against the Karmātian chief of Bahrayn, Abū Sa'id al-Djānnābī. He left Başra with an army of regular soldiers, volunteers from Başra and beduin auxiliaries, was left in the lurch in the first battle by the beduins and he volunteers and next day, after a bloody battle, he was taken prisoner together with about 700 men (end of Radjāb 287/July 900). The prisoners were executed, but al-'Abbās was spared by the Karmātian, who charged him with a message to the caliph, in which he set forth the dangers and the uselessness of a new campaign against him. One can find in M. J. de Goeje’s Mémoire sur les Caramathes de Basra, 37-41, an account of the battle and its consequences, after al-Tabarī, as well as the anecdote, told among others by al-Tanukhī (al-Farājī ba'd al-Shidda, Cairo 1903, i, 110-1), concerning the libelation of al-'Abbās, a matter of astonishment to contemporaries as well as his the historians. Al-'Abbās was one of the generals who in 289/901-2 abandoned the commander-in-chief, Badr, at the instigation of the new caliph al-Muktafi. According to Ibn al-Athir he was governor of Kumm and Kāshān in 296/908-9. He accompanied the army of Mu'nis ibn Ḥakam of Diyar Mudar, residing in al-Rakka, where he died in 296/908-9.

He was even a distant precursor of aviation, al-halak). In appeasing its discontent. Then the caliph, in order owing the machinations of Ibn Bakiyya, and the intrigues of Ibn Fasandjas who hoped to extract money from al-'Abbās, he was deposed in 359/969-70 and put into the hands of his rival. The latter, however, was not more successful in his office and al-'Abbās managed to recover his freedom in 360/971, to be re-appointed as vizier and to eliminate definitively Ibn Fasandjas. His extortion of money, to pay the troops, made him again the butt of hatred, especially that of Bakhṭiyār’s omnipotent majordomo, Ibn Bakjiyya. In 362/973 he was arrested owing the machinations of Ibn Bakjiyya, and the latter was appointed vizier. Al-'Abbās was confined in the house of an 'Alīd in Kūfah and died soon afterwards, probably from poison.

AL-'ABBĀS possessed a palace in Baghdad, called Khākān, which was burned down by order of Bakhṭiyār. On this palace, the festivals held in it, and the other buildings of al-'Abbās, see al-'Iṣnārī, Dhayl Zahr al-'Adab, Cairo 1353, 275 ff.

AL-'ABBĀS b. AL-MA'AMŪN, pretender to the throne under al-Mu'taṣim. His father, the caliph al-Ma'mūn, appointed him in 215/828-9 a governor of al-Ḍjazā’ra and the neighbouring frontier district, and he then showed great bravery in fighting the Byzantines. On the death of al-Ma’mūn in 216/833, his brother, Abū Ḥishāk Muḥammad al-Mu’taṣim bi-'Ilāh, by choice of the deceased, ascended the throne of the 'Abbasids (The fully manifest, thanks to the newly found volume of Ibn Hayyān’s al-Muqtābīs concerning the Andalusi amirate, where a long passage is devoted to him and a great number of his verses are quoted. Al-'Abbās b. Lais, who managed, thanks to his panegyrics, to keep his position at the court of Cordova during three successive reigns, is chiefly represented as a man of curious and inventive mind. He is said to have made a journey to 'Irāk and to have brought back to Spain the Sinadhīn. He was the only one in Cordova to be able to explain the contents of al-'Iṣlāh b. Ahmad’s treatise on metrics. To him is attributed the invention of the fabrication of crystal. He constructed, and offered to his masters, a clock (mabhānā) and an armillary sphere (dhāl al-halāh). He was even a distant precursor of aviation, thinking out a sheath furnished with feathers and mobile wings; had the courage to put it on, to jump from the top of a precipice and to hover in the air for a few seconds before falling—escaping death by a miracle. He was occasionally accused of sandaka, but without success.

AL-'ABBĀS b. AL-HUSAYN b. Shadrāzī, Abū 'l-Fadl, vizier. At the death of al-Muḥallabī in 355/963, al-'Abbās, head of the Dīwan of Expenses, was charged by the Būyid Muṣīr al-Dawla with the functions of a vizier, together with another secretary, Ibn Fasandjas, but without succeeding to the title. After the death of Muṣīr al-Dawla in 356/967, he was appointed vizier by the son and successor of Muṣīr al-Dawla, Baṭḥiyār. He succeeded in suppressing the rebellion of another son of Muṣīr al-Dawla. Owing to the enmity of the chamberlain Subuktākhī, the financial difficulties, and the intrigues of Ibn Fasandjas who hoped to extract money from al-'Abbās, he was deposed in 359/969-70 and put into the hands of his rival. The latter, however, was not more successful in his office and al-'Abbās managed to recover his freedom in 360/971, to be re-appointed as vizier and to eliminate definitively Ibn Fasandjas. His extortion of money, to pay the troops, made him again the butt of hatred, especially that of Baṭḥiyār’s omnipotent majordomo, Ibn Bakjiyya. In 362/973 he was arrested owing the machinations of Ibn Bakjiyya, and the latter was appointed vizier. Al-'Abbās was confined in the house of an 'Alīd in Kūfah and died soon afterwards, probably from poison.

AL-'ABBĀS possessed a palace in Baghdad, called Khākān, which was burned down by order of Baṭḥiyār. On this palace, the festivals held in it, and the other buildings of al-'Abbās, see al-'Iṣnārī, Dhayl Zahr al-'Adab, Cairo 1353, 275 ff.

AL-'ABBĀS b. AL-MA'AMŪN, pretender to the throne under al-Mu'taṣīm. His father, the caliph al-'Abbās, appointed him in 215/828-9 a governor of al-Ḍjazā’ra and the neighbouring frontier district, and he then showed great bravery in fighting the Byzantines. On the death of al-Ma’mūn in 216/833, his brother, Abū Ḥishāk Muḥammad al-Mu’taṣīm bi-'Ilāh, by choice of the deceased, ascended the throne of the 'Abbasids. But their strength was not so strong against the Greeks, however, proclaimed al-'Abbās caliph, although he himself was not in the least disposed to comply with the wishes of his troops and took the oath of fealty to his uncle. After that, he went back to his army and succeeded in appeasing its discontent. Then the caliph, in order to strengthen his position, took many measures of precaution; he had the fortress of Ṭuwānā (Tyana) razed, stopped the war against the Byzantines and disbanded the army. Later, having organized some Turkish regiments as his guard, he loaded them with honors to an extent which disaffected the Arab troops, who had shown themselves sufficiently ill-disposed ever since the death of al-Ma’mūn. "Udjay
b. 'Anbas, an Arab general in the service of al-Mu'tazim utilized this discontent for the purpose of organizing a conspiracy, the object of which was to assassinate the caliph and to put al-'Abbās on the throne. The latter allowed himself to be persuaded; but the plot was discovered, and the conspirators paid for their attempt with their lives. Al-'Abbās died in prison at Manbiḍ in 223/838.

(K. V. Zetterstēen)

al-'Abbās b. Mirdās b. ʿAbī ʿAmr b. Ḥaritha b. ʿAbd Kays, of Sulaym, Arabīan poet of the muḥḥadāramīn. A sayyid in his tribe by noble descent on both sides, he won renown as a warrior as well as a poet; although he did not come up to the fame of his stepmother, the celebrated al-Khansā', his poetical achievements surpassed those of his brothers and his sister all of whom displayed literary gifts and two of whom lived to compose elegies on his death. Impelled, so the story goes, by two dream experiences or epiphanies in which his family idol, Dimār (not Dimad, cf. iii, 353) announced its own downfall and the rise of true prophet, al-'Abbās went to Medina to embrace Islam. Muḥammad, who was at the time preparing for the conquest of Mecca, arranged for al-'Abbās to meet him with his tribesmen at al-Kudayd. Al-'Abbās returned to the Banū Sulaym and burned his idol while his wife, Ḥabība, returned to people in indignation over her husband's conversion. Al-'Abbās kept his word and joined in the fāth Makka (8/630) with some 900 fully armed warriors. He was among the muwāllaṭa al-ḥabībūn, those influential men whose loyalty Muḥammad endeavored to secure by lavish gifts, but demurred when on the distribution of the booty taken from the Ḥawāzīn at the battle of Ḥunayn (630) his present turned out substantially smaller than that of other leaders. As a result of a ḥastāda of protest Muḥammad satisfied al-'Abbās by increasing his share. After the fāth he withdrew to the territory of the Sulaym. He lived into the reign of ʿUmar before whom he is reported to have appeared in a quarrel with another poet. Ibn Saʿd reports that he settled near Baṣra, often coming into town where the Baṣrians would take traditions from him. His son Ǧūḥuma, too, appears as a transmitter of ḥadīth from the Prophet. His offspring settled in and near Baṣra.

Al-'Abbās's poetical fame would seem to be due as much to his colourful personality as to the actual merits of his verse. His muḥḥadīṯ with his fellow-tribesman Khufaf b. Nadha, his poem upon his burning Dimār and accepting Islam, his protest against the Prophet's inadequate donotions, and finally a ḥastāda (Aṣma'iyāyyīl, XXXVIII; cf. introduction, 12) originating in connection with a successful raid into the Yaman are perhaps the best-known of his poems, which it seems were never collected into a dīwān. The available material gives evidence of a certain forcefulness but does not betray unusual talents. Some of his lines are interesting because of dialectical peculiarities, others because of the manner in which they reflect his experience of Islam.

(E. Lévi-Provençal)

al-'Abbās b. Muḥammad b. ʿAli b. ʿAbd Allah, brother of the caliphs Abu l-ʿAbbās al-Saffār and Abū Ḫājīfār al-Muṣāfīr. Al-'Abbās helped to retake Malṭaya in 139/756, and three years later was appointed by al-Muṣāfīr as governor of al-Djazīra and the neighbouring frontier district. He was dismissed in 155/772, but his name continues to figure frequently in the history of the following years, however little important his political part may have been. He especially and often distinguished himself in the wars against the Byzantines. In 159/775-6 he was put at the head of the troops which the caliph al-Mahdīi mustered for an expedition against Asia Minor, and it was with great success that he acquiesced himself of the charge committed to him. He died in 186/802.

al-'Abbās' nāṣīḥ al-Jārāfī,Andalusī poet of the 9th/10th century. He stayed for a long time in Egypt, Ḥijāz and Ṭrāk, and the rise of the true prophet. A confidant of the amīr al-Ḥakam, who appointed him as kāfī of his native Algeciras, he soon made a name for himself both as a philologist and a jurist. The Muḥtabis of Ibn Ḥayyān has preserved numerous specimens of his poetry. He died at the end of the reign of ʿAbd al-Rahmān II, and is recorded as 235/852.

Bibliography: Ibn Ḥayyān, al-Muḥtabīs, i (in press), fol. 129 f.; Ibn al-Faraḥī, Tāwīlī, no. 879; Makkāfī, Naṣīḥ, index.
warned, together with the other Marwanids, not to let loose by their revolts the juma, which would prove fatal to the dynasty. But at the end he had to give in to violence and join the coup d'état of 136/744. Later he was thrown into prison by the last Umayyad caliph, Marwan II. He died in prison in Harran, in an epidemic, in 132/750.

(K. V. Zetterstean-F. Gabrieli)

'ABBĀS EFENDI [see Bahāʿīs]

'ABBĀS HILMI I, viceroy of Egypt, born in 1813, son of Ahmad Tūsun (1793-1816) and grandson of Muhammad ʿAll [q.v.]. He succeeded to his uncle Ibrāhīm, who died in Nov. 1848. From his very accession he showed great hostility to foreigners. The reforms undertaken during the preceding period he chose to consider as dangerous and blameworthy innovations that were best abandoned. Most of the schools opened by Muhammad ʿAll were closed, as well as the factories, workshops and sanitary institutions; he even gave orders to destroy the works of the Delta dam. Many foreign, especially French, officials were dismissed. The result was, from the beginning of his reign, the decline of French influence; on the other hand, he drew nearer to Great Britain. Great Britain offered him its support in the conflict with the Ottoman government about the application in Egypt of the tanzimat [q.v.]. In exchange for this support, Great Britain obtained on 18 July 1851 the authorisation to construct the railway between Alexandria and Cairo. The opening of this line, which was planned to be extended to Suez, was meant to counteract the French project to cut the isthmus of Suez.

Distrustful, brutal, hard, and sometimes cruel, by nature, ʿAbbās quickly became unpopular. It must be noted, however, that at least in the first years of his reign, his aversion to the reforms inspired by the West, helped, by a considerable decrease of the expenses, to relieve the poorest classes of the population. They were granted some remission of taxes and had less to suffer from corvee and conscription. Moreover, certain western and Egyptian historians have tried to explain the reactionary xenophobe policy of ʿAbbās by an ardent patriotism, which, allegedly, induced him to limit by all means the foreign influence of the consequences of which he was afraid; Sammarco, however, has refuted this assertion.

ʿAbbās, impelled by his mistrustful character to live in isolation, retired to his palace in Benha. He was strangled there by two of his servants, on 13 July 1854, in circumstances which were never wholly cleared up. He was succeeded by his uncle Muh. Saʿid [q.v.].

'ABBĀS MĪRZA, son of Fath Ṭāhir ʿAll Shah, born in Dhu l-Ḥijjah 1203/Sept. 1789, in the small town of Nawā, died on 10 Dūmād I 1249/25 Oct. 1833. Although not the eldest son, he was heir to the throne because his mother also belonged to the Kāḍārī family. Europeans who knew him were unanimous in their praise of his bravery, generosity and other excellent qualities. R. G. Watson (History of Persia, 128-9) describes him as being "the noblest of the Kajar race". He was passionately devoted to the military art, and, with the aid of, successively, Russian, French and British officers and men, introduced European tactics and discipline amongst his troops in Adharbaydjan, of which province he was Governor-General for many years. Despite his military reforms, he failed in his campaigns against the Russians, but he was successful in the war against Turkey in 1821-3.
He died at Mashhad during his father's lifetime; on Fath 'Ali Shah's death in the following year (1834), 'Abbâs Mîrzâ's son Muḥammad succeeded to the throne.

'Abbâsâ, daughter of the caliph al-Mahdî, sister of the caliphs Hârûn al-Rashîd and al-Ḥâdî; it is to her that the locality Suwaykat al-Abbâsâ owes its name. She had three husbands in succession, all who predeceased her; this inspired Abû Nuwâs to write some satirical verses, in which he recommended the caliph, should he have to train a traitor killed, to marry him to 'Abbâsâ. Her name is connected with the fall of the Barmakids through the amorous intrigue with Dja'far b. Yâbyâ al-Barmakî, with which she is credited. According to al-Tabârî, Hârûn could not deprive himself of the society of either his sister or Dja'far, so that, in order to have them both with him at the same time, he made them contract a purely formal marriage. They, however, were not contented with the form alone; and when Hârûn learned that they had children, and was convinced that the reports in circulation about them were true, he caused Dja'far to be executed.—Some earlier historians than al-Tabârî do not mention this fact; especially it must be noticed that al-Tabârî, like the others, does not give the names of Dja'far's husbands without mentioning that of Dja'far. Further, al-Tabârî, like the other chroniclers who repeat this story, only mentions it as one of the events which were reported to have caused Dja'far's execution. Later chroniclers amplify the love-story of Dja'far and 'Abbâsâ more and more, until Ibn Khaldûn calls it truth in question, even if on the grounds, which are not very conclusive for us. If one detail, found in the Persian Tabârî, must be believed, 'Abbâsâ was already forty years old when her relations with Dja'far began. It is quite certain that her second husband died eleven years before Dja'far, and these figures put all ideas of a youthful romance out of the question. We may then reasonably look upon this anecdote as the product of popular imagination, to give a poetic aura to the fall of this favorite minister.

This is the more likely in that pagan Arab stories contain a remarkably similar episode of the marriage of the minister of a king with the latter's sister (see *Darâhimâ al-Abrašî*); it was very easy to transfer to Dja'far the motif of this story. What the greater number of authorities report on the subject of 'Abbâsâ is reported by some about two other fictitious sisters of Hârûn, Maymûnâ and Fâkhîshâ! The older authorities say nothing about what happened to 'Abbâsâ after the death of Dja'far; it is only the later writers who have woven mysterious horrors about her end. The love of 'Abbâsâ and Dja'far has frequently appealed to the imagination of European as well as Arabian authors: in 1753 a French romance appeared, and again more recently, in 1904 ( Aimé Giron and Albert Tozza, *Les nuits de Bagdad*).
ABBASABAD — ABBASIDS

[Text continues from the previous page]
as emblems of religious revolt by earlier rebels against the Umayyads. Their use by Abu Muslim was thus an appeal to messianic expectations. His activities aroused some opposition among the more moderate Arab Shi'a, led by Sulaymān b. Kāthir, but a tactical withdrawal of Abu Muslim from Khurāsān was sufficient to demonstrate that no effective movement was possible without him and his policies, and led to his return as undisputed leader of the mission. By Ramaḍān 129/May–June 747 he was ready to show his hand. The time and the place were auspicious. The moderate Shi'a and the Khawāridj, the two most important opposition movements against the Umayyads, had both shot their bolt — the former in the risings of 122/740 and 126/744, the latter in the rebellion of 127/745. These served the double purpose of weakening the Umayyad regime and, by their failure, eliminating possible rivals to the Hāghāni succession. 'Irāk, the main centre of previous anti-Umayyad movements, was exhausted, and was moreover subject to special Umayyad surveillance. In concentrating their attention on Khurāsān, the 'Abbāsids were breaking new grounds. Their choice was good. An active and warlike Persian population, imbued with the religious and military traditions of the frontier, was deeply resentful of the inequalities imposed by Umayyad rule. The Arab army and settlers, half Persianized by long residence, were sharply divided among themselves, and even during the triumphal progress of Abu Muslim diverted their own energies and those of the Umayyad governor, Ṣafir b. Sayyār [q.v.], to Arab inter-tribal strife. Soon Abu Muslim was able to take Marw, and then, ably seconded by his general Kāḥtaba [q.v.], an Arab of the tribe of Tā'yin, seized all Khurāsān from the crumbling Umayyad power. From Khurāsān the ‘Abbāsids forces advanced to Rayy and then, after defeating a relieving Umayyad army from Kirmān, captured Niḥawānd. The way was now open to ‘Irāk. In 132/749 the ‘Abbāsids army crossed the Euphrates some 30 or 40 miles north of Kūfa, and engaged and defeated another Umayyad army led by Ibn Hubayra [q.v.]. Kāḥtaba fell on the field of battle, w. h. his son, al-Ḥasan b. Kāḥtaba, took command, and following up the victory, took possession of the city of Kūfa. ‘Ībrāhīm al-‘Imām had fallen into the hands of the Caliph Marwān in 130/748, and died shortly after. It was therefore his brother, Abu ‘l-‘Abbās [q.v.] who was hailed as Caliph by the Hāghāni troops in Kūfa in 132/749, with the title al-Saffāh. The accession of the first ‘Abbāsids Caliph was accompanied by the first breach with the revolutionaries, when the missionary Abu Salama [q.v.], who was put to death in obscure circumstances, allegedly for attempting to bring about the replacement of the ‘Abbāsids by the ‘Alids. Abu Muslim undertook his removal, perhaps in return for ‘Abbāsids acquiescence in the death of Sulaymān b. Kāthir. Meanwhile another ‘Abbāsids army, led by Abu ‘Awn, advanced from Nihāwānd towards Mesopotamia. In 131/749, in the neighbourhood of Shahraẓūz, east of the Lesser Zāb river, he inflicted a crushing defeat on an Umayyad army led by ‘Abd Allāh, the son of the caliph Marwān. Marwān now himself took the field, and marched across the Tigris towards the Greater Zāb river, to engage the army of his opponent. The latter had meanwhile handed over his command to ‘Abd Allāh, the uncle of al-Saffāh, who had arrived from Kūfa with considerable reinforcements. The battle of the Greater Zāb, in 132/750, sealed the fate of the Umayyad Caliphate. The defeated Marwān fled to Syria, where he tried in vain to organize further resistance. The victorious ‘Abbāsids troops advanced through Harrān, the residence of Marwān, into Syria, occupied Damascus, and then pursued Marwān into Egypt, where he was killed and his head sent to al-Saffāh in Kūfa. The authority of the new ‘Abbāsids caliph was now established all over the Middle East.

Much has been written about the historical significance of the ‘Abbāsids revolution, which historians have rightly seen to be something more than a mere change of dynasty. Many nineteenth century orientalists, unduly influenced by the racial theories of Gobineau and others, saw in the struggle a conflict between the Aryanism of Iran and the Semitism of Arabia, ending in a victory for the Persians over the Arabs, the destruction of what Wellhausen called the “Arab Kingdom” of the Umayyads, and the establishment of a new Iranian Empire under a cloak of Persianized Islam. There is at first sight much to support this view: the undoubted role of the Persians in the revolution itself, the prominent place of Persian ministers and courtiers in the new regime, the strong Persian elements in ‘Abbāsids government and culture. It is not surprising to find some statements to the same effect in the Arabic sources ( Cf. al-Masʿudi, Muridī, viii, 292; al-Ibrāhīmī, al-Dānī, al-Tā’yīnī, i, 181 and 2026; etc.). More recent writers have however made important modifications in the theories both of Persian victory and of Arab defeat. Shi’ism, for long regarded as an expression of the “Iranian national consciousness”, was of Arab origin, and had its main centre among the mixed Arab, Aramaean and Persian population of southern ‘Irāk. It was taken to Persia by Arabs, and remained strongest in areas of Arab settlement like Kumm. The revolt of Abu Muslim was directed against Umayyad and Syrian rather than Arab rule as such, and won the support of many Arabs, especially among the Yemenites. There were many Arabs even among its leaders, including the redoubtable general Kāḥtaba. Though racial antagonisms no doubt played their part in the movement, and though Persians were prominent among the victors, they nevertheless served an Arab dynasty, and, as the fate of Abu Muslim, Abu Salama and the Barmaids shows, received short shrift if they fell foul of their masters. Many high offices under the state were at first reserved to Arabs, Arabic was still the sole official language, Arabian land remained fiscally privileged, and the doctrine of Arab superiority remained strong enough, on the one hand, to induce Persians to provide themselves with fabricated Arab pedigrees, on the other to provoke the nationalist reaction of the Shī‘a ‘ibiyya [q.v.]. What the Arabs had lost was the exclusive right to the fruits of power. Persians as well as Arabs came to the ‘Abbāsids court, and the favour of the ruler, often expressed in the form of “adoption” into the Royal household, rather than pure Arab descent, came to be the passport to power and prestige. If a term must be set to the Arab Kingdom, it must be sought in the gradual cessation of the allowances and pensions formerly paid as of right to the Arab warriors and their families, and in the rise to power of the Turkish guards from the time of al-Mu’taṣim. The real significance of the ‘Abbāsids victory must be sought in the facts of the change that followed it, rather than in dubiously documented hypotheses on the movement that produced it. The first and most obvious change was the transfer of the centre of gravity from Syria to ‘Irāk, the traditional centre
of the great cosmopolitan Empires of the ancient Middle East, and of the civilisation to which Toynbee has given the name "Syriac". The first ʿAbbasid caliph, al-Saffāh, set up his capital in the small town of Ḥāshimiyya, which he built on the east bank of the Euphrates near Kūfa. Later he transferred the capital to al-Anbār. It was his brother and successor, al-ʾAnsārī, in many ways the real founder of the ʿAbbasid Caliphate, who established the permanent capital of the Empire in a new city on the west bank of the Tigris, near the ruins of Ctesiphon and at the intersection of several trade-routes. Its official name was Madīnat al-Salām, but it is usually known by the name of the small town that previously occupied the site—Baghdād.

From this city or its neighbourhood the ʿAbbasid dynasty first ruled, and later reigned, as heads of the greater part of the Islamic world for five centuries. The period of their sovereignty, covering the great epoch of classical Islamic civilisation, may be conveniently considered in two parts. The first, from 132/750 to 334/945, saw the gradual decline of the authority of the caliphs and the rise of military leaders ruling through their troops. During the second, from ca. 334/945 to 636/1238, the caliphs, with one exception, retained a purely nominal suzerainty, while real power, even in Baghdād itself, was exercised by dynasties or families. The main events of these two periods will be treated under the names of the various caliphs, dynasties, places, etc. Here only the broad outline of events will be given, and an attempt made to describe the main characteristics of each period.

1. 132/750—334/945

The ʿAbbasid Caliphate in the days following its establishment must have seemed very insecure to contemporary eyes. Rebels rose against it on every side and for a long time every new caliph had to face risings in and around even the metropolitan province of Ṭirāk. In Syria, Arab supporters of the deposed Umayyads gave trouble, and found encouragement in the growing legend of the Sufyānī, a messianic figure of the house of Umayya who competed with the Ālīd pretenders for the support of the discontented. The Ālīds themselves, temporarily disorganised by the frustration of their hopes, and kept under close surveillance, were for a time in eclipse, but soon reappeared as the most dangerous and determined opponents of ʿAbbasid rule. Even the Khwārījīgī remained an active, if minor, opposition force. Nor were the ostensible supporters of the dynasty wholly reliable. In the prevailing atmosphere of mistrust, only members of the Ābāsid family were appointed to the highest positions—but when Abū ʿAbd Allāh b. al-Mansūr descended from Caliph with the title al-Mansūr, they set up, in the name of the Arab aristocratic monopoly of high office, and the firm establishment in power of the Barmakids, Persian influences became stronger and stronger. Sasanid Persian models were followed in the court and the government, and Persians began to play an increasingly important part in both political and cultural life. This process of Persianisation continued during the reigns of al-Mahādi and al-Ḥādī; the prejudice against the employment of mawdūdī in high places gradually disappeared. To replace the weakening bond of Arab nationality the caliphs laid increased stress on Islamic orthodoxy and conformity, trying to weld their cosmopolitan Empire into a unity based on a common faith and a common way of life. Al-Mansūr's renunciation of the heterodox origins of the ʿAbbasid movement was followed under his successors by a deliberate policy of wooing the orthodox theologians and makers of opinion, and laying a greater stress on the religious element in the nature of the authority exercised by the caliphs. This policy, when contrasted with the disolute lives led by many of the caliphs and their courtiers, often led to charges of hypocrisy, but was in the main successful in achieving its object. Mecca and Medina were rebuilt, the pilgrimage from ʿIrāq organised on a regular basis, and orthodoxy reinforced by an inquisitorial persecution of the various heretical movements and of Manichaeism, which at this time became prominent, under the name of Zandaka, as a revolutionising movement of the poorer classes (see ZINDA). For a time an attempt was made to impose the Muʿtazili doctrine, which, if H. S. Nyberg's attractive hypothesis is correct (see EI 1 ʿAbū ʿAbd Allāh b. al-Mūʿtazīla), was an official ʿAbbasid attempt at a compromise with the Shiʿa. From the

Encyclopaedia of Islam
time of al-Mutawakkil this attempt was abandoned, and thereafter the 'Abbāsids adhered, formally at least, to the most rigid orthodoxy.

The reign of Hārūn al-Rashīd is generally regarded as the apogee of 'Abbāsīd power, but it is at this time that the first portents of decline are seen. In Persia, the series of religious revolts that had followed, the martyrdom of Abū Muslim became ever more threatening, and challenged 'Abbāsīd authority in the Caspian provinces as well as in Khurāsān. In the west, 'Abbāsīd authority disappeared almost completely in Spain, while the Saffarids in Persia and the Tulunids in Egypt and Syria had rejected the 'Abbāsīds and become independent under an Umayyad prince as far back as 138/756. After the death of Yazīd b. Hātim, the last effective 'Abbāsīd governor of North Africa, in 170/787, independent dynasties arose, first in Morocco and then in Tunisia, and the authority of Baghdād was never again asserted west of Egypt. The Aghlabids of Tunisia, exercising hereditary and independent rule under the nominal suzerainty of the caliph, set the pattern for a whole series of subsequent local hereditary governorships, whose encroachments eventually reduced the effective sovereignty of the Caliphate to central and southern Irāq. Another danger-sign showed the weakness of the defences of the Empire. By 'Abbāsīd times the frontiers of Islam were more or less fixed, and the only foreign armies of any importance were with the Byzantines, and even these seem to have been of more show than effect. The inconclusive campaigns of Hārūn were the last major offensives launched against Byzantium by the Caliphate. Thereafter Islam was on the defensive. Byzantine armies sought out weak points in Syria and Mesopotamia, while Kūtar invaders entered Islamic territory in the name of the Shiʿa. Perhaps the most serious factor of weakness was the obscure internal convulsion that culminated in the fragmentation of the Beyazidids and the assumption by Hārūn of the reins of power in his own not too competent hands. This step seems to have shaken the alliance with the Persian aristocratic wing of the movement that had brought them to power, which in the early 'Abbāsīd period gave up the more extremist elements. After Hārūn's death, smouldering conflicts burst into civil war between his sons al-ʿAzmīn and al-Mumān. Al-ʿAzmīn's strength lay mainly in the capital and in Irāq, al-Mumān's in Persia, and the civil war has been interpreted as a national conflict between Arabs and Persians, ending in a victory for the latter. The same objections can be raised to this explanation as to the corresponding theory concerning the 'Abbāsīd revolution itself. The civil war was more probably a continuation of the social struggles of the immediately preceding period, complicated by a regional rather than national conflict between Persia and Irāq. Al-Mumān, relying on eastern support, for a while projected the transfer of the capital from Baghdād to Marw, but some time after his victory wisely decided to return to the Imperial city. Thereafter Persian aristocratic and regional aspirations found an outlet in local dynasties. In 205/820 ʿṬhir, the Persian general of al-Mumān, made himself virtually independent in Khurāsān, and founded a dynasty. His example was followed by others, who, while for the most part still recognizing the suzerainty of the caliphs, deprived them of all effective authority in most of Persia. While the power of the caliphs in the provinces was gradually being reduced to the granting of diplomas of investiture to the de facto rulers, their authority even in Irāq itself was dwindling. A spendthrift court and an inflated bureaucracy produced chronic financial disorder, aggravated by the loss of provincial revenues and, subsequently, by the exhaustion or loss to invaders of gold and silver mines. The caliphs found a remedy in the farming out of state revenues, eventually with the local governors as tax-farmers. These farmer-governors soon became the real rulers of the Empire, the more so when tax-farms and governorships were held by army commanders, who alone had the force to impose obedience. From the time of al-Muʿtasim and al-Wāḥīdī, the caliphs became the puppets of their own generals, who were often able to appoint and depose them at will. Al-Muʿtasim is usually credited with the introduction of the practice of using Turks from Central Asia as soldiers and officers, and from this time the dominant military caste became mainly Turkish. In 220/836 he built a new residence at Sāmarrā, some 60 miles north of Baghdād. Sāmarrā remained the Imperial residence until 279/892, when al-Muʿtamid returned to Baghdād. Its foundation illustrates the growing gulf between the caliph and his praetorians on the one hand and the people of Baghdād on the other. Its art and architecture illustrate the emergence of a new ruling caste with different tastes and traditions. Under al-Wāḥīdī the power of the Turks continued to grow. A serious attempt to reassert the supremacy of the Caliphate was made by his successor al-Muʿtamid, who tried to break the power of the Turkish guards and to rally support against them among the theologians and the civil population, whose orthodox fanaticism he sought to placate by renouncing and suppressing the Muʿtaṣīf doctrines of his predecessors and enforcing the regulations against the Christians and Jews. The attempt ended in failure. The murder of al-Muʿtamid in 247/861 was followed by a period of anarchy. During an interval of nine years four caliphs succeeded one another, but all were helpless in the hands of the Turkish guards, whose control of the court and the capital grew firmer, while the provinces relapsed into anarchy or, at best, autonomy. In Southern Irāq a revolt broke out among the negro slaves, known as Zandj (q.v.), who worked on the salt marshes near Basra. This rapidly developed into a major threat to the Empire. The Zanj leader, who displayed brilliant generalship, defeated several imperial armies, and was able to establish effective control over much of Southern Irāq and South West Persia. The lines of communication linking Baghdad with Basra, and therefore with the Persian Gulf and the trade route to the East, were cut, and by 264/877 Zanj parties were raiding within 17 miles of Baghdad itself. But meanwhile a period of greater stability had begun in the capital. The caliph al-Muʿtamid, who succeeded in 256/870, was not a very effective ruler, but his brother al-Muwallaʾ soon became the real master of the capital, and during the twenty years of his rule did much to restore the failing strength of the house of ʿAbbās. His first task was to restore order and stability in Baghdād itself, then to tackle the problems presented by the Zanj and by the encroachments of provincial leaders, especially the ʿṢaffārīds in Persia and the ʿṬūlūnīs in Egypt and Syria. By 269/882 he had expelled the Zanj from all their conquests, and in 270/883 finally crushed them. Though failing to destroy the ʿṢaffārīds and ʿṬūlūnīs, he did succeed in checking their ambitions, and facilitated the task of his successors. On the
death of al-Muwaffak in 278/891, he was succeeded as real ruler by his son al-Muktafi, who became caliph on the death of al-Mutanabbi in the following year. Al-Muktadid and his successor al-Muktafi were both able and energetic rulers. In Persia and Egypt the authority of the Caliphate was for a time reasserted, leaving the government free to deal with the menace of Shi‘ism, now active again in a militant and extreme form. After the rise of the ‘Abbāsids and the consequent disappearance of the ‘Umayyads, it was the Fāṭimid line of ‘Alī that commanded the support of most of the Shi‘is.

After the death of Dā’ūr al-Sādiq in 148/765, these split into two groups, one of which, known as Ismā‘īlī, inherited many of the functions, doctrines and followers of the vanished ‘Abbasids. The transformation of the Caliphate in the 8th and 9th centuries from an agrarian, military state to a cosmopolitan Empire with an intensive commercial and industrial life, the growth of large cities and the concentration of capital and labour, subjected the loose social structure of the Empire to grave strain, and engendered widespread discontent. The rapid growth of the intellectual life of Islam, and the clash of cultures and ideas resulting from outside influence and internal development, again helped to prepare the way for the spread of heretical movements which, in a theocratic society, were the only possible expression of moral or material dissent from the existing order. The endemic disorders and upheavals of the late 9th and early 10th centuries brought these strains to breaking point, and the caliphs were called upon to deal with a series of challenges ranging in form from the revolutionary violence of the Karmatians (q.v.) in Bahrayn, Syria, Mesopotamia and Southern Arabia, to the more subtle and ultimately more effective criticism of peaceful moralists and mystics in Baghdad itself. Al-Mu‘taṣid died after a defeat at the hand of the Karmatians, but his successor al-Muktasim managed to crush the Karmatian revolt in Syria and Mesopotamia, and, at the time of his death in 295/908, was leading a successful counter-attack against the Byzantines, who had sought to exploit the anarchy of the Muslim Empire. The Shi‘a danger was however far from ended. After a brief struggle for power, al-Muktasim was succeeded by his brother al-Mu‘taṣid, still a boy of 13. During his minority, and the long and ineffective reign that followed it, the destructive tendencies halted by the regent al-Muwaffak and his two successors reappeared. The Karmatians resumed their activities, and from their bases in Bahrayn threatened the life-lines of the Caliphate, while in the west another wing of the Ismā‘īl movement established a Fāṭimid anti-Caliphate in Tunisia. In North Syria the beduin Hamdānids dynasty established itself, while in Persia another Shi‘ite family, the Buyids, began to build a new dynasty that soon threatened even ʻIrāq. In the capital, growing disorder and confusion culminated in the death of the caliph, while fighting his general Mu‘nis. Under his successors al-Kāḥir and al-Rādī, the decay of the authority of the Caliphate was completed. The event that is usually taken to symbolise this process was the grant to the governor of ʻIrāq, Ibn Rādīq, of the title amir al-umāra—Commander of Commanders. This title, apparently intended to assert the primacy of the military commander of Baghdad over his colleagues elsewhere, served at the same time to give formal recognition to the existence of a supreme temporal authority, exercising effective political and military power, and leaving the caliph only as formal head of the state and the faith and representative of the religious unity of Islam. In 344/954 came the ultimate degradation, when the Buyid Amir Mu‘izz al-Dawla entered Baghdad, and the title of amir al-umara, and with it the effective control of the city of the caliphs, passed into the hands of a Shi‘ite dynasty. Almost two centuries had passed between the enthronement of al-Saffār and the arrival of Mu‘izz al-Dawla. Though most of the period still awaits adequate investigation, certain broad lines of development can be discerned. In government, the early ‘Abbāsids caliphs continued along the lines of the late Umayyads, with far less break in continuity than was at one time believed. Certain changes, begun under the preceding dynasty, continued at an accelerated pace. From an Arab super-shaykh governing by the intermittent consent of the Arab aristocracy, the caliph became an autocrat, claiming a divine origin for his authority, resting it on his armed forces, and exercising it through a vast and growing bureaucratic organisation. Stronger in this respect than the Umayyads, the ʻAbbāsids were nevertheless weaker than the old oriental despot, in that they lacked the support of an established feudal caste and a priestly hierarchy and were themselves theoretically subject to the Holy Law, of the authority of which their office was the supreme embodiment. With the transfer of the capital to the East and the entry of increasing numbers of Persians into the service of the caliphs, Persian influences grew in the court and the administration, which was organised in a series of diwāns (q.v.) or ministries, under the supreme control of the wazir (q.v.). The provincial government was carried on jointly by the amir (q.v.) (Governor) and ‘āmil (q.v.) (financial administrator), under the general surveillance of the capital, exercised through the agents of the saḥib al-barid (Director of Posts and Intelligence) (see barid). In the army the Arab element gradually lost its importance, and the pensions formerly paid to Arabs were discontinued except for serving soldiers. The core of the early ‘Abbāsids army consisted of the Kūrāsānīs, a term that is to be understood in a regional rather than national sense, and covering both Arabs and Persians from Kūrāsān. In time these gave way to the Turkish slave troops, who from the time of al-Mu‘taṣim onwards became the main element in the army and, in consequence, the main source of political authority for the various amirs and commanders whose power replaced that of the caliphs.

The ʻAbbāsids came to power through a religious movement, and sought in religion the basis of unity and authority in the Empire they ruled. While broadly successful in this purpose, they had throughout to contend with a series of religious opposition movements and sects, and with the mistrust or reserve of the more conscientious elements among the Sunnite religious leaders.

The political breakdown of the 9th and 10th centuries, resulting in the fragmentation of power in the Empire as a whole and the decline and eventual collapse of authority in the capital, had no immediate ill-effects on the economic and cultural life of the Caliphate. The ʻAbbāsid accession had been followed by a great economic revival, based on the exploitation of the resources of the Empire through industry and trade, and the development of a vast network of trade relations both within the Empire and with the world outside. These changes brought
important social consequences. The Arab warrior caste was deposed, and replaced by a ruling class of landowners and bureaucrats, professional soldiers and literati, merchants and men of learning. The Islamic town was transformed from a garrison city to a market and exchange, and in time to the centre of a flourishing and diversified urban culture. The literature, art, theology, philosophy and science of the period is examined elsewhere (in individual articles). Here it need only be remarked that this was the classic age of Islam, when a new, rich and original civilisation, born of the confluence of many races and traditions, came to maturity.

2. 334/945—656/1258

During the long period from the Buyid occupation of Baghdād to the conquest of the city by the Mongols, the Caliphate became a purely titular institution, representing the headship of Sunni Islam, and acting as legitimating authority for the numerous secular rulers who exercised effective sovereignty, both in the provinces and in the capital. The caliphs themselves, except for a brief revival towards the end, were at the mercy of the secular rulers, who appointed and deposed them at will, and only one of them, al-‘Nāṣir, has left any mark on history.

The appointment of Ibn Rāqīṣ as amīr al-umara² was the first of a long series, and marked the formal recognition of the office of secular sovereign. The main history of the period will be found in the articles on the various dynasties that held it.

In the second quarter of the 10th century a number of princes of the Shī‘ite Persian house of Būya (or Buwayh), originating in the highlands of Daylam, extended their power over most of western Persia, and forced the caliphs to grant them legal recognition. In 334/945 the Buyid prince Mu‘izz al-Dawla entered Baghdād, and wrung from the caliph al-Mu‘tasim the title of amīr al-umara². For over a century the caliphs were compelled to submit to the final humiliation of accepting these Shī‘ite mayors of the palace as absolute masters. Despite their Shī‘ism, the Buyids made no attempt to install an ‘A‘lid caliph—the twelfth Imām of the Iḥānā‘-aṣghar Shī‘a had disappeared some 70 years earlier—but gave outward homage to the ‘Abbāsid masters, retaining them as an orthodox cover for their own power and an instrument of their policy in the Sunni world.

With the exception of the extraordinariness of the Sale in the name of the Fatimid caliph. This brief episode was the high water mark of Fatimid power. In 447/1055 the Seljuk Tughrīl-beg entered Baghdād, and had himself proclaimed as Sultan. This title is often attributed by the chroniclers to earlier rulers who exercised a sovereignty not greatly different from that of the Seljūks. The Seljūk sultans of Baghdād appear however to be the first to have used the title officially and inscribed it on their coins. In effect the Seljuk Great Sultanate, which lasted about a century, was the logical development of the office of amīr al-umara², and the title has remained in use ever since for the holder of supreme secular power.

The Seljūks brought several important changes. Unlike their predecessors they were Turks and Sunnis, and with their advent the power of the Turks, that had been growing intermittently since the time of al-Mu‘tasim, was finally established; by now the Turks in the Middle East were no longer all slave or freed soldiers, imported from Central Asia; whole clans of free, nomadic Turks began to migrate westwards, playing an increasingly important role and in time changing the ethnic configuration of the Middle East. The replacement of a Shī‘i by a Sunni ruler increased the prestige though not the power of the caliphs, as did also the extension of the sphere of influence of the central government, and therefore of the nominal sovereignty of the caliphs, over many hitherto independent lands. The period of the Seljūks, and of the Seljukid and Atabeg dynasties that followed the break-up of the Great Sultanate, brought two major changes. One was the regularisation of the economic and social changes that had been taking place in the preceding period, and the elaboration of a new social and fiscal order of quasi-feudal character; the other was the campaign against the Shī‘ite menace, both on the political and military level through the suppression of Shī‘ite dynasties and movements, and on the intellectual level through the creation of a network of madrasas [q.v.] to serve as centres for the formulation and defence of Sunni orthodoxy against the Shī‘ite propagandists. Both changes encountered a vigorous reaction in the form of the Assassins (see nizāris), an active and energetic revolutionary movement that rose from the ruins of the Fatimid da‘wah and offered a bitter and sustained challenge to Seljuk rule and Sunni orthodoxy. The Assassins ultimately failed, and thereafter Shī‘ism was never again the major political factor until the rise of the Şafawīs.

After the break-up of the Great Sultanate, ʿIrāq fell under the domination of a local dynasty of Seljūk princes, the last of whom was Tughrīl II (573-590/1177-1194). The collapse of his power and the absence of any alternative enabled the ʿAbbāsid caliph al-‘Nāṣir to make a final attempt to restore the lost authority of the Caliphate. The moment was favourable—of the two major dynasties of the Middle East, the Ayyūbīd in Egypt and Syria were preoccupied with the struggle against the Crusaders, the Khūrizm-shāh in the East with his wars against other Turkish dynasties and then against the Mongols. In this power vacuum, al-‘Nāṣir attempted
to create a kind of State of the Church for the Caliphate in Baghhd and l'Irk, and to buttress his authority by seeking popular support through the futuwwa [q.v.] organisations and making adroit use of pro-'Alid sentiment. It was however only the diversion of their energies to meet the Mongol threat in the East that saved him from destruction by the Khwrizm-shahs. Al-Nasir's successors were weak and incompetent, and when the Mongol general Hüllük, having already conquered Persia, appeared before Baghhd in 656/1258, the last caliph al-Mustansir was unable to offer any serious resistance.

The Mongol conquest of Baghhd and the destruction of the Caliphate are usually described as a major catastrophe in the history of Islam. Certainly they mark the end of an epoch—not only in the outward forms of government and sovereignty, but in Islamic civilisation itself, which after the transformation wrought by the great wave of Tatar invasion flows in new channels, different from those of the preceding centuries. But the immediate moral effects of the destruction of the Caliphate have been overrated. The Caliphate had long ceased to exist as an effective institution, and the Mongols did little more than lay the ghost of something that was already dead. To the real organs of temporal power the Mongol invasions made little difference, the only change being that the Sultanate now began to acquire de jure recognition, and sultans began to arrogate to themselves titles and prerogatives formerly reserved to the caliphs.

The 'Abbásid Caliphs of Egypt

The establishment by Baybars of an 'Abbásid shadow-Caliphate in Cairo in 659/1261 has been explained by R. Hartmann as follows: the disappearance of the Caliphate in Baghhd created a political vacuum, affecting not so much the theologians as the secular rulers, who still felt the need for a legitimating authority. Abu Numayy, the Shārīf of Mecca, gave formal recognition to the Ḥāsid ruler of Tunisia Abu Abd Allah, who had assumed the title of caliph, with the regnal name of al-Mustansir, in 659/1261. This assumption, made before the fall of Baghhd, was not in the Sunni juristic sense of the word caliph, but in that of North Africa, conditioned by Almohad claims and practices. It acquired a new value from Abu Numayy's recognition, confirmed by Mamluk action in sending a report on the victory of ʿAyn Djlšt to Abu ʿAbd Allāh and addressing him as amir al-muʿminin—Commander of the Faithful. Baybars, stronger than his predecessor, preferred not to give this recognition to a powerful and possibly dangerous neighbour, and instead solved the problems of legitimacy and continuity by installing an 'Abbásid refugee as caliph in Cairo, with the same regnal name of al-Mustansir.

For the next two and a half centuries a line of 'Abbásids succeeded one another as nominal caliphs under the rule of the Mamluk Sultans in Cairo. Except for a brief interval in 815/1412, when the caliph al-Mustaʿīn became a stop-gap ruler for six months in the course of a feud between rival claimants to the Sultanate, the caliphs in Cairo were completely helpless and powerless, being in effect little more than minor court pensioners with purely ceremonial duties to perform on the accession of a new sultan. Attempts by the Mamluk sultans to use their 'Abbásid protegés as a means of gaining recognition in other Muslim countries met with some limited success, notably in India and in the Ottoman Empire where Bayezid I applied to the Cairo caliph in 1394 for a diploma granting him the title of sultan. But the Ottoman view of the Cairo Caliphate is perhaps best expressed by the 15th-century historian Yazlık-oghluʿAlli, who in describing the role of the patriarch at the Byzantine court calls him "the caliph of the Christians"—a comparison that is far nearer the truth than the more common one between the caliph and the Pope (cf. P. Wittek, in BSOS, 1953, 649 f.).

In 1517 the last caliph al-Mutawakkil was deposed by Selim I, the Ottoman conqueror of Syria and Egypt, and the 'Abbásid shadow-Caliphate abolished. A story that al-Mutawakkil transferred his title to Selim, and through him, to the Ottoman house, was first published by Mordagea d’Ohsson in 1788 (Tableau général de l’Empire Ottoman, i, 269-70), and thereafter won wide acceptance. Barthold however showed this story to be completely without foundation, and it is now generally rejected by scholars [see Khalipa].

The sources for the history of the 'Abbāsid Caliphate are too numerous for anything more than a general statement to be possible. A fuller discussion of the literature will be found in J. Sauvaget, Introduction a l’histoire du monde musulman, Paris 1943, 126 ff., and of the historians in D. S. Marquand, Lectures on Arabic Historians, Calcutta 1930 (cf. al-Ma‘bari). The first group to be considered are the chronicles. While a large proportion of these have been published especially for the earlier period, surprisingly little use has been made of them, and most of the 'Abbāsid period still awaits its monographers. Still less attention has been paid to the adab literature, perhaps the best expression of the outlook and attitude of the secular literate classes who administered the Empire, and a fruitful source of historical information. Travel and geography, poetry, theology and law all have an important contribution to make to historical knowledge, and except for the first two, have been little used. To the vast Muslim literature may be added the smaller but still valuable literatures of the Christians and Jews, in Arabic, Syriac, Hebrew, and some other languages. Finally, there remains archeology.

A useful summary and bibliography of archeological work will be found in the above-mentioned book of Sauvaget.

No general history of the 'Abbāсидs has been produced for many years, and the reader must still have recourse to early and out-of-date works like G. Weil, Geschichte der Wissenschaften zu Berlin, Phil.-hist. Kl. 1928, 2 vols., Stuttgart 1918 (abridged English translation by S. Khuda Bukhsh and D. S. Margoliouth, London 1938), and 'Abd al-'Azīz al-Muhammad, Studies on the economic life of Mesopotamia in the 10th century, in Arabic, Baghdad 1948. Reference may also be made to A. J. Toynbee, A study of history, London 1934 ff.

Only the accession and the first few reigns have been monographed in any detail. On the 'Abbāsid revolution Van Vloten and Wellhausen are mentioned in the article. Th. Noldeke's Orientalsche Skizzen Berlin 1892 (English translation by J. S. Black, London 1892), includes studies on al-Manṣūr, the Zanj rising, and the Ṣaffārids. The most valuable work to date on the early 'Abbāsid period will be found in the studies of F. Gabrieli (al-'Amin, al-Mu'tamid) and S. Moscati (Abū 'l-Mahdī, al-Hādī), which, with other monographs, will be found listed under the appropriate articles. For two studies by S. Moscati on particular problems connected with the 'Abbāsid victory see Il "Tradimento" di Wdsit, Mission 1951, 177-86, and Le massacre des Umayyades, ArO 1951, 85-115. Reference may also be made to N. H. Abbott, Two queens of Bagdad, Chicago 1937, dealing with the mother and wife of Hārūn al-Raṣīl and giving a description of some aspects of court life, and A. F. Rifà', Asr al-Ma‘mūn, Cairo 1927. The period from 892 to 946 has been studied in great detail by H. Bowen, The life and times of 'Abbās ibn 'Abd al-Muṭṭab, Cambridge 1928. This must now be supplemented by an important additional source—the Akhbār al-Raṣīl wa-l-Muṭṭabkī of al-Ṣūf (ed. J. H. Dunne, Cairo 1935; annotated French translation by M. Canard, 2 vols. Algiers 1940-50). Two important works of a more general character deal with the middle period: A. Mez, Die Renaissance des Islam, Heidelberg 1922 (English translation by S. Khuda Bukhsh and D. S. Margoliouth, London 1938), and 'Abd al-'Azīz al-Dūrī, Studies on the economic life of Mesopotamia in the 10th century, in Arabic, Baghdad 1948. Reference may also be made to general works in Arabic by Aḥmād Aḥmād, A. 'A. Dūrī, Ḥasan Imāmī Ḥasan and others.

'BABBASID ART [see SAMSARA]
AL-ABBASIYYA, old town of Ifrīkīya (Tunisia), three miles to the S.E. of al-Kayrawān. It was also known by the name of Ḥārāb b. al-Aḍḥalī and al-Ḵṣār al-Kadīm. It was built by Ibrāhīm b. al- Ağlabī, the founder of the Aḥlabī dynasty, in 184/800, the same year in which he was appointed amīr of Ifrīkīya, after the revolt of some leaders of the Arab ḏūnā. He gave his foundation the name al-ʿAbbāsīyya in honour of the ʿAbbāsīs, his masters. The town contained baths, inns, sākhs and a Friday-mosque with a minaret of cylindrical form, built of bricks and adorned by small columns arranged in seven storeys. After the example of the great mosque of Kayrawān, a maksūra of carved wood, adjoining the miskřābīb, was reserved to the amīr and high dignitaries. The town had several gates, the following being the most important: Bāb al-Rahma (of Mercy), Bāb al-Ḥadīd (of Iron), Bāb Ghabilīn (attributed to al- Ağlabī b. ʿAbbāl Allāh b. al- Ağlabī, relative and minister of Ziyādat Allāh I) and Bāb al-Rīh (of Wind)—all these in the east; and Bāb al-Saʿāda (of Happiness), to the west. In the middle of the town there was a large square called al-Maydān (Hippodrome), where the parades and reviews (ʿard) of the troops took place. Not far away was the palace of al-Rusāfā (of Wind), recalling by its name those of Damas-cus and Baghdad. It was in this palace that Ibrāhīm ibn Ḥamdīn received the ambassador of Charlemagne who came to ask for the relics of St. Cyprian and delivered the gifts destined for the caliph Harun al-Rashīd. It was also there that the truce (ḥudna) of ten years and the exchange of prisoners was arranged with the gifts destined for the caliph Harun al-Rashīd. From its foundation, al-ʿAbbāsīyya had a mint (dar al-darb) where gold dirhams, silver dinārs and silver dirhams, bearing the town's name, were coined. An official factory of textiles (firās) produced the robes of honour (khīla) and the standards. Under the successors of Ibrāhīm I, al-ʿAbbāsīyya was provided with monuments of public and private utility. Abū Ibrāhīm Ahmad built a large reservoir (sakrīq or ḥāshiyya) of which important remains have been preserved. The basin had an abundant supply of water, which was carried to Kayrawān in the summer, when the cisterns of the capital were exhausted.—The town of Raḵḵāda, founded in 264/877 by Ibrāhīm II, some miles further to the south, replaced al-ʿAbbāsīyya as residence. Al-ʿAbbāsīyya sank to the level of a township, inhabited by mawsūlīs and tradesmen, but continued to exist in a modest way until the Hilālīan invasion (middle of the 5th/11th century) when it disappeared for good. A cursory excavation, in 1923, of the hill (teill) where al-ʿAbbāsīyya was situated, brought to light many potsherds belonging to the Aḥlabī period. This white pottery with large black, green and blue decoration was not doubt inspired by oriental models coming from Irāk (Sānnārā, Raḵḵā) and Egypt (Fustāt). It is worth mentioning that al-ʿAbbāsīyya was the birth-place of several scholars, notably of Abu ʿI⁻Arab [q.v.] Muḥ. b. Abmad b. Tamīm, first historian of al-Kayrawān (d. 333/945).

tice. We have the example of the Kalbite Zayd b. Haritha, who became the adopted son of Muhammad: a valuable example, even if it has been touched up in the manner of Tradition (see the decision attributed to 'Umar, infra, as plausible evidence pointing the same way). We have, however, nothing conclusive on the existence of enslavement for debt or the sale of children by their families: the late and rare accounts of such occurrences (Abūnāh, i, iii, 97; xii, 4) show them to be abnormal.

It would moreover be unwise to stretch the scanty information we have on the condition of slaves in the Hijāz before Islam, to fit every locality and every social division. Nomads and sedentaries, in particular, may have shown evidence of quite a different attitude, even in those days: we shall come to the modern period later. The abiding scorn of slave ancestry, even if only on the mother’s side, the satire aimed at the man who marries a captive girl (G. Jacob, Alawah. Beduinenleben, Berlin 1897, pp. 137-8, 213; Bichr Fares, L'honneur chez les Arabes avant l'Islam, Paris 1932, p. 71) are perhaps characteristic of beduin mentality, rather than indicative of the general outlook of town-dwellers. The biography in literary form of the renowned warrior-poet 'Antara, son of a beduin and an Ethiopian slave-girl, who has to perform dazzling feats of arms before his father, will consent to legitimize him, is a roman à thèse (Lammens, Le berceau de l'Islam, Rome 1914, p. 299) against disinheritig the children of such unions, indeed against keeping them in slavery: proof that the question had some immediacy and demanded a liberal answer, at any rate in some quarters.

It is probable that the usual practice of the pre-Islamic Arabs was influenced by an ancient Semitic distinction between two classes of slave, never perhaps reduced to a strict legal principle (I. Mendelsohn, Slavery in the Ancient Near East, New York, 1949, pp. 57-8) and never ratified by Muslim law, but which has left traces here and there in the code of behaviour of Islamicized lands: in contrast with the purchased slave (‘abd al-mamlakah), the slave born in his master’s house (‘abd usu) is entitled to full and complete rights of ownership (xxiv, 33)—in accepting it as fact that in pre-Islamic times female slaves were prostituted for the benefit of their masters, again in accordance with a Near Eastern custom of great antiquity (Mendelsohn, op. cit., p. 54).

2. The Kūrān. The Religious Ethic

a.—Islam, like its two parent monotheisms, Judaism and Christianity, has never preached the abolition of slavery as a doctrine, but it has followed a valuable example, though in a very different fashion in endeavouring to moderate the institution and mitigate its legal and moral aspects (for the part played in this by Christianity, see M. Bloch, in Arnulfs, 1947, and Imbert, in Mélanges F. de Visscher, Brussels, 1949, vol. i). Spiritually, the slave has the same value as the free man, and the same eternity is in store for his soul; in this earthly life, falling emancipation, there remains the fact of his inferior status, to which he must piously resign himself.

The Kūrān regards this discrimination between human beings as in accordance with the divinely-established order of things (xvi, 71, 75; xxx, 28). But over and over again, from beginning to end of the Preaching, it makes the emancipation of slaves a meritorious act: a work of charity (ii, 177; xc, 13), to which the legal alms may be devoted (ix, 60), or a deed of expiation for certain felonies (unintentional homicide: iv, 92, where a "believing slave" is specified; perjury: v, 89; xviii, 3); consent must be readily given to contractual emancipation (xxiv, 33). The emancipated slave is mentioned among those who should be treated "kindly" (bāsāmīn, iv, 36). Furthermore, his dignity as a human being is shown in certain ordinances relating to the sexual side of social relationships. We have already mentioned the ban on the prostitution of female slaves (xxiv, 33); nobody may lawfully enjoy them except their master (xxiii, 6; xxxiii, 59, 18x, 30) or their husband, for legal marriage is open to slaves, male and female. Masters have the moral duty to marry off their "virtuous" slaves of both sexes (xxiv, 32); if need be it is even permissible for Muslim slaves to marry free Muslims (ii, 221; iv, 25). The slave-woman who, obtaining her master’s consent, which is essential, marries a free man, is entitled to "a reasonable dowry" from her husband. She is obliged to remain faithful to him; but if she commits adultery her slave status re-emerges in the curious provision that she is liable to only one-half of the punishment reserved for the free married woman (iv, 25). Finally, the Kūrān protects the slave’s life, to some extent, by the law of retaliation, but the formula "the free for the free, the slave for the slave" (ii, 178) shows clearly how in penal matters the principle of inequality is maintained.

b.—The more or less official Muslim ethic, expressed in the hadīths, follows the line of Kūrānic teaching; it even lays perceptible stress on the humanitarian tendencies of the latter in the question with which we are dealing. Al-Ghazālī, in the Ihyā‘, ed. 1946 A.H., ii, 195-7 (jāhād al-mamlakah) (transl. G.-H. Bousquet, AIEO 1952, 423-7) had only to string together a number of well-known hadīths to produce what amounts to a lecture on ethics for slave-owners, illustrated by examples.

Tradition delights in asserting that the slave’s lot was among the latest preoccupations of the Prophet. It has quite a large store of sayings and anecdotes, attributed to the Prophet or to his Companions, enjoining real kindness towards this inferior social class. ‘‘Do not forget that they are your brothers’’; at any rate when they are Muslims, as some texts specify.—‘‘God has given you the right of ownership over them; He could have given them the right of ownership over you’’; ‘‘God has more power over you than you have over them’’. Thus the master is recommended not to show contempt for his slave; not to say ‘‘my slave’’ but ‘‘my boy, my servant’’ (u. supra), to share his food with him, to provide him with clothing similar to his own, to set him no more than moderate work, not to punish him excessively if he does wrong, to forgive him ‘‘seventy times a day’’, and finally to sell him to another master if they cannot get on well together.

Manumission is commended as a happy solution in many cases and is suggested as a way for the master to make amends for excessive chastisement of his slave. It is recommended, in the same category
as alms-giving, at the time of an eclipse, and is included among the various possible ways of expiating a voluntary breaking of the fast of Ramadan: the Qur'an prescribes no more than "the feeding of a poor man": ii, 184). A twofold reward in heaven is promised to the man who educates his slavegirl, frees her and marries her. A famous hadith affirms: "The man who frees a Muslim (v.l. 'a believer') slave, God will free from hell, limb for limb".

It is the duty of the slave, for his part, to give loyal service. He is "the shepherd of his master's wealth" and will be asked for an account of it in the next world. His reward in paradise will be twofold if, in addition to performing the usual religious obligations, he has the especial merit of having given good advice to his master.

If the Qur'an and Tradition show a certain favouritism towards such slaves as are Muslims, another direction is shown in hadiths forbidding the keeping of male Arabs in slavery; they invoke a decision to this effect said to have been given by the caliph 'Umar, in favour of disposing of instances of slavery against the payment of a ransom, where these were the result of "pre-Islamic practices" (see especially Ibn Sallām, K. al-Am'ādi, pp. 133-4).

Bibliography: Wensinck, Handbook, s.v. slaves.

3. Fīkh

Under the heading of fīkh properly so-called, we shall have recourse to the main provisions agreed on by the great Sunni schools. Thereafter we shall note very briefly some typical solutions adopted by Imām al-Shī'ism.

a.-Apart from the occasionally operative distinction between Muslim and non-Muslim slaves, Muslim law recognizes only one category of slaves, regardless of their ethnic origin or the source of their condition. The institution is kept going by only two lawful means: birth in slavery or capture in war, and even of these the latter is not applicable to Muslims, since they may remain enslaved they cannot be reduced to slavery. Legally therefore, the only Muslim slaves are those born into both categories or who were already slaves at the time of their conversion to Islam. Their number tends to diminish both through emancipation, particularly recommended in such cases, and through the following provision: whereas the usual principle of Muslim law is that the child assumes at birth his mother's status, free or slave, an exception, of all the more importance in view of its wide application, is made in favour of the child born of a free man and a female slave belonging to him; such a child is regarded as free-born (otherwise he would be his father's slave). What this amounts to is that slavery could scarcely continue to exist in Islam without the constantly renewed contribution of peripheral or external elements, either directly captured in war or imported commercially, under the fiction of the Holy War, from foreign territory (dār al-'arb).

It is pleasing to see that in the eyes of Muslim jurists slavery is an exceptional condition: "The basic principle is liberty" (al-āqīl huwa l-ḥārijyā). Consequently, for the majority of them, the presumption in favour of freedom; on the whole they have come down on the side of regarding as free the foundling (lākīh) whose origin remains unknown. But it may fairly be stated that, despite the strictness professed by certain doctors of the law, the fīkh has never evolved an adequately clear system of sanctions to suppress the kidnapping or sale of free persons, Muslim or non-Muslim. Still less do we see any positive denunciation of the practice of castrating young slaves, although it was condemned in principle.

b.—On the juridico-religious level, the slave has a kind of composite quality, partaking of the nature both of thing and of person. Considered as a thing, he is subject to the right of ownership—indeed it is in this that the strict definition of slavery lies—exercised by a man or woman, and he may be the object of all the legal operations proceeding from this position: sale, gift, hire, inheritance and so on. In this respect he is "a mere commodity" (ṣīrā min al-sīrā). In the various classes of property distinguished by the fīkh, he generally ranks with the animals and his lot is like theirs: the new-born slave, for instance, is the "fruit" (ghallā) of his mother, like the young of cattle, and belongs to her master; in the theoretical treatises on public law, the mudābisīb is given the duty of ensuring that masters treat their slaves and their animals properly. The slave may (as among the Romans and in Christian Europe) belong to two or more owners at the same time: he is then said to be "held in common" (muğālarak); such joint ownership gives rise to some extremely complex legal positions, which provide abundant material for the casuistry of the doctors. Again, it should be noted that the law lays down the amount of the reward which may be claimed by the one who restores a runaway slave (ībāk) to his master.

Yet the slave, even from the point of view of the right of ownership, of which he is the object, is not always treated exactly like other property. Mālikī law, for example, allows, in towns where it is the customary usage, an automatic guarantee of three days, at the expense of the seller of the slave, against any "faults" (wārūd) in the latter (one year in the case of madness or leprosy). The fact that a master may legally have sexual relations with his female slaves gives rise to a system of regulating these relations, which has repercussions elsewhere on the exercise of the right of ownership: thus a distinction is sometimes drawn between costly female slaves, intended for cohabitation, and ordinary female slaves (e.g. Muwaddiwana, vi, 192 seq., concerning a clause of non-guarantee in sale), between female slaves within and outside the prohibited degrees of relationship to the interested party (e.g. in the matter of the loan of consummation, ḥārd, except among the Ḥanafīs, who forbid it with all living things). Further, the regard for kinship has an even more striking effect. It is forbidden to separate a slave mother and her young child, up to about the age of seven, by their becoming the property of different different masters (a hadith runs: "Whoever separates a mother from her child, God will separate her from his dear ones on the Day of Resurrection"). Under pain of nullity of the legal transaction; the Ḥanafīs, more reluctant to impose legal sanctions, brand as "objectionable" the separating of a slave, not yet arrived at puberty, from any close blood-relative within the prohibited degrees, whether the latter is of age or not. Emancipation follows automatically, except in the Zāhiri school, when a slave becomes the property of a very close relative: according to the Shī'īs, only in the ascending and descending lines: the Mālikīs add brothers and sisters too, while the Ḥanafīs extend the rule to all relatives within the prohibited degrees. Religious affiliation is also taken into account, inasmuch as non-Muslims cannot
keep Muslim slaves; they must either free them or
dispose of them to Muslim masters.

If the master fails to meet his moral obligation of
providing for the physical maintenance (nafaka)
of his slave, the law requires in the last resort that
the latter be sold, a solution also enjoined, except by
the Ḥanafīs, in the case of animals. The Mālikīs
hold that emancipation is compulsory (cf. Exodus,
xxi, 26-7) when the master carries his ill-treatment
of his slave to the point of mutilation or disfigure-
ment. Later, when we come to deal with personal
rights, we shall meet with other instances of curtail-
ment of the absolute right of ownership, as of other
features of penal law.

c.—On the personal rights of the slave, that is, on
his juridico-religious competence, it is interesting to
see whether the classical jurists have ever attempted
a general theory that would bring out the principles
underlying the solutions scattered under the various
headings of fiqh. One such attempt is to be found
in the works of the Ḥanafi al-Pazdawi (d. 482/1089),
commented on and imitated in the later treatises on
waṣīl al-fiqh; the basic ideas, Ḥanafi of course, are as
follows (waṣīl, ed. Istanbul 1307 A.H., pp. 1401-1426):
slave-status is incompatible with "patrimonial
ownership" (madākiyyat al-mdl), whence it follows
for example, that the slave cannot take a concubine,
but is compatible with "non-patrimonial ownership"
(madākiyyat ghayr al-mdl), whence it follows, for
example, that the slave may marry. His status does
not debar the slave from administering property
and laying claim to the "possession" (yad) of it,
but is incompatible with the full exercise of the
higher legal faculties of the human being: his ghimmah
(abstract financial responsibility) and his bi'li (free-
dom of action in sexual matters) are reduced, and
all waṣīlāyyāt (public or private offices of authority)
are forbidden to him. More recent works, of the type
of the Ashbāk wa-Nazdīr by the Shāffiite Suyūṭī
and the Ḥanafite Ibn Ṭuḥayyīn, merely give dry
and rather disjointed lists of the manifold rules
about what slaves may and may not do.
d.—On the male slave's claim to full personal
rights, it is a question of differentiating between a
religious status (ibtidādi) theoretically identical with
that of his free coreligionists (the contrary opinion is exceptional; e.g.
in one solitary Mālikī, cf. Ibn Ṭuḥayyīn, Dibāḏī,
1329 268), but some derogations were more or
less inevitable on certain points. Most authori-
ties hold that his dependence on a master absolves
him from the strict necessity of performing such
pious acts as involve freedom of movement: the Fri-
day prayer, pilgrimage, the Holy War. Another
consequence of this dependence is that the master
is responsible for the annual payment of his "alms
at the breaking of the fast" (ṣahād al-fitr). The Muslim
slave-woman is not under such strict an obligation to
"hide her nakedness" (saṣr al-suṣura) at the ritual
prayer as the free woman is. The slave is not forbidden
to act as leader (iṣmād) of congregational prayer,
although the Ḥanafīs disapprove of the practice,
and some other authorities do not permit him to
become a salaried iṣmād, or at any rate they prefer
a free man to hold the office, if one is available of
the required competence. The question of his acting
as iṣmād at the midday prayer on Fridays and
the two canonical festivals is more debatable,
especially if this office is regarded as an emanation
from the public authority; even within the various
schools there is disagreement about whether or not
it is allowable. On the whole, however, the affirm-
ative answer seems to have prevailed, except among
the Ḥanbalīs. The slave is no more qualified to
hold a position of religious magistrature (judgeship,
ṭiba) than an official position of secular authority;
he is nevertheless acceptable as a subordinate officer
in the revenue department.

e.—In matters of law in the strict sense (muʿāmalāt),
the slave's incompetence to act (baqir) is assumed
in principle, but is not absolute. If he is a Muslim, the
fiqh confirms and expressly states his competence to
contract a marriage, as clearly laid down in the Kurʾān
(v. supra); but the master's consent is required both
for male and female slaves (according to the Mā-
likīs, the male slave of full age may marry of his
own accord, but the master then has the right either
to ratify the marriage or to terminate it by repu-
diation) and it is the master who acts as "guardian
for matrimonial purposes" (waṣīl) of his female slaves.
The master can even marry off by "compulsion",
(ghabr) a male slave, not yet of age, or a female slave
(the father of a family has a similar right over his
children); the schools of Abu Ḥanīfah and Mālik
concede him the same power over a male slave of
full age. The Ḥanbalīs alone, on the other hand, hold
that the slave may insist on his master's marrying
him off. Notwithstanding reservations and restrictions
based on the words of the Kurʾān, and in spite of
the customary requirement of "compatibility" (ḥafidż)
between the parties, the jurists admit and
lay down rules for marriage between Muslims of
whom one is a slave and the other free. We have
convincing evidence that, in the course of the cen-
turies, such unequal marriages occurred (to the
advantage to the slave, male or female, concerned)
more often than one might think. A slave wife, on
being emancipated, has the right to opt for divorce
if her husband is a slave and, according to the
Ḥanafīs, even if he is free.

A Muslim cannot be the husband or wife of his
or her slave (nor even, some would add, of the slave
belonging to his or her son); there is an absolute in-
compatibility, for the same persons, between connu-
bism and ownership. In contradiction to the other
rites, the Ḥanafīs permit a Muslim, even a free Muslim,
to marry a Jewish or Christian slave-girl. The slave
is entitled to a maximum of two wives, except in
the Mālikī view, which grants him four, just like
a free man. The Mālikīs are also alone in conceding
that a slave-wife has the right to share in her hus-
band's nights on equal terms with a free co-wife;
the other jurists allow her only one night in three.

The obligation, which is generally recognized as
incumbent on a slave-husband, to maintain his wife,
gives rise to various solutions if he is not legitimately
possessed of adequate means.

Although the majority of authorities deny that
the male slave of full age can contract a valid marri-
age of his own free will, yet all agree that he has
the husband's usual right of repudiation (halāk) as
he thinks fit. But in accordance with the general
tendency to reduce by one-half, in the case of
the slave, all figures prescribed for free men, he may only
take back his wife after one single formula of repu-
diation, instead of the two which the Koran (ii,
229) lays down as a maximum. Consequently a
twofold repudiation on his part has the same decisive
result as a threefold repudiation by a free man;
the Ḥanafīs alone, who in the matter of repudiation
have more consideration for the woman than for
the man, apply this reduction if it is the wife who is
a slave, whether or not her husband is a free man.
The Ḥanafīs also set themselves apart from the other
schools in not permitting the married male slave to
use the device of "cursing" (ḥādūn), instituted by the
Kur'an (xxiv, 6-9) to the advantage of the husband who may accuse his wife of adultery with no legal proof. The "legal period of withdrawal" ('idda) which must be observed by widows or repudiated woman (Kur'an, ii, 228, 734; lv, 4) is also halved when the woman in question is a slave: 1) two months and five days for a widow, instead of four months and ten days; 2) two menstrual or intermenstrual periods (depending on the school) instead of three (one could hardly say one-and-a-half) for the repudiated woman who is usually regular, except that the Zahirists keep the figure at three; 3) one month and a half for the repudiated woman who is not usually regular, except according to the Mālikīs, who oddly enough, as Averroes remarks (Bidaya, ed. 1935, ii, 92; tr. Laimèche, 233-4), here hold to the figure of three.

Far more important in practice, on account of its wide application and great bearing on social life, is the system of legal concubinage in fiqh as in the Kur'an, extramarital cohabitation is permissible only between a man and his own female slave; he is forbidden to cohabit with a slave belonging to his wife, even with the latter's consent (contrary to the Biblical custom), but indulgence is shown if he has relations with a slave belonging to his son. Co-owners of a female slave may not cohabit with her, nor may a sole owner cohabit with a married female slave. When the concubine (surriyya) has a child by her master, she enjoys the title of umm walad [q.v.] and an improved status in that she cannot be sold and becomes free on her master's death (compare the Code of Hammurabi, para. 170; but for the fluctuations in old Islamic practice see J. Schacht, in E. I. s.v., and The Origins of Muhammadan Jurisprudence, Oxford, 1950, 264-6); that child and any other she may subsequently have born are free. There is no limit to the number of concubines as there is to the number of wives, but almost all the authorities teach that there are the same bars to cohabitation as to marriage: natural or acquired kinship, two sisters together, the woman's professing a heathen religion.

With the especial aim of avoiding confusion over parentage, in the absence of any initial ceremony or 'idda, the jurists have prescribed a temporary ban on sexual relations, in the case of a slave-woman, for "verification of non-pregnancy" or istibrid', when for any reason she becomes the property of a new master or changes her status (emancipation, marriage). If she is pregnant, this ban lasts till her confinement, as with the 'idda; if not, its duration is one menstrual period. If she is not yet regular in her periods or has ceased to be regular, the authorities differ: one month or three months is the usual rule. Mālikis and Hanbalis make the seller of the slave-woman share in the responsibility of the istibrid'; the former entrust her (muwadda') to the supervision of a third person. There is considerable difference of opinion on points of detail in the numerous cases where the istibrid' would appear to be no longer obligatory, as serving no purpose; to avoid it, recourse is had to certain devices of procedure, particularly by the Ḥanafī devotees of "circumventions of the law" (hiyā'il) (well-known anecdote of Hārūn al-Rashīd and the ḫādi' Abū Yūsuf, which has found its way into the Arabian Nights).

The children born of legal concubinage are legitimate and, in the matter of succession to their father's estate, are on the same footing as children born in wedlock. But it is harder to establish legally the paternity of a master, with all its legal and social consequences, than that of a husband; besides, the old Ḥārābī jurists were loth to declare it officially if there was no expression of willingness on the part of the master concerned. The Ḥanafīs too stand apart from the other schools in not fathering a child on the master unless the latter acknowledges it, and in permitting him to disown it if there is a legal presumption in favour of his paternity inasmuch as the concubine is already umm walad. In the other schools, the master of an unmarried female slave is legally regarded as the father of her child, not only if he acknowledges it as his own but also if he makes an implicit admission of having had relations with her, as is obviously the case if she is already umm walad. It is open to him to deny paternity only if cohabitation was manifestly impossible within the—very wide—officially recognized limits of the term of pregnancy, or if he takes an oath that he put his concubine in istibrid' at least six months before the date of the birth, and that he has not cohabited with her since. The ascription of paternity becomes complicated in such abnormal situations as when two co-owners of a slave cohabit with her during the same intermenstrual period, or when two entitled parties in succession have had relations with her without istibrid'; recourse is then had to the ruling of the "physiognomists" (khuf'pl. kāfa), an ancient Arabian expedient difficult of application at certain times. Failing this, the child is left to choose for himself at puberty. Here again the Ḥanafīs stand alone in refusing to ratify this archaic institution; they prefer, if the decision proves to be rationally impossible, to set up a kind of two-fold paternity.

Most authorities deny the slave-woman the right of custody (ḥadāsā) over her children to which the free woman is entitled, nor do they permit the male slave to be a "guardian for matrimonial purposes" (walī). The Shāfī and Ḥanafī schools (who have not ratified the partial tolerance of Abū Ḥanīfa) refuse to allow the slave to act as executor of a will (waṣf). The testimony (shahida) of a slave is not admissible in court, except among the Hanbalis, and even they do not accept it in connection with the most serious punishable offences. His affirmation (ifṣār) is generally accepted in matters affecting his person (apart from restrictions imposed by certain authorities) but not in matters of property.

All the schools agree that the master can do as he likes with property in the possession of his slave and is at liberty to take it away from him. In the eyes of third parties, the ordinary slave has no patrimony of his own; his business activities, which are severely restricted, are on behalf of his master, who alone is financially competent to act. Nevertheless the Mālikīs take up the remarkable position (for an interesting justification see ʻAbd al-Wahhāb, ʻIṣbūl, i, 270) of recognizing the slave's "ownership" (milh) of his peculium, whose source is mainly from gifts or bequests which it is permissible for him to accept on his own account, although the ownership here is precarious and may not be disposed of without consent. Two important consequences of this doctrine are that, according to the Mālikīs, the slave may lawfully have concubines without giving rise to any theoretical difficulties, and that on gaining his freedom he may keep his peculium, unless his master has formally announced his wish to retain it.

Finally, apropos of patrimony, there is quite a common practice, known from remote Semitic anti-
quity and from the Classical world, which provides the slave with a real, though not unrestricted, legal competency: it consists in the master's putting his slave in charge of a business or of certain specified business dealings, entrusting him with a capital sum where necessary. The slave is then said to be "authorized" (ma'dhun or ma'dhun lah). The effects of this "authorization" (i'tibl), which may nevertheless be revoked, are conceived in more or less generous terms by different jurists. The recipient always in fact becomes relatively independent, so as to be able to deal quite freely with third parties. The authorities are well-nigh unanimous in not making the master responsible for the debts of his "authorized" slave; the Hanafis, followed with some hesitation by the Hanbalis, allow them to be recovered on the "physical person" (nakaba) of the slave debtor, if the capital at his disposal is inadequate; in other words he may be sold to pay them. On the other hand, the Malikis and Shafiis recognize his "abstract responsibility" (zdimmah); the "obligation to pay" (dasy) they leave standing to the account of those creditors whom the assets are insufficient to satisfy, while deferring the "execution of payment" (mudilaba, "Haftung") till such time as the slave is compensated.

1.—It is in connection with punishments (u'khdb) that the hybrid and indeterminate character of the legal nature of the slave, who is simultaneously a thing and a person of inferior status, breaks through the complicated web of solutions presented by the fiib. Here is a curious example, of an unusual kind but mentioned as clearly showing this ambivalence: the "legal compensation" (diya) for the foetus aborted by a free woman is a young slave of either sex, technically known as chura, whereas the compensation for victims duly born is reckoned in camels or money.

To what extent is the law of retaliation (bi'dzg) applied to slaves, on the basis of Kur'an, ii, 178 (u. supra)? In a case of intentional homicide it works against the slave, whether the victim be bond or free (if he is free, it is no doubt not precisely the idea of retaliation which underlies the punishment); but the schools object to putting a free man to death for killing a slave, with the noteworthy exception of the Hanafis (and also of that illustrious, albeit somewhat dissident, Hanbali, Ibn Taymiyya; cf. Laoust, Etats, 418, 438), and even they exempt the man who kills his own slave or one belonging to his son. The Malikis are almost alone in conferring on the victim's next-of-kin the ownership of the guilty slave (again with a great many reservations), to do with him as he pleases: he may put him to death, keep him in slavery or set him free. This may be a survival of an archaic solution, elsewhere replaced by the simple choice, as in the case of free men, between retaliation and compensation according to the tariff. In cases of deliberate wounding the Shafiis apply retaliation between the same persons as in cases of homicide; Malikis and Hanbalis insist on equality of status, slave or free, between the guilty party and his victim; the Hanafis forego retaliation altogether.

What of the monetary compensation, according as the slave is guilty of or is the victim of bloodshed?

1) Slave victim: The compensation goes to the master. The diya is the responsibility of the guilty person alone, except that the Shafiis are undecided whether or not to bring in the "group jointly responsible for the bloodwit" (zdhab), which is the Hanafi rule in cases of homicide only. This diya is not fixed, as for the free man, but is calculated in the event of death, on the market value (bimaa) of the victim; the Hanafis alone set an upper limit to it, namely the diya of a free man less a token reduction of ten dirhams. If there is only wounding, of a type specified in the tariff laid down by the Law for a free man, the majority of authorities hold that the market value of the injured slave should be reduced by the amount of the difference between the figure shown in the legal scale for an identical wound and the maximum compensation for a free man. The Malikis and some Hanbalis teach, though with certain reservations, that the sum paid should exactly equal the depreciation in the market value of the slave.

2) Slave guilty: The majority of authorities give the master the choice between surrendering the culprit (dath, noxalis deditio) and paying the appropriate diya. But the Shafiis, followed by several Hanbalis, regard the diya as incumbent on the "physical person" (nakaba) of the slave in question, whom his master will therefore sell, and hand over the price received in exchange for him, up to the amount of the diya, unless he prefers to pay the sum due without selling him.

The slave guilty of theft and the Muslim slave guilty of apostasy are punished in the same way as free men: by cutting off the hand in the former case, by death in the latter, when the necessary conditions for these punishments are fulfilled.

Fornication (sind) committed by a slave of either sex does not legally involve the death penalty, in consequence of the Kur'anic ordinance (u. supra) and because neither male nor female slaves are held capable of acquiring the particular legal condition of a muhsan(a) spouse, which the fiib restricts to free persons who have consummated marriage and which it regards as necessary before a death-sentence can be imposed for a sexual offence. As laid down in the Kur'an, the punishment is half of that decreed (xxiv, 2) for the free person who is not muhsan(a); viz. fifty lashes instead of one hundred, to which some authorities would add the further penalty of banishment. It should be noted that Hanafis and Hanbalis refuse to regard as muhsan the spouse of anybody who is not muhsan: so, according to them, the husband or wife of a slave cannot be executed for adultery. As part of the general tendency to mitigate the punishment for sexual offences involving slaves, certain cases of unlawful cohabitation with a female slave (e.g. by a co-owner or the master's father) are not looked upon as sind.

Finally, the slave who is guilty of a "false charge of fornication" (hadi) against a free person is liable, here again, to half the penalty decreed by the Kur'an (xxiv, 4) against the slanderer who is free; viz. forty lashes instead of eighty. But the slave who is the victim of such a slander has no right at all to any such satisfaction, since the Law, which to a certain extent protects the person of the slave, does not go so far as to regard him or her as a man or woman of honour.

The vast field of the "arbitrary punishments" (a'dairin), left to the judge's discretion, almost completely defies investigation through the study of written sources. We are conscious of our inability to make a sufficiently close study of how, in matters of punishment, the slave's position really compares, throughout history, with that of the free man, in the eyes of the judicial authorities of Islam.

j.—The emancipation (uzh, 'uzaa, 'tibd) of the slave is a work of piety; it is a unilateral act on the part of the master, consisting in an explicit or implicit declaration; in the former case it is not necessary
to show intention. In principle, emancipation cannot be revoked, nor may the beneficiary refuse it. If, however, instead of being immediate, it is to take effect at some fixed future date or subject to certain conditions, all authorities but the Mālikīs permit the slave to be sold in the meantime. This destroys the effect of the emancipation (except, some say, if the slave is then re-acquired by his former owner). The children of a female slave, born or unborn, as a rule become free on her emancipation. The partial enfranchisement of a slave by his sole master is equivalent to his total enfranchisement (Abū Ḥanīfa formulates a reservation, but is not followed by his disciples). The question is more involved when the slave is held in joint ownership and one of the owners enfranchises him insofar as his own share is concerned; if this owner is well-to-do, the enfranchisement is total and he will compensate his fellow-owners for the value of their shares. If the emancipator is not wealthy enough for this, the slave remains “partial” (mukādhab), except according to the Ḥanafīs, who free him and allow the other owners to recover their share out of the income from his work (ṣū‘aṣa). There is another point on which the Ḥanafīs reject the solution readily accepted by the other schools: they do not permit recourse to the drawing of lots (kur’ā) to determine which of several slaves is to be enfranchised when circumstances make it necessary to choose; their rejection of this procedure dictates certain of their rulings.

A grant of enfranchisement with effect from the master’s death, a desirable practice for the Faithful and one for which they have often shown partiality, is known as tadbir, from the expression ‘an ḍurrā‘ min ‘aftar’ (this is the Mālikīs, who base it on a formula containing a word from the root ḍur). The Shāfīʿīs also apply the term to an enfranchisement to take effect from a date after the master’s death, which for the other schools would count as no more than a revocable testamentary disposition. Ṭadbir itself is in principle irrevocable, in the eyes of all the authorities, but here too the Shāfīʿīs and Ḥanbalis allow it to be made void by the sale of the mudabbar slave. The Ḥanafīs permit this only if the ṭadbir is limited (mubayyad) by a condition connected with the emancipator’s death. It is permissible for a master to cohabit with his mudabbar slave; and her children, except in the dominant Shāfīʿī view, follow the condition of their mother. On the master’s death, the mudabbar, being regarded as part of his estate, is subject to the rule of the disposable third and on this rule depends the manner of his effective liberation, which is different for each school. Except according to the Ḥanafīs, he remains in slavery if the debts of the deceased cannot be settled without selling him. Contractual enfranchisement is of great doctrinal and practical importance. It is recommended by the Kur’ān (xxv, 33: the interpretation of the text as implying a strict obligation has not generally prevailed). It consists in the master’s granting the slave his freedom in return for the payment of sums of money agreed between them. Some call this conditional enfranchisement, according to others it is ransom by the slave of his own person: a divergence which entails solutions differing in detail. The transaction is known in the Kur’ān as ḥabd, the verbal noun of the third form. In the classical language, no doubt to distinguish this from ḥabd = “letter, book”, it has been replaced by its morphological equivalent mukādhaba or by ḥabdā. Although the payments are usually spaced out (munadhabism) and the majority of jurists regard settlement by instalments as essential to the contract, the Ḥanafīs accept one single and immediate payment; the Mālikīs are satisfied with one instal- ment, while Shāfīʿīs and Ḥanbalis insist on a mini- mum of two. The sums to be paid are of course de-ducted from the peculium of the slave, who is ipso facto “authorized” to engage in business; the granting of ḥabdā to a female slave who has no honest source of income is frowned upon. The mukādhab is set free only when his payments are completed (on some archaic divergences, see Schacht, Origins, 275–80). But the master is forbidden to sell him in the meantime, except by the Ḥanbalis, who nevertheless hold the purchaser to the terms of the contract of enfranchisement. The Mālikīs give the master a limited right to dispose in advance of the total of the sums which the mukādhab undertakes to pay (they are known as ḥabdā, like the contracts itself). Con- cubinage with a “contractually emancipated female slave” is unlawful. A grant of mukādhaba may be superimposed on one of ṭadbir, to the same person’s advantage. When the mukādhab reaches the end of his payments, a “rebate” (ṭāḍ) is usually accorded to him, in compliance with the Kur’ānic text: fixed or discretionary, obligatory or merely recommended, according to the different authorities.

k.—Once he has gained his liberty, the freedman (‘atīk, muʿṣāb) immediately enjoys the same full legal capacity as the freeborn. But both he and his male descendants in perpetuity remain attached to the emancipator (muʿtīk), and to his or her family, by a bond of “clientship” or wālād, a term equally denoting the converse side of the relationship: “pa- tronage”. “Patron” and “client” are both referred to as mawla (pl. mansūl), in relation to each other: if necessary they are differentiated by means of epithets: “higher” (al-ʿalā) for the former and “low- er” (al-ʿasfāl) for the latter. The Ḥanafīs alone main- tain, besides this wālād which originates in slavery, a legal institution known as wālād al-mawṣūla between free men, which is outside the scope of the present discussion.

A saying, applied with slight variations in the different schools, runs: “Patronage belongs to the emancipator” (al-wālād li-man aṣṭak); it cannot be made over to a third party by any negotiation or shift at the moment of emancipation. The fiṭḥ, moreover, which insists on assimilating patronage to natural kinship (fiṭḥ: al-wālād lubma ka-lubmat al-nasab), has succeeded in making it inalienable and untransferable, whereas cases of sale were not unknown before and even under Islam (cf. Ahmad Amlī, Faḍīr al-Islām, i, 110; Schacht, Origins, 173). Nevertheless, on the strength of the peculiar concept of “attraction of patronage” (dījr al-walad), this right may be transferred in certain cases; for example, from the immediate emancipator to the one who emancipated him, or from the emancipator of the mother to the subsequent emancipator of the father, subject to certain conditions. Mālikīs and Ḥanbalis sanction, not without much wavering, and under very different final forms, an ancient type of enfranchisement without patronage, known as fiṭḥ al-salība in reference to the pre-Islamic custom, condemned indeed in the Kur’ān (v, 103), which consisted in turning loose in complete freedom one particular she-camel of the herd, protected by taboos.

The patron and his “agnates” (ṭāṣaba), or those of the patrines, stand in the position of agnates, except according to the Zāhīrites, to the emancipated slave who has no natural agnates, particularly in
connection with tutelage for purposes of matrimony and with joint responsibility in penal matters. In return, the property of the emancipated slave or of his or her descendants in the male line who die leaving neither priority heirs nor agnates, revert to the patron or patrons or to their agnatic heirs, in accordance with a system of devolution (by successive generations among the kin; maxim: al-walad li-l-kubr) more archaic than in usual cases of succession (see R. Brunschvig, in Revue Historique de Droit, 1950). A woman is absolutely excluded from this "inheritance of patronage" (mirith al-walad?): she can be patron only of her own freedmen or the freedmen of the latter; her sons inherit the patronage, while they are not counted among her agnates for purposes of joint responsibility in penal matters, a particularly conservative institution. One ancient isolated opinion notwithstanding, the jurists have not granted the freedman the right to inherit the property of the patron who dies without heirs.

Bibliography: Apart from references in the text, all the collections of hadith and treatises on fiqīh, not forgetting the works on ikhtilāf. Studies in European languages: Weckwarth, Der Sklave im Muham. Recht, Berlin 1909, mentioned for the sake of completeness; Abd Elwahed, Contributions à une théorie sociologique de l'esclavage, Paris 1931, is more important, but biased. For the three main Sunni schools only, see first of all: D. Santillana, Istitutioni, i 1, 141-160; Juynboll, Handleiding 4, 232-40, Bergsträsser-Schacht, Grundzüge, 38-42; and, for penal law, L. Bercher, Les débts et les pénés de droit commun prévus par le Coran, Tunis 1926, passim. On the Mālikī view of legality in legal concubinage, Lapanne-Joinville, in Revue Marocaine de Droit, 1952.

I.—The strictly juridical statute of slavery among the Imāmī Shi'ites, for which one may refer to the classic work of al-Hilli, Šarḥ al-Islām (tr. Querry, 2 vols., Paris 1871-2) is indicative of attitudes sometimes considerably removed from the great Sunni principles. Among the solutions it offers we shall confine ourselves to the following, as being particularly revealing of some interesting legal or social viewpoints.

The child born in wedlock does not follow the status of his mother, bond or free, but failing any stipulation to the contrary, is born free if either of his parents is free. If both are slaves but not of the same master, he belongs jointly to the masters of both parents. The master of a female slave may grant a third party the "use" of her, for purposes of work or sexual relations. There is a great deal of controversy about the possibility of manumitting a non-Muslim slave; on the other hand it is recommended that the Muslim slave should be freed after seven years' service (compare with Exodus, xxi, 2; Deut., xv, 12). Manumission is of right, according to most authorities, when the slave is mutilated by the master, as the Mālikīs hold, or if he is smitten with blindness, leprosy or paralysis in the course of his slavery. The concubine who has borne a child is not automatically freed on her master's death unless her child is still alive; her value is then deducted from this child's share of the inheritance. Enfranchisement with effect from a master's death may be revoked, just like a legacy; it does not prevent sale of the slave, which is tantamount to a revocation. Contractual enfranchisement is of two kinds: "conditional", which leaves in total slavery the slave who defaults in his debts, as among the Sunnis; "unconditional", which gives the slave his freedom in proportion to the amount he pays.

In penal law, there is no retaliation on the freeman for the murder of a slave. The maḥr of a freeman killed by a slave can, as in Mālikī law, claim the possession of the guilty slave. The diyya of the slave may not exceed (whereas the Ḥanafis say: amount to) that of a free person of the same sex.

Some of these provisions show an independent development of doctrine, while others clearly echo ancient solutions which the Sunnis as a whole have not retained (see two examples in J. Schacht, Origins, 265, 279).

The Practice of Slavery

A) In the Middle Ages

Throughout the whole of Islamic history, down to the 19th century, slavery has always been an institution tenacious of life and deeply rooted in custom. The Turks, who were to come to the relief of the Arabs in the victorious struggle against Christianity, seem to have practised it but little in their primitive nomadic state (Uçok, in Revue Historique de Droit français, 1952, 423): after providing for so long their unwilling quota, through kidnapping or purchase, to the slave class of the Muslim world, they became themselves supporters of the institution in an ever-increasing degree, as they adopted Islam and the sedentary way of life.

The wars of conquest, which, after the fulgurous expansion of Islam in the first century of the hijrīa, continued throughout the Middle Ages to further its spread in one direction or another despite setbacks elsewhere, provided the conquerors with an almost ceaseless stream of prisoners of both sexes, many of whom remained in slavery. Even in those places where the frontier of the dār al-Islām were, for the time being, established, armed raids into enemy country, organized by the central power or individual groups, continued to put into practice the principle of the "Holy War", when no official truce or momentary alliance happened to be in force; and these raids brought back captives. Piracy in the Mediterranean, coupled with the privateering war from which it was often barely distinguishable, both augmented by grim razzias against the Christian seaboard, contributed to the supply of slaves to the adjacent Muslim lands, to an extent which varied at different periods but was always considerable.

Mediterranean Christendom, from Spain to Byzantium, paid this aggressive Islam in its own coin, by land and by sea. A curious chapter in the economic and social history of these Christian countries is afforded by the periodic influxes to their territory of "Moors" or "Saracens", reduced to slavery, then closely watched, employed as labourers, sometimes escaping or being ransomed but usually blending. Little by little, into the local population, after their slow conversion to Christianity (see Ch. Verlinden's detailed study, in L'Esclavage dans le monde ibérique médiéval, Amuario Historia Derecho Espanol, 1934; idem, on Catalonia, in Annales du Midi, 1950, and his useful bibliography, for various countries, in Studi...G. Luzzatto, Milan, 1949, while awaiting his book on L'Esclavage dans l'Europe Médiévale; due to appear in 1954; interesting documentation on one particular society is to be found in A. González Palencia, Los Mostrabres de Toledo en los siglos XII y XIII, Madrid 1930, prel., vol. ii, 244-6; on the quasi-ritual invitation of Muslim captives to the Emperor of Constantinople's banquet, in the 10th century, see M. Canard, in Vasiliev, Byzance et les Arabes, vol. ii, part 2, Brussels 1950, 387-8).
It sometimes happened, admittedly on a restricted scale, that Muslims made slaves of other Muslims. This was the case, for example, when members of fanatical sects regarded the rest of mankind as beyond the pale of Islam and consequently did not scruple to attack them and, if they spared their lives, to keep them in captivity. There was an exceptional instance in 1077, when thousands of women of a revolted Berber tribe were publicly sold in Cairo. What happened more frequently, on the borders of Muslim states, was that official or private razzias against populations still largely pagan carried off indiscriminately human beings, particularly children, who might belong to Islam. With the spread of Islam in negro Africa and the intensification of Moroccan pressure in this direction, beginning in the last centuries of the Middle Ages, the question of the legality of subsequent sales had to be put to some great jurists; they answered circumspectly, giving the dealers the benefit of the doubt as to the origin of individuals offered for sale (in 15th century, al-Wansharisli, Miṣyār, vol. ix, 171-2, tr. Archives Marocaines, xiii, 426-8; towards 1600, Ahmad Bābā of Timbuktu, quoted in P. Zeyu, Exclavage et guerre sainte, Paris 1900).

The import of slaves by peaceful means tended, from an early date, to compete with the forcible method. Slaves were included in the well-known babī [q.v.] (Latin pactum?) or annual Nubian tribute, unquestionably a continuation of an ancient tradition, which was furnished to Egypt well-nigh regularly for many hundreds of years. But, in the ordinary course of events, it was trade that brought a plentiful flow of slaves from outside into the markets of the ḍār al-Islām. The slavers' caravans went into the heart of Africa or of Asia to acquire their human merchandise, bought or stolen; on the Dark Continent, the slaving propensities and internal struggles of the natives facilitated the business of the dealers. Not only negroes and Ethiopians, Berbers and Turks were the objects of this international trade; there were in addition, chiefly in the early Middle Ages, various European elements, above all, the "slaves" whose name has given rise to our term "slave" and has also been extended in Arabic (Ṣakālība) to cover other ethnic groups of central or eastern Europe, their geographical neighbours. The traffic was carried on by sea as well as by land; the Red Sea has never ceased to provide a way from Africa to Arabia; the Mediterranean, with its appendage the Black Sea, offers a route, that has always been frequented, from Christian or pagan Europe to the Muslim world. Certain ports seem to have had a bigger share than others, at various times, in the reception of this merchandise: Almeria in Muslim Spain, Farama and later Alexandria in Egypt, Darband (Bāb al-Abwāb), on the shores of the Caspian, warf from quite an early date a very busy frontier market for slaves, as were Bulhārā and Samarkand in the interior.

From the middle of the 8th century, the Venetians, to the great indignation of the Papacy, began their career as purveyors of slaves—sometimes Christian—to the Islamic lands. In the 9th and 10th centuries, Jewish merchants played an important part in the trade of "slaves" across central and western Europe (including a celebrated eunuch-"factory" at Verdun) and their distribution throughout Islam (the famous passage from Ibn Khurraḍāḍhīb on the Radhāniyya is reproduced and translated by Hadj-Sadok, in Bibliothèque arabe-francaise, vi, Algiers 1949, 20-3). At a later date, the Mamluks of Egypt, with the consent of the Byzantine emperor, imported new slaves, to serve or to replace them, from the Genoese or Venetian trading-posts of the Crimea or the Sea of Azov.

Even within the Muslim world, there were considerable movements of slaves, of every racial origin, in the Middle Ages; tribute sent to the caliphs by provincial governors and vassal amirs, or commercial traffic. We do not know all the details of the organization of this traffic, but we are acquainted with certain aspects of it. Every big town had its public slavemarket, which in some countries was called the "place of display" (maṭṣīra). The one at Sāmarrā, in the 9th century, is described as being a vast quadrilateral, with internal alleys and onestorey houses, containing rooms and shops (al-Yaḥṣūbī, Buldān, 260 = tr. Wiet, Cairo 1937, 52). The slave-merchant, who was known as "importer" (diḍālīb) or "cattle-dealer" (nabḥūb), inspired at the same time contempt for his occupation and envy for his wealth: he used in fact to draw huge profits, often through clever faking of his merchandise, if he did not actually hoodwink the unsophisticated customer in a quite outrageous fashion. Some remarkable details in this connection are to be found from the pen of the eastern Christian doctor Ibn Butlān, towards the middle of the 12th century (see Mez, Renaissance, 156-7) and in the writings of the conscientious Muslim al-Sākāf of Malaga, towards 1100 (Manuel de Hība, ed. Colin and Lévi-Provençal, Paris 1934, 47-58).

I do not consider that it would serve any useful purpose here to quote selling-prices, particularly if the prices in question are exceptional. Such figures have no real meaning unless subjected to criticism and compared with the commercial value of other commodities—a study which has yet to be made and the materials for which, it seems, could be assembled with no great difficulty. But it is already clear and well-known that there were differences in the same market as between the various categories of slave, according to their place of origin, their sex, age, physical condition and abilities; these differences seem vast in the case of choice items, particularly females: young, handsome, talented. As a rule, whites were worth more than blacks; the ascending order of value among them, in 11th-century Spain, was: Berbers, Catalans, Galicians. At Alexandria, in the 15th century, Tartars and Circassians were prized above Greeks, Serbs and Albanians. An elementary and traditional kind of comparative psycho-physiology decides the typical qualities and defects assigned, in popular lore, to representatives of the various races and, in consequence, the functions for which they are considered best suited. Berber women, for instance, are esteemed for housework, sexual relations and childbearing; negroes are thought to be docile ("one would say they born for slavery"), robust and excellent wet-nurses; Greek women may be trusted to look after precious things; Armenian and Indian women do not take kindly to slavery and are difficult to manage.

Almost all female slaves are destined for domestic occupations, to which may be added, when they are physically attractive, the gratification of the master's pleasures. Herein indeed lies the commonest motive—lawful in Muslim eyes—for their purchase. Those of them who show an aptitude for study may be given a thorough musical or even literary education, by the slave-dealer or a rich master, and beguile by their attainments the leisure hours of high society (the slave-girl musician is called bayna).
Some again are found here and there given over to prostitution, despite the Kur'anic prohibition. Male slaves have a wider range of duties, from the beginning of their captivity. A great number form the personal bodyguards or the enormous slave-militias, black or white, frequently in rivalry, which speedily reinforce or replace the Arab, Berber and Iranian fighting-men. This military function was the chief reason for the Egyptian and North African recruitment of slaves in the land of the negroes and for the introduction into 'Irāk, by the caliphs of Bāghdād, of Turkish slaves, employed in the same way by the Šāmānids of Bukhārā (details on their formation and career in Niţām al-Mulk, Siyāsēt-nāma, ed. tr. Schefer, Paris 1891-3. 95/139 f.).

But certainly the most remarkable regime in this respect, remarkable both for the extent of the phenomenon and for the great ethnic variety of white warrior-slaves involved in it, must have been that of the Mamluks [q.v.].

Other male slaves have domestic duties—sometimes of a questionable nature—in the homes of people of moderate means, as well as in those of the great. Among them were the eunuchs who, chiefly on the model of Byzantium, filled the palaces of the caliphs, the amirs and all the nobles, at first as guardians of the kāritim. They are rarely referred to by their specific appellation of "castrate" (khiṣī) or "eunuch" (tauḏshī); they are more usually designated by a neutral term: "servant" (khādīm), or, as a mark of high honour, "master" in the sense of "teacher" (ustādī; see Canard, Histoire d'ar-Rādī, Algiers 1946, 210), which also indicates the function performed by some of them. In the early Middle Ages, the proportion of "Slaves" among the eunuchs imported and then re-exported by Muslim Spain was so high that sīkhlī (var. sīkhlī) was often used there in the sense of "eunuch" (Dozy, Suppl., i, 663).

In the 9th century, the illustrious writer al-Dāhibī states that the majority of white eunuchs in 'Irāk were 'Slaves', and in the course of the remarkable essay which he devotes to the effects of castration on men, he asserts that in these "Slaves", as opposed to the blacks, the operation encourages the development of all the natural aptitudes (al-Hayvanīn, Cairo 1938, i, 106 seqq., tr. Asin Palacios in Isis, 1930, 42-54). For the following century, interesting details are to be found in the work of the geographer Mākdisī, on the categories of eunuchs and the processes of castration (re-ed. Pellat, Algiers 1950, 56-9; see also Ibn Hawākī, i, 110). Whereas the blacks were usually submitted to a complete and barbarous amputation, "level with the abdomen", as the later expression ran, the whites, who were operated on with a little more care, retained the ability to perform coitus (this distinction is also vouched for in modern times); some of them took concubines or even wives, as the Hanafi school allowed.

Outside the house, many slaves served as assistants in business, or carried on business themselves, in accordance with their legal position, with a considerable measure of independence. Others cultivated their masters' fields. Examples are found of monumental building-works carried out by slave-labour, especially by prisoners-of-war in government service. But it must be emphasized that mediaeval Islam seems scarcely to have known the system of large-scale rural exploitation based on an immense and anonymous slave labour-force. One big attempt along these lines, carried out by the 'Abbāsīds in order to revivify the lands of 'Irāk, the centre of their empire, ended, during the second half of the 9th century, in the prolonged and terrible revolt of the Tār̄ūsī [q.v.] slaves, who had been imported from the eastern coast of Africa to bring the swamps of Lower Mesopotamia under cultivation.

The vast majority of slaves therefore escaped the system of collective forced labour, which condemns a man to one of the most distressful of all existences. This does not mean that they were one and all contented with their lot; the number of runaways, which seems very high at certain periods, would indicate the reverse. But setting aside the suffering caused by the slave traffic (all the more if castration was performed), and taking into account the general harshness of the times, the condition of the majority of slaves with their Muslim masters was tolerable and not too much at variance with the quite liberal regulations which the official morality and law had striven to establish. Despite the obvious points of inferiority, it was even known for them to attain happy and enviable positions, in material prosperity and influence, especially in rich and highly-placed families and, even more, in the immediate entourage of the sovereign. They had, in addition, the prospect of liberation, which it was not always over-bold to hope for.

This liberation, in the case of prisoners-of-war or victims of razzias by land or sea, might result from negotiations between the powers concerned: an exchange of captives or restoration in return for a ransom. History is full of such negotiations, sometimes futile, sometimes crowned with success, between Christian and Muslim states. Many were the captives ransomed, in both directions, thanks to collections of an official nature, but also more and more by ordinary individuals. In the latter case, Jews often played a useful part as go-betweens; in Spain they were sometimes referred to as "al-faqeques" (Ar. jākkāh, "liberator"). Further, great Catholic religious Orders, organized for the most part since the end of the 12th century and the beginning of the 13th, devoted themselves to succouring and ransoming their co-religionists who were captives in Muslim countries: in discharging this duty, Trinitarians and Mercedarians were to have a long and fruitful career, which their eulogists, ancient and modern, have regrettably deemed it necessary to embellish still further by means of exaggerated figures.

Also worthy of consideration, for their number and for their effects on Muslim society, were the compulsory manumissions, under the conditions imposed by the Law, of concubines who had borne children, as well as the voluntary manumissions of slaves of both sexes, especially Muslims, by their Muslim masters. Thus apostasy was rendered attractive for Christians; though not, as a rule, imposed on them, it was insistently suggested. We have already said that enfranchisement is an act of piety, widely practised; it is frequently the result of a vow or oath (conditional oath, expiration for a violated oath). The beneficiary ranks unreservedly as a free man or woman; the bond of clientship which continues to exist, and whose existence is felt, presents not so much a slight moral derogation as an inestimable advantage in the reality of a highly compact social structure. From Abbasid times onward, more than one freedman rose very high indeed in the military and political hierarchy, even to the most exalted ranks to which a free Muslim might attain. Their very names, which they continued to bear, betraying to the world their former servitude and even their irremediable condition as eunuchs (some of them commanded armies), were...
no obstacle to such a rise. In the 4th/10th century, such men as Mu‘nis in Baghdad and the negro Kaf ur in Egypt afford a remarkable illustration of the system. A number of Muslim dynasties, in Spain as well as in Egypt and the heart of Asia, have an avowedly servile origin. A Turkish “slave” dynasty reigned at Dihlī in the 13th century [see Dihlī Sultanate]. The “mamlāk” sultans of Cairo actually made such an origin a condition of coming to power, through a recognised cursus honorum [see C. Wiet, in Hanotaux, Histoire de la Nation Égyptienne, vol. iv, 1937, 395-5], still perceptible in our own days. Christendom never-by European Christendom; having almost entirely disappeared slavery on its own ground, it must have undergone no radical changes during the modern period, down to the last century. The main sources and the mediaeval rules of the slave-trade were modified only to a limited extent by the disappearance of Islam from Spain and on the foreign and domestic policies of many mediae-

B) In the Modern Period

The practice of slavery among the Muslims seems to have undergone no radical changes during the modern period, down to the last century. The main sources and the mediaeval rules of the slave-trade were modified only to a limited extent by the disappearance of Islam from Spain and on the other hand its expansion or consolidation in the Balkans, India and Indonesia. Far more considerable must have been the effect of the position adopted by European Christendom; having almost entirely suppressed slavery on its own ground, it must have ceased to contribute to the commercial supply of white human merchandise long before it adopted the worldwide policy of abolitionism, whose effects are still perceptible in our own days. Christendom nevertheless busied itself with supplying its American colonies with African negroes, thrown into cruel bondage. Among these unfortunate, Muslims seem to have been particularly numerous in Brazil, where from 1807 to 1835 they fomented the great slave revolts, rigorously quelled, which shook Bahia (on their cultural influence and their disappearance, see R. Ricard and R. Bastide, in Hesperis for 1950 and 1952 respectively). In the Mediterranean, where the corsairs and “Barbary” pirates continued such their ravages, perhaps to an even greater extent, after the establishment of Ottoman supremacy [see O. Eck, See-rauberei im Mittelmeer, Munich-Berlin 1940], the bordering Christian powers retaliated almost down to the end of the 18th century, as they had done previously, by numerous captures. In this work the Knights of Malta took an active part: during the first half of the century, they sold to the French navy the men it needed as rowers on the galleys. More than ten thousand Muslim slaves attempted a revolt on the island in 1749; Bonaparte liberated the two thousand Barbary slaves whom he found there in 1798 (see Godeschot and Emerit, in Revue Historique, 1952, 105-13).

On the lot of Christian captives or slaves in the hands of the Barbary corsairs, there is abundant European documentation; perhaps even too abundant, in view of its not being always of good quality. If Cervantes’ captivity at Tunis is a matter of pure probability and had a felicitous result on his work, that of St. Vincent de Paul at Tunis is scarcely plausible. The information provided in what might be termed the classic accounts of the subject, such as those of Friar Haedo or Father Dan (17th century, the heyday of the corsairs), must be carefully checked against other data, preferably derived, where possible, from consular archives (for all aspects of slavery at Algiers, see the solid study by H. D. de Gramont, in Revue Historique, 1884-5, to be supplemented by Venture de Paradis, ed. Fagnan, Algiers 1898, and Lespès, Alger, Paris 1930, ii, chaps. 3-5; for Tunisia, we have a judicious statement of the facts by J. Pignon in R.T., 1930; see also, as a more recent publication, García Navarro, Redenciones de cautivos en África, ed. Vasques Pajaro, Madrid 1946). It is important to distinguish particularly between slaves held to ransom, who were rich and well-treated, and the slave workers, whose widely-varying destinies might hold in store for them a bitter life in the galleys, or wretched toil in the countryside, or an often much easier life in or just outside the city. Barbary at that time abounded in “matamores” (Ar. mamlûr: “slave”) and “bagnios” (Ital. bagno: “bath”) in which the slaves were penned. The Atlantic itself was scoured by the Moroccan corsairs, from their base at Rabat-Salé (see Penz, Les captifs français du Maroc au XVIIe siècle, Rabat 1944). As in the Middle Ages, the liberationist religious Orders and the Jews took an active part in procuring releases by ransom. Renegades attained high positions in the fleet or in the army. But at the beginning of the 19th century, after a slow decline that was hastened by increased pressure on the part of the European powers, the number of Christian captives was considerably diminished. At the time of the French conquest in 1830, Algiers had no more than 2,072 slaves held to ransom, who were rich and well-treated, and the slave workers, whose widely-varying destinies might hold in store for them a bitter life in the galleys, or wretched toil in the countryside, or an often much easier life in or just outside the city. Barbary at that time abounded in “matamores” (Ar. mamlûr: “slave”) and “bagnios” (Ital. bagno: “bath”) in which the slaves were penned. The Atlantic itself was scoured by the Moroccan corsairs, from their base at Rabat-Salé (see Penz, Les captifs français du Maroc au XVIIe siècle, Rabat 1944). As in the Middle Ages, the liberationist religious Orders and the Jews took an active part in procuring releases by ransom. Renegades attained high positions in the fleet or in the army. But at the beginning of the 19th century, after a slow decline that was hastened by increased pressure on the part of the European powers, the number of Christian captives was considerably diminished. At the time of the French conquest in 1830, Algiers had no more than 2,072 as against several thousands two centuries earlier.

North Africa remained an outlet for the traffic in negroes, on the other hand, right down to the French occupation. In this traffic Morocco played a preponderant part, especially at that period in the second half of the 17th century, when the sultan Mūlib Ismā‘īl raised a veritable army of negroes and half-breeds (“abd al-Bukhrī, in consequence
of the oath they took on this collection of "authentic" traditions; see H. Terrasse, Histoire du Maroc, ii, Casablanca 1950, 256-7. Black slaves of both sexes continued to be imported into Morocco until well into the 20th century, with some pretence at secrecy since the open traffic from Timbuktu and public sale (the fairs of Sidi Ahmad u-Misik on the southern borders; at Fez and Rabat the special market was called birka, as in Tunisia) had become impossible. It should be pointed out how much their presence colours the family and social life of the cities (see R. Le Tourneau, Fes avant le Protectorat, Casablanca 1949, 200-3, with references; and, under the Protectorate, J. and J. Tharaud, Fes ou les bourgeois de l'Islam, Paris 1930, 17-43).

Towards 1810, a competent observer, Dr Louis Frank, made a special study of the importation of slaves at Tunis (L'Univers Historique, Tunis, 195 seqq.) as he had done in Egypt ten years previously under Bonaparte (his Mémoire sur le commerce des nègres au Kaire, Paris 1802). The general organization of the traffic, the focus of which was public sales, recorded in writing, was much the same in both places, with the difference that whereas Cairo was supplied solely by big caravans (two annual, one from Sennar and one from Dárfor—see also J. S. Tringham, Islam in the Sudan, Paris 1949, passim—, and one biannual, from Bornu or Fezzan), Tunis used to receive some isolated consignments, apart from one big caravan every year from Fezzan or beyond (see also J. Despois, Géographie humaine du Fezzan, Paris 1946, 357, with references): an annual total of some three thousand for Cairo and one thousand for Tunis. In the latter city the male black slaves came under the authority of the agha or chief eunuch of the bey, while the negroes had "a forewoman to rule and protect them." In Egypt, the mortality of these negroes was high; in Tunis, according to Dr. Frank, their infants survived only if they were of mixed blood (on the blacks in present-day Tunisia, see Zawadowski, in En terre d'Islam, 1942). In the time of Mohammad 'Ali, towards 1835, the Egyptian army used to make up its strength by yearly razzias from bases in Dárfor and Kordofán; it would enrol the sturdiest of the captives and hand the rest over to the inhabitants of those provinces and to the dealers, some of whom were themselves black converts to Islam (see T. F. Buxton, De la traite des esclaves en Afrique, French tr., Paris 1840, 705).

The moral and social condition of slaves in an urban environment, in the 19th century, seems to have been fairly uniform in such diverse cities as Tunis, Cairo and Mecca (a great centre for the traffic on the occasion of the annual pilgrimage). White slaves had become rare since the beginning of the century: they were expensive and in little demand except by exalted personages or rich Turks; white female slaves were preferably Caucasians, famed for their beauty. Arabia could muster a small number of Indonesians. The bulk of the slaves were black, but in the east a distinction was drawn between Ethiopians, who were paler and more highly prized, and negroes in the strict sense. Eunuchs were imported already castrated; in Mecca, the majority of them were in the service of the mosques. All the European writers lay stress on the good treatment these blacks customarily received at the hands of their town-dwelling masters, in contrast to the dreadful conditions of their capture and subsequent transportation under the lash of the Arab or Arabized slaves. They readily adopted Islam and became deeply attached to it (some even thanked God for having led them to the true Faith through their captivity: Doughty, Arabia Deserta, i, 554-5), though their new faith did not prevent them from performing their traditional songs and dances, or even their African rites of exorcism (the săr [g.v.]; see Tringham, op. cit., 174-7; similar facts in Barbary). They formed, one may say, part of the family and, especially as concubines, the slave-girls came to be of one blood with it. Enfranchisements were usual, but it was not unknown for a concubine who had borne a child to seek from her master a denial of paternity, since there were more advantages for her in remaining a slave than in marrying and running the risk of repudiation (see especially Lane, Manners and Customs, London 1835, 147, 168, 194-7; Burckhardt, Voyages en Arabie, French tr., Paris 1835, i, 251-2; Snouck Hurgronje, Mekka, ii (The Hague 1889), 11-24, 132-6). It is therefore not surprising that, round about 1860, the Swiss Henry Dunant, founder of the Red Cross, who knew Tunisian society, laid great stress on the customary mildness of urban servitude among the Muslims, as compared with the methods of American slave-holders.

At the end of the 18th century, Mouradgea d'Ohsoum, to whom we owe so much of our information on the structure of the Ottoman empire, declared: "There is perhaps no nation where the captives, the slaves, the very toilers in the galleys are better provided for or treated with more kindness than among the Mohammedans" (Tableau général de l'empire ottoman, iv/1, 381).

Under the sultans of Constantinople, slavery perpetuated the mediaeval traditions of the Islamic peoples: it furnished domestics, concubines, officials and soldiers. For the use of private persons, for example, the slave-dealers (esirciler), who were under the supervision of a kâhya, had at their disposal a public building in the capital, not far from which lived the expert matrons who acted as go-betweens if the purchasers so desired. Every slave, after passing the frontier, had a document of civic status bearing his name, which remained as a title-deed in the hands of his successive owners. People of quality, who imitated the court on a reduced scale, had harims of close on a hundred slave-women. The sultan's harim numbered several hundred, classified in a strict hierarchy of five ranks, only the two highest of which (those of kadın, "lady" and, below them, of gedilik, "privileged"), were attached to the person of the sovereign. Some of the women of the highest rank were former slaves whom the sultan had freed and subsequently married informally. Although for many years none of the sultan's wives had been freeborn, these former slaves had no difficulty in wielding very great influence at court. Besides this female element, there lived at the seraglio numerous eunuchs, conventionally known as "aghas" (Turkish also uses in this sense the Arabic ḥāḏīm > hadīm). The black eunuchs, under the "agha of the girls" (ktešar ağaṣ), vied with the white eunuchs, under the "agha of the gate" (hākp ağaṣ) for precedence and power; in the upshot it was the former who carried the day. Finally we must note the importance in all public services, civil and military, of slaves of various origins, "slaves of the gate" (hākpukullar), who, often converted to Islam of their own accord and enfranchised, attained the most desirable posts. From the 15th century, when the number of white slaves brought in by war and purchase had dwindled, almost down to the middle of the 17th century, there functioned the system,
contrary to the Sacred Law, of devsirme [see Dew-
sharim], or forced enrolment of young Christians of
the empire, mainly from the Balkans, as slaves of the
government. These involuntary yet devoted servants
of the Porte used to receive a training suited to their
abilities; the most gifted would enter the palace or
the higher administration; the rest were turned over
to the navy or various military corps, including the
Janissaries, whose brilliant reputation was due to them
(see M. d'Ohsinon, op. cit., vi and vii, and
H. A. R. Gibb and H. Bowen's sold and well-
documented Islamic Society and the West, i/1, Oxford
1950, 42-4, 56-60, 73-82, 329-33).

Further east, in modern Persia, it is essentially
in the domestic form that slavery has been practised.
There one meets with the general characteristics
already noted: usually good treatment, integration
in the family, ease of enfranchisement, with some
modifications belonging to Imam Shīfī's law
(v. sufra). Seventeenth-century European travellers
were struck by the high number of eunuchs and the
power they had, both at the Şafawi court and in
the houses of the great; according to Chardin (Voy-
ages en Persé, Amsterdam 1711, ii, 283-5) there
were some 3,000 of them in the service of the sove-
reign, while the nobles and even rich private citizens
had staffs of eunuchs. The term schlīdīn (šahīn,
equivalent to fostash which we have met above). Their purchase price
was extremely high; the majority were white and
came mostly from the Malabar coast of India. In
the first half of the 19th century, under the Kadjārs,
white slaves became few and soon disappeared al-
together, except for the pretty Caucasian girls who
continued to enter the šafars; but, contrary to the
most widespread Muslim practice, their children
could not succeed to the throne, which was reserved
for sons whose mothers were of royal blood. The
numbers of the black slaves had increased; they
were either Ethiopians who had crossed Arabia, or
Zanj of east Africa, who came by way of Zanzibar,
Mascat and Bushire (on this traffic, in Arab hands,
see R. Coupland, The Exploration of East Africa,
London 1959, 136-46, with references), to draw custom
to the market of Shirās. The high mortality
which overtook these coloured men in Persia prevent-
ted their forming an important element in the popu-
lation (see Polak, Persien, Leipzig 1865, 1, 246-61,
661; E. Aubin, Le Perse d'aujourd'hui, Paris 1908, 148).

The Persians, in the course of their armed con-
flicts with the Sunni inhabitants of Turkestān, were
sometimes reduced to slavery, as being heretics.
In the middle of the 19th century, it was still possible
for so many thousands of them, prisoners of war,
to be sold at once in the market at Buḥḵarā that
prices slumped. Some of them in this same town,
having won their masters' regard and being en-
franchised, rose to every official position of honour.
Others, however, less well endowed, went from there
to swell the number of the slaves on whose shoulders
fell the greater portion of the agricultural work
in the khanate of Khīwa (see A. Vambéry, Travels
in Central Asia, London 1864, 192-3, 331, 371).

Among the relatively rare examples of an essential
agricultural task performed by a compact slave
labour-force, we may cite that of the region of Zan-
zebar itself, where, in the 19th century, there was
kept a body of blacks gathered from almost as far
as the great lakes and destined in the mass for ex-
port. The harsh life of toil in the sugar- or clove-
plantations, run by Arab or Indian planters, all
along the coast, was quite devoid of the amenities
of urban servitude. The lot of thousands of slaves
employed in pearl-fishing in the Persian Gulf also
seems to have been a very harsh one over a long
period.

Much less burdensome, certainly, but wildly dis-
criminatory, is the slavery which still obtains today
in the desert: in the Sahara on the one hand, in Arabia
on the other, for the benefit of the nomad tribes.
Tuareg society, divided into three rigid castes, used
to keep on the lowest level, beneath the nobles and
their vassals, the slave-groups (akli, pi. ikli), en-
franchised or not, almost all of them black, who were
utilized by the dominant clans either as tillers of the
soil or as servants to men and beasts. Among
the beduin of the Arabian peninsula and its fringes (see
especially A. Jausen, Coutumes des Arabes au pays
de Mosab, Paris 1908, 26, 60-1, 125-6; A. Musil, The
Manners and Customs of the Rwala Bedouns,
New York 1928, 276-8), black slaves may intermarry
and acquire property, but however intimate they
may be with the master and his family, however
great the advantages custom permits them to enjoy,
they are never regarded as equals, even after en-
franchisement: they are 'abīd, and 'abdī they remain;
and marriage with the sons or daughters of them is
considered a come-down, by the lowest of whites.

Abolition

Although Islam, in teaching and in actuality, has
favoured the emancipation of slaves, it was only
under an overwhelming foreign influence that it
began, about a hundred years ago, an evolutionary
in doctrine and in practice towards the total suppression
of slavery, its abolition in law and custom. This
evolution, which has continued, is in some regions
still incomplete. Here we have one of the most typical
examples of the transformation that the Muslim
world has undergone, through European pressure
or example, from the mid-19th century down to
our own day.

The European powers concerned were themselves,
to some extent, novices in this field: they had long
favoured the traffic and maintained slavery in their
colonies. One of them, Russia, had maintained serf-
dom on her own soil. The French "philosophers"
of the 18th century, beginning with Montesquieu,
had condemned the very principle of slavery; its
short-lived suppression under the First Republic
was unfortunately a check. But, from 1806 onward,
Britain took the lead in the movement for the
suppression of the slave-trade and then of slavery
itself. She may be accused of having more than once
let her maritime and colonial interests dictate her
interventionary zeal or, on other occasions, the mild-
ness of her actions. Yet, when all is said, she stands
out as a great pioneer of abolition over the whole
surface of the earth, including the lands of Islam.

The diplomatic history of the 19th century, since
1814-15, is dotted with treaties and other inter-
national agreements aimed at banning the traffic
in negroes, by sea and across the continent of Africa,
in increasingly precise terms. The suppression
of slavery as such is mentioned only towards the end
of the century, and then timidly. But measures in
this direction had already been adopted in several
portions of the Muslim world, particularly those
under the authority of European states. Britain,
having emancipated the slaves in her colonies by
the famous Bill of 28 Aug. 1833, made in 1843 the first general decision to abolish slavery in India (completed by a series of other Acts down to 1862). France completely abolished slavery in all her overseas territories, including Algeria, by a decree of the Second Republic on 27 April 1848; the Netherlands did the same for their Indonesian possessions by the laws of 1854-59, with effect from 1 Jan. 1860 (3 years before their colonies in the West Indies); and Russia for her Central Asian dependencies on 3 June (O.S.) 1873, before even having completed the conquest of Turkestan.

Parallel with this direct and radical action by the Powers, the Muslim states which, while remaining independent, were most subject to Western pressure and had most contacts with European civilization, were slowly and cautiously embarking on restrictive measures. As early as 1830, the Ottoman sultan had enfranchised en bloc those white slaves of Christian origin who remained true to their religion, while expressly keeping the Muslims in slavery (G. Young, Corps de droit ottoman, ii, Oxford 1905, 171-2). To Tunisia belongs the honour of having been the first to promulgate a general edict of emancipation for black slaves (ipso facto, of Muslim slaves: there were practically no white slaves in the Regency). By a decree of 23 Jan. 1846, the bey Ahmad ordered that letters of enfranchisement should be granted to every slave who so wished, and that every instance of slavery of which the religious magistrates might be apprised should be referred to him. The preamble to this decision, which was approved by the two highest dignitaries of the Hanafi and Mālikī rites in the country, is worth dwelling on: in it, slavery is declared to be lawful in principle but regrettable in its consequences. Of the three considerations particularized, two are of a religious nature, the third political (maslaha siyāsīyya): the initial enslaving of the people concerned comes under suspicion of illegality by reason of the present-day expression of Islam in their countries; masters no longer comply with the rules of good treatment which regulate their rights and shelter them from wrong-doing. It is therefore befitting to avoid the risk of seeing unhappy slaves seeking the protection of foreign authorities (M. Bompard, Législation de la Tunisie, 398; Arabic text in Sanbū, Mādīmādī al-Kawānin al-Tamāyyyya, fasc. 1, p. 4).

Thirty years later, in the treaty concluded with England on 19 July 1875, the bey Muḥammad al-Ṣādirāk undertook not only to see that the decree of 1846 was given full effect, but also to do everything in his power to suppress slavery and punish any infraction. Under the French protectorate, various Tunisian ministerial circulars (1887-91) and the bey's decree of 28 May 1890 completed the formal prohibition of slavery in the Regency and the organization of the freeing of black slaves on the judicial and administrative plains (M. Bompard, op. cit., 472; P. Zéys, Code annoté de la Tunisie, i, 384-6).

At Istanbul, the first imperial firmāns against the slave-trade date from the period of the Tanẓimāt, under ʿAbd al-Majīd, and especially from the years of close understanding with France and Great Britain: Oct. 1854 for the whites, Feb. 1857 for the blacks (a religiously-inspired reservation exempted the Ḥidżār from the reform). How little effect these documents had at first in preventing the import of blacks, is apparent from the multiplicity of decisions of the same sort, the circulars and instructions which continued to repeat one another,
East Africa and its Invaders, Oxford 1938; idem, The Exploitation of East Africa, London 1939); if this did not stop it immediately, it was at any rate a considerable embarrassment for the trade. Next, under the British protectorate, a decree of the sultan in 1897 granted their freedom to any slaves who should ask for it, and forbade the courts to concede the claims of slave-owners. On 6 July 1909, a final decree abolished the status of slave in its entirety. The same thing had happened two years before in British East Africa (now the Tanzanian Ujamaa), against an indemnity to be paid to the owners (the matter was settled in 1916).

It is safe to say that, towards the end of the 19th century and the beginning of the 20th, the export of negroes was at a very low ebb. We may add that Persia, one of the receiving countries, had also publicly renounced this trade in her 1882 treaty with England, and her newly-created National Assembly adopted in Oct. 1909 a "fundamental law" in favour of individual freedom (E. Aubin, La Perse d'aujourd'hui, Paris 1908, 210); if slavery was not suppressed by these measures, it did suffer a severe blow. In Africa itself, the greater part of the vast zone where in the Muslim slaver held sway, extending from the Atlantic to Wadai, east of Lake Chad, was conquered piecemeal and occupied by France; this has been followed by the almost complete disappearance of the slave-trade from this immense area and slavery has been abolished almost everywhere within it.

Italy, the latest comer of the colonial powers, conducted an identical policy in the territories she administered in the east (Somaliland, Eritrea) and north (Tripolitania, Cyrenaica) of the continent. But the last independent Fattah, of the holy land, was one which was conquered and governed by a Christian dynasty, remained (despite the negus's edicts against the traffic) a notable stronghold of the slaves, facing the Sudan and exporting whenever possible; in the provinces, islamization and the intensification of the slave trade often went hand in hand (Tringham, Islam in Ethiopia, Oxford 1952, 203-4 and passim). During the 1914-18 war, the relinquishment of Fezzan by the Italians, who had just taken it from the Turks, and its occupation by the Sanûsî, allowed the traffic to resume much of its activity: a slavemarket was held every week at Murzûk (Petragnani, in L'Afrique française, Feb. 1921, tr. in L'Afrique française, April 1922).

At the end of the first world war, when the victors had visions of organizing the peace and of securing, in accordance with their Convention of St. Germain of 10 Sept. 1919, "the complete suppression of slavery in all its forms", long experience gave them advance information on the problems that were bound to be raised by a task of this nature; on the successes that might be hoped for and the resistance that might be expected in Muslim lands. The suppression of the traffic, which had become for the most part clandestine, was a troublesome affair, demanding the use of powerful forces and involving, by sea, the risk of provoking legal conflict between nations (France and Great Britain, 1905, in the Indian Ocean). Yet making an end of the trade does not mean putting a stop to slavery or to the transfer of slaves from one owner to another. As for official abolition, it is not always easy to secure under a protectorate; nor is it always equivalent in practice to positive and immediate suppression.

The fact is that, if slavery is such a firmly-rooted institution in certain Islamic countries, it is due far more to social conservatism than to a collective economic need. We established above that the part played by slave-labour in those lands is rarely essential for productive work. This explains why an abolitionist policy, so long as it is not applied too high-handedly, provokes no serious disturbance there, nor any violent reaction. The prevailing wish in the minds of slave-owners is to enjoy the comfort afforded by having a large domestic staff, kept under strict control; from which, moreover, lawful concubines may be recruited. They have on their side not only the tacit consent of the majority of their slaves but also an extensive public opinion and the religious tradition of Islam. The domestic slave is in his master's power through fear and respect, through self-interest, through affection. We must bear in mind that he is generally well-treated; we may reflect that he lives in a family atmosphere, without thought for the morrow. To the slave-woman, concubinage offers, besides various advantages for herself and her children, the chance of an ascent in the social scale, of which an untimely emancipation would rob her. Even when freed, the slave is often likely to remain close to his master. If he has procured his freedom against the latter's wishes, or if he has been snatched from the claws of the slave, he is woefully without resources in a hostile environment, unless his benefits by the special measures which governments ought to take—and which they have occasionally taken—with a view to his social readjustment.

The fact, brought out in the Kur'ân, that slavery is in principle lawful, satisfies religious scruples. Total abolition might even seem a reprehensible innovation, contrary to the letter of the holy Book and the exemplary practice of the Prophet. Nevertheless, contact with the realities of the modern world and its ideology began to bring about a discernible evolution in the thought of many educated Muslims before the end of the 19th century. They may be fond of emphasizing that Islam has, on the whole, bestowed an exceptionally favourable lot on the victims of slavery. Yet they are ready to see that this institution, which is linked to one particular economic and social stage, has had its day. The reformer Sayyid Ahmad Khán in India, goes so far as to maintain, in a special work, Ibâlí-i Qulâmi, which appeared in 1893, translated into Arabic in 1895, that the Kur'ân (xili, 4) forbade the making of new slaves (Baljon, The Reforms . . . of Sir Sayyid Ahmad Khán, Leiden 1949, 28-29). Without going so far, his illustrious compatriot Ameer Ali (The Spirit of Islam, London, 1st ed. 1893; ed. 1935, 262) includes slavery among the preislamic practices which Islam only tolerated through temporary necessity, while virtually abolishing them: man-made laws were later to complete the abrogation of it, which could not have been done formerly by a sudden and total emancipation (cf. the Egyptian Chafik, on much the same lines: L'esclavage au point de vue musulman, Cairo 1891, 2nd ed. 1938). This thesis gradually found its way, to a varying extent, into the circle of the wulâm (for the school of Muhammad 'Abduh, see Tafsîr al-Mandar, xi, 288 ff.), already open to the older arguments of the Tunisian muftis, which were more restrained and more legalistic. But obviously it could not gain the support of the Wahhâbs of Arabia, those uncompromising restorers of the sunna of the Prophet; up to the present day they have vigorously maintained their downright antagonism towards abolition.

The League of Nations, from the very outset of its work, displayed an active interest in all problems
relating to slavery. This interest was notably expressed in the adoption of the international Geneva Convention of 23 Sept. 1926, in which the legal definition of slavery is formulated ("status or condition of a person over whom any or all of the powers attaching to the right of ownership are exercised"), which squares with the concepts of Muslim law and the signatories pledge themselves "to bring about, progressively and as soon as possible, the complete abolition of slavery". One by one, almost all the States concerned adhered to this Convention, but not Saudi Arabia or the Yaman. From then on, a consultative committee of experts worked indefatigably, gathering official returns (some of which, furnished mainly by the British and Italian governments, are highly instructive) and publishing copious reports. Legal measures multiplied, independently of this international organization as well as under its aegis. Abolition came as a matter of course in the new Turkish Republic, which repudiated every trace of Muslim law, as in the Levant territories severed from the old Ottoman empire and directly administered by France or Great Britain. In Egypt, the 1923 Constitution confirmed the guarantee of individual liberty. One after another, Afghanistan (1923, 1931), 'Irāk (1924), Kalāt (1926), Persia [Iran] and Transjordan (1929) suppressed the legal status of slave. Bahrayn followed suit in 1937.

In Africa, an order of 1922, coupled with penal sanctions in 1930, abolished slavery in Tanganyika (the former German East Africa) under British mandate; the Anglo-Egyptian Sudan took steps, as far-sighted as they were vigorous, to put an end by degrees to the vestiges of the traffic and to assist freed slaves. In Northern Nigeria, under British administration, abolition, which began in 1907 and suffered a momentary check towards 1933 from a new offensive on the part of the trade, was accomplished by an order of 1936. In Morocco, a circular from the French Protectorate administration in 1922 suppressed public slave-dealing and granted their liberty (v. H. Ingrams, *Arabia and the Isles*, London 1942, 349-50; and U. N. Economic and Social Council, *Official Records*, Sept. 1951, 644).

Under cover of the second World War (1939-45) there seems to have been some retrogression, with a small-scale resumption of the trade, particularly in certain Ethiopian provinces. At the time of writing, it is usually acknowledged that there is practically no transport of slaves any longer from Africa to Arabia. Nevertheless the legal status of slave persists in the peninsula. It is evidently the example of the neighbouring independent states of Saudi Arabia and the Yaman that prevents Britain from increasing her pressure on the states under her control with a view to total abolition. Other considerations, no doubt, keep France from having slavery abolished by law in Morocco, where there are in any case only mild survivals in the cities or the southern oases (see, for the bend of the Dra, Dj. Jacques-Meunie, in *Hesperis* 1947, 451-2; persistence to a final solution does not come from the class of 'ulamā' (for the present-day legal aspect, see *Gazette des Tribunaux du Maroc*, 1944, 5-7; and *Revue Marocaine de Droit*, 1952, 154-5; 183-5). In the Sahara, the French administration which as early as 1916 deprived the Tuareg of their agricultural slaves, took their house slaves away from them in 1946 (R. Capot-Rey, *Le Sahara français*, Paris 1953, 288-9). The United Kingdom of Libya (a former Italian possession), in its constitution of Oct. 1951, laid down as a principle the personal liberty of its subjects.

The United Nations Organization (U.N.O.), the moral heir of the League of Nations, has resumed the study of slavery and has condemned it, in no uncertain terms, in its "Universal Declaration of Human Rights", voted by the General Assembly on 10 Dec. 1948 (though not ratified by every State): "Art. 4. No one shall be held in slavery or servitude. Slavery and the slave trade are prohibited in all their forms". An ad hoc Committee on Slavery, under the Economic and Social Council, is proceeding with enquiries by means of questionnaires addressed to governments and recognized associations (Saudi Arabia and the Yaman, both members of U.N.O., have not replied) and is proposing concerted solutions. Its Report of 4 May 1951 (ref. E./1988) advocates making a start by abolishing the legal status of slave and demands that every State concerned should assist emancipated slaves to fashion a new life for themselves. As yet no resolution has been passed by the United Nations, who are divided on this point as on so many others and are far more preoccupied with the serious forms of servitude which continue to exist, or have come into existence in the world of today, than with the last vestiges of Muslim slavery, which are doubtless bound to disappear quietly in the reasonably near future.
"ABD ALLĀH B. AL-‘ABBĀS

‘ABD ALLĀH B. AL-‘ABBĀS (frequently Ibn ‘Abbās, without the article), Abū ‘Abbās, called al-Ḫāṭīb ‘the doctor’ or al-Bahr ‘the sea’, because of his doctrine, is considered one of the greatest scholars, if not the greatest, of the first generation of Muslims. He was the father of Kur'ānic exegesis; at a time when it was necessary to bring the Kur'ān into accord with the new demands of a society which had undergone a profound transformation, he appears to have been extremely skilful in accomplishing this task.

He was born three years before the hijra, when the Hashimite family was living shut up in ‘the Ravine’ (al-Shb‘), and, as his mother had become a Muslim before the hijra, he also was regarded as a Muslim.

From his youth he showed a strong inclination towards accurate scholarly research, in so far as such a conception was possible at that time. We know indeed that the desire to gather information concerning the Prophet by questioning his Companions. While still young, he became a master, around whom thronged people desirous to learn. Proud of his knowledge, which was not based only on memory, but also on a large collection of written notes, he gave public lectures, or rather classes, keeping to a sort of programme, on different subjects: interpretation of the Kur'ān, judicial questions, Muhammad’s expeditions, pre-Islamic history, ancient poetry. It is because of his habit of quoting lines in support of his explanations of phrases or words of the Kur'ān that ancient Arabic poetry acquired, for Muslim scholars, its acknowledged importance. His competence having been recognized, he was asked for fatwas (especially famous is his authorization of mu′a marriage, which he later had to vindicate). The Kur'ānic explanations of Ibn ‘Abbās were soon brought together in special collections, of which the isnāḏs go back to one of his immediate pupils (Fīhris, 33); his fatwas were also collected; today there exist numerous manuscripts and several editions of a taṣfīr or taṣfīrīs which are attributed to him (whether rightly or wrongly cannot be said, as no study of this material has yet been made (Goldzihner, Richtungen, 76; cf. also Brockelmann, i, 190, S i, 331).

The importance of the role played by Ibn ‘Abbās in the political and military events of his time should not be exaggerated, as his Muslim biographers have tended to do, influenced by the fact that he was the grandfather of the ‘Abbāskuds. He followed the Muslim armies in several campaigns: into Egypt (between 18 and 21 H.), into Ifriqiya (27 H.), into Dişrāǧān and Tabārisṭān (30 H.), and, much later (49 H.), he accompanied Yazīd on his expedition against Constantinople (with ‘Abd Allāh b. Umar b. al-Khaṭāb). At the battles of the Camel (36 H.) and of Sīfīn (37 H.), he commanded a wing of ‘All’s troops. For want of resounding exploits and important offices to record, Ibn ‘Abbās is presented to us later, by his biographers, as a counsellor whom the caliphs ‘Umar and ‘Uthmān valued highly, and as a counsellor too—unfortunately little heeded—of ‘All and his son al-Ḥusayn. The truth is that Ibn ‘Abbās did not enter political life until after ‘All came to power, and took an active part in it for only three or four years. A single official mission had been, in fact, entrusted to him by ‘Uthmān, that of conducting the pilgrimage to Mecca the year the caliph was besieged in his house at Medina. It was for this reason that Ibn ‘Abbās was not in the capital at the time of the assassination of ‘Uthmān. When he returned some days later, he paid homage to ‘All. From that time he was charged with important missions and, after the occupation of Baṣra (36 H.), appointed governor of that town. He was one of the signatories of the convention of Sīfīn (37 H.), which handed over to two arbitrators the task of settling the quarrel between ‘All and Mu‘āwiya, and in a discussion with the Ḥarrātīs (see Ḥarrātī) he pleaded in support of the legal validity of that arbitration. But the relations between Ibn ‘Abbās and the caliph rapidly became strained, with the result that Ibn ‘Abbās withdrew to Mecca, abandoning his seat of government, and that ‘All no longer regarded him as his representative at Baṣra. The sources assign different dates to this defection of Ibn ‘Abbās: 38, 39, 40, but there is good reason to believe that it took place in 38 H. (it is possible to follow the movements of Ibn ‘Abbās during that year, and in the succeeding years he no longer appears in the foreground). The traditions which assert that Ibn ‘Abbās was consistently faithful until the death of the caliph are not worthy of credence. What were the reasons for the defection? Some Arabic sources say that Ibn ‘Abbās took offence because ‘All reproached him for defalcations which he was alleged to have committed as governor; but the true motive of his relinquishment of office, which coincided with that of many other supporters of ‘All, has to be related to other much more important events of the period: the massacre of the Ḥarrātīs at al-Nahrawān, which Ibn ‘Abbās, ‘according to certain men’, had stigmatised, and the false position of ‘Ali, who maintained his claim to be caliph when, according to the verdict of the arbitrators, he was no longer recognized as such by the majority of Muslims.

Later, Ibn ‘Abbās took a step which one might be tempted to judge severely, were it not that the precise circumstances are completely unknown: he carried off the provincial funds of Baṣra, probably when he returned to the town some time after his defection. Was this seizure criminal? When one observes that this act did not diminish the esteem in which Ibn ‘Abbās was held by the Muslim community, one may suppose that there were some fairly valid motives to justify it. Similarly, the events in which Ibn ‘Abbās was involved immediately after the death of ‘All are far from clear. Al-Ḫasan appointed him general of his troops, but Ibn ‘Abbās established contact with Mu‘āwiya: whether on his own initiative or at the invitation of al-Ḫasan is obscure; perhaps it was he who successfully brought about the agreement between the two claimants to the Caliphate; he maintained that, as a reward for his good offices, Mu‘āwiya had recognized his right to appropriate the money which he had seized (part
ABD ALLAH B. AL-ABBAS — ABD ALLAH B. ABD AL-KADIR

of the treasury of Basra). All these machinations of Ibn 'Abbās seemed to certain rā‘īs incompatibility with the dignity of such a personage; and so they transferred them, obviously wrongly, to his brother, ʿUbayd Allāh. During the long reign of Muʿawiyah, Ibn 'Abbās lived in the Ḥijāz; he went fairly frequently to the Damascus court, mainly, it seems, to defend the interests of the Ḥāghimites, which were also his own.

The troubled events of the years which followed the deaths of the first and second Umayyads brought Ibn 'Abbās once again, perhaps against his will, on to the political scene. Although the information which we possess is fragmentary, it can be deduced from it that ʿAbd Allāh b. al-Zubayr, having raised the standard of revolt at Mecca, became violently incensed with Ibn 'Abbās who, with the son of Ibn al-Ḥanafiyya, refused to recognise him as caliph. Both were banished from Mecca; in 64, the year of the siege of the town, they returned, but they persisted in their opposition to Ibn al-Zubayr, with unfortunate results: they were imprisoned. Al-Mukhtar, informed of their dangerous situation, sent from Kufa a large troop of horse, which delivered them by a surprise attack. It was thanks to Ibn 'Abbās that on that occasion bloodshed was avoided in the holy city. Under the protection of this troop, which Muslims of all periods have shown him. But the portrait sketched by Lammens.

Both were banished from Mecca; in 64, the year of the siege of the town, they returned, but they persisted in their opposition to Ibn al-Zubayr, with unfortunate results: they were imprisoned. Al-Mukhtar, informed of their dangerous situation, sent from Kufa a large troop of horse, which delivered them by a surprise attack. It was thanks to Ibn 'Abbās that on that occasion bloodshed was avoided in the holy city. Under the protection of this troop, which Muslims of all periods have shown him. But the portrait sketched by Lammens.

The verdicts which Caetani and Lammens have given on Ibn 'Abbās are in contrast to the respect which Muslims of all periods have shown him. But Caetani's arguments can easily be disproved by fair and careful criticism (it is especially important not to confuse accounts from Muslim biblical history with the kadīfl concerning the Prophet), and grave doubts can be cast on the resemblance to the original of the portrait sketched by Lammens.

Bibliography: Biographies by Arab authors (numerous, but often repeat the same information, and mainly concerned with Ibn 'Abbās's scholarly activity): Ibn Sa'd, ii/2, 119-23, 125; iv/2, 4; v, 74-5, 216-7, 231 and Index; Bahāḥ, Anābī, ms. Paris, 64°, 714v-731v; 448v-454v; 723; Kashshāf, Muṣafrāt Abārār Al-Ridāl, Bombay n.d. 36-42; Ibn al-ʿAṯīr, Usd, Cairo 1280-6, ii, 192-5; Sibīt, Ibn al-Dāwīzī, Mirāt al-Zamān, ms. Paris Ar. 6131, f. 187v-190v; Ḍabbālī, Muṣafrāt al-Kurrā, ms. Paris Anc. F. 742 = Cat. 2084, f. 5v-6; Ibn ḤāḍJR, Isāba, Calcutta 1946-53, ii, 502-15, no. 5149; id., Tahdīth al-Tahdīth, Hyde-}

 shortcuts in his Memoirs, in which he mentions he established himself in that town and earned his living in many different ways. He acted as an interpreter, gave lessons in Malay, wrote letters, and assisted the American missionaries North, Keasberry and others in translating mission books and school books.

In 1838 was published at Singapore under the title Bahawa in Kestah Pā-layar-an Abdullāh, ibn Abdul-kadhir, Munsfji, de P Singapura ka-Kalantan, a description of a journey to the Malay States on the east coast of the Peninsula of Malacca, giving most important information concerning them. This book inaugurated a new and free Malay prose style; its author may be considered a pioneer of the literary movement which, continued by authors of the 20th century, ultimately led to the development of Malay into the national language of Indonesia.

'Abd Allāh's principal work is the Hikayat Ab-}

dullah, his Memoirs, in which inter alia he mentions politically important personages, such as Farquhar and Raffles (whose secretary he was), and emphasizes the advantages of a European administration over an Indian one, even though he at the same time sharply criticizes the administrative measures of the English and Dutch. The work was finished in 1843 and lithographed with a few additions in 1849. Some copies of this first edition have an English dedication to Governor Butterworth, in which the work is called a "humble attempt to revive Malay literature". In his Memoirs 'Abd Allāh mentions several works written by him. Among these is a poem describing a fire in Singapore, in which the author lost all his possessions. It was entitled Shaīr Singapura dimakan api and printed in Malay as well as in Latin characters (1843). The Ms. described in the catalogues under this title do not contain this
poem, but a similar one, entitled Sha'ir Kampung Gelam terbakar, published after a fire in 1847.

The periodical Čermin Mata contains some contributions by Abd Allah. He died in 1854 during a pilgrimage to Mecca, shortly after his arrival in that city. The notes of his voyage as far as Djjidda are preserved in Čermin Mata.

Besides these original works Abd Allah translated the Tamil redaction of Panatantara (a collection of Indian fables) into Malay under the title of Hikayat Pandja Tanđaran, and edited the Malay Chronicles (Sedjarah Melayu).

(C. A. van Ophuysen—P. Voorhoeve)

'ABD ALLAH b. 'ABD AL-MALIK b. MARWÂN, son of the caliph 'Abd al-Malik b. Marwân (q.v.), was born about the year 60/680-1, perhaps somewhat earlier, as he is said to have been 27 years old in the year 85/704. He grew up in Damascus and accompanied his father in several campaigns. We first meet him as an independent general in the year 81/701-2, in one of the usual razzias against the Eastern Romans. Then in the year 82/702-1, he was sent with Muḥammad b. Marwân to help al-Ḥadijdâdi against al-Ăsh'âth and played a part in the negotiations of Dayr al-Djamādîm. Thereupon he again led expeditions against the Eastern Romans, and in the year 81/702-3 conquered al- Masâṣâ, which he converted into a military camp. After the death of his uncle 'Abd al-Ăazîz b. Marwân, he was appointed governor of Egypt in the year 85/704. On 11 Djamâdî II he made his entry into Fustât. He was to wipe out all traces of 'Abd al-Ăazîz, and therefore changed all the officials. His administration left a bad record in the tradition, because he accepted bribes and embezzled public monies. The only really important achievement of his rule was the introduction of the Arab language into the diwans of the capital. His administration gave o- fience in Damascus; in the year 88/706-7 he made there a passing visit, and in 90/708-9 he was defi- nitely recalled. He departed to Syria with many presents, but they were taken from him in the pro- vince of al-Urdunn by order of the caliph. Thereupon he disappeared from the political arena. Only al-Yaşûbi has the information that he was executed when the 'Abbâsids came to power. He is said to have been crucified by al-Salîfî in the year 132/- 749-50 in al-Hîrâ.

(C. H. Becker)

'ABD ALLAH b. 'ABD AL-MUTTA'LÎB of B. Hâshîm of Kûraysh, father of the prophet Muhammad. The earliest and most reliable sources give little information about him. His mother was Fâţima bint 'Amr of B. Mâkhzûm. Al-Kâlîb places his birth in the 24th year of the reign of Anûshîrwan (554), but he is usually said to have been twenty- five when he died (570). According to a well- known story, picturesque but probably with little factual basis, 'Abd al-Muttablîb vowed that, if he had ten sons who reached maturity, he would sac- rifice one; he attained this and selected 'Abd Allah by lot, but eventually sacrificed 100 camels instead. His marriage to Âmina bint Wâbî has been much embellished in legend. It may have marked an alliance between 'Abd al-Muttablîb and Âmina's clan, B. Zuhra, as he himself married a woman of this clan at the same time. During a trading expedition 'Abd Allah fell ill and died at Medina among the clan of his father's mother, B. Âdî b. al-Nadîdâr, being buried in Dâr al-Nâbiga. His death took place either shortly before Muhammad's birth or a few months after; the word "orphan" in K. xcvii, 6, doubtless refers to Muhammad's early loss of his parents.

Bibliography: Ibn Highâm, 97-102; Ibn Sâ'd, i,1, 53-61; Ţabari, i, 967, 979-80, 1074-51; Caetani, Annaî, i, 65-7, 118-20. (W. Montgomery-Watt)

'ABD ALLAH b. 'ABI ISHâK AL-HADRAMI, grammarian and Qur'an-reader from Bâcia, died in 1177/735-6. His "exceptional" (şâdhik) reading continued the tradition of Ibn 'Abbas and, in turn, influenced the readings of 'Isâ b. 'Umar al-Thâkafi and of Abû 'Amr al-Âlî. It seems now established that he was the earliest of the real Arab grammarians (cf. Ibrahim Mustafa, Actes du XXI Conr/es des Orient., 278-9). He is said to have extended the use of inductive reasoning (khdâb) and the detail is handed down in this case. The fact that he the title is handed down, but in that case he opted for the accusative (mâshî). Nothing else is known about him beyond the facts that, being of
non-Arabic origin himself, he felt some hostility towards the Arabs, and that he was the object of a stinging riposte by al-Farazdaq, whose mistakes must have pointed out.

'Abd Allâh b. Ahmad [see Sunûd].

'Abd Allâh b. 'Ali, uncle of the caliphs Abu l-'Abbâs al-Saffâî and Abu Dja far al-Mansûr. 'Abd Allâh was one of the most active participants in the struggle of the 'Abbâsîds against the last Umayyad caliph Marwân II. He was commander-in-chief in the decisive battle at the Greater Zâb, where Marwân lost his crown, and when the latter took to flight, 'Abd Allâh pursued him, quickly captured Damascus and marched on to Palestine, whence he had the furtive caliph pursued to Egypt. He was even more implacable than his brother Dâ'îd b. 'Ali in waging war on the members of the Umayyad house, and shrank from no method to exterminate them root and branch. During his stay in Palestine, he had about eighty of them murdered at one time. Such cruelties naturally caused ill-will against the Muslims and was the object of such cruelties naturally caused ill-will against the Muslims and was the object of the Meccans and Asârî, he returned to Basra, leaving the government of Khurasan in the hands of deputies. In 35/656 he attempted in vain to support Uthmân, and subsequently assisted A父子, Talba and al-Zubayr in organizing the resistance to 'Ali at Basra. After their defeat in the Battle of the Camel he took refuge with the Banû Hûrkus and made his way to Damascus, where he joined Mu'awîya. In 41/661 he was one of Mu'awîya's delegates to treat with al-Hasan b. 'Ali, and at the end of the same year he was re-appointed to the governorship of Basra. In 42-43/662-4 his lieutenants reconquered Khurasan and Sicily, which had been lost to the Arabs during the civil war, and an expedition was sent into Sind. But his lenience towards the tribesmen appeared too dangerous to Mu'awîya, who replaced him in 44/664 by a more energetic governor; thereafter Ibn 'Amîr appears to have lived in retirement until his death at Mecca in 50/668, or in 57 or 58.

'Abd Allâh b. 'Amîr was celebrated not only for his military abilities, but also for his generosity and other personal and especially for his many public works. Among these were the construction of two canals at Basra and the canal of Ubulla, plantations in al-Nîhâdî and Kâratayn, and improved water supplies for the pilgrims at 'Arafah.

'Abd Allâh b. 'Ulluggin b. Badîs b. Habîb b. Zîlî, third and last ruler of the kingdom of Granada, of the Sinâhâdî Berber family of the Banû Zîlî [see Sâhâdî of Spain]. Born in 447/1056, he was appointed at the death of his father Buluggîn Sayf al-Dawla, in 456/1064, as the presumptive heir of his grandfather Badîs b. Habîb. He succeeded him on the throne of Granada, while his brother Tamîl b. Mu'izz became independent ruler of Mallaga. His reign consisted of a long series of troubles inside his kingdom, of armed conflicts with his Muslim neighbours, and of compromises with Alfonso VI, king of Castile. At the time of the Almoravid intervention in Spain he took part in the battles of al-Zallâkâ (q.v.) and Aledo, but his negotiation with the Christian king soon cost him his throne. He was besieged in his capital in 483/1090 by Yûsuf b. Tâshûfîn, was dethroned and sent into Mediterraneo, Rome 1923, under the relevant years; S. Moscati, Le massacre des Umayyades, in Archiv Orientalî, 1950, 88-115. (K. V. Zetterstén—S. Moscati)
forced residence in Aghmat, in Southern Morocco, where he ended his days.

It was during his exile in Morocco that `Abd Allah composed his "Memoirs", the almost complete text of which was found by the author of the present article in successive fragments, at intervals of several years, in the library of the Diámi al-Karawaiyín in Fes. This autobiography, called al-Tibydn 'an al-kádháka al-há'íma bi-biídálit Bani Zirí ji jírmána, is the most considerable and the least deformed document on the history of Spain in the second half of the 6th century. In spite of menacing his kingdom, these "Memoirs" give a very detailed chronicle of all the events that led in 478/1085 to the taking of Toledo by Alfonso VI, and, in the next year, to the arrival of the Almoravids in the Peninsula. At the same time it is a psychological document of the first order, that mirrors, much better than the chronicles of the Andalusi fašeji, the state of social and political decomposition in which Muslim Spain was found at the end of the 11th century, and the progress made by that time by the efforts of the Reconquesta. The account of the events prior to the reign of the author is also new and important. The "Memoirs" of `Abd Allah must be considered as the guiding thread that allows us to find our bearings through the maze of the history of Muslim Spain at the moment it was about to fall into the power of the North African dynasties.

Several fragments of the Tibydn were published, with an annotated translation by the author of this article, in And., 1935, 233-344; 1936, 29-145; 1941, 231-93. The whole of the Arabic text, now recovered, will be published soon. A Spanish translation, made by E. Lévi-Provençal and E. García Gómez (Las "Memorias" de `Abd Allah, último rey ziri de Granada) is due to be published in 1953.

Bibliography: The biographical articles about `Abd Allah by Ibn Idrísh and Ibn al-Khathib have been reproduced in And., 1936, 124-7; see also Ibn al-Khathib, A'mál al-A'Tám (Lévi-Provençal), 268-70; Nasb al-Qdásí (Lévi-Provençal), 93-4; R. Menéndez Pidal, La España del Cid 4, Madrid 1947, indices; idem, Leyendo las "Memorias" del rey ziri `Abd Allah, And. 1944, 1-8; E. Lévi-Provençal, Esp. Mús., iv (E. Lévi-Provençal).

`ABD ALLAH B. DJARÁF b. ABI TALIN, nephew of the caliph 'All. `Abd Allah's father had gone over to Islam very early, and took part in the emigration of the first believers to Abyssinia, where, according to the common belief, `Abd Allah was born. On his mother's side he was a brother of Muhammad b. Abi Bakr; the mother's name was Asmá' bint 'Umayys al-Khath'amáyya. After some years the father returned to Medina taking his son with him. `Abd Allah became known chiefly on account of his great generosity, and received the honorific surname of Bahr al-Djád, the Ocean of Generosity'. He appears to have played no very important part in politics, although his name crops up from time to time in history during `All's time and that following. When Mu'áwiya tried to throw suspicion on Kays b. Sa'd, the valiant governor of Egypt, to damage him in `All's eyes, `Abd Allah advised the removal of Kays; `All allowed himself to be persuaded and took the fateful step of replacing him by Mu'ámmad b. Abi Bakr, who in a very short time brought the whole of Egypt into the greatest confusion. This took place in the year 60/656-7. When in the year 60/656-8, after Yazid's accession, the Shi'ites of Kufa summoned Husayn b. `Abd Allah to proceed to that city to take to himself proclaimed caliph, `Abd Allah amongst others endeavoured to dissuade him from this dangerous enterprise, but without success. The date of `Abd Allah's death is generally given as 80 or 85, but 87 and 90 are also recorded.

(K. V. Zettersténk)

`ABD ALLAH B. DJUDÁN, of Banú Asad b. Khuzyamay, a confederate (halál) of Banú Umayyà of Kuraysh. His mother was Umayma bint `Abd al-Muţallîb, Muhammad's aunt. An early Muslim along with his brothers, Ubayd Allah and `Abd Allah, he took part in the former in the migration to Abyssinia. Ubayd Allah became a Christian and died there, but `Abd Allah returned to Mecca and was the most prominent of a group of confederates, including his sister Zaynab (q.v.), who all migrated to Medina. He led the much-criticized raid to Nāghla where Muslims first shed Meccan blood, and fought at Badr. At his death at Ulûd he was between 40 and 50.

(W. Montgomery Watt)

`ABD ALLAH b. DJUDÁN, Kurayshite no table of the clan of Taym b. Murad, at the end of the 6th c. A.D. He acquired such wealth from the caravan and slave trade that he possessed one of the largest fortunes in Morocco, Fas, Táhribih, Makhdum (van Vloten), 165; Ibn Rusta, 215; Mas'údî, Murúdij, vi, 153 ff.; Lammens, La Mecque à la veille de l'Hégire, index. He surrounded himself with unusual luxury (being nick-named bási 'I'lláhab, because he used to drink from a golden cup), and was the owner of the two singing-girls called "Locusts of 'A'd" (Djarradat 'A'd) whom he offered to Umayya b. Abi N-Salt. In giving magnificent banquets, he showed a generosity that became proverbial (Agfání, viii, 4; Thāqlíbî, Thimár, 487, in connection with the expression: fījân Ibn Díjadīn). Thus he won the favour of the poets, but also drew on himself some invective (al-Djabît, Hayawwán i, 364; ii, 93). His prestige enabled him to play a certain role in politics (Agfání, xix, 76), and he seems to have been the promoter of the Meccan confederacy known as hif al-fada'il (Ibn Ḥighám, 85; Yaḵbúlî, ii, 12; Lammens, op. cit., 54 ff.).

Already before the 3rd/9th c., his unusual wealth, and the wish of the Meccans to explain it otherwise than by the slave trade, gave rise to his identification with the hero of a Yamanite legend, discoverer of the tomb of Shádâd b. 'Amr (q.v.) (Wab b. Munabbîb, Tijdiyn, 65 ff.). Thus he is represented as a şuţád banished by his clan, wandering in the desert and enriched by a treasure of precious stones and gold which he finds in an old tomb (al-Hamdán, Ḩišil, viii, 183 sqq.; al-Damhîrî, s.v. Thavaban; al-Djabît, Baydân, ed. Sandúbî i, 31). According to an isolated and no doubt apocryphal tradition, he is buried in a place in Yaman called Birk al-Ghumad (Yakut, i, 589).

and refers to Fakhr

A1I b. al-Husayn, B. of Mecca, in 1882,
he represented for some time the Hidjaz in the Otto-

April 1914 he had interviews in Egypt with Lord
Kitchener and Ronald Storrs and thus took part in
the negotiations that led to the proclamation of
"Arab Revolt" announced by his father in Mecca, 9 Sha'bân 1334/10 June 1916. During the hostilities
he played only a minor role. On 8 March 1920 an
"Irâkî Congress", which met in Damascus, pro-
claimed him "constitutional king of Irâk". But he
never took possession of the throne, which
was given by the English, in June 1921, to his brother
Faysal, who had been expelled from Damascus by the French
troops of General Gouraud (24-27 July
1920). In March 1921 'Abd Allâh met in Jerusalem
W. Churchill, then colonial secretary. It was during
that interview that it was orally agreed to create in
Transjordan, separated from the rest of Palestine
placed under British mandate, a "national Arab
government" headed by 'Abd Allâh (28 March).
On 28 August 1923 this government was recognized by the
High Commissioner for Palestine. Its relations
with Great Britain were fixed by a treaty signed
in Jerusalem 20 February 1928 (modified by the
agreements of 2 June 1934 and 9 July 1941).
In 1946 Great Britain recognized Transjordan "as a
completely independent state" (treaty of 22 March
1946, modified by the treaty of 15 March 1948).
'Abd Allâh was crowned as king in 'Am'mân, 25
May 1946, and Transjordan, constituted a kingdom,
took the name of "Hashimite Kingdom of Jordan". After the war in Palestine (15 May 1948-3 April
1949), 'Abd Allâh annexed the territories occupied by the Arab Legion to the west of the Jordan (April
May 1950). He was assassinated in Jerusalem on 20
July 1951.

In the last years of his life, he visited successively
Turkey (Jan. 1947), Iran (July-August 1949) and
Spain (Sept. 1949). His journeys were followed by
the signature of treaties of friendship with these
countries (Turkey, 11 Jan. 1947; Iran, 16 Nov. 1949;
Spain, 7 Oct. 1950). On the other hand he tried to
overcome the hostility of the Arab League to his
projects of territorial expansion. He died, however,
without accomplishing the great ideal of his reign:
marshalling round his throne the Arab lands of Syria
(project of Greater Syria).

He was the author of memoirs, only the first
part of which has been published.

Iskandar, in the same way Abd al-Mu'min wanted to occupy the same position in relation to his now aging father, 4 Abd Allah would, however, not hear of any diminution of his power, and only the mediation of the clergy prevented an open breach between father and son, and compelled 4 Abd al-Mu'min to yield. On hearing of the strained relations between father and son, the nomads had penetrated into the region of Taškhend and had defeated between Taškhend and Samarqand an army against them. At the beginning of a punitive expedition against this enemy 4 Abd Allah was overtaken by death in Samarqand (end of the "hen year", 1066/beginning of 1598).

4 Abd al-Mu'min was murdered only six months later by his subjects. The conquests in Khurasan and Khârizm were lost, and in the Òzbek's own country the power fell into the hands of another dynasty. Of greater permanence were the results of 4 Abd Allah's activity in internal affairs; the administration, especially the coinage system, was remodelled by him, many public works (bridges, caravanseras, wells, etc.) were completed. Even at the present day popular folklore ascribes all such monuments either to Timur or to 4 Abd Allah.

**Bibliography:** The life of this ruler up to the year 996/1587-8 is described in detail by his eulogist Hâfiz Tânish: Sârafânâ-ye Shâhistân (Persian), usually called 4 Abd Allah-nâmâ. Much information (especially about the last few years) is given by 4 Abd Allah's Persian contemporary Iskandar Munshi in Ta'rîf-i 'Alâm Arâ-ye 'Abbasî (biography of Shâh 'Abbâs I, Teheran 1897). Extracts from both works are in Welyaminow-Zenonzow, Islyedowaniya o kasmovskikh izslyedovaniya i islyedowaniya s (in the Trudy wostoc. old. imper. arkeol. obsh., t., and before that in his Moneti bukharskiya i khwaišiyâ. See also my extracts from the little known Bahir al-Asrdr by Mahmûd b. Wall. In the Zapisiki wostoc. old. imper. russ. arkeol. obsh., xv. On the Bahir al-Asrdr comp. Ethê, India Office Cat., No. 575. The information given by Vambéry, Gesch. Bochara's, and by Howorth, Hist. of the Mongols, ii. div. 2, who follows him, is to be accepted with great caution.

(W. Barthold)

**4 Abd Allah b. Ismâ'il, 4 Alâwîd [q.v.]** sultan of Morocco, whose first reign started 4 Shrâbân 1141/5 March 1729, while his last ended 4 Ziyâd 1171/10 Nov. 1757.

This sovereign was in fact deposed several times, five times according to the Arabic historians, and as often recalled to power. For the good order established in Morocco under Mawlay Ismâ'il [q.v.] was at that time but a memory. When 4 Abd Allah assumed power, two of his brothers, Ahmad al-Dârj and 'Abd al-Malik, had been fighting for it for two years, and had roused, by their mutual bids and their weakness, violent antagonism between the black army of their father, the 4 'abid al-Dârjârî, and the gish [diyâsh, q.v.] tribe of Òdâyâ and the Berbers of the Middle and Central Atlas. When it is added that the sons of Mawlay Ismâ'il were numerous and that several of them aspired to power, and that, on the other hand, 4 Abd Allah showed himself from the beginning as an ungovernable and cruel prince, then it is plain why Morocco was at this time the scene of constant disorders.

Raised to power by the 4 'abid, who had been won over by his mother, 4 Abd Allah immediately stirred up against himself the city of Fez, whose resistance was overcome only after a siege of six months. He then tried to pacify his kingdom, but in consequence of a disastrous campaign in the Central Atlas, he excited the enmity of the 4 'abid and had to flee, on 29 Sept. 1734, to the Wâdi Nûn, to his mother's tribe. Replaced by his brother 4 Ali al-A'radj, he was recalled in 1736, but was again expelled a few months later by the 4 'abid. He took refuge with the Berber Ait Idrâsân and was replaced successively by two of his brothers, Muḥ. b. al-Abhâyîs and al-Mustadî. Recalled in 1740, he fought against al-Mustadî and his ally, the pasha of Tangier, Ahmad al-Riff, when another son of Ismâ'il, Zayn al-'Abîdîn, was elevated to the throne by the 4 'abid. 4 Abd Allah found new supporters among the Berbers, with whose help he regained power in the same year. He then succeeded in defeating al-Mustadî and al-Riff and made an effort to pacify Morocco. New revolts, however, followed each other without interruption and the sultan constantly changed his allies, relying sometimes on the 4 'abid, sometimes on the Òdâyâ, sometimes on the Berbers. He was deposed yet again (1748) in favour of his son Muhammed governor of Marrâkûsh. His son, however, remained loyal and assured the reign of 4 Abd Allah until his death, but in the midst of continual disorders. 4 Abd Allah resided partly in Meknes, and partly in a country house near Fez, Dâr Dîshâbâh.

4 Abd Allah b. Khâzîm al-Sulâmî, governor of Khurâsân. On the first expedition of 4 Abd Allah b. 4 'Amîr [q.v.] into Khurâsân in 31/651-2, Ibn Khâzîm commanded the advance-guard which occupied Sarakhz. According to some accounts, he put down a rebellion led by Kârin in 33/653-4 and was rewarded with the governorship of the province, but this is probably an anticipation of the events of 42/662. During Ibn 4 'Amîr's second governorship of Bayra (41/661), Kays b. al-Haythâm al-Sulâmî was appointed to Khurâsân, and 4 Abd Allah b. Khâzîm and 4 Abd al-Râhîm b. Samura were dispatched to recover Balîk and Sîujîstân. When Kays showed himself unable to deal with an Ephthalite revolt which broke out in the following year, Ibn 4 'Amîr replaced him as governor by 4 Abd Allah b. Khâzîm, who remained in Khurâsân until recalled by Ziyâd in 45/684.

Ibn Khâzîm returned to Khurâsân with the army of Salm b. Ziyâd (61/68-2/684) and when the latter withdrew after the death of Yazîd I Ibn Khâzîm persuaded him to nominate him as governor of the province (64/684). Having gained possession of Marw after defeating its Tanmite governor, he then attacked, with the aid of Tamîm, the Bakrite governors of Marw al-Rûdh and Harât, and overcame them after a long struggle. The victory was followed by repeated risings of the Tamîm against Ibn Khâzîm, who now nominally governor on the death of Ibn Abd al-Malik. In 72/682 he received, but indignantly rejected, an offer by 4 Abd al-Malik to confirm him as governor for seven years; the offer was then made to and accepted by his deputy in Marw, the Tanmitte Bukayr b. Wishâh, who overtook and killed him (probably
'abd allâh b. khâzîm — 'abd allâh b. mu'âwiya

in 73/692-3) as he was attempting to join his son Mûsâ in the stronghold which he had previously prepared at Tîrûnâ. The career of Ibûn Khâzîm was afterwards embellished with saga-like accretions, which make it difficult to estimate many details with precision.

(1. H. A. R. Gibb)

'abd allâh b. maymûn, client of the family of al-Hârîb b. 'Abd allâh b. al-Mahmûzîn (Ibn al-Zubayri's governor in Basra, cf. al-Tabarî, index), known in the Twelver Shi'ite literature as a transmitter of traditions from Dîjarîr al-Sâdîk (al-Kullîn, Ibn Bâbûrû, al-Tûsî, passim, cf. Ivanow, Alleged Founder, 117-60; see also the Shi'ite books of rîdîqîl: al-Sâdîk, 130-136; al-Adîrûlî, 160; al-Nâjîlî, al-Rîdîqîlî, 148; al-Tûsî, Fihrist, 197; he appears also in Sunni books of rîdîqîl: al-Dhahabî, Mîzân al-Irâtî, ii, 81, who quotes the earlier Sunni authorities; Ibn Hâdjâr, Takhtût al-Tâhutîbî, vi, 149). Since Dîjarîr al-Sâdîk died in 148/765, 'Abd allâh belongs to the middle and the second half of the 2nd/8th century. His father Maymûn al-Kaddâk ("sharpeners of arrows"—so al-Madhîl), and his son 'Abd allâh as the founder of Ismâ'îlism, is mentioned in the earliest Ismâ'îlî sources (cf. Lewis, Origins, 65-7).

The anti-Ismâ'îlî writers, from the beginning of the 4th/10th century on, have a long and colourful tale to tell of 'Abd allâh as the father, and of Maymûn as the mother, of Ismâ'îlism. The source of all these accounts is that of Ibn Rizâm, anachronistically, in the middle of the 3rd/9th century. His father, Muh. b. Ismâ'îl, and his son 'Abd allâh as leaders of the extremist movement out of which grew Ismâ'îlism. The evidence is as yet not sufficient for a definite solution of this problem, and it would seem possible that the story for the story about Maymûn and 'Abd allâh is to be sought in the role that some descendants of 'Abd allâh b. Maymûn may have played in the Ismâ'îlî movement in its beginnings about 260/873, and that the story was spun out of this knowledge of the connection of some "Kaddâshids" with Ismâ'îlism. The origins of Ismâ'îlism, Cambridge 1940 (see especially 49-73), admits, on the whole, the historicity of the role of Maymûn and 'Abd allâh as leaders of the extremist movement out of which grew Ismâ'îlism. The evidence is as yet not sufficient for a definite solution of this problem, and it would seem possible that the story for the story about Maymûn and 'Abd allâh is to be sought in the role that some descendants of 'Abd allâh b. Maymûn may have played in the Ismâ'îlî movement in its beginnings about 260/873, and that the story was spun out of this knowledge of the connection of some "Kaddâshids" with Ismâ'îlism.

'S. M. Stern')

'abd allâh b. mu'âwiya, 'Aid rebel. After the death of Abû Hâshîn, a grandson of 'Ali, claims were laid to the Imamate from several quarters. Some asserted that Abû Hâshîn had formally transferred his right to the dignity of Imam to the 'Abbâsîd Muhammâd b. 'Ali. Others said that he had spoken in favor of 'Abd allâh b. 'Amr al-Khaqî b. Khâshîh and wanted to proclaim him Imam. As he, however, did not come up to the expectations of his followers, they turned from him and declared 'Abd allâh b. Mu'âwiya, a great-grandson of 'Ali's brother Dîjarîr, to be the rightful Imam. The latter asserted that both the godhead and the prophetic office were united in his person, because the spirit of God had been transferred from the one to the other and had finally come to him. In accordance with this his followers believed in metempsychosis and denied the resurrection. In Muḥarram 127/Oct. 744, 'Abd allâh revolted in Kûfâ where he was joined by many followers, especially from amongst the Zaydîtes (q.v.). The latter captured the citadel and expelled the
prefect. In a short time, however, Abd Allah b. Umar, who was governor of Itrāk, put an end to his manoeuvres. When it came to fighting, the ever unreliable Kufans deserted; only the Zaydites fought bravely and continued the battle till Abd Allah was granted an unimpeded retreat. From Kufa he proceeded at first to Madā'in and then to al-Dībāl. His power was in no way broken. From Kufa and from other places numbers of people flocked to him and he soon succeeded in winning over several important strongholds in Persia. After residing for some time in Isfahān, he went to Īṣṭābhr. Owing to the temporary weakness of the government in Persia, as a result of the disorders in Itrāk and Khurāsān, he had no difficulty in extending his rule over a great part of al-Dībāl, Aḥwāz, Fārs and Kūrma. The Khāridjītes, who had fought against Marwān II on the Tigris, withdrew into 'Abd Allah's domain and other opponents of the caliph also joined him, including some 'Abbāsidās. In the end, however, he was unable to maintain his power. 'Āmir b. Dubārā, one of Marwān's generals, who had been entrusted with the pursuit of the Khāridjītes, led an army into 'Abd Allah's domains and brought his rule to a sudden end. In the year 229/746-7, 'Abd Allah was defeated at Marw al-Shāhān and forced to flee to Khurāsān, where Abd al-Muslim, the celebrated general of the 'Abbāsidās, had him executed. After his death, some of his followers, called al-Dīnāhīyya [q.v.], maintained that he was still alive and would return; on the other hand, others, the so-called Hāridjītes, believed that his spirit was reincarnated in Isbāk b. Zayd b. Īlāhirī al-Ansārī.

'Abd Allah b. Muhammād, Sharīf of Mecca

[see Makkā]

'Abd Allah b. Muhammād b. 'Abd al-Rahmān al-Marwānī, seventh 'Umayyad Amīr of Cordova. He succeeded his brother al-Mundhir on the latter's death before Bobastro, centre of 'Umar b. Hafซ's rebellion, on 15 Safar 275/29 June 888. The circumstances of al-Mundhir's death arouse the suspicion that the new sovereign was not quite innocent of it. At his accession, 'Abd Allah, born in 229/844, was forty-four years old. His reign, which lasted for a quarter of a century, until his death on 1 Rabi' I 300/26 October 912, was described in detail by the chronicler Ibn Ḥāyyān, in that part of his Muṣḥābis which has been preserved in an Oxford manuscript, long since known and utilized, and published in a somewhat faulty edition by M. M. An inscription, Paris 1937.

His biographers present a flattering portrait of the Amīr 'Abd Allah and omit to mention his cruelty and his lack of scruples. They extol his sobriety, his piety and his Islamic culture. It may be granted to him as an undoubted merit that he maintained, in a difficult period, the Hispanic-Umayyad dynasty and contrived to counter a multitude of internal dangers, notably the Andalusian revolt fomented by the muwallads and the particularist tendencies of the Arab gentry of Seville and Elvira. For further details see 'Umayyads of Spain.

'Abd Allah b. Muhammād al-Tā'ishī (his name is invariably pronounced as 'Abdullāh), the successor of Muḥammad Aḥmad [q.v.], the Suda- nese Mahdī. He belonged to the Awlād Umm Surra, a clan of the Dībarāt section of the Ta'ishī tribe of cattle-breeding Arabs (Bakkāra) in Darfur. His great-grandfather is said to have been a Tunisian šarīf who married a woman of the tribe. His father Muḥammad b. 'All Kārār bore the nickname of Tūr Shāyīn (Ugly Bull). Religious pretensions were hereditary in the family, and both father and son were ḫākis of repute. Zubayr Raḥma, the famous merchant-adventurer and conquerer of Darfur, relates that 'Abdullāhī narrowly escaped execution at his hands, when taken prisoner during the Dāfūr fighting in 1873, and that even then he was in search of the Expected Mahdī. Tūr Shāyīn died among the Bakkāras in Darfur, whom he brought to the Central Sudan where his governor of the eastern province, the redoutable 'Abdullāhī, assumed control of the new Mahdist state. A convinced believer in the Mahdī's mission and himself claiming supernatural gifts, he rigorously upheld the religious ordinances of the Mahdiyya, without neglecting the temporal aim of establishing his personal and absolute rule. With this end in view he deprived the Mahdī's blood-relations (the Agārāf) of all influence and successfully crushed the opposition of powerful tribal chiefs and of rival religious pretenders. Not himself a military leader, 'Abdullāhī was served by a number of capable amīrs who, in the first year of his reign, captured the last posts still held by the Egyptian garrisons. His governor of the eastern province, the redoutable 'Uṯmān Dīnā (q.v.) fought numerous actions with varying success against the Anglo-Egyptian forces based on Sukin. Between 1887 and 1889 there was intermittent warfare with the Abyssinians (sack of Gondar by the Mahdīs in 1887; battle of Kallabât 9 March 1889 when an Abyssinian victory was turned into rout by the death in battle of King John). In the execution of his policy 'Abdullāhī relied largely on the Bakkāra tribesmen of Kordofān and Darfur, whom he brought to the Central Sudan where they incurred much unpopularity as a privileged and predatory class. 'Abdullāhī's most trusted associate was his brother Yaḥūkī and he seems to have intended his eldest son 'Uṯmān Shāykh al-Dīn to be his successor.

The first serious reverse of his reign was the defeat at Toskhi (3 Aug. 1889) of the Mahdīs under 'Abd al-Rahmān al-Nājdūm who attempted the invasion of Egypt with quite inadequate forces. The country over which 'Abdullāhī still ruled with absolute power was now devastated by incessant warfare and by the terrible famine of 1889. The end came when the British government, then in virtual control of Egypt, decided on the re-conquest of the
Sudan. The occupation of Dongola (1896) by Anglo-
Egyptian forces was followed by their advance to
Omdurman and the decisive defeat of the Mahdist
army (2 Sept. 1898). Abdullāh fled to Kordofān
where he maintained himself with a considerable
body of followers for another year. In the final
battle of Umm Dubaykārat (24 Nov. 1899) he met
death with courage and dignity.

The Mahdī and his successor professed to re-live
the life of the Prophet and of early Islam, and 'Abd-
Dhulāh's epistles, in which he exhorted the Sultan
of Turkey, the Khedive of Egypt, and Queen Vic-
toria to embrace the Mahdist faith, vividly display
the anachronistic spirit of the Mahdiyya. Ruthless
towards external enemies and suspected rivals, and
governing without regard for the material welfare
of his country, 'Abdullāh yet remained true to his
fanatical faith and to the primitive code of a Bāṣākārī
Arab. In contrast to European writers who stress
the cruel and barbaric character of his reign, Su-
danese tradition credits him with the virtues of
simplicity in his private life, generosity as a host,
and sword in the Sudan

proposed to leave Medina, but 'Abd Allāh b. 'Umar
(q.v.) advised him to remain, and he gave in to Ibn
'Umar's arguments. When the inhabitants of Medina
rebelled against the new caliph, he became the leader
of the Kurāyshī element in the city and took
part in the battle of the Harra in Dhū 'l-Hijjah
63/August 683. Escaping from the general rout, he
took refuge in Mecca with the anti-caliph 'Abd
Allāh b. Zubayr, who appointed him in Rama-
dān 65/April 683 governor of Kūf. Shortly after-
wards he was attacked by the Shī'ite adventurer
al-Mukhtar b. Abī 'Ubayd [q.v.]. Abandoned, he
siegèd in his palace and probably betrayed by his
own general Ibrāhim b. al-Aṣhtar, he relinquished
his post, withdrew to Baṣra, and then joined Ibn
al-Zubayr in Mecca. There he joined Ibn al-Zubayr's
forces and was killed together with him in 73/692.

(K. V. Zetterstén—Ch. Pellat)

'ABD ALLĀH b. RAWĀḤA, a Kharrājīte, be-
longing to the most esteemed clan of the Banu
l-Ḫārij. At the second 'Akhāba assembly in March
622, 'Abd Allāh was one of the 72 trustworthy
whom the already converted Medinians, conform-
ably to the Prophet's wish, had chosen. When
Muhammad had emigrated to Medina, 'Abd Allāh
proved himself to be one of the most energetic and
upright champions of his cause. Muhammad appears
to have thought a great deal of him, and often en-
trusted him with honorable missions. After the battle
of Badr, in the year 2/623, in which the Medinians
were victorious, 'Abd Allāh together with Zayd b.
Ḫārijah hastened to Medina to bring the tidings
of victory. During the so-called "second campaign
of Badr", in Dhūl-Ḫājdār 4/Apr. 626, 'Abd
Allāh remained behind in Medina as lieutenant-
governor. When in 5/627, at the commencement of
the siege of Medina, the fidelity of the Banu Kurayzah,
his allies, was suspected, the Prophet sent 'Abd
Allāh together with three other influential Medinians
to find out the real sentiments of his allies. After
Khaybar had been conquered in the year 7/628 and
its territory divided, Muhammad appointed 'Abd
Allāh as appraiser of its yield. On sending out the
Mu'ta expedition in the year 8/629, 'Abd Allāh was
appointed by the Prophet as second in succession
to the commander of the army, and when both his
superiors had fallen, he sought and met his death
as they had done fighting for the Faith.

Besides his military talents 'Abd Allāh possessed
other qualities which made him valuable to his
master; he was one of the few pre-Islamic men who
could write, and was for that reason, together
with other faithful followers, chosen as secretary
by the Prophet. Muhammad appears to have esteemed
him very highly, more especially on account of his
poetical gifts. In the Aḥbānī it is expressly stated
that the Prophet considered his poems equal to
those of his "court" poets Ḥāsān b. Thābit and Ka'b
b. Mālik. It is characteristic of 'Abd Allāh’s "literary
tendency" that he attacked the Kurayshī more espe-
cially for their unbelief, whilst the two other poets
always reproached them with their impious deeds.
Only about 50 verses of his have been preserved and
they are for the most part to be found in Ibn Ḥāşim.

(A. Schaade)

‘ABD ALLAH B. SABA’, reputed founder of the Shi‘a. Also called Ibn al-Sawādā, Ibn Ḥarb, Ibn Wahb. “Saba” appears also as Sab’; the name of the associated sect appears as Saba‘yya, Sab‘yya, or, corrupted, as Sab​āya, Sab​āya.

In the Sunnī account he was a Yamanite Jew converted to Islam, who about the time of ‘All first introduced the ideas ascribed to the more extreme wing of the Shi‘a (aghūd, q.v.). Especially attributed to himself is the exaltation of ‘All himself: that ‘All stood to Muhammad as divinely appointed heir, as Joshua did to Moses (the wiṣāya doctrine); that ‘All was not dead, but would return to bring righteousness upon earth (the raq‘a); that ‘All was divine, exalted to the clouds, and the thunder was his voice.

To Ibn Saba’s conspiratorial cunning was ascribed the Shī‘a’s special rights; that ‘All was divine, that ‘All was a purely political supporter of ‘Uthman (cf. al-Makdīsī, 107, 227; Al-Dhahabi, ed. Ritter, vi, 6); and Surer sources seem to confirm it being true. Ibn Saba and the muqaddas ascribed to Ibn Saba and the muqaddas are now ascribed to Ibn Saba and the muqaddas ascribed to Ibn Saba and the muqaddas (cf. Khushaysh al-Nasa’i, ed. Ritter, 1910, 1-46; L. Caetani, Annali, viii, 42 ff. and passim.

(M. G. S. Hodson)

‘ABDALLAH B. SAD’, Muslim statesman and general. Abū Yahya ‘Abd Allah b. Sad b. Abī Sarḥ al-Ṣamīrī belonged to the clan of Ḥār. Luḥayy of Kuraysh and was as foster brother of the subsequent caliph ‘Uthmān a chief partisan of the Umayyads. He was less a soldier than a financier. The judgements of historians on his character vary greatly. His name is connected in many ways with the beginnings of Islam. First he is mentioned as one of Muhammad’s scribes: he is supposed to have arbitrarily altered the revelation, or at least he boasted of doing so after his apostasy from Islam, and thereby incurred the hatred of the Prophet. For this reason the latter desired to have him executed after the capture of Mecca, but ‘Uthmān obtained, though with difficulty, the Prophet’s pardon. This story afterwards became very famous. ‘Abd Allah later on showed himself grateful to ‘Uthmān for his rescue by agitating for the latter’s election as caliph.

He was one of the Hidrā-companions who took part in the conquest of Egypt under ‘Amr b. al-‘Āṣī [q.v.] and appears to have governed Upper Egypt independently under ‘Umar, after the latter’s quarrel with ‘Amr. It is impossible exactly to fix the date when he was appointed governor of the whole of Egypt; according to Ibn Taghribirdī, as early as the year 25/645-6, and therefore before the visit of Alexandria under Manuel. As he was not able to suppress this rising, ‘Amr was recalled, who, immediately after his victory had to restore the government to ‘Abd Allah. ‘Uthmān desired to confirm ‘Abd Allah as financial prefect and to appoint ‘Amr as military governor, but the latter declined. ‘Abd Allah now succeeded in considerably increasing the state revenues of Egypt, much to the satisfaction of the caliph. Although his principal aim was the administration of the finances, he also became renowned as a general. ‘Abd Allah regulated the relations between the Muslims and the Nubians and supported Mu‘awiyah’s expedition against Cyprus. He himself undertook several expeditions against Roman Africa, the first probably in the year 25/645-6, the most important and most successful certainly in the year 27/647-8. He subjected the territory of Carthage to Islam. His most important military performance, however, was the naval battle of Dḥāt al-Ṣawārī, comparable in significance to the battle of the Yarmūk [q.v.], in which the Roman fleet was completely destroyed. This battle took place in the year 34/655, although different dates are given in some sources. Soon afterwards the agitation against ‘Uthmān began in many parts of the empire. ‘Abd Allah appears as the principal champion of the regime represented by the caliph. He endeavoured to warn the caliph and even left Egypt in order to support him. His lieutenant al-Sādib b. Hishām was expelled by the Egyptian revolutionary party under Muhammad b. Ḥishām, and ‘Abd Allah himself was prevented from returning to Egypt. On the frontier ‘Abd Allah learned of the murder of the caliph, and fled to Mu‘awiyah. Shortly before the latter’s march to Siffin, he died in Askalon or Ramla (in 36 or 37/656-8). His supposed participation
in the battle of Siffin and his late death in the year 57/676-7 belong to the numberless myths connected with the battle of Siffin.

'Abd Allâh b. Salâm, a Jew of Medina, belonging to the Banû Kaynûkû and originally called al-Hasayn (on the name Salâm, see Ibn Khâtîb al-Dhghî, Thwâfî, ed. Mann, 69). Muhammad gave him the name of 'Abd Allâh when he embraced Islam. This conversion is said to have taken place immediately after Muhammad's arrival at Medina, or, according to others, when Muhammad was still in Mecca. Another account which makes him accept Islam in the year 56/675-6 is worthy of more credence—though Muslim critics think it badly accredited—for his name is sought in vain in the battles which Muhammad had to wage in Medina. The few unimportant mentions in the Maghazi may well have been inserted in order to remove the glaring contradiction with the generally accepted tradition. He was with 'Umar in Dhîbiya and Jerusalem, and under 'Uthmân took the latter's side against the rebels, whom he in vain endeavored to dissuade from murdering the caliph. After 'Uthmân's death he did not do homage to 'Alî and imploded him not to march to Irân against `Abd Allâh b. al-Khâja; legend brings him into relation with Mu'awiyâ also. He died in 43/663-4.

In Muslim tradition he has become the typical representative of that group of Jewish scribes who honored the truth, admitting that Muhammad was the Prophet predicted in the Torah, and protecting him from the intrigues of their co-religionists. The questions which 'Abd Allâh is made to ask Muhammad and which only a prophet could answer, the contents of the haddîth which the works on tradition ascribe to him, and the story of Bulûkîyâ which Thâlîbi puts into his mouth, mostly have their origin in Jewish sources; if they do not really come from 'Abd Allâh himself, they certainly come from Jewish renegade circles. While his contemporaries often reproached him with his Jewish origin, later on traditions were circulated, in which Mu'awiyâ assumes him of entry into Paradise, or in which the Prophet and celebrated Companions give him high praise. Certain verses of the Qurân are also said to refer to him. The "questions" which he put to Muhammad were subsequently enlarged to whole books, and in the same manner several other works were foisted on him, which are partly based on what is related by him in Hadîth. As well as his sons Muhammad and Yûsuf, Abû Hurayra and Anas b. Mâlik also handed down his traditions. Tabarî took more especially Biblical narratives from him into his Chronicle.

'Abd Allâh b. Tâhir, born 182/798, died 230/844, was a poet, general, statesman, confidant of caliphs and, as governor of Khurâsân, almost an independent sovereign. His father, Tâhir b. al-Hasayn, had founded the powerful Tahirîd dynasty which ruled over a territory extending from al-Rayy to the Indian frontier, with its capital at Naysâbûr. In 206/821-2 the caliph al-Ma'mûn appointed 'Abd Allâh b. Tâhir governor of the region between al-Râkîa and Egypt and at the same time he was placed in command of the caliph's troops in the campaign against Nasr b. Shâbâh, a former partisan of al-`Amin, who was endeavoring to gain control of Mesopotamia. After subduing Nasr 'Abd Allâh went in 211/826-7 to Egypt, where for ten years refugees from Spain had been further weakening an already weak state, and he swiftly captured the leaders and restored order.

While he was at Dinawar, in al-Djibal, busy raising troops to quell a revolt of Bâbak the Khorramite, his brother, Tâlîka, died and in 214/829-30 he was appointed by al-Ma'mûn to succeed him as governor of Khurâsân. He proved to be an exceedingly wise ruler, establishing a stable government in his domains, protecting the poor against abuses by the upper classes and bringing education to the masses; no boy, however poor, was denied the means to acquire knowledge. As a result of litigations in Naysâbûr he ordered an investigation into the use of water for irrigation, and the book of Canals, which was the outcome of this, established legal rules for water utilization which served as a guide for several centuries (cf. A. Schmidt, Islamica, 1930, 128).

During the caliphate of al-Mu'âtasîm, 'Abd Allâh subdued the revolt of the 'Alîd pretender, Muhammâd b. al-Kâsim, in 219/834-5; and in 224/838-9 in Tâharîstân, which was under his jurisdiction as governor of Khurâsân, he quelled the far more alarming revolt of its ibhakhâd, al-Mâzîlyâr [q.v.], incited to rebel by al-Afshîn.

Gardîzî relates that al-Mu'âtasîm so hated 'Abd Allâh b. Tâhir for a personal criticism that when he became caliph he attempted to poison 'Abd Allâh by sending him a slave girl with a gift of poisoned cloth, but the attempt failed because the slave girl fell in love with 'Abd Allâh and revealed the plot. However that may be, 'Abd Allâh seems to have enjoyed the caliph's esteem. His most implacable enemy, al-Afshîn, during his own heresy trial, testified bitterly to the high regard the caliph had for him, and al-Mu'âtasîm himself referred to 'Abd Allâh as one of the four great men (curiously enough, all of them Tahirîds) of his brother's reign and regretted that he had not been able to foster any men of the same noble calibre.

Like all Tâhirîd rulers, 'Abd Allâh was enormously wealthy; his magnificent palace in Baghdad enjoyed
the royal right of sanctuary and served as a residence for the governor of the city, which remained under Byzantine domination for a long time (Le Strange, Baghdad, 139).

He was a man of wide culture with a deep love and respect for learning; in the controversy regarding the relative merits of Arabic vs. Persian culture, which engaged the keenest minds of that day, 'Abd Allāh strongly supported all things Arabic. In his own right he was an accomplished musician and a poet of note, as well as a sympathetic patron of the poet Ābū Tammām, the compiler of the ʿUṣūlāt, who sang his praises in many poems.

At the age of 48 'Abd Allāh b. Thāhir died as a result of a quinsy after an illness of three days, on Mon. 11 Raḥmān I, 230/Nov. 26, 844, according to most Arab historians (but Nov. 26 was Wed.) and, in true dynastic fashion, he was succeeded by his son, Thāhir. At the time of his death the taxes from the provinces under his control amounted to 48 million dirhams.

'ABD ALLĀH b. TĀHİR [see ABU FUDAYK].

'ABD ALLĀH b. UBAYY b. SA'Lū. (Salūt being Ubayy's mother), chief of Baʿl-Hublā (also known as Sālim), a section of the clan of ʿAwf of the Khazraǰīs, and one of the leading men of Medina. Parricide to the high priest he had led some of the Khazraǰīs in the first day of the Fījar at Medina, but did not take part in the second day of the Fījar or the battle of Buʿāth since he had quarreled with another leader, ʿAmr b. al-Nuʿmān of Bayāda, over the latter's unjust killing of Jewish hostages, perhaps because he realized the need for justice within a community and feared ʿAmr's ambition. But for the coming of Muḥammad he might have been the director of Medina, as the sources suggest. When all but a small minority of the Medina Fatimids accepted Islam, Ibn Ubayy followed the majority, but he was never a whole-hearted Muslim. In 2/624 when Muḥammad attacked Banū Kaʿyukūk, Ibn Ubayy pleaded for them since they had been in league with him in pre-Islamic times; he probably urged their importance as a fighting unit in view of the expected Meccan onslaught. In the consultations before Uḥd (3/625) he supported the policy originally favoured by Muḥammad of remaining in the strongholds. When Muḥammad decided to go to meet the enemy, Ibn Ubayy disapproved, and eventually with 300 followers retired to the strongholds. This move may have stopped the Meccans from attacking Medina itself after the battle, but it showed cowardice and lack of belief in God and the Prophet (cf. Qurʾān, iii, 166-8 [160-2]). Up to this point Ibn Ubayy had done little but criticize Muḥammad verbally, but for the next two years he also intrigued against him. He tried to persuade Banū al-Nādīr not to evacuate their homes at Muḥammad's command, even promising military support. On the expedition to Muṣayrāt he used the occasion of a quarrel between Emigrants and Ṭanṣūr to try to undermine Muḥammad's position and make men think of expelling him; and immediately afterwards he was active in spreading scandal about Ḥāsha. Muḥammad called a meeting and asked to be allowed to punish him (without incurring a feud). There was high feeling between the Aws and the Khazraǰīs, but it was clear that Ibn Ubayy had little backing. His reputation of being leader of the Hypocrites (mudālīkūn) or Muslim opponents of Muḥammad was based on these incidents. After this year there is no record of his actively opposing Muḥammad or intriguing against him. He took part in the expedition of Ḥudaybiya, but stayed away from that to Tabūk, doubtless because of ill health, since he died shortly afterwards (9/631). He was probably not involved in the intrigues connected with the "mosque of dissension" (masjīd al-qirār), since Muḥammad himself conducted his funeral. Throughout his dealings with Ibn Ubayy Muḥammad showed great restraint.

Ibn Ubayy had a son 'Abd Allāh b. 'Abd Allāh and several daughters who became good Muslims.

'ABD ALLĀH b. ʿUMAR b. 'ABD AL-ʿAZĪZ, son of the caliph ʿUmar II. In the year 126/744 'Abd Allāh was appointed governor of Ṣirāk by Yazīd III, but in a short time aroused the discontent of the Syrian chiefs in that place, who felt that they were unfavorably treated by the new governor compared with the inhabitants of Ṣirāk. After the accession of Marwān II, 'Abd Allāh b. Muḥtiyya b. Djaʾfar, a descendant of ʿAlī's brother Djaʾfar, rebelled in Kūfa in Muḥarram 127/Oct. 744, but was expelled by 'Abd Allāh b. ʿUmar, whereupon he transferred his propaganda to other parts. When Marwān transferred to al-Nāḍr b. Saʿd ibn-Ḥarāshi the governorship of Ṣirāk, 'Abd Allāh energetically refused to leave his post. Al-Nāḍr appeared at Kūfa, whilst 'Abd Allāh remained in Ḥira and hostilities broke out between them. Soon after, his enemy appeared in the person of the Khāridjite chief al-Dāḥḥāk b. Kayš, and then the two adversaries had to come to terms and even to join forces. In Radjab 127/April-May 745 they were defeated by al-Dāḥḥāk and 'Abd Allāh withdrew to Wāṣīf, whilst the victor captured Kūfa. Then the old enmity between the two governors again broke out, but for a second time al-Dāḥḥāk put an end to their quarrels. After a siege lasting several months 'Abd Allāh was obliged to make peace with al-Dāḥḥāk. Subsequently Marwān had 'Abd Allāh arrested. According to the usual account, he died of plague in the prison of Ḥarrān in the year 132/749-50.

'ABD ALLĀH b. ʿUMAR b. AL-KHATTĀB, one of the most prominent personalities of the first generation of Muslims, and of the authorities most frequently quoted for Traditions. He derived his reputation not only from being a son of the Caliph, but also because his high moral qualities compelled the admiration of his contemporaries. At a time when the Muslims were being carried by their passions into civil war, Ibn ʿUmar was able to maintain himself aloof from the conflict; furthermore, he followed the precepts of Islam with such scrupulous
obedience that he became a pattern for future generations, to such a degree that information was collected as to how he dressed, how he cut and dyed his beard, etc. The biographies of him are full of anecdotes and charming touches which serve to illustrate his native wit, his deep piety, his gentleness, propriety and continence, his determination to detach himself from all that he loved most. Some of these stories may have been invented, but his nobility of soul is incontestable. As a transmitter of Tradition, he has been regarded as the most scrupulous in neither adding to nor omitting anything from the hadiths as Lamans has suggested, it is undeniable that Ibn Umar was lacking in energy, and his own father recognized this defect in him.

The following are the events recorded on the life of Umar. Before the hijra, at an unspecified date, he embraced Islam with his father, and emigrated to Medina some time before him. The Prophet sent him back on account of his age when he presented himself to fight at Badr and at Uhud, but he was about fifteen when he took part in the decisive battle of the Moat, when the Muslims were victorious. This service, together with his bravery and piety, earned for him the surname 'dhu 'l-thafindt, leader, a title of the Badjia tribe, noted for its bravery and piety and surnamed 'Abd Allah b. 'Abd Allah b. Sa'd b. Abl Sarh in 26-7/647 against the Byzantines in Ifrikiya and is said to have killed the exarch Gregory with his own hand. On returning from his native land, his dresses, how he cut and dyed his beard, etc. The biographies of him are full of anecdotes and charming touches which serve to illustrate his native wit, his deep piety, his gentleness, propriety and continence, his determination to detach himself from all that he loved most. Some of these stories may have been invented, but his nobility of soul is incontestable. As a transmitter of Tradition, he has been regarded as the most scrupulous in neither adding to nor omitting anything from the hadiths.

Ibn Umar returned to Medina some time before Umar died of septicaemia in 73/693, well before the hijra, at an unspecified date, he embraced Islam with his father, and emigrated to Medina some time before him. The Prophet sent him back on account of his age when he presented himself to fight at Badr and at Uhud, but he was about fifteen when he took part in the decisive battle of the Moat, when the Muslims were victorious. This service, together with his bravery and piety, earned for him the surname 'dhu 'l-thafindt, leader, a title of the Badjia tribe, noted for its bravery and piety and surnamed 'Abd Allah b. 'Abd Allah b. Sa'd b. Abl Sarh in 26-7/647 against the Byzantines in Ifrikiya and is said to have killed the exarch Gregory with his own hand. On returning from his native land, his dresses, how he cut and dyed his beard, etc. The biographies of him are full of anecdotes and charming touches which serve to illustrate his native wit, his deep piety, his gentleness, propriety and continence, his determination to detach himself from all that he loved most. Some of these stories may have been invented, but his nobility of soul is incontestable. to Medina to announce the news of the victory, he was credited with an eloquent description of this exploit (Aghdni, vi, 39, on which most of the later narratives depend). He accompanied Sa'ad b. al-As in his campaigns in northern Persia (29/30/650), and was subsequently nominated by 'Uthman to be one of the commission charged with the official recension of the Qur'ān (Gesch. des Qorans, ii, 47-53). After the assassination of 'Uthman he accompanied his father and 'Aāqiq to Bayṣra and commanded the infantry in the battle of the Camel (to ii, 36/4 Dec. 656); after the battle he returned with 'Aīṣa to Medina, and took no further part in the civil war, except to attend the Arbitration at Dāmāt al-Djiandal (or rather Adhruh), where he is said to have advised 'Abd Allāh b. 'Umar to bribe 'Amr b. al-As (Naṣr b. Muzāḥim, Waqṣūt Siṣān, Cairo 1356, 62).

During the reign of Mu'āwiyah I, 'Abd Allāh, who had inherited a considerable fortune from his father, remained in the background, biding his time, but refused to take the oath to Yazid as heir-presumptive. On Mu'āwiyah's death (60/680), he, together with Ḥusayn b. 'Ali [q.v.], again refused to swear allegiance to Yazid, and to escape the threats of Marwān they fled to Mecca, where they remained unmolested. When, however, after the expedition of Ḥusayn and his death at Karbāba, Ibn al-Zubayr began secretly to enrol adherents, a small force was sent from Medina under the command of his brother 'Amr to arrest him. 'Amr was defeated and taken prisoner, beaten and incarcerated in a cell until he died, and his body was exposed on a gibbet (61/681). 'Abd Allāh now publicly declared Yazid deposed, and his example was followed by the Anṣār at Medina, who elected 'Abd Allāh b. Ḥazāzla [q.v.], known as Ibn al-Ghāsīl (lbn Sa'd, v, 46-9) as their chief. Yazid, realizing that he had temporized too long, despatched a Syrian army under Muslim b. ʿUkbā, which defeated the Medinians in the battle of the Harra (27 Dhu 'l-Hijjah 63/27 Aug., 683) and proceeded (notwithstanding Muslim's death) to besiege 'Abd Allāh b. al-Zubayr in Mecca (26 Muh. 64/24 Sept. 683). Sixty-four days later, on receiving the news of Yazid's death, the Syrian forces desisted, and the commander, Ḥusayn b. Numayr, tried to persuade Ibn al-Zubayr to accompany them back to Syria, but he determined to stay in Mecca.

The ensuing confusion in Syria and the outbreak of civil war gave Ibn al-Zubayr his chance. He proclaimed himself amir al-mumāminin, and the opponents of the Umayyads in Syria, Egypt, southern Arabia and Kūfa recognized him as Caliph. But his authority remained almost wholly nominal. The victory of Marwān I [q.v.] at Mardī Rāḥīt (end of 64/July 684) and the revolt of Muḥkār [q.v.] at Kūfa fifteen months later, placed his supporters in Syria, Egypt and Ṭirāk on the defensive; and although al-Muhāllab's support of Mus'ab b. al-Zubayr at Basra and subsequent victory over Muḥkār (67/682) restored a Zubayrid government in Ṭirāk, Mus'ab was to all intents an independent ruler. At the same time, the Bakīrite Khaḍirījītes, who had separated from Ibn al-Zubayr after the death of Yazid and had established themselves in eastern Najd under the command of Nadjīd, occupied the province of Bahrāyin (i.e. al-Ḥaṣa), and in 68/687-8 seized al-Yaman and Hadramawt, followed next year by the occupation of Ta'if, thus completely isolating him in the Hijāz. At the Pilgrimage of 68/688 no fewer than four different leaders presided over their separate groups of partisans: Ibn al-Zubayr, a Khaḍirījī, an Umayyad, and Muḥammad b. al-Hanafīyya. Finally, after the Umayyad reoccupation of Irāk, 72/692, 'Abd al-Malik despatched al-Ḥadījādī to deal with Mecca. The siege began on 1 Dhu 'l-Ka'da 72/25 March, 692, and lasted for more than six months, during which the city and the Ka'ba were under bombardment. When at length his supporters gave way, and even his own sons surrendered to al-Ḥadījādī, 'Abd Allāh, urged on by his mother, returned to the field of battle and was slain. His body was placed on a gibbet on the spot where his brother 'Amr had been exposed, and some time later was given back by orders of 'Abd al-Malik to his mother, who buried it in the house of Ṣafiyya at Medina.

'Abd Allāh is the principal representative in history of the second generation of the noble Muslim families of Mecca, who resented the capture of the Caliphate by the Umayyad house and the gulf of power which this had created between the clan of 'Abd Shams and the other Meccan clans. This resentment is still clearly visible as a groundtheme in the numerous anecdotes on his relations with Mu'āwiyah (see Bibl. under Balādhuri), in spite of their later elaboration and of Muslim idealization of this challenger of Umayyad rule, which has transformed a brave, but fundamentally self-seeking and self-indulgent man into a model of piety (see especially Ḥiya al-Awliyā', i, 329-337). On the other hand, many sources portray him as avaricious, jealous, and ill-natured, and reproach him particularly for his harsh conduct towards his brother, Muhammad b. al-Hanafīyya, and 'Abd Allāh b. 'Abbās.

with Antoine de Bourbon, king of Navarre, and was prepared to cede to him al-Kasr al-Šâghir in exchange for 500 soldiers, and entered into commercial relations with England. He tried to conquer the fortress of Mazagan, which was in the hands of the Portuguese, dispatching against it a numerous army under the command of his son Muḥammad, his heir. The siege lasted from 4 March to 30 April 1562 and ended with the failure of the Sa'did troops, who suffered heavy losses.

In internal affairs he consolidated the work of his father, without meeting any serious opposition. He seemed to have feared especially the members of his family; he had his brother al-Ma'mūn assassinated in Tlemcen and put to death his nephew Muḥ. b. ʿAbd al-Kādir, whose popularity roused his ill-will (975/1567-8). He also seems to have suspected some of the religious leaders: he imprisoned, or put to death, several members of the Yūsufiyya order and had crucified in Marrākūsh the faqīḥ Abū ʿAbd Allāh Muḥ. al-Andalusī, accused of heresy (15 Dhu'l-Hijjād 980/19 April 1573). He constructed several important buildings in Marrākūsh, such as the Ibn Yūsuf madrasa. Diego de Torres also attributes to him the establishment of the malālkūt of Marrākūsh in its present location. He also built a fortress to protect the harbour of Agadir.

Abd Allāh Pasha Muḥsin-Zāde Čelebi, Ottoman statesman and general, son of Muḥsin Čelebi, descended from a family of merchants at Aleppo. He started his career in 1115/1703 in the financial administration with the post of supervisor (emīs) of the Mīn (darb-khānâ), the defterdar of which was his brother, Muḥmed Efendī. He became son-in-law ( damsâr) of the Grand-Vizier Corlulu ʿAlī Pasha (1707-10) and enjoyed the favour of the grand vizier Kaytaş Beg, who was sent to Egypt in 1126/1714, succeeded in subduing the rebel and sent his head to the Porte. Between 1715 and 1737 he filled several administrative and military posts: defterdar in Morea, governor (muhâfîz) of Lepanto (Aynabakhti), chief of the kapudânlâs with the rank of a Pasha, head of the imperial chancery (nâshīdâlâs), agâh of the Janissaries, Beylerbey of Vidin, of Rumeli and of Bosnia. He was commander (ser-vâshîr) at Bender, in Bessarabia, when Russia invaded the Crimea (1736) and Austria threatened to intervene on the Danube. Negotiations at Niemirov (Poland) led to no results.

Appointed by Sultan Mahmud I (1730-54) as Grand-Vizier (6 Rabi` II, 1150/August 3rd, 1737), Abd Allâh Pasha directed the war operations, without achieving the results hoped for by the court. Re-called to Istanbul after four months, he had to hand over the seal of office to the new Grand-Vizier Yegen Pasha (Dec. 19th, 1737). He continued to fill posts as commander of fortresses and governor of provinces and died in Rahb (`i, 1162/spring 1749 in Trikala, Thessaly, at the age of 90 years. His son Mehmed Pasha Muḥsin-Zāde signed the peace of Küçük Kaynarja (1774).

Abd Allâh Sari [see Sari Abd Allâh Efendi].

Abd al-ʿAzîz (Abdulaziz), the thirty-second Ottoman sultan. Born on 9 Feb. 1830, the third son of Sultan Mahmûd II [q.v.], he succeeded his brother Abd al-Madjîd [q.v.], 20 June 1861. His reign was marked by revolts and insurrections in the Balkan provinces (Montenegro, Serbia, Bosnia, Herzegovina and Bulgaria) and in Crete, which brought about the intervention of the great powers. From 1870 onwards, the influence of Russia, supplanting that of France and England, preponderated in Istanbul, and General Ignatieff, the Russian ambassador, often imposed his views on the grand vizier Mahmûd Nadîm Pasha. Russia also made efforts to stir up the discontent of the subjects of the Porte: Slavs, Albanians, and even Arabs and Egyptians.

In spite of internal crises, the policy of reforms, called tanzîmât [q.v.], was not abandoned. The administration of the provinces was reorganized (law of wîldâyets modeled on French law, 1867) and some attempts were made to reform the institution of the waḥf (1867). On French advice, a council of justice ( shârâ-i dawâšt), composed of Muslims and Christians, and a council of justice (imâdan-i ahkâm-ı ʿadîyyet) were set up (1868). Public education was reorganized after the French model and a lycée was opened in Galata-saray. It was open to all Ottoman subjects and instruction was given in French by French teachers (1868). A university (dâr ul-fûnûn) was established. At the same time, the army, and especially the navy, were reorganized. Foreigners acquired the right to possess immovable property (1867). Other attempts at economic reforms remained fruitless: in 1877, the deficit of the budget reached 112 millions. The government, judging itself unable to face its obligations, followed the advice of the Russian ambassador, reduced by half the payment of interest on the debt and had to declare itself bankrupt. The deplorable state of the national economy, the financial crisis, the revolts and insurrections in the Balkan provinces, made it particularly difficult to apply the reforms, with which the great powers were dissatisfied, while the Old Turks considered them incompatible with religion and the Young Turks insufficient. This resulted in general discontent against the sultan, who was deposed on 30 March 1876 and committed suicide a few days later.

‘ABD AL-AZİZ B. AL-ḤADDĪJ IBRĀHĪM AL-ǦİAMIĬI AL-ISGĀNĪ, celebrated Ibâdi scholar, b. c. 1130/1717-8, probably at Wardjlân (Ouargla), d. Raḍjâb 1223/August 1618, at Banû Isgân (Beni Isqen) in the Mzab, where, at the age of about forty, he had begun his studies under the shaykh Abû Zakariyyâ Yahyâ b. Sâlih, of Djarr. ‘Abd al-‘Azîz is held by the Ibâdis to-day to be one of the greatest scholars who ever lived in the Mzab, where he has left the reputation of a man of fervent piety, remarkable sagacity, great imperturbability, perfect self-control, and astonishing assiduity.

He devoted himself to the composition of a dozen works on theology and jurisprudence. His most important work is K. al-Na’l-a-Shî’a al-‘Ālî, autographed at Cairo 1305/1887-8. This treatise, conceived on the plan of the Mukhâsasâr of Khâlit, but less concise in style, is a complete exposition of Ibâdi legislation, put together from the most authoritative works of Ibâdi scholarship in ‘Uman, Djâbal Nafusa, Djarr and the Mzab, all of which can be identified without difficulty. It was on this work that E. Zeys drew for his studies on this subject. The other works of ‘Abd al-‘Azîz are the following: Takmilat al-Nâ, published at Tunis some 25 years ago; al-Ward al-bâsîm fi Riway’al-Akhâm, a précis of jurisprudence devoted chiefly to questions of judgment; Ma’âlim al-Din, a reasoned exposition of the Ibâdi creed, along with refutation of the arguments put forward by the defenders of the other sects (unpublished); Mukhâsasâr al-Musâhîb min K. Abî Maṣ‘ûla wa’l-Awlâh, on questions of inheritance; ‘Ikâd al-Dīwânîh, a summary of Kanâ’ir al-Khayrât al-Dîayâtî, on worship and religion in general (unpublished); Mukhâsasâr Ḥubûk al-Awdâdî, on the rights and duties of husband and wife (unpublished); ‘Ulama min Durar al-Minbâdî al-Ma’âmî, abridgment of a voluminous ‘Umixî work of jurisprudence (unpublished); Ta‘âṣum al-Mawqijâr (or Dhûl-Nârânî) al-Ṣa’di Marqîl-Baḥrâyn (unpublished); al-Asrâr al-Nârânîyya, on prayer and the accompanying rites (autographed in Egypt 1306/1888-9); al-Nûr, on the principal dogmas of the Faith (autographed in Egypt 1306/1888-9); Mukhâsasâr al-Mawqijâr al-Târîhî, résumé of several Ibâdi works on Ḥadîth.

(De Motylinスキ一T. Lewicki)

‘ABD AL-‘AZÎZ B. AL-ḤADDĪJ IBRÂHĪM B. ‘ABD AL-MALIK, Umayyad general. He was a faithful partisan of his cousin Yazid III and one of his most eminent assistants. Already in al-Wâlî II’s reign he helped Yazid, who headed the mawkûtins, to enlist troops against the caliph. When they had succeeded in getting together an army in Damascus, ‘Abd al-‘Azîz received the supreme command and marched against al-Wâlî. Yazid’s brother ‘Abbâs, who was about to go to the caliph’s assistance, was attacked and forced to pay homage to Yazid.

Shortly afterwards ‘Abd al-‘Azîz stormed the castle of Bâlghrân, whither al-Wâlî had withdrawn, and put the caliph to death. This was in the year 126/744. Yazid was now proclaimed caliph; the inhabitants of Himâ (Enesa), however, stoutly refused to do homage to the usurper and marched against Damascus. Yazid sent two army divisions against them, and while the rebels were engaged with one division, ‘Abd al-‘Azîz advanced with the other and decided the combat, whereupon the rising was suppressed. In the same year Yazid died after settling the succession on his brother Ibrâhîm and after him on ‘Abd al-‘Azîz. The inhabitants of Himâ, however, again refused to do homage to the new ruler, who for that matter was hardly recognized outside the capital. On Ibrâhîm’s orders ‘Abd al-‘Azîz therefore began to lay siege to the town, but withdrew when Marwân b. Muḥ., then governor of Armenia and Adhâbarbaydjiân, advanced against him. His successor, its gates to Marwân, the followers of the late caliph were defeated in Sa’dîr 127/Nov. 744 at ‘Ayn al-Djarr, and Marwân had himself proclaimed caliph in Damascus. As soon as he had entered the town, ‘Abd al-‘Azîz b. al-Ḥaddîjîdî was murdered by clients of al-Wâlî II.

(Sc. V. Zetterstêen)

‘ABD AL-‘AZÎZ B. AL-ḤADDÎJ IBRÂHÎM, sultan of Morocco from 1894 to 1908. He was born, according to Weisgerber, on 24 Feb. 1878, according to Doutte and Saint-René Taillandier 18 Rabî’ I 1298/18 Feb. 1881, of the sultan Mawlay al-Ḥasan and Lâlâ Rukçâyî, of Circassian origin. When his father died on a campaign, 9 June 1894, ‘Abd al-‘Azîz was proclaimed sultan in Rabat, thanks to the hâdîjî Aḥmad b. Mûsâ, called Bâ Aḥmad, who had been in charge of his education and received as reward the title of Grand-Vizier. ‘Abd al-‘Azîz left the management of affairs in the hands of Aḥmad until his death on 13 May 1900. During this period Morocco continued to live more or less in its traditional way.

After the death of his mentor, ‘Abd al-‘Azîz fell under the influence of a small group of Europeans, including Sir Harry McLean, instructor of the Sherifian infantry, who encouraged the natural taste of the ruler for modernism, so that very soon the Sherifian palaces housed photographic cameras, billiards, etc. All this shocked the conservative feelings of the Moroccans and cost money. Moreover, in Sept. 1901, ‘Abd al-‘Azîz contemplated an equitable reform of taxes, tarîbî, in order to abolish the privileges and immunities of the existing system. In consequence, an agitator (râfî), called Dîlîlî b. Idrîs al-Ẓarâbînî al-Ŷûsûfî, nicknamed Bâ Ḥmi‘îra (‘Abî Ḥmâra), rose in the district of Taznîf, gave himself out as a brother of the sultan and quickly became master of the region to the east of Fez (1902), threatening the capital itself in 1903.

On the other hand, the European powers exerted a strong pressure upon the Sherifian government, to protect the Europeans established in Morocco,
repress frontier incidents (region of Figuig), and obtain a guarantee for the considerable sums lent to the sultan by various European groups. These pressures, marked by various incidents, such as the visit of the German Emperor William II to Tangier (31 March 1905), led to the conference of Algeciras. The Act of Algeciras (7 April 1906), interpreted as an admission of surrender to the demands of the European powers, made 'Abd al-'Azîz even more unpopular in Morocco. Anarchy and discontent increased equally, and the sultan was unable to bring about any improvement. One of his brothers, Mawlay 'Abd al-Hafliz, was proclaimed sultan in Marrakûsh on 16 August 1907, immediately after the disembarkation of French troops in Casablanca. 'Abd al-'Azîz tried to resist by organizing an expedition to Marrakûsh in July 1908. His army broke up and was defeated by the troops of his brother on 19 August at Bû Aqlîba on the Wadi Tassâtût. 'Abd al-'Azîz took refuge in Casablanca and there abdicated on 21 August 1908. After a short stay in France, he established himself in Tangier, where he lived, without mixing in politics, until his death, 10 June 1943.

**'ABD AL-'AZIZ B. MARWÂN**, son of the caliph Marwân I and father of 'Umar b. 'Abd al-'Azîz. 'Abd al-'Azîz was appointed governor of Egypt by his father, and the appointment was confirmed by 'Abd al-Malik, when he ascended the throne. During his twenty years' sojourn in Egypt, 'Abd al-'Azîz proved himself a capable governor, who really had the welfare of his province at heart. When in the year 69/689, 'Abd al-Malik, after the assassination of his rebellious lieutenant 'Amr b. Sa'd, intended to have the latter's relatives executed as well, 'Abd al-'Azîz interceded for them and persuaded the incensed caliph to spare their lives. Towards the end of his life 'Abd al-'Azîz suffered from the ill will of his brother 'Abd al-Malik. Marwân had nominated him to succeed 'Abd al-Malik, but the latter wished to secure the throne for his two sons, al-Walîd and Sulaymân, and therefore cherished the project of removing his brother from his governorship and excluding him from the succession to the throne, when in the year 85/704 news suddenly reached Damascus that 'Abd al-'Azîz was dead.

**'ABD AL-'AZIZ B. MUHAMMAD B. IBRAHIM AL-SINHâGÎ FIGHTAGH, Moroccan writer, b. 956/1549, d. at Marrakûsh 1031/1621-2, was head of the chancery (wazîr al-balâm al-'UD) and official historiographer (mutawalli ilâ-rîkh al-dawla) of the Sau'did sultan Ahmad al-Mansur al-Dhâhibî (q.v.). Of his literary and historical works, which were considerable, there survive only lengthy quotations, especially by the chronicler al-Îfrîînî (q.v.) in his *Nuzhat al-Hâdît*. Al-Fighthâlî, who was a contemporary and friend of al-Mâkkarî (q.v.), the author of *Nafl al-Tîb*, composed annals of the Sau'did dynasty down to his own times, under the title of *Mawâbîl al-Sa'îdî fi a'Ibâr al-Malik al-Šurâfî*. He was the author of many panegyric poems, more particularly *mawâlîdyyâd* [q.v.]. The verses used for the epigraphic decoration of the palace of al-Badî' at Marrâkûsh were of his composition.

**'ABD AL-'AZIZ B. MÛSÁ B. NUŠAYR**, first governor of al-Andalus, after the departure to the East of his father Mûsâ b. Nušayr, the famous conqueror of the Iberian peninsula, in 95/714, Mûsâ, on leaving, gave his instructions to pursue the Muslim advance and to pacify the regions which had come under Muslim control. According to certain traditions, it was under his government that part of what is now Portugal, including the towns of Evora, Santarem and Coimbra, and the sub-pyreanean regions from Pamplona to Narbonne were conquered. He himself took Malaga and Elvira, and then subdued the land of Catalonia, concluding with a Gothic lord, Theodemir (who gave his name to the district, Tudmir [q.v.]) a treaty, the more or less authentic text of which has survived.

'Abd al-'Azîz married the widow of the last Visigothic king Roderic, Egîlon, who is said to have adopted Islam and taken the name of Umm 'Asîm. This princess gained so much influence over the governor that he soon became suspect to his compatriots and was accused of abusing his position. He was assassinated in Seville, where he had fixed his residence, by a certain Ziyâd b. Udhra al-Balawî, at the beginning of Radjab 97/March 718, and was succeeded by his maternal cousin, Ayyûb b. Habîl al-Laghmî.

**'ABD AL-'AZIZ AL SA'OD** [see SA'ODDS]

**'ABD AL-'AZIZ B. AL-WALÎD**, son of the caliph al-Walîd I. In 91/709, he took part in the campaign against the Byzantines, under the orders of his uncle, Maslama b. 'Abd al-Malik, and during the following years, he also participated in the battles against the same enemies. In 96/714-5, al-Walîd, whose designated successor was Sulaymân b. 'Abd al-Malik, tried to exclude Sulaymân from the succession in favour of his son 'Abd al-'Azîz, but his attempt failed. After the death of Sulaymân at Dâbîk, 99/717, 'Abd al-'Azîz wanted to claim the crown, but learning that 'Umar II b. 'Abd al-'Azîz had been proclaimed as caliph, he betook himself to him and paid him homage. He died in 110/728-9.

ABD AL-'AZIZ EFENDI Kara Celebizade [see KARA CELEBIZADE]

SHAH 'ABD AL-'AZIZ AL-DIHLAWI, the eldest son of Shah Wali Allah al-Dihlawi (g.v.), a noted Indian theologian and author of several religious works in Arabic and Persian, was born at Delhi in 1159/1746 (hence his chronogrammatic name Ghulam Haliin) and died there in 1239/1824. He studied mainly with his father, after whose death in 1176/1762 he soon began to teach as the head of the Madrasa Rahimiya, founded by his grandfather. As a teacher, preacher and writer, he exercised a considerable influence on the religious thought of his time. His chief works are as follows. In Arabic: (1) Sira al-Shahadatayn (Delhi 1261), in which he sets forth the ingenious view that the Prophet vicariously acquired the merit and distinction of shahda or martyrdom through the tragic death of his grandson, Husayn son of 'Ali. One of his pupils, Salamat Allah wrote a commentary on it in Persian (Lucknow 1882). (2) 'Asis al-lkthibas fi Fadail Aghyar al-Nas, a collection of traditions on the virtues of the first four Caliphs (Dilli 1322/1904, with Persian and Urdu translations). (3) Mu'in al-Ab'did, a concise statement of the Muslim creed (Dilli 1321 A. H.). In Persian: (4) Tufa' iihna 'Ashariyya (edited by Muhammad Sadik 'Ali Ridawi, Lucknow 1205 A. H.), in which he refutes the Shi'ite doctrines and thus continues the controversial work of his father, Isat al-Khata'i 'an Khulafa al-Khulafa. It has also been translated into Urdu. (5) Ugdul Nafa' (Dilli 1312, 1348 A. H.), an introduction to the science of Hadith. (6) Bihtiar al-MuHadithin (Dilli 1989), a bibliography of Hadith literature, giving descriptions of books together with brief biographies of their authors. (7) Fathawi (in 2 parts, Dilli 1341 A. H.), a collection of opinions and formal decisions on questions of law and doctrine.

There is also an Urdu translation of part 1 by M. Nawwab 'Ali and 'Abd al-Dajib (Haydarabad Deccan 1333; also Cawnpore). (8) Fath al-'Asis, commonly known as Tasir 'Asiri, a commentary in Persian on Suras i and ii, and sections 29 and 30 of the Kur'an. Sections 29 and 30 were both printed at Calcutta; the former bears the date 1248 A. H., while that of the other is not traceable. There are several other prints. Urdu translations of all the various parts have been published. (9) Mufidat Shah 'Abd al-'Asis, the obiter dicta of the author, originally collected in Persian in 1233 A. H. and later translated into Urdu by 'Azmat Ilahi in 1315/1897 and lithographed at Meerut.

Bibliography: Siddik Hasan Khan, lbii al-Nubaida', 296; Muhammad b. Yahya al-Tibrizi, al-Yani' al-Dawli fl Asamid al-Shayk 'Abd al-Ghani, lithographed on the margin of Kasfi al-Astir 'an Riga'i Ma'sani al-Athir (Deoband 1349 A. H.), 73-5; Rahim 'Ali, Tadhkira Ulama? Hind (Lucknow 1914), 122; Rahim Babhik, Hayati Wali (in Urdu), Dilli 1319 A. (SH. INAYATULLAH)

'ABD AL-BA'H [see BAH'I'S].

'ABD AL-DJABBAR B. 'ABD AL-RAHMAN AL-ADLI, governor of Khurasan. In 1307/1748 and 1337/1750-1 he was a supporter of the 'Abbasiids in their conflict with the Umayyads, and was appointed to command the shura during the caliphates of al-Saffah and al-Mansur. The latter sent him to Khorasan as governor in 1409/197-8. On arrival in the province, he began a violent persecution against the local aristocracy, whom he accused of partiality for the 'Aliids; but it seems that his measures affected also some of the partisans of the 'Abbasiids (as is stated in the Persian version of al-Tabari). This was apparently the reason why the caliph came to suspect him of rebellion. A cunning exchange of letters, which followed, only confirmed these suspicions, and eventually in 1417/1558-9 al-Mansur sent an army against him under the command of his son al-Mahdi. On the approach of the troops the population of Marw al-Rudh rose and delivered up 'Abd al-Djibbar, who was brought before al-Mansur, tortured, and put to death, probably at the beginning of 142/1775-60.

Bibliography: Ya'kub, index; Tabari, index; Chronique de Tabari (Persian), tr. H. Zietenberg, iv, 378-80; S. Moscati, La risoluzione di 'Abd al-Gabbah, in Rend. Lincei, 1947, 613-5. (S. MOSCATI)

'ABD AL-DJABBAR B. AHMAD B. 'ABD AL-DJABBAR AL-HAMADHANI AL-ASADABADI, Abu I-Hasan, Mu'tazilite theologian, in law a follower of the Shafi'i school. Born about 325, he lived in Baghdad, until called to Dilli in 367/978, by the sdbb Ibn 'Abbad, a staunch supporter of the Mu'tazila. He was subsequently appointed chief kadi of the province; hence he is usually referred to in later Mu'tazilite literature as khddi al-kudati. (For some anecdotes on his relations with Ibn 'Abbad see Yakub, Irjidad, ii, 312, 314). On the death of Ibn 'Abbad, he was deposed and arrested by the ruler, Fakhr al-Dawla, but was later released, probably through the intervention made by him about his deceased benefactor (Irjidad, i, 70-1, ii, 335). No details seem to be given, about his later life, and we do not seem to know, for instance, whether he was re-instanted in his office. He died in 415/1025.

His main dogmatic work is the enormous al-Muhgihi, of which the greater part has been preserved (in Sa'ad, see: Fihrist Kutub al-Khizna al-Mutawakkiliyya, 103-4; some volumes in Cairo, brought from Sa'ad, see: Kh. Y. Nami, Kh. Y. Nami, Tadhkira 'Aziziyya, 1946, Index; Bashir al-Dln, Tadhkira 'Aziziyya, 1929, 42) contains as important dogmatic treatise seems to be his al-Misriyya li-Taswir al-Maktyuddt al-'Arabiyya; of India to Arabic literature, an introduction al-Misriyya li-Taswir al-Maktyuddt al-'Arabiyya, Cairo 1952, 15). Another important handbook of his dogmatics, al-Mu'hib bi'l-Taklif, was compiled by his pupil Ibn Mattawayh (q.v.). Several volumes in Sa'ad, Fihrist, 102 (vol. 1149; Al-Irshad, 357; fragments in Leningrad, see: A. Borisov, Les manuscrits mu'assilltes de la Bibliotheque publique de Leningrad, Bibliografia y Vostoka, 1935, 63-95). His monograph on prophecy (Tathbis Dalai'di 'Ibluwwal Sayyidina Muhammad, Shahid 'Ali Pasha 1575, cf. H. Ritter, Isl., 1929, 42) contains also important discussions of the views of other schools, especially those of the Shi'a. Another important dogmatic treatise seems to be his Sirar al-Ural al-Khamsiyya (vat. 1928). For other writings that have come down to us, cf. Brockelmann. It is only from his own works, however, that his system can be reconstructed. All the writings of the latter Mu'tazila—including the Zaydi writers of his own school, too, have been preserved mainly by the Zaydis of Yemen—appear in reports of his opinions. He was the chief figure in the last phase of Mu'tazilism, but his teaching has not yet been studied.

Bibliography: Abu Sa'id al-Bayhaki, Sheik Qyuan al-Mas'udi, MS Leiden, Landberg 215, fol. 123-125, whence Ibn al-Murtaqi, al-Mu'tasila, Arnold), 66 ff.; al-Shaykh al-Baghdadi,
"Abd al-Djabbar b. Ahmad — Abd al-Hakik b. Sayf al-Din

— Abd al-Djabbar’s Tabakdt al-Mu‘asla was the main source of Abu Sa‘id al-Maybaj’s important historical account of the Mut‘azila in the introduction of his Sharh ‘Uyun al-Masa‘il. Al-Maybaj’s account was taken over, in a slightly abbreviated form, by Ibn al-Murtada (ed. T. W. Arnold). (S. M. Stern)

Abd al-Fattah Fumani, Persian historian, lived probably in the 16th-17th centuries. Entering into government service in Fuman, the old capital of Gilan (Ch. Schefer, Christ. pers., ii, 93) he was appointed controller of accounts by the vizier of the place, Behzad-beg, about 1018 or 1019/1609-10. After serving under several other viziers, he was taken to ‘Irak by ‘Adil Shah. He wrote in Persian Ta’rikh-i Gilan, a history of Gilan from 923/1517 to 1038/1628. This book, published by B. Dorn (with a resume in his introduction), completes the histories of Zahir al-Din [q.v.] and ‘Ali b. Sham’s Gilan [q.v.].

Abd al-Ghani b. Ismai’il al-Nabulusi, a mystic, theologian, poet, traveller, and voluminous writer on a variety of subjects, born in Damascus 5 Du‘a‘ 1-Hijjah 1050/19 March 1641, and the leading figure in the religious and literary life of Syria in his time. His family, traditionally Shafi‘i (though his father had changed to the Hanafi rite), had long been settled in Damascus and Muhhibi describes his great-grandfather as ‘ghaykh mas‘ahib al-Sham’ (Khudija, ii, 433). He early showed an interest in mysticism, joining the Kādiri and Naṣḥandi taṣkīs, and as a young man shut himself up in his house for seven years with the famous scholars there (of whom he mentions Behzad-beg, about 1018 or 1019/1609-10. After serving under several other viziers, he was taken to ‘Irak by ‘Adil Shah. He wrote in Persian Ta’rikh-i Gilan, a history of Gilan from 923/1517 to 1038/1628. This book, published by B. Dorn (with a resume in his introduction), completes the histories of Zahir al-Din [q.v.] and ‘Ali b. Sham’s Gilan [q.v.].

Abd al-Ghani, Tadhrib al-‘Abhār, i, 154-7; Mustafa al-Bakri, al-Falah al-tariyy fi ... al-shaykh ‘Abd al-Ghanî al-Masri (Ms. in the writer’s possession); Ibn al-‘Arabi, Fuqâ‘i al-hikam, ed. ‘Ali (Cairo, 1940), i, 23; A. S. Khalidi, Riwa‘i id-yid al-Sham (Jaffa, 1946); ‘Abou’dou, Rouwad al-nahda al-haditha (Haurat, 1952), 143 ff.; L. Massignon, La Passion de al-Hallaj, passim. (W. A. S. Khalidi)

Abd al-Hakik Abü Muhammad [see MarnNius].

Abd al-Hakik Abü Sayf al-Din al-Dihlawi, al-Buhgârî, Abu l-Majdî, with the taḥkallus Ḥabîb, Indian author in Arabic and Persian, born Mubarram 958/Jan. 1551, died 2 Rabî‘ II 1052/30 June 1642. He spent some time in Fat’hâbîr, studying with Sayfî and Mîrzâ Nîzâm al-Dîn Ahmad, but fell out with them (cf. Bâdûnî, iii, 113, 115 ff.; al-Mahdî wa l-Râzî, on marg. of. Akhbâr al-Abhâb, Delhi, 1352, 156; ‘Abd al-Hakîk’s book on the writers of Delhi, cf. below, p. 20; Haft Ilmîm, s. v. Diḥî). He left for the Hijâz in 996 (Akhbâ‘i-Abhâr, Urdu transl. of Ghalwî’s Gulsîr-Abhâr, Aga 1326, 559), studying for several years with the famous scholars there (of whom he gave an account in his Zad al-Muttaqîn). On his return, he taught for half a century in Delhi. He won the favour of Dînahîr (who praises him in the Târîkh-i-Dînahîr, al-‘Adhîm, 180-2, 204, and Shabdadîhîn. ‘Ubayd Allah Khâshêh, Makhbûsar Mu‘âdîy âl-Wilayy, Panjab Univ. Libr. MS. fol. 258 v., quotes a riyaḍa by ‘Abd al-Ḥakîk against the “ecstatic phrases” (ghâfisîyâd) of Ahmad Kâhûl (Mudjid‘i-al-‘Imâm, d. 1034), but ultimately

(‘Awâd al-Dîn Nûrî, Muḥmmad Uskudârî, Muhammad Birgâli. He wrote also on the orders to which he belonged, as well as on the Mawârîn, p. In his original writings he seems to be dominated by the concept of wadât al-wuqûjid; of these original works the most important is the first volume of his great diwân.

The Dhu‘a‘n al-‘adawâ’wîn, which contains the main body of his poetical output, comprises, as well as the first volume on mysticism (published Cairo 1302 etc.), three other volumes containing eulogies of the Prophet, general eulogies and correspondences, and love-poems respectively. This by no means represents the whole of his poetical output, many of his other works also being written in verse form, and his interest in poetry is reflected in his commentary on the poems of Ibn Hâni‘ al-Andalusî. During his lifetime and after he had a great reputation as a poet (see Amir Haydar, Le Liban (ed. Rustum) i, 8 ft., 22 ft., and for his use of the muwâshshâh, Hartmann, Muwâshshâh, 6).

In his narratives of his travels (see above) it was not ‘Abd al-Ǧhani’s intention to present a description of topographical or architectural detail. They are rather records of his own mystical experiences; but at the same time they throw a considerable amount of light on the religious and cultural life of the age. They are important also because they served as models for later travellers, such as the Damascene Muṣṭâfâ al-Bakîrî and the Egyptian As‘ad al-Ḻukayymi. In addition, he wrote works, some of them vast and encyclopaedic, on tafsîr, hadîth, kalâm, fikh, interpretation of dreams (a mine of information on the spiritualism and superstitions of his age), agriculture, the lawfulness of tobacco, and many other subjects.

Bibliography: Murâdî, Silh al-durar, i, 30-8; Dijâbî, ‘Adlîb i-‘Abîr, i, 154-7; Muhî ‘alî al-Bakrî, al-Falîh al-tarîî fi ... al-shaykh ‘Abd al-Ghanî al-Masri (Ms. in the writer’s possession); Ibn al-‘Aralî, Fuqâ‘i al-hikam, ed. ‘Ali (Cairo, 1940), i, 23; A. S. Khalidi, Riwa‘i id-yid al-Sham (Jaffa, 1946); ‘Abou’dou, Rouwad al-nahda al-hadîthâ (Haurat, 1952), 143 ff.; L. Massignon, La Passion de al-Hallaj, passim. (W. A. S. Khalidi)
the controversy was settled peacefully (Siddil: Hasan Khan, Tiksdr ... falar, 201; A thydr al-Aghydr, 6; W. Beale, Mstfâh al-Tawârîsh, Capnwr 1867, 246; Bashar al-Din Aymad, Wâdrî-i Hikmât-i Dildr, Agra 1919, iii, 305. According to the Taflîf-i and Abydr al-Hâmîd's descendants in Delhi were still celebrating every year his 7ers at the tomb.

In his Taflîf Kaîb al-Alî bi-Kitâbât Fîhrîst al-Tawârîsh, appended to his treatise on the writers and poets of Delhi (cf. the Urdu periodical Târîkh, Haydarabad-Deccan, vol. i, part 34), 'Abd al-Hâmîd gives a list of his forty-nine works in Arabic and Persian. The following are the most important of his works: a Dîwân (cf. Shîbûh-Guîsîân, Bhopal 1295, 741); Lamâtah al-Tankh, Arabic commentary on al-Tibrizî's Mtbkât al-Masârb; Aşîrât al-Lamaâtî, a fuller, Persian, commentary on the Mtbkât, Lucknow 1277; A thydr al-Aghydr, lives of saints, mostly Indian; Zuwdat al-Áthbdr, biography of 'Abd al-Kâdîr al-Dîjlânî; Mstfâh al-Fawîsh, Persian translation, with commentary, of al-Dîjlânî's Futûh al-Ghayb; Dîshr al-Mulâk, a sketch of Indian history from the Ghûrûds to Akbar; Dîshdr al-Kuîs, a history of Medina, based mainly on al-Sambûdî; Madâřîd al-Nubuwâ, a biography of the Prophet (Urdu transl.: Mâdarîd al-Nubuwâ, the Prophet, Lucknow 1277). His main contribution is his share of the popularization of the study of Hadith in India. His autobiography: in Aghydr al-Aghydr and another in the treatise on the writers of Delhi; Tabâkât-i Tabâkî (Engl. Transl.), Calcutta 1936, 692; 'Abd al-Hâmîd, Badâqânâmâ, i, 341; M. Şâlîb, Aşamâl-i Şâlih, ii, 384; Ilbâd al-Nubâlî, Capnwr 1289, 303; Târîkh, 112; âthdr al-Sanâdîdî, Capnwr 1904, 65; Cal. Peshawar Liber., 43, 273, 203 ff., 277; Brockelmann, ii, 549, S. 1, 779, 777, 603; Storey, 194 ff., 181, 214, 427, 441; Zubair Ahmad, The contribution of India to Arabic literature, index. (Mohammad Shafi)
literary form and while sometimes still hesitant, finally strikes a happy harmony between thought and language. His works reflect his joy in redeeming nature, to which he no doubt owes the pantheistic strain of his poetry.

Nowhere, however, can Hâmid's personality be so clearly perceived as in the poems written on his wife's death: 

Ma§ber, Olü, Hzadiye. Obsession with death, already present in Quräim, is here still more persistent and the problems of human destiny are treated with genuine anguish. The influence of a society which had lost the purity of its peaceful faith in Islam and looked with apprehension at the changing world, and the literary influence of Ziyyä pasha's two poems Terkib-i Bend and Terdi§î-i Bend which Hâmid had read in his youth with great admiration, contributed to strengthen this feeling of anguish. 

Ma§ber is doubtlessly Hâmid's masterpiece. 

Mâfta's image seems never to have been absent from his mind and it is significant that his second wife Nelly, whom he married in England, resembled greatly his dead wife. Hâmid's poems written in this second period show affinities of thought, if not of vision, with those of V. Hugo, especially with such pieces as Dieu and La Fin de Satan. In the poetry written after his appointment to London, there is less philosophical searching, but the inspiration is of a clearer perfection. For example, his poem "On passing through Hyde Park" is one of the best ever written in Turkish on the subject of nature and freedom. However, 'Abd al-Hâmid's prohibition of the publishing of his poems in the Istanbul newspapers put an end to this third period of his literary career.

In his preface to Dukhter-i Hindu Hâmid exposed his preference for the romantic and exotic drama; from then onwards, in all his plays, even in plays such as E§ber, Nesteren or Teter that seem by their very subject to be nearer to the French classical theatre, he remained faithful to this conception. A despair born of political reasons and of the realization that his plays would never see the stage, make these pieces overloaded with speculation, while the dramatic situation is either absent or lost under the weight of incident. Though a play like Finten pretends to be a picture of English life, the dialogues of Rüklar and Tatylar Gorlud are dealing with the problem of man's destiny, most of the plays are historical. They deal with ancient India, Greece (E§ber), Mesopotamia (Sardânpâlâ), Turkish history in Central Asia, history of Andalusia. E§ber, supposed to be influenced by Racine's Alexandre and by Corneille, is an apology of pacifism and patriotism, while Türk is the expression of Namik Kemal's ideology. A peculiar feature of these plays is Hâmid's endeavour to assign to woman her place in life. In Zeyneh, in Ibn-i Mü§sü, sequel of Türk and in Finten, Hâmid appears as a follower of Shakespeare.

Hâmid has deeply influenced Turkish poetry. The generations both of Therueti Fûnûn and Fengirî A§i were under the impact of Hâmid, and followed the creative and revolutionary lead which he had given in language and form. He not only employed new metres unknown in Turkish poetry up to his day, but also quantitative verse. He even tried a sort of blank verse. In his drama he came nearer to spoken language. As, however, his works written after 1885 were not published at the time, he had little share in the developments that took place afterwards. His real influence, starting in 1885, can be said to have stopped already in 1905.

'A'B'D AL-HÂMID I (ABDÜLHAMID), Ottoman Sultan, born 5 Radjab 1137/20 March 1775, succeeded his brother Mustâfa 6 Dhu l-Ka'da 1187/21 January 1774.

'Abd al-Hamid succeeded to the throne during a war with Russia, in which financial difficulties, rebellions in various provinces, and the weariness aroused by ill success made the cessation of hostilities an absolute necessity for Turkey. At the same time Russia also had been placed by the Pugachev revolt in a position to welcome peace. The new Sultan, however, was unwilling to end the war without some kind of victory, and the Porte accordingly refused to accept the Russian proposals for peace talks; hostilities were reopened, and the Turkish army was defeated at Kozluqû. The route spread to the headquarters at Shumla of the Grand Vizier Mulsin-zade Mehmed Pâshâ, who was forced to sue for peace from the Russian commander Runjanev.

The treaty by which the war was terminated, and which was dictated by the Russians, was signed on 12 Dümâdâ I, 1188/21 July 1774 at Kuuç Kaynardje (g.v.) and is known by the name of that town. By its terms the Crimea was to become an independent state; and Russia obtained the fortresses on the coast of the Sea of Azof (Azak), the lands of Lesser and Greater Kabartay, the area between the rivers Dnieper and Bug, freedom of navigation in the Black Sea, and the right to pass merchant ships through the Straits. Its most dangerous feature for Turkey was the wording of some of the clauses in such a way as to lead Russia to claim the right to protect Turkish subjects belonging to the Orthodox church; in return, however, Russia recognized a somewhat vaguely stated claim by the Sultan, as khalîfa, to religious authority over all Muslims. After this treaty Austria too took advantage of the weakness of Turkey and annexed Bukovina, hitherto part of the principality of Moldavia (1775).

In 1774 war broke out also between Turkey and Persia, following a Persian invasion of Kurdistan. Ottoman forces were despatched to Bagdad in 1775, with the object of putting an end to the rule of the Mamlûks, but the Porte was forced to recognize their administration, and in the following year Basra fell to the Persians. In 1779 it was evacuated in consequence of internal disturbances in Persia, and reoccupied by the mamlûk Sulaymân Ağâ, who was then granted the three pashaliks of al-Irâq (1180).

The peace of Kuuç Kaynardje proved to be no more than an armistice between Turkey and Russia. Catherine II continued to aim at the annexation of the Crimea, whereas the Porte was trying to bring the principality back to its former status. For this reason the Crimea became an area of conflict and of Russian intervention under various forms; and
in addition, the clauses concerning the Straits and the Orthodox Christians in Turkey were subjects of contention between the two countries. Although it seemed at one time that war was imminent over the Crimean question, the terms relating to the Crimea in the treaty of Kucuk Kaynardje were interpreted and reaffirmed by a Convention, in which France acted as mediator, signed at Istanbul in the pavilion of Aynali-Kawak on 10 March 1779.

Nevertheless, Catherine II, after forming an alliance against Turkey with Joseph II (who had succeeded Maria Theresa of Austria), stirred up a revolt in the Crimea against the Khan Şahîn Girây, and on this pretext sent an army to the Crimea and annexed it to Russia. ’Abd al-Hamîd I, though deeply mortified by this action, could not, being aware of the weakness of his empire, envisage going to war. When, however, the Carazina began to form far-reaching schemes for the setting up of a Greek state with her grandson Constantine Pavlovîc at its head, the Porte could no longer tolerate the menacing demonstrations against Turkey provoked by her and her ally Joseph II.

In spite of the Sultan’s love of peace, war was declared against Russia and Austria by the Grand Vizier Koğja Yûsuf Paşa (1787), when a request for the return of the Crimea was rejected, and Swinemünde subsequently occupied on the side of Turkey. An attack by the Turkish fleet in the direction of Killburn was unsuccessful, and the Russians laid siege to the fortress of Očakov. The Turkish army, however, attached more importance to the Austrian campaign and after twice defeating, at Vidin and Slatin, the Austrian armies which had taken the offensive along the Danube, invaded the Banat. On the other hand, the Turkish fleet failed in its attempt to relieve Očakov, and after a long resistance the fortress fell and its population was put to the sword. ’Abd al-Hamîd, whose health was already undermined by the worries of the war, died of a stroke on reading the news, 11 Radjab 1203/2 April 1789.

Although ’Abd al-Hamîd I, who succeeded to the throne at an advanced age after spending most of his life in the seclusion of the palace, cannot be considered an energetic and successful sovereign, he is noted for his zeal, humanity, and benevolence. He gave wide powers, for that time, to his Grand Viziers and left them free in their conduct of affairs, and he endeavoured to strengthen the central government against rebel forces within the empire; e.g. he sent a punitive expedition under Dîezarîhi Hasan Paşa against Zahir al-Qumr, who had acquired great influence in Syria, and against the rebellious Mamlûk beys in Egypt. It may be observed that whereas during his reign the Porte followed a special policy towards Caucasia by trying to civilize the Circassian tribes and to attach them to Turkey and, in order to further this object, developed the education of trained officers, and the reopening of Ibrahim Muteferrîka’s [q.v.] printing house, which had been allowed to fall into disuse, are among the achievements of ’Abd al-Hamîd I. He also founded the Beylerbeyi and Mirgün mosques on the Bosporus, as well as a number of benefactions such as libraries, schools, soup-kitchens, and fountains.

’Abd al-Hamîd II (Ghâzî) (Abdûlhamîd), 36th Ottoman sultan, fifth child of thirty of ’Abd al-Majîd (Abdûlmeqîd) [q.v.], born Wednesday, 22 September 1842. He is traditionally represented as a reserved child, easily overcome by his keen intelligence, not given to study. It is said that, after a stormy youth, he led a thrifty family life, which earned him the undeserved nickname ‘Pinti Hamîd’, Hamîd the Skinflint, taken from a comedy by Kașsab. He early showed a great liking for the company of devout persons (Pertewîncî, ‘ukmînîcî) and, in order to further this object, developed the education of trained officers, and the reopening of the Vizîrînî Bahriîn University, [q.v.], founded by the enlightened Grand Vizier, who paid for his special policy towards Caucasia by trying to civilize the Circassian tribes and to attach them to Turkey. He endeavoured to strengthen the central government against rebel forces within the empire, e.g. he sent a punitive expedition under Dîezarîhi Hasan Paşa against Zahir al-Qumr, who had acquired great influence in Syria, and against the rebellious Mamlûk beys in Egypt. It may be observed that whereas during his reign the Porte followed a special policy towards Caucasia by trying to civilize the Circassian tribes and to attach them to Turkey and, in order to further this object, developed the education of trained officers, and the reopening of Ibrahim Muteferrîka’s [q.v.] printing house, which had been allowed to fall into disuse, are among the achievements of ’Abd al-Hamîd I. He also founded the Beylerbeyi and Mirgün mosques on the Bosporus, as well as a number of benefactions such as libraries, schools, soup-kitchens, and fountains.

the coup de force carried out by the reactionaries and by troops roused to fanaticism, on 13 April 1909, the 3rd army corps of Macedonia, commanded by Marshal Mahmud Sherifet, which had for that occasion become an “investing” or “marching” army (harekat ordusu), brought back the fugitive Young Turks and the Constitution to Istanbul (24 April).

Abd al-Hamid was deposed by a decision (harâr-nâmê) of the two Chambers, meeting as a National Assembly on 28 April 1909, based on a jâava of the same day, a document in which appeared in particular the strange imputation that he had “forbidden and burnt the books of the religious Law”. The brother of Abd al-Hamid, Muhammad (Mehmet) Reshid, succeeded him as Muhammad V.

Abd al-Hamid was exiled to Salonika. When the Balkan war broke out, in 1912, he was moved to the palace of Beylerbeyi (on the Bosphorus). He died there of pneumonia, on Sunday, 10 February 1918, at the age of 75, and was buried in the turbe of his grandfather, Mahmud II.

The two salient points of Abd al-Hamid’s political system were absolutism and Panislamism.

1) Absolutism (istidâd) — Although their power was unlimited, ‘Abd al-Hamid’s predecessors interfered relatively little in the affair of government. They usually left it to their plenipotentiary representative, the grand vizier (Sadir a’zam), who was regarded as their wekil-i miyâlak (a term which has sometimes been translated as ‘vicar absolute’). The government was ‘the (Sublime) Porte’ of the grand vizier. ‘Abd al-Hamid wished to create an instrument of domination carrying even closer personal control, and he gave great importance to “the Palace” or “the Court”. In Turkish, this was termed the Mabeyin, an Arabic term which means literally “that (which is) between (the private apartments and the Porte)”. It was a separate building (within the precincts of Yildiz), and contained the offices of the chamberlains (mabeyndi) and of the rapporteurs or referendaries (ameqij or amadi). Hence the power of the first secretary of the Mabeyin (of the sultan, in fact act) Taftun Pagha, for instance — or of a second secretary such as Izzet ‘Abed, a Syrian who was the object of public execution. The palace of Yildiz, usually shortened to Yildiz (q.v.), with its harem and its administrative departments, became a sort of town with several thousand residents — a town half shrouded in secrecy, which long haunted and terrified people’s imaginations, often without cause.

This system, carried on at a time when there existed a strong revolutionary ferment, was not calculated to discourage conspiracies, and it was only by miraculous good fortune that ‘Abd al-Hamid escaped an Armenian bomb in 1905. This only by miraculous good fortune that by authentic documents. The censor struck out words like watan, “fatherland”, because it was a conception that implied rivalry to dynasty and religion, and other words, such as liberty, explosion, bomb, regicide, murder, plot, etc.

2) Panislamism.— ‘Abd al-Hamid had a deep sense of the importance of his role (which was, however, debatable) of khalifa, by virtue of which he was protector of the religion of Islam (art. 3 of the Constitution of 1876). He greatly esteemed Djamal al-din al-Afghani (q.v.), who had held out to him the bright prospect of bringing the Shi’ites themselves back into the bosom of Sunnism. This sterile and even dangerous policy was largely based on the illusion that he could count on the loyalty of the Arabs, his spoilt children.

Strangely enough, the Turcologist Arminius Vambery, a Hungarian Jew who was on terms of friendship with ‘Abd al-Hamid, encouraged him in these tendencies. They had one useful result at least, in that they prompted ‘Abd al-Hamid to build the Hidjak railway to the holy places of Islam. This undertaking, which had also strategic value because of the frequent troubles in the Yemen, and of which ‘Abd al-Hamid was justly proud, was paid for by collections made exclusively among Muslims, and by the revenue from the “Hidjak stamp”. The railway was begun on 1 September 1900, on the 25th anniversary of the Sultan’s accession.

It was also the indirect cause of the Anglo-Turkish dispute over Tabia and the Gulf of Akaba, in which England appeared for the first time (1906) as the official defender of Egyptian interests. The line reached Medina in 1908.

Another manifestation of Panislamism was less successful. This was the sending to Japan of the screw training ship Erzogul, a wooden vessel that went down within sight of the Japanese coast (25 September 1890).

The European press and caricaturists accused ‘Abd al-Hamid of blind fanaticism, and branded him with the name of ‘Red Sultan’ because of the role attributed to him in the suppression of revolts or of bloody conflicts in Macedonia and Crete, and especially Armenia (risings in 1894 and 1895, raid on the Ottoman Bank in 1896). The least that can be said, indeed, is that he did little or nothing to prevent horrible massacres (just as he did nothing to prevent extortion). On the other hand, the atrocities had begun before his time, and did not stop after his disappearance. The Turkish population, fanaticized for these occasions, was not the only one to take part. There were also other Muslims: the Circassian immigrants from the Caucasus, and the Kurds.

It would be unjust to judge ‘Abd al-Hamid, who has so often been accused of obscurantism, without giving him credit for all the institutions established during his reign.

Physically, ‘Abd al-Hamid had regular features, an aquiline nose and lightcoloured eyes, but as he grew older his appearance became that of a bent old man. He had a loud, deep voice, and knew how to be agreeable. In his dress he was quiet, very simple, and distinguished. He was a man of contrasts. Very approachable, unlike most of the Ottoman sultans, he was given to sudden fits of anger, which were, however, quickly suppressed. Authoritarian to the point of despotism, very intelligent, and possessed of an excellent memory, he had an exceptional capacity for work, and liked to deal with all affairs himself — a paralyzing trait in the head of a State.

Bibliography: Works, in alphabetical order of authors, which, without being general histories
of Turkey, are devoted entirely or in part to ʿAbd al-Hamid. (No sultan has elicited in Europe so many studies, for the most part tendentious).

The twelve years' reign of ʿAbd al-Hamid in Egypt under the name of Banu 'l-Muḥājjir and in the house of his disciple Ibn al-Mukaffa, but was misfortune and is generally said to have shared it can only be conjectured (in the absence of earlier secretaries). Since the same style sequences of qualifying clauses. Since the same style—...—is to be traced to Greek influences in the Umayyad secretariat.

5

The surviving compositions of ʿAbd al-Hamid, comprising six formal rasāʾil and a few chancey pieces and private letters, exhibit a remarkable divergence of styles. His most elaborate...—is to be traced to Greek influences in the Umayyad secretariat.
His most famous risālā, on the other hand, that addressed to the Secretaries (kutub),...the Makdisid al-Alhdn ("Purports of Music"), written about 834-7/1421-3, was dedicated to the Turkish Sultan Murad II, the dignitary of his office and their responsibilities, is fluent, simple and straightforward. A comparison of its contents with the writings of Ibn al-Muḳaffa and later quotations from Persian works shows clearly that it is inspired by the tradition of the Sāsānid secretariat, and largely reproduces with an Islamic gloss the maxims of the Iranian dikhrā (see A. Christensen, L'Iran sous les Sassanides, Copenhagen, 1944, 132 ff.). Also of Persian inspiration, and quite distinct from the traditional Arabic presentation of the subject, is his risālā describing the incidents of a hunt, evidently written for the entertainment of the court. A large proportion of the maxims addressed to the prince in the first risālā mentioned above are also derived from Sāsānid court ceremonial and usages, although the military instructions are more probably influenced by Greek tactics, either through literary channels or from actual experience in the Byzantine wars.

It would appear, therefore, that both views expressed by later Arabic critics in regard to 'Abd al-Ḥamīd are justified, in spite of their apparent incompatibility. On the one hand is the statement (e.g. al-'Askari, Dīwān al-Muḍżīn, ii, 89) that "'Abd al-Ḥamīd extracted from the Persian tongue the maxims of secretarial composition which he illustrated, and transposed them into the Arabic tongue". On the other hand there is the description of him (e.g. Ibn 'Abd Rabīḥ, al-'Ikbāl al-Farīd, ii, 169 (1321) = iv, 165 (1944/1363) as having been "the first to open up the buds of rhetoric, to smooth out its ways, and to loosen poetry from its bonds". He was also a master of pithy epigram, several examples of which are recorded in the adab works of students, who achieved prominence as teachers and scholars in their own turn. One of his pupils, Mawlāwī Ḥāfīz Allāh wrote his biography under the title of Kunīs al-Barakah. He died at Lucknow in 1304/1886.

Bibliography: Rahmān 'Āli, Taḥkhirat ʻUlamā Hind (in Persian, Lucknow 1894 and 1914), 114-7; Zubābid Ahmad, The Contribution of India to Arabic Literature (Jullundur 1946), 114, 186; Sarkis, Dictionnaire de bibliographie Arabe (Cairo 1928), col. 1595-7; Brockelmann, S II, 857-78 (where works nos. 18 and 19 are wrongly ascribed to the subject of this article).

'ABB AL-KĀDIR B. KHALID AL-HAMID AL-MARĀGHI, the greatest of the Persian writers on music. Born at Marāgha, about the middle of the 8th/14th century, he had become one of the minstrels of al-Ḥūsayn, the Dīlahārīd Sultan of ʻIrāk, about 781/1379. Under the next Sultan, ʻĀdham, he was appointed the chief court minstrel, a post which he held until Timūr captured Baghdaḏ in 795/1393, when he was transported to Samarqand, the capital of the conqueror. In 1395-96 he went to Tabriz in the service of Timūr's wayward son Mīrānshāh, for whose erratic conduct his "boon companions" were blamed. Timūr acted swiftly with the sword, but 'Abd al-Ḳādir, being forewarned, escaped to Sultan ʻĀdham at Baghdaḏ, although he once more fell into Timūr's hands when the latter re-entered Baghdaḏ in 803/1402. Taken back to Samarqand, he became one of the four brilliant men who shed lustre on the court of Shāhrukh. In 824/1421, having written a music treatise for the Turkish Sultan Murād II, he set out for the Ottoman court to present it in person in 826/1423. Later he returned to Samarqand, dying at Harāt in 838/March 1435.

Of the fame of 'Abd al-Ḳādir in his day, and since, there can be little doubt. Muʿīn al-Dīn-i Iṣfīzārī, the author of the Rawdat al-Dījarāt, eulogizes him for his threefold talents as musician, poet, and painter, but it was more especially for his skill in music that he was called "the glory of the past age". In addition to being a deft performer on the lute (ṭūdā) and a prolific composer (laynīfī), he excelled as a music theorist. His most important treatise on music is the Dījamāt al-Albān ("Encyclopedia of Music"), autographs of which are preserved at the Bodleian Library and the Nūrū ʿOṯmānīyya Library, Istanbul. The first of these, written in 808/1405 for his son Nūr al-Dīn 'Abd al-Ḥamīn, was revised by the author in 816/1413. The second, dated 818/1415, carries a dedication to Sultan Shāhrukh. Several abridgments of this work also exist, notably a shorter one, autographed, without title, dated 821/1421, which is at the Bodleian. It was written, evidently, for Bāysunghur. A longer version in the same library, called the Makāṣīd al-Albān ("Purports of Music"), written about 834/1421-3, was dedicated to the Turkish Sultan Murād II,
According to the Leiden copy, a third treatise on music, the Kanz al-Tuhaf ("Treasury of Music") which contained the author's notated compositions, has not survived. His last work, the Sharh al-Adwar ("Commentary on the Kitab al-Adwar" [of Saff al-Din]), is to be found in the Nuru 'Othmáníyya Library. At Leiden there is a short Kitab al-Adwar in Turkish bearing his name. These works are of great importance in the history of Persian, Arabic, and Turkish music. Although only a few of his musical compositions have survived in the Nimu'm, many have been handed down viva voce in a form known in Turkish as the 'stär.

A son, 'Abd al-Aziz, who is thought to have settled at the Ottoman court after 1435, was the author of a music treatise, the Naqdwdt al-Adwar ("The Select of the Modes"), dedicated to the Turkish Sultan Muhammad II (d. 866/1461), whilst a grandson, Mahmud, who lived under Bâyazid II (d. 918/1512), compiled a Mahásíd al-Adwar ("Portraits of the Modes"), both mss. being at the Nuru 'Othmáníyya Library.

'Abd al-Kâdir B. Muhyî al-Dîn al-Hâsání, the Amir 'Abd al-Kâdir, descended from a family which originated in the Rîf and settled among the Hâshîm, was born in 1223/1808 at the gate of the Wâdi al-Hammâm, some twenty kilometres west of Mascara. Studies at Arzew, then at Oran, marriage, and a pilgrimage to Mecca in 1244/1828-9 were the most outstanding events in a youth that was devoted to the reading of sacred books and to physical exercises, under the direction of his father, who, by his pieté and charity, had acquired a great influence.

The indecision shown by the French after the capture of Algiers (5 July 1830) in the organization of their conquest favoured Muhyî al-Dîn in Orania, and he took the initiative in the struggle against the Christians, but soon yielded first place to his son, who was proclaimed sultan of the Arabs on 5 Radjab 1248/22 November 1832 by the Hâshîm, the Banû 'Amir, and the Gharâbâ. In spite of the opposition of certain elements of the population and the failure of his supporters before Oran and Mostaganem (1833), 'Abd al-Kâdir's action prevented the pacification of the country. This state of affairs prompted General Desmichels to treat with his adversary (4 and 26 February 1834). Thus officially recognized the new Amir of the Faithful extended his authority to the gates of Algiers (April 1835), but his claims provoked the renewal of hostilities. First Clauzel and then Bugeaud avenged the defeat on the Macta (28 June) by burning Mascara (6 December), occupying Tiemcen (13 January 1836), and winning a great victory on the Wâdi Sîkkak (6 July); but these successes were fruitless. Three times abandoned by his troops, 'Abd al-Kâdir immediately regrouped them. The position of the French remained precarious, with their towns invested, their columns ceaselessly harassed, and their allies receiving heavy punishment. The desire to be secured against attacks in the west while an expedition against Constantine was being carried out led Louis-Philippe's government to negotiate. By the signature of the treaty of the Tafna (30 May 1837) Bugeaud repeated, in a worse form, the mistake made by Desmichels. Though the French kept Oran, Arzew, Mostaganem, Blida, and Kolea, the Amir obtained the whole province of Oran, part of that of Algiers, as well as the whole baytîkh of Titteri.

From June 1837 to November 1839 'Abd al-Kâdir used the cessation of hostilities to organize the territories that had been handed over to him. After establishing his capital at Tagdempt, he travelled about his new state, imposing chiefs, by force if necessary, on all the tribes between Morocco in the west and Kabylia in the east, and gaining recognition for his dominion as far as the Sahara.

In the course of these journeys 'Abd al-Kâdir, taking advantage of the faulty wording of the Treaty of the Tafna, had gone beyond the boundaries that had been assigned to him; Marshal Valére therefore submitted to him a draft of an additional treaty which accurately indicated, and reduced, the territories over which France recognized his rights, but he refused to ratify it. The 'Iron Gates' expedition, in the course of which the Duke of Orleans linked Constantine to Algiers, provided the Amir with a pretext for restarting the war. On 20 November 1839 his forces invaded the Mitidja, sacking farms and massacring settlers. Algiers was threatened. The occupation of Miliana, then of Medea (May-June 1840) by the French did not ease their difficulties, for the supplying of their garrisons made necessary the movement of convoys which were exposed to continual attacks.

The nomination of Bugeaud as governor-general (29 December 1840) changed the course of events; he realized that Algeria would never be pacified until the power of 'Abd al-Kâdir was crushed and until the tactics of 'active columns' took the place of 'limited occupation'. Between 1841 and 1843 he seized the towns of Tagdempt, Mascara, Boghar, Tata, Saida, Tiemcen, Sebdou and Nedroma, and sent out expeditions with instructions to capture his enemy and destroy his supporters. The capture of the smala (16 May 1843), the travelling capital of the Amir, was a serious blow to him. The tribes submitted to France. Hunted and weakened, 'Abd al-Kâdir took refuge at the end of the year on the borders of Morocco, to obtain shelter, to recruit soldiers, and to compromise French relations with that empire.

His hopes were not deceived. The occupation of Lalla Maghnia by la Moricière stirred up a conflict, but the bombardment of Tangier and Mogador (6 and 15 August 1844) and the victory of the Isly (14 August) compelled the Sultan Mâlwây 'Abd al-Râjmân to refuse his guest any support and to declare him an outlaw. 'Abd al-Kâdir appeared again in Algeria in 1846 to take the lead in the insurrections while they were breaking out on all sides. His first successes (Sidi-Brahim, 23 September) seemed to promise final triumph for his cause. No less than eighteen columns were needed to stem the revolt and to throw the Amir back into Morocco.
(July 1846), where he was now the object of the hostility of the Sultan, who feared in him a dangerous rival. Attacked by the tribes, and pursued by the Sharifian troops, 'Abd al-Kadir crossed the Algerian frontier again. Finding all lines of escape towards the south closed to him, he gave himself up to the Duc d'Aumale on 23 December 1847.

In spite of the promise to him that he would be transported to Acre or to Alexandria, 'Abd al-Kadir was, with his suite, interned successively at Toulon, at Pau, and then at Amboise. Released by the Prince-President Louis-Napoleon on 10 October 1852, the former leader of Algeria in revolt now received a pension from the France of which he had become the loyal subject, and went to live in retirement first at Brusa (1853) and then at Damascus (1855). It was in this town that he proved in a very special way the sincerity of his loyalty, by delivering the French consul and saving several thousand persons when the Druses tried to massacre the Christian population (July 1860). He died there in the night of 25 to 26 May 1883, having passed his time during his exile in meditation, the practice of his faith, and charity.

'ABD AL-KÂDIR B. MUHYI ‘L-DIN — 'ABD AL-KÂDIR DIHLAWI

His library was unique for those times, cf. Khîsîna, i, 2. In Dhu ‘l-Ka‘da 1077 he visited Istanbul, but returned to Cairo after less than four months, in 1078. In the same year, he made the acquaintance of İbrahim Pasha Katkhuda, governor of Egypt, who treated him with great respect and made him his associate and boon-companion. Some years later, when Katkhuda was deposed from the governorship and returned home through Syria (reaching Damascus in 1085), 'Abd al-Kadir accompanied him and sojourned in Adrianople. He made the acquaintance of the learned grand-vizier of Turkey, Ahmad Pasha al-Fâdîl Köprülü-xâde, and dedicated to him his masterly gloss on Ibn Hîshâm’s Sharh Bânat Swâ’d. Al-Muhibbi, son of an old friend of ‘Abd al-Kadir, who saw him in Adrianople, records that he enjoyed, in this period, the highest regard and respect of the important personages of Turkey. But after a while he was attacked by a disease, and as a cure could not be affected by the physicians, he left for Cairo in disgust, though he came back later. This time he caught a disease of the eye and almost lost his sight. He returned to Cairo and died there shortly after.

He was known by the Makâmât of al-Harîrî, many Arabic diwâns and numerous Persian and Turkish verses. He had a fine critical sense and a profound knowledge of Arabic philology, Arabic poetry, the history of the Arabs and Persians, Arabic proverbs and anecdotes.

He wrote a number of useful books. Among these are: 1) The Khîsînat al-Adab wa Lubb Lubbîh Lîsîn al-‘Arâb (Cairo, 1299/1882, 1347/1928-9 [publication stopped in 1335 after the death of the author]); a commentary on the 977 shâdhid of Ibn al-Khâlid in his Kofiyah. It was begun in Cairo in 1073/1663 and finished there in 1079/1668 (after a brief interruption due to his visit to Istanbul) and dedicated to Muhammad IV (1058-99/1648-87). It seems originally to have been divided into eight volumes (see al-Muhibbi). 2) A commentary on the shâdhid cited in al-Râdi’s Sharh al-Maṣûrah, called by al-Radî the ‘Allâhîn. To this he appended a Sharh of the same title, which he transmitted to the Sharh of al-Dîrâbî, trans. by V. Rosetty in Le spectateur militaire, 15 Febr. 1844, repub. by L. Patorni, Algiers 1890. 3) A commentary on the 968 shâdhid of Ibn al-Khâlid in his Kofiyah. To this he appended a Sharh of the Sharh of al-Dîrâbî, trans. by V. Rosetty in Le spectateur militaire, 15 Febr. 1844, repub. by L. Patorni, Algiers 1890.

'ABD AL-KÂDIR DIHLAWI, Indian theologian, the third son of Shâh Wali Allâh Dihlawî [q.v.], born at Dihlî (Dehlî) in 1160/1753-4. He is chiefly remembered for his Urdu translation of the Kûrân, accompanied by explanatory notes. Its title Mûdiq-i Kûrân ("Interpretation of the Kûrân")
is the chronogram for 1205/1790-1, the date of the completion of the work. It was published at Houghly in 1245/1829, under the conditions, Lucknow 1263/1847 and Bombay 1270/1853-4. Since then, it has been repeatedly lithographed interlinearly along with the Arabic text. It is generally regarded as more faithful than the one prepared by his brother Šãh Râfî' al-Dîn. He died in 1228/1813.

**'ABD AL-KÂDIR AL-DJILÂNÎ (or al-Djîlî) MUBârîK AL-DîN ÂBD MUH. B. ÂBD SÀLIH DUNGÔL DÎSîR, Hanbalite theologian, preacher and Šûfî, who gave his name to the order of the Kâdirîyya [q.v.]; b. 470/1077-8, d. 561/1166.**

Apart from Abu 'l-Mahasin (al-Nudium al-Zdhirâ, *c.*) who gave his name to the order of the Kâdirîyya, their writings have, therefore, little to contribute to a historical account of his life and only a small proportion of their data can be considered reliable. Apart from Abu 'l-Maḥâsin (al-Nudjîm al-Ẓâhirî, ed. Juynbool, i, 608), who names as the birth-place of 'Abd al-Kâdir al-Djîlî, a village between Baghdad and Wâsît, all authorities are unanimous in stating that he was a Persian from Nayf (Nîf) in Djîlân, south of the Caspian Sea. The Persian name of his father not only supports this statement, but at the same time contradicts the common assertion that he was descended in the paternal line directly from al-Ḥasan, the grandson of the Prophet. Baghdâd, where he came to study at the age of eighteen, remained the scene of his activities up to his death.

'Abd al-Kâdir was active. He appears as a teacher of theology in his *al-Kâdir al-Djîlî al-Qawwâl*, a book containing 17,738 hadiths. He was averse to all forms of asceticism and lived in the society of the poor and free. His school was continued, with the help of pious endowments, by 'Abd al-Wâhûb, one of his numerous sons, and by his descendants [see Ḳâdirîyya].

'Abd al-Kâdir lived at a time when Šûfîsm was triumphant and expanding. In the century preceding him a conflict, tîtâf had existed long before, assumed an acute form and became the concern of every individual. The consciousness of the individual as well as the whole of society was torn by the breach between secularism, religiously indifferent or religious only in a conventional way, on the one hand, and an intellectualist religion, at odds over theological doctrine, on the other. Innumerable are the complaints in literary works that express despair in face of the vanity of the "world", but also the emptiness of the legalistic religion, "dead knowledge handed down by dead people" (Âbû Yâzîd al-Bistâmî). In such a situation Šûfîsm, as the embodiment of emotional religion, became in the generations preceding 'Abd al-Kâdir, a wide-spread movement. The historical process pushed one problem into the foreground: how to reconcile the ascetic and mystic elements with religious law. Ibn 'Abbâs [q.v.], 'Abd al-Kâdir's teacher, met Šûfîsm, as befitted the zealous Hanbalite convert, with a definite no. The same attitude was later taken again by the strict Hanbalites. This was not, however, the only possible way for them. Al-Ansârî al-Harawî [q.v.] (d. 481/1088), who conducted disputations in the strictest accordance with the school of Ahmad b. Hanbal (which he extolled with the motto *madhhab Ahmad ahmad madhhab*), wrote Šûfî books appealing to the emotions, and Ibn al-Djâwwîl [q.v.], who made violent attacks on the orgiastic piety of the Šûfî meetings, himself held, according to the testimony of Ibn Djuhabay, meetings that are paradigmatic for Šûfî cult practice. This is the period in which 'Abd al-Kâdir was active. He appears as a teacher of theology in his *al-Qawwâl li-Tâlibî Tarîkh al-Ḥâbî* (Cairo 1304). Starting with an exposition of the ethical and social duties of a Sunni Muslim, it sets forth in the form of a Hanbalite handbook the Šûfî teachings for the believer, including a short exposé of the seventy-three sects, and ends with an account of the particular way of Šûfîsm. Extreme Hanbalites have criticised the special duties taken upon themselves by the Šûfîs. According to Ibn Taymiyya, the particular litanies for certain days, taken over in the *al-Qawwâl* from Mâkki's *Kut al-Kâlid*, are reprehensible if they assume the character of a legal duty. Conflicts with the religious law, however, such as Ibn al-Djâwwîl, in his *Tabîls Iblis*, finds among contemporary Šûfîs, do not occur in the writings of 'Abd al-Kâdir. The unquestioning submission to the message of Muḥammad, as it is set forth in the *Kûrân* and the *sunna*, excludes on the part of the Šûfî any claim to inspired revelation. The fullfilment of works of supererogation assumes the prior fulfillment of the demands of divine law. Ecstatic practices, though not forbidden, are allowed only with certain restrictions. Ascetism is limited by the duties towards family and society. The perfect Šûfî lives in his divine Lord, has a knowledge of the mystery of God, and yet this saint, even if he reaches the highest rank, that of a Ḳâdî or a Ḥâbîb, cannot teach the grade of the prophets, not to speak of surpassing it, as some Šûfîs were teaching. In the personality of 'Abd al-Kâdir the Šûfî is not at variance with the Hanbalite.

This appears also in his sermons contained in the
collections al-Fath al-Rabbani (62 sermons; Cairo 1302) and Futūkh al-Dhā‘abib (78 sermons; on the margin of al-Shaṭṭa‘nawī). Abd al-Kādir often directs the attention of his audience to the perfect saint. Yet both the contents and the style show that the sermons were not addressed to exclusive süfī circles. The plain manner, avoiding süfī terminology, and the often very simple moral admonishment suggest that they were delivered before a large audience. Before men, who experience the power of fate as a permanent threat, he sets the ideal figure of the saint, who has overcome his accidental self and reached his essential being, conquering the fear of fate and death, because he participates in Him who orders fate and death. Sūfism as taught by the Hanbalite ‘Abd al-Kādir consists in fighting, in a dhikr greater than the holy war fought with weapons, against self-will; in thus conquering the hidden ḥīrāk, i.e. the idolatry of self and, in general, of creaturely things; in recognizing in all good and evil the will of God and living, in submission to His will, according to His law.

Al-Shaṭṭa‘nawī’s work on ‘Abd al-Kādir, Bahā‘ī jat al-‘Askār, from which several other writers derived their information, was written just over a hundred years after ‘Abd al-Kādir’s death. His account, rejected as untrustworthy already by al-Dhahābī (JRAS, 1907, 267 ff.), presents him as the supreme saint. He is not described according to the ideal of the saint conceived by ‘Abd al-Kādir himself. He is not a man who serves as a symbol for cosmic resignation, whose example can be followed by resigning this and the next world, by accepting in both of them the lot given by God. The figure of ‘Abd al-Kādir as a saint, as it is drawn by al-Shaṭṭa‘nawī, is the outcome of a piety which relinquished the hope of being able to put the ideal into practice.

According to the legend, ‘Abd al-Kādir himself, by the sentence which remained closely associated with his name: “My foot is on the neck of every saint of God”, laid claim to the highest rank and obtained the consent of all the saints of the epoch. A poem ascribed to him, al-Kawida al-Ghāthiyya, speaks, in a style that is very different from that of his authentic writings, of his mystery which has the power to extinguish fire, raise the dead, crush mountains, dry up seas, and of the exaltedness of his position. In the ‘Abd al-Kādir of legend, the inconceivable, incomprehensible majesty of God has become manifest. From his earliest childhood, when he marked the beginning of the fast that of his authentic writings, of his mystery which relinquished the hope of being able to put the ideal into practice.

Claims of religion could not be complied with, the saint was experienced as the presentability of that which was unattainable to human effort. The saint does not make demands, but bestows grace for men who worship the inconceivable. In this capacity, ‘Abd al-Kādir became one of the best known media tors in Islam. His tomb, over which sultan Sulaymān had a beautiful turba built in 941/1535, has remained to the present day one of the most frequented sanctuaries of Islam in Baghādād.

‘**ĀBD AL-KĀDIR B. ‘ALI B. YUSUF AL-FĀSĪ**, the most famous representative of the Moroccan family of the Fāsiyyūn, b. in al-Kṣār al-Kabīr 1077/1599, d. 1091/1680. He was the head of the mā‘ṣıya of the Shāhidīyya in al-Kṣār al-Kabīr. He wrote a ḥārahīs and some books on hadith, but he is best known as one of the main representatives of Moroccan sūfism at the beginning of the 17th century. His descendants form today a very numerous and important branch of the religious and scholarly aristocracy of Fz (the inhabitants of the town being called, in order to avoid a confusion with the family of the Fāsiyyūn, aḥl Fāsī).

**Bibliography**: E. Lévi-Provençal, Hist. Chorfa, 264-5 (with references). (E. Lévi-Provençal)

He is best known for his collection of alphabetically arranged brief biographies of Hanafites, al-Dhā‘abib al-Mudīyya fī Ṭaba‘dī al-Hanāfiyya (Raydarābād 1332/1913-4), a valuable reference work, generally considered to be the first to deal with its particular subject. Written in a country in which the Hanafite school was weakly represented, and in a period just preceding its renaissance, the work has little firsthand information but preserves much material, especially from Persian local histories.

In addition, ‘Abd al-Kādir wrote a biography of Abū Hamīfa (al-Būtanīyya Masālima Ṣayyida ‘Na‘mān, used in ‘Dīsam, i, p. 26 ff.) and a collection of biographies of persons who died between 665/1267 and 760/1359. His other publications (most complete list in Ibn Ḥūṭūbūgha ed. Flügel, p. 28, and Ibn Tūlūn) belong to the ordinary run of juridical textbooks, commentaries, and indexes.

CABD AL-KARIM BUKHARl, a Persian historian, wrote in 1233/1818 a short summary of the geographical relations of Central Asian countries (Afghanistan, Bukhara, Khivâ, Khokand, Tibet and Kashmir), and of historical events in those countries from 1160 (accession of Ahmad Shâh Durrânî) down to his own times. 'Abd al-Karîm had already left his native country in 1222/1807-8 and accompanied an embassy to Constantinople; he remained there till his death, which took place after 1240/1820, and wrote his book for the master of ceremonies 'Ârif Bey. The only manuscript was obtained by Ch. Scheler from 'Ârif Bey's estate and published in the PELOV (the text was printed in Bulâk, 1290/1873-4, the French translation in Paris in 1876). The Histoire de l'Asie Centrale is a most important authority for the recent history of Central Asia, especially for Bukhârâ, Khivâ and Khokand. (W. BARTHOLD)

'ABD AL-KARlM KASHMIRI. Kutb Al-Dîn R. IBRâHIM AL-DÎJlL, a Muslim mystic, descendant of the famous 'Abî Abd al-Kâdîr al-Dîjlânî, was born in 767/1365 and died about 832/1428. Little is known of his life, as the biographical works do not mention him. According to some of his own statements in al-Insân al-Kâmîl, he lived from 796/1393 until 805/1400-3 in Safîd in Khâlq, and added: The only manuscript was Al-Jâzîl, who is the best known (several editions printed in Cairo). An analysis of its contents and modified. According to his ontological doctrine exposed in his al-Insân al-Kâmîl and his Marâtîb al-Wudu'd, nothing really exists but the Divine Essence with its creative (âkhâlî) and creaturely (khakhâlî) modes of being. Absolute Being develops in a scale (mârâtîb) of individualisations or "descents" (ka-nazalûdî). The most important of these are the following: 'âmâ, the simple hidden pure Essence before its manifestation (talâqâati); adhâbîyya, the first descent from the darkness of 'âmâ to the light of the manifestation, the first manifestation of Pure Essence (âdâlî) exclusive of Divine attributes, qualities or relations; wâshîriyya, the manifestation of the Essence with the attributes and qualities and their effects under the aspect of unity. It is plurality in unity. On this scale there is no distinction between the attributes, they are identical with each other and with the One. Opposites coincide—Mercy and Vengeance are the same. 'Il-dîhiyya is higher than the above-mentioned manifestations. It comprehends both Being and Non-being in all degrees, the "places of manifestation and the manifested" (al-masdûr wa 'l-tâshîr), i.e. the Creator and the Creature (al-hâl wa 'l-khalîl). At the same time it is the principle of order for the whole series of individualisations and maintains each of them in its proper place. All opposites exhibit their relativity in the greatest possible perfection, they do not coincide any longer. Râmahîyya manifests the creative attributes (al-šîd il-khalîbiyya) exclusively, whereas 'Il-dîhiyya comprehends both the creative and the creaturely. The first Mercy (rahma) of God was His bringing the Universe into existence from Himself. God is the substance (hayûlû) of the Universe. The Universe is like ice, and God is the water of which the ice is made. Rubûbiyya comprehends those attributes that require an object and are shared by man, as knowing, hearing, seeing. The differentiation of the phenomena of the Universe is caused by their mutual relations to the respective divine attribute through which God manifests Himself. In his al-Insân al-Kâmîl al-Dîjlî deals with most of the cosmic, metaphysical, religious and psychological notions current in his time. He establishes their place in his system and explains their relations to the respective divine attribute. In doing so he has succeeded in giving many new, unexpected and highly interesting interpretations of well-known theologoumena. Thus he builds a phantasmal cosmology which differs widely from orthodox views: e.g. Adam ate the forbidden fruit because his soul manifested a certain aspect of Lordship (rubûbiyya), for it is not in the nature of Lordship to submit to a prohibition; for the people in Hell God creates a natural pleasure of which their bodies become enamoured; Hell at last will be extinguished and replaced by a tree named Dîjdîrî; IBls will return to the presence and grace of God; all infidels worship God according to the necessity of their essential natures and all will be saved, etc. Al-Dîjlî's doctrine of the Perfect Man (al-Insân al-Kâmîl), the Logos, is almost the same as that of Ibn 'Arabî (cf. K. G. NEUGEBAUER, Kleine Schriften des Ibn al-'Arabî, Leiden 1916, 104). He is Muhammad the Prophet who may, however, assume the form of any holy man. So al-Dîjlî met him in 796 in Safîd in the form of his shaykh. He is a copy of God, who becomes visible in him, and at the same time, he is a copy of the Universe, which is brought into existence from him. His whole being is sensible of a pervasive delight and contemplation, the emanation of all that exists from himself, etc. Al-Dîjlî had many auditions and visions. He talked with angels and cosmic beings. When in 800 he stayed in Safïd, he met all the prophets and saints; he wandered through Heaven and Hell, in which he met Plato. In the Marâtîb al-Wudu'd forty degrees of Being are enumerated, the first being al-dâlî 'l-Idhîyya or al-shaykh al-mudahl, the last al-Insân. The other books and treatises of al-Dîjlî have not yet been studied by European scholars. They are listed in Brockelmann, II, 264-5, S II, 283-4. (H. RITTER)

'ABD AL-KARIM KASHMIRI. 'ÂKIRAT MAHMUD B. BULÂKI B. MUKH. RIPA, Indo-Persian historian. From autobiographical references in his Bayân-i Wâbišw we learn that he was living in Dîhlî at the time of its sack by Nâdir Shâh (1151/1739), and entered the service of Nâdir as a mulâsaddî. He accompanied Nâdir on his march from Dîhlî to Kazwîn, reaching Kazwîn in 1154/1741. From there he travelled to Mecca and returned to India by sea in 1156/1743. He died in 1198/1784.

He is the author of a history of his own times obtained from Nâdir Shâh's invasion of India to 1198/1784 (the India Office copy, Ethê 666, comes down to 1190/1785), including an account of his own travels, entitled Bayân-i Wâbiš. He gives much information obtained from Nâdir's courtiers, including 'Alâwî Khan, the hakîm bâghî, or based on personal observation, and is not afraid to criticise Nâdir. The text has not been printed so far; a condensed translation was published by F. Glotz, The Memoirs of the Khoja Abdalhureem, Calcutta 1878, 1812, London 1873; abridged version of this by L. Langens, Voyages de l'Inde à la Mecque, Paris 1797. To the MSS enumerated by Storey can be added: The Panjâb Public Library Cat. (Persian), Lahore 1942, p. 51.
British public announcements in the Panjāb at the time, inscriptions on the Sikh guns etc.

(ii) Ta'rikh-i Ahmad (or Ta'rikh Ahmadshāhī), lith. Lucknow 1266/1850 (for the ms. of the work see Storey ii/2, 403). Having completed the history of Shudja al-Mulk Durrani (see ii above) who left Ludhianā and with the help of the British Government regained the throne of his ancestors in 1255/1841, the author decided to write a complete history of the Durrānīs. Till 1221/1777 (about the middle of the reign of Zaman Shāh) he based it on the Husaynshāhī or the Ta'rikh Husaynī (see Rieu, Cat. Pers. Ms. Br. Mus., iii, 904b) by Imām al-Dīn who had lived for a long time in Afghanistan. A very brief history of the subsequent period up to the fall of the dynasty he based on the information received from well-informed, trustworthy and truthful visitors of his from Kābul, Kandahār and vicinity (Ahmadshāhī, 3, 51). After stating the genealogy of the Abdāllās he gives the history of Ahmad Shāh and his successors. In the last quarter of the work is given an account of the chief amirs of Zaman Shāh, a geographical note on the Panjāb and the stages of the route Kabul-Kandahār-Harāt-Čīch (with a list of the tombs of the Čīchīl saints), and a chapter on Turkistān and its ruler Nabūtā Bāy. The last event mentioned in the text is dated Shudja al-Mulk and the recall of the British troops from Afghanistan, to which is appended a list of the 75 sons of Pā'inda Khān.

This work and the Muhārāba are among the sources of the Sirāj al-Tawārīkh (Kabul 1337), a history of Afghanistan compiled under the orders of the Amir Ḥābib Allāh Khān. An Urdu version of the Ta'rikh Ahmad by Mīr Wārīgh 'All Sayfī and entitled Wāzbāt-i Durrānī was lith. in Cawnpur. 1292/1875.

Bibliography: Storey, ii/2, 402-4, iii/3, 673; O. Mann, Quellenstudien zur Geschichte des Ahmed Sāk Durrānī, in ZDMG, 1898, 106 ff.; Fr. transl. of the chapter on Turkistān in Ch. Schefer, Histoire de l'Asie Centrale par Mīr Abdal Kerim Boukharī, Paris 1876, 280 ff.

[MOHAMMAD SHAFI]
Hadiar, with its citadel al-Mushakkar. Another fortified place was Djuwatha. The oasis district on the coast reached from Safwa (a name that does not occur before the Middle Ages) in the north to Zahran in the south, its capital being Zara near Katif.

'Abd al-Kays was divided into two groups, Shann and Lukayz. Lukayz comprised the tribes of Nukra, al-Dil, 'Ajji and Muḥārib b. 'Amr. The last three were distinguished by the denomination al-ʿUmūr from their "brothers" the Anmār. These latter consisted of the tribes of ʻĀmir b. al-Ḥārith (with the sub-tribes of Banū Murra and Banū Mālik) and Djiadhima b. 'Awf (in which the branches 'Abd Shams, Ḥiyay and 'Amr confederated, under the name Barādīm, against the stronger Ḥāriqa).

The Muḥārib lived in the villages of the oasis of al-Bahrayn. Hadiar itself was inhabited by a mixed population, not bound by tribal ties. The same was probably the case in Zara and other towns of the coastal oasis, where there existed also a considerable population of non-Arabic origin (Persians, Indians, Jews, Mandaean). Amr confederated, under the help of the other chiefs of 'Abd al-Kays, to expel the Kharidiite from the west. It cost al-Ża'labā, proclaimed a Lakhmīd as their ruler. The Muslims were besieged in Djuwatha, but held out. After the arrival of reinforcements, made available by the victory over Musaylima, they took the initiative and attacked (12/633). It was not before the autumn of 634 that the Persian garrison of Zara was forced to surrender.

With the Muslim conquest starts a new movement of emigration. Labīd (an older tribe than Shann and Lukayz) took part in an expedition across the Gulf against Fars and settled mainly in Tawwādī. The emigration was directed mainly towards Başra; in Kūfa, the 'Abd al-Kays were not so strongly represented. With the troops of Kūfa they reached Mosul, with those of Başra Kūrūsān, where their strength in 715 was four thousand men. The 'Abd al-Kays took no prominent part in the politics of the newly conquered provinces. They more often, with a few exceptions, adapted themselves to local conditions, were ʻArid in ʻAlīd Kūfa, and participated in Başra and Kūrūsān in the feuds between the tribes. In Başra, Harīm b. Ḥayyān, one of the earliest pietists of Islam and a forerunner of al-Hasan al-Baqri, belonged to this tribe.

In their native country the 'Abd al-Kays tried to withstand, but without success, the Ḥāristī movement of Najīda, centered in the Yamām (67/686-7). At the same time, the tribal distribution there begins to change. Of the tribes of 'Abd al-Kays only Djiadhima b. 'Awf and Muḥārib remained in their old sites—Muḥārib occupying also the harbour of ʿUkayr, and 'Amr b. al-Ḥārith remaining in Zahran and on one of the smaller islands of Bahrayn (Sitra?). The rest of their territory was occupied by the Saʿ—Tamīm, who is the Isābī, and of these the Saʿīd is to be most noted.

Emigration from the over-populated oases started at an early date, directed particularly towards the other coastal lands of Arabia, ʻUmān (fractions of Nukra and Dil, ʻAwaka, "brothers" of the ʻUmūr and Anmār, etc.), and partly towards the Persian coast. When 'Abd al-Kays penetrated into Eastern Arabia, they are said to have found there remnants of Isyak, who were at that time migrating towards Ḥirāk. Later, they had as their northern neighbours those of the Kays b. Ţhālabā (of Bakr-Rabil'a) who had left their dwellings in Ṭārid and were grazing along the line Thajji—Kātimma—Faldji = al-Baṭīn. The enemies of 'Abd al-Kays were the Saʿīd, a group of Tamīm, who roamed on both sides of the Dahān as far as Wādī Farūk and Wādī al-Sahba. It cost al-Ţhālabā, proclaimed a Lakhmīd as their ruler. The Muslims were besieged in Djuwatha, but held out. After the arrival of reinforcements, made available by the victory over Musaylima, they took the initiative and attacked (12/633). It was not before the autumn of 634 that the Persian garrison of Zara was forced to surrender.

With the Muslim conquest starts a new movement of emigration. Labīd (an older tribe than Shann and Lukayz) took part in an expedition across the Gulf against Fars and settled mainly in Tawwādī. Emigration from the over-populated oases started at an early date, directed particularly towards the other coastal lands of Arabia, ʻUmān (fractions of Nukra and Dil, ʻAwaka, "brothers" of the ʻUmūr and Anmār, etc.), and partly towards the Persian coast. When 'Abd al-Kays penetrated into Eastern Arabia, they are said to have found there remnants of Isyak, who were at that time migrating towards Ḥirāk. Later, they had as their northern neighbours those of the Kays b. Ţhālabā (of Bakr-Rabil'a) who had left their dwellings in Ṭārid and were grazing along the line Thajji—Kātimma—Faldji = al-Baṭīn. The enemies of 'Abd al-Kays were the Saʿīd, a group of Tamīm, who roamed on both sides of the Dahān as far as Wādī Farūk and Wādī al-Sahba.
The attempt of the 'Uyunid 'Ali b. Muṣarrab to revive the ancient glory of the tribe by his poems miscarried, partly because the old Arabian world had long since become petrified, partly because also the oases of East Arabia were permeated by new immigrants.

Before the 'Abd al-Kays accepted Islam, the tribe seems to have been overwhelmingly Christian. Only a few names bear witness to its original pagan past, viz. al-Muthakkib and al-Mumazzak (from Babylonian ḥaṭṭušu, "priest") was taken over, as in other tribes, from the early Arabian town civilization. Tradition, ignorant of this fact, made of 'Amr al-Afkal a representative of ḥybris.

The genealogy of the 'Abd al-Kays is, compared with that of other tribes, remarkably incomplete, to judge by Ibn abu al-Kalbis Mukhtasar (Table A of judge by Ibn al-Kalbi's officer of the caliph al-Mansur is put higher than 'priest') was taken over, as in other tribes, only a few names bear witness to its original pagan past. The oases of East Arabia were permeated by new elements. The Arab philologists as an inferior one.

There was also a whole series of troubles, insurrections and massacres: in Kurdistan (1847), in the Danubian principalities (1848), in Bosnia (1850-51), and soon afterwards returned to his native Baghdad where he died.

His numerous writings covered almost the whole domain of the knowledge of those days. Of those extant, al-Ifṣāda wa-l-Ṭibbār, a short description of Egypt, was widely known in Europe and was translated into Latin, German, and French; cf. S. de Sacy, Relation de l'Egypte par Abd al-Latīf, Paris 1810; the others are on philology, tradition, medicine, mathematics and philosophy. (For his work on metaphysics cf. F. Kraus, in BIE, 1941, 277.)

The most important events of his reign were the proclamation of the khāfij-i sherif, or khatīb-i humayūn, of Gūlhāne (26 Bahar 1255/3 Nov. 1839) and the Crimean war, which began in 1853 and was ended by arbitration in the Treaty of Paris (30 March 1856). For the proclamation see TANZIMAT, GULKHANE.
in Montenegro (1852-3), in the Lebanon (1849), in Djidda, in the Lebanon and in Syria (1860), not to speak of Bulgaria and Albania.

Apart from his legislative work, Abd al-Madjid was the author of important reforms, in regard to the administration (in the eyalets or wilayets, "provinces"), the army (law of 6 Sept. 1843; see ref.), education (i'dddi, "primary military preparatory" schools, 1845; riîddiyye, "higher primary" schools for boys and girls, 1847; dar ul-madîrî, 1849; mektûb-i ʿôtûmînî, "Ecole ottomane" in Paris 1855), and the coinage (money of good alloy, carefully coined, issued from 1844). To him is due the building of hospitals and other edifices, such as the palace of Dolma Bagîche 1853), the restoration of the Aya Sofiya mosque by Fossati (20 July 1849), the first depositary for the state archives, Khatîne-ye Esmâîl (1845), the first theatre (French Theatre or "Crystal Palace"); besides the "imperial year-book" (1847).

In the summer of 396/1006, Abd al-Malik started an expedition to Bulgaria and Albania.

Khazine-yi Ewrdk Sofiya mosque by Fossati (20 July 1849), the first medîrîyye, especially the pieces called eydiets or "imperial year-book" (1847). "The provinces"), the army (law of 6 Sept. 1843; see ref.), education (i'dddi, "primary military preparatory" schools, 1845; riîddiyye, "higher primary" schools for boys and girls, 1847; dar ul-madîrî, 1849; mektûb-i ʿôtûmînî, "Ecole ottomane" in Paris 1855), and the coinage (money of good alloy, carefully coined, issued from 1844). To him is due the building of hospitals and other edifices, such as the palace of Dolma Bagîche 1853), the restoration of the Aya Sofiya mosque by Fossati (20 July 1849), the first depositary for the state archives, Khatîne-ye Esmâîl (1845), the first theatre (French Theatre or "Crystal Palace"); besides the "imperial year-book" (1847).

It was from his reign onwards that the imperial princes (şahs-şâde) bore the simple title of efendi. "Abd al-Madjid was the first sultan to speak a Western language (French). He was a subtle and attractive feature of his mild and attractive features revealed a generous soul" (Mgr. Louis Petit—(pseudonym: Kutchuk Efendi), Catholic bishop of Athens, Les Contemporains, no. 333, Maison de la Bonne Presse, 1899).

He died young, on 17 Dhu 'l-Hididja 1277/25 June 1855, in the midst of the financial crisis of the country. He was buried in a modest little mausoleum near the mosque of Sultan Selim.

For three out of the ten Grand-Viziers of his reign, see MAŞHÎRE PASHA, ŞAL PASHA, KHUSRAW PASHA.

The foreign diplomat who played during the reign of this sultan the most important role in Istanbul was Stratford Canning (Lord Stratford de Redcliffe).

'ABD AL-MALIK II (ABDULMECID), last Ottoman caliph, son of 'Abd al-'Azîz [q.v.]. He was elected caliph by the Great National Assembly, 18 Nov. 1922, and succeeded, in this quality only, his cousin Muhammad VI, who, after the abolition of the sultanate (1 Nov. 1922) took refuge on board a British warship and left Istanbul. During some months, all the opponents of the regime established in Ankara by Mustafa Kemal rallied round the caliph, who had, in reality, no power at all. Mustafa Kemal put an end to these intrigues by proclaiming the republic, 29 Oct. 1923. A little more than four months afterwards, 3 March 1924, the Great National Assembly resolved upon the abolition of the caliphate. The next day 'Abd al-Madjid left Istanbul. He died in Paris, 23 August 1944.

'ABD AL-MALIK B. MUHAMMAD B. ABD 'AMIR B. MU'ÃFIRI ABU MARWAN AL-MUZAFFAR, son and successor of the famous "major domo" (hadîj) al-Mansûr [q.v.] under the reign of the Umayyad caliph of al-Andalus Hishâm II al-Mu'ayyad bi'llah. He was the real sovereign of Muslim Spain after the death of his father in Medinael (Madinat Sâlim) in 392/1002.

'Abd al-Malik, second son of al-Mansûr, was born in 364/975; his mother, an umm malalî called al-Dhalî, survived him several years. Even before succeeding his father he gained experience as general in several campaigns, both in the North of Spain, against the Christians, and in Morocco. He was appointed by his father as a kind of viceroy of Morocco in 388/998, and took up his residence in Fez, but was recalled to Cordova the next year.

On the career of 'Abd al-Malik as sovereign we are informed in sufficient detail by the newly discovered Hispano-Arabic chronicles. One gets the impression that 'Abd al-Malik b. Aby 'Amir, without having the genius of his father, was not lacking in certain administrative and military qualities. At any rate, the seven years during which he held power are represented as the last favourable period of the history of al-Andalus before the fall of the Umayyad caliphate of the West. The "majordomo", remaining faithful to the line followed by al-Mansûr, continued his policy of harrying the Christian enemy beyond the frontier zones (thugûr). For this purpose he undertook year after year an expedition to one or the other of the marches of al-Andalus. In 393/1002 he directed his army towards the Hispanic March (bilad al-Hruhand), ravaged the surroundings of Barcelona and laid waste thirty-five fortresses of the enemy. In 394/1004, he attacked the territory of the count of Castille, Sancho García, who asked for an armistice and in the following year helped 'Abd al-Malik in his campaign against Galicia and Asturias. In the summer of 396/1006, 'Abd al-Malik started an
offensive against the Frankish county of Ribagorza. His most famous expedition, however, was that of the following year, aimed against the fortress of Clunia, which was taken and destroyed. This victory gained for the Amirīdī hādīsīb the honorific title of al-Muzaffar. In 398/1007 he had again to take up arms against Sancho García and Castille, and yet again in the following year. While he was preparing to set out against Castille, he succumbed to a disease of the chest, near Cordova, on the Guadimellato (Wadi Armilat), 16 Safar 399/20 Oct. 1008.

During the seven years of his rule, ʿAbd al-Malik al-Muzaffar preserved for the State of Cordova its strong administrative structure, by favouring the Slavonic dignitaries (tsākāliba) against the Arab aristocracy. Nevertheless, several attempts were made on his person. There are reasons to assume that his brother, ʿAbd al-Rahmān Sanchuelo, who succeeded him, was not without his share in the unexpected and premature death of the second Amirīdī.

[See also Amirīds and Umayyads of Spain.]

ʿAbd al-Malik b. Ḫaṭīb, govern- or of al-Andalus. He succeeded in this office ʿAbd al-Rahmān b. Ḫaṭīb, since the latter was killed during his expedition into Gaul, 114/732. He had to surrender his office, in 116/734, to ʿUkbā b. Ḫaḍīlād b. Ṣalāḥ, but renewed it in 123/740. While he was preparing to set out against Castille, he succumbed to a disease of the chest, near Cordova, on the Guadimellato (Wadi Armilat), 16 Safar 399/20 Oct. 1008.

In face of this danger, and in view of the insufficiency of his own military resources, ʿAbd al-Malik had to appeal, whether he liked it or not, for the services of a group of Arabs belonging to various ālimāds (q.v.) of Syria, who were besieged in the North-African fortress of Cuita, and gave them permission to cross the Straits under the command of their chief Baldj (q.v.). Thanks to this reinforcement and to three successive defeats which they inflicted upon the rebellious Berbers, he succeeded in allaying the danger that menaced him. The Syrian troops, however, confident in their strength, had no difficulty in removing ʿAbd al-Malik b. Ḫaṭīb and put in his place as wali of al-Andalus their own general Baldj, at the beginning of Dhu l-ʿKhādīja 123/Sept. 741. One of the first actions of the new governor was to order the execution of his predecessor, who was then a very old man.

ʿAbd al-Malik b. Ḫaṭīb, governor of al-Andalus from 398/1007 to 404/1015. He was the son of ʿAbd al-Malik b. Ḫaṭīb, who was the brother of ʿAbd al-Rahmān al-Muzaffar. When his brother was proclaimed Caliph, ʿAbd al-Malik was unable to trust him, and soon after- wards had him seized and executed him, according to the general statement, with his own hand. In the following year (70/689) the campaign against Musʿab b. Zayd, which was made a ten years’ truce with the Greek Emperor, by which, in return for an annual tribute, the latter removed the Mardaites from Syria into Greek territory. Immediately afterwards ʿAbd al-Malik set out from Damascus against Musʿab, but was obliged to return in order to deal with a revolt in the capital led by his kinsman ʿAmr b. Saʿd b. ʿAṣḥāb (q.v.). ʿAmr fortified himself in the vecinity, but on the Caliph’s arrival he capitulated on promise of life and liberty. Nevertheless, ʿAbd al-Malik was unable to trust him, and soon afterwards had him seized and executed him, according to the general statement, with his own hand. In the following year (70/689) the campaign against Musʿab was renewed, but both armies faced one another in Mesopotamia without result. In the third year, ʿAbd al-Malik opened his campaign by besieging Zufar in Kirkisīya for some months. After its capture he reoccupied Upper Mesopotamia, and reinforced by the Kays marched into Ḫarāt. At Dayr al-Ǧāḥshīlī, near Maskin, Musʿab and Ibn al-ʿAṣhtar were defeated and slain (Diwān al-ʿAṣhtar, ii, 72/Oct.-Nov., 691). Al-Muhallab with the troops of Baṣra was engaged in the struggle with the Ḫarajīlite, and most of the ʿIrākīs were weary of the conflict, which had brought them little but hardships and loss. Immediately after the Caliph’s entry into Kūfa, where he received the homage of the province, a force of 2000 Syrians was despatched under al-Ḥadidjābī to deal with Ibn al-Zubayr at Mecca. After a halt at Tāʾif, al-Ḥadidjābī laid siege
to Mecca on 1 Dhu 'l-Ka‘da 72/25 March 692; it was a little more than six months before Ibn al-Zubayr was killed on the field and the city surrendered (17 Di. 1 or II, 73/4 Oct. or 3 Nov., 692). Al-‘Adjudiadi was rewarded with the governorship of the Hijaz.

The recovery of ‘Irak involved 'Abd al-Malik in the necessity of organizing immediate measures against the Kharijites. After an initial failure, the combined forces of Kufa and Basra defeated the Najdiyya of Yamama at Mu‘ahhar in 73/692-3, but the more dangerous and fanatical Azarikha in Persia set a tougher problem. Even under the command of al-Muhallab, the war-weary *mukātita* showed little stomach for this task until in 75/694 ‘Abd al-Malik transferred al-Hadidiadi to the government of Kufa. With his ruthless and energetic backing al-Muhallab was able to hunt down the Azarikha in a three-years’ campaign. In the meantime a fresh Kharijite rising broke out among the Rabi‘a tribesmen in Mesopotamia, who, under the leadership of Shabib, swept down on the territories of Kufa and seized Madā‘in (76-7/695-6). When the *mukātita* of Kufa, recalled from Persia, proved unable to prevent Shabib from investing their city, al-Hadidiadi obtained the services of 4000 Syrian troops, who, after driving off the attackers and killing Shabib (end of 77/beg. of 697) went on to break up the Arab section of the Azarikha in Tabaristan. Following on an outbreak of disorder in Khurasan in the same year (78/697), 'Abd al-Malik added this province also to the government of al-Hadidiadi, who appointed al-Muhallab to govern it as his deputy. Al-Muhallab reopened shortly afterwards the campaigns towards Central Asia, but few positive gains are recorded before his death in 82/701-2, when he was succeeded by his son Yazid. At the same time 'Abd al-Rahmān b. Mu‘ammad b. al-Ash'ath, who had been appointed to Siǧdijān, was engaged in Afghanistan with the troops of Kufa and Basra. Enraged by the criticisms directed against him by the pious vicerey, Ibn al-Ash’ath and the asqari revolted (81/799-1) and marched back into ‘Irak. The small body of Syrian troops and their supporters were unable to withstand the united forces of the province, and for a time the situation was critical; but with the aid of reinforcements from Syria the rebels were defeated at Dayr al-Drimāduin (Di. II, 82/July 702) and again routed at Maskin on the Duṣṣa (Shabbat 83/ 703), and the remnants were pursued into Siǧdijān and Khorāsān, where they were dispersed by Yazid b. al-Muhallab (83/702). In the same year al-Hadidiadi built a new garrison city for the Syrian troops at ‘Asīr. This episode proved to be a turning-point in the history of the Umayyad Caliphate and the Arab empire. Henceforward a permanent Syrian army of occupation garrisoned ‘Irak, and the *mukātita* of Kufa and Basra were never again called out on a war footing. For twelve years more the heavy hand of al-Hadidiadi maintained order and security, and laid the foundations of future economic prosperity in ‘Irak, but at the cost of much bitter resentment amongst the tribesmen, especially in Kufa.

The war with the Byzantines was renewed in 73/692, in consequence of the Emperor’s refusal to accept the new Muslim gold currency struck by ‘Abd al-Malik. Despite some initial successes in their raids into Anatolia and Armenia, the Syrian troops, commanded by the Caliph’s brother Mu‘ammad, gained little territory, but prepared the way for the expeditions of the next reign. In North Africa, however, the *mukātita* of Egypt, under Ḥassān b. al-Nu‘mān, after regaining the southern part of Ḥirkuwah, advanced on Carthage with naval support (78/679). A reinforcing Greek fleet was defeated, Carthage occupied, and a secure base established at Rayrawwān for further conquests.

In the midst of these preoccupations with internal conflicts and external wars, ‘Abd al-Malik found time to develop the administrative efficiency of his empire. The answer to the disintegrating tendency of tribalism was centralization, and various reforms were put in hand to this end. The most important was the substitution of Arabic for Greek and Persian in the financial bureaux; this was a first step towards the reorganization and unification of the diverse tax-systems in the provinces, and also a step towards a more definitely Muslim administration. This appears even more clearly in the decision to issue an Islamic gold coinage, replacing the Byzantine *denarius* with its image of the Emperor by a Muslim *dirār* with Kur‘ānic texts. Despite the hostility which later tradition displayed towards the Umayyads and al-Hadidiadi in particular, it cannot be doubted that already the influence of Islam was strongly felt in this, the first generation of Muslim rulers who had been brought up from an early age in the Muslim faith. Another, and even more far-reaching reform was the re-edition of the Qur‘ānic text of the Kur‘ān with vowel-punctuation, a measure generally attributed to al-Hadidiadi, but which enraged the pietists of Kufa who held to the “reading” of Ibn Mas‘ūd. ‘Abd al-Malik was also the builder of the Kubbat al-Ṣaḥra [q.v.] at Jerusalem.

The last years of his reign were on the whole years of prosperity and peaceful consolidation, but for his anxiety over the succession. Marwān had appointed as successor to ‘Abd al-Malik his brother ‘Abd al-Malik b. ʿAzīz, but ‘Abd al-Malik wished to exclude him in favour of his own sons al-Walīd and Sulaymān. A split was avoided just in time, by the death of ‘Abd al-Malik b. ʿAzīz in Egypt in Di. I, 86/ May 705, only five months before the death of ‘Abd al-Malik (Shawwāl 86/Oct. 705). He was succeeded by his eldest son al-Walīd [q.v.].

‘Abd al-Malik b. Nūh [see Samānids].

‘Abd al-Malik b. ʿAlī, cousin of the caliphs Abu ʿīb ʿAbdās al-Saffār and Abu ʿAlī al-Mansūr. In the reign of Hārūn al-Rashīd ʿAbd al-Malik led several campaigns against the Byzantines, in 74/970-1, in 181/797-8, and according to some authorities also in 175/791-2, although other sources assert that in this year the forces were commanded not by ʿAbd al-Malik but by his son ʿAbd al-Rahmān. He was also for some time governor of Medina and held the same office in Egypt. At length, however, he could not escape the Caliph’s suspicion; in 187/803 he was, for no adequate reason, thrown into prison and remained there until al-Raghad’s death in 183/809. The new Caliph, al-ʿAmin, restored him to liberty and appointed him in 196/ 811-2 governor of Syria and Upper Mesopotamia.

‘Abd al-Malik set out at once for al-Rākṣa, but fell ill and died in that town shortly afterwards (the year
of his death, 196/811-2, is confirmed by al-Mas'ūdi, Tanbih 348; but the same author, Murūdī, iv, 437, gives 197, while Ibn Khallikān indicates 193 (trans. de Slane, l. 316) and even 199 (ibid., iii, 665, 667). Some years later the caliph al-Mamīn ordered his tomb to be destroyed, it is said, because ʿAbd al-Malik had sworn, during the civil war between al-ʿĀmin and al-Mamīn, never to pay homage to the latter.

ʿABD AL-MUʿMIN b. ʿAlī b. ʿAlī b. Yaʿṣar al-ʿĀmilī Abū Muḥammad, successor of the Mahdi Ibd ʿTāmart (q.v.) in the leadership of the reformist movement of taʿākhid, known as the Almohad movement (see AL-MUẒAYYID), and founder of the Muʿminīd dynasty, which in the West, in the 6th/12th century, took the place of the kingdoms of Ifriqiya and of the Almoravid dynasty of Morocco and of Spain, with its capital at Marrākush (q.v.). The history of the origins of the Almohad movement and of the reign of ʿAbd al-Muʿmin has been illuminated and in large measure reinterpreted since the present author had the good fortune to find, in a miscellaneous collection in the Escurial library, some extracts from an anonymous Kitāb al-Ansāb devoted to the principal protagonists of the religious and political system set up by Ibn ʿTāmart, and especially the extremely lively and certainly authentic 'Memoirs' of a companion of the Mahdi and of his successor, Abū Bakr b. ʿAll al-Sinḥādī, called al-Baydhaqī (E. Lêvi-Provençal, Documents inédits dʼhistoire almohade, Paris 1928). This extremely important find was followed by the discovery of a volume of the Nasīm al-Dīwān by Ibn al-ʿAtṣṭān on the beginnings of the movement (published in part by E. Lêvi-Provençal, Six fragments inédits dʼun chronique du début de lʼhistoire almohade, in M. angot, Rend. Basset, Paris 1925, ii, 335-93), and also of a collection of official letters from ʿAbd al-Muʿmin and his immediate successors (E. Lêvi-Provençal, Trente-sept lettres officielles almohades, Rabat 1941; Un recueil de lettres officielles almohades, analysis and historical commentary, Paris 1941). It has thus become possible, without having to rely only on later Arabic historians, to attempt a detailed critical account of this period which covered a large part of the 6th/12th century and coincided with an unprecedented revolution in the history of the Islamic West—an account which, however, still remains to be written.

The circumstances of the meeting of Ibn ʿTāmart and of his disciple ʿAbd al-Muʿmin might have been regarded as legendary were they not confirmed by al-Baydhaqī, who was a witness, ʿAbd al-Muʿmin, a humble student, of the Arabized Berber tribe of the Kūnyā, of the ethnic group of the Zanāta, settled in the north of what is now the province of Oran, not far from Nedroma, made no attempt to claim, as did his master, an Arab and even Prophetic ancestry until very much later. Still a young man the year of his birth has not been ascertained—he had, with his uncle Yaʿṣar, left his native village of Tāgrā to visit the East, or possibly Iṣrīkiya only, in order to complete his studies there. But this peregrination for the purpose of ṣalab al-ʿilm was to take him no further than Bougie (Bīḍāya). It was in a suburb of that town, Mālīla, that Ibn ʿTāmart, the ʿAbd al-Muʿmin of the Sus', as he was then called, who was on his way back to Morocco, encountered the man who was to be his successor. He persuaded him to join the small group of disciples who accompanied him, and taught him his "unitarian" doctrine, during the few months that he remained at Bougie. This meeting probably took place in the course of the year 511/1117.

From this time onwards and until the death of the Mahdi in 524/1130, ʿAbd al-Muʿmin plays an extremely active part at the side of his master, who attached him by adoption to his own tribe, the Hargha, and gave him a place in his "Council of Ten". He took part in all the expeditions, had a say in the deliberations of the Almohad general staff, and found a far-seeing protector in the person of the most active member of the movement, Abū Ḥafs ʿUmar al-Ḥintāfī (q.v.). It was the latter who, at the death of Ibn ʿTāmart, imposed on the Berber hillmen of Tinmallal acceptance of the choice made by the Mahdi of his own successor. Three whole years were, however, to elapse before ʿAbd al-Muʿmin was proclaimed. He then received from all his new subjects the bayʿa of allegiance, but had at the same time to face an uncertain political situation. Events were to reveal his outstanding qualities as a statesman, as a general, and as chief of a coalition which was still, in spite of appearances, heterogeneous. His first task was, leaving aside all other business, to break down the Almoravid structure, whose foundations were already undermined. Fortune favoured him to a degree beyond his highest hopes.

The career of ʿAbd al-Muʿmin as a sovereign began on the day of his proclamation, in 527/1133, and continued until his death in 558/1163. Here we shall merely summarise its principal stages.

The first stage was to secure for the Almohads the whole of Morocco. The conquest proved long and difficult. ʿAbd al-Muʿmin first of all attacked the Sūs and the Dra (Wādī Darʿa (q.v.)), then the line of Almoravid fortresses which in the North encircled the Grand Atlas, preventing access to the plains and to the capital, Marrākūsh. Then he swung towards the northeast, took the fortified towns of Dānnāt and Dāy, and step by step secured possession of the middle Atlas and of the oases of the Ţāflālāt during the years 534-35/1134-41. Then the Almohad columns debouched into northern Morocco, and, from their base in the mountain massif of the Djebla, occupied the fortresses in the region of Tāgrā. Thence, they went on to win over to the movement the sub-Mediterranean tribes of the Wādī Lāw, and of Bāḍis, Nākūr, Melīla, and the North-Oranian region; to his own village of Tāgrā, ʿAbd al-Muʿmin returned as a conqueror.

From this moment, ʿAbd al-Muʿmin, at the head of considerable forces, felt himself strong enough to abandon the guerilla operations in hilly country which had hitherto been his tactics, and to confront the Almoravids in the plain. The carrying out of this intention was made all the easier for him by the death of the Almoravid amīr, ʿAll b. Yūsus b. Tāghuīn, which took place in 537/1143, leaving a tottering throne to his son Tāghuīn, and open rivalry between the Lāmtūna and Massufa chiefs in regard to the succession to the amirate. Another untoward circumstance for the Almoravid dynasty was the tragic death of one of their most devoted and skilful generals, the Catalan Reverter (al-Ruburtayr), leader of their Christian militia, who was killed in an engagement with the Almohads, in 539/1145, in eastern Morocco.
Finally, the adhesion of the Zanāta to the taṣwīd further inclined the balance in favour of the rebel movement. The armies of ʿAbd al-Muʿmin and of Tāghūt b. ʿAll met before Tlemcen, and the Almoravid was forced to fall back on Oran, but he died as a result of a fall from his horse in the same year, 539. Now the road to Fez was open: first Oujda (Wajdja) and then Guercif (Adjarisf) were taken, and the capital of north Morocco fell after a siege of nine months in 540/1146, followed by Miknāsa (Meknes) and Saʿl. This series of victories was quickly followed up by the capture of Marrakush. The Almoravid capital made some attempt to resist the attackers, but was soon forced to capitulate, in spite of the heroic defence made by the garrison of the kaṣaba (Shawwāl 541/April 1147), and there was great slaughter of the Almoravids, among the dead being the young prince ʿIshāk b. ʿAll b. ʿYūsuf. Henceforward the Muʿminid dynasty had the capital of its choice. The Almoravid palace was selected as his personal residence by ʿAbd al-Muʿmin, who gave orders for the erection in its vicinity of the monumental Mosque of the Booksellers (Djāmīʿ al-Kutubiyyin), whose imposing minaret still towers above Marrākush today.

The final destruction of Almoravid power made it possible for ʿAbd al-Muʿmin to organise his new empire, using as a basis the political system of the Almohad community, but broadened and adapted to his purpose. He carried out a new scrutiny of his supporters, thousands of whom, judged to be of doubtful loyalty or lacking in religious fervour, were put to the sword. Then it seemed to him that the time had come to extend his conquests beyond the boundaries of the Almoravid possessions in the Maghrib, and he prepared to annex Iftirkiya.

Iftirkiya was in any case an easy prey at that moment. The Sinhadjian dynasties of Bidjaya and Kayrawān were thoroughly undermined, and the wave of beduin incursions was swamping the whole country, while the Normans, led by Roger II, king of Sicily, were gaining a foothold in the principal ports of Iftirkiya. An Almohad expedition against Iftirkiya could therefore be regarded as all the more justified, in that it could claim to be a ḍaʿīd against the infidel. ʿAbd al-Muʿmin entrusted his success at Saʿl, in 546/1151, then, in the course of an irresistible thrust towards the east, took possession once again of Algiers, Bougie and of Kalīb Bānī Hāmmād, and utterly routed near Setif the nomadic Arabs, formerly in the service of the Hāmmādīs of Bougie; after which he did not scorn to accept their services, and for the time being refrained from advancing any further towards Tunisia.

Iftirkiya properly so called was not conquered until eight years later. ʿAbd al-Muʿmin, leaving as his lieutenant in the Maghrib Abū Hafs ʿUmar al-Hintāṭī, arrived before Tunis, after a journey of six months, in Djiṅmād I 554/June 1159. Having taken the town, he went on towards al-Mahdiyya and attacked this fortified town, which was in the hands of Roger II of Sicily, with powerful forces; the town fell in Muharram 555/January 1160. In the course of this campaign he also secured possession of Sūsa, Kayrawān, Sfax, Gafsa, Gabes, and Tripoli. Then the ruler returned to Marrākush, whence he left for Spain in 556/1161.

The establishment of the Almohads in the Iberian peninsula had begun in 539/1145, immediately after the capture of Tlemcen. In the next year the Almoravid admiral Ibn Maymūn, who had gone over to ʿAbd al-Muʿmin, contributed his part by taking Cádiz. In 541/1157 an Almohad army took successfully the fortified towns of Jerez, Niebla, Silves, Béja, Badajoz, Mertola, and finally Seville. In 549/1154 Granada was surrendered to the new masters of the country by its Almoravid governor. In 552/1157 Almeria was recaptured from the Christians, who had seized it, and whose designs on al-Andalus became ever more obvious. It was in these circumstances that ʿAbd al-Muʿmin decided to cross the Straits himself, and established his head-quarters at Gibraltar (Djabal Tārīk, afterwards Djabal al-Fāṭih), whose reconstruction he had ordered in the previous year. He remained there for two months of winter, and sent out his columns towards Jaén, where the mercenaries of Ibn Mardanīgh [q.v.] had engaged in raiding.

ʿAbd al-Muʿmin returned to Morocco at the beginning of 558/1162. He proceeded to concentrate his troops in the huge enceinte built opposite Saʿl, the Rībāl al-Fāṭih, now Rabat, with a view to another expedition to the Iberian peninsula. But he had to take to his bed, and, after a long and painful illness, died in the month of Djiṅmād II 558/May 1163. (All the historians agree as to the month and the year, but not as to the actual day). His remains were taken from Saʿl to Tinmallal and buried near the tomb of the Mahdi Ibn Tūmart.

In all probability, it was at the time of the capture of Marrākush that ʿAbd al-Muʿmin allowed his entourage to confer on him the exalted title of amīr al-muʾminin, whereas the Almoravids had used only the title amīr al-munṣūṣīn, recognising the spiritual suzerainty of the ʿAbbaṣid caliphate of the East. Also, breaking with the Almoravid tradition, which itself had been inspired by the Hispano-Umeyyad organisation, he set up an administrative system which took into account the political needs of his great empire, as well as his desire not to give offence to his entourage of Berbers, “Almohads from the very beginning”. Many regulations that formed part of this system are still in existence in the organisation of the makhzen [q.v.] of modern Morocco. But he had also to turn to Andalusian experts for his chancellery, mostly to men who had formerly been secretaries at the Almoravid court. He cleverly secured his succession in the direct line, as well as his desire not to give offence to his entourage of Berbers, “Almohads from the very beginning”.

Various estimates have been given of ʿAbd al-Muʿmin, who was in no way marked out for the brilliant career that he made for himself. If, at the beginning and during the years that followed the death of Ibn Tūmart, he seems to have been somewhat timid and to have allowed himself to be led what timid and to have allowed himself to be led by his principal collaborator Abū Hafs ʿUmar ʿIntīf, it appears that he later manifested in increasing measure not only strategic but also political qualities, handling tactfully his susceptible entourage of Almohad Berbers, winning the good will of the Arabs of Iftirkiya after subjugating them, and carrying out with great intelligence and energy, and also cruelty, his role as head of a State and guardian of the doctrine of the Mahdi, to whom he owed his own fortune and that of his dynasty.

So CABD AL-MLPMIN — MIRZA CABD AL-RAHIM KHAN

**‘ABD AL-MUT‘ALÎB B. HÂSHIM, paternal grandfather of Mu‘âmmad.** Passing through Medina on trading journeys to Syria, Hâshim b. ʿAbd Manâf married Salmâ bint ʿAmr of the clan of ʿAdî b. al-Nâdidjar of the KhazrâdJ, by whom in her house in Medina, this apparently being the practice of her family in accordance with a matrilineal kinship system. Some time after Hâshim’s death his brother al-Muṭṭalîb tried to strengthen his deteriorating position in Mecca by bringing his gifted nephew from Medina to help him. The common explanation that the youth was called ʿAbd al-Muṭṭalîb because he was mistaken for the slave of al-Muṭṭalîb is not acceptable; the name has probably a religious significance. Arabic sources give the impression that ʿAbd al-Muṭṭalîb was the leading ‘man in Mecca (sayyid Kuraysh), whereas some Western scholars have tried to show that he was insignificant. It seems more probable that he was a leader of a political group within Kuraysh which had developed out of the alliance of the Mutayyabun (B. ʿAbd Manâf, B. Asad, B. Zuhra, B. Taym, B. al-Ḥârîth b. Fîhr) by the succession of B. Nawfal b. ʿAbd Manâf and B. Shams b. ʿAbd Manâf. It is significant that ʿAbd al-Muṭṭalîb is said to have had disputes with Nawfal and with the grandson of ʿAbd Shams. Moreover it is doubtless as leader of this group that he negotiated with the leader of an Abyssinian army invading Mecca, perhaps hoping thereby to obtain some advantage over Meccan rivals. He also appears to have been in alliance with tribes from the neighbourhood of Mecca, Khuza‘a, Kinânâ and Thâtîf, and to have owned a well at al-Tâm. The basis of his prosperity was trade, especially with Syria and the Yemen, coupled with the tikāya and rīsâda (the privilege of supplying pilgrims to Mecca with water and food), which he had inherited from Hâshim. He is credited with having dug several wells, notably that of Zamzam at the Ka‘ba. Fâtima bint ʿAmr (of B. Mâghzam, Mu‘âmmad’s father) and ʿAbd al-Tâlib; he had other wives from B. Zuhra of Kuraysh, al-Nâmîr, ʿAmir b. ʿSâ‘a‘a and Khuza‘a, mothers respectively of Ḥamza, al-ʿAbbas, al-Ḥârîth and Abî Lahab. On the death of Mu‘âmmad’s mother he took the boy of six to his own house. While the stories about ʿAbd al-Muṭṭalîb have been subject to tendentious shaping, there may be more fact underlying them than sceptical Western scholars have allowed.

**MIRZA ‘ABD AL-RAHIM KHÂN, KHÁN-I KHÁNÁN, general, statesman and scholar,** was born in Lahore, 14 Safar 964/18 Dec. 1560, the son of Akbar’s first wâkîl, Bayram Khân [q.v.]. He belonged to the Bahârî, a branch of the Kara Köyunlu Turkmen, and his mother was a daughter of Djamîl Khân Mewâtî, whose elder daughter he married. When he was four his father was murdered and he was thereafter brought up by Akbar himself, who gave him an excellent education and training, and from whom he received the title of Mirzâ Khân. In 1572 he accompanied Akbar to Gudrâr and then had assigned to him, under the tutelage of Sayyid Âlîmd of Bârâhâ, the district of Fâtan, within which his father had been murdered.

In Dhumâdār 1 I 981/Aug. 1573 he accompanied Akbar on his historic forced march to Gudrâr and he shared the command of the centre in the battle of Sarnâl which destroyed the power of the rebel Mirzâ. In 1576 he was appointed governor of Gudrâr, Wazîr Khân Harawi being entrusted with the actual administration of the province. He was deputed in the same year to the Mewâr expedition and assisted in the conquest of Gîrîm and the subjugation of Bahlâmîr in 1578. As a mark of great confidence the emperor appointed him, in 1581, mir ‘ard, an office which was previously held by seven officers jointly. He was also given the džâgîr of Ranthâmber and ordered to pacify the area. In 1582 he was appointed adâlî to Akbar’s son Salîm, then a boy of thirteen. In 1583 he was deputed to suppress the revolt of Mu‘zafar Shâh Gudrârî, which he broke by defeating Mu‘zafar against heavy odds in Mu‘harram 992/Jan. 1584, at the two battles of Sardjûdî and Nâdût. In recognition of his victories he was given the title of Khân-i Khânân and raised to what was till then the highest mansâb, of 5,000. He remained in command of Gudrâr, pursued Mu‘zafar into Kâthâwâr, and subjugated Nawânagîr. In 1585, during his temporary absence at the court, Mu‘zafar again raised the banner of revolt. He quickly returned to Gudrâr and pacified the province. In the following year, when the system of joint governors was instituted, Kulîd Khân was associated with him in the government of the province. In 1587 he was permitted to return to the court while retaining nominally the governorship. In 1589, Gudrâr was taken from him and given to Mirzâ ʿAţîz Kûkâ, the brother of his wife, Mâh Bânu.

In the same year he was appointed to the highest office at the court, that of wâkîl, and given Džawnâr as džâgîr. In that year he presented to the emperor his Persian translation of Bâbour-nâma, entitled Wâlîšdî-i Bâbour. In 1590-1 his džâgîr was transferred against his wishes from Džawnâr to Muluq and Bâkkrâr and he was appointed to command the army sent to conquer Kândâhâr and to annex Thatta, then held by Mirzâ Dîjâr Beg Târkân. ʿAbd al-Rahîm decided, according to Abu ʿI-Fâḍl, to proceed against Thatta in preference to Kândâhâr in the hope of getting more booty. Consequently the command of the Kândâhâr expedition was entrusted to Akbar’s son Dândîl. In 1590-1 the conquest of Thatta was completed. Mirzâ Dîjâr Beg married one of his daughters to ʿAbd al-Rahîm’s son, Shâh Nawâz Khân [Iridî], and came to the court along with ʿAbd al-Rahîm.

In 1593 he was appointed to assist the prince
Daniyal who was given the command of an expedition to the Deccan, but on his taking the active part in the campaign except when he defeated a largely outnumbering force under Suhayl Khan of Bidjakpur in an important battle fought in 1597. His relations with the prince remained strained and in 1598 he was recalled from the Deccan.

On the death of Murad, Daniyal was appointed to the Deccan in 1599; 'Abd al-Rahim was ordered to join him and besiege Ahmadnagar, which was being heroically defended by Când Bób. After the fall of Ahmadnagar Daniyal was appointed to its government and was married to Djâhâni Bâgum, 'Abd al-Râhîm's daughter. In 1601 'Abd al-Râhîm was ordered to repair to Ahmadnagar and pacify the territory and in the following year the command of Berá, Pathír and Telingâna was made over to him. When Salim ascended the throne Daniyal was recalled from the Deccan.

In his religious views he was professedly a Sunnî. Though religious leaders like shaykh Afrmu Sarhindî and shaykh 'Abd al-Hâcîf Dihlawî counted him among the orthodox, his religious outlook remained mystical and liberal. The belief that he was suspected of practising ta'âziyya and of secretly following Shâfîite tenets is not supported by contemporary evidence.

NURUL HASAN

'ABD AL-RAHMAN, the name of the Marwânid prince who restored the Umayyad dynasty in al-Andalus, and of four of his successors.

1. 'Abd al-Rahmân I, called al-Dâhiq, 'the Immigrant', was the son of Mu'âwiya b. Hîqâm [q.v.]. When his relatives were being hunted down by the 'Abbâsîs, 'Abd al-Rahmân, still a youth—he was born in 1137 [1312—convinced to escape secretly to Palestine, whence, accompanied by his freedman Bâdî, he made his way first to Egypt, and then to Irân. At Kayrawân, the hostile attitude of the governor, 'Abd al-Râhîm b. Hâbîb, drove him to seek refuge in the Maghrib. He stayed for some time in the region of Tâhâr; subsequently he sought hospitality first from the Berber tribe of the Mîkâsâ, and then from the Nafza tribe, on the Moroccan shore of the Mediterranean, taking ad-
vantage of his family connections—his mother having been a captive woman from that very tribe. But the Berbers did not look with favour on the political schemes of the young Syrian émigré, who with the help of his musulûd, decided to try his luck in Spain.

`Abd al-Rahmân b. Mu`tawiyya managed most cleverly, and with keen political sense, to turn to account the bitter rivalries which at that time grouped the Arab Kaysite party and Yamanite party in the Iberian peninsula in opposed camps. We succeeded similarly in enlisting the support of the numerous Umayyad clients who had come to Spain with Baldí b. Bishr [q.v.], and who formed there a local cadre of Syrian gûnds dominating a large part of the south of Andalusia. The ground having been well prepared by Badr, `Abd al-Rahmân entered the peninsula: he disembarked at Almuhecar (al-Munâkkab) on 1 Rabî` I 138/14 August 755, and at once put forward his claim to the sovereign power.

The governor of al-Andalus, Yûsûf b. `Abd al-Rahmân al-Fihri, soon had to take up arms against him. `Abd al-Rahmân, whose forces were continually increasing, made his entry into Seville in Shawwâl 138/March 756, defeated Yûsûf al-Fihri in the outskirts of Cordova on the 10 Dhu`ul-Hijjah following (15 May), and entered the capital, where he was proclaimed amîr of al-Andalus.

The founder of the Umayyad amirate of Cordova was to reign for more than thirty-three years. He spent the greater part of them in consolidating his position in the capital itself. The news of his success spread in the East, and soon a stream of dependents or supporters of the Umayyads was flowing into Spain to help with the restoration in the West of the dynasty that in the East had fallen from power.

It was not long before the amîr of Cordova was forced to confront a multitude of political problems. He had first of all to subdue finally the former wâlid Yûsûf al-Fihri, who had collected round him a certain number of malcontents and tried to retake Cordova; but he was defeated in 141/758 and in the next year was killed near Toledo. Meanwhile, just as in the time of the former governors, embers of revolt were smouldering in almost every part of the new kingdom; unrest was stirred up not only by the neo-Muslim Spaniards and by the Berbers of the mountainous regions, but also by the mutual hostility of the Arab clans. `Abd al-Rahmân I thus had to stamp out rebellion at many different points: for example, in 146/763, the rising of the Arab chief al-`Alî b. Mughîth al-Djâhîmî, and, in 152/769, that of the Berber Shâkyâ in the Santaver district (Shantabâriyya), now the province of Cuenca. Later, a certain number of the Arab chiefs on the eastern side of the Peninsula formed a coalition, and asked for help from Charlemagne. The latter himself crossed the Pyrenees at the head of a Frankish army and laid siege to Saragossa; but a sudden recall to the Rhineland compelled him to raise the siege. On the way back his army was attacked in the narrow valley of Roncesvalley by bands of Basques (Bashkunish) and was decimated (episode of Roland, Duke of Brittany). `Abd al-Rahmân in his turn laid siege to Saragossa, and gained possession of it for a time. But he was forced to give up the idea of recapturing the other towns that had fallen into the hands of the Christians. Thus it was that Gerona (Djarunda) came under Frankish control in 169/785.

Three years later, on 25 Rabî` II 172/30 September 788, `Abd al-Rahmân I died at Cordova before reaching his sixtieth year. The State of Cordova was doubtless still very insecure; but at least he had provided it with an administrative and military organisation similar, on a lesser scale, to that of the former caliphate of Damascus, and which was to last as long as the Marwânid of al-Andalus remained faithful to the `Syrian tradition'. In any case, the success of the `Immigrant' made a deep impression in the East, and the `Abbasid caliph `Abd al-`Azîz al-Mansûr gave him the name shârîr Kûraysh, `Hawk of Kûraysh', as a tribute to his courage and his spirit of enterprise.

Bibliography: E. Lévi-Provençal, Hist. Esp. mus., I, 91-138. The essential Arabic source for the career of `Abd al-Rahmân I is the anonymous compilation entitled AKBÂR MADÎMÂ'U [q.v.], 46-120. For the other sources and the bibliography, see Hist. Esp. mus., I, 91, n. 1.

2. `Abd al-Rahmân II b. al-Hakam b. Hishâm b. `Abd al-Rahmân b. Mu`tawiyya, great-grandson of the above, succeeded his father al-Hakam I on 25 Dhu`ul-Hijjah 206/821 May 822. He was born at Toledo in 176/792 and was chosen as heir presumptive by his father. The recent discovery of that part of the Mukâlabîs of Ibn Hayyân which deals with the reigns of al-Hakam I and `Abd al-Rahmân II has made it possible for the present writer to offer a rather different picture of the latter sovereign and of the kingdom of al-Andalus during his period from that which Dozy based on the documentation available in his time. It now appears that the reign of `Abd al-Rahmân II, which covered a third of a century, was much more prosperous and brilliant than was thought hitherto; in the history of Andalusian civilisation it represented a decisive turning-point, when for the first time there penetrated to Cordova manners and a way of life directly borrowed from Baghdad and from the `Abbasid civilisation which firmly set their stamp on the aristocracy (khâdsâ) of Muslim Spain, and led to a continuous ebbing of the Syro-Umayyad tradition in the Marwânid kingdom.

At the beginning of the reign of `Abd al-Rahmân II some disturbances, which came about as a reaction against the iron rule with which al-Hakam I had governed al-Andalus, were easily put down; gradually the Levante territories (Shârk al-Andalus) were brought completely under the crown, and a new town, Murcia was founded in 216/831 to replace the former chief town, Ello. A revolt on a considerable scale broke out at Toledo; it was finally put down, and the town taken by storm in 222/837. At the same time the ruler of Cordova took up afresh the struggle against the Christians along the frontiers of al-Andalus, and nearly every year personally led or sent summer expeditions (zâ`îfâ) against the Asturio-Leonese kingdom. He also had to deal with the revolt of the Berber Mahmûd b. `Abd al-Jâhîl in the region of Merida and with the minor aggressive outbursts of the muwallad Banû Nasr family [q.v.] of Aragon, while at the same time waging war, at regular intervals, against the Basque kingdom of Pamplona and the Hispanic Marches (now Catalonia), which then formed part of the empire of the Franks (Ifrânj; q.v.).

Two important political events also took place during the reign of `Abd al-Rahmân II. The first, following upon a recrudescence of nationalist propa-
ganda, was the tenacious revolt of the Mozarab Christians [q.v.] of Toledo and Cordova, fomented by certain fanatics. Arabic historiography makes no mention of this revolt, and information about it...
can only be obtained from a few contemporary Latin sources. Not without reluctance, the government of Cordova had to deal severely with a large number of Mozarabs, priests and lay persons, men and women, who were guilty of having reviled the religion of the Prophet. At this time there was a disturbing outbreak of voluntary martyrdom, which was to continue until the end of the tenth century, see the art. UMAYYADS OF SPAIN.

Far more serious was the raid of the Norsemen, in 230/844, on Muslim Spain. The plottings of Norsemen (Urdumaniyyun), usually called Madjus [q.v.] by the Chroniclers, first made their appearance at Lisbon, then came up the Guadalquivir from its mouth and sacked Seville and all the surrounding country. The counter-stroke was not delayed, and after a bloody battle Seville was recaptured from the pirates at the end of Safar 230/November 844. To meet this unexpected menace and to forestall any new attack the navy was reinforced.

Abd al-Rahmân II instituted friendly relations with the three little independent kingdoms of western Barbary: the Rustumid kingdom of Tâhurt, the Saâhid kingdom of Nakûr, and the Midrârid kingdom of Siджîlâmâsa, but made no advances to the Aghlabids of Ifrikîya, who were partisans of the Abdâsids and had just conquered Sicily. From his reign too dates the opening of diplomatic relations between Cordova and Byzantium. An embassy from the emperor Theophilus arrived in Spain in 225/840 to demand the restitution of Crete, which had been occupied by the Andalusian adventurer Abû Hafis 'Umar al-Ballutî [q.v.]. The reply was in the negative, but a Cordovan deputation, of which the poet al-Ǧahzâl [q.v.] was a member, went to Constantinople at this time.

Abd al-Rahmân II was to become particularly renowned as an organiser and builder, and as a patron of letters and the arts. He reorganised the administration of his kingdom on the lines of the Abdâsíd system, ordered the construction at Cordova of several works of public utility, and on two occasions undertook the extension of the great mosque in his capital, in 218/833 and 234/848. His court soon became most brilliant, from the time when the musician and singer Ziryâb [q.v.], who came to Cordova in 207/822, won acceptance at Cordova for the refined usages of the Baghdad civilisation. Several poets won fame in the entourage of the amir of Cordova: for example, al-Abbas ibn Firnas [q.v.], al-Ǧahzâl, mentioned above, and Ibrâhîm ibn Sulaymân al-Ǧâfârî. During his reign the Malikite school of Cordova developed greatly, and several fâkihs acquired a reputation in juridical science, in particular the Berber Yabây [q.v.] al-Laythî, whose dictates Abd al-Rahmân II followed in his choice of kadîs. The end of the amir's life was darkened by palace intrigues, instigated by his fata Nasr and by his concubine Ta'rûb. He died at Cordova on 3 Rabî' II 231/853 September 852, after he had mustered all his resources to put an end to the revolt in southern Andalusia, and to neutralise once and for all the aggressive power of the principal instigator of this revolt, Umar b. Hafşûn [q.v.].

Abd al-Rahmân III was to become particularly renowned as an organiser and builder, and as a patron of letters and the arts. He reorganised the administration of his kingdom on the lines of the Abdâsíd system, ordered the construction at Cordova of several works of public utility, and on two occasions undertook the extension of the great mosque in his capital, in 218/833 and 234/848. His court soon became most brilliant, from the time when the musician and singer Ziryâb [q.v.], who came to Cordova in 207/822, won acceptance at Cordova for the refined usages of the Baghdad civilisation. Several poets won fame in the entourage of the amir of Cordova: for example, al-Abbas ibn Firnas [q.v.], al-Ǧahzâl, mentioned above, and Ibrâhîm ibn Sulaymân al-Ǧâfârî. During his reign the Malikite school of Cordova developed greatly, and several fâkihs acquired a reputation in juridical science, in particular the Berber Yabây [q.v.] al-Laythî, whose dictates Abd al-Rahmân II followed in his choice of kadîs. The end of the amir's life was darkened by palace intrigues, instigated by his fata Nasr and by his concubine Ta'rûb. He died at Cordova on 3 Rabî' II 231/853 September 852, after he had mustered all his resources to put an end to the revolt in southern Andalusia, and to neutralise once and for all the aggressive power of the principal instigator of this revolt, Umar b. Hafşûn [q.v.].

Under the rule of Abd al-Rahmân III the benefits of an unusual degree of continuity, and made it possible for him to subdue one after another all the centres of disaffection in al-Andalus.

The reign of Abd al-Rahmân III can be divided into two principal periods: first a period of internal pacification, the result of which was the achievement of political unity in the kingdom of Cordova, a unity which had been gravely threatened in the reign of amir Abd Allâh [q.v.]; then a longer period, mainly distinguished by activity in external policy: an offensive against Christian Spain, and a struggle with the Fâtimid empire for influence in North Africa.

As soon as he came to the throne, Abd al-Rahmân III mustered all his resources to put an end to the revolt in southern Andalusia, and to neutralise once and for all the aggressive power of the principal instigator of this revolt, Umar b. Hafşûn [q.v.]. Until 305/917 he unceasingly harassed the Andalusian rebels and attacked the Arab aristocrats of Seville, Carmona, and Elvira, who were forced to submit. After the death of Ibn Hafşûn, his sons quickly gave up the struggle. Their head-quarters at Bobastro [q.v.] were taken by storm in 315/928. Five years later the last centre of resistance, Toledo, fell in its turn.

At the same time the ruler of Cordova took care not to allow himself to be outflanked by sporadic outbursts of aggression by his Christian neighbours. He stopped the advance of the king of Asturio-Leon, Ordoño III, in 308/920, and seized a series of strongholds along the strategic line of the Duero, Osma, San Esteban de Gormaz, and Clunia, particularly after his victory at Juncaria (Valdejunqueira). Four years later the victorious operations known as the Pamplona campaign put him in a position to sack the Basque capital, the seat of Sancho Garces I, and to secure his land frontiers for several years. But he was to find a powerful opponent in the new king of Leon, Ramiro II, who, shortly after his accession, took the offensive against Islam and, after a series of encounters in which he was beaten, succeeded in inflicting on the ruler of Cordova, in 327/939, the very serious defeat at the "moat" of Simancas (sometimes wrongly called the battle of Alhandega).

Ten years had already passed since Abd al-Rahmân III, after the taking of Bobastro, and as a retort to the designs of the Fâtimids on his realm, had adopted the exalted title amir al-mu'minîn, and the honorific appellation al-Nâṣîr li-Dîn Allâh. He was now to pursue in North Africa a policy of attraction and to combat, particularly in Morocco, the influence of the new masters of Ifrikîya. In order to secure from bases of operations on African soil, he occupied certain presidios, Ceuta in particular, which was taken in 319/931. On this battle of influences, which was to continue until the end of the tenth century, see the art. UMAYYADS OF SPAIN.

After the Simancas disaster, Abd al-Rahman III quickly succeeded in restoring the situation, especially as his enemy Ramiro II died in 339/951 and his sons Ordoño III and Sancho quarreled over the succession. Al-Nāṣir took full advantage of the civil wars which at that time steeped the kingdoms of Leon and Pamplona in blood (for fuller details see the art. Umayyads).

Abd al-Rahman III died at Cordova on 22 Ramadān 350/15 October 961, at the height of his fame and power. During the latter part of his reign he had lived in the style of a veritable potentate, by obtaining from Hisham II his designation as caliph, the Umayyad Hisham II al-Mu‘ayyad bi’llah. At the end of his reign he had transferred his residence to his royal establishment of Madinat al-Zahra [q.v.], at the gates of Cordova, which he made into a town by itself. Of the kingdom of al-Andalus, which under his predecessors had ever been an object of contention shaken by civil war, the rivalries of the Arab clans, and the clash of ethnic groups in opposition to each other, he had contrived to make a pacified, prosperous, and immensely rich State. From that time Cordova was a Muslim metropolis, a rival to Kairouan and to the great cities of the East. It far surpassed the other capitals of Western Europe, and enjoyed in the Mediterranean world a reputation and a prestige comparable to that of Constantinople.

4. Abd al-Rahmān IV b. Muh. b. ‘Abd al-Malik b. ‘Abd al-Rahman, grandson of ‘Abd al-Rahman al-Nāṣir, Umayyad caliph of al-Andalus, who took at the beginning of his short reign the honorific title of al-Murtadā. This personage, who, at the time of the fall of Cordova, had retired to Valencia, was proclaimed at the end of 408/1017-18, after the assassination of All b. Hammūd [q.v.] by a number of supporters collected together by the lord of Almeria, the Scelvonian Zaid al-Khayrán. Al-Murtadā, before trying to retake Cordova and to instal himself there, laid siege to Granada, where the Šinhāda of Zāwī b. Zirī [q.v.] were in command, and suffered a serious defeat. Betrayed, and abandoned by his own men, he took refuge at Qū 큰 (Wādī Ash), where he was betrayed, and was long assassinated.

5. Abd al-Rahmān V b. Hīghām b. ‘Abd al-Djabbār, one of the last Umayyad caliphs of al-Andalus, was proclaimed on the 16 Ramadān 414/2 December 1023 at Cordova, and took the honorific title of al-Mustazhir bi’llah. He had barely attained his majority, and showed remarkable literary gifts. He surrounded himself with counsellors chosen from among the aristocracy of the capital, men such as the great writer All b. Ḥazm, but was able to remain in power for only forty-seven days. The Cordovan mob deposed him in the course of a riot, and replaced him by Muḥammad III al-Mustakhf, on 3 Dhū ‘l-Ka‘dā the same year/17 January 1024. The first act of his successor was to put ‘Abd al-Rahmān al-Mustazhir to death.

‘Abd al-Rahmān b. Muḥammad b. ‘Aḥẓār, nicknamed Sanchuelo (Shandjulio), the "liberated" (or by his men as a grandchild of Sancho Garcés II Aba-reka, Basque king of Pamplona), son of the famous "majordomo" al-Mansūr [q.v.] b. Aḥẓār. He succeeded his elder brother ‘Abd al-Malik [q.v.] al-Muṣṭafar on his death, 16 Ṣafar 399/20 Oct. 1008, with the consent of the titular caliph, the Umayyad Hīghām II al-Mu‘ayyad bi’llāh. Indifferently gifted, vain, debauched, ‘Abd al-Rahmān Sanchuelo, from the moment that he assumed power in Cordova, made one mistake after the other and alienated public opinion. He started by obtaining from Hīghām II his designation as presumptive heir of the crown. The text of the document of investiture, dated Rabī‘ I 399/Nov. 1008, has been preserved. The designation was very badly received by the people of Cordova, who were already exasperated by the pro-Berber feelings of the Āmirīd Khādījī. While ‘Abd al-Rahmān misguidedly decided to go, in the middle of winter, on an expedition against the kingdom of Leon, an opposition party was formed in Cordova. They elevated to the throne the Umayyad Muḥammad b. Hīghām b. ‘Abd al-Djabbār, whose first care was to order the sack of the residence of the Āmirīds, al-Madinah al-Zāhirah [q.v.]. The reaction of ‘Abd al-Rahmān to this news was half-hearted. He turned back in the direction of Cordova, but during his return journey he was abandoned by his troops and arrested, not far from the capital, by emissaries of the Umayyad pretender, who put him to death, 3 Rājād 399/3 March 1009.

[See also Āmirīds and Umayyads of Spain].

The relations of Mawlay Abd al-Rahman with the European nations were marked by a series of failures that made him abandon his earlier plans of aggression and expansion. The blockade of Tangier by the English in 1828 and the bombardment of al-Araki (Larache), Arzila and Tifla by the Austrians in 1829 as reprisals for the seizure of merchant ships, made an end to an attempted reconstruction of a corsair navy, while the military successes of France in Algeria forced the sultan to renounce all intervention in the territory of the late regency. He tried in 1830-2 to extend his influence to the East of his empire by appointing khallfas in Tlemcen, Miliana and Medea, but had to recall, or disavow, them, because of their troubles and the protest of the French government. From 1832 to 1834 he lent Abd al-Kadir, leader of the holy war, his moral and material support and allowed himself to be involved in a conflict with France when his ally took refuge in Morocco in order to continue the struggle. The reverses which he suffered: battle of Islay (14 August 1844), bombardment of Tangier and Mogador (6 and 15 August), obliged Abd al-Rahman to outlaw the Amir (treaty of Tangier, 26 Oct. 1844). In 1847 he decided to expel him from the country, thus compelling him to retire himself up to the French. Several incidents due to the fanaticism of his subjects, such as the murder of the Spanish consular agent Darmon (1843), that of the Frenchman Paul Rey (1855) and pillage of the brig "Courraud Rose" (1851), embarrassed his relations with the foreign powers, but generally he gave in before threats or force (bombardment of Salé, 1851).

During his reign, Portugal (1823), England (1824, 1827), Sardinia (1825), Spain (1825), France (1825, 1844), Austria (1830), the kingdom of Naples (1834), the United States of America (1836), Sweden and Denmark (1844), renewed, or completed, their commercial treaties with Morocco.

A pious ruler and a good administrator, Mawlay Abd al-Rahman had many monuments built or restored: in Fez (Mosque of Mawlay Idris), Meknes, Salé (minaret of the Great Mosque, fortifications), Tangier (harbour), Safi, Mazagan, Marrakush (mosque of Boughzalan, Kannariyya, al-Wuslat, and the plantation of the Agdalah), etc. He died in Meknes, 29 Muharram 1276/28 August 1859.

Ph. de Cassé-Brissac

ABBAD AL-RAHMAN B. ABU HABID B. AL-WALDJ AL-MARJAWIMI, the only surviving son of the famous Arab general. At the age of eighteen he commanded a squadron at the battle of the Yarmuk. Mu'awiya subsequently appointed him governor of Himas and he commanded several of the later Syrian expeditions into Anatolia. During the civil war, after successfully opposing an 'Iraki expedition into the Jazira, he joined Mu'awiya at Siffin and was made standard-bearer. According to the received tradition, Mu'awiya, fearing that 'Abd al-Rahman might be a rival of Yazid for the succession to the Caliphate, had him poisoned in 46/666 by his Christian physician Ibn Uthāl, who was himself killed shortly afterwards by one of his victim's relatives. H. Lammens (see Bibli.) has disputed the reliability of this tradition (transmitted from 'Iraki sources) and ascribed its origin to incidents connected with an outbreak of anti-Christian violence at Himis.

ABBAD AL-RAHMAN B. MARWÂN B. YÔNUS, called Ibn al-Djilliîtik ("son of the Gallican"), famous chief of insurgents in the West of al-Andalus in the second half of the 3rd/9th century. He belonged to a family of neo-Muslims originating from the North of Portugal and established in Merida. Although his father had been governor of this town on behalf of the sovereigns of Cordova, Abd al-Rahman revolted against the Umayyad Amir Muhammad I in 254/868. The Amir besieged him and forced him, after the capitulation of the city, to reside in Cordova. He remained in the capital until 261/875, when he returned to the region of Merida and threw off his allegiance to the Umayyads. He fortified himself in the castle of Alange (Hish al-Hanâgh), but was again forced to surrender by the Amir Muhammad I, who assigned to him as residence Badajoz. It was not long before Ibn al-Djilliîtik again raised the standard of revolt, supported by the Muslims of Portugal (Burtukal), Sa'dun al-Surubabi, and by Alfonso III, king of Asturias and Leon. The insurgents laid an ambush for the loyalist general Hāshim b. Abd al-Azîz, in the region of the Serra de Estrella, captured him and delivered him into the hands of the Christian king, who released him only against a high ransom. Fearing, justly, a violent reaction from the government in Cordova, Ibn al-Djilliîtik took refuge with Alfonso III. After staying for eight years in Christian territory, he returned in 271/884 to Badajoz and reached a tacit agreement with Cordova. This allowed him to rule over a veritable principality extending over the valley of the Guadiana and the south of what is now Portugal. Under the reigns of the Amirs al-Mumghir and Abd Allâh, Abd al-Rahman practically had a free hand and ruled over his territory as an independent prince, until his death in 276/889. He was succeeded by his son Marwan who only survived him by two months, and after him by a grandson 'Abd Allah b. Muhammâd b. Abd al-Rahman, who died in 311/923 and was followed by a son, Abd al-Rahman. This great-grandson of Ibn al-Djilliîtik was finally compelled to submit to Abd al-Rahman III in 316/930.

'ABD AL-RAHMAN B. MUHAMMAD — 'ABD AL-RAHMAN AL-SUFİ

'ABD AL-RAHMAN B. MUHAMMAD [see Ibn AL-Â¢IBIH]

'ABD AL-RAHMAN B. RUSTUM [see RUSTUM]

'ABD AL-RAHMAN B. SAMURA B. HARDI

'ABD SHAMS B. 'ABD MANÅF B. KHÂSâVî, ARAB general. The name 'Abd al-Rahman was given him by Muhammad on his conversion in place of his former name 'Abd al-Karab. His first command was in Sidjestân in succession to al-Râbî b. Ziyâd in the latter years of the caliphate of 'Uthman, when he conquered Zarandj and Zabûr-î Dâwar and made a treaty with the ruler of Kirmân. He withdrew after the death of 'Uthman; according to Chinese sources, Pêroz, the son of Yazâdirzî, then attempted to establish himself in Sidjestân (Chavannes, Documents sur les Tou-kiue occidentaux, 275, 279). 'Abd al-Rahman b. Samura was, along with 'Abd Allah b. 'Amir, one of the envoys of Mu'âwiya to al-Hasan b. 'Ali [q.v.]. Ibn 'Amir, reappointed governor of Başra and the East, despatched 'Abd al-Rahman and 'Abd Allâb b. Khâzîm in 42/662 to restore Arab rule in eastern Khurasân and Sidjestân. In 43/663 'Abd al-Rahman reoccupied Sidjestân and captured Kâbul after a siege of several months. He then led an expedition to al-Rûkhkhadj (Azerbaijân) and Zabûl-istân (region of Ghaznâz) and again attacked and captured Kâbul, which had rebelled, probably in 45/665. Mu'âwiya subsequently made him directly subordinate to the Caliph, but shortly after the appointment of Ziyâd as governor of Başra he was replaced. He brought back with him a body of captives from Kâbul, who built a mosque for him in his kâse at Başra in the architectural style of Kâbul. He died in 50/670 in Başra, where his descendants formed a powerful and influential clan during the next century.

(H. A. R. Gibb)

'ABD AL-RAHMAN B. 'ABD AL-KÂDIR AL-FÂSÎ, MOROCCAN scholar, b. at Fez 1040/1631, d. in the same town 1096/1685. He was the pupil of his father, 'Abd al-Kâdir b. 'Ali [q.v.] and of numerous other masters. He became a famous polygraph, celebrated by all his biographers for the breadth and variety of his knowledge. It is said to have compiled more than 170 works on Malikite fiqû, medicine, astronomy and history. But it is especially as a lawyer that he is an authority, and his main works are his great collection on the "customs" of Fez, al-'Amal al-Fâsi, and a commentary on al-Shâbî by the famous kâfî Muhyî, entitled Miqât al-Shâbî. He is also the author of a long didactic poem in rûfûs, al-Ubnûm fi Mabûdî al-Ulûm.

(E. Lévi-Provençal)

'ABD AL-RAHMAN B. HARDI B. ABU 'UBAYDA (or 'Abba) AL-FIHRÎ, great-grandson of the famous 'Abd Allâb b. 'Ali, independent governor of Irfêkîya at the end of the Umayyad caliphate. His father, Hardi, had sent expeditions against the Sûs, Morocco and Sicily, in which 'Abd al-Rahman, still a youth, took an active part. He was one of the survivors of the bloody defeat inflicted by the Berbers upon the regular Arab troops in 123/741, in which his father and the governor, Kulhîm b. Qiyâd, lost their lives. He crossed over into Spain, but fearing for his life, returned in 127/745 to Irfêkîya, where he revolted against the actual governor, Hanâzâl b. Sa'îdân al-Kâblî, who two years later saw no other choice but to yield the power to him. 'Abd al-Rahman, on becoming master of al-Kayrawân, had to suppress several rebellions and undertook several large expeditions, notably against Sicily and Sardesînî, in 125/752. His seizure of power was the less contested as it coincided with the fall of the Umayyad caliphate of Syria. It seems that at the beginning he acknowledged the 'Abbâsid allegiance, but shortly afterwards repudiated it, on the receipt of an insulting message from the caliph al-Mansûr. No doubt at al-Mansûr's instigation, two of the brothers of 'Abd al-Rahman decided upon his ruin; he was assassinated by one of them, Yûsûb b. Habîb, who took possession of al-Kayrawân in 127/755. Habib, son of 'Abd al-Rahman, with the help of another uncle of his, 'Imrân b. Habîb, governor of Tûnis, soon afterwards attacked the usurper and, in turn, made himself master of Irfêkîya.

Another 'Abd al-Rahman b. Habîb al-Fîhrî, a contemporary of the preceding, who was called, to distinguish him from the former, was the kadi of al-Silâkî, was a propagandist of the 'Abbâsid in Spain. Pursued by the Umayyad amir 'Abd al-Rahman I, he was assassinated near Valencia in 162/778-9.

(E. Lévi-Provençal)

'ABD AL-RAHMAN B. 'ABD ALLAH AL-GHAFIRÎ, GOVERNOR OF AL-ANDALUS. He succeeded Muhammad b. 'Abd Allâb al-Ashdîja, B.) in this office at the end of 111 or at the beginning of 112/730, and retained it until his death in 114/732. 'Abd al-Rahman, who had already governed Spain provisionally for about two months in 103/721, was a lábi' reputed for his piety. He is chiefly famous for the incursion into Gaul that cost him his life. His expedition, which was carefully prepared, had for its object the basilica of St. Martin at Tours. He collected a numerous army, and from Pamplona marched through the pass of Roncesvalles on Bordeaux, which he devastated, Duke Eudes of Aquitania being powerless to oppose his advance. He then advanced towards the Loire, but was checked in his progress by the Duke of the Franks, Charles Martel, who engaged him about 20 km. to the north-east of Poitiers and inflicted on him a severe defeat. The battle is known as the "battle of Poitiers" in Frankish historiography, while the Arabs call it balâf al-ghûhâdî, "causeway of the martyrs of the faith". The Muslim survivors retreated in disorder towards Narbonne, leaving behind on the battlefield many dead, including 'Abd al-Rahman. The date of this memorable encounter can be fixed at the end of Oct. 732/Ramadân 114.

'Abd al-Rahman Khan — 'Abd al-Rahman Khan

The best known work is a description of the fixed stars (Suwar al-Kawdkib
al-Thabita, quoted also by different titles), which he
wrote about 355/965 and dedicated to 'Adud al-
Dawla. The book described the constellations both
according to the system of the astronomers (after
Ptolemy) and the Arabic tradition of the anwa? (cf. Naw'). The work was illustrated by drawings,
which the author, according to his own declaration,
preserved by al-Biruni (see H. Suter, Beitrage zur
Geschichte der Mathematik bei den Griechen und
Arabern, Edingen 1922, 86), traced from a celestial
globe. He also saw, however, as he says in his introduction, an illustrated work on the constellations
by Uhttps b. Muḥammad. The earliest extant MS,
the Bodleian Library, was copied and illustrated
by the author's son, in 400/1009-10. There are many
other manuscripts, illustrating the styles of the
various epochs. (See J. Upton, Metropolitan Museum
Studies, 1933, 189-99; K. Holter, Die Islamischen
Miniaturhandschriften vor 1750, Zentralbl. f. Biblio-
thekswesen, 1937, 2-5, cf. Ars Islamica, 1940, 10).

Although pro-British in so far as Russian expansion
was concerned, 'Abd al-Rahman Khan's desire to annex
the territories of the Pathan tribes of the Indian
frontier was not calculated to improve Anglo-
Afghan relations. The tension was somewhat eased
by the Durand Agreement of 1893 which delimited
a boundary on the Indo-Afghan frontier across
which neither the Amir nor the Government of
India was to interfere in any way. Afghan intrigues
on the Indian side of this frontier still continued and were partly responsible for the Indian frontier conspiracy of 1887. In fact, Afghan intrigues were the chief cause of unrest on the Indian frontier from 1890 onwards.

The greatest service rendered by 'Abd al-Rahman to his country was the suppression of internal rebellion. The powerful Gilzay tribesmen were crushed in 1886; the rebellion of Ishak, son of 'Abd al-Khaliq, was suppressed in 1888; and finally, after severe fighting, the turbulent Hazaras of central Afghanistan were forced to acknowledge his authority. In 1896 the territories of the non-Muslim tribes of Kiftiristan to the west of Cirtar were annexed and the Kafirs converted to Islam. 'Abd al-Rahman Khan died in 1901 and was succeeded by his son Habib Allah Khan.

Bibliography: Parliamentary Papers, Central Asia, 1884–5; 1887; 1888; J. A. Gray, My Residence at the Court of the Ameer, 1895; S. Wheeler, The Ameer Abdur Rahman, 1895; Sultan Mahomed Khan, Life of Abdul Rahman, 2 vols. 1900, vol. i being a translation of 'Abd al-Rahman's autobiography; C. C. Davies, The problem of the North-West Frontier, 1890–1908, 1923; W. K. Fraser-Tytler, Afghanistan, 1920; M. Longworth Davies, in EHS, c. Abd al-Rashid b. Abd al-Ghafur Al Husayni Al-Madani Al-Tattawi, Persian lexicon, born in Tatta, but a Suyyid by descent; died after 1069/1658. His principal work is a Persian dictionary, usually called Farhang-i Rashidi, or Muntakhab al-Lughat, which is a translation into Malay of a popular dictionary, usually called Badi'a, the author of the same name, the author of the...
analysis of the second part had been given by Hammer-Purgstall, in the Jahrbiicher der Literatur (lxviii, 68 ff.). This book also was used by Tholuck, and cited under the author's name (loc. cit. 7, 11, 18, 26, 73). It is of special interest because in the preface he states that it was written after his publication of the Qandaz al-Saż‘irin of al-Harawi in order to explain the Şûfi technical terms which occur in the book, and in his commentary to the Ta‘wilât al-İrâd of Ibn ʿArabî (Cairo 1309) and in his Ta‘wilât al-İrâd, according to Hadîji Khalifa (ii, 175) the Ta‘wilât of ʿAbd al-Razzîk extend to Sûrâ xlviii only, yet Berlin MS. no. 872 covers the entire Qur‘ân, but apparently in abstract. Risâla fi‘l-kadär wa‘l-kadar, treatise on predestination and free will, first translated into French, (J.A., 1873; revised edition 1875), then the text published by St. Gauydr (1879); it will be dealt with in detail below. The treatise seems to have existed attention, for Hadîji Khalifa (iii, 429) gives three answers to it by Ibn Kamâl Pâsha, Tâshkîrû-zâde and Bâlî Khalifa Şûfiyahwî. A commentary on the Ta‘ţiya poem of Ibn fârid (Cairo 1310). His works as yet unpublished are: Risâla al-Sarmandiya, on the idea of an eternal Being; Risâla al-Khadiyya, on the traditional answer by ‘All to the question of Kumayl b. Ziyâd fi‘l-kadhîba (comp. the Berlin MS. no. 3462; Hadîji Khalifa iv, 38; J.A. 14, 83); a commentary on the Mawdû‘î al-Nudjûm of Ibn Arabî and Tâshkîrat al-Sâhîbiya. Hadîji Khalifa (v, 387) adds Mi‘âbî al-Hîdâyya. For MSS. reference will suffice to Brockemann, ii, 203, 204; S ii, 280–1; the Gothacat. no. 76, 1, and Palmer’s Trinity College Cat. 116.

It will already be tolerably clear what ʿAbd al-Razzîk’s interests and positions were. He was a Şûﬁ of the school of Ibn ʿArabî, the great theologian of the Western Arabic type, though with touches of independence, and he gave much labor to defence and exposition of his master. In the three great divisions of Muslim theologians, the upholders of tradition (naﬁl), of reason (ʿaql), and of the unveiling of the mystic (kashf), he took his place with the third. It may be signiﬁcant that his name never indicates to what legal school he adhered. Like many mystics, he may have regarded such matters as beneath notice, or he may, like Ibn ʿArabî, have been a belated Zâhirî in law, as he was evidently a Bâtinî in theology. The last is evidently the case with the heart, wherein is his particular, material world. The three great conceptions, and these are further specialized, determined, limited, brought near to what we know, by being engraved on the individual reasonable souls, which are the souls of the heavenly bodies, corresponding to the angelic Intelligences, the fractions of the Universal Reason. This world, from its likeness to the human imagination, is called the Imagination of the World (khayâl al-ʿâlam) and the Nearer Heaven (al-samd al-dunyâ). From it issue all beings in order to appear in the World of Sense (ʿâlam al-dâhâk), it manifests everything, measuring out matter and assigning causes. The heavenly bodies, then, have reasonable souls just like our own, these are the imaginative faculties of the particular reasonable souls, into which the Universal Soul divides. On their changes all change in this world below depends (comp. al-ʿazhâzî’s scheme, in J.A.S. 1809, 116 ff.).

Further, this constitution of the universe corresponds to man’s body, macrocosm to microcosm. Just as the brain is the seat of man’s ruling spirit, so the Universal Spirit or Reason is seated in the throne (ʿargh) above the sphere of the fixed stars. The fourth heaven, the sphere of the sun, which vivifies all, is the seat of the Universal Soul, in man this is the heart, wherein is his particular, reasonable soul. So the fourth sphere is like the breast, and the sun like the physical heart. The individual soul of the sun corresponds to the animal spirit in the heart, which is the source of human reason.

Next, as to the place of predestination in this scheme, for that there are three words, kadăr, kadăr and inråya. Kadăr means the existence of the universal types of all things in the world of the Universal Reason. Kadăr is the arrival in the world of the Universal Soul of the types of existing things, after being individualized in order to be adapted to matter, these are joined to their
causes, produced by them, and appear at their fixed times. 'Insya is, broadly, Providence and covers both of the above, just as they contain everything that is actual. It is the divine knowledge, embracing everything as it is, universally and absolutely. It is not in any place, for God's knowledge, in His essence, is nothing else than the presence of His essence before His essence, which is essentially one and goes with all the qualities which inhere in Him. Further, while the essence (badi'a) of badi' is part of the 'Insya of God, its entelechy (hamd) is in the world of the Universal Reason. The Universal Soul is sometimes called the Preserved Tablet (la-ta'kh al-maẖfūz), for on it are preserved unalterable all the general conceptions which are on their way to the individual heavenly souls.

It is the world, then, of badar, of the Soul, which sets everything in motion. This is by the yearning of the reasonable souls of the heavenly bodies towards their spiritual source, the Universal Reason. They try to assimilate themselves to this, to universalize themselves. Step by step, they mount up, and with each advance they receive a new outpouring from that source, drawing them on further. With each movement, there flows from them an influence upon matter according as it is adapted to receive it, and serious there is a change in the material world, corresponding to those in the world of the Soul. These changes may be either absolute of creation and destruction, or, between those extremes, simply of condition. The duration of existence constitutes the Kur'ānic adjal, and all these are fixed by badar.

Finally, this exegesis of Kur'ān, ii, 1—6 will show how 'Abd al-Razzak applied Scripture. "By the Mount and by a Book Inscribed in a Parchment Outspread, and by the Frequented House, and by the Raised Roof, and by the Flowing Sea!" The Frequented House is the Spirit of the fourth sphere, that of the sun. Therefore Jesus, the Spirit of God, has been placed there, whose miracle is the raising of the dead. The Mount is the kābah, the seat of the Universal Reason. The Book Inscribed is badi', which is in that Reason: and the Parchment Outspread is the Reason itself. The Raised Roof is the nearest heaven, where are the individual celestial souls; it is mentioned immediately after the Frequented House, because from this heaven the forms descend on the earth, and from the Frequented House comes the breath of the Spirit, by the combination of which the creation of animated beings is achieved. The Flowing Sea is the sea of primary matter which spreads everywhere and is filled with forms.

How, then, is such a scheme related to pre-determination and free will? It is highly complicated, consisting of a remote first cause and an infinity of intermingling and crossing, nearer, secondary causes. It is possible to look at these last only, and so to assign absolute creative and deciding power to our own wills. Or to look only at the first cause and becomefallacists. We must preserve the balance and hold by both. The complete cause of anything into which human will can enter must have as an element in it, among so many others, free will. It sets all the others in movement. Under this conception, though never clearly stated, is evidently implied that man has in him an element of the divine deciding power. If there is freedom in the divine nature, there must be also in its emanations. For Ibn 'Arabī the oneness of the divine nature over against the creation had overcome everything. 'Abd al-Razzak lays stress on the multitudinous interweaving causes in the world, its constantly developing processes, to show that in life, purpose and will there must be multiplicity. The divine is spread down through the sub-lunar things, it does not simply rule from above. Again, amongst the many causes working in the world and upon men are the restraints and influences of religion, the promises and threatenings of the prophets. These we should permit to have their effects upon us as parts of the whole scheme, the process of training under which we are. But, again, why should training be necessary? Why are there bad and good? Here, again, is an implication, once pretty clearly expressed. Matter is of very differing nature, grosser and finer. It can receive only a corresponding soul, therefore souls also vary. Character and disposition is a combination of both, and it is for the soul to overcome its material body and itself rise. This evidently is the fundamental thought, but 'Abd al-Razzak does not give much space to it. Rather, he uses the old theological catch. This must be the best possible creation, otherwise God would have created a better. Further, if all things were equal, there could be neither order nor organization. This would also be hard on the best things thus ruled out of existence. All things should have a chance; it is for them to use it. God knows their differences and will allow for them. The most and the greatest sins are from ignorance, and God will so treat them. In the life to come the same thing is to go on. Some will attain felicity, others, because they might have done better, must undergo purification by punishment, but that will not be eternal. Here, perhaps, 'Abd al-Razzak is most unsatisfactory. He passes over into the normal Muslim conception although it is not at all clear that his system can permit individuality apart from matter. Freed souls, we should expect, would either return into the unity, or else be sent forth again to another material life. Like so many in Muslim theology and philosophy, this tractate was adapted to an audience, and was not perfectly ingenious. Yet behind its caution of statement the real system is tolerably plain. It is nearer orthodoxy than that of Ibn 'Arabī, but not as near as this eschatology would suggest.

(D. B. Macdonald)
service and allowed to attend the court regularly. Two years later, he was examined by the 'silāma' at Samarkand, and given a salary and provisions (marṣum wa-'alufa) (ibid., ii, 704, 731 f.).

In Ramadān 845/Jan. 1441 'Abd al-Razzāk was sent to India as ambassador and returned in Ramadān 848/Dec. 1444. (For his mission and the result obtained see Matla', ii, 783; T. W. Arnold, The Caliphate, Oxford 1924, 113.) He was similarly sent to Gīlān in 850/1446. He was ordered to make ready for a mission to Egypt in the same year, but due to the death of Shāhrukh this was cancelled. In the period following the death of that king he served his successors. Mīrzā 'Abd al-Latīf, Mīrzā 'Abd Allāh and Mīrzā Abu'l-Kāsim Bābur, with some as sadār, with others as nāfūb and khāṣṣ; see ibid., ii, 1440. Under the last-named prince, who included him among his confidants, he enjoyed many favours (ibid., ii, 1119). In 856/1452 he was in Yazd with Mīrzā Bābur, when the Mīrza interviewed Shāraf al-Dīn Allāh Yāzdī, and in 856/1452 he was with the same prince when he besieged Samarkand, in which city 'Abd al-Razzāk had many friends and old acquaintances (Matla', ii, 1041, 1078). In 866/1462 he was sent to Aṣfūzar for fixing taxes (bunifā) soon after, under Sultan Abū Sa'īd, on 3 Dhu'l Qa'da 1 i, 867/a, Jan. 86/I (R. LE TOURNEAU).

CABD AL-RAZZAK AL-SAMARKANDI — CABD AL-SALAM B. MASHISH

(R. LE TOURNEAU)

Besides this account of his death, which seems to be reasonably probable although reported by much later authors, little more is known of the saint than his genealogy, which, through several ancestors with typically Berber names, attaches him to the house of the Prophet. He is said to have been born in the neighbourhood of the Dībash al-Ālam, in the territory of Almohad power and was attempting to pass himself off as a prophet, and who assassinated the saint because the latter's prestige was an obstacle to his ambitions. 'Abd al-Salām was buried at the top of the mountain, at the foot of an oak, and seems to have been for a long time the object of a purely local cult; Ibn Khaldūn does not mention him, nor for that matter the revolt of his murderer.

His teaching is scarcely better known, in spite of the elaborations which it acquired in Moroccan mysticism. "Perform the obligations of the Law and avoid sin", he is said to have advised a disciple who had asked him for a rule of life, "keep your heart aloof from every temporal attachment, accept what God sends you, and put above all else the love of God" (Ibn 'Ayād, K. al-Mafḍīkh, 106). It is related also that he had as a disciple Abu 'l-Ḥasan 'All al-Shāhīlī (q.v.), who came to him for his initiation into mysticism.

Only from the 15th century, it seems, at the time when the marabout movement connected with al-Shāhīlī became active in Morocco, did the fame of 'Abd al-Salām extend beyond the limits of his tribe into the whole northern part of Morocco. He was then regarded as the "pole" of the East, as 'Abd al-Kādir al-Gīlānī was regarded as the "pole" of the West. A pilgrimage was organized around his tomb in the three days following the 1426-71

'ABD AL-SAMAD b. 'ABD ALLAH AL-PALIMBANI — 'ABD AL-WADIDS

'ABD AL-SAMAD b. 'ABD ALLAH AL-PALIMBANI, i.e. of Palembang in Sumatra, was a pupil of Muhammad al-Sammān (d. 1196/1197), the founder of the Sannāniyya order (cf. Brockelmann, S II, 535 and Nachtr.). He is known chiefly as translator of al-Ghazzālī's Luḥāb ʿIyāʾ al-ʿUlamāʾ al-Dīn into Malay, under the title of Sayr al-Sālikīn lā ʿUddāt Rabb al-ʿĀlamīn. It was begun in 1193 and finished at Tâʾīf in 1203. The translation is very free, shortened in some places, enlarged elsewhere by numerous additions, the sources of which are enumerated in book iii, bāb 10. Here we find also an interesting list of sūfī literature recommended by the author to three stages of pupils in Sufism. Most of the works in this list are in Arabic, but some in Malay. It seems that 'Abd al-Ṣamad lived mostly in Arabia. One of his earlier writings, Zahrāt al-Murūd fī Bayān Kāmilat al-Tawbīḥ, is a Malay treatise on manṭīḥ and ʿaṭā al-dīn, based on notes which he took during a lecture given at Mecca by Ahmad al-Dāmanḥūrī (Brockelmann, I, 371) in 1176. His Hīdāyat al-Sālikīn fī Sulḥāt Masāḥ al-Muttaulators is a Malay adaptation of al-Ghazzālī's Bīḍāyat al-Hīdāya, finished at Mecca, 5 Mūḥ. 1192. In Arabic he compiled a collection of aʿrādīt entitled Urwāt al-Wuthūqa wa-Silsilat al-ʿItīkād, a ṭibāb, and a treatise entitled Naqṣat al-Muʿālāmah. This last work contains fervent admonitions to holy war against infidels. It inspired the author of the Achehnese poem Hīkayat prang sabā of which various redactions were circulated in Acheh during the war against the Dutch in the last quarter of the 19th and the beginning of the 20th century.

Bibliography: Ph. S. van Ronkel, VBG 57, 385, 400, 429; id., Cat. Arab. Ms. Batavia, 139, 216; R. O. Winstedt, A history of Malay literature (JMBRAS 17, III), 103; H. T. Damstè, Hīkayat prang sabā, in BTLV 84, 545 ff.; for the Sannāniyya: C. Snouck Hurgronje, BTG 85, no. The tract Anṣīs al-Muttaulators by 'Abd al-Ṣamad b. Fāṭḥ Husayn b. Fāṭḥ Muḥammad is not the work of an Indonesian author, though on the title-page of the lithographed edition the epithet al-Palimbānī is added to the author's name; its attribution to a Malay author (Brockelmann, S II, 966) is equally false. (P. VOORHOEVE)

'ABD AL-WADIDS (BAʾNŪ 'ABD AL-WĀD, OR ZAYYĀNIDS, BAʾNŪ ZAYYĀN), a Berber dynasty which, from the first half of the 7th/13th century to the middle of the 10th/16th century had its capital at Tlemcën (Tilimsān, [q.v.] and extended its power, against frequent opposition, over the central Maghrib (from the frontiers of the present Morocco to the meridian of Bougie).

According to the concepts recorded by Ibn Khaldūn, the Banū 'Abd al-Wād were Zanāṭa "of the second race." Like the Banū Marīn, B. Tāǧūn, B. Rāḡīd and B. Māzāb, they belonged to the great Zanāṭa family of the Banū Wāsān. Living as nomads, like their neighbours and relatives, the B. Marīn and B. Tāǧūn, they once occupied a more extensive territory, extending to the vicinity of the Awtās. In consequence of the Hilālāt invasion (5th/11th century) these Zanāṭa nomads, driven eastwards, were forced to abandon their territory to the Arab nomads and to emigrate to the high plateaux of what is now the province of Oran. The conquest of the country by the Almohads, at the beginning of the 6th/12th century, made the fortune of the Banū 'Abd al-Wād. They proved themselves loyal and useful allies of the caliphs of Marrākūș, especially at the time when the terrible ravages of the Almoravid Banū Ḥāniyā brought destruction upon Iṣfīkiya and the central Maqrīz (381-600/1185-1203). The assistance which they gave to the Almohad forces earned its reward. Tlemcën, successfully defended, profited by the ruin of the neighbouring centres and by the emigrations that were depopulating them. In 633/1235 the chief of the Banū 'Abd al-Wād, Yaghmūrūsān (or better: Yaghamrūsān) b. Zayyān, inherited from his brother the command over all the branches of the family. This dignity, ratified by the consent of the tribes, was confirmed by a diploma of investiture issued by the Almohad caliph al-Raḡīd. Yaghmūrūsān, the shaykh of an imposing nomad group, who used to lead his tribesmen and their flocks periodically from the desert to the plains of the province of Oran and who could speak only the Berber dialect of the Zanāṭa, became the seden-
tary sovereign of a powerful state. He had moreover the qualities of a founder of empire: energy, the ability needed to hold his associates together around him, political insight, a taste for grandeur and the generous gesture. During a reign that lasted not less than 48 years (633-81/1235-83), he already encountered the dangers that never ceased to menace the kingdom of Tlemcën. These arose on the one hand from the legacy of the clan's former life and the rivalries that set Berber against Berber, and on the other hand from the consequences of the new situation in which the Banū 'Abd al-Wād found themselves. True to his duty as a vassal, he supported the last Almohad caliphs against the Marinids, who had become the masters of Fez. The fall of the Almohads in 646/1248 left him face to face with the Marinids. Between the Marinids and the Banū 'Abd al-Wād there was a long tradition of conflict; it was singularly widened by the establishment of the two kindred kingdoms, neighbours and all the more ardently rivals.

These are the main themes which dictated the course of the external history of the Banū 'Abd al-Wād. Yaghmūrūsān foresaw their development and on his death-bed, so the story goes, he traced for his son ʿUḫmān the conduct he should adopt with regard to the other powers: a strictly defensive attitude as against Marinīd Maqrīz; attempts at expansion at the expense of the Ḥafṣīd kingdom of Tunis, as occasion should offer. In addition to this political testament, his successors could derive lessons from the activities of Yaghmūrūsān himself: his firmness in the face of the Zanāṭa, his relatives in the central Maqrīz, namely Maqrīzāwā and Banū Tāǧūn; in Spain, the triple alliance which he concluded with the sultan of Granada and the Christian king of Castile, in order to thwart the action of the Marinids, their common enemy, both in North Africa and in the Peninsula.

The struggle of Fez against Tlemcën, the attack on the Banū 'Abd al-Wād kingdom—the first objective of their expansion in North Africa—by their western neighbours, the Marinids, is the principal motif of this history and could seem to mark its stages. The first noteworthy episode was, under ʿUḫmān, the son of Yaghmūrūsān, the long siege of Tlemcën by the Marinid sultan Banū Yaʿūb al-Maḥrūṣ, who isolated it during eight years (658-706/1260-1306) by a rigorous blockade and began to build the
encampment-town of al-Manṣūra (see Abū Zayyān I). This time, Tlemcen did not fall. After expanding eastwards under Abū Ḥammūnī I [q.v.], the 'Abd al-Wādīds were again attacked by the Marinid Abū 'l-Ḥasan (see Abū Tāshufīn I), and on 30 Ramadan 737/2 May 1337 Tlemcen was taken by storm. After ten years of Moroccan domination, Tlemcen was delivered from the foreign yoke in 749/1348 by the Marinid Abu Zayyan I Muh. b. 'Utihman, and was not regained by the 'Abd al-Wādīds until 760/1359.

These two Moroccan interregnums caused a break in the history of the 'Abd al-Wādīds which was to show itself in all fields of action. Under Abū Ḥammūnī II (760-91/1359-89 [q.v.]), the kingdom regained a relative freedom of movement, but attempts at expansion in the direction of the Hafsid kingdom were frustrated (the expedition of 767/1366 against Bougie ended in disaster) and Marinid invasion remained as a periodic threat. The struggle with the Marinids had also taken on a new character, for various reasons: firstly, because of the role played by the Maʿṣil Arab of Tafilalet and the valley of the Mūlliya (Wādī Malwiyya), who supported Tlemcen against Fez; secondly, through the policy of the Marinids, whose aim was less to annex Tlemcen than to support an 'Abd al-Wādīd pretender and so to reduce the kingdom to a vassal state; thirdly, owing to the incapacity of the sultans of Tlemcen to defend their capital, and its temporary abandonment by the sovereign to seek refuge with his nomad allies.

This is, in its main lines, the history of the 'Abd al-Wādīds during the second half of the 8th/14th century. For the further hundred and fifty years during which the dynasty continued to exist they never again became masters of their own fate. It is true that they had nothing more to fear from Morocco, where the weak Wāṭṭāṣīds had succeeded to the Marinids; but the hegemony passed to Tunis. The last two great Ḥāṣids, Abū Ḍāris (827/1424) and 'Uṯmān (891/1486), harking back to the tradition of the first rulers of the dynasty, led victorious expeditions against Tlemcen and imposed in their turn vassal sovereignty of their own choice on the 'Abd al-Wādīd kingdom.

The incurable weakness of this kingdom, its internal quarrels and the cupidity of the foreigners made of the last phase of its history—i.e. the first half of the 10th/16th century—an epoch of submission and decadence. Tlemcen passed successively under the suzerainty of the Šādid sovereigns of Marrākush, from whom it was seized by the Turks in 957/1550.

There can be no doubt that, compared with the kingdom of their Marinid kinsmen, that of the 'Abd al-Wādīds appears less rich in men, fertile land and cities, and in every respect less well furnished. Thus it was unable to undertake great military enterprises in North Africa or in Spain. Its geographical position exposed it to the attacks of its covetous neighbours to the east and to the west. The place taken by the Arabs, notably by the great Hūllī tribes of the Banū Ḍāmir and Suwayd, who had invaded the plains of the district of Oran, imposed upon it a ruinous collaboration with these nomads. The Arabs, providing troops that could easily be mobilized, and acting as collectors of taxes and repaid in this service, took part in the dynastic crises and always profited by them. The Arabs, providing troops that could easily be mobilized, and acting as collectors of taxes and repaid in this service, took part in the dynastic crises and always profited by them.

In spite of these precarious conditions of existence, and in spite of their slighter resources, which did
not allow the rulers of Tlemcen to live a life as sumptuous, or to erect buildings as important, as those of the kings of Fez, the ‘Abd al-Wādīds seem to have cut a figure as sovereigns earlier than the Marinids. From the very reign of Yağmurşan, the administrative personnel appears to be more complete and their duties to be better defined than among their western neighbours. At first, the sovereign recruited his viziers among the members of his own family. Under the fourth ruler, Abū Ḥammāt I, who according to Ibn Khaldūn (Berbères, ii, 142; transl. iii, 384) transformed the kingdom from its patriarchal ways and imposed on it the etiquette of a real court, the vizierate was entrusted to Andalusians; and the same system continued under the fifth sultan. The Marinid interregnum gave rise to a new system: the vizier, sometimes a relative of the prince, becomes, as at Fez, a commander of the army and a viceroy, who is tempted to use the authority granted to him. In regard to the ḥādījīb (great chamberlain), it is noteworthy that while in Fez this dignity is often a familiar of the prince, of humble origin and an inglorious past, in Tlemcen he is chosen for his knowledge of law and his financial capacity. After the Marinid interregnum, the title of ḥādījīb vanished almost completely. No less markedly than in the military and economic fields, the Moroccan occupation of the middle of the 8th/14th century represents a collapse in the development of the ‘Abd al-Wādī state.

‘ABD AL-WĀHHĀB b. ‘ABD AL-RAMĀN b. RUSTUM [see RUSTUMIDS]

‘ABD AL-WĀḤĪD b. AL-TAMI MIN AL-MARĀKUSHI, Abū Muḥammad, Maghrībi chronicler from the beginning of the 13th century, b. Marrākush 7 Rabi‘ II 581/8 July 1185. We have no information about his life except for a few autobiographical data that allow us to some degree to piece together his career. He left, at an early age, his native town for Fez, where he made his studies, but returned several times to the Almohad capital before going to Spain. He stayed in Seville in 605/1208-9 and stopped for two years in Córdoba. After a short visit to Marrakush he established himself at Seville, whose Almohad governor took him into his service. At the end of 613/1217, he undertook a journey to the East, going to Irīkiya and then to Egypt. It seems that he remained in the East till the end of his life; according to his own testimony, he was in 617/1220 in Upper Egypt, three years later in Mecca. It was in 621/1224 that he compiled, probably in Baghdād, his Maqṣūb fi Taḥfīz Akhbar al-Maghrib, published by R. Dozy (Leiden 1847, 2nd ed. 1881) under the title The History of the Almohads (French transl. by E. Fagnan, Algiers 1893).

The Maqṣūb gives an often interesting précis of the history of the Muslim West up to the epoch of the Mu‘mīnid dynasty. The author treats this dynasty in often relying on his personal memories than on the official Almohad historiography. For the earlier period, he seems to have had at his disposition certain works of the Andalusian chronicler and traditionist al-Ḫumaydī. The value of the book of ‘Abd al-Wāḥīd is enhanced by its rich material concerning literary history, especially of the century of the mulāḥ al-tanawī in Spain.

‘ABD AL-WĀḤĪD AL-RASHĪD [see AL-MUWAHĪDĪN]

‘ABD AL-WĀŠĪ DŽABALĪ b. ‘ABD AL-DJAMI’, Persian poet, one of the panegyrist of the Seljūk sultan Sandjar. He came from the province of Ghārdjistan, lived for some time in Harāt, then went to Ghazna to enter the service of the sultan Bahrām Shāh, son of Mas‘ūd, of the Ghaznavīd dynasty. Four years afterwards he took the occasion of sultan Sandjar’s coming to Ghazna—to assist Bahrām Shāh, his maternal cousin—to address to him a panegyric. During the last fourteen years of his life he lived at Sandjar’s court and is said to have died in 555/1160. He excerption in Arabic and Persian poetry according to ‘Awi, who quotes, in this connection, two mulammas’. His diwan (MSS Bodleian, and Brit. Mus. Or. 3320) is mainly composed of kājidas, often very difficult. The edition, Lahore 1862, is in need of revision.

Bibliography: Dawlat Shāh, Tadhkirat al-Shar‘ād (Browne), 73-6; ‘Awi, Lubdah (Browne), ii, 104-10; Riḍā Ḥātt Khan, Majma‘ al-Faṣāḥāb i, 185-92; J. Hammer-Purgstall, Gesch. d. schönen Rede Künste Persiens, 101; H. Ethé, in Grundr. d. iran. Philol., ii, 261. (C. HUART-H. MASÉE)

‘ABDAL (A.; plur. of badal, “substitute”), one of the degrees in the šī‘ah hierarchical order of saints, who, unknown by the masses (ridāl al-ghayb [cf. ḥayb]), participate by means of their powerful influence in the preservation of the order of the universe. The different accounts in the šī‘ah literature show no agreement as to the details of this hierarchy. There is also great difference of opinion as to the number of the abdāl: 40, e.g. Ibn Ḥanbal, Musnad, i, 112, cf. v, 322; Ḥudwírī, Kashf al-Mahdīb (Zhukowsky), 259, (transl. Nicholson, 214), 300 (al-Makhlī, Kuf al-Kalūb, ii, 79); 7 (Ibn ‘Arabi, Futūhāl, ii, 9). According to the most generally accepted opinion, the abdāl take the
fifth place in the hierarchy of the saints which descends from the great 
Kūb [q.v.]. They are preceded after the Kūb by: 2) both assistants of the latter
(al-talîmān); 3) the five “stake” or “pillars”
(al-aubād [q.v.] or al-wusūd; 4) the seven “incom-
parables” (al-‘arāf). After the abdāl in the fifth
degree come: 6) the seventy “pre-eminents”
(al-nādājibāt); 7) the 300 “chiefs” (al-rukābatāb); 8) the “troops”
(al-‘asāfi‘āb), 500 in number; 9) the “wise”,
or the “isolated” (al-bukhāmāt or al-mufradāt),
of an unlimited number; 10) al-rudāgahlīyūn. Each of
these ten classes is located in a particular region
and assigned a particular sphere of action.
The vacancies which occur in each of the classes
are filled by the promotion to that class of a member
of the class immediately below it. The abdāl (also
called al-rukābatāb, “the guardians”) have their
residence in Syria. To their merit and intercession
are due the necessary rains, victory over the enemy,
and the averting of general calamities.—A single
individual of the Abdāl is called badāl; badīl,
however, which grammatically corresponds to
another plural (budāl*), is the usual form in the
singular. In Persian and in Turkish the plural
abdāl is often used as a singular.

Bibliography: G. Flügel, in ZDMG, xx,
38-9 (where the older sources are indicated);
Wiser, abdāl, xlii, xliii; Hasan Ali
(where is to be found the most frequently accepted
division of the classes); A. von Kremer, Gesch. d.

In various orders of derwishes in the Ottoman
Empire the name abdāl, as well as budāl* (plur.
of budāl) was used for the derwishes, e.g. among the
Khawlātīyā (cf. for instance Yūṣuf b. Ya‘kūb,
Menābīb-i Sherif we-Tarikat-nāme-yi Pirān we-
Makkīyyāh-ī Tarikat-ī Aṭīyye-yi Khawlātīyaye, Istanbul
n.p., 1834, 377, 38, where it is expressly stated that
Shaykh Sūhū Sīnān used to address his derwishes
as abdāl). When the esteem enjoyed by the derwish
orders declined, the word abdāl, and budāl*, used
as singulars assumed in Turkish a pejorative meaning:
“fool”. The derivation of budāl* from a Turkish
word budal*, “plump body” (K. Lokotsch, Etymologisches
Wörterbuch der europäischen Wörter orientalischen Ursprungs,
Heidelberg 1927, 28) is mistaken. Budal* occurs,
in the same acceptance, also in Bulgarian,
Serbian and Rumanian.

ABDĀL, the former name of the Afghān tribe
now known as the Durrānī; they belong to the
Sabānī branch of the Afghāns. According to their
own tradition, they derived their name from Abdāl
(al-Awdāl) b. Tārīf b. Shārikān b. Kays; Abdāl
was so called because he was in the service of an
abdāl or saint named Khādīja Abū Ahmad of the
Čiğliyya order. The Abdāls for long inhabited
the province of Kandahār, but early in the reign
of Ṣāḥḥ “Abbas I, pressure from the Ghulzay tribe
crushed them and moved to the province of Harāt.
Ṣāḥḥ “Abbas made Sadū, of the Popalzay clan,
head of the tribe, with the title Mir-i Afghānī.
Though loyal to Ṣāḥḥ “Abbas, they emulated the
Ghulzay a century later and made themselves
virtually independent. Nādir Ṣāḥḥ [q.v.] later
subdued the Abdāls, but treated them with leniency
and enrolled many in his army. Amongst these

Abdāls was Ahmad Khān, the second son of Muḥam-
dād Zāmīn Khān Sadōzay. The Abdāls served
Nādir well, and he rewarded them by restoring
them to their former territory of Kandahār. On
Nādir’s assassination in 1747, Ahmad Khān had
himself crowned in Kandahār. Either as the result of
a dream or because of the influence of a jāhīr
named Šāhī Zhāḥ, Ahmad Šāh took the title of
Durrū-i Durrānī (“The Pearl of Pearls”), and the
tribe has since that time been known as the Durrānī.
The two principal clans were the Popalzay and the
Bārākzay; the present royal family of Afghānīstān
belongs to the latter. (For the history of the Durrānī
tribe see DURRĀNĪ and AFGHĀNĪSTĀN).

ABDALĪ, plural Ḍabdilī, Ḍabdilīa and, in the
Ta’rīkh-i Aʿṣāb, Ḍabdilīyūn with i, is now most
commonly used as a collective name for the
inhabitants of Lāhūd (S. W. Arabia. Abadil Faḍl
believes this usage to date from the time
when Ṣhaykh Faḍl b. ʿAlī b. Šāh b. Šallām b.
ʿAlī b. ʿĀlī al-Sallāmī al-Abdālī, made Lāhūd independent
of the Zaydī Imām (1145/1732-3) and founded the
dynasty by which it has since been ruled (see LĀHŪD).
According to the Ta’rīkh-i Aʿṣāb (7th/13th cent.)
the original clan of the ‘Abdāl are descended from
Khwālīn b. ʿAhmar b. ʿAlī b. Khuwālīn, who
mentions them in southern Yaman (Pearl Strings,
v, 217) and Landberg concluded from local enquiries
that they still lived in their former territories.
In the time of Faḍl b. Ṣallām they belonged to the
Yafīfī confederacy; the Āl Sallām, his own
branch, were represented at Khanfar, in Yafīfī
territory, and at Mukkā. Ṣāḥḥ Faḍl states that the
majority of the inhabitants of Lāhūd were then
Aṣābīh, descended through Aṣāb b. ʿAhmar from
Himyar al-Asgār; they had been there in al-
Ham-dānī’s time; the rest belonged to various
 Kahtān tribes, ʿAdālīm, Dījāfīl, Yafīfī, ʿAṣābīh,
Ḥawāshģī and ʿĀmīra. The capital of the state, al-
Hawštā, now has a very mixed population including
representatives of many tribes of S. W. Arabia as
well as people of African descent. (There is also a
branch of the Banū Mawrān called ʿAbdālī, living
on the Safādī side of the southern border of ʿAsrār;
see Philby, Arabian Highlands).

al-Zamīn, Cairo 1351, giving copious quotations.
(C. F. Beckingham)

`ABDĀN, according to the account of Ibn Rīznām
(see Fīhrīst, 182) and ʿAbīn Muḥīn (quoted in
Nawawī’s chapter on the Karmaṭians and in an ab-
notated form in al-Maqrīzī, Aṭṭār al-Ḥawiyya[Buny,
103 ff.], also going back, no doubt, to Ibn Rīznām, was
a brother-in-law and lieutenant of Ḥam-dān
Karmaṭ [q.v.], leader of the Karmaṭians [q.v.] of
southern ‘Irāk. When the Ismaʿīlī headquarters in
Salamiya changed their policy, ʿAbdān fell away
from their allegiance, but was killed, in 286/899, at
the instigation of Zikrawayh, the leader of... 1045 (the best MS), in the
private collection of R. Tschudi, Basle, and in
Istanbul, Millet Kiitubkhanesi, 277 (414).

Abdan are claimed to be in the possession
of Syrian Isma'ili circles; cf. also W. Ivanow, A
Guide to Ismaili Literature, 31. [See also SARMA-TIANS].

Abdan's main concern is with
the state of Muslim scholarship and instruction. He shared the custo-
manship for tijdast, and gives details of the
authorities from whom he obtained, both for himself and his son, such certificates of study: Thus his book turns into a specimen of the rich literature about teachers and books (barnamad, fahrasa), from which we gain an insight into the range of works usually studied, classical, post-classical, and contemporary. In Kur'an-reading and grammar the late works of the Andalusians are preferred, in poetry most interest is shown in the famous post-classical product of North Africa. Among the longer poetic pieces quoted are al-Kashida al-Sharafiyya, by Abu Muhammad 'Abd Allah al-Kurashi (d. 466/ 1073), in praise of the Prophet, and a takhyims of the Mufarrijda. He quotes also some of his own poems; for instance one to his son, containing moral advice, another addressed to the Sultan Salih al-Din Yusuf b. Ayyub, praying him to deliver the lands of Islam from the Christian yoke.

The influence of the Rihla MS of which was copied as late as 1883) can be traced in the geo-
historical and literary literature of the Maghrib from the 14th to the 18th cent. For instance, Ibn Ba'ttuta's description of the Pharaohs of Alexandria (i, 29-30) is derived from it; other travellers, e.g. al-Balawi, and also biographers like Ahmed Bâbâ and Ibn al-Kâdi used it extensively. Finally, its moral purpose, to lay bare the material and spiritual short-
comings of contemporary Ifrîfîya and Middle Maghrib, makes the Rihla a document of considerable interest.

(МУН. БН. ЧЕНЕБ-В. ХОЕНБЕРБАХ)

AL-'ABDARI [i.e. descendant of 'Abd al-Dâr b.
Khûsayy, of the tribe of Kuraysh], MUHAMMAD b.
MUHAMMAD b. 'âli b. 'âbd al-Abû MUHAMMAD,
author of a book of travels bearing the title of al-Rihla al-Maghribiya. He was
staying with the Haha, near Mogador, when he
started on his journey on 25 Dhu l-Hijjah 414/11 Dec.
1289. The dates of his birth and death are not
known; all biographical data are lacking, although
he was always held in esteem as the learned author
Fez, 199; Durrat al-Hijjâ, i, 124) and al-Mâqâkî,
Analecets, 786, 866) knows of him only from his work.
That he had süfî affinities is shown by his interest in
the cult of saints; he himself tells us that he received the süfî khwâra from the shaykh Abû Muhammâd
'Abd Allah al-Abû Yusuf al-Andalûsî in Tunis (MS. Algiers, fol. 154b). In politics he seems to have been a partisan of the Marinids as against the
'Abd al-Wâdîdîs. It was due, probably, to this
circumstance that he was unable, on his return,
to publish his book in Tlemcen.

On his journey he received instruction from the following: Şjârâf al-Dîn al-Dînayû'l-dîn al-Djâhch, Tañdharî, iv, 278), the famous traditionist Ibn Dâqîl al-Tîd (al-Suyûtî, Iftssan al-Muhadara, i, 143),
Zayn al-Dîn b. al-Munayyirî (Ibn Farhûn, Dîdajî,
205; Ahhad Bâbâ, Nagi, 191), 'Abd Allah b. Hârûn
al-Târi al-Kurshûfî in Tunis, Abû Zayd 'Abd al-
Rahmân b. al-Asadî in Kayrawân, Abû 2-Hasan
'âli b. Abû al-Karâfî and others. His son Muham-
mad (see IBN AL-HÂDUB) and Abûl-'Kasîm b.
Rîdwan are mentioned as his pupils. He writes
approvingly of some, such as al-Dabbâgh (author of Ma'didm al-Imân), while others are treated with
devastating criticism (e.g. Abû 'Abd Allah b. 'Abd
al-Sayyid of Tripolîs).

The importance of his book does not lie in its
geographical details. Though he thinks it proper
to criticize—within strict justifications—some state-
ments of al-Bakri, he is not a geographer and his
summary descriptions of various sights—where he
usually follows other geographers—are of no great
value. His rhetorical descriptions have no more

'Abdî Pasha, Ottoman historian. 'Abd-al-Rahmân 'Abdî Pasha came from Anadolu Hisarî on the Bosporus, was educated in the Seryû, and finally attained the post of imperial privy secretary (sirr êdûtibi). In Muhammî 1080/June 1669 he was appointed to the office of nîchânî with the rank of a vizier, and was later appointed hâ'im-makâm of the capital. In April 1679 he became governor of Bosnia, next year again nîchânî, in March a so-called vizier of the cupola, in August 1684 governor of Bağra (cf. Hammer-Purgstall, iv, 379). Described in 1686, he was in the next year appointed governor of Egypt. In 1688 he was governor of Rumelia, next year governor of Crete, where he died in Radjâb 1103/March 1692. 'Abdî Pasha is usually described, though whether correctly is open to some doubt, as the first officially appointed historianographer (wekâtê-nûsêtî); cf. Ismail Hakki Urunçaparî, Osmanî devletinin merkez ve bahriye indirîs, Ankara 1943, 64-8. At any rate he was the author of the history of the Ottoman empire, which starts with the beginning of the reign of Muhammîd (Mehmed) IV, 1058/1648 and ends with 3 Ramaðân 1093/5 Oct. 1682. The book, usually called Ta'rîkh-i Wekâtî (Hâtîdît Khâtîfà, ed. Flügel, no. 14253), but also Wekâtî-nûmesî 'Abdî Pasha, was dedicated to the sultan Mehmed IV. For the MSS cf. Babinger; additional MSS in Istanbul, Baghdad Kûşkû, 217, Khaled Ef., 615 (cf. Isl., 1942, 207), and Istanbul Kütüphaneleri Ta'rîkh-Coğrafya Yazarlari Kataloqları, xi: Türkçe Ta'rîkh Yazarlari, 2nd fasc., Istanbul 1944, 111 f. A partial French translation, by Étienne Roboly, is published in Paris, suppl. turc, 667 (Biochet, 1924, 781).

Abdjad (or Abjad or Abdjâd), the first of the eight mnemonotechnical terms into which the twenty-eight consonants of the Arabic alphabet were divided. In the East, the whole series of these voces memoriales is ordered and, in general, vocalised as follows: abjad haewas huâsiy kalâman sa'aş ârasqu akbâkât abakbâk darsqu. In the West (North Africa and the Iberian peninsula) groups no. 5, 6 and 8 were differently arranged; the complete list was as follows: 'abadjîd haewas huâsiy kalâman sa'aş ârasqu akbâkât abakbâk darsqu. The first six orders of the Oriental series preserve faithfully the order of the “Phoenician” alphabet. The last two, supplementary, groups consisted of the consonants peculiar to Arabic, called, for this reason, rawâdît, “mounted on the hind-quarters”. From a practical point of view, this arrangement of the alphabet has only one point of interest, namely that the Arabs (like the Greeks) gave each letter a numerical value, according to its position. The twenty-eight characters are thus divided into three successive series of nine each: units (1 to 9), tens (10 to 90), hundreds (100 to 900), and "thousand". Naturally, the numerical value corresponding to each of the letters that belong to groups no. 5, 6 and 8 differs in the Oriental and the Occidental systems.

The use of the Arabic characters as numerals has always been limited and exceptional; the ciphers proper (cf. 1114)A have taken their place. Nevertheless, they are used in the following cases: (i) on astrolabes; (ii) in chronograms, usually versified (epigraphic or otherwise), formed according to the system called al-dûjumal (see 1113A and râ'wîf); (iii) in various divinatory procedures and in composing certain talismans (type of bâdâb = 24 6.8. see 1113A). Even in our own days the tîlîs of North Africa use the numerical value of the letters for certain magical operations, according to the system called yâbek (1.10.100.1000); a specialist in this technique is called the vernacular yâkabât. (iv) in the pagination, according to the modern convention, of prefaces and tables of contents, where we would use the Roman letters. This “abecedarian” order of the Arabic letters does not actually correspond to anything, whether from the point of view of phonetics or of graphical representation. To be sure, it is very old. For the first twenty-two letters, it appears already in a tablet discovered at Ra’s Shamra which gives the list of the cuneiform signs that constitute the alphabet of the people of Ugarit in the 14th century B.C. (Ch. Virolleaud, L'abbédaire de Ras Shamra, GLECS, 1950, 57). Its Canaanite origin, at least, is certain; but moreover, the order was kept in the Hebrew and Aramean alphabet, and was, no doubt, taken over by the Arabs together with the latter. Yet the Arabs, having no knowledge of the other Semitic languages and moreover full of prejudices arising from their strong self-consciousness and their national pride, doubtless added explanations for the mnemonotechnic words abjad etc., handed down by tradition and incomprehensible to them. All that they had to say on this head, however interesting, is but a fable. According to one version, six kings of Madyan arranged the Arabic letters after their own names; according to another tradition, the six groups are the names of six demons; a third tradition explains them as the names of the days of the week. Sylvestre de Sacy has noted that in these traditions only the first six words are used, and that, e.g., Friday is not called thakbât, but *urâba; yet it is not admissible to base on such vague traditions the conclusion that the Arabic alphabet had originally only twenty-two letters (J. A. Sylvestre de Sacy, *grammaire arabe*, ii, par. 9). In fact, even among the Arabs there were some more enlightened grammarians, such as al-Mubarrad and al-Sârîf, who, not satisfied with the legendary explanations of abjad, straightforwardly declared that these mnemonotechnic words were of foreign origin. There is, however, one noteworthy detail among

Encyclopaedia of Islam 7
these fabulous indications. One of the six kings of Madyan had the supremacy over the others (ra’suṣuqum); this was Kalaman, whose name is perhaps somehow connected with the Latin *elementum*.

For the other arrangement of the alphabet which exists alongside this “abecedarian” order and which is the one currently employed, see *Hüruf al-Hidjam*.

It may be added that in North Africa the adjective *budjeddi* is still alive, with the acceptance of “beg- inner, tiro, green”, literally, “one still at the abecedarian stage” (cf. the Persian-Turkish *abjad-khādān*, English *abecedarian*, German *Abzchüler*).

**ABÈCHÉ** [see *Abeche*].

**ABEL** [see *Habul*].

**ABENCERAGES** [see *Al-Sarradj Bani*].

**ABENRAGEL** [see *Al-Sarradj Bani*].

**ABESHR** [see *Ibn Abi 'L-Ridjal*].

Little is known of Abbâ’s history until Wâhâbî doctrine swept across the mountains about 1215/1800. The subsequent Turco-Egyptian campaigns brought an army including several Europeans to Manâzîr, which was occupied for about one month in 1250/1834 (Tamisier mentions a nearby village of “Apha”). Al-‘Ayîd, the shaykhly clan of Bânî Mughâyad, there after ruled from Abbâ, later receiving the blessing of the resurgent Wâhâbîs under Faysâl b. Turtî. In 1287/1871 when the Turks were engaged in reoccupying the Yaman, Muhammad b. ‘Ayîd attacked them in the lowlands but they soon overwhelmed him, occupied Abbâ, and put him to death. The town became the center of a kadâ in the Yaman wilâyet and remained Turkish until after the 1918 armistice, except for several months in 1328-9/1910-1 when the Idrîslîs [q.v.] of Shâbyā wrested it from Sulaymân Shâfîk, the Turkish governor. A relief expedition led by Şâhirî Hûsâyin of Mecca arrived in Djumâdî II 1329/June 1911 to find Abbâ once more in Sulaymân’s hands.

After the Turkish withdrawal, Al-‘Ayîd again became sole rulers, but were promptly challenged, first by Muhammad al-‘Idrîsî, then by the Sa‘ûdîs, whose two campaigns (one in 1339/1921 and another in 1340-1/1922 led by Fâysâl b. ‘Abd al-‘Azîz) broke their power. Abbâ has since been the seat of a Sa‘ûdî governor, increased in importance by the Sa‘ûdî acquisition of Idrîsî territory in 1345/1926. The force commanded by Sa‘ûdî b. ‘Abd al-‘Azîz in the Yaman War of 1355/1934 was based on Abbâ. Two years later Philby found the place still suffering from the ravages of its former insecurity, but under peaceful rule prosperity is returning.

For bibliography see *Asîr*. (H. C. Mueller)

**ABHAR** (in *Hudâd al-Alam*: Abhar), a small town owing its importance to the fact that it lies about halfway between Kazân (86 km) and Zandjân (88 km.) and that from it a road branched off southwards to Dinawar. It was conquered in 24/645 by Barâ’î b. ‘Azbî, governor of Rayy. Between 386/996 and 409/1029 it formed the fief of a Musafîrid [q.v.] prince. The stronghold of Sar-djâhân (in Râhât al-sudâr: Sar-danî), lying some 25 km. N.W. of Abbār near a pass leading into Târom [q.v.] played an important rôle under the Sa‘ûdîs.

**Bibliography:** Le Strange, 221; Schwarz, *Iran*, 726-8; Minorsky, *Studies in Caucasian history*, 1952, 165.

**AL-ABHARî, Abîr al-Dîn Mufaddal b. ‘Umar, philosophical writer, about whose life nothing is known; d. in 663/1267. He was the author of two works on scholastic philosophy, which were much in use and often commented: (i) *Hidâyat al-Bîkma* in three parts, a. Logic (al-manîhî), b. Physics (al-fabîyyâdî), c. theology (al-dâ’îyyâdî). The best known commentary is that by Mir Hûsâyin al-Maybûlî, written in 880/1475. (ii) *Isâghâtîjî*, an adaptation of the *Isagoge* of
Porphyry (cf. *FURFRIYUS*). Of the commentaries, that by Shams al-Din Ahmad al-Fanarf (d. 854/1450) has been printed in Istanbul; for other commentaries and glosses, see Brockelmann.

(C. Brockelmann)

**ABIB** [see *TA'ALIM*].

'ABID [see *'ABD and MAHSAZAN*].

'ABID b. AL-ABRAB, pre-Islamic Arab poet, of the tribe of Asad. Very little is known of his life, which must have lain in the first half of the 6th century A.D. The legendary story that his death was caused by al-Mundhir III, king of Hira, would fix as a *terminus ante quem* the date of the king's death, 554. The literary tournament with Imru' al-Kays, attested by the historicoliterary tradition and by verses in the *di'ad* of 'Abid, shows that the two poets were contemporaries; their joust would have to be placed between 530 and 550. About 530—so Lyall assumes—the Banu Asad revolted against the supremacy of the kings of Kinda and killed king Hugir, father of Imru' al-Kays; hence the enmity and the rivalry between the two poets.

The *di'ad* of 'Abid (edited and translated together with that of Ab!d b. al-Tufayl by Ch. Lyall, Leiden 1913, GMS xxii) contains thirty more or less complete *kasidas* and seventeen fragments. The very distinct archaism in the structure and the language of the *di'ad* is a strong argument for its authenticity. The dominant tone is one of melancholic and sententious austerity, as well as of a proud dignity which finds in individual and tribal fadh the expression that becomes it best.

The sentiment of love appears in a very restrained and already strongly stylized form, so that the nasib is more often devoted to the collective regret for a dispersed group than for an individual woman (e.g. *kasida* i, ix, xv, etc.). It is perhaps this melancholic conception of life's flight and of its fleetingness, so often expressed with original accents in the poetry of 'Abid, that gave rise to the legend that places him amongst the mu'ammara [q.v.]. He seems to have died, according to Grunebaum's view (*Orientalia*, 1939, 343, 345), rather young, perhaps even before his fiftieth year. The sententious mind of 'Abid is expressed not only in his nostalgia for the past, but also in his praise of himself and of his tribe (iv, vii, xxii, xxiv etc.) and in his virulent polemics against Imru' al-Kays and other, unknown, poets. The allusions to his poetical talent are especially noteworthy (x and xxiii): they show that he had a clear conscience of his inspiration and his artistic technique. The old Arab critics admired his descriptions of storms and desert tempests, but the modern reader appreciates most among all the poems of his *di'ad* his descriptions of animals, such as the famous scene of an eagle chasing a fox (i) and that of the fish in the sea (xxiii). In these poems and in other celebrated *tableaux*, 'Abid appears as one of the most powerful poets of the *djhaliyya*.

'ABID b. SHARYA [see *'UBAYD b. SHARYA*].

'ABIK [see *'ABD]*.

'ABISH [see *SALCHORDS*].
of these sites must go back to the Arsacid period (Isidore of Charax mentions for example a town of Parz/Ah.) and some are even prehistoric; cf. R. Pumpelly, *Explorations in Turkestan*, Washington 1905, excavations at Anau.

(V. MINORSKY)

**AL-ABIWARDI,** Abu 'l-Mu'azzafar Muhammed b. Ahmad, Arab poet and genealogist, a descendant of 'Abasa b. Abu Sulaym (of the Umayyad lineage of the younger Mu'awiya). He was born in Abiward (Khurásan), or more exactly in the village of Kawfan (not Fokan) near Abiward (he is therefore sometimes called al-Kawfani), and died from poison in Isfahan in 507/1113 (not 557/1161-2). His philological and historico-genealogical works, notably a history of Abiward and a book on the different and identical names of the Arab tribes, are lost; but al-Kaysaran extensively used the latter work. Of his diwan, the three most important sections: al-Nadjiyyat, al-Tabiqiyat (nearly on the caliphs al-Mu'tadil, al-Mustaphir and their viziers) and al-Wadidiyyat are preserved in several MSS. A diwan, arranged according to the alphabetical order of the rhymes, was published in the Lebanon in 1317, but many poems by al-Ghazal have been erroneously included; a choice of less important poems: *Mukhafih al-Abiwardi al-Umarawi*, published in Cairo, 1373/1361-c.

(C. BROCKELMANN-[CH. PELLAT])

**ABKAYK** (properly Buakayk), a town and oil field in al-Haš Province, Saudi Arabia. The name is taken from that of the shallow water sources (naba*) of Buakayk in the sands some 15 miles north of the present town. The name is similar to that of the Arabic root *bakka* relating to water rather than to bugs. The Bedouins know the location of the town as Aba 'l-Ki'dân, "the place of the young male camels".

Surrounded by the heavy dunes of al-`Bagdad, Abkayk (49° 40' E. Long., 25° 55' N. Lat.) is about halfway between al-Zahran and al-Hufhuf on the main road connecting inner Arabia with the Persian Gulf ports of al-Dammam and Ra's Tannûra, and is also on the Saudi Government Railroad (al-Dammam-al-Riyadh). Prior to the discovery of oil in the Abkayk field by California Arabian Standard Oil Company (now Arabian American Oil Company) in 1359/1940, no settlement existed there. In 1372/1952 the population was approximately 15,000, including 1,310 Americans.

The American geologist Max Steininke was primarily responsible for finding oil in this wilderness of dunes. The oil field is about 32 miles long, averages 5 miles in width, and for a time was the most productive field in the world. In 1370/1951 daily production reached about 600,000 barrels (90,000 tons) from only 61 wells. (W. E. MULLIGAN)

**ABKHAZ.** 1. For all practical purposes the term *Abkhaz* or *Akhâz*, in early Muslim sources covers Georgia and Georgians (properly Diwrân, q.v.). The reason (cf. below under 2.) is that a dynasty issued from Abkhâzâia ruled in Georgia at the time of the early `Abbâsids. A distinction between the Abkhâzian dynasty and the Georgian rulers on the upper Kur is made by the Mas'ûdî, ii, 65, 74. The people properly called Abkhaz is possibly referred to only in the tradition represented by Ibn Rusta, 135:

> "*Awqâf, see Marquart, *Streifsüge*, 164-76, and *Hudâd al-`Ajam*, 456. Characteristically, Ibn Rusta places this people at the end of the Khazar dominions."

2. *Abkhâz,* a smaller people of Western Caucasus on the Black Sea, which called itself *Aps-âwâd.* It occupies the area between the main range and the sea, between the river Psw (north of Gâgrî) and the mouth of the Ingur in the south. Since the 17th century (and possibly much earlier) a portion of the tribe has crossed the main ridge and settled on the southern tributaries of the Kuban.

The Abkhâz are mentioned in ancient times as Absâgoi (by Arrian) or Abâgi (by Pliny), cf. Contarini (A.D. 1475): *Avocassia,* in older Russian: *Obesi,* in Turkish: *Abasa,* According to Procopius (5th cent. A.D.) they were under the sovereignty of the Lazes (q.v.), and in those days slaves (eunuchs) were brought to Constantinople from Abkâhâziâ. Subjugated by Justinian, Abkâhâzâ was converted to Christianity. According to the Georgian Annals (Broset, *Histoire de la Géorgie*, i, 237-43), the Arab general Murwan-Kru ("Murwan the Deaf") having occupied the passes of Darial and Dârband, invaded Abkhâzâ (whither the Georgian kings, Mir and Arûtî, had fled), and ruined Tskhum (Sukhum). Dysentry and floods, combined with the attacks of the Georgians and the Abkhâzians, caused great losses to his army and made him retreat. The chronology of the Annals is very uncertain. The name Murwan-Kru seems to refer to the Umayyad Muhammed b. Marwân, or to his son Marwân b. Muhammad, i.e. to the early part of the 8th century, cf. al-Baladhurî, 205, 207-9. Towards A.D. 800 the Abkhâz won their independence with the help of the Khazars; the prince *eristâns* Leon II, of the local dynasty descended from Abkâhâzi, married to a Khazar princess, assumed the title of king, and transferred his capital to Kutai and under the governor of Tiffîn, Isbîk b. Isamâtî (c. 830-53), the Abkhâz are said to have paid tribute to the Arabs. The most prosperous period of the Abkhâz kingdom was between 850 and 950; their kings ruled over Abkhâzâ, Mingrelia (Egrisî), Meretia and Kartilia, and also interfered in Armenian affairs. Since that period Georgian has remained the language of the educated classes in Abkhâzâ. In 978 the Georgian Bagratid Bagrat III, son of the Abkhâzian princess Gurandukht, occupied the Abkhâzian throne and by 1010 united all the Georgian lands. As his first successes were based on the hereditary rights of
his mother, and as even in his later title the rank of "king of Abbâhâzâ" occupied the first place, the Muslims continued to call the Georgian kingdom Abbâhâzâian (down to the 13th century, and occasionally even later).

About the year 1325 the house of Sharvashidize (in Russian: Sharvashidze, alleged to be descended from the dynasty of the Shhrwân-ghâhs, [q.v.] was enfeoffed with Abbâhâzâ; towards the middle of the 15th century (under king Bagrat VI) the Sharvashidze were confirmed as rulers of the country. According to a letter from the emperor of Trebizond in the year 1459, the princes of Abbâhâzâ disposed of an army of 30,000 men.

After the settlement of the Ottomans on the east coast of the Black Sea, the Abbâhâz came under the influence of Turkey and Islam, although Christianity was but slowly supplanted. According to the Dominican John of Lucca, even in his time (1637) the Abbâhâz passed as Christians, although the Christian usages were no longer observed. Since the separation from Georgia the country had been under its own Catholicos (mentioned as early as the 13th century) in Pitzund. Up to the present day the ruins of eight large and about 100 small churches, including chapels, are said to exist in Abbâhâzâ. The house of Sharvashidze did not embrace Islam until the second half of the 18th century, when Prince Leon recognized Turkish sovereignty. On this account, he was given the fort of Sukhûm, which had already been besieged by the Abbâhâz about 1725-8. The country was divided politically into three parts: 1) Abbâhâzâia proper, on the coast from Gagri to the Galidzga under the said Sharvashidze; 2) the highlands of Tzebelda (without any centralized government); 3) the country of Samurzakan on the coast extending from the Galidzga to the Ingr (ruled by a branch of the house of Sharvashidze, subsequently united with Mingrelia).

After the incorporation of Georgia by Russia in 1801, the Abbâhâz had also to enter into relation with this new powerful neighbour. The first attempt was made in 1803 by Prince Kelegh-beg, but was abandoned soon after the assassination of this prince in 1808, his son Sefer-beg came into closer touch with Russia and claimed her help against his brother, the parricide Arslan-beg. In 1810 Sukhûm was taken by the Russians. Sefer-beg, who had become converted to Christianity and assumed the name of George, was installed as prince, but from that time on Sukhûm was occupied by a Russian garrison. The two sons of Sefer-beg, Demetrius (1821 and Michael (1822, after poisoning his elder brother) had to be put in power by the Russian armed force. Their rule was limited to the neighbourhood of Sukhûm, whose garrison could communicate with headquarters only by sea. By the incorporation of the whole coast-line from Anapa to Poti (Treaty of Adrianopol in 1829) Russia's position was naturally strengthened, but even in 1835 only the north-western part of the country, the district of Bzibb, is said to have been in the possession of Prince Michael. The other parts had remained under the rule of his Muslim uncles. Later on, with the help of Russia, Michael succeeded in establishing his power almost as an absolute ruler, but he too, in spite of his Christian faith, had surrounded himself with Turks.

After the final subjugation of Western Caucasus by the Russians (1864) the dominion of the House of Sharvashidze, like that of the other native princes, came to an end; in November 1864 Prince Michael had to renounce his rights and leave the country. Abbâhâzâia was incorporated into the Russian empire as a special province (okrug) of Sukhûm and divided into three districts (okrug)—Pitzund, Ose'miri and Tzebelda. In 1866 an attempt made by the new governor to collect information concerning the economic conditions of the Abbâhâz, for the purpose of taxation, led to a revolt, and, subsequently, to a considerable emigration of the Abbâhâz to Turkey. In the thirties of the 19th century the population of Abbâhâzâia was estimated at about 90,000, and the number of all Abbâhâz (i.e. including those living in the north outside Abbâhâzâia) at 128,000 souls. After 1866, the population of Abbâhâzâia was reduced to c. 65,000. The almost depopulated district of Tzebelda ceased to be a district and was placed under a special "Settlement Curator" (popoheit naseleniya). Later the whole of Abbâhâzâia under the name of district (okrug) of Sukhûm-Kale (Su-khûm-Kalâ) formed a part of the government of Kutais. The population again decreased through emigration, especially after the Abbâhâz took part in the rebellion of the mountain tribes caused by the landing of Turkish troops (1877); in 1881 the number of Abbâhâz was estimated at only 20,000. No statistics on the Abbâhâzians in Turkey are available.

Sovremennye sostëvâ. The Soviet power was proclaimed for a short time in 1918, and finally in 1921. In April 1930 Abbâhâzâia, as an autonomous republic (A.S.S.R.), became part of the Georgian republic (S.S.R.) and its special constitution was confirmed in 1937. The Abbâhâzian A.S.S.R. has a population of 303,000, but in this number the Abbâhâzians are but a minority. In 1939 the total number of the Abbâhâzians in the Soviet Union (i.e. apparently including the northern colonies in Ceresia) was 59,000. The capital (Sukhûm) has 44,000 inhabitants. The territory of the republic has acquired great importance for subtropical cultures. Its water power has been considerably exploited (in 1935, 45 electrical stations).

Since the time when an Abbâhâz alphabet was invented by the eminent specialist in Caucasian languages General Baron P. P. Uslar (1864), and when a book on Biblical history was compiled by a priest and two officers of Abbâhâz nationality, Abbâhâzian letters have had a considerable development. In 1910 the founder of the new literature, Dimitri Gulia (born in 1874), published a book of popular poems. He has been followed by writers in prose (G. D. Gulia, Papaskiri), poets (Kogonia 1903-29), L. Kvitsinia) etc. Abbâhâzian folklore has been collected and schoolbooks written (Ch'od'ua etc.).

The Abbâhâz "polysynthetic" language belongs to the same type as the Cerkèse language. It has two basic vowels as against 65 consonants in the northern (Bzibb) dialect, and 57 in the southern (Abâzû). The latter has been adopted as the literary language. It is now written in the Georgian alphabet suitably completed.

the recent works by Serdiudenko and Tobil’ on northern Abkhazian dialects (1947-9).

ABLATION (see GHUL, TAVAMMUM, WUD7).  

ABNAA', "the sons", a denomination applied to the following:

(I) The descendants of Sa'd b. Zayd Manât b. Tamîm, with the exception of his two sons Ka'b and 'Amr. This tribe inhabited the sandy desert of al-Dahna. (Cf. F. Wüstenfeld, Register zu den genera. Tabellen der arab. Stämme).

(II) The descendants born in Yaman of the Persian immigrants. For the circumstances of the Persian intervention in Yaman under Khursaw Anûghirîwân (531-79) and the reign of Sayf b. Dhî Yazân, as told by the Arabic authors, cf. SAYF b. DHÎ YAZÂN. After the withdrawal of the foreign troops Sayf was murdered and the country again subjugated by the Ethiopians, so that the Persian general Wahriz had to return. The power of the Ethiopians was this time definitely broken and Yaman turned into a vassal state of Persia. At the time of the Prophet the Persian governor Bâdhâm (Badhan) was, together with his people, converted to Islam and acknowledged the suzerainty of Muhammad. Later, however, troubles broke out in Yaman which led to complete anarchy; it was only under the reign of Abû Bakr that order was restored. (Cf. also AL-YAMAN).

(K. V. ZETTERSTEN*)

(III) Abûdâl-dawla, a term applied in the early centuries of the 'Abbâside caliphate to the members of the 'Abbâsid house, and by extension to the Khurâsânî and other mawdiî who entered its service and became adoptive members of it. They survived as a privileged and influential group until the 3rd/9th century, after which they were eclipsed by the growing power of the Turkish and other troops.

(IV) Abûdîl-Atrîk, a term sometimes used in the Mamlûk sultanate to designate the Egyptian or Syrian-born descendants of the Mamlûks, as an alternative to the more common awdâl al-nâs [g.v.].

(V) Abûdî-sîfâbiyân, a term sometimes employed in formal Ottoman usage in place of the more common sîfâbi oğlanlarî—the first of the six regiments (bölük) of cavalry of the Ottoman standing army. They were classed as "Slaves of the Gate" (kapî kułu).

(B. LEWIS)

ABRAHA, a Christian king of South Arabia in the middle of the sixth century A. D. In Islamic literature his fame is due to the tradition that he led a Yamani expedition against Mecca (referred to in the Kur'ân, cv) in the year of Muhammad's birth, c. 570 A.D. The details of Abrahah's life are vague, and the Persians to their invasion are largely under stories of folklore origin which have been attached arbitrarily to the name of a famous personage. For

authentic information we must turn to Procopius and the Himyaritic inscriptions. According to Procopius, Hellestheos king of Abyssinia (Fifth of the inscription Istanbul 7608 bis) invaded South Arabia a few years before 531 A.D., killed its king, appointed a puppet-ruler named Esimiphaios (SMYF of the inscriptions), and retired to Abyssinia; subsequently, Abyssinian deserts who had remained in South Arabia revolted against Esimiphaios and set on the throne Abrahah, originally the slave of a Byzantine merchant of Adulis; two expeditions sent by Hellestheos against the rebels were unsuccessful, and Abrahah retained the throne; Justinian's attempts to incite Abrahah to attack Persia were in vain, for he merely marched a little way northward and then retired; so long as Hellestheos was alive, Abrahah refused to pay tribute to Abyssinia, but agreed to do so to Hellestheos' successor. Our main epigraphic source is Abrahah's long inscription on the Ma'reb dam (Corpus inscr. sem., iv, 541). This records the quelling of an insurrection supported by a son of the dethroned Esimiphaios in the year 657 of the Sabaean era (between 640-650 A.D.); repairs effected to the dam later in the same year; the reception of embassies from Abyssinia, Byzantium, Persia, Hira and Harrîb b. Djabalat the phylarch of Arabia; and the completion of repairs to the dam in the following year. A further text (Ryckmans 656, see le Muson, 1953, 275-84) discovered at Murayghân, east of the upper Wadi Taghih, records a defeat inflicted by Abrahah on the North Arabian tribe Ma'add in 662 of the Sabaean era. The Ma'reb text begins, "By the power and favour and mercy of God and His Messiah and the Holy Spirit (rk qds)". It is perhaps significant of a sectarian distinction that Esimiphaios, who was no doubt a Monophysite like his Abyssinian patron, uses a different formula, "In the name of God and His Son Christ victorious and the Holy Spirit (mnfs qds)"; possibly Abrahah had Nestorian leanings. The titulature adopted by Abrahah is identical with that of his immediate predecessors, "King of Saba' and Dhî-Raydân and Hâdramawt and Yamanat and their Arabs in the plateau and lowland", but in the Ma'reb text he calls himself in addition âlî mlhn 'q'zyn. The word 'zly is not found elsewhere, and no satisfactory explanation of the phrase has yet been given. Conti-Rossini's rendering "the valiant king, of the (tribe) 'Ag'azî" is syntactically improbable; and Glaser's "vicerey of the Abyssinian king" is incompatible with the passage later in the inscription where Abrahah receives an Abyssinian embassy on the same footing as those of Byzantium and Persia. J. Ryckmans' proposed reading âlî mlhn "the king's highness" is worth consideration. From here onwards reliable sources are silent, and we have only the probably legendary story in the Islamic sources, which attributes the motive of the Meccan expedition to Abrahah's jealousy of the Meccan sanctuary and a futile attempt to substitute his church at San'a as the place of pilgrimage for all Arabia. If Abrahah really made such an expedition (the Kur'ân does not name its leader), a more likely explanation of his aims is that the rapprochement with Abyssinia under Hellestheos' successor caused Abrahah to adopt a more aggressive policy towards Persia, and the expedition was the first move of a projected attack on the Persian dominions. However, it proved a failure, and only provoked the Persians to their invasion by Wahrîb a few years later, which finally destroyed the ancient South Arabian kingdom. The Martyrium Arethae

ABKHÂZ — ABRAHA
that Abraha was placed on the throne by the Abyssinian king Elesbaas (usually identified with Procopius' Hellasbaos) immediately after the death of Pubh Nuwas. Other ecclesiastical sources, such as the Leges Hierosolymarum attributed to Gengentius bishop of Zafar, give similar accounts. This version of events, which conflicts fundamentally with both Procopius and the inscriptions, must be regarded as unhistorical and due either to a confusion of names or to a falsification for polemical reasons.

( A. F. L. Beeston)

ABRAHAM [see ibrahim al-khaliil].

"ABS [see ghatafani].

AL-ABSHIHI [see al-ibshih].

ABU 'l-ABBAS AL-SAFFAH, 'Abd Allâh b. Muhammed b. 'Ali b. 'Abd Allâh b. 'Abbas, the first 'Abbasid caliph. The surname al-Saffah means "the bloodthirsty" or "the generous". With the other members of the 'Abbasid family, he took refuge in Kufa in Safar i32/Sept.-Oct. 749, shortly after the occupation of the town by the Imam b. Kahtaba and was proclaimed as caliph in the great mosque on 12 Rabii I/28 November, on which occasion he pronounced a famous speech.

The first task of Abu 'l-Abbas was the total defeat of the Umayyads. The 'Abbasid troops, under the command of his uncle 'Abd Allâh b. 'Ali, achieved a complete victory on the Upper Zab (Djumada II 135/Jan. 750) and flung themselves into the pursuit of Marwan II through Mesopotamia, Syria and Palestine. While Marwan was killed in Egypt (12h Dhu 'l-Hijja 134/August 750), the main campaign could be considered as ended. The isolated resistance of Ibn Hubayra [q.v.] in Wasit was soon overcome by treachery, while the revolts that broke out in Mesopotamia and Syria were bloodily repressed. The conquerors abandoned themselves to violent acts of revenge, of which the first in importance was the episode on Nahri Abî Futrus [q.v.]. Here 'Abd Allâh b. 'Ali, having killed eighty Umayyad chiefs, laid tables over their bodies, which he afterwards threw to the dogs to eat. Similar scenes occurred in al-Kufa, al-Bagha and in the Hijaz. Furthermore, the tombs of the Umayyad caliphs were violated. Similarly, the discontent of the 'Alids, who, after having supported the cause of the revolt, saw themselves deprived of its fruits, was suppressed in blood: in 135/750-1, the governor of Khurásan, Abû Muslim, put down a rising on behalf of the 'Alids in Bukhâra.

In this way, soon after the accession of the 'Abbasids to the caliphate, the principal sources of opposition, namely the Umayyad and the 'Alid ex-enemies, were eliminated. The 'Abbasids, however, wanted to go even further, to the elimination of their own political and military chiefs who had gained too great an authority, or who were, rightly or wrongly, suspected of insubordination. With the complicity of Abû Muslim, Abû Salama [q.v.] and Sulaymân b. Kaghîr [q.v.] were suppressed. Afterwards it was the turn of Abû Muslim; the first attempt against him, in connection with the rebellion of Ziyâd b. Šâlih in Transoxania (135/752-3) was unsuccessful; the second, immediately after the death of Abû'1-'Abbâs, was carried out successfully by his successor, al-Mansûr [q.v.].

Abû'1-'Abbâs died in al-Anbâr, to which town he had transferred his residence, in Dhu'l-Hijja 136/June 754. It is difficult to pass a judgment on his personality, as we do not exactly know what was his personal share in the events of his short caliphate. What is certain is that during his reign the 'Abbasid movement not only passed from the revolutionary to the legal phase, but also consolidated itself, and the first signs appeared of that political and economic power which were confirmed by the caliphate of al-Mansûr.

ABU 'ABBAS AL-YAKUB IBN 'ABDUR, vizier. Belonging to a philo-'Alid family, he participated, together with his brother 'Ali, in the revolt of Ibrâhîm and Muhammed b. 'Abd Allâh against the caliph al-Mansûr in 145/762-3. Imprisoned for this, he was pardoned by the next caliph al-Mahdî in 159/775-6 and succeeded in gaining his favour, it is said, by revealing the plan of escape of another partisan of the 'Alids. Having become a confidant and counsellor of the caliph, he was appointed vizier in 163/779-80 in place of Abû 'Ubâyday Allâh, and used his power in favour of his 'Alid friends. This policy was the main reason for the massacre of the Umayyads, which followed upon several unsuccessful attempts of escape of another partisan of the 'Alids; if so, he himself was at the same time the chief architect and the victim of the precarious nature of such an attempt.

'ABD ALLAH AL-SHITI, Nasir b. 'Abd Allah b. Mu'ayr b. Zakariyyâ, sometimes also called al-Muhtasib [he had allegedly been a muhtasib, market overseer, in 'Irak], the founder of Fâtimid rule in North Africa. A native of Şanabî, he joined the Ismâ'îlî movement in šIrak and was sent to Yaman, where he spent his apprenticeship with Mansûr al-Yaman (Ibn Hawshab), head of the
Ismâ‘îl mission in that country. On the pilgrimage
of 279/892 he met in Mecca some Kutâma pilgrims and
accompanied them back to their native country,
which they reached on 14 Rabî‘ I 280/6 June 893. He first
established himself in Ikdjan near Satfî. In face of the
opposition directed against him by the Aghlabid government,
(289/902 and 290/903). On the occasion of a temporary
setback, his headquarters were moved back to
Ikdjan, which remained his base for subsequent
operations. In 289/902 the imâm al-Mahdî 'Ubâydy Allâh
[q.v.] fled from Syria, attempted to join Abû 'Abd Allâh, but had to take refuge in Siǧismâsâ,
where he was imprisoned. Abû 'Abd Allâh's brother
Abû 'l-Abbas Muḥammâd, who had accompanied the
imâm, fell into the hands of the Aghlabîs. Abû
'Abd Allâh then took Satfî, Tubnâ (293/906) and
conquered Tidjis, Baghaya, defeated Abû 'Abd Allâh's brother
Abd Allâh, but had to take refuge in Sidiilmassa,
which they reached on 14 Rabî‘ II 280/3 June 893. He
and accompanied them back to their native country,
steadily strengthened his position, captivated Mila
face of the opposition directed against him by a
confederacy of Kutama clans, Abû
Abd Allâh transferred his headquarters to Tazrut, where he
fled from Syria, attempted to join Abu

Kutayba, Ma'drif, Cairo 1353/1934, 200; fabari,
i, 108-25; Abu Nueaym, ffilya, Cairo 1351-6, ii,
In the ecstasy of divine love, he gave
up observing the commandments of God and the
Prophetic Traditions, though he subjected himself
to self-mortification. He is supposed to have
been a spiritual descendant of Kūth al-Dîn Balîqîyâr
[q.v.]; however, it is doubtful if he belonged to any
organized ëélf order. Numerous legends regarding his
life, miracles and death have grown, and it is
difficult even to say whether the tomb at Fatâq or
at Karnîl is his, though the former is more famous.
The works attributed to him include letters on
divine love addressed to Iklîyâr al-Dîn (Sulayman
Col., Aligarh Univ.); Ḥikâm-nâmâ (As. Soc. Bengal, Ivanow: 1196), which is definitely apocryphal;
and two madînawîs: Kâlâm-i Kalandâr (Meerut)
and Maṭnawî Bû 'Ali Shâh Kalandâr (Lucknow 1891).

Abû 'Ali Muḥammad b. Ilyâs [see ILYASISI].

Abû 'l-ÄÂYÎRA RûFâY b. Mihrân al-RîyâHî,
a liberated slave of the Banû Riyâh, belonging to
the first generation of tâbî‘ûn residing in Baṣra; d.
907/809-9 or 907/714. A commentary on the Kur‘ân is attributed to him (Hadîth Kâhilîf (Flügel, ii,
352), but he is mainly known as a traditionist
and a transmitter of the Kur‘ân. Having
collected in al- Başra and in Medina kadi‘î transmitted
particularly by Ĕûmar and Ĕûbayy b. Ka'b,
who was considered trustworthy (hâkî); and contributed to
the training of Kaṭâda, Dâbî b. Abû Hind, Āṣîm
al-Ahwâl and other traditionists of renown. His
name figures frequently in the "chains" of trans-
mission of kadi‘î admitted into the great collections.
In the same way, data put under his name are
admitted by al-Tabârî, Tâfisîr, passim, e.g. i, 228;
cf. al-Bayyâjî, Amwâr al-Tânsîî (Fleischer), i, 242.
He transmitted his system of "reading" (hir‘â) to
al-A‘mahî and to the readers of Baṣra Abû
'Amr b. al-Äâîrî [q.v.]; and Shu‘âbî y b. Abû al-Hâlîf b. Azdî
(d. 130/747). He played no political role and took
no part in the conflict between 'Ali and his partisans
and the Umâyâyids.

ABU ‘AMR ZABBÀN B. AL-ALÀ, a celebrated ‘reader’ of the Kur’an, regarded as the founder of the grammatical school of Basra, died c. 134/750. This scholar seems, indeed, like a number of others. He is believed to have been born c. 70/689 of the grammatical school of Basra, died c. 154/770. In one isolated statement, links him with the Arab tribe of Mazin of the confederation of Tamim; see Ibn Khallikan and al-Anbari, 32, merely says that Abu Amr was then a little more than twenty (which gives some force to the statements which put his year of birth at 70/689); see Ibn Khallikan, i, 387. It seems permissible to assume, from the passage of Ibn al-Djazari, i, 289, that this journey gave him the opportunity of pursuing further his ‘readings’ of the Kur’an at Mecca and Medina, studies which he would appear to have continued on his return to ‘Irak. It is difficult, however, to reconcile this assertion with the statement of Ibn Khallikan, i, 387, that Abu ‘Amr and his father returned immediately to ‘Irak upon the death of al-Hâdîdî, in 95/714. However that may be, when Abu ‘Amr had settled in ‘Irak, it appears that he rarely left Basra again. If it is indeed he who is praised in a line of al-Farazdak (d. 114/732-3) (see Fihrist, 50*), he was already before that date a celebrity of some standing in his city of adoption: cf. the flattering comment on him attributed to al-Hasan al-Basri (d. 110/728) and of others (at Basra), and when this same author adds, 88, that a K. al-Nawâdîr was handed down in the version left by him, he must have been referring to writings taken down from his oral teaching by his disciples.

ABU ‘Amr belongs to the generation of scholars for whom the study of Arabic was dependent on that of the Kur’an. It is thus an arbitrary distinction if one tries to separate in him the ‘reader’ of the Koran from the grammatical and the ‘transmitter’ of poetry.

During his stay in Hidjaz, Abu ‘Amr initiated himself into the system of ‘reading’ in process of formation at Mecca and Medina, following the teaching of Abu ‘l-‘Alîya [q.v.] and Ibn Kaṭîr in particular. In ‘Irak he studied the system of Ibn Abî Ishâk al-Haḍâmî and of others (at Basra), and that of ‘Asîm (at Kûfâ). A list of his masters is given by Ibn al-Djazari, 289; cf. also al-Suyûtî, Muzhir, ii, 398, and Fihrist, 39. He built up a system of his own in which the Mecca and Medina influences predominate; a complete table of the origins of this system has been drawn up by C. Pellat, Milieu basrites, 77 f. The ‘reading’ of Abu ‘Amr, at Basra, displaced all others previously existing in the town, and especially that of al-Hasan al-Basri: see Pellat, op. cit., 76; it is said to have been recommended by the ‘reader’ of Kûfâ, Abu ‘l-‘Amr al-Kâtar al-Misrî (see al-Diāhiz, K. al-Nâddir, 88), that a number of others: see the list ibid., 289.

In the 4th/10th century, when the reforms of Ibn al-Mudjâhid were introduced, this system took its place among the canonical ‘Seven readings’. At the time of Ibn al-Djazari (d. 833/1429) it was the accepted system in Yaman, in Hidjaz, and in an important province where it had finally ousted that of Ibn ‘Amr in the 5th/11th century: see Ibn al-Djazari, 292. This system of ‘reading’ was the subject of a treatise by Ibn al-Mudjâhid, see Fihrist, 31*1. Nevertheless, writings of the same order had been composed before that period: see the list, ibid., 28. Another summary is also known, entitled al-Kafar al-Misrî fi birid’al ‘Abî ‘Amr b. al-‘Ala al-Basri, by Umar b. al-Kâtar al-Basri (d. 900/1495), which is preserved in Berlin: see Ahiroard, no. 639. We have, too, an opuscule based on the oral tradition, on the orthography of the Koran: see O. Rescher, in WZKM, 1912, 94 (this opuscule is in a miscellaneous collection, in Aya Sofia, no. 4814). The influence of Abu ‘Amr was not only that of the importance for the development of grammatical and lexicographical studies at Basra. It is less easy to follow, however, than the influence of his system of ‘reading’. Among his disciples, the following names are worthy of note: Yûnus b. Hâbb, al-Asmâ‘î (see id., ii, 323, 329; Fihrist, 42; Ibn al-Anbârî, 30), Abu ‘Ubaydâ (see Ibn Khallikan, 387), Khalîl al-Ahmar (see al-Suyûtî, ii, 278, 403), and the future founder of the School of the Kur’an, Abu al-Ru‘shâb (see id., ii, 400). It is possible that already then, under his stimulus, the method of seeking information from the Beduins, in matters concerning grammar and lexicography, was developed at Basra. (see the anecdote recorded by id., ii, 278 and 304). By his disciples, and especially by Abu ‘Ubaydah by such a scholar as al-Dajîbî, Abu ‘Amr was regarded as ‘the most learned man in things pertaining to the Arabs, and combining with the accuracy of his auricular transmission the veracity of his statements’ (see al-Dajîbî, Bayân, i, 255, 256; cf. Abu ‘l-Tayyib, who expresses a similar view in Muzhir, ii, 399). And yet this point raises a very delicate problem. This scholar seems, indeed, like a number
of his contemporaries, to have been an enthusiastic collector of archaic poetry and of accounts of the 'Days of the Arabs'; cf. Blachère, Histoire de la littérature arabe, Paris, 1952, i, 101 f. According to an account taken up from Abū 'Ubayda by al-Dīhājīz, Bayyūm, i, 256 (repeated in a somewhat changed form by Ibn al-Dījarī, 290, Ibn Khallikān, i, 386, and al-Kutubī, i, 164), 'the books which Abū 'Amr had written by taking the words down from such Arabs as were worthy to serve as informers filled a room in his dwelling. Later on, having devoted himself to reading (of the Kūrān), he burnt these books'. This piece of evidence, which we have no means of checking, does not say that Abū 'Amr destroyed the collections of poetry made by himself, as has been too often asserted. Actually, the main point to keep in mind is that after this destruction—if it took place—Abū 'Amr continued nevertheless to communicate orally the documentation which he had accumulated in his memory. There are many anecdotes which show his knowledge of ancient poetry; see for example, al-Dīhājīz, Bayyūm, i, 256, ii, 121; al-Śūrāfī, 30; Ibn al-Anbārī, 31, 34. It is known that on one occasion he did not hesitate to forge a line; see al-Śuyūtī, Muṣṭir, ii, 415. This fact, which he himself admitted, in no way detracted from his acknowledged authority as a transmitter (tādīl). His place among Arab lexicographers seems to have been very important, since he is said to have been, in this sphere, the master of al-Khāliq [q.v.]; see ibid., ii, 396, and also the numerous references to Abū 'Amr's lexicographical authority, ibid., ii, 73, 111, 291, 350. The authors of adāb and the anthologists often quote, too, his judgements on the poets; see for example, ibid., ii, 73, 111, 291, 350.

It is no exaggeration to say that the figure of Abū 'Amr b. 'Alā' dominates the intellectual activity of the centre of Basra at the period when the generation of scholars was growing up—men such as al-Khāliq, al-Asma'i, Abū 'Ubayda—who have been, in this sphere, the master of al-Khāliq [q.v.]; see ibid., ii, 396, and also the numerous references to Abū 'Amr's lexicographical authority, ibid., ii, 73, 111, 291, 350. The authors of adāb and the anthologists often quote, too, his judgements on the poets; see for example, ibid., ii, 73, 111, 291, 350.

Practically nothing is known about his life, except the names of his authorities and his students, none of them very famous personalities. He is said to have been judge or mufti of Harrān. One source (Ibn 'Asākir, (ms. 1793); Dhahabī, Nubald*, 1793); Dhahabī, Tadhkira, 329; F. Rosenthal, 322; Samʿānī, Anṣāb, fol. 161a and passim; Yāḥyā, ii, 232, and passim; Ibn al-Adīm, Baghyā (ms. Rosenthal, A history of Muslim historiography, Leiden 1952, 310, 389, 393.
a partisan of 'Ali. His name (Zālim b. 'Amr) and genealogy are uncertain; his mother belonged to the clan 'Abd al-Dār b. Kuṣayy of Kuraysh. He was probably born some years before the Hijra. In the caliphate of 'Umar he went to Basra. He lived first among his own tribe, then among the Banū Ḥudhayl, and for some time also among the Banū Kuṣayr, the kinsmen of his favourite wife; but his Şī'ite propensities as well as his obstinacy and avarice made him disagreeable to his neighbours. It is doubtful whether he held any office under 'Umar and 'Uthmān. In 'Ali's caliphate he rose to prominence. He is said to have taken part in the unsuccessful negotiations with 'Āqīqa and in the ensuing “Battle of the Camel,” and also fought at Shīfūn for 'Ali. He was employed at Basra either as kādi or as secretary to the governor 'Abd Allāh b. 'Abbās, and is even said to have held a military command in the wars against the Ḥanāfīs. When 'Ali's star was setting, and according to al-Madā'ini, 'Abd Allāh b. 'Abbās planned to leave Basra, taking with him the treasury, Abu ʿl-Aswad tried to stop him and reported the matter to 'Ali, who appointed him governor. This post he held, if at all, only for a short time. When 'Ali was murdered, he made a poem (no. 59 in Rescher's numbering) the Umayyads responsible for it. But his sentiments were of no consequence, as there was no large Shī'a element in Basra (Aḥkāmī, xi, 121). He did not realize that he had lost all influence. He had reason to complain about Muʿwiyya's representative 'Abd Allāh b. 'Amir, with whom he had formerly been on good terms (Poems nos. 23, 46), and also tried in vain to gain the favour of the viceroy Ziyād b. Abīh. Relations between them had been strained already in the caliphate of 'Ali, when Ziyād was in charge of the revenue-office (Aḥkāmī, xi, 170). He lamented the death of al-Husayn in 61/680 (no. 61) and cried for vengeance (no. 62). The last event mentioned in his poems is his complaint to the “Prince of the Faithful” Ibn al-Zubayr about his representative at Basra in c. 67/686 (Ibn Sa'd, v, 19). He died, according to al-Madā'ini, at Basra during the great plague in 69/688.

A collection of his poems, made by al-Sukkārī, is extant, but has been published only in part. They are poor in language and style and artistically and historically insignificant; most of them deal with petty incidents of everyday life; some of the poems are apparently forged. This applies also to the widely circulated allegation—invented most probably by some philologist of the Basra school—that is was Abu'l-Aswad who laid down for the first time the rules of Arabic grammar and invented the vocalisation of the Kurān.

Abū ʿAtāʾ al-Sindī, Aflah (or Marzūq) b. Yāsār, Arabic poet. He owes his surname of al-Sindī to the fact that his father came from Sind; he himself was born in Kūfa and lived there as a client of the Banū Asad. He fought for the declining Umayyad dynasty with pen and sword, praising them and casting scorn on their adversaries. It is true, however, that when he obtained power, he tried to insinuate himself into the favour of the new rulers by singing their praises. But the iron character of al-Saffāh was but little sensible to such fawning, and under the reign of his successor, al-Mansūr, the poet was even obliged to keep himself hidden. Only after al-Mansūr's death in 158/774 did he again make his appearance. He died, no doubt, shortly afterwards, but the exact date is not known. Abū ʿAtāʾ was considered a good poet—his elegy on Ibn Hubayra [q.v.] being especially famous—although he pronounced Arabic badly and even stammered, so that he was obliged to have his poetry recited by others.

Bibliography: Ibn Kūtayba, Shīr, 482-4; Abū Tamman, Ḥamāsa, i, 372 ff.; Aḥkāmī, xvi, 81-7; Marzūbān, Muḍjam, 380; al-Bakrī, Simḥ al-Laḍlī (Maimani), 802; al-Kutubī, Fawādi, Cairo 1283, i, 937; collection of fragments by Baloch Nabi Bakhsh Khan, IC, 1949, 137 f. (A. Schaade*)

Abū ʿl-ʿAtāʾī, poetical nickname (“father of craziness”) of Abū ʿImār ʿIsāmīl b. al-Kāsim b. Suwayd b. Kaysān, Arabic poet, born in Kūfa (or ʿAyn al-Tanṭū) 130/748 and died 210/825 or 211/826. His family had been mawdūl of the Anaza tribe for two or three generations, and were engaged in menial occupations; his father was a cupper, and the poet himself as a youth sold earthenware in the streets. His outlook on life was embittered by a sense of social inferiority; his later verse is devoted to his hatred of the governing class and the wealthy; and he was notorious for covetousness and meanness to the end of his life. But like Bahshār b. Burd, he had a natural gift for poetry, and hoped to find in this the door to a larger life. On account of his poverty he had not the time to attend lectures on philology and the poetry of the ancients, and to this we must attribute the roughness and unconventionality of his style. As a young man he associated with the prolific circle of poets grouped around Wāliba b. al-Ḥubāb, and gained a reputation with his ghazals and wine-songs; later critics have condemned these productions as poor and effeminate (Ibn Kūtayba, Shīr, 497), and only fragments of them have survived. Like most of the spontaneous poets, he showed a preference for simple language and metre, and he was especially famous—his elegy on Ibn Hubayra [q.v.] being especially famous—although he pronounced Arabic badly and even stammered, so that he was obliged to have his poetry recited by others.

In the caliphate of al-Mahdī he went to Basra either as kādi or as secretary to the governor Ṣaddāt b. al-Hubab. He had no intention of throwing herself, away on a penniless nobody. He held the caliph responsible for his failure to win ʿUtbā, and some indiscrete verses gained him a flogging and banishment to Kūfa. When al-Mahdī died, he took his revenge in some verses which could be read ambiguously.

Back in Baghdād his fulsome praise of al-Mādhī annoyed the latter's successor Ḥārūn al-Raṣīld, who sent him to prison along with his friend Ibrāhīm al-Mawāllī. Restored to favour, he charmed Ḥārūn with his love-lyrics, but suddenly renounced the ghazal and devoted himself to ascetic poetry (c. 178). Ḥārūn at first took umbrage at his conversion and imprisoned him, but was reconciled later at the instances of al-Faḍl b. Kābih, and in part also no doubt because of his popularity with the masses. It may be suspected that al-Faḍl's patronage was connected with his intrigue, in association with the queen Zubayda, against the ʿArqamids, and that Abū ʿl-ʿAtāʾī's new “ascetic” produce conveniently served their purposes. However that may be, Abūl-ʿAtāʾī maintained henceforward a vast
output of sermons in verse, long and short, painting the horrors of all-leveling Death, and directed especially against the rich and the powerful, not excluding the caliph himself. So profitable was it that when Abū Nuwās also began to produce suhayyiḍī, Abū'l-Atahiyya warned him not to trespass on the field to which he had established a prescriptive right (Akhbd Abī Nuwās, Cairo 1924, 70). Some later critics questioned, not without cause, the sincerity of his conversion, notably the real ascetic Abū'l-ḥālā al-Maṣʾarī, who referred to him as “that astute fellow” (Ibn Faḍl Allāh, Masūdik al-Asbār, xv, MS Brit. Mus. 575, fol. 136).

A more frequent accusation brought against Abū'l-Atahiyya is that of heresy, which was a favourite weapon at the time; and it was suggested by Goldziher that one reason for his imprisonments may be sought in the occasionally unorthodox tone of some of his poems. Having no theological education he seems to have been influenced by the modified legacy of Manichaean beliefs still current in Iraq, which accounted for the disorders of this world by the creation of Allah. In certain of his verses also, such as “If you would see the noblest of mankind look for a king in the guise of a pauper”, there may be suggestions of a concealed attachment to Muṣā al-Kāẓim and the cause of the Shīʿite imāms, still strong in Kūfa.

His astonishing success as a poet was due to the simplicity, spontaneity, and artlessness of his language, which contrasted with the labour-dense artificiality of some of his contemporaries, and expressed the feelings of the people in verse that they could understand. He was fortunate also, by his friendship with Isrāḥīm al-Mawgūlī, to have many of his poems set to music by the foremost musician of the day. He and his younger contemporary Abān b. Ḥabīb al-Hāmidī (q.v.) were the first to use muḍawādī (couplet) rhyming verse, and he was the first, according to al-Maṣʿarī (al-Fāṣal wa-l-ṣawādī, i, 131), to invent the metre muḍawīḍī. He also used a metre consisting of eight syllables. Owing to his enormous output his entire duwān was never collected. The suhayyiḍī were put together by the Spanish scholar Ibn ʿAbd al-Barr (d. 461/1071).

Bibliography: Ibn Khallikān, no. 91; al-Aghārī, iii, 126-83 (i, 112); see also Guliʾs Tāfāsī (other references; Tarīḥī Bangālī, vi, 250-60; Goldziher, Trans. IX Congress of Orientalists, 113 ff.; G. Vajda, in RSÖ, 1937, 215 ff., 225 ff.; Brockelmann, i, 76; S I, 119. Partially the duwān were published in Bairut 1887, 1909; see also Muṣṭafā ʿAlī, ed. F. E. Bustani, Bairut 1927; Zuhdīyī, trans. O. Rescher, Stuttgart 1928. (A. Guillaume)

Abū l-ʿĀwar al-Sulāmī, general in the service of Muṣawīya. He belonged to the powerful tribe of Sulaymān (hence “al-Sulāmī”); his mother was a Christian and his father had fought at Uhud in the ranks of the Kuraysh. The son, who does not seem to have belonged to the closest circle of the Prophet, went, probably with the army commanded by Yazīd b. Abī Sufyān, to Syria. In the battle of the Yarmūk he was in charge of a detachment, and from that time he followed faithfully the fortunes of the Umayyads. He thus exposed himself to the execration of ʿAll, especially after he had taken part in the battle of Siffin. He assisted ʿAmr b. al-ʿĀṣī in conquering Egypt for Muṣawīya and was in command of various military expeditions by sea. In addition, he showed also diplomatic and administrative abilities. At Siffin, he took part in the negotiations with ʿAli and prepared the preliminary draft for the conference of Ṭabrūz. He was also commissioned to count the jallākī of Palestine for a new distribution of taxes. Muṣawīya had in mind to appoint him in Egypt to the post of ʿAmr b. al-ʿĀṣī, who had been guilty of showing a too independent attitude; but this plan came to nothing, and he was appointed to the governorship of the province of al-Urdūn. On the ground of his services the Arabic annalists counted him among the main lieutenants of Muṣawīya, those who constituted his shī'a or bidūna. He disappeared from the political scene before the end of Muṣawīya's reign.

Bibliography: Ibn Saʿd, iii/2, 106; Ibn Rusta, 213; Tabari, index; Masʿūdī, Murūdī, iv, 351; Michael the Syrian (Chabot), ii, 442, 445, 450; Baybaki, Mahāšīn, 149; Ibn al-Aṣfar, Usd., v, 138; Ibn Ḥadjdār, Isāba, iv, 14; H. Lammens, Études sur le règne de Muṣawīya, 42 ff. (M. Lammens)

Abū ʿAwn Abūd al-Malik b. Yazīd al-Khorasānī, general in the service of the ʿAbbasīs. After the outbreak of the rebellion in Khurasan, 25 Ramadān 129/9 June 747, Abū ʿAwn several times took part in the war against the Umayyads. At Siffin he accompanied the ʿAbbasī general Kaṭaba b. Shabbīh; then he was sent by the latter to Shahhrarāz, where on 20 Dhuʾl-Hijja 131/10 August 749, in conjunction with Mālik b. ʿArif, he defeated Uṭḥmān b. Sufyān. While Abū ʿAwn remained in the vicinity of Mosul, the Umayyad caliph Marwān II marched against him. Under the supreme command of Abū Allāh ʿĀrīf, Abū ʿAwn took part in the battle by the Greater Zāb (12 Dhuʾl-Muḥarram 12/25 January 750), in the pursuit of Marwān, and in the capture of Damascus. When Abū Allāh remained behind in Palestine, he sent Ṣāḥib b. ʿĀrīf together with Abū ʿAwn and a few others to continue the pursuit to Egypt, and it was there that the caliph, after a fresh defeat, was tracked down and killed in the same year. Abū ʿAwn remained in Egypt till further orders as governor. In 159/775-6 he was appointed governor of Khūrasan by al-Mahdī, but deposed in the following year.

Bibliography: Yaʿqūb b. Ṭabarī, Masʿūdī, Murūdī, Indexes; Wellhausen, Das arabisch Reich und sein Sturz, Berlin 1902, 331 ff.; L. Caetani, Chronographia Islamica, Roma 1912, under the relevant years. (K. V. Zetterström)

Abū l-ʿAYNĀʾ Muḥammad b. al-Kāẓim b. Khalīl b. Yaḥyā b. Sulaimān al-Hāshimi, an Arabic litterateur and poet. He was born about the year 190/805 in al-Ahwāz (his family came from al-Yamāma) and grew up in Baṣra, where he received instruction from the most famous philologists, Abū ʿUbaīda, al-ʿAṣmaʾī, Abū Ẓayd al-Anṣārī and others. He was renowned amongst his contemporaries not only for his linguistic attainments, but also for his quickness at repartee. Ibn Abī Tāhir collected anecdotes concerning him in a special work entitled Abkhdr Abī l-ʿAynd, many of which are to be found in the al-Aghārī. The book itself as well as the collection of his poems have not been preserved. He became blind at the age of 40, later on he emigrated to Bagdad, but returned to Baṣra again and died there in the years 251 or 252/865.

Bibliography: Fihrī, 125; Ibn Khallikān, no. 615. (C. Brockelmann)

Abū Ayyūb Khalīl b. Ẓayd b. Kušayy b. al-ʻAšmāʾī al-Anṣārī, generally known by his kunya, companion of the Prophet. It was in the
house of Abu Ayyub that the Prophet stayed on his emigration to Medina, before his own mosque and house were built. He took part in all the Prophet's expeditions, was present at all the battles of early Islam and served under the command of 'Amr b. al-Asi during the conquest of Egypt. Later on he was appointed by 'Ali to the governorship of Medina, but was obliged to rejoin 'Ali in Irak when Busr b. Abu Jarjat approached the town with an army of 3000 men. At his disposal by 'Amr b. al-Asi. In Irak Abu Ayyub al-Ansari took part in the battles fought there by 'Ali. During the reign of Mu'awiyah, he took part in the invasion of Cyprus and the expedition against Constantinople led by Yazid b. Mu'awiyah. During the siege of the Byzantine capital Abu Ayyub died of dysentery, in the year 52/672 (the years 50, 51 and 55 are also given as the date of his death). At his own request, he was buried under the walls of Constantinople.

226 hadiths are attributed to Abu Ayyub, but only a small number of them (thirteen altogether) have been admitted as authentic by al-Bukhari and Muslim.

E. LÉVY-PROVÉNÇAL

The tomb of Abu Ayyub is mentioned for the first time by Ibn Kutaiba, al-Ma'arif, 140 (ed. Cairo 1934, 119); according to al-Ṭabarî, iii, 324, Ibn al-Ṭahār, iii, 381, Ibn al-Dīwānī and al-Kazwīnī, 408, the Byzantines respected it and made pilgrimage to it in time of drought to pray there for rain (isiṣṭād). The probably legendary—discovery of the tomb by Ak Shams al-Dīn (d. 1273) during the siege of the city by Muhammad II can be compared to the finding of the Holy Lance by the Crusaders during the siege of Antioch. The Turkish legend is fully reproduced in Leunclavius, Historiae musulmanae, Frankfurt 1591, 38 ff. and in the careful monograph of Hāḍīṣī 'Abd Allāh, al-Ṭāhir al-Maṣḥūṣiyā fi 'Ī-Manāhith al-Kadīthiyā. See also A. M. Schneider, in Oriens, 1951, 113 ff.; P. Wittek, Ayyūnasyawī, in Annales de l'hist. de phil. et d'hist. orientales et slaves, Bruxelles 1951, 505 ff. (esp. 513 ff.).

J. H. MORDTMANN

A mosque was built on the spot by Muhammad II in 863/1458; it was enlarged by Etmeqilī-zāde Ahmad Pasha in 1000/1591; two new minarets, each with two galleries, were added in 1136/1273. It was in this mosque that the sultan Mahmūd II deposited the relics of the Prophet discovered in the treasury of the Sarāy (the imprint of the foot). The grand-vizier Sinān Pasha (d. 1133/1729), Māh Frīr Khādījā (mother of the sultan 'Uṯmān III), the grand-vizier Semzū 'Ali Pasha, Gurdīl Muhammad Pasha, Lala Muṣṭafā Pasha (the conqueror of Cyprus) and a number of other important persons are buried in the turba or in the immediate vicinity of its court-yard. The mosque is situated outside the Byzantine walls, and an important suburb (Eyyūb [see İstanbul]) grew up round it. The mosque was the object of special veneration and it was forbidden for non-Muslims to enter it. According to a rather late custom (cf. Isl., 1931, 184 ff. and Mawlāwīyya) it was in this mosque that the sultan, on his accession, was girded with the sword of his ancestors by the Celebi Etendi, the head of the Mawlawi order who came especially from Konya to carry out the ceremony.

ABŪ BAKR, the first caliph.

i. Name, family, and early life.—Abū Bakr was probably born shortly after 570 as he is said to have been three years younger than Muhammad. His father was Abū Kūfā ("Uṣmān") b. "Amir of the clan of Taym of the tribe of Kūryas, and he is therefore sometimes known as Ibn Abū Kūfā. His mother was Umm al-Ḵayr (Salmā) bint Ṣaḥīr of the same clan. The names "Abū Allāh and "Āṭīk ("freed slave") are attributed to him as well as Abū Bakr, but the relation of these names to one another and their original significance is not clear. Muhammad seems to have made a play on the name "Āṭīk and to have said that he was "freed from Hell". He was later known as al-Ṣadīk, the truthful, the upright, or the one who counts true; the last meaning is supported by the tradition that he alone immediately believed Muhammad's story of his night-journey (tird, q.v.).

In the course of his life he had four wives. (1) Kūyāya bint "Abd al-Uẓzā of the Meccan clan of "Amīr, who bore him "Abd Allāh and Asmā (who married al-Zubayr b. al-"Āwām); (2) Umm Rūmān bint "Amīr of the tribe of Kūfīn, who bore him "Abd al-Raḥmān (originally "Abd al-Kaβa or "Abd al-"Uzza") and "Āḥīya; (3) Asmā bint "Umays of the tribe of Ḥathāīm, who bore him Muḥammad b. Ḥathāūd b. al-Ḵarḍījā, of the Medinan clan of al-Ḫārīth b. al-Ḫarḍājī, who bore him Umm Kūltūmīm posthumously. The last two marriages were made late in his life and were doubtless political; Asmā bint "Umays was the widow of Dīya' b. Abī Tālib (who was killed in 6/629). The first two marriages were probably concurrent, since "Abd al-Raḥmān was the eldest son, but only Umm Rūmān accompanied Abū Bakr to Medina.

Little is known about Abū Bakr's life before his conversion. He was a merchant (tird) worth 40,000 dirhams, indicating (according to H. Lammens, La Médecine à la Veille de l'Hégire, Beirut 1924, 226-8) that his business was comparatively unimportant. He is not mentioned as having travelled to Syria or elsewhere, but he was an expert in the genealogies of the Arab tribes.

ii. From his conversion to the death of Muhammad.—Abū Bakr was possibly a friend of Muhammad before the latter's call to be a prophet and his own conversion. According to some traditions he was the first male Muslim after Muhammad (Ibn Sa'd, iii/1, 121; al-Ṭabarî, i, 1165-7); but this may simply be a reflection of his later preeminence, since the same claim is made for "Ali and Ṣayd b. Ḥārījā.
Similarly the statement that Abu Bakr was responsible for the conversion of Uthman b. Affân, al-Zubayr, 'Abd al-Rahmân b. 'Awf, Sa'd b. Abi Waqqâs and Talhah b. Ubayd Allâh is suspicious because these five and 'Ali constituted the gûrû or council to elect a successor to 'Umar. What is certain is that for some time before the Hijira, Abu Bakr was the foremost member of the Muslim community after Muhammad.

He remained in Mecca when many Muslims emigrated to Abyssinia. This is an obscure affair. It has been suggested that the emigrants objected to the policy of the group among the Muslims led by Abu Bakr. The traditional view, however, was that the emigrants went to avoid persecution; and it may be that Abu Bakr's clan of Taym, like others belonging to the group known as Hîlf al-Fujûl, did not persecute its members. It seems, however, that it also lacked the will or the power to defend them, for it allowed Abu Bakr and his fellow clansman Ta'bâ to be bound together by a man of the Meccan clan of Asad; and at a later date Abu Bakr left Mecca and only returned on receiving the protection (djiwar) of Ibn al-Dughunna, the chief of a nomadic group in alliance with Kurayh. The slaves bought and set free by Abu Bakr, notably 'Abd Allâh b. Fuhayra and Bilân, suffered bodily violence. The purchase of slaves who professed Islam, though slaves bought and set free by Abu Bakr, notably 'Abd Allâh b. Fuhayra and Bilân, suffered bodily violence. The purchase of slaves who professed Islam, though the Meccan council to elect a successor to Muhammad, however, remained in Mecca, and Abu Bakr's son 'Abd al-Rahmân actually fought against the Muslims at Badr and Uhud, but was converted to Islam before the conquest of Mecca. In Medina Abu Bakr found a house in the district of al-Sunb. His special position in the community was marked by Muhammad's marriage to his daughter 'A'isha. He was a participant in all the expeditions led by Muhammad in person, and was constantly at his side, ready to help with advice and information. In critical moments he was steady as a rock and did not lose heart. There seems to have been a remarkable degree of harmony between leader and follower. When others (including 'Umar who was inseparable from Abu Bakr) questioned Muhammad's decisions to make peace at al-Âdhabiyah and to abandon the siege of al-Tâ'if, Abu Bakr gave immediate and wholehearted support. He was the first to know the true objective of the expedition which conquered Mecca in 8/630. In other words, he was Muhammad's chief adviser. He did not have any separate military command, except of a small party detached from a larger expedition in 6/627 and of a minor expedition against the tribe of Hawâzin in 7/628. In 8/629 he served with 'Umar under the command of Abu Ubaydah, probably in order to smooth over political difficulties. By his being appointed to conduct the pilgrimage of A. H. 9 and to lead public prayers in Medina during Muhammad's last illness, and by other signs of respect, he was marked as successor.

iii. His caliphate, 11/632-13/634.—The day of Muhammad's death (12 Rabî' I, 1/8 June, 632) was a critical one for the young Islamic state. The Anṣâr set about appointing a leader from their own number, but were persuaded by 'Umar and others to accept Abu Bakr. He took the title of Khâlid rasûl Allâh, 'deputy or successor of the messenger of God', and after a short time moved to a house in the centre of Medina.

His caliphate of a little over two years was largely occupied in dealing with the ridda or 'apostasy'. This phenomenon, as the name given by Arabic historians indicates, was regarded by them as primarily a religious movement; but recent European scholars, especially J. Wellhausen (Syrian and Farabeyes, vi, Berlin, 1895, 7-37) and L. Caetani (Annales, ii, 549-83) have argued that it was essentially political. More probably it was both. Medina had become the centre of a social and political system, of which religion was an integral part; consequently it was inevitable that any reaction against this system should have a religious aspect. There were six main centres of this reaction. In four of these, the leader had a religious character and is often called a 'false prophet': al-Aswad al-Ansi in the Yemen, Musaylima among the tribes of Hanîfa in the Yamama, Tulayhâ in the tribes of Asad and Qaṭafân, and the prophetess Sadjâh in the tribe of Tamím. The form of the ridda in each centre varied according to local circumstances; it involved the refusal to send taxes to Medina and to obey the agents sent out by Medina. In the Yemen the ridda began before Muhammad's death, and when Abu Bakr came to power al-Aswad had been replaced by Kays b. Hubayra b. 'Abd Yaghûh al-Makshûh. In other places there had presumably existed for some time a movement against the rule of Medina, but it became open revolt only after Muhammad's death. During the absence of the main Muslim army in Syria under Usâma b. Zayd, some neighbouring tribes tried to surprise Medina, but were eventually defeated at Dhû 'l-Kaṣâ. After the return of the Syrian expedition, a large army commanded by Khâlid b. al-Walid was sent against the rebels. First Tulayhâ was defeated in a battle at Buzầkha, and the area restored to its allegiance to Islam. Soon afterwards, Tamîm abandoned Sadjâh and submitted to Abu Bakr. The most important battle of the ridda was the battle of the Yamama at 'Akrâbâ' (about Rabî' I, 12/May 633), known as 'the garden of death' on account of the great slaughter on both sides. Here Musaylima, the most serious opponent of the Muslims, was defeated and killed, and central Arabia brought under their control. Subordinate commanders were entrusted with subsidiary operations in al-Bahrayn and 'Umar (with Mahra), while Khâlid pacified the Yamama before moving towards Irak. The ridda in the Yemen and Haḍramawt was defeated by another commander, al-Muḥādjir b. Abu Umâyra. In dealing with captured leaders Abu Bakr showed great clemency, and many became active supporters of the cause of Islam. The traditional view was that the ridda had been quelled before the end of 11 A.H. (March 633); but Caetani has shown that the events require a much longer time, and that it may have continued into 13/634.

The size of Muhammad's expeditions along the road to Syria shows that he had realized the urgency of expansion if peace was to be maintained among the Arab tribes. Abu Bakr was aware of this strategic principle. In the first days of his caliphate, despite the threats of rebellion in Arabia, he persisted with Muhammad's plan of sending a large army under Usâma towards Syria. Again, once the danger from Musaylima in central Arabia was removed, no time
was lost in despatching Khalid towards 'Irafc. Thus was set on foot under Abu Bakr's ... Id bi'l-Nahdr, it passes for a work of Ibn Sma (cf. G. C. Anawati, Essai de Bibliographie avicennienne, no. 162).

In *al-Mu'tabar*, modelled in great part on the *Shifd* of Ibn Sīnā, Abu'l-Barakāt sometimes takes over theses from that book, quoting them literally, but at the same time attacks others that are among the most essential. In his opposition to Ibn Sīnā he is often at one, in the field of physics, with the tradition that bore in Islamic lands the name of Platonic, and which was that followed by Abū Bakr al-Rāzū. His psychology is, in some respects, related more than that of the *Shifd* or more manifestly so to that of the Neoplatonists.

Abu'l-Barakāt's method of philosophizing does not, however, lend itself easily to recourse to the authority of tradition. This is shown by the very title of the *Kitāb al-Mu'tabar*, which in the usage of Abu 'l-Barakāt means something like: "The book about what has been established by personal reflection". As a matter of fact, this method is distinguished in the first instance by the appeal to self-evident truths, the certainties *a priori*, which nullify the theses *a posteriori* of the ruling philosophy of the period. Abu 'l-Barakāt refuses to make a difference between the certainties of reason, admitted as valid by the Peripatetics, and those depending on the estimative faculty (*wahm*), dismissed by them.

It is mainly this method that leads Abu 'l-Barakāt to assert, against the partisans of the Aristotelian theory of space, the existence of a tridimensional space. With John Philoponus he refutes the proposition denying the possibility of movement in the void. Having demonstrated the fallacy of the peripatetic arguments to the contrary, he proves the infinity of space by the impossibility for man to conceive a limited space.

Similarly, it is the appeal to the *a priori* knowledge of the human mind that allows Abu 'l-Barakāt to clarify the problem of time—the true solution of which, according to him, depends upon metaphysics rather than upon physics. In effect, he shows that the apperception of time, of being, and of self, is anterior in the soul to any other apperception the soul might have, and that the nature of being and that of time are closely linked. According to his definition, time is the measure of being (not, as the peripatetics held, that of movement). He does not admit the diversity of the various levels of time, the gradations of *samīn*, *dahr*, *sarmad* assumed by Ibn Sīnā and other philosophers. In his opinion, time characterizes the being of the Creator as well as that of created things.

He identifies prime matter with the body considered merely from the point of view of corporeality, apart from any other characteristic; corporeality being an extension susceptible of being measured. Among the four elements, earth alone is, in his view, constituted of corpuscles, indivisible because of their solidity.

Dealing with the movement of projectiles, Abu 'l-Barakāt accepts, though with modifications, the theory of Ibn Sīnā—ultimately, as it seems, inspired by John Philoponus—according to which the cause of this movement is a 'violent inclination', that is to say a force (called later by certain Latin schoolmen *impetus*) imparted by the projecting body to the projectile. He explains the acceleration in the fall of heavy objects by the fact that the principle of natural inclination (*masyf tabīfi*), a current philosophical term, contained in them, furnishes them with successive inclinations. The text of the *Mu'labar* treating of this doctrine is the first one, as far as is known at present, where one finds implied this fundamental law of modern dynamics: a constant force gives rise to an accelerated movement.

It is especially the psychological doctrine of Abu 'l-Barakāt that shows in the most palpable way the role given in his philosophy to recourse to what is self-evident. As a matter of fact, this doctrine has as its starting point the consciousness that man has of himself, i.e. of his soul. This consciousness bears the stamp of certainty and is anterior to any other knowledge; it would be there even without the perception of the sensible things. Ibn Sīnā had already availed himself of this *a priori* datum, which he had great difficulty in integrating with his psychology—which bears the stamp of Peripaticism—while Abu 'l-Barakāt is led by it towards other psychological verities, equally guaranteed and authenticated by their self-evident character. For instance, the valid consciousness that man has of being one—the same when he sees and hears, thinks, remembers or desires, or accomplishes any other psychical act—is sufficient in the view of Abu 'l-Barakāt to refute the various theories postulating a multiplicity of the faculties of the soul. Another example: the certainty that one has of perceiving, in the act of seeing, the very object that one sees, and at the place where it really is—and not an image, that according to certain hypotheses is situated inside the brain—this certainty proves by itself the truth of the impressions that it guarantees. We have, then, a psychology that consists, partly, of a system of self-evident truths, and is dominated up to a certain point by the notion of consciousness or apperception (*shu'ūr*, a term used in a similar sense by Ibn Sīnā). It denies the distinction established by the Aristotelian doctrine between intellect and soul. In fact, according to Abu 'l-Barakāt, it is the soul which accomplishes the so-called acts of intellecution—a concept which he criticizes. Similarly, he denies the existence of the active intellect postulated by the peripatetics.

Platonic or Plotinian influences—which are, to be sure, in harmony with the personal intimations of Abu 'l-Barakāt—appear perhaps in the definition of the soul as an incorporeal substance acting in and by the body. Immateriality is taken by Abu 'l-Barakāt in a very strict sense, which was not current at all; so for instance in the theory of memory. The human souls are caused, in the view of Abu 'l-Barakāt, by the stellar ones, and return, after death, to their causes.

The knowledge of God, cause of causes, comes at the end of the knowledge of existing things and that of being perceived by an *a priori* knowledge, which divides being into necessary and contingent. On the other hand, the wisdom manifested in the order of nature proves the existence of a Creator. Last not least there are ways of direct communication between God and men. Abu 'l-Barakāt, following in this point the Avicennian tradition, does not admit the proof for the existence of God based on movement.

He holds that the essential attributes of God, such as knowledge, power and wisdom, belong to His essence in the same way as having three angles equal to two right angles belongs to the essence of a triangle.

In his view God may have manifold knowledge, also about particulars. In order to refute arguments to the contrary, he refers to his psychological doctrine, where he proves that the forms of the things perceived, stored up in the human soul, are immaterial, like the entity that has perceived them.
In this way divine knowledge appears as being up to a point analogous to human knowledge.

Rejecting the theory of emanation held by the philosophers, Abu 'l-Barakât thinks that things have been created by a succession of divine volitions, either pre-eternal or coming into being in time. The first of these volitions, an attribute of the divine essence, created the first thing in existence, viz. according to religious terminology, the highest of the angels.

The personalism of the conception of God in Abu 'l-Barakât sometimes relates it to the doctrines of the kalâm. Nevertheless, this does not necessarily justify the conclusion that the kalâm has influenced his thought.

So far as the problem of the eternity of the world is concerned, Abu 'l-Barakât, having confronted the theses of those who affirm it and those that deny it, does not explicitly state his own conclusions, but hints that one who has understood his exposé of the question will not fail to find the correct answer. It seems, in summing up the discussion, that the true solution is, in the view of Abu'1-Barakât, that which asserts the eternity of the world.

Abu 'l-Barakât whose authority was invoked by a Jewish scholar of 'Irâk, Samuel b. 'Eli, in his polemic against Maimonides, had as his partisans amongst the Muslims 'Abd Allah b. Râ'înî, Khâlid b. Sâdiq b. Sân'ânî, and the Tâbilli, the junior to the last. The influence of Abu 'l-Barakât over a personage of the first order, Fâhûr al-Dîn al-Râ'îzî, seems to have been decisive. It is manifest especially in al-Mabâthî b. al-Maghârîyya, a capital work of Fâhûr al-Dîn, and was of great historical importance. In fact, the observation of the Shi'ite Muh. b. Sulaymân al-Tanakabûnî, a Persian author of the 15th cent., who says, in substance, that the tradition of Ibn Sînâ had almost succumbed under the attacks of Abu 'l-Barakât and Fâhûr al-Dîn, before being re-established by Naṣr al-Dîn al-Ṭûsî (Kishâr al-'Ulâmîd, lih. 1304, 278), refers to a crisis in Islamic philosophical speculation, a crisis originated by Abu ‘l-Barakât, the memory of which remained alive among the Iranian students of Ibn Sînâ.

(S. Pines)

ABû BAYHÂS AL-HAYMÂN B. DÄHIR, KH SHAHID, of the Banû Sa’d b. Dubay’î. In order to escape from the persecution of al-Hâdîkhârî, he fled to Medina, but was arrested by the governor, Uhmân b. Hâyyahoph, Abu ‘l-Baghdâdî executed (94/713). He gave his name to the Bayhasiya, one of the Khâhordjîte sects, which occupied an intermediate position between the strict Azrâkîs and the milder Şurîs and İbâdîs. The Bayhasîs, though admitting that Muslims of different opinion from their own were unbelievers, considered it permissible to live amongst them, to intermarry with them and to inherit from them. Their tenets again diverged, so that they branched off into various subdivisions.

ABû BILâL [see MIRJâD B. UDAVYA].

ABû BURDÀ [see AL-ṢAMâRâIL].

ABû DAHMÂL AL-DJUMâHÎ, WAHô B. ZAM’À, Kurayshîte poet of Mecca, who started to compose poetry before 40/660 and died after 96/715. He is included among the erotic poets of the Hijrî by his poems devoted to three women: ‘Amra, of a noble Meccan family, a Syrian woman who led him into a breach with his family, and especially ‘Aïkâ, daughter of Mu’âwiya, whom he first saw during a pilgrimage. His verses, soon becoming famous, attracted the attention of the princess, whom he followed to Damascus, but the caliph, though recognizing the chaste character of Abû Dha’bal’s relations with his daughter, took umbrage and sent the poet away.

Abû Dahr’al is not, however, an exclusively erotic poet, as an important part of his work is devoted to panegyrics on Ibn al-’Azrâk, governor of al-Djand in Yaman, appointed by ‘Abî Allâh b. al-Zubayr, and ’Ummârah b. ‘Amr, governor of Hadramawt. The incident with Mu’âwiya seems to have turned him away from the Umayyads and made him a partisan of the anti-caliph; the Aghâhî even quotes some verses alluding to the murder of al-Husayn b. ‘All.

Bibliography: Brockelmann, S, 1-80 and the references given there; to the fundamental article in the Aghâhî, vi, 154-70 should be added al-Murzubanî, al-Muwashshah, 70, 189; idem, Mu’jam 117, 342; Nâlînî, Scrisitî, vi, 55; O. Rescher, Abriss, 1, 144-5; and especially the sources quoted by F. Krenkow, JRA SI, 1910, 107-75, who has collected the verses of the poet. (Cn. PELLAT)

ABû DÂMDAM, the heir of a stock of anecdotes, cited already in the 10th century. All kinds of foolish remarks are attributed to him, and more particularly comical decisions on questions of law, similar to those later attributed to Karâkûş. This Abû Dâmam is probably identical with the devotee who, before or during the lifetime of Muḥammad, offered up his good name in place of the poor tax to the servants of God; for this express sacrifice of the respect of his fellowmen may easily be interpreted as a permission or invitation to expose the devotee as the typical figure of foolishness. To one bearer of the same name there is ascribed an extraordinary knowledge of the ancient poetry, but there is no means of deciding whether this is the same personage.

as 'Amir instead of Uwaymir, and for his father's name instead of Zayd we find variously 'Amir, 'Abd Allah, Malik or Tha'laba, while some give him the nisba al-Rahānī. He was a younger contemporary of Muhammad who is generally listed among the Companions (Sahabā) though some sources raise doubts as to the legitimacy of this. He did not become a Muslim till after the battle of Badr and it is noted that he was the last of his family to become a convert to Islam. Some list him among the people of Medina he was the "brother" chosen for Salmān al-Fārisī. A certain number of traditions are reported on his authority and are given in the Dākhā'īr al-Mawāridh, iii, 158-62. The Sūfis claimed him as one of the aḥā al-sulṭānī [q.v.], quoting a number of sayings of an ascetic or pietistic character from him, which is probably the reason why in the biographical dictionaries he is called a šāhid and one to whom 'īmām was given. These sources also say that he became known as the sage (hakim) of the early Muslim community. He is reported as having said that before Islam he was a merchant, and after his conversion found that business life interfered with strict attention to cult duties (dīwān) so he gave up business. His great reputation, however, was as an authority on the Kurān. He is listed as one of the few who collected (dāmā'a) revelations during the Prophet's lifetime, and a small number of variant readings from him is recorded in the kaidāl books. During his stay in Damascus, where he was sent to serve as a kādi, he made it a practice to gather to the mosque groups to whom he taught the Kurān, thus becoming the true father of the Damascus School later headed by Ibn 'Amīr [q.v.]. He died at Damascus in 32/652, or thereabouts, his tomb and that of his wife Umm al-Dārḍā being shown near one of the gates.

**ABŪ ḌĀ'UD AL-SIDJĪŠĀNI, SULAYMĀN B. AL-AS'UṬAṬI, a traditionist;** born in 202/817. He travelled widely in pursuit of his studies and gained a high reputation for his knowledge and piety. Eventually he settled at Basra, which is no doubt why some wrongly held that the nisba Sidjīšānī comes from a village near Basra called Sidjīšān (or Sidjīšānā), and not from the province of that name. He died in 322/935/Febr. 889.

Abū Dā'ūd's principal work is his Kitāb al-Sunan, which is one of the six canonical books of Tradition accepted by Sunni. He is said to have submitted it to Ahmad b. Hanbal who gave it his approval. Ibn Dāsa says Abū Dā'ūd declared that he collected this work of 4800 traditions from a mass of 500,000, and that it contains sound traditions, those which seem to be so, and those which are nearly so. He also said, "I have made clear the traditions in this book of mine which contain great weakness, and those about which I have said nothing are good (ṣīh), some being sounder than others". This refers to the notes which he often adds to his traditions to express his opinion on the value to be attributed to them. Muslim has an introduction to his Sahih which in which he discusses some general questions of criticism; but Abū Dā'ūd is the first to give such detailed notes, paving the way for the more systematic criticism of individual traditions given by his pupil al-Tirmīdī in his collection. Abū Dā'ūd quotes men not found in the two Sahīhs, his principle being that transmitters are counted trustworthy provided there is no formal proof to discount them. His work which has the generic title of Sunan, dealing mainly with matters ordained, or allowed, or forbidden by law, received high praise. For example, Abū Sa'id b. al-Arābī said that anyone who knew nothing but the Kurān and this book would have sufficient knowledge; and Muhammad b. Maqiṣīd said that the traditionists accepted it without question just as they accepted the Kurān. But one is surprised to find that, although many men in the fourth century praised it highly, no mention of it is made in the Fīrīṣt. Indeed, Abū Dā'ūd is merely mentioned there as the father of his son. People of later times have expressed some criticisms. Al-Munṣūri, for example, who produced a summary of it, called al-Mugaddab, criticized some of the traditions not supplied with notes, and Ibn al-Diāwūzīya added further criticisms. But while faults have been found with the work, it still holds an honoured place. The Sunan was transmitted through several lines, some versions being said to contain material not found in others. Al-Luḥūlī's version is the one which has gained most favour. A number of editions of the Sunan have been printed in the East (see Brockelmann). A small collection of mursal traditions by Abū Dā'ūd, entitled Kitāb al-Mardīš, was published in Cairo in 1310/1892.

**Biography:**

(Š. ROBSON)

**ABŪ DHARR AL-SHÂṢÂRI, a Companion of Muhammad.** His name is commonly given as Djuundub b. Dujāda, but other names are also mentioned. He is said to have worshipped one God before his conversion. When news of Muhammad reached him he sent his brother to Mecca to make enquiries, and being dissatisfied with his report, he went himself. One story says he met Muhammad with Abū Bakr at the Ka'ba, another that 'All took him secretly to Muhammad. He immediately believed, and is surprisingly claimed to have been the fifth (even the fourth) believer. He was sent home, where he stayed till he went to Medina after the battle of the Ditch (5/627). Later he lived in Syria till he was recalled by 'Uṯmān because of a complaint against him by Muṣ̣āwiya. He retired, or was sent, to al-Rabadha, where he died in 32/652-3, or 31. He was noted for humility and asceticism, in which respect he is said to have resembled Jesus. He was very religious and eager for knowledge, and is said to have matched Ibn Mas'ūd in religious learning. He is credited with 281 traditions, of which al-Bukhārī and Muslim rendered 31 between them.

**Biography:**
Ibn Kutayba, Ma'ārifs (Wustenfeld), 130; Ya'kūbī, ii, 138; al-Mas'ūdī, Murādi, iv, 268-74; Ibn 'Abd al-Barr, Istārīj, Haydarābād
ABU DHUWAYB AL-HUDHALI, Khuwaylid

B. KHALID, Arabian poet, a younger contemporary
of Ibn Abi Sarh, and as such the poetical school
of Medina. Like his master
Abu Dhu'ayb was not "nadjdi" and did not follow the poetical
tradition. Moreover, al-Asmaci accuses Khalaf al-

[Text continues with detailed information about Abu Dhu'ayb's life and contributions to poetry, including his style, influence, and the poetical tradition he represents.]

ABU DU'AD AL-YYADI, Dhuyayrya, Dhuyayryya of Haritha b. al-Huwayri b. al-Huwayriyya (or again Hanzala b. al-Shakir, which was more probably, however, the name of Abu l-Tamahān al-Kaymi, see Shīr, 229), pre-Islamic poet of the Era, contemporary of al-Mundhir b. Mā' al-Sāmā' (about 506-544 A.D.), who put him in the charge of his horses. The expression dāījāh ḥa'dā' Abū Du'ād, which appears in
line of Khayyār B. Zuhayr and has become proverbial,
gave rise to several traditions showing Abū Du'ād as
the "protégé" of a noble and generous dāījā, who is either al-Mundhir, al-Harīth b. Ḥammām or Ka' b b. Māma.

As poet, Abū Du'ād is famous for his description of horses, and in this genre some critics consider him superior to Šafyāl al-Charnawī and al-Nahgha al-Djahl. Nevertheless, the lexicographers have not collected his poems systematically, and the yid did not collect those of 'Adi b. Zayd, because his language was not "nadjdi" and he did not follow the poetical tradition. Moreover, al-Amsā' accuses Khalaf al-
Amar of having attributed to Abu Du'ad forty kasidas composed by himself (al-Marzubani, Muwaddak, 73). 

Bibliography: Brockelmann, S I, 58; Caussin de Perceval, Essai sur l’Histoire des Arabes, ii, 110-3, putting together the traditions; the fundamental article is that of the Aghānī, xv, 95-9; see also Ibn Kutayba, Shīr, 120-3; Maydānī, Amīdī, Cairo 1932, i, 49, 170 (in reference to dhūr kāḏūr A. D. and anā al-magḥīr al-‘uraydān); Marzuban, Muwaddak, 73-4, 86; idem, Muwadda, 115; Ibn Durayd, Iṣba’d, 104; Yaḥkūbī, i, 259-306; W. Ahlwardt, Sammlungen, i, 8-9; O. His travels in Persia hint at the years 331-341/943-952. 

On the contrary, the second risāla, describing Abū Dulaf’s journey in more easily controllable regions (western and northern Persia, Armenia) gives a clear itinerary and contains a number of interesting details which can be verified.

(Ch. Fellay)

Abū Dulāmā, Zand b. al-Djawn, a black slave, client of the Banū Asad of Kūfah. He is already mentioned in the history of the last Umayyad caliph, but appears as a “poet” only under the ‘ABBāsīs and plays the part of a court jester in the palace of al-Saffāh and especially in those of al-Manṣūr and al-Mahdī. His poem on the death of Abu Muslim (137/754-5) is said to have been the first of his works to make him a name. Examples of his poetry show him to have been a clever, witty versificator, who readily seizes upon low expressions and displays all sorts of filth with cynical joy; but he does not despise the most insidiously folsome praise when this form of mendicancy promises some reward. He laughs at the praise of the crowd and his spiteful tongue is feared by all. It is true he did not spare himself and still less his nearest relations; he would even occasionally revenge himself for the coarse jokes which the magnates played on him when one of his patrons was pleased to ridicule another through him. He also enjoyed the jester’s liberty of being above the Islamic laws and could make them the butt of his insolent mockery. He has given proverbial fame to his mule, which possessed all possible defects and to which he dedicated a witty kasīda. Abū Dulīmā embodied a popular type of crude and unrestrained comicality; hence the historicity of some of the anecdotes that are told both of him and of Abū Nuwās is somewhat doubtful.

Statements as to the date of his death vary: according to some he died in 160/776-7, according to others in 170/786-7; the first of these dates being the more likely.

ABU 'L-DUNYA — ABU 'L-FADL ALLAMI

ABU 'L-DUNYA, ABU 'L-HASAN ALI B. UTHMAN B. AL-KHATTAB (or 'Uthman b. al-Kh.), one of those to whom preternatural longevity has been ascribed (mu'ammarun, q.v.); he is also called al-Mu'ammarr al-Maghribi or al-Ashadjdi al-Mu'ammar. He is said to have been born about 600 A.D. and to have died in 1097/22 Aug. 1602. His head was severed and sent to Sallm, at whose instance the crime had been committed, while the body was buried at Antari (near Gwalior). The news came as a shock to the Caliph, who had made a scar on his face (al-Ashadjdi = the scarred one). After the death of the caliph, he went to Tangier. He returned at the beginning of the 4th/10th century, to fulfil the pilgrimage and to relate traditions which he claimed to have heard from the mouth of 'Ali. The information about him relates traditions which he claimed to have heard from his father, and owed his profound scholarship to his study of religious sciences, Greek thought and the second son of Shaykh 'Abd al-Mu'ammar al-Maghribi or al-Ashadjdi al-Mu'ammar. He is said to have been born about 600 A.D. and to have died in 316/928, 327/938-9.

ABU 'L-FADL, (Fazl) ALLAMI (Shaykh), author, liberal thinker, and informal secretary of the emperor Akbar, was the younger brother of the poet Fayd (q.v.); and the grandson of Shaykh 'Amr al-Mu'mmar, who was buried at Antari (near Gwalior). The news came as a shock to the Caliph, who had made a scar on his face (al-Ashadjdi = the scarred one). After the death of the caliph, he went to Tangier. He returned at the beginning of the 4th/10th century, to fulfil the pilgrimage and to relate traditions which he claimed to have heard from the mouth of 'Ali. The information about him relates traditions which he claimed to have heard from his father, and owed his profound scholarship to his study of religious sciences, Greek thought and the second son of Shaykh 'Abd al-Mu'ammar al-Maghribi or al-Ashadjdi al-Mu'ammar. He is said to have been born about 600 A.D. and to have died in 316/928, 327/938-9.

In political affairs, Abu 'l-Fadl sought to emphasise the divine character of Akbar's kingship. Royalty, he claimed, was light emanating from God (farr-i-fadl), communicated to kings without the intermediate assistance of any one. Though the existence of kings was necessary at all times, it was only after many ages that there appeared, by divine blessing, a monarch who could not only rely effectively but also guide the world spiritually. Since Akbar could ensure the material as well as the spiritual well-being of his subjects, he could be truly regarded as the "Perfect Man" (insan-i-kamil). It was the duty of all to give Akbar complete loyalty and to seek his spiritual guidance by becoming his disciples. The chosen among the disciples would be those who attained the "four degrees of devotion" (chahar martsaba-i-ikhlas), i.e. preparedness to place at Akbar's disposal their property, life, honour and faith.

Though Abu'l-Fadl's religio-political views earned him the enmity of the ulama', the policy of religious toleration which he helped Akbar in evolving, the non-denominational yet spiritual character of obedience to the Emperor which he advocated, his justification of ethical grounds of every imperial action, and his persistent efforts to inculcate, especially among the nobles, a sense of mystical loyalty to Akbar, contributed greatly to the political consolidation of the Mughal Empire. In spite of Abu'l-Fadl's immense influence over Akbar and the numerous duties which he performed at Court (especially in drafting letters to nobles and foreign potentates), his progress in the official hierarchy was slow. It was only in 1585 that he was promoted to the mansab of 1000, which was doubled in 1592. Six years later it was raised to 2500. Except when he was associated, for a short time in 1586, with Shah Kull Khan Mahram in the joint-government of Delhi, Abu'l-Fadl never held any office until 1599, when he was posted to the Deccan, at the instance of hostile elements at the Court. He distinguished himself there as an able administrator and military commander. In recognition of his services, he was promoted, in 1600, to the rank of 4000, and two years later, to that of 5000. The same year he was hastily summoned to the Court when Akbar's son Sallm (afterwards the Emperor Jahangir) rebelled. On his way back, he was waylaid and assassinated by Râdja BÌr Singh Deva, the disaffected Bundela chieftain of Orchha, on 4 RaÌy I 1011/22 Aug. 1602. His head was severed and sent to Sallm, at whose instance the crime had been committed, while the body was buried at Antari (near Gwalior). The news came as
A great shock to Akbar, who mourned the loss deeply and never forgave Salim for instigating the murder. Abu'l-Fadl was survived by his son, 'Abd al-Rahmân Afdal Khan (d. 1613), who rose to be governor of Bihâr.

Abu'l-Fadl's principal title to fame as an author rests upon his monumental work, Akbar Nâma, a history of Akbar (down to the 46th regnal year) and of his ancestors, compiled in three daftars (first two daftars published in Bibl. Ind. 3 vols.). The third daftar, Al-in-i-Akbari (Bibl. Ind., 3 vols.), dealing with Imperial regulations and containing detailed information on Indian geography, administration and social and religious life, was the first work of its kind in India. Abu'l-Fadl's compositions, characterised by an individual literary style, served as a model for many generations, though none was able to imitate him successfully. His numerous works include a Persian translation of the Bible; 1^{	ext{st}}-Dânîk (a recension of Amwâr-i-Suhaîlî); prefaces to Târikh-i-Alî (unfortunately lost), to the Persian translation of Mahâkâhârâta, and to many other works; and a Mâjudâjîd (ed. by Rizvi, Medieval India Quarterly, Aligarh, i/iii). His letters, prefaces and other compositions were compiled by his nephew under the title Inshâ-i-Abu'l-Fadl (3 vols.). Another collection of his private letters is entitled Rukâlî-i-Abu'l-Fadl.

Bibliography: Autobiographical accounts: Al-in-i-Akbari, iii (at end); Inshâ-i-Abu'l-Fadl, iii. Biographies: Ma'dâ'isr al-Umarî (Bibl. Ind.), ii, 606-22; Elliot and Dowson, vi, 1 ff.; Blochman, Introduction to his translation of Al-in-i-Akbari; Storey, ii/3, 541-51 (detailed references on 551). (Nurul Hasan)

other singers, such as MaBâf and Ibn Surayjî, and

ABU 'L-FADL 'IYÄD [see iyyâd].

ABU 'L-FARADJ [see RABBAGHA]; IBN AL-DRAWZ; IBN AL-‘IYR; IBN AL-NADIM.

ABU 'L-FARADJ AL-ISBAHANI (or AL-ISPAHANI), 1^{	ext{st}} B. I. A-BUSAYN B. MUH. B. AHMAD AL-KURAYSHI, Arab historian, litterateur and poet. He was born in 284/897 in Isfahan (whence his nishâba), in Persia, but was of pure Arab race, a descendant of Kuraysh, or, to be more exact, of the Marwânî branch of the Umayyads. In spite of this, he was a Shi‘îte. He studied in Baghdad, where he passed the greater part of his life, protected by the Bâyâdis, especially by the vizier al-Muhallabî. He found also a warm welcome in Aleppo at the court of the Hâmidî prince Sayyâf al-Dawla. He died in Baghdad on 14 Dhu'l-Hijjâda 356/20 Nov. 967. His main book, on which he worked according to his own testimony for fifty years, is the Kitâb al-Aghdên ("Book of Songs"). In it the author collected the songs that had been chosen, by order of the caliph Hârûn al-Rashîd, by the famous musicians Ibârîm al-Mawîsî, Ismâ'îl b. Dâmîn and Fulayh b. al-Awra, and later revised by Ismâ'îl b. Ibârîm al-Mawîsî; he added songs by other singers such as MaBâf and Ibn Surayjî and by caliphs and their descendants; for each song he indicated its melody. This is, however, but the least part of his work, as Abu'l-Faradj added rich information about the poets who were the authors of the songs, giving an account of their life and quoting many of their verses, as well as about the composers of the melodies.

Furthermore, he gives many details about the ancient Arab tribes, their ayyâm, their social life, the court life of the Umayyads, society at the time of the 'Abbâsid caliphs, especially of Hârûn al-Rashîd, the milieu of musicians and singers. In one word, in the Aghdên we pass in review the whole of Arabic civilization from the dijâhîyya down to the end of the 3rd/9th century. The author even does another service: following the method of the Arab writers, he quotes long passages from earlier writers, whose works have not come down to us. His book is thus a source also for the development of Arabic style.

Another work of Abu'l-Faradj that has come down to us is Makâli al-Tablîyîn wa-Itkharruh, a historical work composed in 353/967. It contains biographies of the descendants of Abû Tâlib (from Djaîf b. Abî Tâlib to the seventy who died under the reign of al-Muktadir, 295-320/908-32) who in some way lost their lives for political reasons, including those who died in prison or in hiding. This book was published in lithography, Teheran 1907 and in print, Nâdiri 1355. The Bombay edition (1311) on the margin of Fâhîr al-Dîn al-Nâdirî, Muntakhab fi 'l-Ma‘râthî wa 'l-Khutab, contains the first half only.

Among those books that are lost should be mentioned books on genealogy and a Kitâb Ayyâm al-'Arab, where 1700 "days" were mentioned. Abu'l-Faradj also edited the Awdhûn of Abu Tammâm, al-Buhturî and Abu Nuwas.

Bibliography: Ibn Khallîkân, no. 351; Yâkût, Irshâd, v. 149-68; al-Khâtib al-Baghdâdi, TaRîih Baghdadî, xi, 398-400; Brockelmann, i, 146, S i, 225-6. A good biography, quoting his poetry and containing information about the Aghdên, in Aghdên, preface, i, 15-37 (the information about the Muhallabî is to be corrected). For MSS of the Aghdên see H. Ritter, in Oriens, 1949, 276 ff.; for miniatures illustrating it, D. S. Rice, in Burlington Magazine, 1953, 128 ff. (M. Nallino)

ABU 'L-FATH [see IBN AL-‘AMID; IBN AL-FURât; AL-MUZAFFAR].

ABU 'L-FIDA, ISMÄ‘IL B. (AL-APDA), 2^{	ext{nd}} B. (AL-MUZAFFAR) MAHMûD B. (AL-MANfSM) MUHAMMAD B. TAKî AL-DîN UMAK B. SHÂHÂNSHÀH B. AYYÔB, AL-MALIK AL-MU‘AYYAD IMÂD AL-DÎN, SYRIAN prince, historian, and geographer, of the family of the Ayyûbîds [q.v.], born in Damascus, Dijm. i, 672/Nov. 1273. At the age of 12, in the company of his father and his cousin al-Muzaffar Mahmûd II, prince of Hamâh, he was present at the siege and capture of Markh (Margat) (684/1285). He took part also in the later campaigns against the Crusaders. On the suppression of the Ayyûbid principality of Hamâh in 698/1299, he remained in the service of its Mamlûk governors, at the same time ingratiating himself with the Mamlûk sultan al-Malik al-Nâsir [q.v.] Muhammad b. Kâlûn. After several vain attempts to obtain the government of Hamâh, he was finally appointed on 18 Dijm. i, 710/14 Oct. 1310, at the instance of the "king of the Arabs", Muhammân, shaikh of Al Fadl. In 712/1312 his government was converted to a life principality, but two years later he, with the other governors,
was made directly subordinate to the governor of Damascus, Tankiz, with whom his relations were for a time strained. In the following years he strengthened his position by lavish patronage and generosity, especially on the occasion of his visits to Egypt. In 719/1319-20 he accompanied sultan Muhammad on pilgrimage to Mecca, and on their return to Cairo he was publicly invested with the insignia of the sultanate and the title of al-Malik al-Mu'ayyad (17 Muh. 720/28 Feb. 1320), and given precedence over all the governors in Syria. He continued to enjoy the great reputation which he had acquired as patron and man of letters, as well as the friendship of the sultan, until his death at Hamah on 23 Muh. 732/27 Oct. 1331. With the support of Tankiz, his son al-Afdal Muhammad was nominated as his successor, and was also granted the insignia of the sultanate. (For his grave, cf. ZDMG, laxi, 657-60; lxiii, 329-33, 853 ff.; Bull. d'Estudes Orient., 1931, 149).

The Arabic biographical notices furnish several specimens of his poetical productions, which included a versification of the juristic work al-Iidwl of al-Mawardi [q.v.]. Of various other writings on religious and literary subjects almost all have perished. His reputation rests on two works, both largely compilations, but rearranged and supplemented by himself. The Mukhtasar ta'rikh al-bashar, a universal history covering the pre-Islamic period and Islamic history down to 729/1329, is in its earlier part based mainly on Ibn al-Athir. Its contemporary popularity is shown by the continuations to it written by Ibn al-Wardi [q.v.], Ibn Habib al-Dimashki, and Ibn al-Shihna al-Halabi [q.v.]. It was a major source of eighteenth-century orientalism, through the editions of J. Gagnier, De vida ... Mohammedis (Oxford 1723) and J. J. Reiske-J. G. Chr. Adler, Annales Moslemici (Leipzig 1754 and Copenhagen 1789-94). The complete text was first published in Istanbul (2 vols., 1286/1869-70).

The Tabwin al-Buladn, a descriptive geography supplemented by physical and mathematical data in tabular form (derived mainly from the Arabic translation of Ptolemy, the tenth-century K. al-masid, al-Biruni and Ibn Sa'd b. Maqrizi [q.v.]), these divergences being completed in 721/1321, largely replaced all earlier geographical works. It is extensively quoted by al-Kalakshandi [q.v.], and several later abridgements were made, including one in Turkish by Muh. b. 'Ali Sipahiзаде (d. 997/1589). Individual sections were edited and translated by European scholars from the seventeenth century (John Greaves, London 1650; J. B. Koehler, Leipzig 1766; etc.). The entire work was edited by J. T. Reinaud and MacGuckin de Slane (Paris 1840) and translated by Reinaud (Paris 1848) and Stanislas Guyard (Paris 1883), the first volume of the translation consisting of a classic survey entitled Introduction générale à la géographie des Orientaux. The judgments of scholars on Abu 'l-Fida's geography have differed widely, from "a rather poor compilation of earlier sources" (J. H. Kramers, in Legacy of Islam, Oxford 1931, 91; cf. C. E. Dubler, Abû Hâmid el Granadino, Madrid 1953, 182) to G. Sarton (see Bibli.), for whom Abu'l-Fidâ is "the greatest geographer of his age". See also the art. DURAR.

**Bibliography:** Autobiography (extracted from the History), trans. de Slane, in Reueil des Historiens des Croisades, i, 156-182 (see also Appendice 744-51); Dhahabi, Ta'rikh al-Islam, Suppl., Leiden MS. 755; Kutubî, Fawâd (Cairo 1951), i, 70; Ibn Hadjar, al-Durar al-kâmina, Hyderabad 1348, i, 371-3; Subki, Taḥâbî al-Muhfîz, vi, 84-5; Ibn Taghribirdî, Cairo, ix, 10, 23, 24, 39, 46-7, 64-5, 94, 100-101, 193, 204 (largely reproduced in Mägriß, Sudah, i, Cairo 1941, 87, 89, 90, 137, 142, 166, 196, 202, 238); idem, Les Biographies du Manhal Şâfi (G. (ABU 'FIRAS)
ABU FIRAŚ — ABU ’L-ĞHAZI BAHĀDUR KHĀN

His *dīwān* was edited with a commentary (largely from the poet himself) shortly after his death by his tutor and biographer, the grammarian Ibn Khāhawayh (d. 370/980). The manuscripts present, however, so many variations in text and arrangement that other recensions must also have been circulated, including probably that of al-Babbagha (d. 398/1008: see Tanūkhi, *Bibl.*). All the earlier defective editions (Bayrūt 1873, 1900, 1910) are superseded by the critical edition of S. Dahhan (3 vols., Bayrūt 1944), with full bibliography.

**ABŪ FUDAYK** ‘ABD ALLĀH B. THĀ’AWI, a Khāridji agitation, of the Banū Kays b. Thā’abā. Originally associated with Nāfiʾ b. al-Azraq [q.v.], he left him to join Nāḏīb b. ‘Amīr [q.v.], whom he did not hesitate to murder, because of certain differences of opinion between them.

After this murder he gained control over Bahrayn (72/691) and succeeded in withstanding the attack of an army from Basra sent against him by ‘Abd al-Malik. Shortly afterwards (73/693) a second expedition, consisting of 10,000 men from Basra and commanded by ‘Umar b. ‘Ubayd Allāh b. Ma’mar succeeded in defeating and killing him.

**ABU FUTRUS** [see NABH ABUTRUS]

**ABU ’L-FUTRūH HASAN** [see MĀKKA]

**ABU ’L-FUTRūH AL-RĀZĪ**. Persian commentator of the Kurān. He lived between 480/1087 and 525/1131, fixed by conjecture. Among his disciples are the famous Shī’ī theologians Ibn Shahrābūbūb and Ibn Bībīyya [q.v.], who describes him as a scholar, preacher, commentator of the Kurān and a pious man. According to al-Shughrārī (Maḏḏalīs al-Muʿminīn) he was a contemporary of al-Zamānī and a pious man. According to al-Shughrārī (Maḏḏalīs al-Muʿminīn) he was a contemporary of al-Zamānī and a pious man. According to al-Shughrārī (Maḏḏalīs al-Muʿminīn) he was a contemporary of al-Zamānī and a pious man. According to al-Shughrārī (Maḏḏalīs al-Muʿminīn) he was a contemporary of al-Zamānī and a pious man. According to al-Shughrārī (Maḏḏalīs al-Muʿminīn) he was a contemporary of al-Zamānī and a pious man. According to al-Shughrārī (Maḏḏalīs al-Muʿminīn) he was a contemporary of al-Zamānī and a pious man. According to al-Shughrārī (Maḏḏalīs al-Muʿminīn) he was a contemporary of al-Zamānī and a pious man. According to al-Shughrārī (Maḏḏalīs al-Muʿminīn) he was a contemporary of al-Zamānī and a pious man. He had been a companion of ‘Ābed al-Wahhāb (168-208/784-823) at Taharīt, to offer him his book *Mudawwana*, he stayed with the Ibāḍī *shaykh*. Abū Haṣīm Amrūs b. Ṭahāf, of Djabal Nāfusa, who rendered a service to Ibāḍī literature by conserving in the Maghrib a copy of the work.

The *Mudawwana* of Abū Ǧānim is the oldest Ibāḍī treatise on general jurisprudence, according to the teaching of Abū ’Ubayda Muslim al-Tanmī (d. under al-Mansūr, 136-55/754-75; cf. ‘ĪBĀDIYYA) as transmitted by his disciples. The manuscript of the *Mudawwana*, copied by ‘Amrūs b. Fath, was composed of twelve parts; the titles are given in the catalogue of Ibāḍī books compiled by Abū ’l-Kāsim al-Barrādī (6th/9th century). The work has become very rare; according to information received from S. Smogorzewski, a unique manuscript was in the possession of an Ibāḍī *shaykh* in Kaukāsa (Mzāb). Al-Barrādī’s catalogue also quotes another law book by Abū Ḥānim.

**ABU ’L-ĞHAZI BAHĀDUR KHĀN**, ruler of Khiwa and Caghātāy historian, born probably on 16 Rabīʿ 3, 1012/24 Aug., 1603, son of ‘Arab Muhammad Khān, of the Ōzbek dynasty of the Shyābānīdīs [q.v.], and of a princess of the same family. He spent his youth in Urgaṇç (at that time largely depopulated owing to the change of course of the Oxus), at the court of his father, who was khān of this place. In 1029-1619 he was appointed to be his father’s lieutenant in Kāṯ, but when his father was killed soon afterwards in a rebellion of two of his other sons, had to take refuge at Samarkand with Imam-kuli Khān. After long fighting he, together with his brother Isfandiyar, succeeded inousting the rebellious brothers, with the aid of some Turkmen tribes. In 1023-1623 he became lieutenant of his brother in Urgaṇç, but quarrelled with him, in connection with Turkmen tribal feuds, in 1036-1626 and had to flee to Tāshkent, where he lived for two years at the Kazakh court. After another attempt to seize the throne in Khiwa, he spent ten years (from 1039/1629) as an exile at the court of the Ṣalaḥwīds, mostly at Isfahān. Here he widened his knowledge of the past of his people, acquired at the Kazakh court, by the study of Persian sources. By the evidence of his translation, he knew Persian and Arabic well. After his flight from Persia he perfected his knowledge at the Kalmūk court, by collecting Mongol traditions.

It was only after the death of Isfandiyār (1052/ 1642) that Abū ’l-Ḡāzi became (in 1054/1644-5) khān of Khiwa. As khān, he maintained diplomatic relations with all his neighbours, including Russia, interrupted by repeated wars. Expeditions against the Turkmen in 1054/1644, 1056/1646, 1058/1648, 1062/1651 and 1064/1653, led finally to the submission of some of these tribes in Kara-Kum and

**Bibliography:** Storey, section 1, p. 6; H. Massé, in *Melanges W. Marçais*, Paris 1950, 243 ff. (H. Massé)
Manghīshlak. He was engaged also against the Kalmuks in 1066/1655 and 1073/1662. Occasionally he allowed Russian caravans passing through his territory to be plundered, but had, in the interests of his own trade if for no other reasons, to pay compensation. For the rest, he endeavoured to further the welfare of his country and to promote scholarship. The military turn in his life seems to have left him himself, according to less partial sources, rather modest. He died in 1074/1663, shortly after he had abdicated in favour of his son.

Of his works we possess: 1) Šajēdīr-i Terā-hīne, composed in 1070/1659, mainly derived from Rashtdāl-Dīn and the Qhuzmāna, but with additions of independent value. The Caghātāy text was published in facsimile by the Türk Dāl Kurumu, Ankara 1937; there is a Russian translation by A. Tumanski, ʿAshkābād 1892. 2) Şahjāsarat al-Aṭrāk (Şajīdēr-i Türk), which he left unfinished at his death; the part from 1054/1644 was finished by his son Abu ʿlmużaffar Anuḫa Muhammad Bahādūr in 1076/1665. This work contains the history of the Shlaybānids from the middle of the 13th century, and is the main source for the dynasties up to 1074/1663, though written mostly "from memory", without direct use of sources, and widely defective for the earlier periods as well as in its chronology. The introduction, containing traditions about Cūghiz Kān and his immediate successors, is almost wholly legendary. Nevertheless, as the work became known in Europe at an early date, it remained for some time the main authority for the history of the Mongols. Two Swedes captured in the battle of Poltava (1709), Tabbert von Strahlenberg and Schenström, became acquainted with it in Siberia and, with the help of a Russian interpretation by an imām, prepared a German translation, on which is based the French edition of v. Bentinck, Histoire généalogique des Tartars, Leiden 1726. This was soon followed by a Russian and in 1780 by an English edition. The German original of 1716-7 was published by Messerschmidt, Göttinngen 1780, as Geschichtsbuch der mungalisch-mogulischen Chanen. Finally Ch. M. v. Frähn published a Latin translation, Kazan 1825. A critical use of the text was only made possible by the publication of the Caghātāy text, with a French translation, by J. J. P. Baron Desmaisons, Histoire des Mogols et des Talars, 1874, but this work in turn requires revision in the light of more recent studies.

ABŪ ḤAFṢ UMAR B. DĪJAMI, probably a native of the Dījāl Nafāsīa, mentioned in al-Shāmmakhī's K. al-Siyār (Cairo 1301, 561-2), in a short note that gives no chronological information, but from which it may be deduced that he lived at the end of the 8th/14th or the beginning of the 9th/15th century. He translated into Arabic the old ʿAḥida of the Ibāḍī of the Maghrib, originally composed in Berber. This translation was in use, at the time of al-Shāmmakhī (d. 928/1521-2), in the island of Djarba and in the other Ibāḍī communities of the Maghrib, excepting the Dījāl Nafāsīa. It is still the catechism of the Ibāḍī of the Ma#ab and of Djarba. The ʿAḥida of Abū Ḥafs was the subject of numerous commentaries: by al-Shāmmakhī (circulating in MSS); by Abū Sulaymān Dāʿūd b. ʿĪbrāhim al-Thalāṭī of Djarba (d. 697/1599-60) (see Exiga dit Kayser, Description et histoire de l'île de Djerba, Tunis 1884, 9-10 text, 9-10 transl.); and finally those by Umar b. Ramaḍān al-Thalāṭī (12th/18th century), autographed or printed after the ʿAḥida, in the editions of Algeria (e.g. Constantine) or Cairo.

The ʿAḥida of Abū Ḥafs was published and translated, with notes taken from the Ibāḍī commentaries, by A. de Motylinski, L' ʿAqīda des Abadithes, Recueil Mém. et Textes XIV* Congrès des Orientalistes, Algiers 1905, 505-45. (A. de Motylinski-T. Lewicki)

ABŪ ḤAFṢ UMAR B. SHUʿAYB AL-BALLŪTĪ, a native of Pedrero (Bitrawdj) in the Fāṣ al-Ballūt, a district to the north of Cordova, founder of a minor dynasty which ruled over the island of Crete (Irktīfīh [q.v.]) between 212/827 and 350/961, when his descendant Abū al-ʿAzīz b. Shuʿayb was dethroned and the island recaptured by the general and future Byzantine emperor, Nicephorus Phocas.

After the celebrated revolt of the Suburb which broke out in Cordova in 212/827 and was harshly suppressed by the amīr Ḥakam I (cf. UMAYYADS OF SPAIN), a group of Andalusians, several thousand in number, who had been expelled from the capital, decided to emigrate and try their luck in the Mediterranean. They succeeded in gaining a foothold in Egypt and occupied Alexandria for a few years. Besieged by the governor, Abū ʿAllāh b. Tāhir, they had to capitulate in 212/827 and then decided to attempt a landing in Creté. Under the leadership of their chief, Abū Ḥafs al-Ballūtī, they captured the island, which thus passed under Muslim domination. There is little information about the chronology of the dynasty founded by al-Ballūtī and the history of the island during that period. All that is known, thanks to Byzantine historians, who call Abū Ḥafs Apocapsa or Apoçapsa, is that all attempts by the Byzantines to recapture Crete were in vain. It was also in vain that in 225/840 the emperor Theophilius addressed himself to Abū al-Rahmān II [q.v.] to ask for the restitution of the island. During its Muslim occupation, Crete maintained economic and cultural relations with al-Andalus, and its capital, al-Khandāk (modern Candia), was quite a brilliant intellectual centre.

Abū Ḥaṣṭ Intī—on whom the “Memoirs” of al-Bayyāḥī (q.v.) are the most detailed source, whose information is most likely to be authentic—bore, in common with all his fellow-tribemen before the activity of the Almohade Mahdī, a Berber name, which appears to have been Faskat ʿū-Mzāl. Ibn Tūmart himself, after he had persuaded him to support his cause, gave him the name of Abū Ḥaṣṭ ʿUmar, in memory of the famous companion and lieutenant of the Prophet. Their first meeting, after the Mahdī’s return to his native mountains, can be placed in the year 514/1120-21; Abū Ḥaṣṭ, at this time, was apparently about 30 years old. From that time on, he was to make a remarkable career for himself, showing an extremely developed political sense, a more and more marked ascendant over the first Almohade caliph, his own “creator”, and enjoying the respect of all those who benefited under his protector and Maecenas, Abū Hafs, at the forefront of the historical scene of the Maghrib, al-Andalus and Ifriqiya. For details of his long political and military activities, see the articles Al-Muwaḥḥidūn and Muʾminīnāt.

Abū Hāmmū had a highly cultivated mind and 
sought the society of scholars and poets; he himself 
composed a treatise on political ethics. His secretary, 
imite friend and historian, was Yāḥyā b. Khayyām, 
who was assassinated in Ṭamaḏān 780/Dec. 1379, 
at the instigation of Abū Tāḥufīn.

**ABU HAMZA** [see _al-mugheṭār b. ’awf_].

**ABU HANIFA AL-NUMĀN** b. Ṭabīṣī, the 
teacher of law and religious lawyer, the eponym of 
the school of the Ḥanafīs [g.v.]. He died in 150/767 
at the age of 70, and was therefore born about the 
year 80/699. His grandfather Zūhī is said to have 
been brought as a slave from Kabul to Kūfā, and 
set free by a member of the Arabian tribe of Taŷm-
Allāh b. Ṭḥālaba; he and his descendants became 
thus clients (mawla) of this tribe, and Abū Ḥanīfā is 
ocasionally called al-Taŷmī. Very little is known 
of his life, except that he lived in Kūfā as a manu-
facturer and merchant of a kind of silk material 
(khāṭa). It is certain that he attended the lecture 
meetings of Ḥammād b. Abī Sulaymān (d. 120) who 
taught religious law in Kūfā, and, perhaps on the 
occasion of a khāṭī, those of ‘Aṭā’ī b. Abī Rabāh 
(d. 114 or 115) in Mecca. The long lists, given by 
his later biographers, of the authorities from whom 
he is supposed to have „heard“ traditions, are to be 
treated with caution. After the death of Ḥammād, 
Abū Ḥanīfā became the foremost authority on 
questions of religious law in Kūfā and the main 
representative of the Kūfian school of law. He 
collected a great number of private disciples to 
whom he taught his doctrine, but he was never a 
kāfī. He died in prison in Baghdād, two generations 
built over his tomb in 459/1066. The quarter around the mausoleum is still called 
al-’Āṣamiyya, al-Īmām al-’Āṣīm being Abū Ḥanīfā’s 
customary epithet.

The biographical legend will have it that the 
‘Abbāsīd caliph al-Ŷmūṣīr called him to the newly 
founded capital, wanted to appoint him as a kāfī 
there, and imprisoned him because of his steady 
refusal. A variant makes already the Umayyad 
governor Yazīd b. ’Umar b. Ḥubayra, under Marwān 
II, offer him the post of kāfī in Kūfā and flog him 
in order to make him accept it, but again without 
success. These and similar stories are meant to 
explain the end of Abū Ḥanīfā in prison, and the 
fact, surprising to later generations, that the master 
should not have been a kāfī. The truth is probably 
that he compromised himself by unguarded remarks 
at the time of the rising of the ’Alīdīs al-Nafs al-
Zakīyya and his brother Ibrāhīm, in 145, was trans-
ported to Baghdād and imprisoned there (al-Kaṭīb 
al-Baghdādī, xii. 329).

Abū Ḥanīfā did not himself compose any works 
on religious law, but discussed his opinions with 
and dictated them to his disciples. Some of the works 
of these last are therefore the main sources for Abū 
Ḥanīfā’s doctrine, particularly the _Iḥtisāb_ Abū Ḥanīfā wa’dn Abī Laylā and the _al-Radd‘al-Siyār 
al-’Arāzī_ by Abū Yūṣūf, and the _al-Hudūd_ and 
the version of Mālik’s _Muwaṭṭa‘_ by al-Shaybānī. (The 
formal _ṣmād_ al-Shaybānī—Abū Yūṣūf—Abū Ḥanīfā, 
that occurs in many works of al-Shaybānī, designating 
as it does merely the general relationship of pupil 
and master, is of no value in this connection). For 
the doctrine that Abū Ḥanīfā himself had received 
from Ḥammād, the main sources are the _al-Aktār 
of Abū Yūsuf_ and the _al-Ākhar of al-Shaybānī_. The 
comparison of Abū Ḥanīfā’s successors with his 
predecessors enables us to assess his achievement in 
developing Muhammadan legal thought and doctrine. 
Abū Ḥanīfā’s legal thought is in general much 
superior to that of his contemporary Ibn Abī Laylā 
(d. 148), the _kāfī_ of Kūfā in his time. With respect 
to him and to contemporary legal reasoning in Kūfā 
in general, Abū Ḥanīfā seems to have played the 
role of a theoretical systematizer who achieved a 
considerable progress in technical legal thought. Not 
being a kāfī, he was less restricted than Ibn Abī 
Laylā by considerations of practical necessity; at the 
same time, he was less firmly guided by the administration 
of justice. Abū Ḥanīfā’s doctrine is as a rule system-
atically consistent. There is so much new, explicit 
legal thought embodied in it, that an appreciable 
part of it was found defective and was rejected by 
his disciples. His legal thought is not only more 
broadly based and more thoroughly applied than 
that of his older contemporaries, but technically 
more highly developed, more circumspect, and more 
refined. A high degree of reasoning, often somewhat 
ruthless and unbalanced, with little regard for the 
practice, is typical of Abū Ḥanīfā’s legal thought 
as a whole. Abū Ḥanīfā used his personal judgment 
(_aṣayy_) and conclusions by analogy (_ḥiṣād_) to 
the extent customary in the schools of religious law 
in his time; and as little as the representatives of the 
other schools, the Medinese for example, was 
inclined to abandon the traditional doctrine for the 
sake of „isolated“ traditions from the Prophet, 
traditions related by single individuals in any one 
generation, such as began to become current in 
Islamic religious science during the lifetime of Abū 
Ḥanīfā, in the first half of the second century A. H. 
When this last kind of tradition, two generations 
later, thanks mainly to the work of al-Shafi‘ī, had 
gained official recognition, Abū Ḥanīfā for adventi-
tious reasons was made the scapegoat for the resist-
ance to the „traditions of the Prophet“ and, parallel 
to this, for the exercise of personal judgment in the 
ancient schools of law, and many sayings shocking 
to the later taste were attributed to him. Al-Khaṭīb 
al-Baghdādī (d. 463/1071) made himself the mouth-
piece of this hostile tendency. The legal devices 
(_hiṣa_) which Abū Ḥanīfā had developed in the 
normal course of his technical legal reasoning, were 
criticized too, but they became later one of his 
special titles to fame (cf. Schacht, in _Ist._, 1926, 
221 ff.).

As a theologian, too, Abū Ḥanīfā has exercised a 
considerable influence. He is the eponym of a 
popular tradition of dogmatic theology that lays 
particular stress on the ideas of the community of 
the Muslims, of its unifying principle, the _sunna_, of 
the majority of the faithful who follow the middle 
way in matters of religious law and avoid extremes, 
and that relies on scriptural rather than on rational 
proofs. This tradition is represented by al-Rāzī, 
_Muta‘allīm_ (wrongly attributed to Abū Ḥanīfā) and 
by the _Fikh al-Aṣba‘_ which both originated in the 
circle of Abū Ḥanīfā’s disciples, and later by the 
works of Ḥanafī theologians, including the creed of 
al-Ṭahāwī (d. 321/933) and the catechism of Abū 
’l-Laylā al-Samarqandī (d. 383/993) which has always 
been very popular in Malaya and Indonesia, in 
territory which in matters of religious law is solidly 
Šafi‘ī. This dogmatic tradition arose out of the 
popular background of the theological movement of 
the _Murdhī‘a_ [g.v.], to which Abū Ḥanīfā himself 
belonged. The only authentic document by Abū 
Ḥanīfā which we possess is, in fact, his letter to 
’Uṯmān al-Battī, in which he defends his _mudjī‘_
views in an urbane way. (It was printed, together with the al-Ālim wa'l-Muḍṭalīm and the Fikh al-Abṣāt, in Cairo 1368/1949). Another title that was ascribed to Abū Ḥanīfa is the Fikh al-Ākbar. Wensinck has shown that the so-called Fikh al-Ākbar I alone is relevant. This exists only embodied in a commentary wrongly attributed to al-Māturīdī (printed as no. 1 in Madjlīs al-Shurūḥ al-Fikh al-Ākbar, Hyderabad 1931). The text itself consists of statements of Abu Hanifa as against the Muḥaddiths, and the Djahmis [see these articles]. Propositions directed against the Murji'īs as well as against the Muʿtazila [q.v.] are lacking. This means that the author was a Murdji'īte who lived before the rise of the Muḥaddiths, and the Djahmis [see these articles].

As, in effect, immediately after the death of Abū Ḥanīfa, this text appeared, the author was a Murdji'īte who lived at the time of the revolt of al-Nafs al-Zakīyya. Of a strong constitution, he seems to have been still able to distinguish and to compare the tenets of the Murdji'ī, the Rāzī, the Karamīs, the Shiʿites, and the Ḯālīmīs [see these articles]. The authenticity of the tenets of the Fikh al-Ākbar I is therefore authentic opinions of Abū Ḥanīfa, though nothing goes to show that he actually composed the short text. But the so-called Fikh al-Ākbar II and the Wasīyyat Abī Ḥanīfa are not by Abū Ḥanīfa. The authenticity of a number of other short texts attributed to Abū Ḥanīfa has not yet been investigated and is at least doubtful; the Wasīyya addressed to his disciple Yūsūf b. Khālid al-Sūnī and the Bāṣrī represents Iranian courtiers' ethics and cannot be imagined as a work of a specialist in Islamic religious law.

The later enemies of Abū Ḥanīfa, in order to discredit him, hazed him not only with extravagant opinions derived from the principles of the Murdji'īs, but also with all kinds of heretical doctrines that he could not possibly have held. For example, they ascribed to him the doctrine that hell was not eternal—a doctrine of the Ḯālīmīs, against whom Abū Ḥanīfa ranged himself explicitly in the Fikh al-Ākbar, or the opinion that it was lawful to revolt against a government—a doctrine which goes straight against Abū Ḥanīfa's own tenets as expressed in the al-Ālim wa'l-Muḍṭalīm; he even was called a Murdji'īte who believed in the sword, a contradictio in adiecto. (This is perhaps deduced from his attitude at the time of the revolt of al-Nafs al-Zakīyya).

Among his descendants, his son Ḥamad and his grandson Ismāʿīl, ǧāfī in Baṣra and in Raḵḵa (d. 212/827), distinguished themselves in religious law. Among his more important pupils were: Zafar b. al-Ḥudhayl (d. 158/775); Dāwūd al-Ṭāʾī (d. 165/781-2); Abū Yūsuf [q.v.]; Abū Muḥammad al-Balḵī (see above); Al-ǧayyānī [q.v.]; Asbād b. ʿAmr (d. 190/806); Ḥasan b. Ziyād al-Łuṭuʿ (d. 204/819-20). Among the traditionalists, ʿAbd Allāh b. al-Mubārāk (d. 181/797) esteemed him highly.

Under the growing pressure of traditions his outlook of a great prince. Numerous public buildings show his piety and his magnificence. His reign saw not only the zenith of the dynasty and its greatest territorial expansion, but also the beginning of its decline. In Spain, he took Gibraltar from the Christians (1333), but after a success at sea, he suffered a disastrous defeat at the Rio Salado, near Tārīfa, which put an end to the holy war for the Marinids (1340). In Barbary, he took up again the expansionist policy of the great Almohades; he besieged Tlemcen, rebuilt the town-camp of al-Manṣūra and, after three years, at last took the capital of the ʿAbd al-Wādīds. In conquered Tlemcen, he received the congratulations of the Mamlūk sultan of Egypt and of the king of the Sudan. In support of his ally, the Ḥāfīz of Tunis, he marched on ʿIrīkīyya; but, after a period of success, he was crushingly defeated near al-Ḵayrawān (Kairouan) by a coalition of the nomad Arabs (1348).

He left Tunis by sea, his fleet sank; he managed to disembark at Algiers and tried to recover his kingdom, which his son Abū ʿĪnān had seized. He died in 752/1352. Abū ʿĪnān had him buried at Chella (Ṣḥīla [q.v.]).

Abū Ḥāṣim Abū Allāh, Shiʿite leader, son of Muḥammad b. al-Ḥanafīyya, whom he succeeded as head of the smaller branch of the Ḥanafīyya [see KAYSANIYYA]. The only information we have about him concerns his death and his testament in favour of the Ḥāfīzids. Old historical and heresiographical sources relate that Abū Ḥāṣim went, with a group of Shiʿites, to the court of Sulaymān b. ʿAbd al-Malik, who, afraid of his intelligence and authority, had him poisoned during his return journey. Feeling his approaching death, Abū Ḥāṣim made a detour to ʿUmayma, not far from the residence of the Ḥāfīzids, where he died after bequeathing his rights to the Imamate to Muhammad b. Ḥanif [q.v.]. This tradition has been generally taken as an invention of the philo-Ḥāfīzīs for party. Nevertheless, stripped of incongruences and superstructures, it may well contain a kernel of truth, especially as, in effect, immediately after the death of Abū
Hashim the Abhábídís came out of the shadows and the 'Iráki shí'a went into action in obedience to their orders. [Cf. also 'Abá'íns].

**Abú Ḥámísh**, sharif of Mecca [see Makká].

**Abú Ḥámísh**, Mu'tázílí theologian [see AL-DU'BÁÀ'Í].

**Abú Ḥámísh** Ya'qúb b. Labíd (or Labín or Ḥábí) al-Málázi al-Najjáší, Ibdá'í imám in the Maghrib. The orthodox Arab historians represent him as a mere leader of Berber rebels. His role, however, was more defined, as he was given by the Ibádís of Tripolitania the title of imám al-dá'í ("imám of defense"). According to the chronicle of Abú Zakariyyá bi al-Wardíání, this revolt took place in Ra'djáb 145/Sept.-Oct. 762, only one year after the death of Abú 'r-Kháthatáb. According to al-Shámmákhí, al-Súyáris, Cairo 1301, 134, Abú Hámísh's government began in 154 A.H. It is, however, possible that this is a mistake for 145.

Little is known about the first years of Abú Hámísh's imamate; he captured Tripoli, massacring many of his enemies, and made the city his capital. According to Abú Zakariyyá bi he was in contact with the future founder of the imamate of Táhárt, ʿAbd al-Ráhman b. Rustum, who was at this time entrenched in the mountain of Suúf Ádjl. In 154/762 Abú Hámísh took part in a general rising of the Berbers against the 'Abásídís government of Irfíkíya, ʿUmar b. Ḥáfs, called Ḥazááríd. With his troops he took part in the siege of Túbná, in the Záb. Another detachment of Abú Hámísh's army had been for eight months investing al-Karaywán, which was taken in the beginning of 155/771-2. Soon after the capture of al-Karaywán, an 'Abásídís army from Egypt appeared on the eastern frontier of Tripolitania. Abú Hámísh left Tripoli and defeated this army in a battle, which is said by the Ibádís chronicles, probably erroneously, to have taken place near Maqmadás (Macomas Syrtis in antiquity, Marsá Zafrán of the modern maps). Shortly after, however, another 'Abásídís army commanded by Ya'qúb b. Hámísh al-Ádzí advanced from Cairo towards Tripoli. Abú Hámísh collected the Ibádí Berber tribes of Tripolitania: Náfúsá, Hawwárá, Darísá, etc. and went out to meet the enemy. The battle took place on 27 Ra'djáb 155/March 772, to the west of a place called Di'aní (Abú Zakariyyá bi) or Díndúbá (al-Shámmákhí), to the east of Díbab Náfúsá. The Ibádí army was cut to pieces, and Abú Hámísh with 30,000 of his men are said to have been left on the battlefield.

**Bibliography:** Abú Zakariyyá, al-Síná wa-Abhábí al-Ámmá (MS of the coll. of S. Smogor-zewski), fol. 147-160; E. Masqueray, Chronique d'Abou Zabaris, Algiers 1875, 41-9; Shawhákhí, Súyáris, Cairo 1301, 138-58; Baládlhurt, Fárak, 235-3; Ibn Khaldún, Hist. des Berb., i, 211-3, 397-85; Idem, Descriptio al-Magribi (de Goeje), 82-4; F. **Abú Ḥámísh al-Ráží**, Ahmad b. Ḥámdáan, early Ismá'Ílí author and missionary (dá'í) of Rayy. Born in the district of Bashahrí near Rayy and well versed in Ḥadíth and Arabic poetry, he was chosen by Ghiyásh al-Ádí of Rayy, as his lieutenant. Ghiyásh was succeeded by Abú Dja'dár, whom, however, Abú Hámísh contrived to oust, thus becoming himself the leader of the dá'íwá in Rayy. It is reported that he succeeded in converting Ahmad b. 'Áli, governor of Rayy (304-11/916-24). After the occupation of Rayy by the Súmámidí troops (311-923-4) Abú Hámísh went to Dáylam to make common cause with the 'Alísíls there. His activities seem to have been at first supported by Mardáwídí, [q.v.]. When Mardáwídí later turned against the Ismá'Ílís, Abú Hámísh fled to Mufdíb (who became governor of Adharbájyán in 319/931). There he seems to have died, according to Ibn Ḥádíjar, in 329/933-4, the date being, if not quite certain, approximately correct.

Of his works the most famous is the al-Zína, a dictionary of theological terms, which is dominated by his philological interests, while Ismá'Ílí tenets are only discreetly alluded to. (For a short description of the book see A. H. al-Hamadani, Actes XXIe Congrès des Orientalistes, 291-4). In a lost book, al-Ísák, he attacked the philosophical system of al-Nasáfí [q.v.], as expounded in al-Nasáfí's al-Múdásí. When this controversy has been better explored and Abú Hámísh's al-Nám al-Nubuwá is fully published, it is hoped that more light will be shed on his own opinions. (P. Kraus has published an important section of Al-Nám al-Nubuwá, the dialogue between Abú Hámísh and the philosopher Abú Bakr al-Ráží).

Stern)

**Abú Ḥámísh al-Sidjáštáí, Sáhí b. Múr. al-Djusámi**, Arabic philologist of Basrá, d. Ra'djáb 255/865. His nisba is related to Sidjáštáí, a village in the district of Basrá (Yáğút, iii, 44). He was a disciple of Abú Zayd al-Ánsáris, Abu 'Ubayda Mú'már b. al-Muğğáná, al-Ásma'í, etc. Among his disciples are mentioned Ibn Durayd and al-Mubárrad. As a grammarian he was of no great importance, since his specific field was the works of the ancient poets, their vocabulary and prosody. Of his works the bibliographers mention thirty-seven titles (enumerated by A. Haffner, Drei arabische Quellenwerke über die Adádd, Beirut 1913, 160-2). The following works have come down to us: (1) al-Adádd, ed. by Haffner, op. cit. 163-209; (2) al-Nadá, ed. by L. Lagumina in Atti... Lincei, Scienze morali, Ser. 4, 1919-20, 8, 5-45; (3) al-Tadhkhir wa l-Ta'dhib, MS Taym, cf. MMIA, 1923, 340; (4) al-Masá'mírámí, ed. by I. Goldziber, Abh. z. arab. Philologie, ii, Leiden 1809.

(B. Lewin)

**Abú 'l-Háwl** (Hól), "father of terror", the Arabic name for the sphinx of Dwísa (Gizeh). Some authors simply call it al-šánam, "the idol", but the name Abu 'l-Háwl is already attested for the Fatimid
period. At that time the Coptic name Belhib (Belhīb), or as al-Kuqa (quoted by al-Maqrizi) has it: Belhīb (Belhib), was also still known. The Arabic Abu 'l-Hawl is most probably a popular etymology based on the Coptic designation; the initial B probably represents the Coptic article, which has been transformed in Arabic, as often happened, into Abū. In the old tradition the name Abu 'l-Hawl was applied only to the head of the Ibonodied sphinx, as the body was covered by sand in the Middle Ages and was discovered only in 1877. Modern Arabic authors use the word for “sphinx” in general, not only for the sphinx in the vicinity of the pyramids.

The Arabs, who had no knowledge of ancient Egyptian civilization, regarded with superstitious awe the head which reached high above the sand of the desert in majestic dimensions. It was considered to be a talisman preventing the encroachment of the sand on the valley of the Nile; the same magical effect was ascribed by others to the pyramids. Another, female, colossal statue—to judge by the descriptions probably a statue of Isis with the child Horus—which lay on the other shore of the Nile in Fustāt, was considered to be the beloved of Abu 'l-Hawl. She had her back to the river, as Abu 'l-Hawl had his to the desert, and was thought to be a talisman against the flooding of Fustāt by high water. This statue was destroyed in A.D. 684. Its hunters and its stones were used in the building of a mosque. According to another tradition Abu 'l-Hawl was the effigy of the legendary Ushmum, a shaykh colour is frequently mentioned. About 780/1378 a fanatical ḥawāfi caused further damage to the statue.

Abū Ḥayyān's greatness as a grammarian was due not only to his mastery of the linguistic data and control of his predecessors' theories, but also to his willingness to illuminate an Arabic grammatical concept through quotations from other languages and by following such operational principles as "One may base rules of Arabic on frequency of occurrence" and "Analogous formations that contradict genuine data found in good speech are not to be permitted". This unusual spirit of objectivity and respect for facts have made of the Manhādī al-Salih a work of great distinction. Besides elucidating and correcting Ibn Mālik's brilliant if occasionally erroneous compression of the totality of Arabic grammar into 1000 verses of poetry, the Manhādī presents a miniature bibliography of grammatical science and a panorama of thought on some of its most difficult problems on which the opinions of hundreds of grammarians, Karāmān readers, and lexicographers are cited. It was consigned to obscurity by the more elementary works on the same subject written by his pupil Ibn 'Akkīl and Ibn Hākhān.

ABU 'L-HAYYĀN AL-TAWHĪDĪ, 'Alī b. Muḥ. b. 'Ammās (probably called al-Tawhīdī after the sort of dates called tawhīd), man of letters and philosopher of the 4th/10th century. The place of his birth is given either as Nishāpūr, Shīrāz, Wāṣīt or Baghādād; its date must be placed between 310-20/922-32. He studied in Baghādād, grammar under al-Sīrāfī and al-Rūmnānī, Shīfi'ite law under Abū Hāmid al-Mawārī and Abū Bakr al-Shāhībī; and also frequented ṣaff masters. He supported himself by acting as a professional scribe. It is said, in a somewhat doubtful passage (see al-Subkī, al-Ṣafadī, al-Dhahābī, Ibn Ḥadījar) that he was, owing to heretical opinions, persecuted by the vizier al-Muḥallābī (d. 352/963). He was in Mecca in 353/964 (al-Imām, ii, 79), Basānīr, MS Cambridge, fol. 169v) and in Rayy in 358/971 (Yākūt, Irkād, ii, 292; at the court of Abu 'l-Fadl b. al-'Ammīd?, d. 360/970). From his al-Muhābāsātī, 156, we know that in 361/971 he attended lectures of the philosopher Yahyā b. ʻAdī in Baghādād. He tried his luck with the vizier Abu 'l-Fāthī b. al-'Ammīd in Rayy (d. 366/976), to whom he addressed an elaborate epistle; to judge from his hostile sentiments towards the vizier, he did not achieve much. From 367/977 he was employed by Ibn ʻAbbād as an amanuensis. In this case, too, he was anything but a success, owing, no doubt, mainly to his own difficult character and sense of superiority (he for example refused to "waste his time" in copying the bulky collection of his master's epistles), and was finally given his dismissal. He felt himself badly treated and avenged himself by a pamphlet containing brilliant caricatures of both Abu 'l-Fāth b. al-'Ammīd and Ibn ʻAbbād (Dhamm—or Mathālīb or Aḥādab—al-Waṭirāy; considerable extracts in Yākūt, i, 281, ii, 44 ff., 282 ff., 317 ff.; v, 359 ff., 392 ff., 406 f.).
It was in the period between 350-65/961-75 that he composed his anthology of adab, entitled Ṣaḥīḥ al-Ḳudāmī, also called al-Ḳudāmī wa-l-Ḍabābīr, etc. in ten volumes (vols. i-v in Fāṭih [Istanbul], 3205-9; i-ii in Cambridge 134, in Dījār Allāh [Istanbul] and in Manchester 767; unidentified volumes in the ʾUmāniyya [Istanbul, Rāmāpur i, 330, Ambrosiana (?)]. It was probably in Rāvī that he addressed to Miskawayh the questions which the latter answered in his Ṣawādmī wa-l-Ṣāwāmdī. After his return to Bāghdād, at the end of 370/980, he was recommended by Zayd b. Rifaʿa and Abu Ṭawfīq al-Būḏjānī, the mathematician, to Ibn Saʿdān (also called, after his function as an inspector of the army, al-ʾĀṣīd—cf. al-Rūḍhawrī, Ḍayyāl Tadjībīr al-Umm, 9; hence the confusion in Ibn al-Ḫīṭṭī and in modern authors). For him he started his book on Friendship, which was finished, however, only thirty years later. He frequented regularly at this epoch (lectures attended in 371/981, al-Mukdāsī, 246, 286) the man who exercised the greatest influence on him, namely Abū Sulaymān al-Manṭiqī [q.v.], who was his main oracle, especially on philosophical matters, but also on every other conceivable subject. Ibn Saʿdān was appointed by Ṣaḥmān al-Dawla as his vizier in 373/983. Abu Ḥayyān remained an assiduous courtier of the vizier, attending his evening receptions where he had to answer on the vizier’s questions on the most varied topics of philology, literature, philosophy, court- and literary gossip. (He very often reproduces the views of Abū Sulaymān—who lived in retirement and did not attend the court—on the matter in question). At the request of Abu Ṭawfīq the mathematician, he compiled for his personal a record of thirty-seven of these sessions, under the title of al-Muḍnāsī wa-l-Muḍnāsī (ed. A. Amin and A. al-Zayn, Cairo 1939-44). In 375/985-6 Ibn Saʿdān fell and was executed, and Abū Ḥayyān apparently remained without a patron. (He wrote for Abu Ṭawfīq al-Mudlīdī, vizier in Shīrāz for Ṣaḥmān al-Dawla in 382-3/993-4, al-Mukhābātī wa-l-Munṣāhāt; quotations in Yāḥyā, i, 15, iii, 97, v, 384, 405, vi, 466). Of the latter period, when he must have been very old, we have evidently nothing left. It was in these later years that he compiled his al-Mukhābātī (Bombay 1306, Cairo 1929—both very faulty editions), a collection of 106 conversations on various philosophical subjects. The chief speaker is again Abū Sulaymān, and there appear all the other members of the Baghdad philosophical circle. Al-Mukhābātī and al-Muḍnāsī wa-l-Muḍnāsī are mines of information about contemporary intellectual life and they should prove invaluable for a reconstruction of the doctrines of the Baghdād philosophers.—Towards the end of his life Abū Ḥayyān burned his books, alleging as reason the neglect in which he had to live for twenty years. In the preface to his treatise on Friendship (al-Ṣadākā wa-l-Ṣaʿīq, printed together with a short treatise on the use of science, Istanbul 1301), which he finished in 400/1009, he makes similar complaints. A guide book to the cemetery of Shīrāz (Ṣaddāl al-Isār an-Ḥafi al-Awārād, 17) claims that the tomb of Abū Ḥayyān al-Tawhīdī (whom it calls, however, Ahmad b. ʿAbdāb) was to be seen in Shīrāz and gives as the date of his death 414/1023.

His talent is most apparent in the passages, frequent in his books, where he characterizes people. As for his beliefs, he does not seem to have had any original system. He was obviously impressed by Abū Sulaymān’s Neo-platonic system, which the latter shared with most of the other contemporary Baghdād philosophers. Like the other members of the circle, Abū Ḥayyān also showed an interest in Sūfism, but not enough to make him a regular Ṣūfī. His al-Ṭabārī al-Ṣāḥīyya (ed. A. Badawī, Cairo 1935) aconsists of prayers and homilies and contains occasional references to Ṣūfī technicalities”. “Abū Ḥayyān was coupled with Ibn al-Rāwandī and al-ʾAšʿarī as one of the sindīs of Islam (JRAS, 1905, 80) but his extant works scarcely justify this assertion” (D. S. Margoliouth, in EJ, s.v.).

Keilani, Thalāth Rasāʾīl, Damascus 1952. An extract from al-Żulfā, al-Rūḍhawrī, 75. (S. M. Stern)

the dualists, represented by the Zoroastrians, the Manichaens and other Gnostics; the philosophers of Greek inspiration, the 
haqriyyas, mainly represented by the champions of the natural sciences; finally against the increasingly numerous Muslims who were influenced by these foreign ideas: crypto-Manichaean poets like Ṣāliḥ b. 'Abd al-Kuḍūs, the theologians of the "modern" type who had adopted certain gnostic and philosophical doctrines, etc. It seems that it was only at a mature age that he made himself acquainted with philosophy. On the occasion of his pilgrimage (the date of which is unknown) he met in Mecca the Shī'īe theologian Ḥišām b. al-Ḥakam and disputed with him concerning his anthropomorphist doctrines, which show a gnostic influence; and it was only then that he began to study the books of the ḏahrīyya. Later observers notice certain similarities between his doctrine of the divine attributes and the philosophy of Pseudo-EmpeDocles, forged by the Neo-Platonists and natural scientists of late antiquity; in effect his philosophical sources must have been of such a kind, which are represented in general by medieval Aristotelianism. These philosophers attracted, as well as repelled, him; while combatting them, he adopted their methods and their manner of looking at problems. Naive as a thinker, and having no scholastic tradition, he approached speculative problems with a daring which did not even recoil from the absurd. Hence all the prematurity and the lack of balance which characterize his theology, but also the freshness of his attempts. He was the first to set many of the fundamental problems at which the whole of the later Mu'tazila was to labour.

The unity, the spirituality and the transcendence of God are carried in the theology of Abu '1-Hudhayl to the highest degree of abstraction. God is one; he does not resemble his creatures in any respect; he is not a body (against Ḥišām b. al-Ḥakam); has no figure (ḥay'a), form (ṣūra) or limit. God is knowing with a knowledge, is powerful with a power, alive with a life, eternal with an eternity, seeing with a faculty of sight, etc. (against the Shī'īes who asserted that God is knowledge, etc.), but this knowledge, power, etc. are identical with himself (against popular theology which regarded the divine attributes as entities added to essence); provisional formulas of compromise which did not satisfy later generations. God is omnipresent in the sense that he directs everything and his direction is exercised to the highest degree of abstraction. God is one; he does not resemble his creatures in any respect; he is not a body (against Ḥišām b. al-Ḥakam); has no figure (ḥay'a), form (ṣūra) or limit. God is knowing with a knowledge, is powerful with a power, alive with a life, eternal with an eternity, seeing with a faculty of sight, etc. (against the Shī'īes who asserted that God is knowledge, etc.), but this knowledge, power, etc. are identical with himself (against popular theology which regarded the divine attributes as entities added to essence); provisional formulas of compromise which did not satisfy later generations. God is omnipresent in the sense that he directs everything and his direction is exercised to the highest degree of abstraction. God is one; he does not resemble his creatures in any respect; he is not a body (against Ḥišām b. al-Ḥakam); has no figure (ḥay'a), form (ṣūra) or limit. Divine activity is interpreted in the light of the doctrine of accidents: the whole process of the world consists in an incessant creation of accidents which descend into the bodies. Some accidents, however, are not to be found in a place or in a body; e.g. time and divine will (irāda). The latter is identical with the eternal creative word kun; it is distinct from its object (al-murād) and also from the divine order (amr), which can either obey or disobey (while the effect of the creating word Kun is absolute: kun fa-yakunu, Kunān ii, iii, etc.). Those who are not acquainted with the Kur'ānic revelation, but have nevertheless accomplished laudable acts prescribed by the Kur'ān, have obeyed God without having the intention to do so (theory of jā'la la yurḍu'lladhu bihd, otherwise attributed to the Kūrānjīes). The Kur'ān is an accident created by God; being written, recited or committed to memory, it is at the same time in various places.—In the question of the mansīla bayn al-mansīlatayn Abu '1-Hudhayl took up a position which was in conformity with the political situation of his time: he did not reject any of the combattants round 'Alī, yet preferred 'Ali to ʿUlīmān. He enjoyed the favour of al-Māyān, who often invited him to the court for theological disputes.—All the writings of Abu '1-Hudhayl are lost.

During his long life, Abu '1-Hudhayl had an enormous influence on the development of theology and he collected round him a large number of disciples of different generations. The best known amongst them is al-Nāẓrān, though he quarrelled with his master because of his destructive utterances concerning the atom; Abu '1-Hudhayl condemned him and composed several treatises against him. Among his disciples are named Yahya b. Bishr, Bighr al-Arradjānī, al-Ṣāhībānī, and others. His school continued to exist for a long time; even al-Dhubbāt still avowed his indebtedness to Abu '1-Hudhayl's
theology, in spite of the numerous points on which he differed from him. Unfortunately, the theology of Abu l-Hudhayl was exposed to the malevolence of a renegade from Mu'tazilism, the famous Ibn al-Rawandi, who, in his Tadhkira al-Mu'tasila grossly misrepresented it, by submitting it to an often too cheap criticism; this caricature has been faultily reproduced by al-Baghda'di in his Fark and often recurs in the resumes of the Mu'tazila. It is only with the help of al-Intisar, by al-Khayyati, the severest critic of Ibn al-Rawandi, that we are able to unmask the latter's procedure and gain an exact idea of the true motives of Abu l-Hudhayl's speculation. Al-As'ari, in his Makhd, reproduced his theses with admirable impartiality, after the school tradition of the Mu'tazila. Al-Shahrastani based his expose on the later Mu'tazilite tradition, especially, it seems, on al-Ka'b.

ABU 'L-HUDHAYL AL-SALLAF. — ABO INAN FARIS

Abu Hurayra, was published by M. Hasaughty, MM. 1953, 96 ff. (J. ROBSON)

ABU HUSAYN (BANU ABU HUSSAYN) Sicilian dynasty [see KALBIDS].

ABU 'INAN FARIS, eleventh sovereign of the Marinid [q.v.] dynasty of Fez, born in 729/1329, had himself proclaimed at Tlemcen in 749/1349, when his father, Abu l-Hasan 'Ali, after being defeated at Kayrawan, was returning as a fugitive to Morocco. Ibn al-Ahmar describes him as very tall, with a fair skin (his mother was a Christian slave), and says that he had a long beard. A fearless horseman, he was also widely versed in literature and the law. Like his father, he was a prince with a passion for building, and completed several of the foundations that his father had begun, in particular medersas at Fez, Meknes, and Algiers. The Bâ 'Ináníyya at Fez is the most monumental of these Maghribi colleges.

Having gained the throne by usurpation, Abu 'Inan went on to assume the caliphal title amir al-mu'minin, which his father had not borne. He made it his aim to rebuild his father's empire in Barbary and fairly quickly succeeded in doing so, but only for a few years. He seized Tlemcen from the 'Abd al-Wadid (1352) and, the same year, took possession of Bougie. In 757/1357 he occupied Constantinople and had himself proclaimed at Tunis; but, abandoned by his Arab auxiliaries, the Dawawida of the Constantine region, he was compelled to return to Fez. Not long afterwards he fell ill (757/1357) and was strangled by his vizier al-Fadlud, who had the son of his victim proclaimed, and thus inaugurated the series of palace revolutions and the long decadence of the Marinids.

ABŪ 'ĪNĀN FĀRĪS — ABU KABIR AL-HUDHALI

ABŪ 'ĪSA AL-ISFĀHĀNĪ, Jewish pretender to the title of the Messiah under the Umayyad ʿAbd al-Malik b. Marwân, or according to others under Marwân II. The most noteworthy of his doctrines was his acknowledgment of the validity—for the non-Jews—of Islam and Christianity. He was killed in a battle against the Muslims; the sect, called ʿIsawīyya, survived into the loth century A. D. (S. M. STERN).

Biography: Birûnl, al-Āḥār al-Bāḥiyya, 15; Ibn Hazm, Fīṣal, i, 114-5; Shahrastânî, 168; Makrizî, Khitaṭ, ii, 478-9 (= S. de Sacy, Chrest. arabe, i, 116); H. Grätz, Gesch. d. jüd. Volkes, v, 173 and note 17 (by A. Markavy); Encyclopædia Judaica, s.v. Abu Issa. (S. M. STERN).

ABŪ 'ĪSA MUḤAMMAD B. ḤĀRŪN AL-WARRĀK, a Muʿtazilite at first, became one of the arch-heretics in Islam: his friend and pupil, Ibn al-Rawandi, went through the same metamorphosis.

The date of Abu ʿĪsa’s death is given by al-Masʿūdī (vii, 236) as 247/861; if it is true, however, that Ibn al-Rawandi died about the end of the 3rd/9th century (see Kraus, 379), this date would seem to be too early. The issue would be decided if one could be sure that the paragraph in al-Shahrastânî, 195, where the date 271 occurs, still continues the quotation from Abû ʿĪsa.

Abû ʿĪsa was accused of Manichaean sympathies. Al-Murtaḍâ’s defence, al-Shâfî, 13, to the effect that his books al-Maghribî and al-Nawâḥ ʿalâ al-Bahḍîm were spuriously attributed to him by the Manicheans, deserves, of course, no credit. On the other hand it is not very likely that he was a formal adherent of Manicheism; most probably he was an “independent thinker” (L. Massinogn). Interesting quotations, showing his method in criticising current religious beliefs, and taken from his al-Qâhîr al-Maghribî—such is the full title also in Fīṣal, 177, and al-Tûsî, 99; a “stranger from the East” was evidently introduced as the exponent of heterodox views—are to be found in Abû Ḥâyyân al-Tawbîdî, al-Imdaḍ wa ʿl-Muḥāsasa, iii, 192.

His main work was a book on religions and sects, al-Makhâlî, which served as an important source for writers such as al-Shârî (Makhdîd al-Īṣâmiyyin, 49, 51; cf. e.g. al-Tibrizî on the Šīʿa), 33, 34—Ṣḥîḥa; cf. also index, 37), al-Masʿūdî (Mūrâdî, v, 473 ff.—Zaydiyya), al-Baghdâdî (Farkh, 49, 51), al-Birûnl (al-Āḥār al-Bāḥiyya, 277, 284—Jewish sects, Samaritans), Abu ʿl-Maʿâlî (Bayān al-Adyān (Eghbal), 10—religion of the pagan Arabs; as the editor points out, 54 ff., similar passages are to be found in Ibn Abî ʿl-Hadîd, Sharḥ Nâḥâj al-Bâlāqâša, i, 39, iv, 437; Ibn Abî ʿl-Hadîd quotes Abû ʿĪsa in other passages also), al-Shahrastânî, (141, 143—Ṣḥîḥa; 192—Mazdak; 188—Mâna). Abû ʿĪsa’s Muʿtazilite adversaries insinuated that he was too eager to reproduce in his book the arguments of the Manicheans.

Abû ʿĪsa wrote books favourable to the Šīʿa (al-Imâma; al-Sâkhīf, quoted by al-Mufîd, cf. Eghbal, Khânânâ-d-i Nawbâkhtî, 86)—hence the partiality of Šīʿite authors for him.

His critical examination of the three branches of Christianity (Orthodox, Jacobite, Nestorian) survives in the refutation by Yahyâ b. ʿAdî (cf. A. Perier, Yahya ben ʿAdî, 67, 150 ff.; L. Massinogn, Textes inédits concernant l’Histoire de la mystique, 182-5; A. Abel, Abû ʿĪsa al-Warrâq, Brusel 1949).

ABŪ ISHĀK AL-ILBĪRĪ, Ibâšmî b. Masʿūd b. Sâ’dî al-Tujâdl, Andalusian jurist and poet, native, as shown by his nisba, of Ibbira (Elvira), which in the century of the mulâk al-tawâlîl lost its position to the neighbouring Granada. Little is known of his life. Born in the last years of the 4th/10th century, he was, during the reign of the Zirid king of Granada, Bâdî b. Ḥâbuṣ, secretary of the hâdî ʿAli b. Muḥ. b. Tawbâ and at the same time was occupied in teaching. In his poems he protested against the increasing influence of the Jews in the kingdom of Granada and especially against the functions, too important in his eyes, entrusted to the famous vizier Samuel ha-Nagîd Ibn Nagrella, and to his son Joseph, who succeeded him in this office in 448/1056-7. It was no doubt at the latter’s instigation that Bâdî assigned to the fâkîh a forced residence in the râbiqa of al-ʿUkhâb, in the Sierra de Elvira. Abû Ishâk, however, did not give way, and the celebrated political poem, to which he owes most of his reputation, was, if not the determining cause, at least one of the factors which brought about the well-known pogrom in Granada, on 9 Safar 459/30 Dec. 1066, during which Joseph b. Nagrella and 3000 of his coréligionists were murdered. Abû Ishâk al-Ilbîrî died shortly afterwards, at the end of the same year of 459/1067.

In addition to his fulminating poem, to which attention was long ago drawn by Dozy, Abû Ishâk left a collection of poems, which are in the majority of ascetic inspiration and which he apparently composed at an advanced age. This dīwaʿ, of which a MS has been preserved in the Escorial (no. 404), has been published by the author of this article, with an introduction. It is very characteristic of the limited poetical faculties of an Andalusian fâkîh of medium culture, who rises to eloquence only when expressing his intolerant fanaticism.

ABŪ ISHĀK [see al-Šâbihî and al-Šīrâzī].

ABŪ KABIR AL-HUDHALI, an early Arab poet, after Abû Ḫuqu’ayb the second greatest poet of the tribe of Hudhayl. He belonged to the Banû Sa’d, or, according to some, to the Banu Dhu’ayrab. His real name was ʿAmîr (or ʿUwaymir) b. al-Hulays (also without the article), according to other statements, ʿAmîr b. Ḫámrâ, but he was always known by his hânya. According to some commentators (cf. e.g. al-Tibrîzî in the Ḥamâsa), Abû Kabir married the mother of the famous ʿAbd al-ʿAbbâs b. ʿHâri (El), as the stepson was displeased at this union Abû Kabîr is said to have been advised by the mother of Taḥabbâs b. ʿHâri to kill him at the first opportunity, but failed on account of the latter’s bravery. This
story can hardly be true but is rather an attempt to explain the well known lines of Abu Kalamun as a name for the chameleon (though, according to the "Burānī-i Ḍāḥif", the word has this meaning in Persian). The proverb: "more changeable than Abu Kalamun", or: "than Abu Barakish" (e.g. Freytag), Proverbs, i, 409; Hamadhānī, Makāmah, Beyrouth 1924, 86; Ibn Ḥazm, Tawd, 69, cf. And., 1950, 353), could refer to the chameleon or to a bird of changing colours which is also called Abu Barakish (cf. Kazwini, ed. Wüstenfeld, i, 406). Further, according to Muhammad, 240 i (ed. and tran. by Allah, 53 and no. 143), Abu Kalamun denotes a mollusc (pinna), the byssus or "beard" of which is used in the manufacture of a sheeny cloth, which is also known as ṣaf al-bahr (cf. Dozy, Suppl., s.v.). P. Kraus, Jābir ibn Ḥayyān, ii, 110 refers to the use of ẓayyālqaw as a term for the philosophers' stone in ancient alchemy (cf. Lippmann, Entstehung... Alchemie, i, 298). This usage explains why Ḍāḥif gave one of his books, in which he treats of the various colours of the seven metals (ādīsād), the title Kūbā Abū Kalamān (P. Kraus, op. cit., i, 24; cf. Ruska, in Isl., 1925, 102 n.).

**Bibliography:** In addition to the references given in the text: Ḣūṭārī, 42; G. Jacob, Studien in arab. Geogr., ii, 61; and the references given by P. Kraus, Jābir ibn Ḥayyān, ii, 109, no. 4.

**ABŪ KALB [see SIKKA].**

**ABŪ KĀLĪDJĀR ABU-MARZUBĀN B. SULTĀN AL-DAWLĀ, a prince of the Buwayhid [q.v.] dynasty, born in al-BAṣra in Shawwāl 399/May-June 1009. When in 412/1021 Muḥarrif al-Dawlā's Daylamite troops murdered his wazīr at al-Ahwāz and declared for his brother Sultan al-Dawla [q.v.], the latter, whom Muḥarrif had supplanted as ruler of al-Īrāq in the previous year, took heart and sent them his son Abū Kālīdjār, though then only a boy of twelve, to take over the city in his name. In the following year Muḥarrif and Sultan made peace, Muḥarrif retaining al-Īrāq and Sultan regaining Fārs and Khūzistān; but in Shawwāl 415/December 1023-January 1024 Sultan died, on which the control of those provinces was for the next two years disputed between Abū Kālīdjār (who was even then no more than sixteen) and another of his uncles Abū 'l-Fawāris, the ruler of Kirmān. Abū Kālīdjār emerged victorious from this struggle, but then failed in an attempt to dislodge Abū 'l-Fawāris also from Kirmān; so that when they made peace in 418/1027 he was obliged to pay Abū 'l-Fawāris a yearly tribute of 20,000 dinār.

Meanwhile these preoccupations had prevented Abū Kālīdjār from accepting the invitation of the Baghdād garrison to replace yet a third uncle, Djalāl al-Dawla [q.v.], as Amīr al-Umarā', on the latter's failure to appear in the capital after the death, in Rabī' II 416/June 1025, of Muḥarrif al-Dawla. Abū Kālīdjār was nevertheless acknowledged in the khwāṭa at Baghdād for some eighteen months (from Shawwāl 416/Dec. 1025 to Dhu al-Ḫadādhi 1488/June-July 1027); in 417/1026 he was likewise acknowledged in the khwāṭa at al-Kūfā; and in the following year he was able to send his wazīr, Ibn Bābshāhīd, to assert his authority over the Euphrates marshes, though the only result of this move was a rebellion of their inhabitants against the wazīr's extortion. In 419/1028 Abū Kālīdjār added both al-BAṣra and Kirmān to the area under his control, the former by a timely intervention in a conflict between the Daylamites and Turks of Djalāl's garrison, and the latter by the death of Abū
During his ensuing four years’ reign Abû Kâlidjar was chiefly concerned to preserve his power against Sâlûqûd enroachment. This had already caused him to begin wailing his capital, Shirâz, for the first time, and in 437/1045-6 only the outbreak of disease among his horses prevented him from challenging a Sâlûqûd advance into the south-western Dijâbl. Two years later, however, he decided instead to ally himself with the Sâlûqûd; and, Tughrûl [q.v.] proving amenable, an alliance was sealed by Tughrûl’s marriage with Abu Kâlidjar’s daughter and the marriage of Abu Kâlidjar’s second son to Tughrûl’s niece. This alliance preserved his dominions in the west from further Sâlûqûd attacks; but in 440/1048, a Sâlûqûd force again invaded Kirmân, where, instead of being opposed, it was joined by Abû Kâlidjar’s governor. He therefore set out to vindicate his authority in person, but suddenly died before reaching his destination (Dirumâd I 440/ October 1048).

Abû Kâlidjar left at least nine sons, the eldest of whom, entitled al-Malik al-Râhil [q.v.], succeeded him as Amir al-Umar, the last of the dynasty to rule in Beghûd and al-Irk, and the second of whom, Fûlûd-Sûtûn, succeeded him as ruler of Fârs until murdered by a rebel in 454/1062.

In 439, while in Shirâz, Abû Kâlidjar, in common with many of his Daylamite troops, was converted to Ismâ’îlism by the Fatimid dâdi al-Mu’âyyad fi l-Dîn [q.v.]. Some four years later, in order to maintain good relations with the ‘Abbâsâd al-Kâ’îm he was obliged to banish the dâdi from his dominions; but it would appear from the account of these events in the latter’s Sîra (ed. Kâmil Husayn, Cairo 1949, 77) that he remained personally devoted to the Fâtimid cause. A reference to Abû Kâlidjar’s dealings with al-Mu’âyyad is made also by Ibn al-Bâkîhi in his Fârîn-nâmâ.

c. 1460) who translated also Abu Kamil’s treatise on algebra (Munich 225, 3). As assumed by G. Sacerdote, Il trattato del pentagono e del decagono di Abu Kamil, in Festschrift Steinschneider, Leipzig 1896, 169-94, and proved by Suter, Die Abhandlung des Abü Kamil Shudja b. Aslam “über das Fünfzick und Zehneck”, Bibl. Math. 1909-10, 15-42, these translations were made not from Arabic or Latin, but from Spanish. According to Suter, it is probable that the Muslim MS 1927 A, no. 6, is a Latin version of al-Tarā’if. (The same MS contains Latin versions of Abū Kamil’s algebra and of his treatises on the pentagon and decagon).—Indeterminate equations with integral solutions appear in India fully developed about 1150 in Bhāskara’s Vijaganita (cf. Colebrooke, Algebra with arithmetic and mensuration, London 1817, 233-5), but the problem is referred to already by Āryabhaṭa (b. 476), who even anticipates for its solution the method of continued fractions, to which Bhāskara applies the term kuṭaka “dispersion” (cf. M. Cantor, Gesch. d. Math., 1, 588 ff.) Abu Kāmil’s procedure is less systematic and therefore inferior to the Indian. He finds his solutions mainly by way of trial, yet shows considerable skill in overcoming the difficulties involved. It is hard to decide whether or not he knew the kuṭaka method. However that may be, it is certain that the anonymous author of a commentary on al-Tarā’if, of which the Leiden MS contains a fragment (fol. 101-2), was familiar with it, because he clearly refers to the proof of a method of finding integral solutions that can hardly have been different from the kuṭaka method.

The connection between Abu Kāmil and the Indians is shown by a curious detail: they resort to the same, or at least similar, varieties of birds as examples in their problems. In Europe, we meet with indeterminate equations in Leonard of Pisa’s Liber abaci (1202; Scritti, ed. Boncompagni, Roma 1857-62, i)—again with reference to birds. The first appearance in Europe of this problem seems to be marked by a MS composed about 1000 A.D. in the monastery of Reichenau. Later European algebraists, in particular the German “Cossists” (Adam Riese, etc.) usually substitute men, women, or virgins for the birds, and therefore the term “regula virginiun” (or “r. potatorum”, “r. coeci” or “r. coeli”) was adopted by them to denote this kind of problem (cf. Bibl. Math., 1905, 112).

Abu Kāmil’s “Algebra” is known only in Latin (MS Paris 7377 A, fol. 71v-93v) and Hebrew (Paris 1029, 7 and Munich 225, 5) translations. The two MSS of the Arabic original noted by Brockelmann have not yet been examined. It is above all upon this work that his fame rested. It was commented by al-Iṣṭakhrī and al-Imrānī, but both commentaries led on by his philological inclinations, have inter-...
ABU ‘L-KHATTĀB MUHAMMAD B. ABI ZAYNAB MIKLAS AL-AGIDA AL-ASADI, Muslim heresiarch.

According to al-Kashshi, his father was Miklas b. ‘Abi ‘l-Khattāb, and he himself used the kunyas ‘Abi Ismā‘īl and Abu ‘l-Zubayr. He was a Kūfī and a mawālī of the tribe of Asad. In the Nusayri writings he is also called al-Kāhilī. He was one of the chief dā‘īs of the Imām Dja‘far al-Ṣādiq, but fell into error and taught false doctrines, as a result of which he was repudiated and denounced by the Imām. Seventy of his followers, assembled in the mosque of Kūf, were attacked by order of the governor ʿĪsā b. Mūsā, and after a bitter struggle, were killed.

Abu ‘l-Khattāb himself was arrested and brought before ʿĪsā b. Mūsā, who had him executed and crucified at Dār al-Riżq, on the Euphrates, together with a number of his followers. Their heads were sent to the Caliph al-Manṣūr and impaled by the gate of Baghdad for three days. The date of these events is not precisely known, but a conversation recorded by al-Kashshi as having taken place in 138/755 appears to refer to the externalization of Abu ‘l-Khattāb and his followers (fa‘nabaja‘at ilāhārum wa-faniyat al-dīdāhum: al-Kashshi 191; cf. Lewis, 33; Ivanow, however (p. 117) interprets this tradition as referring to the repudiation of Abu ‘l-Khattāb by Dja‘far al-Ṣādiq).

According to the Nusayris, who still regard Abu ‘l-Khattāb, ‘he manifested the daw‘a at Dār al-Riżq on 10 or 12 Muḥarram, and both this and the day of his ‘appointment’ by Dja‘far al-Ṣādiq (11 Dhu ‘l-Hiḍḍa) are sacred anniversaries. He seems to have played a role of some importance in the early development of extremist Shi‘ite doctrine, and is named by the Central Asian Imami book Umm al-Khitāb (Ist., 1936, pts. 1 and 2; cf. W. Ivanow, REI, 1932, 428-9), as well as by a number of Sunni and Iḥnā‘-asharī sources, as a founder of the Iḥnā‘ī faith. He is however condemned in later Iḥnā‘ī writings of the Fāṭimid period, in much the same terms as in the books of the Iḥnā‘-asharīyya. For a discussion of his doctrines see Ihtittihya.

ABU ‘L-KHATTĀB AL-KALWADDĀNĪ [see “ABU‘L-KHATTĀB AL-KALWADDĀNĪ.”

ABU ‘L-KHATTĀB ‘ABD AL-‘ALĀ B. AL-SAMH AL-MA‘ĀFĪRĪ AL-‘IMHARĪ AL-YAMANI, governor of al-Andalus, who arrived in that country from Irkīya in 1257/743, to replace the wāli Thā‘ab b. Salāma al-‘Umīl. He carried out a liberal policy, and skilfully removed from Cordova the representatives of the Syrian djundīs, who had come to Spain under the leadership of Bādi b. Bishr [q.v.]. On the advice of Count Ardabast (Arτābās), son of the Visigothic prince Witia, he settled these djundīs on fiefs, requiring from them in return that they should respond to mobilization appeals that might arise in the west, he allowed them to disband. When Abu‘l-Khattāb shortly afterwards reached the neighbourhood of Tripoli, the imām hastily assembled the nearest tribes to check his advance. The battle took place at Tāwurgha (on the coast, a few days’ journey to the east of Tripoli) in Sa‘ar 144/May-June 761. It was very bloody: Abu‘l-Khattāb with twelve or fourteen thousand of his followers were killed. In Dju‘nādā l’August, Ibn al-‘Ash‘ath reoccupied al-Kayrawān.
ABU 'L-KHAṬṭĀR — ABU 'L-KHAYR AL-ISHBĪLī

Sidona, those of the ḍīnawd of Ḥimṣ (Emesa) in the district of Seville and Niebla, those of the ḍīnawd of Kinnasrin in the district of Jaén, and those of the ḍīnawd of Egypt in the Algarve and in the region of Murcia (Tudmir). A little later Abu 'l-Khaṭṭār entered into conflict with a powerful chief of the ḍīnawd of Kinnasrin, al-Sumayî [q.v.] b. Ḥātim al-Kilibī, who mustered troops and defeated the governor in Radjab 127/4 April 745 on the Guadalete. In vain did Abu 'l-Khaṭṭār afterwards attempt to regain his office; it was seized by the Djiḏūḥmite chief Thawābā b. Salāma, who himself died the next year.

**Bibliography:** E. Lévi-Provençal, *Hist. Esp. mus.*, i, 48-50. (E. Lévi-Provençal)

ABU 'L-KHAYR, ruler of the Ozbegs [see uzbek] and founder of the power of this nation, descendant of Ṣhābān, Djiḏū's youngest son [see muṣābit], born in the year of the dragon (1422; as the year of the hijra 876/1434-35 is erroneously given). At first he is said to have been in the service of another descendant of Ṣhābān, Djiamaḍūk Khān. The latter met his death in a revolt; Abu 'l-Khayr was taken prisoner, but was released and shortly after proclaimed khān in the territory of Tura (Siberia) at the age of 17 (year of the aṭ-qaʿa, as year of the hijra 833/1429-30 is given). After a victory won over another khān of the family of Djiḏū the greater part of Kipāḵā submitted to him. In 834/1430-1 he conquered Khbāzām with his capital Urgandi, which was plundered, but soon afterwards he gave it back. According to his biographers, Abu 'l-Khayr later vanquished two more princes, Maḥmūd Khān and Ahmad Khān, conquered the city of Urdū-Bāzār, and seized (though for a short time only) the "throne of Ṣūyūn Khān", i.e. that of Batu. Shortly before the death of Sultan Shahrūkh (850/1447) Abu 'l-Khayr established himself firmly through the subjugation of the fortresses of Sīghan (at present the ruins of Sunak-Kurgan), Arkūk, Sūzaḵ, Āḵ-Kurgan and Uskand or the Šīr Dāryā—the most significant event in his reign for the further history of the Ozbegs. Sīghan seems to have been his capital from that time. South of this region formidable conquests were made under Abu 'l-Khayr; even the neighbouring town of Yasī (now Turkistan) remained in the power of the Timūrids. Marauding expeditions were frequently undertaken, even as far afield as Buḥbūrā and Samarqand. Abu 'l-Khayr appeared with greater forces in 855/1451-2 as an ally of the prince Abū Saʿīd against the then ruler of Samarqand 'Abd Allāh; with his aid 'Abd Allāh was defeated and killed and Abū Saʿīd was installed as ruler in Samarqand; Rābiʿa Sūltān Bēgūm, daughter of Ulugh Beg, was given in marriage to Abu 'l-Khayr. A second attempt to interfere in the disputes of the Timūrids fell out less happily; Muḥammad Djiḏū, favored by Abu 'l-Khayr against Abū Saʿīd, was forced in 865/1460-1 after some successes to raise the siege of Samarqand at the approach of his enemy, to quit the country ravaged by Abu 'l-Khayr's auxiliary troops (under Burke Sūltān) and in 866/1463—having, it seems, received no assistance from Abu 'l-Khayr—to surrender to his adversary. Shortly before, probably about 861/1456-7 (Abu 'l-Khayr's grandson, Maḥmūd, born in 858/1454, is said to have been then three years old), Abu 'l-Khayr's power received a severe blow from the Kalmāk (Kalmucks); beaten in the open field, he had to flee to Sīghan and let the enemy ravage the whole country up to the Sr. About 870/1465-6 there appears to have taken place among the Ozbegs that split, through which the proper inhabitants of the steppes, since called Kazak, separated from the other portion of the nation. The year of the rat (1488; erroneously identified with 874/1469-70) is given as the year of Abu 'l-Khayr's death; the power founded by him was after a short interruption restored and extended by his grandson Muhammad Shaybānī.

**Bibliography:** Abu 'l-Khayr's biography was written towards 950/1543-4 by Masʿud b. ʿUṯmān al-Kuḫistānī (Ṭawārīḵ-i Abu 'l-Khayr Khan); the statements in Howorth, *Hist. of the Mongols*, ii, 687, are correct only so far as concerns the MS. of the British Museum, but not the work itself; cf. Rieu, *Cat. of Pers. MSS.*, i, 102; the Leningrad MSS, including that of the University Library or. 852, used here, have also the beginning of the biography. Masʿud was also able to utilize the oral narratives of Abu 'l-Khayr's son Sūyūn Khān (d. 931/1525), who seems to have drawn his information from written sources, as for example the Maṭlaʾ al-Sādāyān of ʿAbd al-Razzāk al-Samarkandī. Information about Abu 'l-Khayr is also to be found in the historical works on his grandson Shaybānī and his successors, especially in the Taḳdīrāt-i Nūrāt Nūmā (cf. Rieu, *Cat. of Turkish MSS.*, 276 ff.) and the writings dependent on it. (W. Barthold)

ABU 'L-KHAYR AL-ISHBĪLī, surnamed al-Shaṭḏḏaḏ, "the arboriculturist", author of a book on agriculture, was a native of Seville (Ishbiliya). Neither the date of his birth or that of his death are known, and one can only say that as he is quoted by Ibn al-ʿAwwām [q.v.], who lived in the second half of the 6th/12th century, he must have belonged to an earlier period. He was probably the contemporary of the botanist-physicians and "gardener" of the 5th/11th century, such as Ibn Wafīd al-Lakhmī, Ibn Bāṣāl, Ibn Ḥaḍḏīḏḏī al-Iṣbīlī and al-Tighrānī. His *K. al-Fīlāhā* is preserved in MSS in the Bibliothèque Nationale in Paris, in the Zaytūnā mosque in Tunis and some private libraries in North Africa.

The following are the main contents of Abu 'l-Khayr's book. (i) General considerations on planting (*gharāsā*): favourable months; influence of the moon; the time needed for plants to grow and to yield fruit; age of trees; damage (weather, animals, fire, water); special treatment of olive-trees, vines, fig-trees, palm-trees, (ii) Plantations proper: trees, bushes, grain, seeds; layering, pruning, grafting; fruit and vegetable conserves; growing of vegetables; aromatic plants, flowers; flax and cotton; banana and sugar-cane. (iii) Animals: of the back-yard, especially pigeons; bees and wild animals; harmful animals (reptiles, rodents and insects). (iv) Finally two pages on the *nāḏārīb al-ʿām*, i.e. meteorological or astrological prognostications.

Abu 'l-Khayr appeals to his personal experience and observations in the gardens, parks, fields, vineyards and forests of the Aljaraf (al-Sharaf, district of Seville). His literary documentation consists in quoting, no doubt at second hand, the *K. al-Nabāt* of Abū Ḥanīfa al-Dinawarī (which had been expounded in 60 vols. by Ibn Ukhṭ Ghanī—cf. Makkar, *Anelectes*, ii, 270); Aristotle, Anatolius, "Kastūs" (Cassianus Bassus Scholasticus), Philemo—through adaptations of the Geopomicon and through the *Filāhā al-Nabāṭīyya* of Ibn Wāḥshīyya [q.v.]. (For this agronomical literature see *Filāhā*.) On the whole, the book is an empirical work of technical science, but, like the agronomical literature in general, is not without its popular and superstitious
side, and formulas for amulets and descriptions of talismans are given.

(H. Perès)

**ABŪ KHIRĀSH** Khuwaylid b. Murra al-Hudhaïl, muhāqad Arāb poet, who was converted to Islam and died under the caliphate of ’Umar, from the bite of a snake while he was drawing water for Yamanite pilgrims (who were then required to pay his dniq). Abu Khirāsh is counted among the pre-Islamic warriors who could run faster than horses, sharing this distinction with his nine brothers Abū Djiyandab, ’Urwā, al-Abābī, al-Aswad, Abu ’l-Aswad, ’Amr, Zuhayr, Diijānad and Suwayf, who also were poets of rank.

(CH. PELLAT)

**ABŪ KUBAYS,** a sacred hill on the eastern edge of Mecca. Rising abruptly from the valley floor, it overlooks the Great Mosque a few hundred meters away. The Ka‘ba corner containing the Black Stone points towards the hill, at the foot of which is *al-Safâ*, the southern end of al-Masâ‘. Buildings now hem the hill in on nearly every side. Muslim tradition holds that this was the first mountain created by God. Adam and other ancients are sometimes said to be buried there. The hill’s older name was al-Amin, given because the Black Stone was kept safe there during Noah’s Flood. Various stories explain the origin of the name Abū Kubays (Yākūt, s.v.; al-Azraqī, 477-8, inclines towards the version identifying Abū Kubays as a man of Yāyd, the first to build on the hill. Diabl Abū Kubays and al-Abmar on the western side of the valley were together called al-Akhsabān (the Two Rough Ones); a *hadīth* says that Mecca will last as long as these two. According to popular tradition, the Prophet was standing on Abū Kubays when the moon was rent in twain (Kur., liv, 1). The Ka‘ba was destroyed in 64/683-4 by shots from a *mandjantik* fixed on Abū Kubays, and in medieval times a castle crowned the hill; no fortifications now remain there. The first *zāma* of the Sanūf order was built on Abū Kubays c. 1252-3/1837, and in Snouck Hurgronje’s time a large Nakḥbandî establishment also stood on the slopes (Mecca, ii, 285).

For bibliography, see *Makka.* (G. RENTZ)

**ABŪ KURRA** Theodore, Melkite Bishop of Harrān, said to be the first Christian writer of importance to produce works in the Arabic language. He was born at Edessa c. 740 and must have died c. 820. He refers to himself in his writings as a disciple of John of Damascus (d. 749), but though he studied as a youth in the monastery of St. Saba in Palestine, he can hardly have been a student under the Damascene. Like that of John, however, his name is associated with the early stages of Christian apologetics against Islam, and with that Christian learning which played so large a part in moulding the development of Islamic theology. He wrote in his native Syriac, in Greek and in Arabic. His writings are for the most part polemical in nature, which may be explained by the fact that in his days the city of Harrān was a centre of vigorous intellectual life in which pagans and Manichees, Jews, Muslims and Christians of orthodox and of non-orthodox persuasion all shared. In his extant treatises he defends his orthodox faith against the teachings of all these opposing traditions. His Greek tractates have been edited in Migone, *Pair. Gr.*, xevii, and the Arabic by Constantine Bacha, *Oeuvres arabes de Théodore Abooucara, évêque de Haran*, Beyrouth, n.d., though there is some doubt as to the authenticity of certain tractates included in each of these collections (see Peeters, in *Acta Bollandiana*, 1930, 94, and H. Beck, in *Orientalia christianana analecta*, 1937, 40-3).

**ABŪ LAHAB,** son of ’Abd al-Muṭṭalib and Lubāna bint Ḥādji[r of Khuzâ‘a], and half-brother of Muḥammad’s father. His name was ’Abd al-’Uzza and his *hunya* Abū Ḥutba; Abū Lahab (literally “father of the flame”) was a nickname given by his father on account of his beauty. At one time, doubtless before Muḥammad’s preaching had roused opposition, he was friendly with his nephew, for his sons ’Uṭba and Ḥutba were married (or perhaps only betrothed) to Muḥammad’s daughters Ruṣayyaa and Um’m Kūlqum respectively. During the boycott of Ḥādji[r and al-Muṭṭalib by the other clans Abū Lahab dissociated himself from Ḥādji[r, probably because through his wife, a daughter of Ḥādji[r, Um’mayya, he was connected with Abū Shams. On the death of Abū Tālib, shortly after the end of the boycott, Abū Lahab became head of the clan and at first promised to protect Muḥammad, presumably for the sake of the honour of the clan. He withdrew his protection, however, when Abū Ĕahl and Ḥutba b. Abū Muqṭay managed to convince him that Muhammad had spoken disrespectfully of deceased ancestors like ’Abd al-Muṭṭalib and said they were destined for Hell. This loss of protection probably led to Muḥammad’s attempt to settle in al-Ṭālîb; when it proved vain, Muḥammad,
before entering Mecca again, had to obtain the ḍiyār of the head of another clan. This hostile conduct was doubtless the occasion of Sūra exi which, with a play on the name, consigns Abū Lahab and his wife to the flames of Hell. He died shortly after the battle of Badr to which he is said to have sent in his place a man who owed him money. There is a long story about his reaction to the news of this defeat. His sons 'Utba and Muḥammad became Muslims in 8/630, and 'Uthma's grandson, al-Ŷaḏl b. al-Abbās, was known as a poet (Abūlāhān, xv, 2-11).

Abū 'l-Layth al-Samarkandi, Naṣr b. Muḥ. b. Ahmad b. Ibrāhīm, known as 'Imām al-Ḥudā, a Ḥanafī theologian and jurisconsult of the 4th/10th century. The date of his death is variously given as between 373/983-4 and 393/1002-3. He must not be confused with his slightly older contemporary al-Ḥājīṣ al-Samarkandi, whose name was also Abū 'l-Layth Naṣr. The oldest known bibliographical source, 'Abī a-ṣ-Ṣādir (d. 275/1373), attributes to this latter person some of the main works that generally under the name of the 'Imām al-Ḥudā, but this seems to be a mistake.

Abū 'l-Layth was a very successful author in several fields of the Islamic sciences, and his books have become popular from Morocco to Indonesia. His main works are: (1) a Tafsīr, printed Cairo 1310/1892-3; this was translated into old Ottoman Turkish by Ibn 'Arābghā (d. 854/1450-1), and Ibn 'Arābghā's work was expanded by Abū 'l-Ŷaḏl Mūsā al-Īnāqī, a contemporary, under the title Anfas al-Dīwāhār; manuscripts of these Turkish editions are among the oldest dated Ottoman Turkish manuscripts; (2) Khisānat al-Fīḥḥ, a handbook of Ḥanafī law; (3) Muḥājīf 'l-Risāya, on the divergent doctrines of the ancient Ḥanafī authorities, in three editions; (4) al-Mubaddāma fī 'l-Salāḥ, on the duty of ritual prayer, with many commentaries; (5) Tanbih al-Ṣāḥīḥīn and (6) Bustān al-Ārifīn, both on ethics and piety, often printed; (7) an 'Abīda, in the form of question and answer (ed. A. W. T. Juynboll, BTLV 1081, 215 ff., 267 ff.), with a commentary by Muhammad b. 'Umar al-Nawāwī (d. after 1305/1888), under the title Kafir al-Ghayth (Broekelmann, S II, 814; C. H. Becker, Isl., 1911, 23), often printed, also Malay and Javanese interlinear translations. This 'Abīda is authentic (against Juynboll, i. c., and F. Kern, ZA 1912, 170) and represents a popular, Ḥanafī current of theological thought (Schacht, in Studia Islamica, i).

Abū 'l-Maʿalī Muḥammad b. 'Ubayd Allāh, Persian writer. His sixth ancestor was Husayn al-Asghar, traditionist and son of the Īmām Zayn al-Ŷabīn. His family lived for a long time in Balkh. He was a contemporary of Nasir-i Khusrūw, whom he may have known and about whom he gives us the earliest information available.

From two passages of his only work Ch. Schefer assumed that he was at the court of the Ghurid sultan Masʿūd III when he composed his Bayān al-Aḏwān, dated 485/1092, the earliest known work on religions in the Persian language. The first two chapters are devoted to religions before Islam and to some heresies; the third and fourth to the exposition of the Sunni and Shī'ite doctrines and to the Islamic sects (especially Ismāʿīlīsm); the fifth chapter, dealing with the Jews (which may, therefore, have been of importance) is lost. He mentions his main sources. His work has not the bulk of the Tābiʿīrat al-ʿĀsalm of Sharīf Murtadā (second half of 12th century), but it commends itself by its clear precision and by the sober vigour of its style. It is among the best of the rare prose works in Persian from the Ghurid period. Editions by Ch. Schefer (Christiömтicae persanae, i, 131-71) and Abbas Iqbal, Tehran 1324 (detailed genealogy of Abū 'l-Maʿalī in the introduction); transl. H. Massé, RHR, 1926, 17-75. (H. Massé)

Abū 'l-Maʿalī ʿAbd al-Malik [see Abu Dukayn].

Abū Madyan, Shusayb b. al-Ḥusayn al-Andalusi, famous Andalusian mystic, born about 520/1126 at Cañillana, a little town about 20 miles NNE of Seville. Sprung from a very modest family, he learnt the trade of weaver, but, impelled by an irresistible taste for knowledge, he learnt the Qurʾān and, as soon as he was able, went to North Africa to complete his education. At Fez he was the disciple of renowned masters, who owed, however, their fame less to their theological learning than to their piety and their ascetic lives—men such as Abū Yaʿṣūf al-Hāzinārī, Allāh b. Ḥizbān, and Abd al-Ḍuqkānī. This last invested him with the khirba, the robe which bore witness to his vocation of ṣūfī; but his real initiator into the theories of mysticism seems to have been Abū Yaʿṣūf al-Hāzinārī. With the permission of this master, he left for the Orient. There he succeeded in absorbing the tradition of al-Ghazālī and of the great mystics. At Mecca he may have encountered the famous ʿAbd al-Kādir al-Gilānī (d. 561/1166). He returned to the Maghrib, and settled at Biqāya (Bougie), where he became known for his teaching and his exemplary life. His fame reached the ears of the Muʿminid ruler Abū Yūsuf Yaʿṣūf al-Mansūr, who summoned him to the court at Marrākuṣh, no doubt apprehensive about such religious pretexts outside the Almohad sect. When within sight of Tīlīmsān (Tlemcen) Abū Madyan was taken ill and died (594/1197). Following his expressed wish he was buried at al-ʿUbābā, a village on the outskirts of Tlemcen, which was apparently already frequented by ascetics, but which, as his burial-place, was to become especially venerable.

The place which he occupies amongst the most important figures in western Islam is not due, strictly speaking, to his writings; at least, his only surviving writings are "a few mystical poems, a wasiyat (testament), and an ʿabīda (creed)" (A. Bel). It is because of the memory of him handed down by his disciples, and the maxims attributed to him, that he has been considered worthy to be regarded as a ṣūfī (pole), a ṣūfī (supreme succour), and a wall (friend of God). The maxims proclaim the excellence of the ascetic life, of renunciation of this world's goods, of humility, and of absolute confidence in God. He used to say: "Action accompanied by pride profits no man; idleness accompanied by humility harms no man. He who renounces
calculation and choice lives a better life”. He often repeated this line: “Say: Allah! and abandon all that is material or has to do with the material, if thou desiriest to attain the true goal”. Actually there is nothing original in his conception of sufism, but the success of his doctrine and its long-continued influence can be explained by its conciliation of various tendencies and by the type of society which he had undergone. With him the moderate sufism that Ghazali had already, a century earlier, received it. “His great merit and his great success is nothing original in his conception of sufism, but the use of a privileged elite, is now adapted to the mentality of the North African believer, whether man of the people or literate... Abū Madyan... gave once and for all the keynote for North African mysticism” (R. Brunschvig).

The books of hagiography attribute miracles to him, and Tlemcen, where he died, adopted him as patron. His tomb, which became the centre of a fine architectural complex (mosque of al-ʿUbbād 737/1339, madrasa 747/1347, little palace, hammam) mainly built by the Marinid sultan of Fez Abu ʿl-Ḥasan, ruler of Tlemcen, is still a place of pilgrimage for the country people of the province of Oran and eastern Morocco.

ABU 'L-MAHĀSIN DIYĀM AL-DIN YÚSUF B. TĀGHİRIBĀDI, Arabic historian, born at Cairo, probably in 812/1409-10 (exact date doubtful). His father was a mamlūk from Asia Minor (Rūm) bought and promoted by Sultan al-Zahir Barkūk; under Sultan al-Nāṣir Farāju he became commander in chief of the Egyptian armies (amīr ḥārī, al-bāḥk) in 810/1407, and in 813 viceroy (amīr kabīr, at-dabak) in chief of the Egyptian armies bought and promoted by Sultan al-Zahir Barkūk; he made the pilgrimage to Mecca in 826/1423, in 836/1432 he took an active part in the Syrian campaign of Sultan Barsbāy, with whom he was on intimate terms (as he was with later sultans), and turned to the writing of history after he had heard al-ʿAynī’s works read to that sultan.

One of his first important works was al-Manhāl al-Sāfī wa ‘l-Mustawfi baʾd al-Wāfī, biographies of the sultans and important amirs and scholars from 650/1251 to 855/1451, but with some additions as late as 862/1458; an annotated résumé was published by G. Wiet in MIE, 1932, 2-4.8. Next came al-Nudjām al-Zaḳī al-Mulāk Miṣr wa ‘l-Kāhira, a history of Egypt from 20/641 to his own times, and continuing also the biographical series of the Mankal. It was written, he says, for himself and his friends, especially Sultan Dījakmāk’s son Mūḥammad, and at first went only to the end of Dījakmāk’s reign, Mubarram 857/Jan. 1453. Later he continued it to 872/1467 (see below). Editions: Abū ʿl-Mahāsīn ibn Taghrī Birdī’s Annals, from 20/641 to 365/976, ed. Juyboll and Matthes, 2 vols., Leiden 1855-56; Abū ʿl-Māḥāsīn ibn Taḡhrī Birdī’s Annals, from 366/977 to 566/1171 and from 746/1345 to 872/1467, ed. W. Popper (Univ. of California Publ. in Semitic Philology, ii, iii part I, v, vi, xii). Berkeley 1909-29; al-Nudjām al-Zaḳī al-Mulāk wa ‘l-Kāhira, from 20/641 to 799/1397, Cairo 1348/1929 ff. (Dār al-Kutub al-Misriyya, al-Kām al-Asābī).

Two other extensive historical works, not mentioned by him or his biographers, are ascribed to him: Nuzhat al-Raʾy, from 20/641 to 365/976, ed. W. Popper (Berkeley 1909-29); Waliyaʾl-Saltana waʾl-fithilfa, ed. with Latin translation by J. E. Carlyle, Cambridge 1798.

He wrote also several condensations or extracts from his main works: al-Dalʿī al-Shāfiʾi alaʾl-Manḥal al-Sāfī; Ṭabbūl al-Wustārī; ʿAbd al-Qādir al-Ṭahābī ʿl-Idāhāra (supplement to al-Dhahabī’s Ishārāt); al-Kawākh al-Bāḥrī; Manāṣir al-Lajīfī fi ʿl-Dirr man Walīyaʾl-Saltana waʾl-Khālīfa, ed. with Latin translation by J. E. Carlyle, Cambridge 1798.

His other works other than on history were: Tahārī Fawād al-ʿArab ju ʿl-ʾAsmāʾ al-Tūrkhūya; al-Amṯāl al-Sārīra; Ḥiyāt al-Šīfātī fi ʿl-ʾAsmāʾ waʾl-Sināʾat (anthology of poetry, history and literature); al-Sukhar al-ʾAbādī waʾl-ʿifr al-Fāṭīh (a poem of mystic content); and a short treatise on vocal music. He left the manuscripts of his works to the tomb-mosque which he had built for himself. He died on 5 Dhuʾl-Hijja, 874/5 June 1470.

Bibliography: Abū al-Mardīl (the author’s pupil and copyist of the Manhal), in Nudjām, Cairo, i, Introd., p. 9; Sakhāwī, Dawʾ, x, 305-8; Ibn al-Imād, Saghārdī, ii, 317; Ibn Ḥyāʾ, Badīʾ (Kahle and Mustafa), iii, 56, 43; Well, Chalifūn, iv, pp. xvii-xlxi; v, pp. xxiv-xvii; E. A. Amar, in Mélanges H. Derenbourg, 1909, 245-54; G. Wiet, in BIE, 1930, 89-105; Brockemann, II, 41, S II, 39; F. Wüstenfeld, Die Geschichtsschreiber der Araber, no. 490; Ḥādīth Khalfā (Fügel), index, no. 4301; Babinger, 61. (W. Popper)

ABU 'L-MAHĀSIN YÚSUF B. MŪḤAMMAD B. YŪSUF AL-FĀSĪ, Moroccan scholar, and Şāfi shaykh of repute, born in 938/1530-31, the ancestor of the Fasiyyūn (vernacular Fāsiyyūn) family, which, since the 16th century, has provided the town of Fāṣ with a long succession of scholars and jurists.
Abu'l-Mahasin al-Fasl himself belonged to the Fihrite branch of the Fasiyyun family at Fas (this is how he came to acquire the appellative al-Fasl, which remained that of all his descendants). But it was to the capital of North Morocco that Abu'l-Mahasin al-Fasl went to study, and there he finally settled, from 988/1580 onwards. He soon acquired there an exceptional reputation for learning and piety, and founded a zawiya which has been much frequented ever since. In 986/1578, he took part in the famous battle of Wadi' al-Makhazin against the Portuguese (see sa'īdīn). He died on 18 Rabi' I 1013/14 August 1604. Among his most famous descendants should be mentioned his son Muhammad al-'Arab al-Fasl, author of a monograph on Abu'l-Mahasin, the Mir'āt al-Mahāsin (lith. at Fez in 1324), his grandson 'Abd al-Kādir b. Ali (q.v.), and the son of the latter, 'Abd al-Raḥmān (q.v.). A genealogical table of the Fasiyyun family will be found in Hist. Chorfa, 242.

Abū Manṣūr Iyās Al-Nafṣūsī, governor of Djebal Nafusa and Tripolitania, on behalf of the Rustamid sīdām of Tāhār, Abu'l-Yākzan Muhammad b. Aflah (d. 281/894-5). He came from Tindemira, a village in the Djebal Nafusa, but the exact dates of his birth and death are unknown. His province comprised the whole of Tripolitania, excepting the town of Tripoli which belonged to the Aghlabids. He had immediately to engage in conflict with the Berber Ibādī tribe of Zawāgha, who occupied the coast between Tripoli and Eljerba. This tribe, which sought to free itself from dependence on the Nafusa and had adopted the dissident doctrines of Khalaf b. al-Samli, revolted against Abu Manṣūr under the leadership of the son of Khalaf, who had taken refuge with them. Abu Manṣūr, attacked by the Zawāgha, defeated them with severe losses; their leader fortified himself on the island of Djebra, but his followers were bribed and delivered up to Abu Manṣūr.

According to Ibn al-Raḳīq, quoted by al-Sham-mākhī, when in 266/879-80 the invader Abu'l-Abbas Ahmad b. Tūlūn defeated the Aghlabid governor of Tripoli, Muhammad b. Kurhub and besieged the city for forty three days, the inhabitants called Abu Manṣūr up to Abu Mansūr. He arrived with twelve thousand men, attacked Ibn Tūlūn outside the city and routed him.

Abū Ma'shar [see also 'Alīnī].

Abū Ma'shar Dā'far b. Muḥammad b. 'Umar al-Balkhī, astrologer, usually known in western Europe as Albumasar, was born at Balkh in eastern Khurasan, studied at Baghdād, and was a contemporary of the famous philosopher al-Kindī (first half of 3rd/9th century); after studying the Islamic traditions, he devoted himself particularly to the study of astronomy and astrology, and it is to the latter that he owes his celebrity. He benefited fully from the very flourishing state of astronomical studies in Baghdād, but had a decided preference for astrology. In any case, in his various astrological works it is possible to pick out the astronomical principles and laws that he derived from contemporary scholars. He died at Wāsīt, almost a centenarian, in 272/886.

In the works of Abū Ma'shar can be observed the influences exerted at that time on Arab learning by cultural currents from Persia (in the Pahlawi tongue), and, more indirectly, from India. But Abu Ma'shar not only benefited from the learning of his contemporaries; even in his own time he was reputed to be a plagiarist. The author of the Fīrūt, on the authority of Ibn al-Muktafi, tells us that Abū Ma'shar plagiarized various authors, particularly the works of Sind b. 'All, and these accusations are corroborated by modern criticism.

Among his numerous works may be cited:

1. A collection of astronomical tables (ṣidī), unfortunately lost, in which the movements of the planets were calculated for the meridian of Gāndīz (or Gandezi in Pahlawi), and in agreement with the Indian theory of millenary cycles (kaṇārādī).

2. (al-Madhīb al-Kabīr) (The great introduction to Astrology), a treatise divided into eight books and still unpublished in Arabic, twice translated into Latin, first in 1310 by Johannes Hispalensis, then, in 1550, by Hermannus Secundus or the German. This work was to have a great influence in Christian Europe; the Latin manuscripts of it are numerous, and Hermann's translation was printed at Augsburg quite early, in 1489, under the title Introductorium in astronomiam Albumasaris Albaci de octo continens libros particulas; it was also printed in Venice in 1495 and again in 156. It is important to note that this corpus of astrology contains an exposition of the theory of tides, and it can be said that medieval Europe learned the laws of the ebb and flow of the sea from it. There is in this theory, side by side with true observations, some completely fantastic explanations. The moon is made to influence also the nations. The moon is made to influence also the winds, rainfall, and the whole sublunary world.

3. (Abhām Tabāwīl Sinn al-Masāli'd, translated by Johannes Hispalensis under the title De magnis coniunctionibus et annorum revolutionibus ac coron protectionibus octo continens tractatus, printed at Augsburg in 1489, and at Venice in 1515. The Arabic text is found in Escorial ms. 917 (Broeckelmann, i, 221, is wrong in supposing that this is a ms. of the preceding work), and also in ms. 2988 of the Bibl. Nat. of Paris. Nallino believed that the translation of De magnis coniunctionibus . . . was from an Arabic original, Dalālāt al-Aghābūs al-'Uhmīyya ('Indicazioni date dalle persone superiori dagli astri'), and Suter denied any connection between the De magnis coniunctionibus and the Kitāb al-qārinīs which is also attributed to Albumasar; but, as J. Vernet points out in a recent article, there is a large measure of correspondence between the two works.

4. Al-Nukat, a sort of summary of the previous treatise, translated by Johannes Hispalensis under the title Flores astrolæum: the Arabic text is in Escorial ms. 918, 1, and 938, 5, and also in folios 1-9 of ms. 2988 of the Bibl. Nat., Paris. The Latin
won for him the general's pardon. It is possible that Abū Mihdjan also took part in the battle of Vologesias (Ullays). In 1637 he was again exiled by 'Umar to Nāṣir, and died shortly afterwards; it is said that his tomb was to be seen on the frontier of Ḍāḥabāyḍīn or of Dījrān.

The fragments of his poetry that have been preserved show no originality, but his reputation as a poet is upheld mainly by his bacchanalian songs (the famous line: ‘When I die, bury me at the foot of a vine . . .’ is attributed to him) and a group of poems in which he openly challenges the Kuṭān’s prohibition of wine must be taken seriously. It was this attitude that led to his being banished several times by ‘Umar.

This poet should not be confused with his namesake Abū Mihdjan Nusaybi b. Rabād, on whom see NUSAYB.

Bibliography: The diwan of Abū Mihdjan has been edited by C. Landberg, Primeur arabes, i. Leiden 1886 (another ed., Cairo n. d., with a commentary by al-’Askarl), and by Abel, Leiden 1887 (with a biography and a Latin translation). Accounts of him are to be found in Dījrānī, Tabadāl (Cairo, 1056; Ibn Kūtayba, 351-2; Mas’ūdī, Murādī, iv, 213-19; Aḥānim, xi, 137-43, xx, 210-21; Ibn Ḥadjar, Isḥāq, iv, no. 1017; Baḥdānī, Ḥizānā (Būlāk), iii, 550-6; Āṣfānī, Annales, v, 224 sqq.; Brockelmann, i, 40, s 1, 70; O. Rescher, Abriss, i, 105-7; Nallino, Scrilli, vi, 46.

(N. RHODOKANAKIS-C. PEILLAT)

ABŪ MIKHNĀF LŪṬ B. YĀḤĪYA B. SA‘ĪD B. MIṢĞNAF AL-‘АЗDĪ, one of the earliest Arabic traditionists and historians, d. 157/774. He is credited in the Fihrist with 32 monographs on the diverse episodes of Arab history, relying mostly on ʻIrākī and on the chronicles of al-Baladhurī and al-Tabari. The separate works which have come down to us under his name are later pseudographs. His great-grandfather Mikhnāf was the leader of the ʻIrākī Azd on the side of ‘Alī (for him see Ibn Sa‘īd, vi, 22 and Nag b. Muṣāḥīm, Waqfa’at Sīfang (Cairo 1369), index). On the whole, however, Abū Mikhnāf presents an ʻIrākī point of view.

ABŪ MUHAMMAD ʻABD ALLĀH B. MUḤammad B. BARAKA AL-ʻUMĀNĪ, commonly called Ibn Baraka, Ibāḍīte author from the township of Bahil in ʻUmān. The precise dates of his life are not known, but an ʻUmānī Ibāḍīte writer, Ibn Muddād, regards him as a disciple and partisan of the imām Sa‘īd b. ʻAbd Allāh b. Maḥbūb, killed in 328/939-40. He himself played a considerable part in the political life of ʻUmān and composed several historical and juridical works, of which only the following are extant: 1. al-Ḍjāmī’, on the principles of law; 2. al-Muwāṣṣana, on the condition of ʻUmān at the time of the imām al-Ṣalt b. Maḥīk, and dealing also with certain points of principle and their juridical solutions; 3. al-Sīrā, somewhat similar to the preceding work; 4. Maḥb al-ʻilm, in praise of

translation was printed at Augsburg in 1488, at Venice in 1488, 1485, and 1506. 

Abū Mas'har Nādhī b. ʻAbd al-Raḥmān al-Madhani, a slave from the Yaman, possibly of Indian parentage, who purchased his freedom and lived in Medina. He was considered a rather ‘weak’ hadīth scholar, but he is deservedly famous as the author of a Kitāb al-Maghāzī. Numerous fragments of it have been preserved by al-Wākīlī and Ibn Sa‘īd. Among his authorities he mentions Nāfī (who at al-Kadisiyya. The story goes that, in order to part in the defence of al-Ja‘if against Muhammad, he escaped first from his c. c. d. had imprisoned him for drunkenness, and on Muhammad’s life and especially chronological statements, the latter going down to the very year of his death.

knowledge and those who pursue it; 5. al-Tahānī; 6. al-Yānī; 7. al-Sirāfī; Ibn Dā'far, doubtless a commentary on al-Dā'f, a work by Abū Dā'far Muhammad b. Dā'far al-Azkarī of Umān, dealing with the application of legal principles.

Abū Muḥammad Ṣāliḥ b. Yāsārān b. Gharīyūn al-Durqālī al-Madājrī, famous Moroccan saint of the 6th-7th century A.H., patron of the town of Āsfī [q.v.], the present-day Safi. Born about 550/1155, his principal master was Mecca and is believed to have stayed in Alexandria [q.v.], instructing him, the Imam sent him in 128/745-6 to instruct in Kufa. In 124/741-2, the Khurasanian al-Mughīra b. Saʿīd. In 124/741-2, the Khurasanian al-Mughīra b. Saʿīd. In 124/741-2, the Khurasanian al-Mughīra b. Saʿīd.

Abū al-Muṭḥir ibn al-Salt b. Khāmis al-Bahlawi al-Ummānī, Ibāḍī historian and lawyer, native of Bahla in Umān. His exact dates are not known; but he is counted among the Ibāḍī scholars of the second half of the 3rd/9th century. He left valuable literary materials, especially in the field of history, and also took an active part in the political life of his time, being a zealous partisan of the imām al-Salt b. Mālik, deposed in 273/886-7. Among his works, the following are worthy of note: (1) al-Abdāl wa l-Sifālī, devoted to events in Umān at the time of al-Salt b. Mālik, and to the circumstances of his deposition; (2) al-Bayān wa l-Burkān, on the principle of the institution of the Imāmate in connection with the affair of al-Salt; (3) al-strā, containing information about the important figures of the earliest period of Ibāḍīsm. MSS of these three books were in the possession of S. Smorgorzewski. (4) Taṣfīr al-Khams miʿat Āya, commentary on five hundred verses dealing with forbidden and permitted things.

Abū Naḍārā, Yaḥyā b. Rāfāʾil Șānō (also James Sanu), prolific Jewish Egyptian journalist and playwright (1839-1912). He indirectly influenced the ʿUrabi Revolt by teaching, lecturing, writing and performing short satirical plays and first starting the publication of Abū Naddārā Zarkā, entitled "the man with green spectacles", after making use of Abū Muslim against his uncle Abū Allāh b. Allāh [q.v.], he invited him to present himself at court. Abū Muslim, after long hesitation, suspecting, but not fully crediting, what was waiting for him, decided to do as he was bid, and was treacherously killed. His memory remained alive in the Eastern provinces, and, starting with the movement of al-Muḥanna [q.v.], gave rise, during many years, to political and religious agitation.

Abū l-Muṭḥir ibn al-Salt b. Khāmis al-Bahlawi al-Ummānī, Ibāḍī historian and lawyer, native of Bahla in Umān. His exact dates are not known; but he is counted among the Ibāḍī scholars of the second half of the 3rd/9th century. He left valuable literary materials, especially in the field of history, and also took an active part in the political life of his time, being a zealous partisan of the imām al-Salt b. Mālik, deposed in 273/886-7. Among his works, the following are worthy of note: (1) al-Abdāl wa l-Sifālī, devoted to events in Umān at the time of al-Salt b. Mālik, and to the circumstances of his deposition; (2) al-Bayān wa l-Burkān, on the principle of the institution of the Imāmate in connection with the affair of al-Salt; (3) al-strā, containing information about the important figures of the earliest period of Ibāḍīsm. MSS of these three books were in the possession of S. Smorgorzewski. (4) Taṣfīr al-Khams miʿat Āya, commentary on five hundred verses dealing with forbidden and permitted things.
ABŪ NADDĀRA — ABŪ NU‘AYM AL-ISFĀHĀNĪ

an anonymous lithographic sheet, enlivened by cartoons, in the Egyptian fallahm dialect. Because he had criticized the Khedive and his counsellors, he had to leave Egypt in 1878; but he continued to publish his newspaper in Paris intermittently, in Arabic and French, and smuggled it into Egypt under various names. Copies also reached North Africa, Syria and India. Besides Abū Naḍḍāra himself, many characters drawn from Egyptian life appeared in his newspapers, notably the greedy ḥāḇīr al-ḥāṣ (the Khedive Isma’il), officials, merchants, brokers, beggars, etc. They expressed their views in conversation form, letters, short plays, and minutes of meetings. He also contributed articles to various French newspapers. Besides his plays—of which he claims to have written over 30 (one preserved in Arabic)—he published a few stories and pamphlets, of little literary value. His political-journalistic activity in his exile had two phases. In the first, until 1882, he attacked the Khedives Ismā’il and Tawfīk, and the Egyptian supporters; called on France and Turkey to oust the British; proposed Prince Ḥālim, son of Muḥammad All, for the throne of Egypt; and campaigned, albeit perversely, for the beheading of the lot of the fallāḥīn. All in all, he was the creator of the satirical newspaper and the modern satirical Arabic.

ABŪ ’L-NAJJĪM AL-FAḌL (AL-MUFAḌḍAL) B. KUDAMA AL-ṢIḌĪQ, Arab poet of the first/7-8th century (d. after 105/724). Although he composed several ḥaḍāṣas, he owes his celebrity to his verses in raǧīs in which he treats of bedūin subjects (description of camels, horses, oases, etc.), and eulogizes the Umayyads ʿAbd al-Malik, Ḥāšm, ʿAbd al-Malik b. Ṣabh, and the governor al-Nadīḏīḏī. The critics, who include him among the four best ṣaḥīḥ (with his fellow-tribesman al-Aghlab and the two Tamīlites of al-ʿAṣra, al-ʿAḏīḏīḏī and his son Ruʿbā), rank him highest for description, and praise his facility for improvisation. His rivalry with al-ʿAḏīḏīḏī (Muḥammad against Rabīʿa) is famous, and the biographers describe a grotesque scene in which, at the Misrāb, Abū ʿl-Najjīm mounted on a he-camel puts to flight his rival and his she-camel, and recites the well-known line: ‘I and every poet of the human race [have demons to inspire us]: his is female and mine male’. Nevertheless it was Ruʿbā who gave the name Umma raǧīs to a long raḡīs which Abū ʿl-Najjīm recited to Ḥāšm, whose wrath was aroused by an ill-chosen word; he was soon received back into favour, however, and received from Ḥāšm an endowment in the Sawād of al-Kūfa.

Bibliography: Brockelmann, S I, 90; Rescher, Abrīs, i, 223; Nallino, Sensiti, vi, 98. A biographical account and some verses are to be found in Ibn Sallām, Taḥābāt (Heil), 148, 149-50; Ibn Ḥaṭṭāb, Shārīʿ, ii, 386; Abū Ḥāfiz, al-Taw f, ix, 95-98; Baghdādī, Khidma, i, 103, ii, 340-53; M. M. I, 928, collects together the biographical data (385-94), and publishes the Umma al-raḡīs (472-9).

A lāmiyya has been published by Maymann, al-Ṭārāḥ al-adabiyya, Cairo 1937, 55-71, and there are scattered verses in a number of works, particularly al-Ḏaḥif, Bāyān and Ḥayyānīn, in the indexes; A. ʿArabi, Fuhula, 1921, 499, 503, 511, 515; Abū Tammān, Hamadā (Freytag), 145, 144, 755; Marzubān, Muʿjīdūm, 310; ʿAskarī, Dīwān al-Muṣṭaʿfīn, i, 113, 279. (CH. FELLAT)

ABŪ NASR [see AL-FĀRAĪB].

ABŪ NU‘AYM AL-ISFĀHĀNĪ, AḤMAD B. ABD ALLĀH B. ḤISHĀ K B. MUṢĀ B. MĪRĀN AL-SHĀFIṢ, born in Ifṣāḥān in Raġāb 335/Jan.-Feb. 948 (Ibn Ḥallikān: or 334, ʿAqīl, al-Tabākī, i, 298, 330), d. Monday 19 Muḥarram (Ibn Ḥallikān: or Ṣafar; ʿAqīl: Monday 20 Muḥarram; ʿAbābī, Subkī: 20 Muḥarram) 430/23 Oct. 1038, an authority on fiḥk and ṣaḥāwa. His grandfather Muḥ. b. Yūsuf was a well known ascetic, the first of his kin to accept Islam (Ibn Ḥallikān). Abū Nuʿaym mentions him as his forerunner in Ḥiyya at-Tabākī (i, 4). His father who also was a scholar (ʿAqīl, al-Ṭabākī, i, 334) had taught by important teachers, as ʿAqīl al-Khulīlī and al-ʿAṣāmī, from his sixth year. From 356/967 he travelled and studied in TaFra, Hindūz and Khurāsān, and for 14 years he was reckoned as one of the best ḥadīth authorities. This is stated by his contemporary al-Khaṭīb al-Baḡdādī who quotes him (Taḵrīr Bagdādī, xii, 407, 412) and by al-Ḥaṭīb and al-Ṣabīkī, but neither al-Khaṭīb nor ʿAqīl include him in their biographies of learned men. The number of those who transmitted ḥadīth from him is said to be about eighty. Abū-Sulaim, his older contemporary, quotes one ḥadīth on his authority with one intermediary (Tabākī al-Ṣūfīyyah, sub Abru l-Abābīs b. Ṭāʿāt). Al-Khaṭīb, according to al-Ṣabīkī one of his nearest pupils, criticizes him for treating ṣaḥāwa's lightly, but is in this contradicted by al-Ṭabākī. A ḥadīth about Hanbalites and Ṣǎffīmites caused sharp criticism of him by his fellow townsman Abū ʿAbd Allāh b. Mandāḥ (cf. Brockelmann, S I, 281) and led to bodily attacks on him. He was even expelled from the mosque of Ifṣāḥān, which saved his life as, according to tradition, Subukṭīn, when he conquered the town, massacred the people assembled in the mosque at the Friday-service; this is reckoned one of his ḥāḍim. Abū al-ʿNabībī al-Mishābī, cf. Brockelmann, S II, 763 f.) relates that the mosque fell down twice and crushed the crowd because A. N. had cursed it. Abū Nuʿaym's work Ḥiyyat at-Ṭabākī wa-Tabākī al-Ṭabākī wa-Ṭabākī al-Ṭabākī (Cairo 1351/1932-1357/1938) was finished in 422/1031 (see x, 408). It was written to strengthen what he regarded as the true ṣuffism (i, 4). After a general description of ṣūfism he mentions the different etymologies of the word, above all its derivations from šīf, on which he had written a book Labs al-Shīf, stressing its connotation of humility (i, 20, 23). The rest consists in accounts of and sayings by 649 pious people (waṣṣāk) reckoned as ṣūfis, beginning with the four "righteous caliphs"—evidence of the interpretation of ṣūfism and orthodoxy. Every section begins with "the ṣāḥib (Abū Nuʿaym) said". It differs from al-Sulami's Ṣabākī, which gives only sayings with few or no anecdotes. It is told that he brought the work personally to Niṣābūr...
where he sold it for 400 dirhams. Extracts from it are used in Ibn al-Djawzī, Șafwat al-Șafwa.

His second large work, Dhikr Al-Abbas al-Iṣbahānī (ed. S. Edering, Leiden 1931) contains biographies of people who had connections with Iṣbahānī, mainly scholars, after a short history and topography of the town. On this topic he had several forerunners (cf. Edering ii, p. viii-x). Besides these works he wrote several smaller books on the proofs of prophecy, the medicine of the prophet, the excellence of Muhammad's first followers, with extracts from al-Buhkārī and Muslim etc. He died in Iṣbahānī and his tomb is said by Yākūt (î, 28b) to be in Mūrdbāb.

Bibliography: Brockelmann, S I, 516 f.; Yākūt, index; Ibn Khallīkān, Cairo, no. 32; Dāhābī, Taḏḥīb al-Ruṣūf, Ḥaydarābab 1334, iii, 275-79; Subki, Taḏābūt al-Ṣāḥībīyyah, Cairo 1324, 7-9; Șaḥrānī, al-Taṣābīḥ al-Ḳurānī, Cairo 1315, i, 56; Ibn al-ʾImād, Ṣaḥḥārīya, lii, 243; Nabāḥīn, Ǧarīm al-ʿAwmūy, Cairo 1320, i, 239.

(A. PEDERSEN)

ABŪ NUʾAYM AL-FADL B. DUKAYN AL-MULĀṬ, ḥadīṯ scholar and historical informant (b. 130/748, d. 29 Shabaʿa 219/8 Sept. 834). He was a client of the family of Muhammad’s Companion Ṭalḥa. He lived in al-Kūfah and made occasional visits to Baghdād, where he was once received by al-Māmūn. Dukayn’s actual name is said to have been ʿĀmir. A son of Abū Nuʾaym, ʿAbd al-Raḥmān (perhaps the author of the Kurʾān commentary, referred to in Fihrist, 34), and a grandson, ʿĀhmād b. Mīṭḥam, are mentioned.

Abū Nuʾaym is considered a very reliable transmitter of traditions. He is also highly praised for the courageous way in which he stood up for the unconnectedness of the Kurʾān against the Mutanūna inquisitors. On the other hand, he was suspected of being a Ṣhīʿī. He admitted his secret veneration of being a Shiʿaite. He expressed his dislike of the Ṣaḥḥābīs and Ṣaḥḥābīs also, and studied under the grammarians Abū Ḫayyān, Abū Zayd, etc. He is also said to have spent, according to the old custom, some time among the beduins in order to improve his linguistic knowledge.

His education finished, Abū Nuʾaym came to Baghdād, to gain the favour of the caliph with panegyrics. He found, however, little favour at the court, but was better received by the Barmakids. After the fall of the Barmakids he had to flee to Egypt, where he composed panegyrics on the head of the diwan al-ḥanāfī, al-Ḵalīfah b. ʿAbd al-Ḥamīd. Soon, however, he was able to return to his beloved Baghdād, where he now spent, as a boon companion of al-ʾĀmin, the most brilliant years of his life. Nevertheless, even al-ʾĀmin once prohibited him from wine drinking and even imprisoned him on that account.

There are different reports about his death. According to one tradition he died in prison, to which he had been sent on account of a blasphemous verse, according to another in the house of a woman tavern-keeper, according to a third in the house of the learned Shiʿī family of the ʿAl Ṣawbakht. He was linked to this family, especially to Ismāʿīl b. Abī Sahl al-Ṣawbakhtī, by close friendship, though this did not prevent him from composing some amusing lampoons on Ismāʿīl (Dīwān, 171 f.). The assertion, therefore, that he was murdered by the Sawbakhtīs is probably mere slander, especially as this family interested itself even later in the collection of Abū Nuʾaym’s poems and Ḥamza al-Iṣbahānī made use of information derived from them (cf. MS Fāṭih 3773, fol. 3v).

The Arab literary critics themselves regarded Abū Nuʾaym as the representative of the modern school of poets, the muhdathūn. “What Imrāʿ al-Kays was for the ancients, that is Abū Nuʾaym for the moderns” (Fāṭih 3773, fol. 71). At most, only ʿAḅshābī b. Burd could possibly compete with him. Although in his panegyrics Abū Nuʾaym still uses in general the classical form (cf. e.g. Dīwān, 77), the panegyric known as maḥāna, addressed to Al-ʾAfḍāl b. al-Rahlī, to which Ibn Dīmī devoted an extensive commentary, otherwise the old forms, especially that of the maṣbē, serve as a butt for his ridicule. Once he begins abruptly: “I do not weep because the dwelling-place has become an inhospitable desert” (Fāṭih 3775, fol. 12r); instead of the...
former dwelling-place of the beloved he weeps for the taverns that have disappeared and bewails the delights of both, but also depicts with humorous realism his adventures in this field. Nor does he avoid self-irony, as when he describes the thrashing which he received at the hands of youths whom he had made drunk in order to amuse himself with them (cf. e.g. Fāṭīh 3775, fol 21). Equally ironical are the dirges which he composed about his own body, wasted by illness (Diwān, 131 f.).

Abū Nuwās confesses his sins with remarkable frankness and often also invites his fellow-men to repent likewise. He calls upon those who reproach him to leave him alone as their blame only incites him all the more; nor does he intend to mend his ways until the grave. He boasts of having omitted nothing that displeases God, except polytheism (Diwān, 281), and ridicules all the institutions of Islam. His verses against Islam do not serve to prove for God to take notice of his deeds (Fāṭīh 3775, fol. 16). His ascetic poems do not serve to prove that he repented in old age; they could have been composed in transient moods or as occasional poems due to special impulses. Otherwise, too, there are frequent contradictions in the diwān; they ought not to be taken as proofs of a change of mind or of dishonesty, as Abū Nuwās was more interested in the witty formulation of his ideas than in the content of the idea itself.

Poems about love of women are rare in comparison with those on love of boys. It is said that only once Abū Nuwās fell in love with a girl, a slave called Dījān. It is true that ʿHamza al-Iṣbahānī denies this emphatically and enumerates a long list of women with whom Abū Nuwās was allegedly in love (Fāṭīh 3774, fol. 76 v); but these are only names taken from the poems and are perhaps even fictitious.

The diwān of Abū Nuwās contains, for the first time in Arabic literature, a special chapter containing hunting-poems. They mostly describe hounds, falcons and horses, but also various kinds of game, and are remarkable for the richness of their vocabulary. Abū Nuwās had models for this genre in the descriptions of animals in the old beduin poetry, but he seems to have made it into an independent genre. Later on it was further developed by Ibn al-Muṭazz.

The language of Abū Nuwās, though he uses some contemporary vernacular expressions, is on the whole correct. The mistakes which he makes were already usual among his predecessors (cf. J. Fück, Arabiya, 51 ff.). In certain groups of his poems Persian words occur very frequently (e.g. in dāḏ-i biyābin, Fāṭīh 3775, fol. 29, a whole idāfat-construction). Altogether, Persian civilization plays a considerable role in his poetry (cf. Gabrieli, OM, 1953, 283). We often find him referring to the heroes of Persian history, but as the old Arabs are also mentioned, this has certainly no special significance, and Abū Nuwās can hardly be called a poet of the shuʿbāṭiya. His work only reflects the cultural background of the ʿAbbāsid epoch, in which the influence of the Iranian element gradually increased. In the imagination of the Arabic world the figure of Abū Nuwās is intimately connected with that of Hārūn al-Raṣīlī, who personifies in his turn the glory of the caliphate. Thus he entered the *Arabian Nights* and still today he is a favourite figure of popular stories, where he most often plays the role of a court jester. (Cf. A. Schaade, Zur Herkunft der Urform einiger Abū Nuwās Geschichten in 1002 Nacht, ZDMG, 1934, 299 ff.; idem, Weiteres zu Abū Nuwās in 1002 Nacht, ZDMG, 1936, 602 ff.; W. H. Ingrams, Abū Nuwās in Life and in Legend, London 1933, cf. Schaade in OLE, 1935, 545-7.)

Abū Nuwās did not himself make a collection of his poems. Thus, on the one hand much has been lost—more especially his poems written in Egypt remained unknown in ʿIrāk (cf. Fāṭīh 3773, fol. 47); on the other hand, many poems, especially on wine and pederasty, were falsely attributed to him. His diwān is extant in several recensions, of which the two most important are due to al-Sūlī and ʿHamza al-Iṣbahānī (for the latter, see E. Mittwoch, in MSOS, 1909, 156 ff.). While al-Sūlī aimed at excluding all spurious poems and arranged the poems, within the separate chapters, in strict alphabetical order, ʿHamza shows a less critical sense, as one could never know if a suspect poem as not after all genuine. Thus his collection is about three times as large as that of al-Sūlī, and contains about 1500 poems with 13,000 lines. Moreover, he adds many abhār, which are missing in al-Sūlī, and to some chapters adds a commentary. He also incorporated in his collection the so-called *Risāla of the Syri'an on the sarkāb of Abū Nuwās*, addressed to him by Muḥānī b. Yāmūt. Ahlwardt's edition of the wine-songs follows the recension of al-Sūlī, while the printed edition of Cairo 1898 is based on that of ʿHamza. Today we have for both MSS—especially in Istanbul—than those that were available at the time of these editions.

**Abū Righāl**, mythical person, about whom two entirely different traditions can easily be distinguished. According to the first, he was a Ṭhakafite of Tāḥīf who guided Abraha [q.v.] on his
way to Mecca. He died in al-Muğḥammas [q.v.] and was buried there. It was the custom to stone his tomb. (For a similar custom cf. Al-Ḍāmāmah.) The story is sometimes told with the object of slandering the Thaḳafītes. The earliest mention would be a verse of Ḥāṣṣān b. Ṭḥābīt (ed. Hirschfeld, ii, i, l), if it is not an anti-Thaḳafīte falsification. The early date of the custom of stoning Abū Rīḡāl’s tomb is proved by a vers of Ḍīarīr: “If al-Farazdāk dies, stone him as you stone the tomb of Abū Rīḡāl.” In the second tradition, found in its simplest form in al-Ṭabarī and Aḥmad b. Ḥanbal, Abū Rīḡāl was the only survivor of Thaḳūd, and at the time of the death of Thaḳūd b. Ṭabarī he was staying in Mecca and was saved by the sanctity of the place; he died, however, as soon as he left Mecca. His story was told by the Prophet as he was passing al-Ḥijḍr with his army. In the earliest form, this version knows of no connection of Abū Rīḡāl with Thaḳūf, but this feature was later introduced, possibly under the influence of the first story. In one of the stories in al-Abūl Ḥāfīẓ he is even said to have been a king of Tāʾif and ancestor of Thaḳūf. On the other hand, authors like al-Ḍāḥīṣ, Ibn Kūṭayba and Aḥmad b. Abī Ṣa’dīd quote a version which is evidently meant as a defence of the Thaḳafītes: it was they who killed Abū Rīḡāl, a cruel and unjust person. Later authors still further confuse the two traditions. Al-Dīyārbakrī gives as the name of Abū Rīḡāl Zayd b. Muḥṭalīf.

Abu Sa'id b. Abu 'l-Khayr

St. Petersburg 1899, after two defective manuscripts; reprint Teheran 1313 H. Sh., new ed., St. Petersburg 1899, after two defective manuscripts; reprint Teheran 1313 H. Sh. (quoted as AT). Manuscripts also Skutari, Hadâ'î, Taş, 238; Istanbul, Şehîd 'Ali Pasha 1416.) This was the source used in the Tadhkirat al-Awliyâ’ of 'Attâr and the Naqdahâl al-Uns of Dilâm. The father of Abu Sa'id was a druggist known as Babu Bu 'l-Khayr. He took the boy with him occasionally to the sacred performances of dances (samâ‘) which the süfis of the town gave by turns in their boxes. Abu Sa'id received his first instruction in mystical devotion from Abu 'l-Kâsim Bîghrî-î Vâslûn (d. 380/990), who had a poetic streak in him and is the author of the majority of the verses which Abu Sa'id later quoted in his sermons. As a young man Abu Sa'id studied Shâfi‘ite law in Marw under Abu 'Abd Allâh al-Husûl and Abu Bakr al-Kaffâl (d. 417; al-Subki, Tabakât, iii, 194-200). Among his fellow-students was Abu Muhammad al-Dâwâyînî (d. 438: al-Subki, iii, 208-19), the father of İmân al-Haramayn. Then he studied exegesis of the Kurâ’n, dogmatics and Hadîth in Sarakhs under Abu 'All Zâhirî (d. 389; al-Subki, ii, 223), who succeeded in rooting out the social motive of sufism, the “service of the people,” from his household, and converted many of them into followers instead. He liked to arrange lavish, even extravagant entertainments for his followers, culminating in sacred dance music (samâ‘). During these, dancing and crying out (na‘ra zadan) were, as was customary, the order of the day. In the throes of ecstatic dances were thrown off, torn up, and distributed around.

To finance these luxurious occasions, at which as much as a thousand dinârs is supposed to have been spent in a day, and which moved 'Awwâl to remark that in later years Abu Sa'id lived hardly as an ascetic but rather as a sultan (Barthold, Turkistan, i, 211), he did not hesitate to invent the cause of frequent embarrassment to his household manager Hasan-i Mu‘addib. Some wealthy devotee, however, was always found, who, often at the last moment, provided the requisite money. Sometimes he sent Hasan to followers, even to opponents, with whom he stayed, in order to raise money in an almost barefaced manner. The money was immediately spent, as it was regarded as a privilege to possess no assured property (ma‘lâm) and to accumulate nothing. His way of living caused offence to the Karrâmî Abu Bakr Muh. b. İshâb b. Mîmahâd, made common cause with the Hanafî Khâdî Sa'idî b. Muhammad al-Ustuwâlî (d. 432; on both see ‘Utîl-Manûnî, ii, 309 ff., Persian translation by Dîrufâkânî, Teheran 1272, 427 ff.; W. Barthold, Turkistan, 289-90, 312; on the latter ibn ‘Abîl ‘Walî, al-Dâwâyînî al-Mud‘âtî, no. 685, and al-Sâmânî, Anwâr, under al-Ustuwâlî) and laid information about Abu Sa'id before sultan Maḥmûd b. Subûktîgîn, who ordered an inquiry, perhaps in conjunction with a universal heresy hunt carried out by the aforementioned Karrâmî governor Abu Bakr (Barthold, Turkistan, 290). However, Abu Sa'id contrived to disarm both through his skill in thought-reading, with the result that they abandoned the prosecution. The indictments were, that the ṣâyikî recited on the pulpit verses in place of the Kurâ’n and Hadîth, that he gave too luxurious feasts and that he had made the young people dance. The great al-Kûshârî, who encountered Abu Sa'id in Nîşâbûr, took exception to the excessively liberal way of life of the young man and to his dance music. The contrast between the characters of the two men is illustrated by an apt anecdote: al-Kûshârî had repudiated a derwîsh and banished him from the town. Abu Sa'id showed him at a banquet how by very much gentler methods a derwîsh may be sent travelling (Nicholson, 35-6). A strong kindliness of nature and an affection for his fellow-men were conspicuous characteristics of Abu Sa'id. He was no preacher of repentance; seldom, if ever, did he refer in his sermons to the verses of the Kurâ’n threatening the tortures of Hell. Numerous stories were related of how by means of his firdâsî he saw through the intimate thoughts of sinners and opponents and thoroughly
abashed them. The guiding motif of his life is said to have been the hadith: "If man kia'ah was-a'i man karamak wa-l-makan (AT, 311). The celebrated sūfī Ibn Bākūya (d. 442/1050) reproached him for allowing young people to sit together with old and for treating them just as he did the old, for allowing them to dance and for giving back the cast-off khirba to its owner, whereas it should be being cast off have become common property. Abū Sa'id contrived to give plausible reasons for these innovations (AT, 70-71). Ibn Ḥazm brands him as an unbeliever, since he wore now wool, now silk, sometimes a thousand rakās a day, sometimes not at all ( Ṣafi, iv, 188). At all events social work played a very much greater role in the second period of his life than individual mystic experience: and from this point of view he is comparable (in spite of substantial differences) with Abū Iṣḥāq al-Kāzarīnī (q.v.). However he once gave tongue to a pronouncement similar to al-Hallājī's Ana 'l-Hākāb. In the course of a sermon he was overcome by a state of inner excitement and called out Layst fi l-djūbati ilā 'llāh, "There is none other than God in this robe". So saying he ran his forefinger through the gown. It was divided and the portion with the hole made by his finger preserved.

Abū Nāṣrārī he also met the philosopher Ibn Sīnā and is supposed to have held lengthy conversations with him. A correspondence between the two is preserved. Abū Sa'id asked the philosopher what was the way to God according to his experience, and received a reply (printed by H. Ethe, SBBayr. Ak., 1878, 52 ff.; Ibn Sīnā, al-Nādīr, Cairo 1331, 12-5; Ibn Abī-'Uṣaybi'a, ii, 9-10; al-'Amīlī, al-Kašgālī, Cairo 1318, 264-5). At the end of his stay in Nīshāpūr he wished to accompany his son Abū Taḥīr on the pilgrimage, but was restrained from this in Kharakān by the celebrated sūfī Abu 'l-Ḥasan Kharakānī. He then went to Bistām where he visited the grave of Abū Yazīd, and to Dāmghān, eventually returning Rayy before returning with his son. He spent the rest of his life in his home town of Mayhāna.

Abū Sa'id is supposedly the author of a great number of quatrains. In several manuscripts (AT, 311, 48, note; also editions Bombay 1294 and Lahore 1934.) However it has been expressly stated that he composed only one verse and one quatrain (Nicholson, 4). The quatrains may not then be attributable to him. One of them, with which he is supposed to have cured his Kūrān-teacher Abū Sālih of an illness (AT, 229) and which opens with the word haurūdi was made the subject of a commentary by 'Abd Allāh b. Mahmūd al-Sāhīshī under the title Risāla-yi Haʻarūdīyya (AT, 32-5).

Abū Sa'id left a numerous family, who tended his grave for more than a hundred years and were held in great respect in Mayhāna. His eldest son Abū Taḥīr Sa'id (d. 480) continued the "service of the poor" and thereby involved himself in debts which were paid by Niẓām al-Mulk. He was an uncultured individual, however, who left school before he was ten years old and knew by heart only the 48th sūra of the Kūrān, and did not have the personality to find an order after his father's death (as did the son of Djamāl al-Dīn Rūmī, Sultān Walād), although Abū Sa'id did leave behind a kind of statute for an order (Nicholson, 46). The tradition was however broken by political events. Abū Sa'id lived to see the entry of the Saljuḳs into Khurāsān. They occupied Mayhāna, and Abū Sa'id was on friendly relations with Tughrīl and Čağhrī Beg. Sultan Mas'ud laid siege to the town and captured it shortly before his decisive defeat at Dāndānākān in the year 431/1040. During the devastation of Khurāsān by the Ghurī in the year 508/1113 the place was absolutely laid waste, no fewer than 115 members of Abū Sa'id's family being tortured and put to death. A follower of Abū Sa'id, Dūst Bū Sa'd Dāda, whom the shaykh had sent to Ghazna not long before his death to have the Sultan discharge his accumulated debts, found Abū Sa'id dead, went to Baghdad on his return, and founded a daughter monastery there. At the time of Ibn al-Muqarrabī his family held the position of shaykh al-shaykh in Baghdad, but nothing is known of the subsequent destiny of this offshoot (AT, 294-300).

ABŪ SAID AL-DJANNABĪ [see AL-DJENNABĪ].

ABŪ SA'D B. MUHAMMAD B. MIḤAḴHĀR B. TIMŪR, Timūrid sultan. In 853/1449, at the age of twenty-five, Abū Sa'id, taking advantage of the desperate situation of Ulugh Beg, at whose court he lived, tried his fortune in Transoxiana. A siege of Samarkand (1449), then a rising at Bāḵhtar (May 1450) both ended in failure. Not long afterwards he seized Yaš (Turkistan), and held it against the troops of 'Abd Allāh b. Ibrāhīm Sultan b. Shāhīrūkh. In Dīnāmād I 855/June 1451 he drove the latter out of Samarkand with the help of the Özbeg khan Abū 'l-Khayr. In spring 858/1454 Abū Sa'id crossed the Oxus and took Bāḵtūr. Abū 'l-Kāsim Bābur, ruler of Khurāsān, invaded Transoxiana and laid siege to Samarkand (Oct.-Nov.), where resistance was organized by the famous Nakhshbandi šaykh 'Uḥayd Allāh Ahrār, who is said to have restrained Abū Sa'id from deserting his capital. Peace was made, Abū Sa'id keeping the right bank of the Oxus. The relations of the two princes remained cordial until the death of Bābur (Rabī' II 861/ March 1457).

Abū Sa'id then tried to take Harāt, where Ibrāhīm b. 'Alī al-Dawla b. Bayṣungūr had succeeded in having himself proclaimed. The siege (July-August 1457), marked by the execution of Gahwar Shād, who was accused of intelligence with Ibrāhīm, was raised without result. Defeated by the Kara Köyünün Dījahānshāh, Ibrāhīm sought an alliance with Abū Sa'id (beginning of 862/winter 1457-8), and a defensive treaty was concluded. At the end of June 1458 Dījahānshāh occupied Harāt. Abū Sa'id, who had stationed his army on the Murghāb to watch the course of events, took advantage of Dījahānshāh's difficulties to get possession of the town peacefully (Nov. 1458), and thus became master of Khurāsān, which he had always coveted. In Dīnāmād I 863/March 1459 the three Timūrid princes 'Alī al-Dawla, Ibrāhīm b. 'Alī al-Dawla, and Sultān Saṅgarī were defeated at Sarakhs.

The year 1459 was spent in mopping up Khurāsān. In 1460 Abū Sa'id occupied Māzandarān; in his rear the amīr Khallī came from Sīstān and laid siege to Harāt (summer 1460); and when calm had been restored in Sīstān (autumn 1460), Abū Sa'id had to deal with a revolt in Transoxiana (winter 1460). Sultān Ḥusayn took advantage of this to reoccupy Māzandarān and besiege Harāt (Sept. 1461), but Māzandarān was retaken by Abū Sa'id in the same year.

Abū Sa'id's power extended theoretically over Transoxiana, Turkistān (to the confines of Kāšghār and of the Dašt-i Kīpāk), Kābulistān and Zābu-
Abū Sa'id b. Timūr — Abū Sakhr al-Hudhali

Abū Sa'id was more fortunate in the north-east, and succeeded in averting the Mongol threat to his frontiers. During his reign in Samarkand he had repulsed two attacks by the Mongol Mūsā Esen Buγha. In 1456 he recognized Yūnus, the elder brother of Esen Buγha, and on several occasions gave him help in establishing himself in the western part of Mughulistan. In 1468/64 Yūnus once again sought refuge with Abū Sa'id, who lent him troops.

Real though the personal qualities of Abū Sa'id were, they had been exaggerated, and his reign revealed no very impressive trends. Among the Turkish aristocracy of his entourage, pre-eminence was normally to be paid in three instalments. At Samarkand, Bukhara, and Karat the tamghād was normally to be paid in three instalments. Each year the Khurasanian infantry, in the rearguard, was attacked by deserters. When the news of the death of Abū Sa'id reached Harāt the troops raised in 'Hindūstān' (i.e. Afghanistan) were not yet organized. Notwithstanding this lack of preparation Abū Sa'id made the mistake, when caught by the winter, of penetrating too deeply into 'Adharbāyjān. He was cut off and captured near Mūshān by Ḫūn Ḥasan. A few days later the Timurid Yādgār Muhammad, a dependent of Ḫūn Ḥasan, had him executed (Feb. 1469) to avenge the death of his grandmother Gawhar Shād.

Studies. In the absence of monographs on the period, works dealing with questions or periods bordering on it must be used. See particularly V. V. Barthold, Ulug Beg i jego wremię, 1898 (Germ. transl. by Hinzz, Ulug Beg und seine Zeit, 1913), and Mir Ali Šīr i političeskaja súiet (transl. Hinzz, Herat unter Husain Baqirā), the articles (by Yakubovskii, Molfanov, Belenitskii, etc.) in the two collections Rodonadalnik uzbekskoj literatury, Taṣkent 1940, and Ali Šīr Navaţ Šarbeh, Taṣkent 1945; Bilenijskii, K ishiri toqul-nagro zemleoladaniya Srednej Azii pri Timuridakh, in Istorič-Markistič, 1941/4; the works of I. P. Petruševskii; W. Hinzz, Iran i Ausstieg zum Nationalstaat, 1936. On the Russian embassy to Harāt in 1464 cf. *ZVO*, i, 30 sqq. See also Browne, iii; Grousset, Empire des Steppes. Bouvart, Essai sur la civilisation timouride, J., 1926, and L'Empire mongol (2e phase), Paris 1927, may be disregarded.

(J. Aubin)

**Abū Sakhr al-Hudhali, 'Abd Allāh b. Salama, Arab poet of the second half of the 1st/7th century. He belonged to the tribe of Saba, a branch of the Hudhayl of the Ḥidżāz, and embraced the Marwānid cause; imprisoned by the anti-caliph 'Abd Allāh b. al-Zubayr, he regained his liberty when the latter died, and, according to his own account, took part in the capture of Mecca in 72/692. He celebrated in his verse the caliph 'Abd al-Malik, as well as his brother, 'Abd al-ʿAzīz; see Aghānī, xxii, 144. Above all he praised the amīr Abū Kālid 'Abd al-ʿAzīz of the Aslān clan, whose brother, Umayya, had been governor of al-Baṣra from 71/950**
ABU SAKHR AL-HUDHALI — ABU 'L-SARAYA AL-SHAYBANI

until 73/end of 692; see al-Tabari, index; on the favour in which this family was held by the Caliph, see Ibn 'Abd Rabbih, 'Abd, Cairo 1359, viii, 55. Some poems and fragments by Abû Sakhr are known, which were included by al-Sukkari in his dīwān of Hujjāyl. A number are baṣīdas of the classic type; others are erotic-eligiac compositions recalling those of Abu Rabī’.n

Bibliography: Akgâni, 221, 144-54; J. Wellhausen, Letter 6 to the Lieder der Hujjāyliden, Berlin 1884, i, Arabic text, nos. 250-269; al-Buhurtî, Hamāsa, no. 1009; Kudāma b. Dī'far, Nakāb al-Shaybānī, 13, 44-55. (R. Blachère)

ABŪ SALĀMA ḤĀFIS B. SULAYMĀN AL-KHAL-LĀL, vizier. A freed slave from Kūfā, he was sent in 127/744-5 to Khūrasān with ample powers, as one of the chief ‘Abbasid emissaries. He took part in the armed insurrection which put an end to the Umayyad dynasty, and was appointed governor of Kūfā. At the culminating point of the revolution he inclined towards the ‘Alids and seems to have attempted to set up an ‘Abbasid caliphate. In this, one can perhaps see a consequence of the deliberate ambiguity about the rights of ‘the house of the Prophet’, put into circulation by the revolutionary propaganda. Al-Salām, however, was chosen as caliph and Abū Salāma gave him his allegiance (132/749). The caliph appointed Abū Salāma vizier, without, however, losing his suspicions, and in the same year planned to remove him. Fearing that this might irritate Abū Muslim, the powerful governor of Khūrasān, who was Abū Salāma’s companion in the dā’wa and might have been acting in agreement with him, he sent his brother Abū Ṭāfīr (al-Manṣūr) to consult Abū Muslim. Abū Muslim made no difficulties; on the contrary, he himself sent a hired assassin to kill Abū Salāma. The crime was subsequently attributed to the Khāṭīfdites. Abū Salāma is described as an educated and capable man, and his services in the ‘Abbasid cause are indisputable. Nevertheless, the fears of the caliph concerning him seem, by the common witness of the sources, to have been justified.

Bibliography: Dinawarī, al-‘Abbâr al-Tawâlī (Guirgass), Yaḵṭūbī, Ṣāḥib, Murādī, indexes; Ibn Khallikān, no. 200; Ibn al-Tiktaḵāk, Fakhrī (Dèrenbourg), 205-10; S. Moscati, in Rend. Linc., 1949, 324-31. (S. Moscati)

ABU’L-SALĂT UMAYYAH B. ‘ABD-AL-ÂżĪZ B. ABD AL-ÂżĪZ AL-ÂMÎL, was born in 446/1057 in Denia (Dâniyya), in the Levante, and studied under the kāfi al-Wâkkâši from whom he inherited his encyclopaedic knowledge. About 489/1096 we find him in Alexandria and Cairo, where he continued to pursue his studies. In consequence of an unsuccessful attempt to refoat a sunken ship, he was imprisoned by the vizier al-Âḍîl. Exiled from Egypt, he went (in 505/1112-3) to al-Mahdiyya, where he was well received by the Zirid amīrs Yahyā b. Tamīm, and his son ‘Abbâr. Yahyā, and he remained in al-Mahdiyya, an honoured and respected figure, until his death on 1 Muharram 529/1134 (other dates are also mentioned).

The following may be mentioned of his numerous works. (i) Taḥfīz al-Dīrām, a short treatise on Aristotelian logic, edited and translated into Spanish by A. González Palencia, Madrid 1915 (with bibliographical introduction). (ii) Risāla fi l-‘Âmal bi l-Âṣturâb, on the use of the astrolabe; a short analysis with a list of the chapters, in Millâs, Assâiq. (iii) Answers to scientific questions (masâ‘il) concerning different problems of physics, cosmography and mathematics; short summary ibidem. (iv) A summary of astronomy, composed for the Egyptian vizier al-Âḍîl, which, according to the judgment of his contemporaries, was a manual without educational value and useless for teachers. (v) Al-ÂdÎyâ fi ‘l-Murâdâ, on simples, was translated into Latin by the famous physician Arnaldo de Villanova and into Hebrew by Yehuda Natan. (vi) Al-Ârâsî fi-l-Miṣâriyya, dedicated to Abu ’l-Âţāhir Yahyā b. Tamīm, and giving vivid information about the affairs and the customs of Egypt; ed. by ’Abd al-Salām Hūrūn, Naqd al-Maghdūbud, Cairo, (vii) Risâla fi l-Mâšīḥi; the Arabic original is lost, but an anonymous Hebrew translation is preserved in Paris, Bibl. Nat., Hebrew MS no. 1036.

Bibliography: Ibn al-Kiftī, 80; Ibn Abī Usaybi‘a, ii, 52 ff.; Yaḵṭūbī, Fâhīd, ii, 361; Ibn Khallikān, 101; Maḵkārī, Analectes, i, 530 ff., 218-9; Brockelmann, i, 641, S 1, 890; Suter, 175; M. Steinschneider, Die Hebräischen Übersetzungen, 735, 885; L. Leclerc, Médicine arabe, ii, 74-5; J. M. Millâs Vallacrossa, Assâiq d’Histoire de les idées fisiques i matematiques a la Catalunya medieval, i, 75-81; G. Sarton, Introduction to the Histo. of Science, i, 230. (J. M. Millâs)

Abu’l-Sâlît also wrote for al-Hasan b. Yahyā, a historical work, viz. a continuation of the History of Ifrīqiya by Ibn al-Raḵḵ, bringing it down to 517/1123. Extracts are to be found in Ibn Ṭabārâh, al-Bayān al-Muḵtârī, i, 274 ff., 292 ff., al-Tidjānī, Riḥlā, Tunis 1927, 51 ff. (= JA, 1852/ii, 131), 90 (= ibidem, 176), 237 (= JA, 1853, 375 ff.), and Ibn al-Khaṭîb (Centenario di Michele Amari, i, 455-9). (S. MOSCATI)

ABU’L-SÂRÂYÂ AL-HAMDÂNĪ [see Hamdânî].

ABU’L-SÂRÂYÂ AL-SÂRÎ B. MÂNṢūR AL-SHAYBÂNĪ, Shi‘ite rebel. Said to have been a donkey-driver, and afterwards a bandit, he entered the service of Yazīd b. Marṣayd al-Shaybānî in Armenia, and was engaged against the Khurramiyya [g.n.]. Later he commanded Yazīd’s vanguard against Harthama in the civil war between al-Âmīn and al-Ma’mūn, but subsequently changed sides and joined Harthama. Obtaining permission to go on pilgrimage to Mecca, he openly revolted, and after defeating the troops sent against him went to al-Raḵḵ. Here he met the ‘Aḥid Muḥammad b. Ibrâhîm b. Ṭaḥtâbâ [g.n.] whom he persuaded to go to Kūfā, and himself joined him there on 10 Džumâdâ l-ÂI 150/26 Jan. 815. Three weeks later he defeated the army sent by al-Hasan b. Sahīl to put down the revolt at Kūfā, and on the following day (1 Râṣâb/15 Feb.) Ibn Ṭaḥtâbâ died. The Sunnī sources accuse Abu’l-Sârâyâ of poisoning him, but the accusation is not borne out by the Shi‘ite tradition. Another ‘Aḥid, Muḥammad b. Mūṭ. b. Zayd, was chosen as Îmān, but the effective power remained in the hands of Abu’l-Sârâyâ. He had dirhams coined in Kūfā (ZDMG, 1868, 707) and sent detachments to take Wâṣīt, Baṣrâ, al-Ahwätz, Mecca, etc. When he next marched on Baghdâd, al-Hasan b. Sahīl appealed to Harthama, then on his way back to Khūrašān. Harthama at once turned back, defeated Abu’l-Sârâyâ at Kār Ibn Ḥuṣayn (Shawwal/May-June), and besieged him in Kūfâ. Since the Kufans refused to support him, Abu’l-Sârâyâ fled with 800 horsemen (16 Muḥarram 200/26 Aug. 815), made for Sûsâ, but was there defeated and himself wounded by the forces of the governor of Khâbizān, al-Hasan b. ‘Abbâr al-Ma’mūn, and his followers dispersed. He tried to reach his
home at Ra'ā's al-'Ayn, but was overtaken at Djalula by Hammad al-Kundaghush, who captured him and handed him over to al-Hasan b. Sahîh at Ra'ā's al-
râwân. Al-Hasan had him beheaded (10 Rabi' I 200/18 Oct. 815) and his body was hung at the bridge of Baghdad.

(H. A. R. Gibb)

**Abū Shâma Shâmar Al-Dîn Abû 'l-Kâсим Abû al-
Râmah b. Isâm b. al-Mâkdi, Arab his-
tor ian, born in Damascus on 23 Rabi' II 599/10 Jan. 1203. All his life was spent in Damascus except when he stayed for one year in Egypt for the purpose of study, and visited Jerusalem for fourteen days, and al-Hidâjî, twice, on pilgrimage. He obtained a professorship in Damascus, in the madrasas al-Rukniyya and al-Ashrafiiyya, only five years before his death on 19 Ramaḍân 665/13 June 1268. Like most scholars of his time he had a varied education, on a Sunni basis, and his works, consequently, dealt with several subjects, but his reputation rests on his historical writings.

His main works are: 1) *K. al-Rawdatayn fi Âḥbâr al-Dawlatayn*, a history of Nūr al-Dîn and Shâhâr al-Dîn (printed in Cairo, 1288, 1292; extracts, with French translation by Barbier de Meynard, in *Recueil des historiens des croisades, Hist. Or.*, iv, v, Paris 1896, 1906; German translation—careless and incomplete—by E. P. Goergens, entitled *Buch der beiden Garten*, 1890). It is biographical rather than historical work, especially in the period, was born in Basra in the quarter of the Muslim authorities and preserves, in parts, the important works of al-Bark al-Shdmi by 'l-Mâṣār, or al-Mukhtasar, or al-Takrib. This became the starting-
point of one of the great literary traditions of the

2) *Al-Dhayl âla 'l-Rawdatayn*, a continuation to the preceding. In the first part of this book Abû Shâma draws mainly on the *Mirād al-Zamān* of Shbîn Ibn al-Djawzî. In the later part he himself as an eyewitness is the main source. This book is more of a biographical than historical work, especially in the second part, and is less important than K. al-Rawdatayn.

Mâṣân*, Cairo 1352, i, 255, ii, 123, 198-9, 252; see also O. Rescher, *Abriss*, ii, 28-9; Brockelmann, i, 83, s 1, 133.*

(A. Schaad-ch. Pellat)

**Abû 'l-Shâma Shâmar Abû Muḥammad Mar-
wân b. Muḥ. Arabic poet of the early ʿAbbâsîd period, was born in Bagdad in the quarter of the Banû Sa'd as a mawâd of the Banû Umayya. No date is given for his birth. His ʿabbâsîd would seem to flâde to his big nose and big mouth. He must have migrated to Baghdad somewhat considerable time before the accession of Hârûn al-Rashîd (170/786). Ibn al-Mu'tazza, *Tabâkît al-Shyurî al-Muḥdathîn* (A. Eghbal), 55, puts his death in or about 180/796. Like other poets of his time Abû 'l-Shâma Shâmar is credited with undertaking an occasional public duty. He appears to have served as transmitter of the *hadâdi* of Madnît Sâbîr to the caliph. On the whole, however, he made his precarious living by means of eulogies and lampoons. A number of anecdotes illustrate his position on the margin of the contemporary world of letters. Ibn 'Abd Râbiḥ, *ʾIthār al-Farîd*, Cairo 1333/1935, iv, 255, lists Abû 'l-Shâma Shâmar among the "luckyless wits." His originality, which was most effective in parody and to which the introduction to Arabic poetry of the talking cat that deserts its impoverished owner may be owed, went unrewarded and constant frustration induced frequent descents into unmitigated vulgarity.

**Bibliography:** A collection of his fragments with a critical introduction and a biography was published by G. E. von Grunebaum, *Orientalia*, 1935, 262-85; (G. E. von Grunebaum)

**Abû 'l-Shawâ**

**Abû Musâmah (b. ʿAbd Allâh) B. Rashîd al-Khuzâî, Arab poet, died about 200/915.** Like his relative DÎ Bilî (v.), he lived at the court of Hârûn al-Rashîd for whom he wrote panegyrics, and afterwards dirges. He then went to al-Râkî and obtained the favours of the amir 'Ukba b. al-
Aṣâhî, remaining his boon-companion and court poet until 196/811.—To justify by the care taken of his work that have been preserved, Abû 'l-Shis does not appear as an origional poet in his panegyrics, hunting poems and wine songs, though these poems were valued by his contemporaries, notably by Abû Nuwâs, who did not hesitate to plagiarize him. The elegies on the infirmities of old age which he composed at the end of his life, when he became blind, are of greater value as they express real feeling. Similarly, when he makes fun of himself or mocks at the poets who imitate the poetry of the desert (e.g. Ibn Kutayba, *Shyri*, 536, concerning the *guurab al-bayn*), he is not lacking in humour.

Mâṣân*, Cairo 1352, i, 255, ii, 123, 198-9, 252; see also O. Rescher, *Abriss*, ii, 28-9; Brockelmann, i, 83, s 1, 133.*

(A. Schaad-ch. Pellat)

**Abû Shudjâ**

**Abû Ahmad b. Ḥasan (or Husayn) b. Ahmad, a famous Shâfi'i juricconsult.** His family came from Isfâhân, his father was born in 'Abbâdân. He himself was born in 434/1042-3 in Baṣra, and there taught Shâfi'i law for more than 40 years; he was alive in 500/106-7, but the date of his death is not known. At some time, he was a kāfi. He is the author of a short compendium of Shâfi'i law, called al-Ḥâyâ fi 'l-ʾIkhâṣār, or al-
Muḥtâsîr, or al-Ṭabrî, This became the starting-
point of one of the great literary traditions of the

**Ābū Shudžā‘**

ABŪ SULAYMĀN MUḤAMMĀD B. AL-HUṢAYN [see al-Rūḍḥawārī]

**ABŪ SUFYYĀN B. ḤABB B. UMAYYA,** of the clan of *Abū Shams* of Kuraysh, prominent Meccan merchant and financier (to be distinguished from Muhammad's cousin Abū Sufyān b. al-Harith b. Utbā). He realized that the result of the settlement of Medina by Safwan b. Umayya and the submission of the main settlement of Medina by Shahrastānī b. al-Subkī, who had business and family connections there, helped to destroy the idol of al-Lāt. He was appointed governor of Nadīrān and perhaps also of the Hijāz, but whether by Muhammad or Abū Bakr is disputed. It is true that he was in Mecca at Muhammad's death and spoke against Abū Bakr, he cannot have been governor of Nadīrān then; but the alleged speech, like many other statements about Abū Sufyān, may be anti-Umayyad propaganda. He was present at the battle of the Yarmūk, but may have done little more than exhort the younger men, as he was about 70. He is said to have died about 32/653 aged about 88. Of his sons, Yāzīd died as a Muslim general in Palestine about 16/639, and Mu'āwiya was the first Umayyad caliph.

**ABŪ SULAYMĀN MUḤAMMĀD B. ṬĀHIR B. BAKRĀM AL-SIDJIṢṬĀNĪ AL-MANȚIKĪ, philosopher, b. about 300/912, d. about 375/985. He was a pupil of Matta b. Yunus (d. 328/939) and Yahya b. Ṭalhā b. Abī Ṭalhā. His name is sometimes given as Abū Ḥanẓala. Abū Shams had been at one time a member of the political group known as the Mutayyabūn (which included the clan of Ḥāshim), but about Muhammad's time he had moved away from this group and in some matters cooperated with the rival group, Makhshīm, Dāmūs, Sāḥib, etc. As head of *Abū Shams* of Kuraysh, prominent Meccan clan of al-Ṭaḥfūl, he led caravans in person, notably in 2/624 when a caravan of 1000 camels returning from Syria under the command of the old Greek philosophers (cf. P. Kraus, in *Islamica*, 1931, 534-8; add Brit. Mus. Or. 9033; cancel Bodl. Marsh 539; Leiden 133 contains an abbreviation is extant in several MSS (cf. M. Plessner, *Abregé de la loi jurisprudence musulmane*, *Revue de l'Institut de Droit de l'Université d'Alger*, II, 1935; edition and (faulty) translation of the corresponding chapters of the text, by E. Sachau, *Muhammadanisches Recht*, Berlin 1897). Various other authors also quote Abū Sulayman for information concerning the history of the old Greek philosophers, *Siwān al-Ṭikmā*, to "Abu Hayyan al-Tawhīdī" [q.v.], and lived in Baghdad (he was patronized by 'Adud al-Dawla, to whom he dedicated some of his treatises), occupying an eminent place among the philosophers of the capital. His system, like that of most of the other members of his environment, had a strong Neo-platonic colouring. For the content of his teaching we are mainly indebted to "Abu Hayyan al-Tawhīdī" [q.v.], whose works, especially *Muḥākāʿa* and *al-Mudīq al-Muṣafīr* ("Munya*), are filled with reports of Abū Sulaymān's utterances on philosophical as well as many other topics, usually expressed in a rather involved and obscure style. A few of Abū Sulaymān's shorter treatises have survived in MS. Of his history of Greek and Islamic philosophers, *Siwān al-Ṭikmā*, only an abbreviation is extant in several MSS (cf. M. Plessner, in *Islamica*, 1931, 534-8; add Brit. Mus. Or. 9033; cancel Bodl. Marsh 539; Leiden 133 contains an even shorter version by al-Ghaḍānfar al-Tibrīzī). The *Siwān al-Ṭikmā* was one of the sources of al-Shahrastānī, *al-Milal wa 'l-Nihal*, for the description of the old Greek philosophers (cf. F. Kraus, in *BIE*, 1937, 207 = IC, 1938, 146). Various other authors also quote Abū Sulaymān for information concerning the history of philosophy: Ibn al-Nadim (who was a disciple of his), *Fihrist*, 241, 243, 248; Ibn Maṭrān, see P. Kraus, *Jābir ibn Hayyān*, i, p. ixii; Ibn Abī Usaybi‘a, i, 9, 15, 57, 104, 180-7.

**Bibliography:** *Fihrist*, 264, 316; Abū Shudžā‘, *Ṭaḍāl al-Ummām* (Amedroz-Margoliouth), 75-7; Bayhaḵī, *Tabīkh al-Šāwī al-Ṭikmā* (M. Shafi), 74-5; Yākūt, *Iṣāba*, ii, 89, iii, 100, v, 360, 398 (after Abī Hayyān); Sāḥib al-Andalūs, 81; Ibn al-Kiṭīb, 282-5; Ibn Abī Usaybi‘a, i,
321-2; Brockelmann, I, 236, S I, 377; Muḥammad b. ʿAbd al-Wahhāb Kazzwīnī, ʿSharḥ-i Ḥāl-i Ābu Sulaymān Mānūšī Sīyāṣīdānī (Publ. de la Société des Études Iranennes, no. 5), Chalon-sur-Saône 1933 = Bītā Makālah, Teheran 1934, 94 ff. (S. M. Stern)

ABŪ 'L-SUʿŪD MUḤAMMAD b. MUḤYĪ ʿL-DĪN MUḤ. B. AL-ʿIMĀD MUṢṬAPĀ AL-ʿIMĀDĪ, known as Khodja Celebi (Hoca Celebi), famous commentator of the Kurān, Hanafi scholar and Shaykh al-Islām, born 17 Shahrūd 969/30 December 1460, died 5 Dhimādād 952/23 August 1543. He was of Iskilib (Iskilip, west of Amasia) and native of Iskilib. He became Muslims, while Talib fought against Muḥammad. Abu Ṣuʿūd began his career as a teacher, being eventually promoted to one of the “Eight Madrasas” of Sultan Muḥammad II. In 939/1533 he was appointed kādi, first in Brūsā (Bursa), then in Istanbul; in 944/1537 he became kādi ʿasker of Rumelia, and in 952/1545 Sultan Sulaymān I. made him Grand Mufti or Shaykh al-Islām. He kept this post for the rest of his life, under Sulaymān and his successor Qāsim. Abu 'l-Suʿūd was bound to Sulaymān by real friendship, and though he could not quite maintain his exclusive influence under Sulaymān, this Sulaymān too held him in high esteem. The one reproach that is made against him is his scheming and his eagerness for the intimacy of the great. To Sulaymān, he justified the killing of Yaʿḥīdī, and to Qāsim the attack on Cyprus, in breach of a treaty of peace with Venice. He was buried in the Abu Ayyūb quarter of Istanbul, where his tomb still exists. When the news of his death reached the Holy Cities, funeral prayers for an absent person were said for him. Several of his disciples held important positions under Sulaymān, Qāsim and Muḥammad III.

As Shaykh al-Islām, Abu 'l-Suʿūd succeeded in bringing the kānān, the administrative law of the Ottoman Empire, into agreement with the ǧarīrā, the sacred law of Islam. Supported by Sulaymān, he completed and consolidated a development which had already started under Muḥammad II. He formulated, consciously and in sweeping terms, the principle that the competence of the ǧarīrā derives from their appointment by the Sultan, and that they are therefore bound to follow his directives in applying the ǧarīrā. Already as kādi ʿasker he had begun, on the orders of the Sultan, to revise the land law of the European provinces and to apply to it the principles of the ǧarīrā. (On the effects of this revision, see P. Lemerle and F. Wuitek, in Archives d’Histoire du droit oriental, 1945, 466 ff.) His ǧafurā, of which a number still exist in the original, were brought together in several semi-official and private collections. In keeping with his general aim, Abu 'l-Suʿūd took account of the practice in authorising the waḥy of movables and in particular of money, the giving and taking of remuneration for teaching and other religious duties, on these two questions, he became involved in polemics, in allowing the Kārgūs play, and in refraining, in the end, from giving a ḥattā against the use of coffee. Whilst he appreciated orthodox orthodox Sūfism, he did not hesitate to authorise the execution of extremist sūfīs.

In his spare time, Abu 'l-Suʿūd composed a commentary on the Kurān, drawn mainly from al-Baydāwī and al-Zamakhshārī, with the title ʾIrshād al-ʿAṭīq al-Salīm; it became popular in the Ottoman Empire and beyond its frontiers, found several commentators and was printed a number of times. Among his other, smaller works, a book of prayers drawn from traditions and meant to be learned by heart (Duʿā-nāma, or R. b. ʿl-Aḍīya al-Maʾṣūmah, may be mentioned. He also wrote some poetry in Arabic, Persian and Turkish.

ABŪ TĀHIR SULAYMĀN AL KARMAṬI [see AL-DAVƏNNA]\n
ABŪ TĀHIR TARSUSİ (TARTOŞI, TOSI) MUḤAMMAD b. ḤASAN b. ʿĀṣI b. MŪṢĀ, a person otherwise unknown, said to be the author of several novels in prose, prolix in style and of great length, a confused mixture of Arab and Persian legendary traditions, written in Persian and afterwards translated into Turkish. These include Kahramān-nāma (about Kahramān, a hero from the epoch of Hūghang, semi-mythical king of Iran), Kirən-i Həbəğəi (the story of a hero from the time of the Kayänid king Kay Kubād), Dārāb-nāma (history of Darius and Alexander).

ABŪ TĀKA [see SİKKĀ]

ABŪ TĀLĪB, son of ʿAbd al-Muṭṭalib b. Ḥāšim and Fāṭima bint ʿAmr (of Makhzūm), and full brother of Muḥammad’s father. His own name was ʿAbd Manāf. He is said to have inherited the offices of sīkāya and riḍāda (providing water and food for pilgrims) from his father, but at the Hilf al-Fuḍūl and war of the Fīḏjar his brother al-Zubayr seems to have been the leading man of Hāšim. He fell into debt, and to meet this surrendered the sīkāya and riḍāda to al-ʿAbbās. Nevertheless he seems to have remained chief of the clan of Hāšim, and their quarter of the town was called the ḥār of Abū Tālib. When ʿAbd al-Muṭṭalib died, he looked after Muḥammad, and is said to have taken him on trading journeys to Syria. He continued to protect Muḥammad when he came forward as prophet, even when most of the other clans of Qurayšy boycotted Hāšim and al-Muṭṭalib; there were presumably also economic reasons for the boycott. He died shortly after the end of the boycott, about 619, and was probably succeeded as chief by his brother Abū Lahab. Of his sons by Fāṭima bint ʿAsad b. Ḥāšim, ʿAlī (who is said to have been brought up by Muḥammad) and Dišāfār became Muslims, while Tālib fought against Muḥammad-
ABŪ TĀLĪB — ABU TAMMĀM 153

mad at Badr. He himself, though protecting Muhammad, clearly did not become a Muslim; but the point was much discussed and varying traditions circulated, in connection with the theological question of the fate of those who lived before Muhammad’s mission.

ABŪ TĀLĪB KALĪM [see kālīm].

ABŪ TĀLĪB MUHAMMAD B. ‘ALI AL-HĀRITHI AL-MARKK, d. in Baghdad in 386/998, muḥādīth and mystic, head of the dogmatic madhab of the Sāliḥiya [q.v.] in Basra. His chief work is the Kūt al-Kulub, Cairo 1310, whole pages of which were copied by al-Ghazzālī in his Ihyā’ Ulum al-Dīn.

Bibliography: Brockelmann, i, 200, S 1, 159-66; Sayyid Murtaḍā, Ḩāfī, Cairo, ii, 67, 69 and passim; Ṣā’āravī Ḥāfī, Cairo, ii, 28; Ibn Ḥabbād al-Rundi, al-Rasā’il al-Kubrā, līth, Fez 1530, 149, 200-1; L. Massignon, Études sur les origines du lexique technique de la mystique musulmane, and ed., index and refl. cited. (L. Massignon)

ABŪ TĀLĪB KHĀN (1752-1806), the son of Hāḍīj Muhammad Beg, of Turkish descent, was born at Lucknow. His early years were spent in Mūrghbādā at the court of Muzaffar Dīwān. With the accession of ʿĀṣaf al-Dawla (1775) he returned to Oudh and was appointed a mādīd of Ḥāwā, and other districts. He also served as a revenue official under Colonel Hanney who farmed the country of Sarwār. He was later employed by Nathaniel Middleton, the English Resident, and was connected with Richard Johnson in the manage-
ment of the confiscated diqāis of the Begams of Oudh. He remained in Oudh until 1796. In February 1799 he sailed from Calcutta to Europe where he visited England, France, Turkey, and other coun-
tries, returning to India in August 1803. An account of his travels, the Masir-i Tālibī fi Bilād-i ifrādij was published in 1812 and translated into English by C. Stewart (1814) and into French by Ch. Malo (1819). He also wrote the Lubb al-Siyar wa-duqān-nāmā and the Ḥalqāsāt al-Āfār. His Taṣfī al-
Ghīlān, a history of Oudh under ʿĀṣaf al-Dawla, is an important source for the careers of Ḥāwār Beg and the various English residents, and contains a spirited defence of Hanney’s revenue administra-

ABŪ TAMMĀM ḤABĪB B. AWS, Arabic poet and anthologist. According to his son Tammām he was born in the year 188/804; according to an account deriving from himself, in the year 190/806 (Akbār, 272-3) and in the town of Dīsām between Damascus and Tiberias. He died according to his son in 253/865, according to others 2 Muḥarram 234/23 Aug. 846 (ibid.). His father was a Christian by name Thādūs (Thaddeus, Theodosios?) who kept a wine-shop in Damascus. The son altered the name of his father to Aws (Akbār, 246) and invented for himself a pedigree connecting him with the tribe of Tāyyī. He was mocked on the score of this false pedigree in satirical verses (Akbār, 235-8); later, however, the pedigree appears to have found ac-
cceptance, and Abū Tammām himself, in the happenings mentioned in his poetry and the biography of the men eulogised by him are accurately established. According to one tradition he composed his first panegyrics in Damascus for Muh. b. al-Ḍāḥm, brother of the poet ʿAlī b. al-Ḍāḥm (al-Muwaṣṣāḥah, 324). This, however, can hardly be correct, as this personage was only in 225 appointed governor of Damascus by al-Muṭṭāṣim (Khallī Mardām Bek, in the preface to the Dīwān of ʿAlī b. al-Ḍāḥm, 4). According to the poet’s own account (Akbār, 121), he composed his first poem in Egypt for the tax-collector ‘Ayāṣh b. Lahlī (al-Badi’, 181). He was, however, disappointed by him and repaid him, as often in similar circum-
stances, with lampoons (cf. al-Badi’, 174 ff.). Al-
Kindī (Governors and Judges of Egypt, ed. Guest, 181, 183, 186, 187) quotes some verses of Tammām referring to events in Egypt in the years 211-4. From Egypt Abū Tammām returned to Syria. At this time are to be placed, apparently, the encomia and lampoons on Abu ʿl-Mughīth Mūsā b. Ibrāhīm al-Rāfīkī. When al-Maʿmūn returned from his campaign against the Byzantines (215-8), Abū Tammām, clad in the bedouin attire beloved by him all his life, offered him a ḥāṣida, which however was not to the caliph’s taste, since he took exception to the fact that a bedouin should compose urban poetry (Abū Hīlāl al-ʿAṣkari, Dīwān al-Maʿmānī, ii, 120). At this time the young Buṭūrī perhaps came into contact with him in ʿAṣkār (Akbār, 66, cf. 105).

Abū Tammām first rose to fame and became generally known under al-Muṭṭāṣim. On the de-
struction of Amorium in the year 243/856 (cf. ʿAmīrīYAYA) the Muṭṭāṣim, chief of the August before the caliph in Sāmarrā. The caliph recalled the harsh voice of the poet, who had heard in Maṣṣa, and granted Abū Tammām an audience only after making sure that he had with him a rāvek, or reciter, with a pleasant voice (Akbār, 143-4). Then began Abū Tammām’s career as the most celebrated panegyrist of his time. In addition to the caliph he eulogised in his ḥāṣidas the highest dignitaries of his epoch. One of these was Ibn Abī Duʿūd, whom, however, he offended temporarily through a poem in which the South Arabs (to whom the tribe of Tāyyī belonged) were greatly extolled to the disadvantage of the North Arabs (from which the chief kāfi claimed descent). An apologetic ḥāṣida had to be addressed to the patron before his reinstatement was effected (Akbār, 147 ff.). Other personalities eulogised by him were, for example, the general Abū Saʿīd Muḥ. b. Yūsuf al-Marwazi, who had distinguished himself in the war by Byzantium and in the operations against the Khurramite Bābak, and his son Yūsuf, killed by the Armenians in 237 while governor of Armenia; Abū Dulāf al-Kāfī, a chief (Akbār, 285; Ḥāṣāh b. Ṣāḥib al-Muṣlīm; police chief (Akbār al-
dījir) of Ḍaghdāg by Baghdād from 207 to 235. Hasan b. Wāḥib, secretary to the wazīr Muḥ. b. ʿAlī al-Malik al-
Zayyāt was a particular admirer of Abū Tammām. Abū Tammām also travelled several times to visit
up his merits and demerits. Al-Marzubānī (d. 384) in al-Muwṣahābāt, Cairo 1343, 303, 329, brings into prominence rather his weak than his strong points. Al-Shirāzī, al-Murtadā in his al-Shīrāzī fi l-Safāy wa l-Ṣabbāt, Istanbul 1932, defends the poet against al-ʿĀmidī’s strictures. The modern reader will follow the judgement of the old critics. Abū Tammān’s kaṣīdas contain, side by side with brilliant conceits which have established the poet’s fame, much that is unpleasant. He has a penchant not only for queer words but also for artificial, frequently tortuous, sentence construction, the understanding of which exercised the Arabic commentators. Unhappy personifications of abstract ideas, affected, far-fetched and unconvincing metaphors harass the reader often for many verses at a stretch till he stumbles on an excellent poetical figure. Added to this is an unfortunate tendency towards paronomasia and subtly-reasoned antithesis, to which he all too frequently sacrifices the clarity and attractiveness of the phrase (cf. Abū al-ḤāIR al-Dūrjānī, Asrār al-Balāgha, ed. Ritter, 15). The Diwān was collected by al-Sūlí (alphabetically), by Abū b. Hāmza al-Īṣfahānī (under subjects), also handed on by al-Sukkārī (Oriens, 1949, 268) and others. Unsatisfactory editions Cairo 1299, Beyrut 1889, 1905, 1923, 1934. Index by Margoliouth in JRAS, 1905, 763-82. No edition exists as yet of the numerous commentaries, absolutely indispensable for the understanding of his poetry, by al-Sūlí, al-Marzūkī, al-Tibrīzī, Ibn al-Mustawfī (Akbhār, intr. 8; H. Ritter, Philologica, iii, in Oriens, 1949, 266-9; Hādīdī Khalīfī, under Diwān Abū Tammān, and Ismāʿīl PāSHA, Idāḥ al-Maknūn fi l-Dhayl al-ʿAṣkallī, i, Istanbul 1945, 422). [The commentary of al-Tibrīzī is in course of publication in Cairo; vol. i, 1952.]

Abū Tammān collected in addition several anthologies of poetry. The best known is a collection of fragments (muballāṯaʿāt) by less known poets, which he made during his involuntary halt in Hamadhān, the Ḥamāsā. Edited with the commentary of al-Tibrīzī by G. Freytag, Hamasae Carmina cum Tibrizii scholis, Bonn 1828, Latin transl. 1847-51, reprinted with all the errors Bulak 1284, Cairo 1938. On the numerous commentaries see Brockelmann, i, 134 ff.; H. Ritter, Philologica, iii, in Oriens, 1949, 246-67; Hādīdī Khalīfī, s.v. Ḥamāsā, and Ismāʿīl PāSHA, Idāḥ al-Maknūn, i, 422. Of the other anthologies there are preserved in manuscript the Ḥamāsā al-Ṣuḥrāʾ or al-Ḥuṣaynīyyāt (see Oriens, 1949, 261-2), not to be identified with any of the ʾIḥtiyyārāt mentioned by al-ʿĀmidī; and ʾIḥtiyyār al-Ṣuʿwārāʾ, which he made during his involuntary halt in Mashhad (see MMIA, xxiv, 274). We know only the names of the remainder: al-ʾIḥtiyyārāt min Shīr al-Ṣuʿwārāʾ wa Madḥ al-Khulafāʾ wa Akhkh Dīwān az-Zamīm (Fīrist, 105, Maʿṣūdī al-Tanṭūsī, 18); al-ʾIḥtiyyārāt min Asghar al-Kabūlī al-Kabīr (Fīrist) = al-ʾIḥtiyyār al-Kabīr al-Kabīr (Mawṣūla, 23); ʾIḥtiyyār al-Muṣalāfāt, beginning with ghasal (ib.); al-ʾIḥtiyyār min Asghar al-Muṣalāhīn (ib.). Also the Nakṣūd Dīwār wa l-ʾAṣkallī, ed. Salhānī, Beyrut 1922, derives from him.

ABŪ TAMMĀM — ABū 'UBAYD AL-BAKRĪ

(AB. RITTE)

ABŪ ŞAHİFÎN I, ‘Abd al-Rahmân b. Abi Hâmmû, fifth sovereign of the ‘Abd al-Wâdîd dynasty. Proclaimed 23 Dhîhânâdâ 178/23 July 1318 after the murder of his father Abū Hâmmû I, he exiled to Spain all those of his relatives who could claim the throne and thus freed his hands to lay siege to Constantine and Bidjâya (Bougie) and to make an attempt at extending his kingdom towards the east. The Şâhidîs, however, allied themselves with the Marinids and the Marinid sultan Abū ‘l-Hasân seized Abû Şahîfîn’s dominions and besieged Tlemcen in 735/1335. Two years later the capital was taken by assault and the king was killed in battle.

(A. BEL)

ABÛ ŞAHİFÎN II b. Abi Hâmmû Mûsâ, sovereign of the ‘Abd al-Wâdîd dynasty. Born in Rabî’ I 732/4-Apri May 1331, he passed his youth in Nedroma. After the flight of Abû Hâmmû II to Tunis, the Marinid sultan Abû ‘l-‘Inân sent him to Fes; he returned to Tlemcen only in 760/1359. In spite of his father’s concessions to him, his impatience to accede to the throne drove him to attempts to get rid of Abû Hâmmû. But Abû Hâmmû, put into prison in Oran, escaped; and when sent on pilgrimage, returned triumphantly to Tlemcen. Finally Abû Şahîfîn took command of a Marinid army which defeated Abû Hâmmû and enabled him to accede to the throne in Dhî ‘l-Hijdâja 791/10 May 1389. He remained faithful to his obligations as a vassal of the Marinids and died on 17 Radjab 795/29 May 1393.

ABU ‘l-ṬAYYIB [see AL-MUBÂDÎL].

ABU ṬAYYIB [see AL-MUTANÂBÎ, AL-TABÂRÎ].

ABÛ THÂWR Ibrahim b. Mâlikî b. Abi ‘l-Yâmân al-Kalbî, prominent jurist and founder of a school of religious law, died in Baghdad in Safar 290/July 854. Living in ‘Irāq one generation after al-Šâhîfî, Abû Thâwr seems to have been influenced by al-Šâhîfî’s methodological insistence on the authority of the hadîth of the Prophet, without, however, renouncing the use of ra’y [q.v.], as had been customary in the ancient schools of law. The later biographers represented this as a conversion on the part of Abû Thâwr from the ra’y of the ancient ‘Irâqîs to the school of al-Šâhîfî, and he is, indeed, often counted among the adherents of the Šâhîfîs’s school. But his opinions, which often diverge from Šâhîfî’s doctrine, are not regarded as variants (ru’dûk) of the doctrine of the school, nor does he, indeed, enjoy a particularly high reputation as a traditionist. Some cautious praise of him as a jurist and is attributed to his former contemporary, Ahmad b. Hanbal. A limited number of Abû Thâwr’s opinions on religious law are quoted in the works on Šâhîfî [q.v.], particularly in the two fragments of al-Tabârî’s Ittihâdî al-Fuhaðîn (ed. Kern, Cairo 1902, and Schacht, Leiden 1933). The school of Abû Thâwr was still widely represented in the 4th/10th century, particularly in Armenia and Adharbâyjan.

ABÛ TûRÂB, nickname of ‘Ali b. Abî Ta’lîb [q.v.].

ABU ‘UBAYD AL-BAKRĪ, Abû Allâh b. Abû ‘l-‘Azîz b. Mûh. b. Ayyûb, was, with al-Shârîf al-Idrisî [q.v.], the greatest geographer of the Muslim West, and one of the most characteristic representatives of Arab Andalusian erudition in the 5th/11th century.

Although little is known about the details of the life of Abû ‘Ubayd al-Bakrî, it is possible to describe the various aspects of his scientific activity, all of which seems to have taken place in his own country; in fact, he appears never to have travelled in the East, or even North Africa, which he nevertheless described so minutely. According to the information which has come down to us, the principal facts of his biography amount to the following: his father, Izz al-Dawla ‘Abd al-‘Azîz al-Bakrî, was the only sovereign (or else the second, after his brother Abû Muş’ab Muh. b. Ayyûb) of the diminutive principality of Huelva (Walba [q.v.]) and Saltes (Shalîsh [q.v.]), founded in 403/1012, at the time of the fall of the Marwânîs’ caliphate of Cordova, on the Atlantic coast of the south of the Iberian peninsula, not far west of Niebla (Labla). In 443/1051, ‘Izz al-Dawla, under the political pressure exerted against him by al-Mu’âthîdî b. ‘Abd al-Mu’âthîdî [q.v., ‘ABBÂIDS], was forced to give up his principality to the king of Seville, who annexed it to his possessions. Abû ‘Ubayd, the exact date of whose birth is unknown, must at this time have been at least thirty. He accompanied his father to Cordova, which was chosen by him for his new place of residence, under the more or less effective protection of its ruler Abû ‘l-Walîd Muh. b. ‘Abd al-’Azîz [q.v., ‘QAWÂRÎDS]. These, anyway, are the particulars given by Ibn Ḥâjâr al-Mâshî, in Ibn Bassâm, al-Dhakhîra, ii, reproduce by Ibn ‘Ukhîrî, al-Raydîn, iii, 240-2, and Dozy, Abbâd, i, 252-3), and which there is no reason to doubt, but another source (append. to al-Raydîn, iii, 299) asserts that Abû ‘Ubayd and his father, who died about 456/1064, withdrew to Seville itself, which is not improbable. However that may be, Abû ‘Ubayd very quickly became known as a distinguished writer. He was the pupil of the chronicler Abû Marwân b. Ḥâyyân and of other masters of repute, and moved in provincial court circles, especially that of the Banû Shumâdî of Almeria. When he later witnessed the military and political intervention of the Almoravids in Spain, and the successive depositions of the Mûthûk al-Jawâlîfî, he had already written most of the numerous works for the preparation of which he had collected innumerable notes. He settled at Cordova, which had been restored by the sultan Yûsf b. Tâhîfîn to the position of capital of al-Andalus: and there he died, full of years, in Ḥajwâlî 487/Nov.-Nov. 1094 (496 according to al-Dabbî, who attributes to him the title of ‘abû ‘l-wallâlîyân).

Abû ‘Ubayd al-Bakrî, to judge by the variety of his works, appears as a perfect type of mûshârikh, having acquired an extensive knowledge of widely different branches of learning. He was principally a geographer, but also at the same time a theologian,
philologist, and botanist. He even cultivated the art of poetry, since certain of his biographers have reproduced some of his bacchic verses, and he has been given the reputation of a confirmed drinker. He has also been depicted as a bibliophile, who preserved his valuable manuscripts in envelopes of fine fabric.

In the religious sphere, Ibn Başḫuwwāl attributes to himself, without giving the title, a work on the "signs of the prophetic mission" of the Messenger of God (fi ʾaḥlām nubuwwat nabiyyīn). As a philologist, Ibn Kháyır (Fahrara, B A H, ix-x, 325, 326, 343, 344), attributes to him four works: (1) a criticism of Abū ʾAlī al-Kālí (q.v.), -tā nbannāt Abī ʾAlī fī Kitāb al-Nawādīr, ed. A. Ġalhānī, 4 vol., Cairo 1344/1926; cf. Brockelmann, S 1, 202; (2) a commentary on the Amālī of the same, Simīn al-Lāʾlī fī Sharḥ al-Amālī, ed. Abū al-Aʿzīz Maymūn, Cairo 1354/1936; cf. Brockelmann, loc. cit.; (3) a commentary on the verses quoted in al-Gharīb al-Musannāf of Abū ʿUbayd al-Kāsīm b. Sallām, entitled Siyat al-Mafṣūl; (4) a commentary on the collection of proverbs by the same Abū ʿUbayd b. Sallām, entitled Faṣl al-Makālī fī Sharḥ Kitāb al-Amālī (MS at Istanbul; cf. M G, vii, 123; Z D M G, 1910; Brockelmann, S 1, 166 f. n.). Lastly we may mention another work, semi-historical, semi-philological, which seems to be lost: al-Muṣallal wa-l-Muṣalalāt on the names of the Arab tribes.

The botanical work of Abū ʿUbayd al-Bakrī, Kitāb al-Nabāṭī, also indicated by Ibn Kháyır, Fahrara, 377, seems not to have been found yet in MS. It has its place, in any case, in the series of Andalusian treatises on descriptive botany, made up of alphabetically-arranged items, and it served as a direct source for the naturalist of the 6th/12th century Ibn ʿAbdūn (q.v.) al-Ishbīlī, for the composition of his ʿUmādat al-Tāḥā fī Sharḥ al-Aṣāḥib (cf. M. Asīn Palacios, Glosario de voces romances registradas por un botánico anónimo hispano-musulmán, Madrid-Granada 1943, xxvii and n. 1). This botanical treatise, which Ibn Abī ʿUṣaybīn described in a few lines (cf. M. Meyerhof, Esquisse d'histoire de la pharmacologie et botanique chez les Musulmans d'Espagne, in And., 1925, 1926; the same, Un glossaire de matières médicales de Maïmonide, in Mém. Inst. d'Égypte, xlii, 1900, xxviii), mainly concentrated, as did that of Ibn ʿAbdūn, on the peninsula of Andalus; it was made use of not only by the latter, but also by the naturalists al-Ghālīkī and Ibn al-Bayṭārī.

Abū ʿUbayd al-Bakrī's geographical work, on which his renown in the Arab world was mainly based, consists of two books of unequal length and importance: Muḍījam maʿ istādījam wa-l-Masdīlīk wa-l-Maṣālik wa-l-Maṣālikī. The Muḍījam, which was published by F. Wüstendörfer in an essay entitled (Das geographische Wörterbuch, Göttingen, 1876-7; covers, 1945-51), is a list of toponyms, mostly referring to the geographical data of the kādirtd and the spelling of which had given rise to discussions. This list is preceded by an interesting introduction on the geographical setting of ancient Arabia and the respective habitats of the most important tribes.

As regards the al-Masālik, the main work of al-Bakrī, we have so far only part of it, in the form of extensive fragments, not all of which have yet been published. Of the introductory volume, which deals with general geography and the Muslim and non-Muslim peoples (MS at Paris, B. N., 5905), the greater part is still unpublished (fragment on the Russians and Slavs published at St. Petersburg in 1878 by A. Kunik and V. Rosen, Izvestiya al-Bekri i drugikh autorov o Russi i Slavyanakh, i; cf. also A. Seippel, Rerum Normannicum Fontes Arabici, Oslo 1896-1928). But the portion which is undoubtedly the most important, that dealing with the Muslim West, has long been known, as far as Africa is concerned, through the edition and French translation (both today very outdated) of MacGuckin de Slane (Description de l'Afrique septentrionale, Arabo-espagnole, Algiers 1857; 2nd ed., Algiers 1910; Fr. tr., J A, 1857-8, 2nd ed., Algiers 1910). Before that, in 1831, an abridged translation had been published in Paris by Quatremère (Not. et extr., xiii). The author of this article has published some unpublished parts of al-Masālik relating to al-Andalus, and identified the quotations included in the historico-geographical compilation entitled al-Rauš al-Miṣrī by Ibn ʿAbd al-Munīm al-Hūnīyārī al-Sabītī (La Péninsule ibérique au Moyen-Age, Leyden 1938, 254-52; cf. also La 'Description de l'Espagne' of Ahmad al-Rāzī, in And., 1953, 100-4), using a MS in the library of the Djāmīʿ al-Karawīyīn at Fīz, in which is to be found the most extensive fragment that we yet possess on the description of the Iberian Peninsula. Following the usual practice of geographers of his own time and preceding centuries, Abū ʿUbayd al-Bakrī aimed first and foremost at giving his work, as its title, descriptions of 'itineraries and kingdoms', indicates, the form of a roadbook, including an estimate of distances between each town or staging-post. A dry list of names might have been the result, interesting enough, but only a bare outline, if the author had not set upon it his personal stamp and made a discriminating choice among the mass of particulars which he had contrived to collect. These particulars are not only geographical; they concern to a considerable extent political and social history and even ethnography, and this is what gives to the Masālik of al-Bakrī, at least as far as the West is concerned, its inestimable value. His was an inquiring and methodical mind, and he thus drew some historical sketches that he never since equalled: his accounts of the Idrisids or the Almoravids, for example, still constitute the most reliable basis of our documentation on the first of these dynasties and on the origins of the second. Most of his descriptions of towns are remarkably precise; his toponymic material for the Magrib, Ifriqiyyā, and the bidda al-Ṣadāb is of a fulness no less worthy of interest.

It goes without saying that, when writing his valuable description of North Africa, Abū ʿUbayd had at his disposal, in his residence at Cordova or Seville, not only the verbal information afforded him by people coming from Ifriqiyya or the Magrib but also the work of other authors who had dealt with the same regions. The basic source, which he actually mentions several times in his work, was in fact al-Masālik wa-l-Maṣālikī by Muḥ. b. Yūsuf al-Warrākī, on the geography of Ifriqiyya. This man (see al-Warrākī and R. Brunschvig in Mélanges Gaudentroy-Demombrynes, Cairo 1935-45, 151-3), who lived for a long time in al-Kawārān before going to settle at Cordova in the reign of the caliph al-Ḥakam II and at his invitation, thus enabled al-Bakrī, who used his work (which now appears to be lost) to furnish us with information that goes back to the 10th century, and on which the geographer could draw at will. Moreover, he doubtless had at his disposal documents of the Cordovan archives...
for example on the heretical sect of the Barghawata [q.v.]). On the other hand, the fact that he makes no allusion to the intervention of the Almoravids in Spain confirms the indication that al-Bakri finished his _Masalik_ in 460/1068, i.e. eighteen years before the battle of al-Zallâqa.

Another source, not less important than al-Warrâk's book, was the geographical work of one of Abu 'Ubayd's own masters, Ahmad b. 'Umar al-'Udhri, a native of Dâlâyra (Dâlâyra, hence his _maṭrīja_ Ibn al-Dalâyri), who died at Almeria in 478/1085 (cf. Ibn Tâkim, _ibid._, xxiv, n. 2). This work, which was entitled _Nisân al-Mardûn_, and was later to be used as a source by al-Kazwîni also, gave much space to the _'aḍīdat_ [q.v.], which were not omitted likewise by al-Bakrî himself. Finally, a further source should be mentioned, of uncertain provenience but which may conceivably be simply another of Abu 'Ubayd's own works: the _Madjamâ_ al-Müsârâh, from which, in their turn, Ibn 'Ubaydî and al-Maṣârî were later to make borrowings.

For his documentation on Christian Spain and the rest of the Europe, it may be noted finally that Abu 'Ubayd 'quotes' — doubtless, however, through the intermediary of al-'Udinî, since al-Kazwîni also refers to him by the same indirect means — a Jew of Tortosa, Ibrahim b. Yaḥya al-Mâshî al-Turtushi, whose work (perhaps written in Hebrew, then translated into Arabic or Latin?) appears to be lost.

The parts of al-Bakrî's _Masalik_ that have been preserved amply merit a complete critical edition and systematic study. A study of the author's language has also yet to be undertaken; al-Bakrî is, together with the authors of _kibâ_ treatises such as Ibn 'Abdîn al-Hâfîzî, and al-Sâkâtî of Malaga, and authors of treatises on husbandry, the Andalusian writer whose vocabulary contains the greatest number of Hispanicisms.

From the point of view of the economic position of the West in the 10th and 11th centuries (data on metrology, the cost of living, commercial relationships and trade in commodities and luxury articles), his works form a very rich source. They provide a mass of information which would give scope for the drawing up of analytical lists and maps, as does the _Nuzhat al-Mushtâq_ of al-Shârî al-Idrisî, that other standard work on these subjects, which superseded his forerunners and were used and frequently quoted by all the later authors. — Only al-'Amâdisî, Cairo 1553, has been published in its entirety, and provides a mass of information which would give scope for the drawing up of analytical lists and maps, as does the _Nuzhat al-Mubtak_ of al-Shârî al-Idrisî, that other masterpiece, of a somewhat later date, on the historical geography of the Islamic world in the middle ages.

**Bibliography:** Biographical accounts of al-Bakrî, all short and with little details: Ibn Bashkawal, _Šila_, n. 628; Ḍabbî, _Bughya_, n. 930; Ibn al-Abbâr, _al-Bulla al-Siyâr_ (in Dory, _Corrections ..., Leyden_ 1883, 118-23); al-Fath b. Ḥâlîk, _Kallâdî al-Tîyân_, 218; Ibn Saḥîd, _Mughrîb_, i, Cairo 1953, 347-8; Ibn Bassâm, _Mâkkâri_ ii (account reproduced by the preceding); Suyûṭî, _Bughya_, 285; Ibn Abî Uṣayyibî, ii, 52; Maṣârî, _Nath_ ( _Amalecot_ ), ii, 125. See also Pons Boüges, _Ensayo_, p. 125; J. Alemany Boüfer, _La geografia de la Península Ibérica en los escritores árabes_, Granada 1921, 45-6; R. Blachère, _Extrait des principaux géographes arabs_, Paris 1932, 183, 253 (with a very dubious appreciation on the documentary value and style of al-Bakrî); _Lévi-Provençal, La Península Ibérica en los escritores árabes_, Leyden 1938, xxii-xxi; Brockelmann, i, 476, S. I, 875-6. The accounts by Reinaud, _Intr. à la Géogr. d'Abûlîfîda_, ciî, and by M. G. de Slane in the preface to his incomplete edition, are today very much out-of-date. Finally, for the materials relating to eastern Europe in the works of al-Bakrî, via his borrowings from Ibnâbirî al-Târîkî (see C. E. Dubler, _Abû Ubâyda al-Granadino y su relación de viaje por tierras eurasíaticas_, Madrid 1932, 161-2. (E. _Lévi-Provençal_)

**ABU 'UBAYD AL-KÂSIM B. SALLÂM** (the _nâsha_ varies between _al-Baghîdâdi_, _al-Khûrâsânî_ and _al-Anşârî_), grammarian, Kur'ânic scholar and lawyer, was born at Harât about 154/770, his father, of Byzantine descent, being a _muâlîd_ of the tribe of Azd. He studied first in his native town, and in his early twenties (about 179/795) went to Kûta, Baṣra and Baghdâd where he completed his studies in grammar, _hirâdāt_, _hadith_ and _fiḳh_. In none of these fields did he adhere to one school or group, but chose a middle position in an eclectic way. Returning home he became tutor in two influential families in Khûrâsân, and in the year 192/807 was appointed _kâdî_ of Tarâsî in Cilicia by its governor Tahît b. Naṣr b. Mâlik. Abu 'Ubayd remained in office until 210/825 and after some travelling settled for the next ten years in Baghdâd, where 'Abd Allâh b. Tâhir became his generous patron. In the year 219/834 he performed the pilgrimage and afterwards stayed on at Mecca to die there in 224/838 and to be buried in the house of Dâ'far b. Abî ' Tilîb. Twenty titles of Abu 'Ubayd's books are mentioned in the _Fihrist_, several of which have survived in MS. His three main works deal with the _gharîb_, the difficult linguistic passages, especially in the _kurâ_ and the _hadith_, and are entitled _Gharîb al-Muṣârâna_, _Gharîb al-Kurâ_ and _Gharîb al-Hadîth_ respectively. _Gharîb al-Muṣârâna_, the first great dictionary of the Arabic language, is said to consist of 1000 chapters, 1200 _gharîba_ and _gharîb_ words; 'Abd Allâh b. Tâhir granted the author a pension as a sign of recognition for it. This and all his other works are based on the previous research of other scholars, but Abu 'Ubayd in using them wrote the standard works on these subjects, which superseded his forerunners and were used and frequently quoted by all the later authors. — Only _al-'Awaṣâl_, Cairo 1553, has been published in its entirety, and provides a mass of information which would give scope for the drawing up of analytical lists and maps, as does the _Nuzhat al-Mubtak_ of al-Shârî al-Idrisî, that other masterpiece, of a somewhat later date, on the historical geography of the Islamic world in the middle ages.

**ABU 'UBAYD ALLâH MU'AWIYA B. 'UBAYD ALLâH B. YÂSÅR AL-AGHâRî, VIZIER.** Appointed by the caliph al-Mu'āṣir to the retinue of his son al-Mahdî, he was made vizier on al-Mahdî's accession (158/775). He held the office probably up to 163/779-80, but already in 161/777-8 the accusation of heresy brought against his son Muḥâmmed, which led to the latter's execution, compromised his position. The enmity of the powerful chamberlain al-Râbi' b. Dâ'ūd consummated his downfall. Removed from the vizierate and replaced by Yaḥûb b. Dâ'ûd, he was nevertheless left in the charge of the _diwan al-râṣîl_ until 167/783-4; he died in 170/787-8. According to the unanimous witness of the sources, he was a man of the first rank, competent and honest. Ibn al-Ṭâṣkāt gives an account of his organizing and administrative achievements, culminating in the reform of the _khârijâ_, substituting
for land tax in the Sawdd of al-'Irâk a proportional tax on the produce, payable in nature; he is also stated to have written a book on this subject.

Bibliography: Ya'qûbî, Tabarî; Dîbajîyâr, Wusârî (Cairo 1938), 102-118; A. Tâbi', Tables; Ibn Khalkînî, xi, 88; Ibn al-Tîkâkî, Fâhîrî (Dârânegb), 246-50; S. Mocásti, in Orientalia, 1946, 162-4.

Abû 'Ubaydâ Ma'mâr b. al-MuTâhâna, Arabic philologist, born 110/728 in Başra, d. 209/824-5 (other dates also in Ta'rikh Başra and later works). He was born a member of the Kurayshite clan of Taym, in the family of 'Ubayd Allâh Ma'mâr (cf. Ibn Ťâmî, Dhikhrat Asâbî al-'Arâb, Cairo 1948, 130); his father or grandfather originally came from Bâdâwarûn (near al-Râkîa in Mesopotamia, less probably the village of the same name in Shîrwân) and was, on dubious authority, to have been Jewish. He studied under the leading philologists of the school of Başra, Abû 'Amr b. al-'Alî and Yûnus b. Hâbbî, and composed a number of treatises on points of grammar and philology, none of which have been preserved. Breaking away, however, from the narrow philological interests of his teachers, Abû 'Ubaydâ took as his field of study everything that had been transmitted on the history and culture of the Arabs. Applying to these scattered oral materials the systematic methods employed in the philological schools, of collecting and grouping together items of the same or similar kinds, he composed a number of treatises on points of Arab and early Islamic history and tribal traditions, which served as the starting point and supplied most of the data for all future studies relating to pre-Arab and early Islamic history and tribal traditions, for example, in the Kitâb al-Khayl, composed some dozens of treatises on points of grammar and philology, none of which have been preserved. Breaking away, however, from the narrow philological interests of his teachers, Abû 'Ubaydâ took as his field of study everything that had been transmitted on the history and culture of the Arabs. Applying to these scattered oral materials the systematic methods employed in the philological schools, of collecting and grouping together items of the same or similar kinds, he composed a number of treatises on points of Arab and early Islamic history and tribal traditions, which served as the starting point and supplied most of the data for all future studies relating to pre-Islamic Arabia. His materials were arranged under general heads and these again by sub-categories, as, for example, in the Kitâb al-Khayl, on famous Arab horses, still preserved (ed. Hyderâbad 1358). Similarly, materials relating to the tribes were most frequently arranged under the categories of "virtues" (manâkîb), "vices" (matâkâmîb); by the latter he gave much offence to the tribal pride of the Arabs, the more so because they provided ammunition for the anti-Arab polemics of the Persian shu'ubiyya for the anti-Arab polemics of the Persian shu'ubiyya.

Moreover, as a convinced Kharijite (cf. with shu'ubiyya) he gave much offence to the tribal pride of the Arabs, the more so because they provided ammunition for the anti-Arab polemics of the Persian shu'ubiyya for the anti-Arab polemics of the Persian shu'ubiyya.

Abû 'Ubaydâ, however, refused the support of his authority. Tradition asserts that 'Umar intended to nominate Abû 'Ubaydâ as his eventual successor, and when a serious epidemic broke out in Syria in 18/639 he summoned Abû 'Ubaydâ to Medina. Abû 'Ubaydâ, however, refused to instruct the Yamanite converts, but returned to Medina before the death of Muhammad and together with 'Umar b. al-Khaţţâb played a decisive part in the election of Abû Bakr as Muhammad's Khâlîfa. After 'Umar's accession to the Caliphate (13/634) Abû 'Ubaydâ was despatched to Syria to join the campaigns against the Byzantine forces, and some time later, probably in the year 15/636, was given the supreme command there. After the victory on the Yarmûk in that year, Abû 'Ubaydâ completed the conquest of northern Syria (Hims, Aleppo, Antioch). In 17/638 the caliph himself visited the headquarters of the Syrian army at Dâbiyâ, to regulate the administration of Syria and to give Abû 'Ubaydâ the support of his authority. Tradition asserts that 'Umar intended to nominate Abû 'Ubaydâ as his eventual successor, and when a serious epidemic broke out in Syria in 18/639 he summoned Abû 'Ubaydâ to Medina. Abû 'Ubaydâ, however, refused
to leave Syria and himself fell a victim to the plague. He was 58 years of age, and left no descendants.

He was clearly a man whose personality impressed his contemporaries, but he is presented by later traditions in a rather colourless fashion.

ABU 'UBAYDA AL-TAMIMI (see IBADIYYA)

ABU 'L-WAFÄ' AL-BUZÂJÂNÎ, MUHAMMAD B. MUH. B. YAHYA B. ISMÄ'IL B. AL-'ABBAS, one of the greatest Arab mathematicians, very probably of Persian origin, born in Buzâjian in Kuhistan, 1 Ramadân 382/10 June 1400. His first teachers in mathematics were his uncles Abu 'Amr al-Mughâzill and Abu 'Abd Allâh Muhammad b. 'Anbasâ, the former having in his turn studied geometry under Abu Yahyâ al-Mawuzâbî (or al-Mawardi) and Abu 'l-'AÂla' b. Karmîn. In the year 349/960 Abu 'l-WafÄ' emigrated to Irâq, and lived in Baghdâd until his death, which took place there in Radjab 388/July 998; according to Ibn al-Athîr and Ibn Khallikân, who follows him, in 387/997. It was Abu 'l-WafÄ', who introduced in 370/981-2, Abu Hayyân al-Tawhîdî to the vizier Ibn Sa'dân, and for whom Abu Hayyân wrote his al-'Imdâd wa'l-Munâ'asa.

Of his mathematical and astronomical works the following are extant: i. An arithmetic book, entitled Fîmâ yahdâ iHayy al-Kutdb wa'l-Ummâl min 'Ibm al-Hisâb, identical with the Al-Mansûrî fîl-Hisâb mentioned by Ibn al-Kâtîf; Woepke published in JA, 1855, 246 ff. the titles of the "stations" and of the chapters of the book. — 2. Al-Kâmîl, probably identical with the Almâqâsî mentioned by Ibn al-Kâtîf; certain parts of it have been translated by Carra de Vaux, JA, 1892, 408-71. — 3. Al-Handasa (in Arabic and Persian), probably the same as the Persian Book of the geometrical constructions of the Paris Library, reviewed by Woepke, JA, 1855, 218-56, 309-59; the latter is of the opinion that this book was not written by Abu 'l-WafÄ' himself, but by one of his pupils summing up his lectures. (See also H. Suter, in Abh. z. Gesch. der Naturwiss. u. d. Med., Erlangen 1922, 94 ff.) — Nothing unfortunately has further development of trigonometry; it is to him we owe, in spherical trigonometry, for the right-angled triangle, the substitution, for the perfect quadrilateral with the proposition of Menelaus, of the so called "rule of the four magnitudes" (since \(a = s + c = s A : t\)), and the tangent theorem \(\tan a = \tan b\); from these formulae he further infers \(\cos c = a \cos a \cos b\). For the oblique-angled spherical triangle he probably first established the sine proposition (cf. Carra de Vaux, loc. cit., 408-40). We are also indebted to him for the method of calculation of the sine of 30°, the result of which agrees up to 8 decimals with its real value (Woepke, in JA, 1860, 296 ff.). His geometrical constructions, which are partly based on Indian models, are also of great interest for Woepke (JA, 1855, 218-56). On the other hand, the merit of introducing tangents, cotangents, secants and cosecants into trigonometry does not belong to him, as these functions were already known by Habâb al-Hâsîb. Neither was he the discoverer of the variation of the moon, as asserted by L. A. Sedilliot in 1836. (A passionate dispute followed between Sedilliot and Chasles on the one side and Biot, Munk and Bertrand on the other, until Carra de Vaux, JA, 1892, 440-71, elucidated the truth of the matter.)

(H. Suter*)

ABU YA'AZZÂ (or YA'AZA) YALANNÛR B. MAVNÎN, sprung from a sub-Arabic Berber tribe (Dukkâla, Hasmîra or Haskûra), famous Moroccan saint of the 6th/12th century. After living for a time at Fez, where his zawiyâ in the al-Bi'da quarter (a dialect form of al-Bulayda) is still frequented, he settled in a village of the Middle Atlas, half-way between Rabat and Kaşâbat Tâddâl, Tâghya, which is today a small administrative centre bearing the name of the saint, as pronounced now in that region: Mûlay Bû'azzâ. He is said to have been the disciple of the patron saint of Azamûr Abu Shû'ayb Ayyûb b. Sa'dîn al-Sinâjdî (in the vernacular Mûlay Bûshîb), and himself to have had as pupil the famous Abu Madyan [q.v.] al-Ghâwî. He died of plague on 1 Shawwâl 572/3 April 1177 in his hermitage at Tâghya, where he led an ascetic life, among adepts of his sîfî doctrine. His funerary zawiyâ is the object of an annual pilgrimage (ma'sum); it was built and decorated at the end of the 17th century by the order of the 'Alawi sultan of Morocco, Mawliy Ismâ'îl.

Apart from a long notice on him by al-Tâdîlî in his al-Taşawwuf ilâ Râjîl al-Tašawwufu, Abu Ya'azzâ was the subject of a monograph, entitled al-Mu'âtî fi Manâbîb Abu Ya'âs, by a Moroccan sîfî author, Ahmad b. Abu 'l-Kâsim al-Sawmâ'î, who died in 1014/1604. See also E. Lévi-Provençal, Fragments historiques sur les Berbères au Moyen Age, Rabat 1934, 77.

(E. Lévi-Provençal)

ABU YA'KUB AL-KHURAYMÎ, ISMÄ'IL B. HASSÂN B. KÜH!, Arab poet, died probably under the caliphate of al-Ma'mûn, about 208/821. The scion of a noble family of Sogdiana, which he sometimes mentions with pride (Ya˒kûb, v, 363), al-Khuraymî (the form al-Khuwarismi is erroneous) derived his nisba from his being a mawla, not directly of Khuraym al-'Nâ'im, as most of his biographers
have it, but of his descendants, viz. Khuraym b. ʿAmir and his son ʿUthmān (see Ibn ʿAsākir, Taʾrīḥ, ii, 434-7; v, 126-8). He seems to have lived in Mesopotamia, Syria, al-Ǧarāʾa, where he frequented dissolute poets such as ʿ(storage) ʿAdhrāʾ, Mutūʿ b. ʿiyās etc. (Aǧhānī, v, 170, xiii, 82), and finally in Baghda. In Baghda he was connected with the entourage of the Rashīd (Aǧhānī, xii, 21-2) and especially with the Barmakids ʿAlī b. ʿUmar b. ʿAmir and his son ʿUthmān. Ibn al-Ḫalīfa, ʿAbd al-Qaybūṭ (al-Masʿūdī, Amlān, i, 64-5; O. Rescher, Asr al-Maʾmūn, 1293, 97; Rifaʿa al-Askari, Fihrist, index; Caire 1940, viii, 146; Askari, Sindʿatayn, 345; Thaʿālīfa, Khāṣṣ al-Khutba, Tunis 1293, 97; Rīfāʿ, Ṭarʿ al-Maʾmūn, iii, 286-94; A. ʿAmin, Ḱuḥaʾ ʿl-Īslām, i, 64-5; O. Rescher, Abrīṣ, ii, 37-8; Brockelmann, i, 111-2. (Ch. Fehlt.)

ʿAbū Yaʿqūb ibn ʿAbd al-Muʾmin, second ruler of the Muʾmīṇīd [q.v.] (Almohad) dynasty, reigned 558-80/1163-84. He succeeded to the throne by a coup d’état, in spite of the official proclamation of his elder brother Muhammad as crown-prince in 549/1154. It is true that Muhammad ruled for about two months, a fact that has been passed over in silence by almost all the historians of the dynasty; but the powerful vizier ʿUmar b. ʿAbd al-Muʾmin, alleging that his father, four days before his death, had ordered the name of the heir-presumptive to be suppressed in the Ḳanūba, and that he had declared to himself (ʿUmar) on his death-bed that he wished Yūsuf to succeed him, summoned Yūsuf in all haste from Seville, where he had resided as governor for the last six years, and had him proclaimed by the Shaykhūs and the army, in Ribāt al-Ǧāt (Raḥbat), as the new caliph.

The accession of Yūsuf was by no means received with unanimous approval. His brother ʿAll, governor of Fez, who went to bury his father in Tinmailla, protested against this arbitrary nomination, but died mysteriously on his return from the Atlas. Two other brothers, ʿAbd Allāh, governor of Bīlāya, who died shortly afterwards by poison, and ʿUthmān, governor of Cordova, also refused to recognize him. Thus Yūsuf did not dare to take the caliphal title of amīr al-muʾminīn, but confined himself for five years to the title of amīr al-muṣalīmīn.

Establishing himself in Marrākush, after dismissing the enormous army concentrated by his father in Rabat, Yūsuf had to suppress a revolt that broke out among the Ghumāra, between Ceuta and Alghara, while thebayt of Ibn Mardanish [q.v.], the sayyid ʿUmar and ʿUthmān were leading a vigorous campaign in al-Andalus against Ibn Mardanish [q.v.] and his Christian mercenaries. Invading his territory, they defeated his army in 560/1165, ten miles outside Murcia. The
city resisted, however, and preserved its independence for another five years.

When the hostile sayyids had submitted or had been eliminated, Ibn Mardanîsh had been defeated and the revolt of the Ghunmâra had been suppressed, Yûsuf assumed in 565/1172 the caliphal title. Yet at the very moment that his proclamation was celebrated, the warlike little state of Portugal caused him grave concern. Giraldo sen Pavor, the famous captain of Afonso Henriques, captured the celebrated, the warlike little state of Portugal, and submitted tawfyid at the very moment that his proclamation was reached Huete in July. The siege at once revealed the caliph's lack of energy and the hesitant and unwarlike spirit of his troops, who failed completely. It seemed that the besieged, who withstood courageously the Almohad attacks, would have to surrender owing to lack of water, but violent summer storms filled their cisterns and threw the enemy's camp into disordered. Owing to lack of food and the approach of the Castilian army, the Almohads lifted the siege and returned, via Cuenca, Jâti, Elche and Orihuela, to Murcia; there the army was disbanded.

Yûsuf rested in Seville during the winter of 568/1172-3. But the count Jimeno “the hunchback” (al-ahdab), who, with the men of Avila, had caused severe damage in the valley of the Guadalquivir, penetrated, in Sha'ban 568/April 1173, into the region of Ecija and took enormous booty. The troops that had come back from Huete were collected again, and the indefatigable Abu Ya'qûb 'Umar Intî [q.v.], together with the two brothers of the caliph, Yahyâ and Ismâ'il, overtook the count near Caracuel, defeated and killed him. Subsequently, Badajoz was furnished with supplies and the whole left bank of the Tagus ravaged, from Talavera to Toledo; in consequence, Afonso Henriques, on behalf of Portugal, and the count Nuño de Lara, on behalf of Castile, were compelled to ask for and to sign an armistice for five years. The winter of 569/1173-4 was spent in resettling and fortifying Beja, in the Algarve, which had been recently repopulated by Christians. The armistice with Portugal had expired short the ever-increasing aggressiveness of the Christians. The armistice with Portugal had expired, and the crown-prince, Sancho, earned his spurs by invading the valley of the lower Guadalquivir, attacking Triana, then Niebla and the whole of the Algarve. Beja had again to be evacuated.

Yûsuf found no other way to withstand these attacks but to transport to Morocco and al-Andalus the Arabs of Ifrikiya, but seeing that they were becoming more and more turbulent, under the leadership of 'Ali, a descendant of the Banu 'l-lland, lords of Kafsa [q.v.] (Gafsa), who had revolted there, he took the field to stifle that dangerous centre of dissidence and to force the Arabs to join the holy war in Spain. He left Marrakûsh for Ifrikiya, and after a siege of three months took Kafsa, in the winter of 576/1180-1. 'Ali, who had surrendered and capitulated, and the Riyâb pretended to submit. Only a small section of them, however, followed Yûsuf; the greater part remained in Ifrikiya, ready to support any attempt at revolt against the Almohads, and to lend assistance to Karakksh [q.v.] and the Banû Ghâniya [q.v.].

In the meantime, in the Iberian peninsula, an advance of Alfonso VIII towards Ecija and the taking of Santafila, near Lora del Río, coincided with a Portuguese invasion towards San Lucar la Mayor, Aznalfarche and Niebla, and with the revolt in the Anti-Atlas of the Banû Wâwazgit, who occupied the silver mine of Zaqjundar. The caliph had to go in person to subdue the rebels, while Ibn Wânûdîn led a razzia against Talavera. Finally Yûsuf, after undertaking the extension of Marrakûsh to the southward and enlarging the range of the Almohads, moved in the summer of 579/1183—an enterprise continued later by his son, Ya'qûb, by the building of the imperial quarter of al-Shâliha—decided, in spite of the discouraging example of Huete, to engage all his forces in a campaign designed to put a brake to the audacity of the Portuguese.

The preparations for the expedition and the concentration of the troops were very ample, but also took a long time. In May, Castile and Leon had concluded the peace of Fresno-Lavandera and engaged themselves to fight together against the Muslims—Ferdinand on his part renouncing his old alliance with the Almohads. Three months later, Yûsuf started collecting his troops. On 16 Rabî' I 580/27 June 1184, he appeared before Santarem (Shantarla). The Portuguese had had about ten months to prepare the defence of the fortress, almost impregnable without a long siege. It cost the Almohads much trouble to take the suburb near the river, and at the end of a week's useless efforts and tenacious resistance, the approach of Ferdinand II with his Leonese spread terror in the Almohad army which, in panic, re-crossed the river. The caliph was mortally wounded when raising camp and died near Evora, on the road to Seville, on 18 Rabî' II 580/20 July 1184. Abû Ya'qûb Yûsuf was considered as the most...
girted of the Almohad caliphs. The son of a Masmud woman—the daughter of the šāhīd Ibn Imrān—and born in the heart of the Atlas, in Timmellal, he was instructed in Marrākūsh in the doctrine of the sawābkī. Nevertheless, in spite of his Maghrībi birth and education, his long stay in Seville, where he arrived at the age of seventeen years, made of him an Andalusian litterateur as refined as one of the muḥākb al-fawāfi. Surrounded by famous philosophers, physicians and poets, he perfected his literary knowledge and developed his artistic taste. Seduced by the charm of Seville, he gave it back the title of capital of al-Andalus, which had been taken away by his father at the end of his reign, and endowed it with numerous monuments and works. He took pleasure in taking part in the scientific meetings adored by men like Ibn Ῥufayl, Ibn Rūghād and Ibn Zuhūr, who, encouraged by him, produced their most celebrated works.

At the same time, thanks to the terror with which his father had imposed his authority, this friend of scholarship was able to enjoy an absolute power in the Maghrib. Irfīkīya was still under his control and the dangerous enclave of Ibn Mardānshī disappeared. Yet in spite of appearances, the ceaseless war against the Christians in al-Andalus made manifest his incapacity as a military leader, the low morale of his enormous armies and the inefficiency of his commissariat. The small Christian states of the Peninsula, though divided by internal warfare, did not suffice to check the Christians’ drive, and led to his death out to the damned, who are, after all, but a handful of dust. The “numinous” sense is extremely highly developed in him, together with a sense of horror and awe before the Deity, in whose presence he always felt himself an unbeliever, just about to lay aside the girdle of the magians (zummār). His passionate aspiration is aimed at absolutely freeing himself through systematic work upon himself (“I was the smith of my own self”: haddaḏ naṣūf), of all obstacles separating him from God (kwāḏ), with the object of “attaining to Him”. He describes this process in extremely interesting autobiographical sayings with partly grandiose images. The “world” (dunyā), “flight from the world” (rūḥ), “work of God” (kwāḏ), miracles (karmāt), qāṯr, even the mystic stages (makāmāt) are for him no more than so many barriers holding him from God. When he has finally shed his “I” in jamā, “as snakes their skin” and reached the desired stage, his changed self-consciousness is expressed in those famous hybrid utterances (khuṭḥālād) which so scandalized and shocked his contemporaries: “Subhānā! Mā aṣmaṣa šu’ārā’!”—“Glory be to me! How great is My majesty!”; “Thy obedience to me is greater than my obedience to Thee”; “I am the throne and the footstool”; “I am the Well-preserved Tablet”; “I saw the Ka’ba walking round me”; and so on. In meditation he made flights into the supersensible
world; these earned him the censure that he claimed
to have experienced a mi*rdi in the same way as the
Prophet. He was in the course of the battle decorated
by God with His Singleness (wakfedmiyya) and
clothed with His "I-ness" (ananiyya), but shrank
from showing himself in that state to men; or
flew with the wings of everlastingness (daymamiyya)
through the air of "no-quality" (lufayfiyya) to the
ground of eternity (asalayya) and saw the tree of
"one-ness" (ahadiyya), to realise that "all that was
illusion" or that it "was himself" who all was that,
etc. In such utterances he appears to have reached
the ultimate problem of all mysticism. A later legend
makes him solve with ease conundrums put to him in
a Christian monastery, thus effecting the wholesale
conversion of the monastery to Islam.

Masila on 10 Shawal, al-Mansur besieged the fortress of Khyana (overlooking what was later to be al-Katat Bani Hammadan). On 2 Shawal al-Mansur besieged the fortress, which was entered on 22 Muharram 336; at night, the last remaining warriors carried Abû Yazid and Abû 'Amr from the citadel. Abû 'Amr was killed, while Abû Yazid had a fall and was captured. The curious conversation that passed between al-Mansur and his captive has been recorded. Abû Yazid died of his wounds in 27 Muharram, at night, the last remaining warriors carried him back to the fortress, which was entered on 22 Muharram 19 August 947. His body, stuffed with straw, was exposed to the insults of the mob in al-Mahdiyya. Facjl, the son of Abû Yazid, gave some further trouble in the Awtas and the district of Kafsa, till he was defeated and killed in Dhu 'l-Ka'da 336. Other sons of Abû Yazid found a shelter in the court of the Umayyads in Cordova.

**Bibliography:** The main source is a contemporary Fatimid chronicle of which the substance has been preserved in Idris Imad al-Din, *Uyun al-Akhbar*, second half of vol. v. The same substance is used by Ibn al-Ra'ik in his lost history of Hiflikya. The whole account of Ibn Hammad (Vanderheyden), 18 ff., is no doubt taken from Ibn al-Ra'ik. Ibn Shaddad, in his lost history of al-Kayrawan, also no doubt copied Ibn al-Ra'ik, while Ibn al-Ahwar's account, viii, 315 ff., still easily recognizable as an abstract of the Fatimid chronicle, evidently goes back to Ibn Shaddad. The passages in Tidjani, *Rihla*, Tunis 1927, 17-19, 20-1, 233-5 (transl. in *JA*, 1852, 96 ff., 101 ff, 106 ff., 1953, 563 ff) are taken from Ibn al-Ra'ik. Further references: Abû Zakariyya (Chronique d'Abou Zakaria, transl. Masqueray), Algiers 1879, 226 ff; Ibn 'Idjarî, *al-Baydân al-Mughrîb* (Colin and Levi-Provenca), i, 316 (quotes Ibn Hammadâd–6th/12th century, not identical with the Ibn Hammadâd quoted above—Ibn Sa'dun and Ibn al-Ra'ik); Ma'ârif, *Il'mâr* (Bunz), while mainly deriving from Ibn al-Ahmar, has some additional notes (55-57).—Cf. Zakariyya (ed. Schacht, Leipzig 1930). Several early accounts are based on Ibn Laidy's comparison of the opinions of the two authorities of Kufa mentioned in the title (Cairo 1355), the Kitab al-Athar, a collection of the Kufan traditions that Abû Yusuf transmitted (Cairo 1357; also in al-Shâfi'i, Kitab al-Umm, vii, 87-150), and the Kitab al-Radd 'ala Siyar al-Awsat, a reasoned refutation, with broad systematic developments, of the opinions of the Syrian scholar al-Awsat, on the law of war (Cairo, n.d.; also in al-Shâfi'i, ed. Schacht, Leipzig 1930). The *Fihrist* mentions at least two titles of the same comparative and polenical kind: the Kitab al-Asrâr and the Kitab al-Radd 'ala Malik b. Anas. Finally, extracts from Abû Yusuf's Kitab al-Hiyal (Book of legal devices) were incorporated by his disciple al-Shaybanî in his *Kitab al-Mahdird fi 'l-Hiyal* (ed. Schacht, Leipzig 1930). Several statements on principles and methods in his potential treatises (e.g. *Kitab al-Radd 'ala Siyar al-Awsat*, par. 5) show Abû Yusuf's interest in legal theory (cf. *Fihrist*, 203 ff), but, contrary to what is sometimes affirmed, he did not write special works on the subject.

The doctrine of Abû Yusuf, on the whole, presupposes the doctrine of Abû Hanifa, whom he regarded as his master. The points on which Abû Yusuf diverged from him are therefore more significant for appreciating Abû Yusuf's own legal thought than those on which both are in agreement. The most prominent peculiarity of Abû Yusuf's doctrine is that he is more dependent on traditions than his master, because there were more authoritative
Secondly, the doctrine of Abu Yusuf often represents a reaction against Abu Hanifa's somewhat unstrained reasoning; but Abu Yusuf was by no means consistent, and in a certain number of cases he abandoned, by diverging from Abu Hanifa, the sounder or more highly developed doctrine. Thirdly, we can discern in Abu Yusuf's legal thought certain favourite processes of reasoning, such as the reductio ad absurdum, and a habit of rather acrimonious polemics. Finally, a remarkable feature of Abu Yusuf's doctrine is the frequency with which he changed his opinions, not always for the better. Sometimes the contemporary sources state directly, and in other cases it is probable, that Abu Yusuf's experience as a judge caused him to change his opinion. Abu Yusuf represents the beginning of the process by which the ancient school of the 'Irākians of Kūfa was replaced by that of the followers of Abu Hanifa.

On his return to Marrakush, worn out by illness, he appointed his son Muhammad as his heir and retired from public life, to spend his time in devotional exercises and pious works, such as the foundation of a magnificent hospital and distributions of alms. He obliged the Jews to wear a special sign to distinguish them from the Muslims. During the last days of his life he was assaulted by remorse for having ordered the execution of some of his nearest relations. He assembled in his palace in al-Sāliha the Almohad shaykhâhs and the members of his family and informed them of his last wishes. It seems that the date of his death can be fixed with certainty on 22 Rabî‘ I 595/23 Jan. 1199.

The reign of Ya‘qūb al-Manṣūr marks the apogee of the Almohad empire. His energetic character, the care and rigorosity with which he supervised the administration of his dominions and his personal courage made it possible for him to defeat all his enemies, in Ifriqiya as well as in Spain, to raise the moral of his armies and to pass into the memory of posterity surrounded by an aureole of legend. His magnificent constructions in the imperial suburb of al-Sāliha and the mosque of the Booksellers (Ajami al-Kutubiyyin) in Marrakush with its splendid minaret, the Giralda of Seville and the ensemble of the mosque of Hassan in Rabat show that he was the glorious continuator of the monumental work undertaken by his father and grandfather. His riches, the splendour of his court, his desire to be surrounded by scholars, his success in the holy war, have blinded his admirers and prevented them from observing the germs of decomposition hidden behind such a brilliant façade. In al-Andalus, in spite of his success in Portugal and Castile, he could hardly contain the Christian drive, while in Ifriqiya the Arabo-Majorcan revolt, stifled but always reviving, opened in the flank of the empire the deep wound which soon drained it of all force and energy. When the vigour and the skill of Ya‘qūb al-Manṣūr were no longer at the helm of the Almohad ship of state, it was inevitable that it should run upon the rocks.

Relations. He assembled in his palace in al-Sāliha the shaykhâhs of the town, the only settlement of any size in the interior until the accession of Shakhbūt b. Dhiyāb of Āl Bū Falāh, the ruling clan, about 1209-10/1795. About 1214-5/1800 the Wahhābîs of Nagīd first appeared along the coast, but they disappeared, close ties with the Kāwāsîm and the people of al-Burayn rather than with Ābū Zabl. Bani Yās do not appear to have come under Wahhābî influence until the accession of Khalfâ b. Shakhbūt in 1248/1833.

Shakhbūt signed the General Treaty of Peace sponsored by the British in 1235/1820 following the British expedition against Ra’s al-Khayma [q.v.]. In 1251/1835 Ābū Zabl adhered to the first Maritime Truce, from which the Trucial Coast takes its name [cf. BAHIR PARIS]. An Exclusive Agreement in 1309/1892 gave Great Britain special rights in Ābū Zabl, which like the other Trucial States is considered to be independent while under British protection. In 1357/1939 the Shaykh of Ābū Zabl granted an oil concession for 75 years which is operated by Petroleum Development (Trucial Coast) Ltd., an Iraqi Petroleum Company associate; in 1372/1952 oil had not yet been found. Offshore drilling rights are held by other interests.

Zāyîd b. Khalfâ (d. 1326/1908) during his reign of 53 years made Ābū Zabl the leading power on the Trucial Coast, but during the successive reigns of his four sons Ābū Zabl was surpassed in importance by al-Shāri‘î [q.v.] and Durbayî [q.v.], which developed more rapidly their relations with the modern world. The present ruler (1952) of Ābū Zabl is Shakhbūt b. Sultān (acc. 1346-7/1928), a grandson of Zāyîd.

Ābū Zabl is by far the largest of the Trucial States, though most of its boundaries in the interior remain undefined. It claims a common land border with Kātār in the vicinity of al-Udāy [q.v.] and extensive territory in al-Zâfra, where members of Bani Yās still reside in some of the tiny villages of al-Diwayî [q.v.]. Several villages of al-Buraynî belong to Āl Bū Falāh. Bani Yās are settled on some of the islands in the Gulf between the Trucial Coast and Kātār, and they visit others while engaged in pearling, fishing, and gathering firewood. Āl Bū Falāh are on friendly terms with many of the beduins of the hinterland, though in recent years the once firm connections with the Manāṣîr [q.v.] have grown weaker.

(G. RENTZ)
famous in Ibadite literature by the breadth of his learning and by his works, mainly on jurisprudence. Abū Zakariyya quotes in his catalogue of Ibadite books written shortly after 775/1372-3, a work by Abū Zakariyya, without giving its title. According to him the work contained seven parts, on fasting, marriage and divorce, testaments, salaries, judgments, preemption and security. The K. al-Saum, on fasting, has been autographed in Cairo, 1320, and the K. al-Niṣāḥ, about marriage and divorce, has been published in Egypt, with a marginal gloss by Muhammad Abū Sitta al-Kaššāl; the other parts are unpublished. Abū Zakariyya wrote also al-Lamā' (or al-Wādī), printed in Cairo (with a marginal gloss by Muhammad Abū Sitta al-Kaššāl) in 1305. It deals with dogmatics (1-116) and ritual law: ablutions, purification, prayer, alms, pilgrimage, etc. (117-692).

Abū Zakariyya al-Wardīlānī, Yahyā b. Abī Bakr, historian of the Ibadīs of the Maghrib. The Ibadī chroniclers al-Dardīnī (7th/13th century) and al-Shāmmakhī (d. 928/1522) who took the chronicle of Abū Zakariyya as the basis for their own works, give but scanty details about him and do not indicate the date either of his birth or of his death. From al-Dardīnī it is known at least that he was a native of Wardīlān (Ouargla), and that he studied in the Wadl al-Rīgh (Oued Rīgh) or perhaps in the neighbouring oasis of Sadrāta. He was also a pupil of the Ibadīs against the Fatimids, as well as on the lives of the famous Shaykhs of the community up to the time of the author. The work, not yet published, consists of two parts; the not very numerous manuscripts are generally modern; those especially of the second part are rare and very faulty. The most important part has been translated by E. Masqueray (Chronique d’Abou Zakaria, Algiers 1878) in a rather mediocre way, after a very bad manuscript. A table of contents has been given by A. de Motylinski.

According to al-Barrādī’s catalogue of Ibadī works (8th/14th century) Abū Zakariyya was also the author of letters and decisions on dogmatic theology.

An edition and new translation of the chronicle of A. Z. by Dalet and R. Le Tourneau is in preparation. (A. de Motylinski-T. Lewicki)
sinated in 801/1398 after being driven from the throne by his brother Abd Allah.

(A. COUR *)

**ABU ZAYYAN III AHMAD b. ABU MUHAMMAD 'ABD ALLAH, second last 'ABD al-Wadid ruler of Tlemcen. Thanks to the support of the Turks of Algiers he seized the power and was proclaimed in 947/1540. The Spaniards of Oran who supported his brother Abu 'Abd Allah Muhammad undertook an expedition against Tlemcen, which failed (949/1543). After a second, victorious expedition, the Spaniards made it possible for Abu 'Abd Allah Muhammad to seize the power (30 Dhu 'l- Ka'da 949/7 March 1543), but he was soon driven out by his own subjects, who restored Abu Zayyan to the throne. He declared himself a vassal of the Turks and reigned until his death in 957/1550.

**ABUKIR**, or Bukir, small town on the Mediterranean coast, 75 m. east of Alexandria, on the railway which links this town with Rosetta (Rashid). The earliest Arab geographer to describe the position of Abukir was al-Idrisi. But before him Arab texts on Ancient Egypt refer to the building of a light-house and European travellers certainly mention on this route, towers intended to serve as landmarks. Eutychius tells of the passage to Abukir of the relieving fleet which had been summoned from Tarsus to protect Egypt against the Fatimids. All Pasha Mubarak, according to a source that has not been traced, relates that European pirates raided Abukir on 27 Shaban 764/11 June 1363, and carried off about sixty inhabitants, who were put up for sale at Sidon. It was the period of Bonaparte's expedition that made Abukir famous, by Nelson's naval victory on 1 August 1798 and the extermination of the Turkish army on 25 July 1799. At Abukir, on 8 March 1801, disembarked the English army which was to end the French occupation; and, finally, Abukir was again an English operational base in March 1807. There was an excellent anchorage and good shelter at Abukir at that time, but the village itself was miserable.

Amelineau erroneously believed that he had found the name Abukir in the _Jacobite Synaxary_; the reference there is to a church in Old Cairo, dedicated to Apa Kyros.

Etienne Combe has studied at length the problem of the Alexandria-Rosetta route, as well as of the lakes along the coast, and has provided a rich bibliography of Arab writers and European travellers. In this work will be found the various transcriptions of the name of the locality, and the monotonous description of a somewhat difficult journey: a sandy region had to be crossed, uncultivated and uninhabited, with only a few palm-trees here and there to enliven the prospect. The three lakes, from west to east, bore the names Maryut, Abukir and Atkut. The only account of the lake of Abukir which is at all detailed in the _Suhb_ of al-Kalkashandi, but he refers to the prosperity of the region as a thing of the past. Some few birds lived on the shores of the lake, whose waters teemed with fish. The mullet (būrū) which was caught there formed part of the food supply of Alexandria. On the banks were some large salinas, whose product was exported to Europe.

A strong casueway, often reinforced, separated the lake of Abukir from Lake Maryūt; the Maḥmūdiyya canal and the railway from Cairo to Alexandria were built along this. Since 1887 the lake of Abukir has been drained and the land cultivated.

Other places of no importance in Egypt have the same name.

Worthy of mention, however, is the gorge of the Būkhr (Būkhrān—Būkhrāt), in the Ḍjabal al-Ṭayr (Mountains of the Birds), in Middle Egypt, north of Minya. The Arab authors associate a curious legend with this locality. The mountain was, on a given day each year, the meetingplace of the birds called būkhr. They put their heads into a cleft in the mountain, which closed on one of them: that bird remained suspended and died there.

ACABUL, misspelling for Abu Tulayh, so called after the _talh_ tree (_Acacia seyal_), the name of a well-centre on the road through the Bayūda desert which, avoiding the Nile bend of Abū Hamad, leads from Korti (Kurti) south of Dongola to al-Metamna, a distance of 192 miles. The place is famous as the scene of a battle fought on 17 Jan. 1885 between the darwīsh forces of Muhammad Aḥmad [g.v.] and a “desert column” of some 1800 British troops who were advancing from Korti to the relief of Ḫaṭrūm where the Egyptian garrison and General Charles Gordon were besieged by the Mahdists. The British under Sir Herbert Stewart found a large body of the Mahdi’s best troops (some 3000 Bakkara and 5000 Ḫaṭrūmi) in possession of the wells. Advancing in square formation they were fiercely attacked, and after desperate hand-to-hand fighting the Mahdists withdrew leaving about 1000 dead behind. The British casualties were 74 dead and 94 wounded. The way was now open to al-Metamna where the British forces were joined by four river steamers which Gordon had despatched from Ḫaṭrūm. A fatal delay of a few days enabled the Mahdists to take Ḫaṭrūm by storm (28 Jan.), and the relieving force was obliged to retrace its steps without achieving its object.

ABUSIR (see Busir).

AL-‘ABWA’, a place on the road from Mecca to Medina, 23 miles from al-Juhiya in the territory of Banu Damra of Kainasa. According to some authorities the name really belonged to a mountain situated there. Muhammad’s mother, Amina, is commonly said to have died there while returning from Medina, and to be buried there; but she is sometimes said to be buried in Medina (Tabari, i, 260). The first expedition from Medina in which Muhammad himself took part was to al-‘Abwa and Waddan nearby. It is said that at al-‘Abwa, as the Meccans marched against Medina in 3/625, some proposed to dig up Amina’s body, but the majority opposed this.

NE of ‘Adan, (b) (Dhu) Abyan (Ibyan) b. Yakdum b. Hamysa, c

It cannot be shown with certainty what more ancient traditions are at the base of the Kur'anic story. The old poets knew ‘Ad as an ancient nation that had perished (e.g. ‘Arfa, i, 8; al-Mutawakkaliyyah, viii, 40; Ibn Higham, i, 468; cf. Zuhayr, xx, 12 and Luqman); hence the expression: “since the time of ‘Ad”, *Hamasa* (Freytag), 195, 341. Their kings are mentioned in the *Dhu‘aylites*, lxx, 6, and their prudence in that of Nabiha, xxv, 4. The mention of the ‘Adite Abmar by Zuhayr, *Mus’alaqa*, verse 32, and in the *Dhu‘aylites*, p. 31, merits consideration, as the Muslim legend connects (Kudar) al-Abmar with Thamud (*q.v.*). Whether there really existed, and where, a nation called ‘Ad, is still an unanswered question. The genealogies of the Arabs relating to the Adites are naturally valueless, just as is their locating of that people in the large and uninhabitable sandy desert between ‘Urmân and Hadramawt. The identification of Iram with Aram, adopted by the Arabs and several modern scholars, is not at all likely. Of the latter, Lot has identified ‘Ad with the wellknown tribe of Iyad; on the other hand Sprenger sought for ‘Ad in the Oadites, who according to Ptolemy lived in N.-W. Arabia; this recalls the well of Iram in Hisma (al-Hamdanî, *Sifa*, 126; A. Sprenger, *Die alte Geogr. Arabiens*, § 207; A. Musil, *Arabia Petraea*, ii/2, 128). The excavation of the second-century Nabataean temple at Djabal Ramm, about twenty-five miles due east of ‘Akhaba, brought to light Nabataean inscriptions giving the name of the place as *rum*; Savignac, very plausibly, connected this with Iram. Cf. H. W. Glidden, in BASOR, no. 73, 1939, 13 ff.; Ramm would also be identical with al-Hamdanî’s Iram and Ptolemy’s Aramaua. But Wellhausen pointed out that instead of the expression “since the time of ‘Ad” the expression *min al-‘ad* also occurs; therefore he supposed that originally ‘Ad was a common noun (“the ancient time”); adj. ‘Adî, “very ancient”) and that the mythical nation arose from a misinterpretation of that expression.

ADÂ (l.), lit. “payment”, “accomplishment”, a technical term used in the *sûkh* to designate the accomplishment of a religious duty in the time prescribed by the law, in opposition to *baḍa‘*, which designates the belated accomplishment of a religious duty (of course when the delay is permitted). A distinction is also drawn between a perfect and an imperfect accomplishment (*al-adâ‘ al-kâmîl* and *al-adâ‘ al-nâbiq*). In the reading of the Korân *adâ‘* means the traditional pronunciation of the letters, synonymous with *khârâ‘* (*q.v.*).
AADA (A.) custom, customary law.

i. — General. The realities of social life have never exactly reflected the *gari'a* [*q.v.*], or *shar'i*, the ideal Muslim Law corresponding to God's will. This is true not only in regard to the ritual provisions of this Law, but also and even more so in regard to its juridical aspects. It is not, of course, the modern reforms of Muslim law in various countries that are envisaged here, but the survival of pre-Islamic custom (*'ada* or *urf* [*q.v.*]). The words *'ada* and *urf* have the same meaning, but the usage varies from region to region (e.g. the first is used in Indonesia, the second in North Africa, and in East Africa one says *dasar*). In addition, the Muslim rulers have often issued administrative regulations on matters of law, called, e.g. in Persia *urf*, in Turkey *hânûn* [*q.v.*] (for the meaning of this word in North Africa, see below ii), sometimes also *siyâsa* [*q.v.*]. Also the innumerable regulations made by rulers, establishing various taxes contrary to the Law (*maks* [*q.v.*]), must be recalled here.

What is, then, the exact role of custom in Muslim countries?

a) There is first of all the case where the *fiqh* itself expressly refers to customary usage, e.g. to determine what is to be understood by equivalent dowry, or by ordinary standards of nourishment (e.g. for the *zakîli al-fîr*) etc. Some lawyers even felt justified in advancing the view, following the principle according to which everything that is not forbidden is permissible, that the Muslim Law could admit customary law in every case in which the *urf* was not contrary to the *shar'i*; in fact, however, custom has not been admitted as one of the sources (*usul*) of the law [cf. *usul*].

b) A juridico-sociological analysis of social reality allows us to make the following distinctions.

1) In the most classically Muslim countries it can be observed that alongside the religious jurisdiction there exists an administrative ("political" = *siyâsa*) jurisdiction, varying in forms and names, which need not be treated here, e.g. in matters concerning penal law, obligations and contracts; in its customary law or the regulations (hânûn) of the princes are applied to a greater or lesser extent. So for example in Turkey marriage, from the 17th century onwards, had to be concluded obligatorily, from the penal point of view, before the authorities.

2) Sometimes even the religious courts are compelled to sanction local usage, either because, thanks to a juridical artifice (*hila* [*q.v.*]) the act, though contrary to the spirit of the Law, has been put into a legally unchallengeable form (e.g. in the matter of usury, or the conditional repudiation in favour of the wife in Java, and especially the use of the *wajib*, in North Africa and elsewhere, to disinherit women); or even without that expedient—which is even more characteristic; thus in Java the pre-Islamic marriage arrangement is considered as a *sarkat* (i.e. *shirkah*), a contract of commercial partnership between the husband and wife. On the island of Great Comore, there exists a kind of *wâfi*, the *magnahuli*, in favour of women only, the validity of which is well recognized. (For the *samâl* in North Africa, see below, ii.)

3) There exist religious courts administering the Law, but, except in case of litigation, the population ignores them and follows local custom. This is the case, among others, in the Avars (cf. below, ii), to a large extent; in the same way, the religious courts were competent in matters of succession in Java up to 1938, but the population did not follow the *Kur'an* in this field; also the persistence of the *lekh dukagini* among the Muslims of North Albania can be quoted in this connection.

4) The clearest case of the persistence of a customary law is that where there is no religious jurisdiction at all, but only that of the customary courts, and these apply customary law. It is, however, essential to realize that this custom can be more or less Islamized (see below, ii, concerning the Berbers). One point, especially, can be taken more or less for granted: viz. that there is no Muslim country where the marriage formalities, which are, to be sure, very simple, are not performed according to Muslim law.

It can be said that in general it is among populations which are still imperfectly Islamized (in the objective meaning of the word, as those in question may have a very fervent faith) that the predominance of customary law and the absence of religious courts can be observed. There is, however, at least one very remarkable exception: until recent times, the region of Menangkabau (Central Sumatra) was strongly attached to its matriarchal customs, which were quite contrary to Islam, and yet Islamic learning was very widely spread in that region. The same matriarchate can be observed also e.g. among the Tuaregs of the Hoggar, who are, it is true, rather lukewarm Muslims. In the Laccadive islands, inheritance follows the female line. Thus the effective manifestations of the survival of custom among the Muslim community are innumerable.

As regards the future, something on the following lines may be said. If, on the one hand, the control of Muslim Law over practice is on the decline—total abolition in Turkey and in the countries under Soviet rule, reforms in Egypt, India etc.—on the other hand the Law is almost everywhere gaining ground at the expense of custom. Custom is thus on the way of slow disappearance, partly due to the influence of European colonization and European civilization. Custom is being Islamized, because the means of communication are improving and religious courts are installed in place of the old customary jurisdictions. As a matter of fact, almost everywhere the European colonizers believed that the law of the local Muslims was essentially the theoretical religious law.

In the following sections more detailed descriptions are given of the role of customary law in three representative areas of the Islamic world.

Adoption is not recognised by Islamic law, but in some parts of the Pandjab and Sind where it is supported by custom it has prevailed over this prohibition. In U.P., also, the custom of adoption has been upheld and the Oudh Estates Act of 1869 permitted a Muslim talubâdār to adopt a son. In other provinces, where some of the communities have retained the Hindu law of inheritance and succession, the courts have refused to accept the plea that the retention of Hindu law of inheritance implies, at the same time, the retention of the Hindu law of adoption. So when, in provinces where the custom has no legal force, a child is adopted—the practice being for wealthy families to adopt children from poor families—he cannot expect to receive an inheritance from the adopting parents under Islamic law, and gifts of property are made to him during their lifetime. The Khodjas, of course, need not resort to this expedient but do so by will.

The Muslim law of pre-emption (ādād) is more or less applied in the light of customary practices. The Madras courts refused to apply it on the grounds of it being opposed to justice, equity and good conscience. In U.P., Bihār, Assam and Gujārāt it was recognised by the courts that the right to pre-emption exists not only between Muslims, but also between a Muslim and a Hindu, and between Hindus if the custom so warrants.

In the law of marriage, custom usually tends to make divorce and polygamy difficult. In some marriage contracts the husband delegates to the wife the right to divorce (talâk al-tafram) which she can use if any of the conditions mentioned in the marriage contract is broken; the marriage contract generally includes the right of the wife to use her powers of divorce if the husband should remarry. Another common device is to name an enormous dower sum (mahr), of which only a token amount (muw'adjal = prompt dower) is paid at the time of marriage, the remainder—the deferred dower (muw'adjal)—becoming payable when the wife is divorced or widowed. When both these conditions are combined within a marriage contract they serve as a potent weapon in the hands of the wife.

In contrast to this in some parts of Southern India a large sum of money must be paid to the bridegroom by the bride’s people, and in this the influence of Hindu custom is to be seen. It has often brought financial ruin to the family or compelled its daughters to remain unmarried.

The 'idda, the waiting period of a divorced or widowed woman laid down by the Islamic law, was in one of the cases in the Pandjab held to be outside the requirements of the customary law of certain Muslim communities (Bhagwat Singh vs. Santi so. I.C. 654).

Though taking of interest is prohibited by Islamic law, it is a practice of long standing among most Indian Muslims, and in particular among the trading communities, and would seem to have gained legality.

Most of such customs which were contrary to Muslim law have been deprived of their legal validity by the Shariat Act of 1937. The force of the custom is almost wholly excluded from most matters of Muslim family law. But the Act excepted from its scope the devolution of agricultural lands which it would appear, still devolve according to custom.

The Act does not summarily abolish customs pertaining to adoption, wills and legacies. But it lays down that if a Muslim who has reached majority makes a declaration to the effect that he and his descendents wish to be governed by Muslim law in the
matters stated above, Muslim law would be applicable
to them.

In addition, there exist in India communities
which are neither completely Muslim nor Hindu,
retaining some elements of both religions. Such is
the sect of Satpanthis and Firpanthis [qq.v.] (the
"followers of truth" and the "followers of Pi") in
Gujarat, Kachch and Mvndesh. They claim to belong
to the Hindu caste of Mathia Kunbis and follow
the Atherva-veda; yet they observe the fast of
Ramadn and other Muslim practices and bury
their dead with both Muslim and other ceremonies.
Other such communities are the Nyitias in Malwa,
the Kanchandas in Sind, and the Usayin Brahmins
in U.P. the Bhagwans or Satyadharmas in Bengal
and the Chauhars in the Pandjab. (See Census of
India, 1931, i, 380 ff.)

With the partition of India, it may be assumed
that henceforth customs will cease to have any
legal sanction in Pakistan, though the same may
not be said with certainty about India. However,
whether or not custom is granted any legal sanction,
it would not be possible to eradicate its deep rooted
influences for generations to come.

dadan Law, Oxford 1949.

(Shamoon T. Lokhandwalla)

iv. — Indonesia. 1. The word, in the form adat,
had been adopted, not only in Malay but also in
many other languages of the Indonesian archipela
go. It comprises all things Indonesian that are custom,
usages, practice.

2. Adat thus includes also the juridical customs of
countries or regions. The scholars who studied the
juridical parts of the general adat in Indonesia used
the now well known word "adat law" (Adatrecht),
and not the wider term "customary law", because at
least among the Muslim population of Indonesia, not
all the juridical customs in force were "customary"
by origin.

Some rules concerning marriage and divorce and
law of inheritance are due to the impact of the
shari'a on the Muslim Indonesian world. From the
shari'a the Indonesians also took the institution of
"pious foundations" (wakf). In some regions the
influence of the shari'a on general rules of the law
of relationship is visible. But otherwise some regional
rule or institution was originally not unwritten law
but due to a princely edict or order (viz. the older
pesuara of the Balinese princes). Moreover in some
regions one may find that parts of the law in the
closed legal communities (desa, subak) are formulated
in written local regulations (awig-auwig desa in Bali),
The famous adat-institution of Java—see § 4—
is still often called by Javanese the djandji dalem,
that is "the royal promise", because according to
their tradition it was a seventeenth century king
(susuhunan) of Mataram, who gave this order to his
subjects in that way.

So far the situation in Muslim Indonesia is mutatis
mutandis the same as in the older and central
countries of Islam. For, notwithstanding the totali-
tarian pretention of the shari'a to be the formulation
of God's eternal will, which is followed by every
Muslim in any country, time or circumstances, only
some chapters of the fikih system were actually
enforced.

2. The particular situation in Muslim Indonesia,
however, is that an incessant discussion is going
on about the worth of adat law and about the
relation of adat law and the shari'a.

Moreover those departments of juridical life which
have been entirely Islamized in other countries:
mobile law, law of relationship, law of
inheritance—are not the unchallenged domain of
shari'a in Muslim Indonesia, as will be shown below.
Before the second world war the more radical
adherents of the nationalist parties argued that the
uniform adat law in the 18 juridical regions of the
East Indies was an obstacle to the unification and
modernization of the country. Their ideal became:
one pan-Indonesian state, one (official) language
and one law. They rejected the shari'a as well as
adat law. Notwithstanding their anti-western attitude
they believed—and partly still do—that western law
should be introduced entirely. The former Dutch
government often had (for its Indonesian subjects)
considered the possibilities of westernization of private
law but projects of codes were never carried out.
Even unification of the adat law in force proved to
be a troublesome experiment. Notwithstanding that,
elements of western law began, rather long ago, to
penetrate into Indonesian life as a consequence of
modernization of the country. Their ideal became:
one pan-Indonesian state, one (official) language

persons, adat-functionaries and politicians tried to find a way out, that is to say a conciliation between both juridical complexes (on this occasion in the section of the law of inheritance) but without success. The view-point of the above-mentioned Minangkabau ‘ulamā, notwithstanding their concessions to adat law, was thoroughly traditional (orthodox).

4. There is however one outstanding problem that was already before the war—to quote a Javanese politician—"an inexhaustible source of disputes". This is the position of the woman, especially in Javanese life. From a social point of view the position of the Javanese woman is fairly high. But her position as a wife is extremely unsafe. The peculiar situation as far as this point is concerned is that in Java (and in Minangkabau) more than 50\% of all marriages are dissolved by the husband’s act of repudiation. Of course the shari’a gives the husband that right everywhere. It is remarkable however that in the Muslim regions where a patrilineal system of relationship is in force the matrimonial bond is strong, because the husband has to pay a considerable bride-price. In Java the so-called “tuku” (remnant of a bride-price) is only a combination of cheap presents, and even the mahr of the sharī’a often remains unpaid. The socio-familial system in Java is bilateral.

If a score of years ago polygyny has not yet found its place against polygyny. Not in the first place against simultaneous polygyny (which is not at all frequent: ± 2\% but mainly against “successive” polygyny: the habit of the man (who can marry quite “cheaply”) to exchange his wife for a younger one. The tašh-taldk-institution is not effective against this most serious social evil. This tašh-regulation is as follows: Immediately after contracting his marriage the husband has to declare to his wife’s wali and the witnesses that, if he leaves his wife for a certain time without providing for her and without sending her tidings, if he severely illtreats her or commits another unseemly act—then his wife is free, if she likes to do so, to complain before the Muslim authority concerned. If there is evidence of her husband’s failing in these respects the authority states one falsūd to have taken place.

The republic has improved the (officially edited) forms for the tašh-statements and given them by means of wadāl-paying the character of an eventual khulul. And a bill is being prepared which is an interesting combination of elements of western law, Muslim religious law and adat law, although the prospects of its enactment are doubtful.

This bill has the following salient points: (a) child-marriages (not frequent in Indonesia) are forbidden; (b) each marriage is to be registered in a registrar’s office in accordance with the European continental system; (c) the future married couple have to give each other certificates as to their health (influence of “eugenics”?) (d) the mutual rights and duties of husband and wife are circumscribed partly (mutatis mutandis) in the words of the Dutch code, partly in the terminology of the sharī’a, especially the duties of the “polygamous” husband; (e) As to polygyny in general: 1. polygyny is to be allowed only in the interest of society; 2. no man can take a second or third wife (etc.) without the consent of the wife (wives) he already has; 3. he requires a medical certificate (on this occasion in Java) that his health allows “polygamy”; 4. he must prove himself to possess the financial means to entertain more than one household; 5. the polygami in spe must promise to be “righteous” in his conduct. Otherwise the judge is given a considerable power to dissolve marriages in well-defined cases, again partly derived from articles of the Dutch code, partly from regional rules of adat law and the usual sharī’i-influences. Whether, however, in the intention of the bill, a Muslim husband can still repudiate his wife depends on the ultimate legislative elaboration of the bill.

5. There are of course other points in the incessant disputes. As was already mentioned in § 3 above, there is the question of succession-law. Notwithstanding the fact that in Java Muslim courts exist (since centuries) which deal with all suits concerning Indonesian Muslim estates, it is well-known that in reality the Javanese, as well as the Sundanese and Madurese—outside the court—followed in case of partition of estates the lines of adat law. For this reason suits of this kind belong since 1937 to the competence of the common “secular” judge. There is still Muslim propaganda against this “colonial” measure.

ADA KAI’E, island in the Danube in Rumania, inhabited by Turks, 4 km above the Iron Gates and 1/4 km below Orsova; 800 by 200 m. In the 19th century the Ottoman Turks occupied the strategic points of the river in this region, but the island is mentioned for the first time only in 1691, when the vizier Dursun Mehmēd Paşa conquered the “little island in the straits of Işăhowa (Orsova)”, which was then occupied by 400 soldiers and called Şanas adası, i.e. “entrenchment island”, from German Schanz (Slibid Brdgftluy Mehmed Agha, Ta’vrik, Istanbul 1928, ii, 540). In 1776 the first durable fortifications were built by the muhalıs of the Iron Gates, Çerkes Mehmēd Paşa (Mehmed Rashid, Ta’vrik, Istanbul 1913, ii, 153). After occupation by the Austrians, it was retaken by ‘Ali Paşa, called serdar-i eatham, in 1738; it is on this occasion that the name Ada Kai’es appears for the first time (cf. Mehmēd Subhl, Ta’vrik-i Wekâh 15, Istanbul 1198, 131, 134). It depended from the wali of Vidin. The last struggles round Ada Kai’s took place in 1788, when during the expedition of the şadır a’şam Kōdja Yuṣuf Paşa against the army of Laudon, the last time when Ottoman troops appeared in the Danat, the island played the role of a river base. Yuṣuf Paşa built a large bridge between Orsova and Tekye (Tekijia) and reinforced the “fortress of the Great Island (Ada-i Kebr Kai’es)”. (The expedition is described in detail by an anonymous writer in Safa-nāme-yi Serdar-i Ekrem Yuṣuf Paşa, MS Istanbul, Univ. Kitapsaray, T.Y. 3254; another
MS in the possession of the writer). During the revolt of the Serbians, the island became an important stronghold of the Empire. The Dayr, who surrendered in Belgrade, were executed in Ada Kal'è by the muhafiz Redjeb Agha in 1809 (Ahmed Djiwedet, Ta'rikh, Istanbul 1909, ix, 126, 128). Somewhat later Redjeb Agha himself, following the example of his brothers, Adem, Bekir and Şüllü, who occupied the fortress of Feth Islam (Kladovo), had to retire to the island. Well Pasha, son of 'Ali Tepeledeni, who had been charged with the pacification of Serbia, granted them pardon, on which they surrendered the island. After 1867, when the Turkish garrisons evacuated Serbia, Ada Kal'è remained without direct communication with the capital. At the Congress of Berlin (1878) the island was forgotten, and so remained an isolated possession of the Ottoman Empire, administered by a nâhiye müdürü. Its inhabitants elected deputies to the Turkish parliament. By the treaty of Trianon (1920), it was incorporated, with the Banat, into Rumania; but this was recognized by Turkey only by the treaty of Lausanne (1923).

At the present day, the island has 640 Turkish inhabitants. There are schools for the Muslim population. The fortifications, in red brick and stones, with their basements and cisterns, are noteworthy, as well as the mosque built by Selim III, with a ziyârîd-gâh of Miskin Bâbâ, a dervîsh who came in the 18th century from Turkestan and died on the island.

(Àurel Deceri)

**ADA PÂZARÌ, flourishing town in the province of Koçka-ei, Turkey, situated at 40° 47' N., 30° 23' E., in the fertile plain known as Akowa on the lower course of the Sakarya river. Originally it lay between two arms of this river (hence the earlier name Ada, "Island"), but now lies between the Sakarya and the Carâb şâyu. It was occupied by the Turks under Orkhan and is mentioned for the first time in a waṣf-foundation which goes back to him (T. Gokbili, XV, v XVI, 1907, apud; T. Gokbili, XV, v XVI, 1907, apud). In 1795 it appears, with the modern name of Adapazarî, as the seat of a nâlîb. In 1852-3 it was raised to the rank of a town, and about 1890 had 24,500 inhabitants, according to V. Cuinet, La Turquie d'Asie, iv, Paris 1899, 372 ff. By the census of 1950 the population had risen to 36,310. It is a trading centre for local produce, especially tobacco, vegetables and fruit. There are no Islamic monuments of importance.

**ADA (A.).** The history of this word reflects, parallel to and even better than the history of the words 'ilm and din, the evolution of Arab culture from its pre-Islamic origins to our own day. In its oldest sense, it may be regarded as synonym of the sunna, with the sense of "habit, hereditary norm of conduct, custom" derived from ancestors and other persons who are looked up to as models (as, in the religious sense, was the sunna of the Prophet for his community). The etymology of the word put forward by Vollers and Nallino agrees with this earliest meaning: both considered that the plural adab was formed from dab ("custom, habit"), and that the singular adab was subsequently derived from plural. (Indigenous lexicographers connect it with the root 'db, meaning "marvellous thing", or "preparation, feast"). In any case, the oldest meaning of the word is that already given: it implies a habit, a practical norm of conduct, with the double connotation of being praiseworthy and being inherited from one's ancestors.

The evolution of thisprimary sense accentuated, on the one hand, its ethical and practical content: adab came to mean "high quality of soul, good upbringing, urbanity and courtesy", in this acceptation corresponding to the refining of bedouin ethics and customs as a result of Islam (cf. Wensinck, Handbook, s.v. adab) and contact with foreign cultures during the first two centuries A.H. Thus, at the beginning of the adab, in this sense was the equivalent of the Latin urba-nitas, the civility, courtesy, refinement of the cities in contrast to beduin uncouthness. (In this sense, the lexicons use the word zarf, courtesy and elegance, to explain adab.) The word kept this ethical and social meaning during the whole period of medieval Muslim civilization. So, for example, adab, etiquette, of eating, drinking, dressing [cf. ta'dim, adab, libas]; adab, etiquette, of the boon companion (cf. the treatise Adab al-Nadîm by Kühaldîm and Nadîmid; from another sphere: adab, etiquette, of disputation: cf. several treatises entitled Adab al-Bahth and Bahth; etiquette of study (cf. books on Adab al-Dars, Adab al-Al'm wa'l-Musa'allim, and Tadris).

However, from the first century of the hidgra, adab, in addition to this ethical and social meaning, acquired an intellectual meaning, which was at first connected with the first meaning, but then became increasingly differentiated from it. Adab came to imply the sum of knowledge which makes a man courteous and "urban", profane culture (as distinct from 'ilm, learning, or rather, religious learning, Kûrân, hadith, twârîz, tasvir ve fasîha lâzîm) based in the first place on poetry, the art of oratory, the historical and tribal traditions of the ancient Arabs, and also on the corresponding sciences: rhetoric, grammar, lexicography, metrics. Consequently this humanistic concept of adab was at first strictly national: the perfect adab, in the Umayyad period, was the man who excelled in knowledge of the ancient poets, in the ayâm al-'Arab, in the poetical, historical and antiquarian sphere of Arab culture. But contact with foreign cultures widened the content of adab, or Arab humanitas, into humanitas without qualification; it now included a knowledge of those sections of non-Arab (Indian, Iranian, Hellenistic) literature (i.e. gnomic and technical literature) with
which Arab Muslim civilization became familiar from the early Abbasid period onwards. The adab of the 9th century, of which al-Dījahīṣī was the most perfect example, was therefore not only cultivated in Arabic poetry and prose, in maxims and proverbs, in the genealogy and tradition of the djīhāḥisyya and of the Arabs at a time when they were hardly yet Islamized, but broadened out his range of interest to include the Iranian world with all its epic, gnomic, and narrative tradition, the Indian world with its fables, and the Greek world with its practical philosophy, and especially its ethics and economics. It was thus that in the 3rd/9th century there came into being the great literature of adab, with its varied and pleasing erudition, which is not pure scholarship although it often also touches on, and handles scientific subjects, but which is centred above all on man, his qualities and his passions, the environment in which he lives, and the material and spiritual culture created by him. Within this domain al-Dījahīṣī and his followers (Abū Ḥayyān al-Tawḥīdī, al-Tanukhī, etc.) turned to account and extended the heritage bequeathed to Muslim society in the previous century by the Iranian genius Ibn al-Mukaffa, who can be described as the true creator of this enlarged conception of adab, with his versions of foreign historical and literary works (Khudayyī-Dimna) and his original ethical and didactic tracts (al-Adab al-Kabīr) and his original ethical and didactic tracts (al-Adab al-Kabīr and al-Šāqīr) (though the authenticity of the latter is very questionable). The literature of adab is the very backbone of high ʿAbbāsid culture.

The richness and complexity of this concept of adab, as humanity or culture, was on the other hand reduced, already in the ʿAbbāsid epoch, to a narrower acceptation. From its meaning of the "necessary general culture" expected of any man of superior education, it took on the specific meaning of "the knowledge necessary for given offices and social functions". Thus one could speak of an adab al-kātib or culture specially required for holding the office of secretary (such is the title of a treatise by Ibn Kūţāya [cf. also Kātib]; or of the adab or ādāb of scribes, in the sense of the sum of special knowledge and experience proper to this office. [For the adab of the kādī, cf. also Kādī]. On the other hand, the concept adab ended by losing the wide humanistic acceptation that it had had during the golden age of the caliphate and became restricted to a narrower, and more rhetorical sphere of "belles-lettres": poetry, artistic prose, paremiography, and anecdotal writing. This was the kind of adab at which al-Ḥarīrī was an adept, with his verbal virtuosity and his entirely formal and purist interests. From humanitas, adab became merely the literature of the academy, and remained so throughout the long decadence of Arabic letters and spirit right up to the time of the modern renaisance.

In the modern age adab, and even more so its plural ādāb, are synonyms of literature in the most specific sense of the word. Taʾrīkh al-Ādāb al-ʿArabīyya is the history of Arabic literature; kuliyāyat al-ādāb is the faculty of arts of letters in the universities organized in the European manner. But beyond the limits of technical nomenclature, the conscious usage of certain writers (e.g. Tāḥā Ḥusayn) tends to give back to the word something of its former elasticity and amplitude.

Bibliography: Nallino, Scritti, vi, 2-17. For books on various species of etiquette, cf. also Brockelmann, iii, index s.v. adab, ādāb; Hājjī Khaṭṭāf, s.v. ādāb and adab. (F. Gabrieli)

'ADAD [see ʾıṣār].

ADAL, one of the Muslim states in East Africa that played an important part in the wars between Islam and Abyssinian Christendom. Al-Makrizī (al-Imām bi-ʾIḥṣāb man bi-Ard al-Ḫabashā min Mulūk al-Īslām, Cairo 1895, 5) enumerates the following seven Islamic states in Southern and Eastern Abyssinia, which he designates as madāʾīkh bilād Ṣaylāt: Awfāt (the common form is ʿĪfāt), Dawārō, Arayabīnī (Arabaynī, Arabaybīnī), Ḥadhā, Ṣahrā, Bālī, Dāra. From Abyssinian chronicles, other states are known which stood on the same footing as the above, one of them being Adal.—Adal ('Adal) is the farthest east of those states, and is approximately identical with the present “Côte française des Somalis”. The inhabitants are partly Somali, partly ʿAfār (Danākīl [see Danākīl]). It is mentioned for the first time in the wars between the Abyssinian king ʿAmda ʿṢeṣōn (1314-44) and the Muslims. In the march of ʿAmda ʿṢeṣōn upon Ṣaylāt (1332), the king of Adal, who attempted to bar his passage, was vanquished and killed. The rulers of Adal have the title of amīr, later on also the title of imām, in the Arabic texts, but of negūs, “king”, in the Ethiopic chronicles. In the 15th century Adal was part of ʿĪfāt (Awfāt [q.v.]); in the 15th century the amīr of Adal ruled over ʿĪfāt and had his capital at Dakar to the east of Ṣaylāt. Under the Māṣjīd-Zarāʾ Yʿsākīb (1434-68) and Baʿṣada Mārjām (1468-78) negotiations took place between the Abyssinians and Adal; afterwards there was fighting between them with changing fortune. Adal frequently served also for the Muslims from districts further to the west as a refuge from the Abyssinians, who, however, often followed them thither. The Muslim writers (al-Makrizī and ʿArabāfashī, Ḥuṣayn al-Ḥabashī) do not mention Adal—unless it is meant by 'Adal al-ʿUmārā' (al-Makrizī, loc. cit., 2)—but refer only to the sultanate of Ṣaylāt' in that region. Further, the king of Adal, Mehmād son of Arwē Badāyī (Perruchon, Chroniques de Zarāʾ Yʿsāqīb et de Baʿṣada Mārjām, 131), belonged to the family of the sultans of Ṣaylāt; he was a grandson of the celebrated Saʿd al-Ḍīn, after whom the dynasty and the land were called (Barr Saʿd al-Ḍīn). The latter reigned 1386-1415; he fell in 1415 in the battle with King Yeshāk of Abyssinia (1414-29). "Adal" and "empire of Ṣaylāt" are often synonymous, and their histories are closely connected with each other [cf. Zayla]. With regard to the 16th century see also AHMAD GRAN. In the later history of those countries, the wars with the Muslim Somalis and 'Āfār are thrust into the background by those with the Gall, who since 1540 warred with the Christians and Muslims of Abyssinia. Adal is still mentioned a few times in the chronicles. Even in the 19th century, before England, France and Italy took possession of the Abyssinian littorals, King Sāḥib-Ṣellāb of Ṣoo called himself also "King of Adal".

ADALYA [see ANTALYA].

ĀDAM, the father of mankind (Abūl-Bashār). In the Kurān it is related that when God had
created what is on the earth and in the heavens he said to the angels: "I am about to place a substitute (khalifa) on earth", and they said: "Will thou place thereon one who will do evil therein and shed blood, whereas we celebrate thy praise and sanctify thee?" Then God taught Adam the names of all things, and as the angels did not know the names Adam taught them these (ii, 28-32 FL). Thereafter God ordered the angels to prostrate themselves before Adam, and they did with the exception of Iblis who in his heart imagined that he was of higher rank, since he was created of fire, whereas Adam was created of clay (golem). Some authors tell that Iblis went into his mouth and emerged from his anus and vice versa; then the spirit was blown into him by God and went into his brain, from where it went into his eyes, his nose and further through the whole body, whereafter the body became flesh, blood, bone, veins and sinews. According to a tradition ascribed to the prophet the dust for the head was taken from the Ka'ba, for breast and back from Jerusalem, thighs from Yaman etc. (al-Tabari, i, 87 ff.; idem, Taşfir, i, 159; al-Masʿudi, Murūjī, i, 51-3; al-Kisāʾi, 23-7; al-Thaʾlabī, 17). In Jewish tradition the clay for Adam's body was taken from the place of the temple or from the whole world, in different colours (golem) (Targum Yerushalmi, to Gen. ii, 7; Sanhedrin, 38a; Pirke R. Eliezer, c. 11); a similar Christian tradition is found with Cyprian and evidence of it in the garden to cover them (vii, 20; xx, 120 f.). Then God sent them down on earth to live there as enemies, but when Adam asked for forgiveness, God promised him guidance (ii, 36-37; vii, 24-26; xx, 122-123). It is said that God had a covenant with Adam at first, but Adam forgot it (xx, 115), and God said "Have I not had a covenant with you, sons of Adam, that you will not serve Satan" (xxxvi, 60, cf. v, 172). Adam was chosen by God, as later Nūb and the families of Ibrāhīm and `Imrān (iii, 23). Like Adam only ʾĪsā was created in a special way (iii, 59).

The non-Biblical elements in this account are to be found in Jewish, in some cases in Christian tradition. God's conversation with the angels before Adam's creation and Adam's superiority because of his knowledge about the names is known from Berešīt Rabba, xvii, 4; Bemidbar Rabba, xix, 3; Pesikta, ed. S. Buber, 34a; Vīta Ađami (Kautzsch), 513. The προσωνύμησις of the angels before Adam is not commanded by God in Jewish writings. The angels wanted to honour him as God, but were prevented from doing so as God made Adam sleep (Berešīt Rabba 8, 10; Pirke R. Eliezer, 19). On the other hand Athanasius (Quaestio X ad Antiōchum) refers to the idea (which he rejects) that Satan fell because he refused to προσωνύμησις before Adam. In Vīta Ađami, i. c., whose origin is uncertain, the angel Michael prostrated himself to Adam and called upon the other angels to do so, and it is understood, but not said, that God approved of it. In the Christian Syriac (ed. Bezold, 14 f.) God gave Adam power over all beings, and the angels worshipped him except the jealous devil who then was turned out from the heavens. God's covenant with Adam is mentioned Sanhedrin, 38b; Augustin, De civitate dei, xvi, 27, and Adam's remorse ʾErubin, 18b; Ṣaboda Zarr, 8a; Vīta Ađami, 512.

In the post-Kurāʾic tradition the kisāʾ about Adam were growing, and these also reflect to a great extent Jewish and Christian influence. They are mainly found in kathīt-collections, in kisāʾ-collections, in the works of general history, and in the commentaries to the Kurāʾīn.

As a preparation for the creation of Adam it is related that God sent Gabriel and after him Michael to the earth to take a handful of clay (hin), but the earth refused to give it for that purpose, then the angel of death was sent and took by force red, white and black clay; this is why men have different colours. Adam got his name because he was taken from the surface, ađam, of the earth. The clay was kneaded and worked on until it became sticky, then slimy, and instead of the body of dry clay (golem). Some authors tell that Iblis went into his mouth and emerged from his anus and vice versa; then the spirit was blown into him by God and went into his brain, from where it went into his eyes, his nose and further through the whole body, whereafter the body became flesh, blood, bone, veins and sinews. According to a tradition ascribed to the prophet the dust for the head was taken from the Ka'ba, for breast and back from Jerusalem, thighs from Yaman etc. (al-Tabari, i, 87 ff.; idem, Taşfir, i, 159; al-Masʿudi, Murūjī, i, 51-3; al-Kisāʾi, 23-7; al-Thaʾlabī, 17). In Jewish tradition the clay for Adam's body was taken from the place of the temple or from the whole world, in different colours (golem) (Targum Yerushalmi, to Gen. ii, 7; Sanhedrin, 38a; Pirke R. Eliezer, c. 11); a similar Christian tradition is found with Cyprian and evidence of it in the garden to cover them (vii, 20; xx, 120 f.). Then God sent them down on earth to live there as enemies, but when Adam asked for forgiveness, God promised him guidance (ii, 36-37; vii, 24-26; xx, 122-123). It is said that God had a covenant with Adam at first, but Adam forgot it (xx, 115), and God said "Have I not had a covenant with you, sons of Adam, that you will not serve Satan" (xxxvi, 60, cf. v, 172). Adam was chosen by God, as later Nūb and the families of Ibrāhīm and `Imrān (iii, 23). Like Adam only ʾĪsā was created in a special way (iii, 59).
who according to a tradition founded the Jewish festivals (‘Aboda Zara, 8a), accomplished the ¡ark and ceremonies, the black stone being sent to him from heaven, whereafter he built the Ka‘ba (al-Tabari, i, 122; al-Ya’kubî, i, 3; al-Tha‘labî, 23). He also learned, with Eve, the use of fire, agriculture and handicraft, according to a tradition of Jewish origin (Hamza al-Íslâîhîn (Gottwald), 84, Berlin 1340, 57; al-Tabari, i, 123, 126 ff.; al-Tha‘labî, 23). According to al-Tha‘labî he even coined dirhams and dinârs, as they are necessary for normal life. In continuation of the name-giving it is said that Adam learned all nouns and greetings and religious formulas (al-Tabari, i, 93 ff.; al-Ya’kubî, 3). The presupposition is that Adam spoke Aramaic (Sanhedrin, 38b; Barhebræus, Chron. Syr., 5). Al-Halabi (al-Sira al-Halabiyya, Cairo 1259, i, 40) says that Adam spoke Arabic in Paradise, but on the earth he spoke súryâsiyya, and he wrote the 12 known kinds of writing, al-Kisa’ (28) that he spoke 700 languages, of which Adam was Arabic. He also wrote books (al-Dinawari, 8).

When Adam and Eve were united they begot children, first Kâblî and Háblî (q.v.), each with a twin-sister. Adam married each to the brother of his twin-sister, therefore Kâblî was jealous and killed Háblî (q.v.), who was born without a sister, was the favourite of Adam and his spiritual heir (wasî). Adam begot many other children, one of whom was named ‘Abd al-‘Hârijî; al-Tha‘labî says that Eve bore a boy and a girl twenty times and that the number of Adam’s offspring was 40,000 before he died. Al-Halabi mentions five gods of the Arabs who were sons of Adam; Iblîs made images of them and these were worshipped by later generations (al-Tabari, i, 149 ff.; 160 ff.; al-Masûdî, i, 62 f.; al-Ya’kubî, 4 f.; al-Tha‘labî, 27; al-Halabi, Sîra, i, 12).

God rubbed the back of Adam, and all his offspring appeared to him, amongst them David. When Adam heard that David should live only a short time he gave him 40 (50 or 70) years of his own life-time, so that he did not reach the 1,000 years that were destined for him (al-Tabari, i, 156 f.; Ibn Sa‘îd, i, 7 f.; al-Tha‘labî, 26). The same occurs in Jewish tradition (Bemidbar Rabba, xvi, 12; Yalkut Shim‘oni, § 41; Pirke R. Eiseler, c. 19), and a related idea is the Christian tradition that everything was created at the same moment (Barhebræus, Ta‘rif al-Mukhîsâr al-Duwal, 7).

Adam was created on Friday, the 6th of Nîsân, year 1. On the same day he was expelled, and he died on a Friday at the same date of the month (al-Tabari, i, 155 ff.; al-Masûdî, i, 60, 69; al-Ya’kubî, i, 4). He was buried, with Eve, in a cave, maghârat al-humad; at the foot of Abû Kûbays near Mecca (al-Tabari, i, 163; al-Ya’kubî, 4). Al-Tha‘labî, 30, relates that after the flood he was brought to Jerusalem, following a Christian tradition that he was taken from the ark to Golgotha, the centre of the earth (Cave of Treasures, 38-42, 84, 112, 148), where the “chapel of Adam” is situated in the church of the holy sepulchre (see W. H. Roscher, Der Omphalosgedanke, Leipzig 1918; E. Wilamowitz, Konstantin’s Kirche am heiligen Grabe, Göttingen 1922; 30 ff.).

Adam was not only the first of men, but also the first of prophets, and so his position became influenced by the Muslim way of thinking. Just as Jesus was the second Adam in Christianity, a connexion was established in Islam between Adam and Muhammad, with Adam as the first, Muhammad as the last apostle (rasûl). In the Sab’îyya system Adam is the first of the 7 nāsîts, and some say there were men and nāsîls (existing before him). Seth was his nāsîl. They distinguish between Adam al-kull, “all-Adam”, identical with the intelligence (‘abîl), from whom the emanation began, and Adam al-djûsî, the first one in the period of veiling. It is this ideal Adam before whom the angels prostrated themselves because he was godly, God’s spirit being in him. This is sometimes designated as an incarnation (hadîl), which was continued by transmigration (panatsûkh). This ideal man was identified with “the perfect man” of Hellenism, and the same was by al-Hâllâğî named nâsît. As Muhammad became the centre of mankind, an idea especially emphasized in šûfism, it became his essence (haqîqa) or his “light” (nur) that manifested itself in Adam. All creatures were created for the sake of Muhammad, and Adam and his offspring were created of his light (al-Masûdî, i, 56; al-Sira al-Halabiyya, 23; al-Tha‘labî, 16).

Among the philosophers al-Fārābī and Ibn Sīnā regard, like the Muḥtazilites, existence as an accident, whereas for Ibn Rushd, as for the Ashʿarites, existence is an essence.

Bibliography: The theory of 'adam as professed by the Muḥtazilites is found in the works dealing with that sect (e.g. Ibn Hazm, Ḥaṣanī, v, 45); a good discussion is found in Shahrastānī, Nihāyat al-Islām (Guillaume), 130 ff. For a general discussion of the problem I refer to S. van den Bergh, tradn. of Ibn Rushd’s Tahāfut al-Tahāfut, ch. i and ii; see also S. Pines, Beiträge zur islamischen Atomenlehre, 116 f.

(S. Van den Bergh)

ADAMAWA, the name—deriving from the local leader of the Fulani ḍiḥād in 1809 (see para. 5 below)—given to a region in the hinterland of West Africa, and used:

(a) of an area never precisely defined in geographical terms but including the conquests of this ḍiḥād and the resulting sphere of Fulani influence in the region, extending from Marua in the north to well beyond Ngaundere in the south and from Rei Duba in the east to west of Yola,—approximately from 11° to 6° N. and 14° to 15° E. With the European occupation of this part of Africa early in the present century, the smaller and more closely populated western part came under the British administration of Nigeria,—the eastern section became part of the German Kamerun, which, after the German defeat in the 1914-18 war, were mandated to Great Britain and France by the League of Nations;

(b) of a Province, area according to 1931 census 251, 778 sq. miles—known until 1927 as the Yola Province—in Northern Nigeria, containing that part of (a) west of the original Anglo-German international boundary, plus those areas of the former German Kamerun mandated to Great Britain. These consist of a small area north of the river Benue, and a larger area to the south of it. The Adamawa Province also includes the Amirate of Muri in its south west corner and some tribal areas, not covered by the old name Adamawa. It lies south of the Bornu Province and east of the Bauchi Province.

2. Geography. The main features of Adamawa are the river Benue—the principal tributary of the river Niger and an international water-way which is navigable by steamers at the height of the wet season (August to October), and by large canoes and barges at all times,—running across its centre from east to west; the Mandara Mountains, over 3,000 feet, running north and south, north of the river Benue; and an extensive crescent-shaped massif,—over 5,000 feet at its higher western end,—curving from east to west, south of the river Benue.

3. Transport and Trade. The river Benue is itself extensively used for transport; the main caravan routes and modern motor roads run from south to north through the region. In earlier days, slaves and some ivory were the main exports; nowadays ground nuts and hides have replaced these, though there are numerous other items, including cotton, gum, sesame, etc. Imports consist of manufactured articles, especially cotton goods.

4. Economy. The region is not industrialised, and contains no large towns. It is self-contained so far as the necessities of life are concerned. Its population is mainly agricultural and pastoral. Its capital wealth consists in the numerous herds of cattle, sheep and goats.

5. Ethnography. (a) The population of the region comprises the Fulani (see article FULBE), both nomad and settled, and numerous pagan tribes. It is not possible to give figures with any accuracy for the indefinite region described in para. 1 (a) above. At the census of 1931, the salient figures for the Adamawa Province of Nigeria (para. 1 (b) above) were as follows: Fulani 150,936; Hausa (q.v.) 21,560; Kanuri (q.v.) 10,495; other tribes 467,138; these plus some minor groups gave a total population of 1,024,755.

The figures for the main pagan tribes were then: Bachama 19,703; Chamba 51,224*; Hama 6,604; Bata 23,003; Hilij 6,284; Kilba 22,799; Lala 7,539; Longuda 11,808; Mambilla 19,348; Mumuye 79,272; Vere 10,866; Wuruk 23,472; Marghi 151,223*.

[Starred figures include members of the tribe outside the Provincial boundary, but inside the old “Adamawa”]

(b) Languages. Fulani (Fuffulde, see under fulbe) is the major language of the region, and the nearest approach to a lingua franca in it. Many of the pagan tribes now use it as such, though they have their own tongues, some of which are interconnected in varying degrees (e.g. Bura and Marghi with Kilba more remotely akin). Hausa is not much spoken outside the towns, and in them mostly by the trading elements. English and French are spoken only by those educated in the more advanced schools in the west and east of the region respectively.

6. History. Prior to the Fulani ḍiḥād, we have only orally transmitted tribal traditions. Most of the major tribes north of the river Benue do not claim to be indigenous and have traditions of immigration from the north and/or east. It seems clear that this was formerly the general direction of tribal movement, owing to the increasing desertification of the Saharan areas further north, and a consequent thrust of those tribes least able to survive southwards to the tsetse ridden coast. The Fulani must have entered Adamawa centuries before the ḍiḥād. Local pagan tradition speaks (i) of an offshoot from the main Fulani trek (round the north and west African coasts, subsequently entering the West African hinterland from the direction of Senegambia), which entered the Bornu north, then Adamawa from the north, having crossed the central Sahara by the westerly caravan route via Murzuq and Bilma, and (ii) of these Fulani arriving cattleless, having lost their herds en route, and then of their obtaining cattle from the local pagans. With the ḍiḥād we come to firm historical ground. When Usmanu bi Foduye (see uthman u. fud,l) started a dīḥād in the Sokoto area in circa 1804, his reputation spread, and he was joined by a certain Modibbo (Fulani for muʿalim) Adama. This Modibbo Adama was born near Gurin, east of the Vere hills on the west bank of the Faro tributary and just south of the river Benue, had studied in Bornu as a youth under a certain Modibbo Kiari thereafter returning to a village called Weltunde in the Benue region. In 1866, Usmanu gave M. Adama a flag and a few warriors with instructions to return to his own country and to start the ḍiḥād there. In 1809 Modibbo. Adama began a ḍiḥād from Gurin, thus embarking on a career of conquest and slave raiding amongst the local pagan tribes. Speaking generally, the Fulani horsemen achieved success except where the pagans could avail themselves of mountainous features unsuitable for mounted men. In such areas, many pagan tribes, such as the Hilij, Margh and Kilba north of the Benue and the Mambilla, Chamba and others south of it, maintained actual or virtual independence until the European occupation.
In 1838, Modibbo Adama transferred his headquarters from Gurin (now only a tiny village, but still hallowed for its associations), to the nearby Ribadu, in 1839 to Jobolowo a little to the west, and, finally, in 1841, he founded Yola still more to the west (in Fulani the name means a raised area in a marsh), where he died in 1848. All these places are just south of the Benue river, and it is obvious that the intention was to control the river crossings. Details of the dynasty founded by Modibbo Adama are given below. The Fulani conquests, often amounting to little more than raids, were never closely organised except near to the capital. The administrative system was one of fiefs, feudal in character, the lesser chiefs owing allegiance to the lamido (Fulani = lambe), and rendering tribute. But the tendency was centrifugal, and these fief holders (Fulani = lamido plur: lambe) often achieved virtual though not nominal independence, in proportion to the distance of their fief from the capital. Good examples of this tendency were found in Madagai and Rei Buba in the north and east of the region respectively. Adamawa as a name for the region seems to have been in use in Bornu when Clapperton was there in 1853.

‘ADAN (ADEN) (i) town, (ii) British crown colony, (iii) British protectorate in S.W. Arabia.

1. Town and support on the South coast of Arabia, in British possession since 1859, with a mixed population of ca. 35,000. ‘Adan (cf. akkad. edilmu “steppe”), more precisely ‘Adan Abyan (by way of distinction from ‘Adan Lā‘a, and al-‘Adan in a verse of Ufnun al-Taghlibi; cf. Yaqūt, iii, 622 f., Kay, 231, AM, ii, 17, 284), or Ḥaḍar ‘Adan from its being strongly fortified, is the Athone of Pliny, ‘Ὲθηνη of Philostorgius, 'Ευδασίμου Ἀραβία of the Periplus, ‘Αραβία ἐκπολείου of Ptolemy (cf. Pauly-Wissowa, Suppl., iii, 6), and most probably the ἐκδομ of Ez., xxvii, 23 (see recently v. Wissmann-Höfler, Beiträge 206 (88), where also the triple ἐκδομ of CIH 550, which may, however, be a fake, is quoted). For other names of the place see al-Makdisi, 30, 1M, 110 (= Löfgren, Arab. Texte, i, 29).

The peninsula of ‘Adan is an extinct volcano, nowadays called Shamshān (vulg. Shamshām), in earlier time al-‘Urr “the mountain” (Urr ‘Adan); it is 1775 feet (ca. 550 m.) high. On the east side is a gap in the range opposite to the island of Ṣərā: here is the main part of the town, and the habitations reach the sea. ‘Adan was once an island: the low and narrow isthmus is still nearly covered at high spring tide. This disadvantage was removed by means of a bridge, al-Makṣir, built by the Persians (cf. “Khor Makṣir” west of the isthmus). Beside the main volcano there are several minor heights, e.g. Djabal Ṣərā, Hukkāt, Marshak (with a large light-house) and Dī Ḥadid (west of the isthmus). The old harbour was on the east side, in connexion with the town; a mole (gašma) was constructed to protect it against the SE wind (asyyab). The excellent harbour to which ‘Adan now owes its importance is the large and well protected bay between the peninsula of ‘Adan and that of “Little Aden”, with the mountains Muzalkam ‘Sugarloaf Peak” and Dāsān “Ass’s Ears”. Bandar Tawayih (Tawwāl),
as the modern port is called, extends along the
NW shore (for details see Red Sea and Aden pilot
135). The habit of constructing dams and cisterns,
typical of old Sabean culture, has left traces in the
ʿAdan territory. There are remains of some fifty
reservoirs scattered over the peninsula. According
to IM they were built by Persians from Sirāf. They
are attested by Salt in 1809 and by Haines, the
future conqueror of ʿAden, in 1835, to be in a tolerable
state; but from 1839 on they were neglected, and
much of their stonework was carried away until
1856, when the restoration of those inside the
crater was begun. There are thirteen tanks holding
nearly two millions litres of water, but the scanty
and irregular rainfalls seldom fill them completely.
There are numerous wells within the crater and in
the west part of the peninsula (cf. IM, 131 ff.),
but they cannot supply the need of drinking water,
being for the most part brackish. In the Middle
Ages al-Ḥayq (= al-Ḥiswa of to-day?) was "the
watering-place (makhāl) of ʿAdan" (al-Ḥamdānī, 53).
In 1867 the British government got the permission
of the sultan of Labādī [q.v.] to build an aqueduct
from the village of Shaykh ʿUthmān. Later on
condensers were installed.

Legend usually ascribes the foundation of ʿAdan
to ʿAdaddī b. Sād [g.n.], who is said to have caused
the famous tunnel to be cut through the mountain
range and to have used the place as a prison. We
are told the same of the Tubbahs and the Pharaohs
of Egypt, whence the name al-Ḥabs or Habs Firʿawm.
According to old tradition (e.g. al-Ṭabarī, i, 144)
Kābīl, having killed his brother Hābīl [g.n.], fled
with his sister from India to ʿAdan, where he was
visited by Harīs on Djī Sīra and taught the use of
musical instruments. His grave is shown to-day
above the Main Pass gate. The "abandoned well"
(bīr muṣṭaṭṭalā, Kūr., xxiii, 44) and Iram Dhdt al-
ʿImād [q.v.] (Kūr., Lxxxix, 6) are located in or near
ʿAdan. The tradition of a fire coming from Yaman
or ʿAdan (Ṣirā) and portending the day of judgement,
ascribed in Ḥadīth to Muhammad, may be some
sort of reminiscence of volcanic activity. IM makes
Hanuman, the Indian ape-god who has a temple in
ʿAdan, fetch the wife of Rāmacandra along a subway
back to Uqūjīyān from Sīra, where she had been
brought by a demon (Rāvāna).

Population. According to al-Ḥamdānī (53, 124)
the Arabs of ʿAdan were divided into three factions:
Marāb, Ḥumāhīm (var. Ḥamāġīm, IM) and Mālāb
(cf. Yākūt, iii, 622; BQA, iii, 102, iv, 206). The great
number of Hindus and Somalis indicates a constant
immigration by sea. IM 117 ff., has details on early
migrations from Madagascar (Kumr) via Mogadishu
and Kīlwa, and of Persians from Sirāf and Kays
(Kish). Cf. Ferrand, Le Kʿoum-Loun etc. (JA, 1919);
Goitein, in BSOAS, 1954, 247 ff.; idem, in Speculum,
1954, 182 ff. A considerable number of the Jews of
ʿAdan after the Ziyādīds, were left in charge of the place until 1676/1673, when they
rebelled and were replaced by two brothers of the
Ḥamdānī family of al-Karam (Mukarram) b. Yām,
the founders of the Zurayyīd [q.v.] dynasty. ʿAbbās
took up his residence in the fort of Taʿkar, con-
trolling the isthmus gate, while Masʿūd held the
castle of Ḫadīrāt and superintended the sea trade.
Later on the town was united in the hands of Muḥ.
b. Sabaʿ (534-48/1139-53) and his son ʿImrān
(-560/1165). The ḥarādāt of ʿAdan by this time is
given as 100,000 dinārs a year. In 569/1173 Tūrān
Shāh, the brother of Saladin, conquered Yaman by
means of Turkish mercenaries (Qhuzz). The periods
of Ayyūbīd (-625/1228), Rasūlīd (-858/1454) and
Ṭahirīd (-923/1517) dominion were a golden time
for the trade of ʿAdan. A new tax, collected by
galleys (ṣaʿfiʿd), was introduced by the Ayūbīds.

The discovery of the sea-route to India and the
rise of the Ottoman power mark the beginning of
decline in the trade of ʿAdan. The Portuguese
admiral Albuquerque attacked the town on Easter
Eve 1513 with twenty ships, but did not succeed in
taking it. In 1538 a Turkish armada on its way to
India outwitted the defenders, and the Turks
dominated Yaman for nearly a hundred years. ʿAdan
was lost to the Zaydi imams of Ṣanāʿa in 1568 and
in 1630 the Turks left it finally. In 1735 ʿAdan
passed into the hands of the ʿAbdallī sultan of
Labādī, whose descendant Muḥsin was forced to
cede it to the English expedition under Captain
Haines, which had been sent to get an indemnity
for the plundering of a British ship. In view of the
sultan's treacherous attitude the place was taken
by storm on the 20th January 1839. Of the pros-
erous town visited by Marco Polo in 1276, with
80,000 inhabitants and 360 (!) mosques, there was
now left a miserable village of 600 persons living
in huts. Since then the development of ʿAdan has
progressed rapidly, especially after the opening of
the Suez canal in 1869, and this "Arabian Gibraltar"
is now a mercantile centre of great and increasing
importance.

Buildings. A wall was built by the Zurayyīds for
the protection of trade, and houses of stone increased
in number. After the departure of Tūrān Shāh his
vicecy in ʿAdan ʿUthmān al-Zandīlī (Zandīllī)
built a larger wall, with six gates, and a custom-
house. Other secular buildings of Tughekwīn, b. Ayyūb,
his son Ismāʿīl, the Rasūlīd ʿAll al-Mudjīhīd, and
the Tāhirīd ʿAbd al-Wahhāb are recorded. AM,
10 ff. Of the "handsome baths, lined with marble
and jasper, and covered with a dome", which were
seen in 1708 by de Merveille (Playfair, from La
Roque), nothing is left. Among the mosques of
ʿAdan the most celebrated is that of Abu Bakr al-
Aydarūs [q.v.], the patron of the town, whose
miḥrāb is held on 15 Rabīʿ II. Other masjīds are men-
tioned by Hunter (175 f.) and in AM.

kolonialpolitische Studie, Diss. Leipzig, 1929.
Adana was occupied by the Arabs in the middle of the 7th century, but frequently changed masters in their struggle with the Byzantines. Depopulated by the constant frontier wars, it was rebuilt by Hārūn al-Rashīd and his successors and became a bastion in the chain of fortresses of the "Syrian marches" (thughār al-Shām). In 875 it was temporarily taken by Basil I, and again in Byzantine possession in 944-6, but recaptured by the Arabs after a siege in 964. In 1025 Cilicia was again occupied by the Byzantines, who could however hold it permanently; nor apparently were the victorious Seldjuks (1071) able at first to establish themselves in the province (cf. J. Laurent, *Byzance et les Turcs ... jusqu’en 1081*, Paris 1913, 11). At any rate, in 1082 Adana again belonged to the Byzantines, but was taken by Sulaymān b. Kūlumādī in 1085 (J. B. Chabot, *Chronique de Michel le Syrien*, Paris 1905, 170). After its occupation by the Crusaders in 1097, it belonged at first to the principality of Antioch, but in 1104 was detached by Alexis I and came under Byzantine administration. In 1132 it belonged to Leo of Little Armenia, in 1137 became Byzantine, in 1138 was occupied by the Rūm Seldjūk Masmādī, in 1153 (at the latest) again Byzantine, in 1172-5 incorporated by the Rūm Seldjūk Mas'ud, in 1177-9 occupied by the Mamluks, and finally in 1238-9 by the Turco-Egyptian state, in which it remained for a long time, although exposed to repeated Muslim attacks. Baybars, after his victory at Antioch in 1166 appeared before Adana; the Mamluks also sacked the town in 1275 and 1304, and attacked it in 1355. It remained, however, in Armenian hands (except for 1347-4, when it fell by inheritance to Guy de Lustigan), until in 1359 it was occupied by the Rum Seldjūk Masmādī and Baybars. In 1378 the governor was the Turkmen Yüregir-oghlu Ramādān, who, acknowledging the suzerainty of the Mamluks, extended his dominions and founded the buffer-state of the Ramādān-oghlu (q.v.). He and his successors followed sometimes a pro- and sometimes an anti-Mamluk policy, securing for Adana a relatively quiet time.

The inner conflicts and the invasion of the Dhu 'l-Qarnayn state, in which it remained for a long time, although exposed to repeated Muslim attacks. ADANA

183

there set in a period of rapid progress (72,577
Adana has been the capital of the province of Seyhan.

Population. Christianity was established in
Adana from an early date, and it was an
episcopal see. Since the government of the
Armenian Rubenids

the Armenians had greatly outnumbered the Greeks
and the Armenian church acquired a preponderant
position. Its Christian population, already
affected by the constant Muslim attacks, steadily decreased
after the Mamluk conquest and under the Ottomans
(see the reports of travellers, and data in Ritter and
Alishan). During the 19th century the Christian
population increased, but the victory of the Turks
in 1923 brought about their total expulsion. Little
is known of the Jews of Adana (cf. A. Galante,

Arab elements penetrated into Cilicia with the armies
from the 8th century, but could scarcely maintain
themselves in Adana itself when Turkish nomads
had already gained a firm foothold in the
neighbourhood. Adana is described by P. Belon
(1548) as

lying on the linguistic frontier between Arabic and
Turkish. Thereafter the Arab elements in the
population were almost wholly displaced, and this
situation could not be changed by the brief Egyptian
occupation in the 19th century.

Culture. Adana has not played in the past, nor
does it play at present, an important cultural role.
It has an interesting museum, founded in 1924 in
the madrasa of Dja’far Pasha. The main monuments
are due to the Ramađân-oghlu: Eski or Yagğ Djamîî,
with a monumental gateway (inscription from 1553)
and madrasa in the E. and S. sides of the court,
domed iwâdâ with finely sculptured ornaments.
The mosque itself is of uncertain date (before 1500).

Ulû Djamîî, built by Ramađân-oghlu Khalîl, 1507-11,
and enlarged by his grandson Mustafa, 948/1541
(for a legend relating to its construction, cf. Baki
T. Arik, Adana Fethinin destanî, Istanbul 1943,
47 ff.), mosque, madrasa, ürûb and ders-khâne,
enclosed by high wall; emphasis on eastern facade
with main entrance. The groundplan, various
details, coloured ornamentation and minaret indicate
the influence of Syrian models; Seljûk tradition
is particularly apparent in the dragons at the base
of the dome; richly elaborated mîkrâb; Ottoman
tiles of the finest quality; these various stiliic
elements are united into a convincing whole. Turos
with graves decorated with tiles of the Ramađân-
oghlu Khalîl, Pîrî and Mustafa. Of the many
foundations of the dynasty the following are wholly
or partly preserved: the so-called Wakîl Serâyîl
residence of the dynasty since 1495; Selâmlık Dayresi,
today Tuz-khanî. Also noteworthy are the Carshî
Hammâmî, the bedestân (frequently mentioned by
travellers, but rebuilt in the middle of the 19th
century, and Aşhulî Memâlîk, of 1409-10, the oldest
mosque in the town, with carved door.

ADANA — ADDAD

(R. Ahnegg)

(ii) The old name of the wildyê embracing in general the Cilician plain (Çukurova)—now called Seyhan—with the capital of the same name. The old Ottoman eyâlet of Adana (see Hâddi id-î Kilâfl, Dihân-nûmû, 601) comprised in addition to Adana only the sandjâks of Sis and Tarsus; the later eyâlet of Adana (since 1867) the sandjâk of Seyhan—with the capital of the same name. The general the Cilician plain (Çukurowa)—now called the Tuz-Khurmatli into the river of Ta'uk. From this junction onwards the river is called al-Tâbîn, or A(jaym (ca. 1340). For the identification of the A(jaym with the Turnat of the cuneiform inscriptions and the Tornadotus (Tornas) of the classical writers, see F. Hommel, Grundriss der Geogr. und Gesch. des älen Orients, Munich 1904, 5, 293 ff.; Pauly-Wissowa, s.v. Tornadotus; for Radânû (= Nahr Râdhân) in the cuneiform inscriptions, which may have at one time denoted also the lower A(jaym, see Streek, in ZA, 1900, 275 and Hommel, 293 ff. It is questionable wheter we may also identify the Gyndes of Herodotus with the A(jaym; cf. Billerbeck, 72 ff.; Pauly-Wissowa, s.v. Gyndes.

(M. Streck*)

ADDAD (pl. of didd = "a word that has two contrary meanings"), words which, according to the definition of Arab philologists, have two meanings that are opposite to each other, e.g. the verb bâl which may mean "to sell" and also "to buy" (= fâlîd); even the word didd itself belongs to the same category of words, for in such an expression as là diddî bahî it has not the meaning of "opposite", but that of "equal". The addâd, from their point of view, belong as a particular class to the homonyms (al-muqallad (q.v.)), except that the latter class comprises two words that have the same sound but two different meanings (mu,kallad (muqallad)), while in the addâd the two meanings are directly opposite to each other. The Arabs treated of this lexical question with the passion and accuracy which they applied to all the other domains of their language, and they devoted to it either special chapters of general works (e.g. al-Suyûtî, al-Muqaddam, Bûlûk, i, 186-93; Ibn Sîdî, al-Muqaddam, iii, 258-66), or separate monographs. The latter were enumerated for the first time by M. Th. Redslob, Die arabischen Wörter mit entgegengesetzter Bedeutung, Göttingen 1873, 7-9 (the name of al-Dilîbî, however, is to be cancelled). While some of these works are known from citations, books called Kîthâ al-Addâd by the following authors are preserved, and in part published: 1) Kutrub (d. 206/821), ed. H. Kofler, Islamica, 1912; 2) al-Amiri (d. 210/823), ed. A. Haffner, Drei arabischen Quellenwerke über die Addâd, Beirut 1913, 45-61; 3) Abû Ûbayd (d. 223/836), see Brockelmann, S I, 167; 4) Abû Hâmîd al-Sîdîjânî (d. ca. 250/864), ed. Haffner, ibid., 71-157; 5) Ibn al-Sîkitî (d. 243/857), ed. Haffner, ibid., 163-209; 6) Abû Bakr b. al-Anbâî (d. 257/939), ed. M. Th. Houtsma, Leiden 1881; also Cairo 1355; 7) Abû ‘l-Tâyîbî al-Halâbî (d. ca. 791), see Brockelmann, S I, 190; 8) al-Saadîânî (d. 650/1252), ed. Haffner, ibid., 221-48.

The opinion which has long been maintained that Arabic, contrary to all the other Semitic languages, contains a very large number of such addâd is no
longer tenable. If all that is false and all that does not belong there are cut out of the list, there remains also in Arabic only a small residue. Hence al-Mubarrad (MS Leiden 437, p. 180) and Ibn Durustawawiy (quoted by al-Suyuti, al-Mukhtar, i, 197) went so far as to deny entirely the existence of the addād in Arabic. Ibn al-Anbārī enumerates in his book more than 400 such addād; but in spite of the fullness of the work such words as ankara, wald, etc. are missing. Redelb already pointed out that a considerable part of this must be eliminated, as the authors either extend too far the concept of the addād, or artificially accumulate as much matter as possible:

1. First of all it must be noted that most of the words quoted were known to or currently used by the Arabs only in one meaning, and the contrary meaning can be evidenced only by scanty and sometimes even contested citations. If it were not so, many misunderstandings would arise in everyday life, while Ibn al-Anbārī in his introduction (p. r) denies any ambiguity. 2. It is absolutely false to consider the words not only in themselves, but also in their syntactical construction in the sentence, and to establish a didd when, through various constructions or interpretations of the sentence, two contrary meanings are possible (Ibn al-Anbārī, loc. cit., 167-8). 3. Particles like in, min, an, au, mà, hai, must be struck out from the list of addād. Such arguments as that in means “if” and “not”, that is to say, can both indicate the possibility of a thing and negate it, are feeble. Equally trivial are the considerations that verbal forms (hāna or yahāna) indicate different tenses, or that proper names (Ishāh, Ayyāh, Yaḥāb) may also have secondary meanings. 4. Forms which only in certain circumstances may have a meaning contrary to their usual one could be enumerated in large numbers. Here belong words such as haś, goblét, and also its contents, naḥnu, we, i; further all the fāʿil forms which are also passive (e.g. wāmīka, bāhṭī) and the jāʿil forms that are also active (e.g. amin); the relatives which may be formed from participles of the first and augmented roots; the verbs that sometimes also in the first form have a causative meaning (e.g. salla) etc.; but none of these cases represent any real addād. 5. Equally to be excluded are words which in certain cases are used ironically (ḥukma mawt or tahakkum mawt) e.g. yā ḍiḥi (“intelligent one”) for a fool, or euphemistically (laḍḍul), as yā ṣālim (“healthy one”) for a sick person. The use of both tropes is at the will of the speaker. 6. The highest degree of arbitrariness and artifice was finally attained by the grammarians who count among the addād words like talʿa (in the meaning of “waterpipe” and “hill”), on the grounds that water flows downwards and the hill rises upwards.

Most of the meanings fall under one or other of the points just quoted and therefore ought not to be considered as addād; only a small residue remains.

The Arabs themselves already sought for explanations for these phenomena, but only one desire consideration in so far at least as in the interpretation it leads back to the root, whence both meanings have branched out (Ibn al-Anbārī, loc. cit., 5; al-Mukhtar, i, 193 ff.). The other explanations account only for the actually occurring meanings, and either regard all the addād as meanings borrowed by the roots from one another (Ibn al-Anbārī, loc. cit., 7; al-Mukhtar, i, 194), or attempt, often clumsily, to harmonize the meanings; for instance, the Arabs explain ṣāḥi in its meaning “whole” by arguing that the whole thing is only a part of something else (Ibn al-Anbārī, 6).

C. Abel, Über den Gegensinn der Urworte, Leipzig 1884 (reprinted in his Sprachwissenschaftlichen Abhandlungen, Leipzig 1885) made an attempt to find a general explanation, starting from a single point of view, for the linguistic phenomenon of the “enantiosemia” as a whole. According to him the words used by primitive men were not expressions for certain unambiguous concepts, but described rather the mutual relation between two opposites; e.g. the concept of “strong” could only be understood by a comparison with “weak”, and the two sides of the opposition was only gradually distinguished by phonetic changes. The theory of Abel was not accepted by linguists, but found recognition among the psychoanalysts.

R. Gords, Words of mutually opposed meaning, Am. J. Semit. Lang., 1938, 270-80, also endeavours to find an explanation that should be valid for all addād. Starting from modern anthropological theories, he connects the addād with taboo and mana and concludes that “by and large, words of contradictory meaning endure in the speech of mankind only as survivals from primitive ways of thought.”

Against such theories, the prevailing opinion in general linguistics is that the entantiosemia cannot be explained from a unique principle. Words have from their origin a fixed meaning; in the case of each didd, therefore, one of the meanings must be considered as original, the other as secondary. The task of linguistics is to trace out in each case the gradual change of meaning, although it is immediately evident that the facts cannot be established for each didd. As a matter of fact, the Arab philologists already admitted in principle this doctrine: al-asl li-maʿna waḥidūn. That their works, in spite of the richness of their materials, make so slight a contribution to the solution of the problem is due, among other reasons, to the fact that for them the explanation of the addād was not so much a scientific task as a purely practical one. To the Arabs it was of prime importance to give as complete an index as possible of all the words destined for daily and literary use, which have contrary meanings; they are therefore often guided simply by exterior consonance; thus for instance they put among the addād the word mūdī, i. “perishing” root udy, 2. “vigorous”, “strong”, root nāʾ. F. Giese, in Untersuchungen über die Addād auf Grund von Stellen aus altarabischen Dichtern, Berlin 1894, explained, for most of the addād which he found in old poetry, how they passed to the opposite meaning, by arranging them under various semasiological categories: 1. Metonymy, when one meaning of the word is to be explained as being a causal or temporal consequence of another meaning: e.g. naʿa, to lift a burden with difficulty, to carry it away; nāḥil, he who goes to the water, the thirsty one; he who returns from the water, having his thirst quenched. 2. Concatenation of concepts of various kinds; for instance bayn, separation and union (according to whether one is separated alone from a group or in union with another), or dāʿal “to be rolled”, hence “heavy”, but also “to be rolled and whirled up”, hence “insignificant”, “light”. 3. Contraction of concept, either by refining or coarsening it, as for instance rammā “to be marrow-like, strong”, and “to be marrowless, feeble”. 4. For the words of emotion and odour the neutral original meaning “to be excited” is to
ADADD — 'ADHĀB AL-ḪABR

be supposed, no matter whether it is applied in a good or bad sense; thus for instance ra'a “to be afraid” and “to be pleased”; faraba “to be sad” and “to be joyful”; radja, ḫibā, “to hope” and “to fear”; ḥafar, banna, a “good smell” and a “bad smell”. To this class belong also the verbs of conjecture in their double meaning of “to know” and “not to know”, e.g. sanna, basiba, ḫibla. 5. Cultural influence has often caused the later differentiation of words originally meaning the same thing in ba', ḥarā, “to sell” and “to buy”, originally “to exchange”. 6. Denominatives, especially in the 2nd and 4th forms, originally meant: “to undertake an action with the object in question”, and therefore may be applied both positively and negatively; e.g. jararaja, “to rise”, “to sink” (cf. Hebrew ḥabar, ḥabir, dhafar, banna, jariba “to be afraid” and “to be pleased”; ḥālib, “to be joyful” and “to hope” and “to fear”).

Jariba “to be joyful” and “to hope” and “to fear” and “to be pleased”; ḥālib, “to be joyful” and “to hope” and “to fear” and “to be pleased”.

The divine judgments, which are also love of justice, also “punishment, chastisement (ʾuḥāb)”.

The idea is based on the conception that the dead have a continued and conscious existence of a kind between death and resurrection. At the beginning of the Muslim administration the town was incorporated in the hāra of Aswān. It was on the caravan route from Cairo to the south, but Ibn Battuta is the only medieval traveller who refers to it, as being a day and a night’s journey south of Armant. The temple of Adfū is merely mentioned by al-Dimashqī, but without any description, for it must have been buried in sand. Indeed, Granger’s reference to it, in 1730, is the first allusion to it by a European: he saw there “the remains of a temple which one could not enter, and it was full of earth and rubbish”. We must wait for Vivant Denon to obtain a less rudimentary account; on him the temple made a tremendous impression. In the year 700/1300 some brickworkers brought to light the statue of a woman seated on a throne, on which were hieroglyphic inscriptions.

The district of Adfū seems to have been very fertile, and particularly rich in palm-trees. Its dates were made into cakes, after first being pounded.

In the Mamlūk period its annual revenue was 17,000 dinārs from an area of 24,762 faddāns.

Adfūwī is full of praise for the good qualities of the people of Adfū, whom he describes as generous, discreet, sincere, welcoming to strangers, and charitable.

No events memorable in history seem to have taken place in the town.

'ADHĀB [see 'Ad al-adhāb].

'ADHĀB (a), “torment, suffering, affliction”, inflicted by God or a human ruler, and in so far as it expresses not only absolute power but also love of justice, also “punishment, chastisement (ʾuḥāb)”.

The divine judgments, which are often mentioned in the Kūrān, strike the individual as well as whole nations in the life of this world as well as in the life to come. It is mainly unbelief, doubt of the divine mission of the prophets and apostles, rebellion against God, that are punished in this manner [see ʾAD, FĪRĀWN, LŪT, NŪH, THAMŪD, and others]. With regard to the punishments in the life to come, which begin already in the grave, see 'ADHĀB AL-KĀBR, DISSHAN-NAM.

For legal punishments, see ṬIRĪBAH.

'TH. W. JUYNBOLL

'ADHĀB AL-KĀBR, the punishment in the tomb, also called punishment in barsakh [q.e.]. The idea is based on the conception that the dead had a continued and conscious existence of a kind in their grave. So arose the doctrine of the two judgements, one which involves punishment or bliss in the grave and a subsequent judgement on the Day of Resurrection [for which see AL-KIYAMAH]. There are various ideas of what happens between death and resurrection.

1. The grave is a garden of paradise or a pit of hell; angels of mercy come for the souls of believers and angels of punishment for the infidels. The souls of believers are birds in the trees of paradise and will be united with their bodies at the resurrection; martyrs are already in paradise.

2. The dead are tortured by the weeping of the mourners, especially the wicked, hearing the steps of the mourners as they leave; the believer finds his grave spacious, 70 cubits by 70, while the unbeliever is crushed by his grave till his ribs inter...
ADHAB AL-KABR — ADHAN

lock. The grave asks the dead man about his religion and the believer’s good works answer for him. A sinner may be tormented by a snake of fire which bites him till the day of judgement.

3. Two angels, Munkar and Nakr, black with blue eyes, make the dead man sit up and ask him about his religion. The believer answers with the “steadfast word” (Kūr’ān, xiv, 26) and is shown the place in hell from which he is delivered and the place reserved for him in paradise; there upon he is left alone till the Day of Resurrection. The unbeliever cannot answer, so the angels beat him with iron whips which cause flames, and the blows are heard by all creation except men and djinn. It is a less reliable doctrine that punishment is of the spirit only. There are elaborate arguments to prove that those whose bodies are left impaled and those who were eaten by wild beasts suffer from it. The punishment lasts as long as it will please Allah, according to some authorities till the Day of Resurrection, except on Fridays. It may be eased as long as a branch planted on the grave is green. The angels draw the souls out of the bodies; those of unbelievers come out easily while those of unbelievers have to be dragged out causing severe pain. Variations in detail are many. The questioning of believers lasts seven days, that of unbelievers forty; or unbelievers are not questioned and the angels proceed at once to punishment: martyrs, infants, and those who have performed certain acts of supererogation are not questioned.

In some sources a distinction is made between the punishment and the pressure (dāghia) in the tomb, the righteous being exempt from the former, but not from the latter, whereas the infidels and the sinners suffer punishment as well as pressure. The prophet’s daughter, Fāṭima, and some others escape being crushed.

The punishment in the tomb is not plainly mentioned in the Kur’ān. Allusions to the idea may be found in several passages, e.g. Kur’ān, xlvii, 26: “But when the angels, causing them to die, shall make them smell on their faces and backs!”, vi, 92: “But couldst thou see, when the ungodly are in the floods of death, and angels reach forth their hands, promising him bliss or misery. The idea of the examination and the punishment in the grave is green. The angels draw the souls out of the bodies; those of believers come out easily while those of unbelievers have to be dragged out causing severe pain. Variations in detail are many. The questioning of believers lasts seven days, that of unbelievers forty; or unbelievers are not questioned and the angels proceed at once to punishment: martyrs, infants, and those who have performed certain acts of supererogation are not questioned.

In some sources a distinction is made between the punishment and the pressure (dāghia) in the tomb, the righteous being exempt from the former, but not from the latter, whereas the infidels and the sinners suffer punishment as well as pressure. The prophet’s daughter, Fāṭima, and some others escape being crushed.

The punishment of the tomb is very frequently mentioned in Tradition (see Bibliography), often, however, without the mention of angels. In the latter group of traditions it is simply said that the dead are punished in their tombs, or why, e.g. on account of special sins they have committed.

The names of Munkar and Nakr do not appear in the Kur’ān, and once only in canonical Tradition (al-Tirmidhi, Diwan’s, báb 70). Apparently these names do not belong to the old stock of traditions. Moreover, in some traditions one anonymous angel only is mentioned as the angel who interrogates and punishes the dead (Muslim, Ḥadīth, trad. 165; Abû Dīrād, Sumā‘, báb 358; Ash-Sunna b. Hanbal, ii, 333, 346; ii, 150; al-Tayyibī, no. 753). So there seem to be four stages in the traditions regarding this subject: the first without any angel being mentioned, the second mentioning “the” angel, the third two angels, the fourth being acquainted with the names Munkar and Nakr.

This state of things is reflected in the development of the creed. The Fiḥk Akbar I, which may date from the middle of the 2nd/8th century, gives only a short reference to the punishment of the tomb (art. 10). The Wasiyyat Abī Ḥanīfa, which may represent the orthodox views of the middle of the 3rd/9th century, mentions both the punishment and the interrogation by Munkar and Nakr. The Fiḥk Akbar II, which may represent the new orthodoxy of the middle of the 4th/10th century A.D., is still more elaborate (art. 23): “The interrogation of the dead in the tomb by Munkar and Nakr is a reality, and the reunion of the body with the spirit in the tomb is a reality. The pressure and the punishment in the tomb are a reality that will take place in the case of all the infidels, and a reality that may take place in the case of some sinners belonging to the faithful”.

In the later creeds and works on dogmatics the punishment and the interrogation in the tomb by Munkar and Nakr are treated in a similar way.

The Khawāridjī, some Mu’tazilīs and some of the extreme Shī‘a do not believe in punishment in the grave. Some Mu’tazilīs explained Munkar as the puttering of the unbeliever as he stumbles in his reply and Nakr as the violence done to him. Others said that Munkar and Nakr were not individuals but two classes of angels because men were dying every minute in all parts of the world and individuals could not be everywhere at once. Another rationalisation was that the two were personifications of a man’s good and evil deeds, promising him bliss or misery.

The Karrāmiyya [q.v.] taught the identity of Munkar and Nakr with the two guardian angels who accompany man (‘Abd al-Kāhir al-Baghdādī, Usul al-Dīn, Istanbul 1928, p. 160). Al-Ghazzālī holds that all eschatological ideas are a reality that takes place in the malakūt.

The origin of the names Munkar and Nakr is uncertain; the meaning “disliked” seems doubtful. The idea of the examination and the punishment of the dead in their tombs is found among other peoples also. The details to be found in Jewish sources (ḥabbūt hak-keber) are strikingly parallel to the Muslim ones; the idea is, however, rather late among the Jews and apparently belongs to the post-Islamic period. (See J. C. G. Bodenschatz, Kirchliche Verfassung der heutigen Juden, Erlangen 1748, ii, 95 f.; Jewish Enc., s.v. Ḥabbūt ha-Keber.)

( A. J. WENSINCK—A. S. TROTTON)

ADHĀN, “announcement”, a technical term for the call to the divine service of Friday and the five daily salāds (see Sāʾlāt).

According to Muslim tradition, the Prophet, soon after his arrival at Madīna (1 or 2 years after the
Hidjra), deliberated with his companions on the best manner of announcing to the faithful the hour of prayer. Some proposed that every time a fire should be kindled, a horn should be blown or a nãbãs (i.e. a long piece of wood clapped with another piece of wood; with such a nãbãs the Christians in the East used at that time to announce the hour of prayer) should be used. But one Muslim, ‘Abd Allah b. Zayd, related that he saw in a dream somebody who from the roof of the mosque called the Muslims to prayer. ‘Umar recommended that manner of announcing the salát, and as all agreed to it, this adhán was introduced by order of the Prophet. From that time the believers were convoked by Bâlî and, up to our days the adhán is called out at the time of the salát.

The adhán of the orthodox Muslim consists of seven formulas, of which the sixth is a repetition of the first:

1. Allâh akbar: "Allâh is most great".
2. Aghhadu an la ðâkh illa ðâkh: "I testify that there is no god besides Allâh".
3. Aghhadu anna Muhammadu rasûl Allâh: "I testify that Mohammad is the apostle of Allâh".
4. Hâyya ‘ala l-salát: "Come to prayer!"
5. Hâyya ‘ala l-salát: "Come to salvation!"
6. Allâh akbar: "Allâh is most great".
7. Lâ ðâkh illa ðâkh: "The is no god besides Allâh".

The first formula is repeated four (by the Mâlikîtes two) times one after the other, the other formulas are repeated twice each, except the last words: lâ ðâkh illa ðâkh, which are pronounced only once. The 2nd and 3rd formulas after being pronounced twice are repeated a third time in a louder voice. This repetition (lardîf) is generally considered as recommended by the law, only the Hâfîzîtes forbid it. At the morning prayer (salât al-suhb) the words al-salât kâhry min al-nasîm ("prayer is better than sleep") are added in the adhán. This formula, also pronounced twice times and called tâthwîb (repetition), is inserted between the 5th and 6th formulas, but the Hâfîzîtes pronounce it at the end.

The adhán of the Shi’ites differs from that of the Sunnites in that the former has an eighth formula (inserted between the fifth and the sixth): Hâyya ‘ala Allâh kâhry al-amal, "Come to the best work!" These words have at all times been the shibboleth of the Shi’îtes; when called from the minarets in an orthodox country, the inhabitants knew that the government had become Shi’îte (cf. Snouck Hurgronje, Mekka, i, 63; S. de Sacy, Chrestomathie arabe i, text, p. 60; transl., p. 160). The Shi’îtes pronounce also the final formula two times.

The Muslims who hear the adhán must repeat its formulas, but instead of the fourth and fifth, they recite: lâ ðâkh illa ðâkh huwwam illa bi-llâh, "there is no strength nor power but in Allâh", and instead of the tâthwîb formula in the morning adhán, they say: sa’dhata wa-bararta, "thou hast spoken truthfully and rightly".

The adhán is followed by formulas of glorification which are recommended and precisely determined by the law. They are omitted only after the call to the maghrib salât, because that time, in which this prayer must be said, is very short. There is no fixed melody for the adhán. Every adhán may be modulated at will with any known tune, provided that the right pronunciation of the words is not impaired by it. Cf. Snouck Hurgronje, Mekka, ii, 87: "In Mecca one hears different airs at the same time. Like the recitation of the Kur’ân, the singing of the adhán is in Mekka a highly developed art". Only among the Hanbalîtes there are doctors who do not allow any melody for the adhán, and the Wahhâbîs follow this doctrine. The Ibâdis, too, do not sing the adhán. [For the melody of the adhán see also Ghina.]

Every Muslim who, alone or with others, recites the above-mentioned salât at home or in the field should pronounce the adhán in a loud voice as is recommended by the law (cf. Snouck Hurgronje, Mehmânische Sprichwörter und Redensarten, 87 = Verspr. Geschr. v, 83). At mosques, a mu’adhîhin (q.v.) is often appointed to perform the adhán.

The call to the other public salât, e.g. those of the two feasts, those at sun and moon eclipses, etc., has only one formula: al-salât diîmânîm, "come to the public prayer"! This formula is said to have been current already in the time of the Prophet. Cf. I. Goldziher, in ZDMG, 1895, 325.

Important information on the modifications of the adhán formulas introduced at various times and in various places from the beginning of Islam is to be found in Makrizî, Khâlî, ii, 269 f.

Owing to the profession of faith frequently occurring in the adhán, the Muslims pronounce it in the right ear of a child shortly after its birth (cf. Lane, Arab. Society in the Middle Ages, 186; Snouck Hurgronje, Mekka, ii, 138) as well as in the ear of people supposed to be possessed of djîmîn (evil spirits).

The salât in the mosque is immediately preceded by a second call, the i’àsha (q.v.), which contains the same formulas as the adhán.

ADHâR (see tâhîn). ADHARBAYJDÂN (AZARBAYJDÂN) (i) province of Persia; (ii) Soviet Socialist Republic.

(i) The great province of Persia, called in Middle Persian Atrapatskân, older new-Persian Adharbâyjan, Adharbâyyan, at present Azarbaydzjan, Greek 'Atropatêon, Byzantine Greek 'Athrapêtôn, Armenian Atrapatan, Syriac Adhâbâyîn. The province was called after the general Atropates ("protected by fire"), who at the time of Alexander’s invasion proclaimed his independence (328 B.C.) and thus preserved his kingdom (Media Minor, Strabo, xi, 13, 3) in the north-western corner of later Persia (cf. Ibn al-Mu’taﬁfîn, in Yâkût, i, 172, and al-Mâqdisî, 375: Adharbâyân b. Bîwarsîf). The dynasty of Atropates flourished under the Arsakids and married into the royal house. The last scion of the house, Gaius Julius Artawâzdr, died in Rome in A.D. 38, when the kingdom was already incorporated by the Arsakids. (For the ancient history cf. Pauly-Wissowa, s.v. Atropatene.) Under the Sassanians Adharbâyjân was a big province and towards the end of the period belonged to the family of Farrakh-Hormizd, (see Marquart, Erasm. 108-14). The capital of Adharbâyjân was at Shîls (or Ganzak), which corresponds to the ruins
of Laylān (south-east of Lake Urmia). It possessed a famous firetemple which the Sasanian kings visited on their accession. Later the fire was removed to the less accessible Arshakid castle of Badżarān, ΘΒάζαραν (now Takht-i Sulaymān).

The Arab conquest of Adharbaydjan is variously recorded under the years 18-22/639-43. In the days of 'Umar, Ḥudhayfa b. al-Yāmān is said to have conquered Adharbaydjan coming from Nihāwān; other expeditions came from Shahrazur. Ḥudhayfa made a treaty with the mawāḏān whose capital was in Ardabil. He agreed to pay 300,000 dirhams and the Arabs promised not to enslave anyone, to respect the fire-temples and the ceremonies held in them, and to protect the population against the Kurds (nomads) of Bālāsagnān, Sābālān and Shāh-i Rūdān.

The population of Adharbaydjan (of Iranian origin) spoke a multitude of dialects (al-Makdisi, 375: 70 languages near Ardabil). Arab chiefs settled in various districts: Rawwād al-Azdī in the region of Tabriz; Bašīr al-Rabī‘a in Marand; Mūr b. ‘Alī al-Rudaynī south of Lake Urmīya, etc. They were gradually absorbed by the native population and towards the middle of the 4th/10th century the Rawwādīs were considered as Kurds. (See in detail Sāyyīd A. Ḵasrawī, ʿPāṭdāḵān-i gumnān, ii 263-8, Teheran 1928-9.)

After the revolt of Bābāk [q.v.], the grip of the caliphate on Adharbaydjan weakened. The last energetic governors of the province (276-317/889-929) were the Šaḏiqīs [q.v.] who themselves ended in revolt. After their fall native dynasties sprang up in Adharbaydjan. After the Khārīqīs Daysam (half Arab and half Kurd), Adharbaydjan was occupied by the Daylamite Marzubān b. Muḥammad, of the būḏīce creed (see MUSAFIRIDS). The Daylamites were succeeded by the Kurdish Rawwādīs [q.v.] (373-643/983-1070).

In the beginning of the 5th/11th century the Ghuzz hordes, first in smaller parties, and then in considerable numbers, under the Seljūq leaders occupied Adharbaydjan. In consequence, the Iranian population of Adharbaydjan and the adjacent parts of Transcaucasia became Turkophone. In 531/1136 Adharbaydjan fell to the lot of the āḏāb-e ʿIldīgīz [q.v.] (better ʿEldīgīz) whose descendants ruled, in competition with the ʿĀbdālūs [q.v.], till the short-lived invasion of the Khārīḏīs-gūrān ʿJālāl al-Dīn (622-8/1225-31) at whose heels came the Mongols. With the arrival of the Ilḵān Ḥūṣūl (654/1256) Adharbaydjan became the centre of a great empire extending from the Oxus to Syria. The residence of the Mongols was first in Marāqā [q.v.] and then in Tabriz [q.v.] which became a great centre of trade and cultural life. After the Mongols and their successors the ʿAjāʾib [q.v.], Adharbaydjan was occupied by the Turkmens returning from the west (the ʿḴᵛār ʿḴoyūn [q.v.] and ʿḴᵛār ʿḴoyūn [q.v.]) whose capital was in Tabriz (780-908/1378-1502).

After 907/1502 Adharbaydjan became the chief bulwark and rallying ground of the Safawids, themselves natives of Ardabil and originally speaking the local Iranian dialect. In the meantime, between 1514 and 1603, the Ottomans frequently occupied Tabriz and other parts of the province. The Persian control was restored by Shāh Ḫosrāv but during the Afghan invasion (1355-42/1722-9) the Ottomans recaptured Adharbaydjan and other western provinces of Persia, until Nādir Shāh expelled them.

In the beginning of the reign of Karīm Khan Ṭabāgha the Afghān ᴾâḏ Khan revolted in Adharydjan and later the Dumbuli Kurds of Khoy and other tribal chiefs lorded it over various parts of Adharbaydjan. With the advent of the Kāḏārs Adharbaydjan became the traditional residence of the heirs-apparent. In the north the final frontier with Russia (along the Araxes) was established in 1828 (treaty of Turkmān-čay). The western frontier with Turkey was delimited only in 1914, and under Rīdā Shāh Persia ceded to Turkey a small area north of the Ararat. After 1905 the representatives of Adharbaydjan took a lively part in the Persian revolution. On 3 April 1908 Russian troops arrived in Adharbaydjan, by agreement with Great Britain, to protect the foreign colonies in Tabriz, but then prolonged their stay under various pretexts, and in 1914-7 warned with the Turks with varying fortune. They evacuated Adharbaydjan after the Russian revolution (1917), and on 8 June the Turks arrived and installed in Tabriz a Turco-Persian government. About this time there appeared the first traces of Adharbaydjan self-consciousness. The Persian control was restored by the future Rīdā Shāh on 5 September 1921. After the events of 1947 (see Iran) the Soviet forces occupied the northern provinces, including Adharbaydjan. Under cover of the occupation, there developed a movement for the autonomy of Adharbaydjan within the limits of the Persian state. The Russians evacuated Adharbaydjan by the beginning of May 1946 (instead of March 1946, as first agreed) and this delay led to a great discussion in the United Nations and to the first official split among the Allies. After the evacuation, the Premier Ḵawāmīnī recognised the provincial autonomy of Adharbaydjan in an agreement signed on 13 June 1946, by which the rights of local self-government and the use of the local Turkish dialect were guaran-
teed. However, on 4 November, Persian troops moved into Adharbaydjan and the status quo ante was restored.

Geography. The list of towns and districts of Adharbaydjan in Ibn ᴷ хрўṭāḏābīhīb, i19, is important for the composition of the province (bārā) soon after the conquest and possibly under the Sāfāvīs: 1. Ṭabārīz; 2. Miḵwān; 3. Ardabil; 4. Ṣūr (= Sena); 5. Barza (= Sakkitz?); 6. Ṣābūr-ḵašt; 7. Tabriz; 8. Marand; 9. Khoy; 10. Kūlsara; 11. Miḵūn; 12. Barzand; 13. Ḏanā (Ganzak); 14. Ḏābārwa; 15. Niţz; 16. Urmīya; 17. Salmās; 18. Shīr; 19. Rustāk al-Salak; 20. Rustāk Ḯind-bīya (= Ḯind-pīye); 21. al-Badḏāh; 22. Urm; 23. Balwān-Ḵarāḏ (= Ḭarāḏ-dagh?); 24. Rustāk Ṣarāh (Sarāb); 25. Daskiyaḵwār (?); 26. Rustāk Ḫay-pḥraḏā. Of these nos. 4, 5, 6, 13, 14, 15, 18, 19 and 26 lie to the south of Lake Urmīya (in the direction of Daynamar); nos. 7, 8, 9, 16 and 17 in the north-western corner; nos. 1, 2, 3, 10, 11, 12, 21, 22, 23 and 24 east of the meridian of Tabriz. Nos. 20 and 25 cannot be located. The frontier in the south was no. 26 “the watch of Media” (possibly the present day Sunkur [q.v.]; in the east, it passed between Ḫiynān and Ḿandān [q.v.]; in the N.E. Ibn ᴷχروحāḏābīhīb, ii11, names Ḿarāḏ (now Altan on the south bank of the Araxes) as “the end of the ʿāmal of Adharbaydjan”. Thus the territory of the province closely corresponded to its present extent, but as Adharbaydjan was usually governed jointly with the neighbouring Armenia and Ardān ʿAbd al-Makdisī, 374: (Ḵhm al-rāḥīb comprising the three provinces), administrative frontiers were subject to temporary changes, especially in later times. In al-Makdisī, 374, Ḫoy,
Urmiya and even Dəkəhərəxan (southeast of Tabriz) are reckoned to Armenia. According to Yākūt (13th century), Adhargon extended down to Banga’s (Parthav). In *Nuwat Al-Kalāb* (730/1340), 89, Nakhibewan and Ordubād, on the left bank of the Araxes, are mentioned under Adhargon.

Very characteristic for Adharyun are the high peaks rising in various parts of the territory, with ranges of mountains connecting them: Mt. Səwələn west of Ardabīl (15,792 feet), Mt. Sahand, southeast of Tabriz (12,840 feet), the Lesser Ararat (12,840 feet) south of which runs the long range which forms the frontier with Turkey and ʿIrāk, and which in its southern part is studded with high peaks. The central parts of Adharyun consist both of considerable plains (Tabriz, Marand, Ḫoy, Salmās) and of high plateaux burrowed by deep gorges.

The territory of Adharyun belongs to the basins of the Caspian, of Lake Urmiya and of the Tigris. Towards the Caspian flow: (i) the tributaries of the Səfəd Rūd having their sources on the south-eastern face of Mt. Sahand, and (ii) the southern tributaries of the Araxes (the river of Ardabīl, Kara-su; the rivers of Karadja-dagh; the river of Ḫoy and the river of Məkət, Zangī-čay). The internal Lake Urmaya drains an area of 52,500 sq. km (the rivers of Marāgha, Sefīda-čay; the river of Tabriz, Aqlī-čay; the numerous rivers of Salmās and Urmaya; the important rivers of the Kurdish districts, Diğəhtu, Tətəwū, Gədər). The Lesser Zāb rises on the Persian side of the frontier range and, through the gap of Alān, enters into the plains of Northern ʿIrāk to join the Tigris.

The population of Adharyaun lives chiefly in villages. The largest towns are Tabriz (280,000 inhabitants), Ardabīl (63,000), Urmaya (49,000), Marāgha (35,000). The semi-nomads are found on the Məğən steppe (the Turkish Shāhsəwān) and in the Kurdish districts along the Turkish frontier and south of Lake Urmaya. The population in its great majority speaks the local language learnt at school. Armenians and Assyrians (tag “ʿAyos”) are found in the districts to the west of Lake Urmaya. Kurdish is spoken along the western frontier and in the southern districts, to the west of the Tətəwū river.

(ii) Azerbayan, Soviet Socialist Republic (AZ. SSR) in the eastern part of Transcaucasia, between the south-eastern branches of the Caucasus, the Caspian coast and the Araxes (which separates it from the Persian province of the same name). In the north-east it borders on the Dəghəstān Autonomus republic (part of the Russian Socialist Federal Soviet Republic, RSFSR). In the north-west it borders on the Georgian S.S. Republic (along the Alazan) and in the west on the Armenian S.S. Republic (along the line running east of Ləsən = Gökçe). In the south-west the autonomous republic (ASSR) of Nakhčewan, locked within the Armenian territories, is part of the Azerbayan republic, whereas the highlands of Kara-baḡ (with a considerable Armenian population) form an autonomous territory (oblast) within Azerbayan.

Historically the territory of the republic corresponds to the Albania of the classical authors (Strabo, xi, 4; Polyemy, v, 11), or in Armenian Alvān-kʿ, and in Arabic ARRĀN [q.v.]. The part of the republic lying north of the Kur (Kura) formed the kingdom of Sərwān (later Sərwān [q.v.]).

After the collapse of the Imperial Russian army Bākū was protectively occupied by the Allies (General Dunsterville, 17 August-14 Sept. 1918) on behalf of Russia. The Turkish forces under Pasha occupied Bākū on 15 Sept. 1918 and reorganized the former province under the name of Azerbayan— as it was explained, in view of the similarity of its Turkish-speaking population with the Turkish-speaking population of the Persian province of Azerbayan. When after the Mudros armistice the Allies reoccupied Bākū (17 Oct. 1918), General Thomson (28 Dec. 1918) recognized the existing Azerbayan government of the Muslim party as the only local authority. After the evacuation of the Allies, the Soviet regime was proclaimed in Bākū on 28 April 1920, without armed opposition, and Azerbayan became one of the three republics of the federated Transcaucasia. In 1936 the federation came to an end and on the 5 Dec. 1936 Azerbayan was admitted into the U.S.S.R. as one of the sixteen constituent republics of the Union.

The present-day republic possesses an area of 87,700 sq. km and a population of 3.2 million, of which 28% live in towns. Local Turks are in a majority of 3/5, whereas the Armenians form 12% of the population, and Russians 10%. The capital of the republic, Bākū [q.v.], counts 809,000 inhabitants, Gandja [q.v.] (formerly Elizavetpol and Kirovabad) 99,000. Other large towns are Shamakhi, Kuba, Səliyān, Nukh, Mingečwar, etc.

AHDARGUN (P. *flame-colored* campaigns in Atropatene), a plant about 2-3 feet high with finger-long elongated leaves, of a red-yellow colour, and malodorous blossoms with a black kernel. The identification of this plant is not yet well established: in Greek κῆρος Αżyczου occurs synonymously with senecio vulgaris, the common groundsel (B. Langkavle, *Botanik der späten Griechen*, 1866, 74; 1. Löw, *Aramäische Pflanzennamen*, 1879, 47). The descriptions of the Arabian authors leave a choice between the dark yellow *upklhmos*, for which Clément-Mulet decided, and the calendar *cenklhmos*, marigold, which indeed unites the characteristic features of shape, hue and smell and which formerly was officinal. In Arabic medicine adharyun passed for a
cordial, an antidote, etc. The plant played in popular belief a greater part than in medicine: it was believed that its odour alone was sufficient to cause or to facilitate delivery as well as to drive away flies, rats and lizards.

**ADHARI (AZERI),** a Turkish dialect.

(i) Language, (ii) literature.

(i) LANGUAGE

The word *Adhari,* which means "pertaining to Adharbaydžan," has been used to denote various ethnic groups from the 10th century onward. It was applied to the Adharbaydžan Republic founded in the Caucasus in 1918, and is extended in the present day to cover not only the Soviet Republic of Adharbaydžan and Persian Adharbaydžan but also the Turkish populations of Khurasan, Astarabad, Hamadān and other parts of Persia, Dāğhestān and Georgia.

Adhari Turkish has long maintained its identity as a literary language. According to the latest morphological classification of the Turkish dialects (Radloff, Šamoliovich), it forms the "Southern Turkish" group, along with the Turkish of Anatolia, Turkmenistān, the Balkan peninsula and the Crimean littoral. Although the last word on the subject has not yet been said, the dialects of spoken Adhari seem to fall into the following main groups:

(i) Bāktū-Shirvān; (ii) Gangdīa-Karabāgh; (iii) Tabrīz; (iv) Urmīya.

The chief phonetic and morphological characteristics of Adhari are summarized below (the forms in brackets are those of the Turkish of Turkey).

a. **Vowels:**

- There are two e-sounds an open [e] and a closed [e] (here shown as ē). The former represents the sound of *fatka* in Arabic and Persian borrowings: *jeget* (fakč), *veten* (veten). So too in conjunction with *a* (which medially is heard as a pause): *etir* (itir), *elī* (Allī), *meḥdīn* (madīn), *yeṇī* (yānī), *meţwāq* (medvūk).

Closed e occurs in initial syllables where other dialects of the group have: *esii* (isinīs), *endir* (indir-), *phis* (hêz), *elm* (ilīm), *etibar* (itibar). It is also heard in the diphthong in *ayn* (aynī), *yaynī*.

b. **Initial i has become in modern Adhari:** *ivāx* (ivāx), *iyyāx* (iyāx).

- Initial i disappears in some words in the various dialects, with no definite rule, and in the Adhari of Persia is regularly dropped from the 2nd person singular and plural and the 3rd person plural of verbal forms: see under Verbs, below. *diriṭ* loses its r, becoming *diṭ.*

- l is commonly dropped from *değil:* *důyū,* *dey,* *deyi.* In some words it replaces *r:* *hančal* (*hançar,* *inč*), *serel* (*sara,* etc.)

c. **Vowel Harmony** is generally observed in Adhari, except in the dialects of Bāktū, Nūkha and Persia, where we find velar suffixes added to palatal stems—*olmač,* *viyacač,* *gödač,* *bildič*—and rounded vowels in suffixes: *atön,* *baban,* *alduc* (*aldax*).

d. **Morphology:**

The chief morphological peculiarities are these:

1. The accusative suffix of all vowel-stems except *su* is *niñt:* *arabant,* *dērēn.* Consonant-stems are treated as in the Turkish of Turkey: *ayac,* *demirَ,*

2. The suffix which denotes a regular occupation or forms a noun of agent is *-piñ:* *demirpi,* *arabapi,* *albapi,* *yaslc.* (3) *kimî* or *kimîn* is always used in place of *gibi,* and *ten* or *cenčan* in place of *hadar* or *deki:* *indiyen,* *indiyenc,* *aznamac,* *iünene*c.

3. The interrogative *mi* generally comes after the verbal suffixes: *nukčum,* *nukčen,* *gelemmir,* *gelemmesen,* *gelir,* *gelirik* ([geliru%], *gelemmiller*); *almarnik,* *almayzn,* *varafy,* *varacag* ([varacag]), *sata b skirm* ([sata-smir], etc. (6) With personal names, instead of the plural _-ni/ni:_ *arabanl,* *dereni.*

- Adhari has no necessitative mood; instead, it uses *serek* with the optative: *serek alam,* *serek idam,* *gerek alam,* *gerek idam,* etc.

The suffix of the 2nd person of the imperative is an invariable _gicen,_ found only in Adhari: *gelicen,* *agicen.*

The suffix of the present 1 tense is _-irt:_ *gelirem,* *geliren/gelisen,* _-ir:_ *gelir,* _-ir:_ *gelir/gelirken,* *gelirsi,* *gelisiz,* *geliler/gelileen.* The negative suffix is _-mir:_ *gelirmez,* *gelirmesen/gelimesen,* *gelmir,* *gelimir/gelimli.*

The suffix of the present 2 or aorist tense is formed with _-er-:_ *geliremek,* *gelere,* *gelere,* the negative: *gelermem/gelirmen,* *gelimesen/gelimesen,* *gelmes,* *gelmerik* _-gelmeruy,* _gelmesisiz/gelmesiz,* _gelmesler/gelmesle*. The imperative potential is:_ *gellememrer,* _gellemersen/gellemersen,* _gellemir,* _gellemir/gelimele.*

The present II or aorist tense is formed with _-er-:_ *geliremem,* *gelere,** the negative: *gelermem/gelirmen,* *gelimesen/gelimesen,* *gelmes,* *gelmerik* _-gelmeruy,* _gelmesisiz/gelmesiz,* _gelmesler/gelmesle*. The imperative potential is:_ *gellememrer,* _gellemersen/gellemersen* etc. The idea of inability is also expressed by the use of
the auxiliary verb *bilmemek*: gele bilmirem, gele bilmirsen etc.

The optative: *olam/olum*, *olasan*, *ola*, ...

His poetic powers to castigating the fanaticism of the people.

The end of the 19th century may be described as a period of Adhari literature is regarded as closing with that of the people. This departure from the classical literary language has been explained as due simply to Shah Isma’l’s desire to find a large audience for his political and religious views. At all events he opened a new period in Adhari literature, both by his endeavour to escape from the Perso-Arabic vocabulary used by Fudül [q.v.], and by his own remarkable creative powers. The course taken by writers after him was towards the language and literature of the people.

In this new development, which continued through the 17th and 18th centuries, an important part was played by the political, social and cultural movements then afoot in Ādharbaydān. Classical literature began to develop side by side with the literature of the people, in the semi-independent khānates then coming into existence. Among the products of this folk-literature were romantic poems such as *Kor-oglu*, *Aşık Charh*, *Sa'id Isma'il* and Fudül's *we-kerem*. This genre, known as *dagışık* (dagışık) literature, made great advances in Adharbaydān and formed a bridge between the classical literary language and the local dialects.

The progress made by folk-literature had its effect on the development of the classical literature, as is particularly evident in the language of the 17th- and 18th-century poets Mesbıl, *Sa'īd Tabārī* [q.v.], Kawst, *Ağha Mesbıl Şirvānī*, *Nīght*, *Widādī* and *Wākī*. Of these, Kawst and Mesbıl are especially noteworthy for their poetic power. Above all, the creative writers Widādī and Wākī (18th century), who were steeped in the classical literature, secured a large public for their poems among the broad mass of the people. Wādī, a prolific lyric poet, greatly enriched Ādharī literature. His contemporary Molla Panāh Wākī (1717-97) is considered the founder of the modern school. He chose his themes from life and appears in his poems as an historian and a realist. The simplicity, sincerity and melodiousness of his sweet songs in praise of his beloved and other beauties, replete with the lyricism of the people, have won him a great and abiding fame among the Ādharīs. In the same category is Dhakir Khanīm (1837-97) on the one hand, and in Karabakh this folk-literature were romantic poems such as *dagışık*, *Ker-oglu* and *Aşık Charh*, then coming into existence. Among the products of *dagışık* literature, made great advances in Adharbaydān and formed a bridge between the classical literary language and the local dialects.

(ii) LITERATURE.

If we set aside the *Kūdī Dede Korkūd* [q.v.], whose composition is ascribed to the 11th century, although the text was probably not fixed before the 14th, the first great name in Adhari Turkish literature is that of *Shaykh ʿĪzz al-Dīn Asfāralāyini*, a renowned 13th-century poet who wrote under the *makhbās* of Ḥasan-oghlu or Fūr Ḥasan.

Two poets of the 14th century who played an important part in the development of Adhari literature were Kāḏī Burhān al-Dīn [q.v.] and Nesml. Nesml [q.v.], who sometimes used the *makhbās* of ʿHūsainī, was a contemporary of Timūr. A master of Arabic and Persian, as well as of Adharī, he used his poetic gift to propagate the Ḥurūfī doctrine. His simple and attractive diction made him the poet par excellence of his time. The mediaeval period of Adhari literature is regarded as closing with him, but the themes and lyricism of his poetry had their influence on the development of the new period.

The simple Turkish style introduced by Nesml was raised to its greatest heights by Ḩabībī, *Shāh Isma’īl* the Saʿfawi and Fuḍūl. Ḩabībī, poet, lyricist and scholar, who for a while enjoyed the patronage of *Shāh Isma’īl* Saʿfawi, constitutes a stage between

Encyclopaedia of Islam

Nesmlī, *Shāh Isma’īl* and Fuḍūl. The language of his matchless ṣūfī love-poems differs but little from that of his predecessors, whereas his contemporary *Shāh Isma’īl* [q.v.] (*“Khatāʾī”*, 1485-1524) made a literary vehicle of the real Adhari Turkīsh of the people. This departure from the classical literary language has been explained as due simply to *Shāh Isma’īl*’s desire to find a large audience for his political and religious views. At all events he opened a new period in Adhari literature, both by his endeavour to escape from the Perso-Arabic vocabulary used by Fudūl [q.v.], and by his own remarkable creative powers. The course taken by writers after him was towards the language and literature of the people.

Encyclopaedia of Islam
the period of the development of the Adhari press. The appearance of *Ekindji*, the first Adhari newspaper, was followed by that of several others: *Diyâd* and *Diyâd-Ḳadib*, at Tishrin (1879-1884); *Khatēd* (1883-91), *ṣahrīb-i Rūs* (1903-05), all of which served as rallying-points for progressive men of letters. The tempo of this development quickened remarkably after the Russian revolution of 1905, conditions becoming then more favourable, and new topics, ideas and figures began to appear. A stream of new periodicals arose: *Hayād*, *Ishād*, *Tarākhât*, *Kaspiy*, *Adh Ṣūr*. Their publishers were Ahmed Agha-oghlu, 'All Bey Hüseyin-zâde, 'All Mardan Topël-bâzîl and Mehmed Emîl Resûl-zâde, nationalists and modernists with a knowledge of Ottoman, Russian and Persian literary and political life. Thanks to their labours and those of men like them, the common people became accustomed to the new cultural movement. The protagonist in the struggle was Alekper Şâbir (d. 1921), the unequaled master of Adhari satire, who used all the powerful resources of his pen to play reaction, fanaticism and ignorance. Support came to him from the poet Djell Matem Kull-zâde, editor of the progressive and democratic review *Molla Naṣr al-Dîn,* and from ‘Abbas Şîhât (1874-1918).

Meşmed Hâdî and Hüseyin Diâwîd were influenced by the literature of Turkey, emulating Nâmlâ Kemâl, Filâtû and Hâmid, and the poet Ahmed Diwâdî also showed the influence of the Turkish national literary movement. Nedjef Bey Wezîrî and ‘Abd ül-Râhîm Bey Haçekwî maintained a constant flow of dramatic works, while Magoma and members of the Hadîbîyî family composed operettas and operas for the Adhari theatre, laying the foundations of a national music.

The chief figures of the latest period, from the fall of the independent Republic of Adhârîbâdîyân to the present day, are Djell Matem Kull-zâde, Axkerwî, ‘Abd Allah Şâhîk, Diâfâr Djâbâbî, and, of the younger generation, the poets Sûleymân Rûştî, Şâmed Wurûgân, Raflîbîyî Nîgâr, Mirwârî Dîlbâzî. Bibliography: The most important studies of Adhari literary activity are listed in IA, s.a., Aser (M. F. Köprülü). Other notable works are: B. Çobanızade, Aseri edebiyatînî yeni devî, Baku 1930; M. Ali Nazîm, Aserbâyjânîskaya âbudıstênemaya literatura, Trudi Aserbâyjânîskovo filiâta, Baku, 1936; Muhasar Aserbâyjan edebiyatı turnih, 1943; Aniologiya azerbâyjânîskoy poezii, Moscow 1930; E. Nikîtin, La littérature des Musulmans en U.R.S.S., REI, 1934, cahier iii; M. E. Resulzade, Qâdîs azerbâyjan edebiyati, Baku 1930; A. Vâşap Yurtsever, Sîdîrîn Azerbâyjan edebiyatîndakî yeri, Ankara 1951. (A. Câfurîolu)

ADHRÂ (see NUDJÛN)

ADHRÂT, the Edrei of the Bible, to-day Derâ, chief town of Hawrân, 106 km. south of Damascus. Situated on the borderline between a basaltic region and the desert, the town, formerly renowned for its wine and oil, was always a great market for cereals and an important centre of trade routes. Before the Assyrian conquest (732 B.C.) the kingdoms of Damascus and Israel contended for it; some scholars have identified it with the Aduri of the Amarna tablets. The capital of Batanea, Adraa was taken by Antiocus III in 218 B.C.; then occupied by the Nabateans; next it came under Roman domination, and from 106 onwards was incorporated in Provincia Arabia. In the Christian era, Adraa became the seat of a bishopric of Arabia. In 613 or 614 the Persians, in course of their victorious campaign against the Byzantines, sacked the town and destroyed the olive-groves of the region (al-Tahari, i, 1005, 1007). On the eve of the bighûra, Adhîrât was the centre of an important Jewish colony; the tribe of Naḍîr, driven out of Medina by Muḥammad, took refuge there with their co-religionists. During the caliphate of Abû Bakr the inhabitants submitted to the Muslims, and acclaimed Umar when he passed through the region. It is stated that Muṣâwiya II b. Yazîd was born there. At the time of the Karmanî rebellion, 29/1306, the population was massacred.

We find the place, called 'City of Bernard d'Étampes', in the works of the chroniclers of the Crusades, in 1119 and 1147 in particular. During the Mamlûk and Ottoman epoch Adhîrât, capital of Bağhîniyya, formed part of the province of Damascus and was one of the stages of the Pilgrimage. The building of the railway linking Damascus, 'Amman, and Medina made it an important station, a junction for Buṣrâ and Hayâd; it was occupied by the British on 28 September 1918. At the present day Derâ is an important railway centre, the southern road from Damascus to Baghdad passes through it, and it is a Syrian frontier post on the Jordan border.

ADHRUB (cf. Aţţo), more rarely Muşhrûh, a place between Maṣân and Petra, a magnificent Roman camp (the surviving monuments are described by Brûnnow and Domaszewski), supplied by a gushing spring. This place, situated in pre-Islamic times in the Muhajir country, was visited by the Kurayshite caravans. It submitted to Muhammad on payment of tribute during the expedition to Tabûk (9/631); the treaty of capitulation handed down by our authorities is probably authentic. Muṣâwiya is said to have received there the homage of al-Ḥasan, the son of 'Ali. According to some Arab geographers Adhrûb was the chief town of the district of al-Sharât, in the province of al-Balkâ'. It is not mentioned since the time of the crusaders, who nevertheless possessed in that region Ahmant, Vaux Moyse (= Wâdî Mûsâ), etc.

Adhrûb became famous in Islamic history on account of the conference which took place there after the battle of Sîffîn, in order to reach a decision in the conflict between 'Ali and Muṣâwiya (see 'Alî and Muṣâwiya).

passions and effort, rendered vain by the inexorable passage of time. Of the former category a few sparse but significant examples have been preserved; we know that they were appreciated and imitated by Walid b. Yazid and, later, by Abū Nuwās. On the second theme, which was probably inspired by the poet’s own misfortunes, we possess numerous fragments which are interesting not only for their pious and ascetic Stimmung (a curious contrast with the hedonism of the baccic poetry), but for the reflections on and evocation of Orient(al (Arabo-Iranian) history which are to be found there, exemplifying the vanity and feebleness of man. Instances of this are the famous fragment on al-Nu’mān I and the castle of Khawwān (Arābīn, ii, 138-9 and elsewhere), another on Hatra (al-Buhturi, al-Ḥamāsa (Cheikho), 198), and one in Ibn Kūtayba, 112-3, on Djiżhima al-Abrāh and al-Zabbā’s, which almost looks like a ballad. From all these relics, amounting to rather less than 400 lines, we receive the impression of a brilliant artistic personality, who contributed to give Arabic poetic form to the old themes of Semitic pessimism, and, at the same time, in contrast to the Biblical author of Ecclesiastes, to accompany them with a positive appreciation of some of the good things of life.

Adī b. Zayd, Arab Christian poet of al-Hira, of the second half of the 6th century. His life was spent partly at the Sāsānid court at Ctesiphon (al-Maddīn), where he was secretary for Arab affairs to Chosroes Parwiz, and partly at the Lahmīd court at al-Hira, where he was a courtier and counselor of al-Nu’mān III, whom he had helped to the throne. This last, however, as a result of the intrigues of his enemies, later had him incarcerated, and finally put to death in prison (about 600 A.D.). Adī is one of the most curious figures in pre-Islamic Arabic history and poetry. With Nābihīg al-Dhūḥyānī and al-ʿAjījī he represents the type of courtly and urbane poet familiar with a higher level of culture and civilization than those of the desert. Arab and historico-literary tradition accordingly regards him as being on the fringe of the mainstream of the poetry of the dhūḥyayn, because of his “un-Nāḏīdī” language, although the subjects with which he dealt and the form which he gave them had a long and profound influence on the development of Arab poetry in the Muslim epoch. As Adī’s date has been lost, only fragments of his work are known to us (collected in an incomplete fashion and without any critical sense by L. Cheikho, Shwarāt al-Nasriyayn, 439-74, to which should be added fragments in al-Dhīḥīb, al-Haywān, iv, 65-6, al-Makdis, al-Bad wa l-Tawīkh, i, 151, Ibn Kūtayba, al-Shīr, 112-3, and various quotations in the Hamasa of al-Buhturi). Among these verses, those describing Biblical episodes (the creation and man’s first sin) are of interest for the history of religion and culture: they, together with other evidence, confirm that the poet was a Christian (ʿibād). But the main themes of his poetry seem to have been, on the one hand, praise of wine, and, on the other, meditation on the decay of human
conferr the vizierate on Ruzzik [q.v.], the son of the dead man. Ruzzik had no intention of giving up any of his prerogatives, and the caliph established relations with a pretender, Shāwar [q.v.], in order to invite him to rid him of Ruzzik. Shāwar recruited troops and took the offensive; he succeeded in taking Cairo and assuming power in Rabī‘ I 558/February 1163. The caliph quickly perceived that he had made a blunder, as the new minister continued, like his predecessors, to seclude his brother. Shāwar was soon betrayed by one of his own officers, Dirghām [q.v.], who took his place in Ramadān 558/August 1163. There were indeed grounds for the sad reflection of a contemporary writer, ‘Umāra, who observed that in those times “any man who had received the confidence of his brother betrayed him”. Then followed the crucial event which was to bring about the fall of the dynasty, Shāwar had succeeded in making his escape; he took refuge at the court of the Zangid prince of Aleppo, Nūr al-Dīn, and asked his help to regain power. The prince of Aleppo did not hesitate, being fired with the idea of re-establishing Sunnism in Egypt and reconstituting Islamic unity. The expedionary force was commanded by Shirkhū [q.v.], “a man full of audacity to whom fear was unknown”, who took with him Sālah al-Dīn, the future founder of the Ayyūbid dynasty. Dirghām was beaten in the open country and killed, and Shāwar became vizier again in Ramadān 559/August 1164.

Difficulties arose in connection with Shirkhū, but it does indeed seem that he was not to blame for them. Shāwar had demanded help from Sunnis against the Shi‘ites whose chief minister he was; the moment his treachery was more serious, for he asked for the intervention of Amārical to drive the forces of Shirkhū out of Egypt. The temporary results of this are well known: Shirkhū capitulated at Bībayy and went back to Syria, the Franks occupied Cairo for a short time, and Shāwar had Fustāt set on fire, being unable to defend it. For the vizier had become alarmed and was trying to negotiate the withdrawal of the Frankish troops. The caliph, who still had absolutely no authority, had now for his part decided to appeal to Nūr al-Dīn, thus signing the warrant for his imminent fall.

This was the third invasion by Shirkhū. It was decisive; he had Shāwar assassinated on 17 Rabī‘ I 560/18 January 1169, and seized the viziership, which he held for only two months, for he died on 22 Dhu‘al-Ḥijjah 1123 March. His nephew, Sālah al-Dīn, succeeded yet him.

Sālah al-Dīn energetically repressed the internal disorders, and did not hesitate to accept the challenge of street fighting in the capital itself, in the course of which the remnants of the Fātimid army, the Sudanese and Armenian forces, were exterminated. Then, on the same day, the name of the ‘Abbāsid caliph of Baghdad was proclaimed in Cairo, in an atmosphere of complete indifference. A theologian of Persian origin, al-Khabūshānī, carried this out, and three years later Sālah al-Dīn rewarded him by opening a college for him. The dedicatory inscription has been preserved; it celebrates the importance of Shafi‘ism, “characterized by a solid doctrinal foundation, unified by the method of al-Aghārṣī, against vain reasoners and other innovators”. Perhaps the caliph ʿAntī never knew of his misfortune; he died a few days after the ʿAbbāsid proclamation, on 10 Mu‘arram 567/13 September 1171. He was not yet twenty-one.

Thus ʿAntī was far from being a caliph on the scale of some of his predecessors. Nonetheless, we possess some interesting information about his personal appearance, for he received a Frankish embassy led by Shāwar. The Franks were taken, in the royal palace, to a vast hall divided into two by a great curtain of silk and gold, “with a pattern of beasts, birds, and persons”. Shāwar prostrated himself three times before this hanging, the third time in an attitude of most humble adoration. Suddenly the great tapestry was raised and the caliph appeared, seated on a throne of gold, encased with precious stones. His face was veiled, and the removal of the glove of his right hand was an elaborate performance. The ambassadors were told that “the caliph was a youth whose beard was just beginning to appear, and that he was dark-skinned and very plump”.

ADIGHE [see AIRAKS].

Al-ʿAdil, title of two Ayyūbid princes:

1. AL-MALIK AL-ʿADIL ABU BAKR MUHAMMAD B. AYYūn, with the honorific title of SAVF AL-DIN (“Sword of the Faith”, called by the Crusaders Saphadin), the brother, assistant, and spiritual heir of Saladin (Salāh al-Dīn, [q.v.]). He was born in Mubarram 540/June-July 1145, or according to other accounts in 538/1143-4, in Damascus or in Baalbek, thus being six or eight years younger than his celebrated brother.

Al-ʿAdil accompanied Saladin to Egypt in the third and final expedition of Shirkhū (564/1169). His first important appointment was to the government of Egypt during Saladin’s frequent absences in Syria after the death of Nūr al-Dīn in 569/1174. In this position he proved himself an able and loyal administrator, and apart from sending enforcements and supplies, when called upon, for Saladin’s army, he enjoyed full and independent powers in both external and internal affairs, being “the real Sultan of Egypt” (ʿImād al-Dīn, in al-Bark Shāhī, v, fol. 1171). After the capture of Aleppo in 579/1183, Saladin at first gave it to his son al-Zahir Ghāzī, but a few months later, on al-ʿAdil’s own request, transferred it to him with full powers of government (diploma in ʿImād al-Dīn, ibid., 124-6, dated Shāhānīn 579), and appointed his nephew Taqī al-Dīn ʿUmar to Egypt, as regent for al-ʿAdal [q.v.]. Although al-Zahir loyally submitted to his father’s decision, his disappointment on this occasion probably contributed to his later strained relations with al-ʿAdil. Three years later, however, in 582/1186, again on al-ʿAdil’s suggestion, al-Zahir was reinstated in Aleppo, and al-ʿAdil himself reappointed to Egypt, this time as regent for Saladin’s son al-Azīz Uthmān. He remained in this post through the campaigns of 583-4/1187-8 and the ensuing Crusade, himself taking part in the conquest of southern Palestine and Karak, and sending ships, men, and supplies in support of Saladin’s attempt to raise the siege of ʿAkkā (585-7/ 1189-91). During the subsequent operations in Palestine he played a particularly important part in the negotiations with Richard Coeur-de-Lion, with whom he formed such friendly relations that it was even proposed that he should marry Richard’s
sister Joan, and that they should rule jointly over Palestine. In the following year (588/1192), in consequence of the disorders resulting from Taki al-Din's unauthorized campaigns in the Djaistra and Diyar Bakr, al-Adil was transferred to the government of these provinces (at the same time retaining Karak and Balka). Behind these frequent changes there may perhaps be discerned a consistent policy applied by Saladin. Of all his brothers, the one in whom he had the most complete confidence, and on whose advice he relied in all contingencies, was al-Adil. It was therefore natural that al-Adil should be placed in command of that province which, in the changing conjunctions of events, was for the time being the most vital for maintaining the unity and strength of Saladin's possessions.

On Saladin's death in 589/1193, al-Adil's first task was, in fact, to defeat an attempt by 'Aziz al-Din, atabeg of Mosul, to reoccupy the Djaistra. Having secured his own province, he next intervened as mediator in the rivalries between Saladin's sons al-Aziz of Egypt and al-Afdal of Damascus. Though at first he supported al-Afdal, the latter's incapacity became so manifest that he finally joined al-Aziz to drive out al-Afdal and himself took over the government of Damascus as the viceroy of al-Aziz (592/1196). He was thus on the spot and ready to deal energetically with the Crusaders of 1197. On the death of al-Aziz (595/1198) the Egyptian troops split into two factions, one supporting al-Afdal, the other al-Adil. Al-Adil was besieged in Damascus until relieved by his Mosopotamian troops under his son al-Kamil, when he pursued al-Afdal into Egypt, defeated him, and was proclaimed Sultan of Egypt and Syria (596/1200). His claim was challenged by al-Abbas, who again besieged Damascus, but al-Adil succeeded in forcing his withdrawal and pursued him to Aleppo, where al-Abbas was finally compelled to recognize his suzerainty (598/1200).

In 604/1207 his Sultanate was formally confirmed by the Caliph, and thereafter he distributed his own provinces between his sons: al-Kamil in Egypt, al-Mu'izz in Damascus, al-Afdal in the Djaistra and Diyar Bakr, himself living from place to place as circumstances required.

So far as can be judged, the cornerstones of al-Adil's policy were to hold Saladin's empire together, in face of the ever-present possibility of fresh Crusades from overseas, and at the same time to serve the interests of the Ayyûbid house. Although the major governments were placed in the hands of his sons, it cannot be denied that they were the most capable to administer them, but he maintained at Aleppo the only one of Saladin's sons who showed any capacity and even guaranteed the succession of his infant son (who was also his own nephew), besides maintaining the governments of the collateral branches at Hims and Hamah. His personal prestige was unrivalled, and he employed it to strengthen the moral and material welfare of his subjects, by patronizing religion and learning, fostering agriculture and commerce, and maintaining peace. He followed Saladin's policy of negotiating commercial treaties with the Italian states, with the double object of increasing his own military resources and discouraging them from supporting fresh Crusades.

When the local Crusader states had ensured peace by a series of truces which covered almost the entire period of his reign, at the same time strengthening his defences against the danger which materialized with the arrival of the Fifth Crusade in 614/1217. Leaving the bulk of his forces on guard in Egypt, he moved into Syria to assist the Mu'azzam to screen the approaches to Jerusalem and Damascus, and while organizing reinforcements for the defence of Damietta fell ill and died at al-Akilin, outside Damascus, on 7 Djamād I, 615/31 August 1218.

2. AL-MALIK AL-ADIL II ABU BAKR SAYF AL-DIN, son of al-Malik al-Kâmil [q.v.] and grandson of the preceding, b. 617/1221. He succeeded al-Kâmil in the government of Egypt (655/1258) but was dethroned by his elder brother al-Sâlîh Ayyûb [q.v.] in 657/1259 and died in prison at Cairo on 2 Shawwâl 645/9 February 1248. See AYYÛBIDS.

Bibliography: Ibn Khallikân, no. 666; Sibt b. al-Djawzl, 466-485; Ibn Taghribirdî, Nûdûm, vi, 303 ff.; Makrizî, Sulûk, i, 223-341.

AL-ADIL B. AL-SALAR, ABU 'L-HASAN, Fâtîmid vizier. He was the son of an Ayyûbid officer, who entered the service of the Fâtîmids after the taking of Jerusalem by the Egyptians, in 491/1098. He married the widow of a Zîrid prince who had died in exile at Alexandria.

He first appears in history as governor of Alexandria, at the beginning of the reign of the Fâtîmid caliph al-Zâfîr. We learn that he assembled troops, marched on Cairo, and, on 7 Shawwâl 544/10 December 1149, installed himself in the vizier's house, which had been abandoned by his predecessor, Ibn Masâl, an old man, who was killed in Upper Egypt on 19 Shawwâl/19 February 1150. In spite of his repugnance, the caliph al-Zâfîr was forced to accept him as vizier, with the title of al-Malik al-Adil. He tried, however, to foment a plot against his minister, but the latter got wind of it and took his revenge in a bloodthirsty way by wiping out the corps of pages. Before long he himself was to fall victim to a stepson, 'Abbas b. Abî 'l-Futûh [q.v.], who assigned to his own son, Nasr, the task of assassinating Ibn al-Sâlâr, on 6 Muḥarram 548/3 April 1153. Nasr carried out the crime with his own hand, and by carrier pigeon informed his father 'Abbas, who had just taken command of the garrisons of Ascalon. 'Abbas hastened back to Cairo to assume the office of vizier.

An important point about the political career of Ibn al-Salâr is that he was the first to consider the possibility of an entente with the prince of Aleppo, Nûr al-Dîn, for making common cause against the Franks. It was doubtless premature; Nûr al-Dîn had his own personal designs on Damascus, which the Crusaders had besieged some years previously. As proof of his good will, Ibn Salâr had, in 546/1151, sent the Egyptian fleets against the ports of Jaffa, Sidon, Beirut, and Tripoli, where great damage was caused. The expedition was also a reprisal against the Franks, who had sacked Farama the previous year.

"ADILA KHATUN — ADIYAMAN 199

ADILA KHATUN, daughter of Ahmad Pasha, wife of Sulayman Pasha Mirzâlî ("Abî Lâyîl), Ottoman governor of Baghdad. During the lifetime of her husband she took part in the government of the province, holding audiences where the petitions were presented to her through the intermediary of an eunuch. She had also a mosque and a caravanseray built, bearing her name. When on the death of Sulaymân (1175/1761) power was about to slip from her hands, she sought up against his successor, "Abî Pasha, first the Janissaries, then five of the principal Mamlûks, and succeeded in having 'Umar Pasha, her brother in law, appointed as governor in the place of "Ali (1764). It is not known when and where she died.

(Gr. Huart*)

ADIL-SHAHS, designation of the Muslim dynasty which ruled over Bûdhjîpur, one of the succession kingdoms to the Bahmânâli kingdom of the Dekkan. The independent history of Bûdhjîpur extends from 895/1489 to 1097/1686 when the kingdom was conquered and absorbed by the Moghal empire. The founder of the dynasty, Ýûsûf 'Adîân Khan, was a slave in the service of Mâhmûd Gâwân, the famous Bahmânâli minister. After rising to the position of master of the horse at the Bahmânâli court, Ýûsûf was appointed to the provincial government of Dâwlatâbâd. He took an active part in the intrigues and civil strife which marked the declining years of the Bahmânâli kingdom and, according to the historian Firîshtha, caused the khalifa to be read in his own name in 895/1489. The Muslim historians of the dynasty claim a royal lineage for Ýûsûf 'Adîân Khan, asserting that he was a son of the Ottoman Turkish sultan Murâd II and was saved by his mother from death at the hands of the succeeding Ottoman Sultan, his elder brother Muhammad II, by being entrusted to a merchant of Sâwâ, Khâdja 'Imâm âl-Dîn, who educated him. Eventually he found his way to India, took service under Mâhmûd Gâwân, the famous Bahmânâli minister. There is no independent evidence corroborating the testimony of historians partial to the 'Adil-Shâh dynasty. That his background was Persian is generally accepted. Ýûsûf 'Adil-Shâh introduced Şi'a doctrines, being the first Muslim ruler in India to do so. During his reign, 895/1489-916/1510, spent in almost continual warfare against rival Muslim Dekkan princes and the Hindu rulers of Vijâyânagar, the Portuguese made their appearance off the shores of India, taking possession of the port of Goa. The successors of Ýûsûf 'Adil-Shâh reigned as follows: Ismâ'îl b. Ýûsûf 916/1509-941/1534 Mâllû b. Ismâ'îl 941/1534-943/1535 'All I b. Ýûsûf 943/1535-955/1557 'All II b. Ýûsûf 955/1557-987/1579 'All III b. Ýûsûf 987/1579-1035/1626 Muhammad b. Ýûsûf 1035/1626-1066/1696 Muhammad b. Ýûsûf 1066/1665-1083/1672 'Ali 1083/1672-1097/1686

 Until the beginning of the 11th/17th century and the advent of the Moghal threat from the north, the political history of Bûdhjîpur is filled by continuous warfare with the neighbouring Muslim states of the Dekkan, Bidar, Ahmadnagar, Golconda and the Hindu empire of Vijâyânagar. However, in 972/1564 the four Muslim principalities combined against Vijâyânagar and at Talikot decisively defeated its forces and sacked the capital. The power and prosperity of Bûdhjîpur reached its zenith under 'Ibrâmîl II though it was never free from turbulence among the nobles. Bûdhjîpur escaped the direct attentions of the Mughals until the reign of Shâh 'Djâhân, attempting instead to acquire territory from Ahmadnagar which was disintegrating under the onslaught of the Mughals. Bûdhjîpur and the latter clashed and in 1046/1636 the Mughals invaded Bûdhjîpur and forced a peace at which Bûdhjîpur acknowledged Mughal suzerainty. For the next twenty years the kingdom enjoyed peace. In 1068/1656 when Muhammad 'Adil-Shâh died, Shâh 'Djâhân objected to the succession of 'Ali 'Adil-Shâh II, invoking his claims as suzerain, and ordered 'Awrangzîb to invade the kingdom. Operations were stopped, however, at the news of Shâh 'Djâhân's illness and Bûdhjîpur survived only to face further danger from the Maharrat chief Sîwâdîl who in 1069-70/1659 destroyed a Bûdhjîpur army and its leader 'Adîl Khan in an ambush. Thenceforth Bûdhjîpur was rarely free from Moghal depredations. With the accession of a minor, Sîkandar 'Adil-Shâh, the kingdom was progressively bereft by Moghal and Maharrat of its provinces until in 1097/1686, after a siege of more than a year, the capital itself was taken by 'Awrangzîb and the remnants of the kingdom absorbed into the Moghal empire. Sîkandar died in captivity in 1111/1700. The 'Adil-Shâhs were great builders and made their capital at Bûdhjîpur [q.v.] one of the most magnificent monuments to the architectural genius of Islam in India. They were also great patrons of literature and the important historian Firîshtha wrote under the patronage of 'Ibrâmîl 'Adil-Shâh II.

(ண. Hardry)

ADIYAMAN, formerly called हिसं मन्सूर, or हिसान मन्सूर (modern spelling हिसन मंसूर), according to CuiNet also called Korkûn, a small town in S.E. Anatolia, capital of the ḥâdâ of the same name in the sağaţâ, now mülâşet, of Malatîya (formerly it belonged to the mülâşet of Ma'mûrât u'l-'Azîz), 37° 45' N, 38° 15' E. The numbers of the inhabitants given in the past vary: according to Elî, 10,000, mainly Armenians; according to Sâml, 25,000, of which only 1255 Christians; according to 'Ali DîwÎdî in one passage 1150, in another more than 25,000 of which more than a half were Kurds; according to CuiNet 2,000 (in the whole ḥâdâ of हिसान मन्सूर: 42,134). The number in 1945 was 10,932.

The name हिसान मन्सूर derives from the Umayyad amir मन्सूर b. Dîjâwâna, who was killed in 141/758 on the orders of the 'Abbâsîd al-Mansûr. Later, Ĥârûn al-Râshîd had the place fortified and gave it a garrison. Thus हिसान मन्सूर, or Adiyaman,
became the heir of the ancient town of the neighbourhood, Perre, whose site is still marked by aqueducts and rock graves. Subsequently, Êsîn Manşûr is rarely mentioned; in the 6th/12th century it belonged to the Artûkids.

(A. TAECHNER)

*ADJ*; ivory.

1. From early times there was a demand for ivory in the civilizations of the Near East. The Assyrians excelled in the carving of ivory and excavations at Nimrud and elsewhere have revealed masterpieces seldom surpassed. In the eastern Mediterranean area a tradition of ivory carving persisted and surviving examples have been attributed to the great centres of Antioch and Alexandria during the later centuries of Roman rule. There is no evidence that the workshops of Syria were producing ivories in the century before Islam; but in Egypt the tradition persisted into the Islamic period.

Probably the main source of ivory in the Islamic period was East Africa, the greatest ivory producing area during the Middle Ages. It is unlikely that India exported ivory in any quantity to the Near East or Europe as it scarcely produced enough for its own needs (W. Heyd, Histoire du commerce du Levant au Moyen-Age, Leipzig 1885, ii, 29-31). Surviving Islamic ivories seem to be of elephant tusk. Walrus ivory was used for the handles of daggers (see R. Ettinghausen, The Unicorn, Washington 1950, 120 ff.) and there are examples of bone carvings from Egypt.

The size and shape of the elephant tusk limits its use to relatively small objects or to elements in larger scale decoration. In the Islamic period objects made entirely of ivory include caskets of both rectangular and cylindrical form, combs, hunter horns or hunting horns and chess pieces. Techniques of decoration were carving in relief or painting on the surface with coloured stains including gilding; intarsia in which shaped ivory plaques either carved or painted were counter sunk in a wooden surface; incrustation in which sheets of ivory were cut to the required shape and stuck to the wooden surface; and incised decoration usually consisting of dots and concentric circles sometimes filled with coloured pigments. Finally, ivory sculpture in the round are extremely rare.

2. It would be strange if ivory had not been in use in the early Islamic period. But so far excavations at sites of the Umayyad and Abbasid period have revealed no objects of ivory. There are very few ivories attributable to the Sâsânîd period in Persia and perhaps the lack of a tradition accounts for this absence of ivory carvings in Mesopotamia and Persia. The cylindrical box with conical cover in the treasury of St. Gereon, Cologne, was made, according to the inscription, in Aden for a governor of Yaman probably about 136/753; but its technique and style belong rather to Egypt (RCEA, no. 41, ill. in Cott, p. 79a). In Egypt Coptic craftsmen kept alive an earlier tradition. Large rectangular panels with both intarsia and incrusted decoration have been variously described as panels of a tabût (coffin) and as book covers; the former is more probable. Pieces have been found in Egypt, and from their style were made by Coptic craftsmen in the 9th and 10th centuries. (For examples in the Arab Museum, Cairo, see Zakî Muhammad Hasan, *Isâlimî Art in Egypt* (in Arabic), i, Cairo 1935, pl. 35; in the Kaiser Friedrich Museum, Berlin, ibid. pl. 34 and F. Sarre, *Islamic Bookbinding*, London 1923, pl. i and fig. 1 where it is described as a Kur'ân cover; and in the Metropolitan Museum of Art, New York, M.S. Dimand, *A Handbook of Muhammadan art*, New York 1947, fig. 69.)

Bone and ivory carved panels have been found in the ruined mounds of Fustât and are associated stylistically with the wood carvings of the Fatimid period. These are cut in low relief and depict scenes of the chase, isolated animals and human figures set against a background of scrollwork. They were probably either panels of caskets or insets to larger wooden panels and can be dated to the 11th-12th century. (Examples in the Arab Museum, in Zakî Muhammad Hasan, *Kunûs al-Fatïmîyûn*, Cairo 1937, pl. 56; in the Victoria and Albert Museum, in M. Longhurst, *Catalogue of carvings in ivory*, i, London 1927, pl. xxviii; in the Metr. Mus., in Dimand, op. cit., fig. 70. For examples of carved woodwork, see E. Pauty, *Les bois sculptés jusqu'au xviie siècle* (C. gên. du Musée arabe du Caire), Cairo 1931.) Caskets of ivory both rectangular and round are mentioned by al-Mârkûzî, *Khiyat*, i, 414, in an eye-witness account of the treasures of the caliph al-Mustansîr.

Apart from these, it is impossible at present to attribute others with any certainty to Fâtîmid Egypt. A group which has the strongest claim to be represented by the beautiful panels carved in ajouré in the Bargello Museum, Florence, which are perhaps related in style and subject matter to the famous carved wood panels from the mâristân of Kalaûn now in the Arab Museum. In composition and workmanship they far surpass the Fustât fragments. (Well illustrated in *Meisterwerke Muhammedanischer Kunst*, Berlin 1910, iii, pl. 253. There is another example in the Louvre, see G. Migeon, *Manuel d'Art Musulman*, Paris 1927, fig. 148. For the mâristân panels, see Pauty, op. cit., pls. xlvi-viii.) Another group which has been ascribed to the Fâtîmid period comprises ivory oliphants or hunting horns and caskets. Their style is distinct and characterized by relief cutting in two planes; the decoration consists of interlaced circles each containing an animal or bird and, in the caskets, human figures too. Similar treatment of the decoration occurs in the repertoire of Fâtîmid ornament as well as in that of Muslim Spain. An attribution to Sicily or South Italy whose Norman rulers are known to have employed Muslim craftsmen should also be considered, for there are a number of oliphants of apparent western manufacture which reproduce in a general way the decoration of the oriental ones. If the latter were in fact made in Egypt it is at least possible that they were made for export to the West. (See O. von Falke, *Eifelsteinhörner*, 511-7, who attributes six horns and a fragmentary piece in the Metropolitan Museum to this group; also four caskets, seven plaques (in the V. and A. Museum) and an ivory box (in the Metr. Museum).) As has already been mentioned the technique of incrustation was practised in Egypt. A casket of wood with ivory incrustations in the Cappella Palatina, Palermo, has been attributed to Egypt since it is connected in style and technique with a
fragmentary wood panel incrusted with ivory found at Edfu and now in the Arab Museum. Its date would appear to be the end of the 12th and beginning of the 13th century. (See Monneret de Villard, *La Casetta*, pls. i-v; for the Edfu panel, pl. xxvi.)

While the technique of incrustation was being adopted by the Muslim craftsmen, the Copts maintained the more ancient tradition of intarsia decoration. Both techniques were used in the doors of the Church of the Virgin in the Dayr al-Suryānī (in Wādi al-Nāfrīn), which were made in the first half of the 10th century (see Monneret de Villard, pls. xxi-xxv). But incrustation was rarely used in later times and was confined to small objects. Intarsia, on the other hand, was frequently used in the Ayyūbīd and Mamlūk period for the decoration of large surfaces. The famous minbar made in Aleppo by order of Nūr al-Dīn in 1168-9 A.D. and sent to the Masḡīd al-Курсā in Jerusalem, is the first of a series of works in which panels of ivory or bone, either plain or carved, were inserted into a wooden ground so as to form geometric patterns, stars or polygons. Intarsia decoration is found in kursīs, minbars and dikbas of the Mamlūk period. The contrast between wood and ivory serves to emphasise the abstract pattern and the effect is heightened when the wood is stained or painted with arabesque or inscriptions. After the fall of the Mamlūks the technique was adopted in Turkey where there are fine examples of mosque furniture with intarsia decoration dating from the 17th century. (The minbar in al- kursā is illustrated in M. van Berchem, *CIA, Série du Nord, Jerusalem*, iii, no. 277 (p. 393 ff., pls. 29-30). Mamlūk examples in L. Hautecoeur and G. Wiet, *Les Mosquées du Caire*, Paris 1932, ii, pls. 172-3, and Turkish examples in E. Kühnel, *Meisterwerke der Archäologischen Museen in Istanbul*, iii, Berlin-Leipzig 1938, pl. 19.)

3. A group of ivories which has given rise to much discussion consists of caskets, combs and crosiers with painted and gilded decoration. Many of these found their way to the treasuries of European churches in the Middle Ages where the caskets were used as reliquaries or pyxes and the combs for liturgical purposes. P. B. Cott’s *Siculo-Arabic Ivories*, which can claim to be almost complete, illustrates some ninety pieces in which the painted decoration is still visible. All have certain common stylistic and technical features. In many pieces all trace of the original colour has disappeared and the well preserved state of the famous casket of Würzburg is exceptional. Generally patterns are outlined in black and filled in with a palette which includes red, blue and green, and gold applied in both liquid and leaf form. Many pieces are inscribed around the rim of the cover in Kūfī or Naṣīḥ script. Most of these inscriptions contain benedictory phrases addressed to the maker or owner. If it is generally agreed that the painted ivories can be assigned to the 12th and 13th centuries, opinions differ regarding the place of origin and unless a piece comes to light with a revealing inscription or a reference in some contemporary source is discovered there can be no final answer to this question. In the circumstances style and iconography are the only evidence.

On stylistic grounds they have been variously attributed to Persia, Mesopotamia, Syria, Egypt, Spain and Sicily. It is true that the decoration on the so-called minbar of Persia dating from the second half of the 12th to the 13th century has a superficial resemblance to that of the painted ivories, in the rather sparse arrangement of the decoration and in the figural representations, especially the horseman. Attenuated versions of the motives found in the decorative arts of Syria occur on the ivories. The decoration of one distinctive group of painted ivories contains star interlacements and geometric ornaments so similar to those found in the art of Granada during the Nasīrīd period that their attribution to a Granada workshop during the 14th and 15th centuries seems certain. (Ferrandis, nos. 89-103. Ferrandis accepts the Sicilian origin for the remainder but suggests that three of these were “imitations” made in Spain, viz. nos. 9 and 65 in Cott and a casket in the parish church of Fitero, Navarre, not mentioned by Cott: Ferrandis, no. 21.) Apart, however, from this small and somewhat isolated group, the closest parallels are to be found in the art of Fāṭimid Egypt: in the fragments of pottery from Fustāt, wood carvings, notably the mūrisīn panels, and the greatest surviving monument of Fāṭimid painting, the ceiling of the Cappella Palatina in Palermo. Kühnel (cf. Bibliography), however, argues for their Sicilian (and, in some pieces, Spanish) origin. In this connection, a casket found at Carroñón de los Condes in Palencia and now in the Museo Arqueológico, Madrid (Ferrandis, no. 9) is important. This is a rectangular box, the flat cover of which is inscribed on intarsia with a dedication to al-Mu‘izz, the last Fāṭimid to reign from Ifrīqiyah, and the interesting information that it was made in al-Manṣūrīyya, the Fāṭimid capital near al-Kayrawān. The maker’s name is unfortunately almost entirely obliterated except for the nisba al-Khurasānī. The casket can therefore be dated between 341/952 and 365/972. The sides are decorated with a border of scroll-work painted in green and red. Although the drawing is cursory and the style dissimilar to that of the group under discussion, it suggests that the technique of painting on ivory was already known and practised in the Maghrib in the third quarter of the 10th century and was presumably introduced from Egypt.

But the fact remains that these painted ivories give the impression of a style not entirely in accord with the canons of Islamic art. The sparse treatment of the decoration and the frequent carelessness in the drawing are in marked contrast with the careful presentation of decoration and precise drawing to which we are accustomed in Islamic art. Indeed, were it not for the Arabic inscriptions, there might well be doubt in assigning them to the Islamic world at all. For this reason it is likely that these objects originated in an area on the fringe of the Islamic world which was open both to oriental and occidental influences. The fact that certain caskets contain Christian figures, that there are two crosiers with painted decoration identical to that of the caskets, and that painted ivories are found exclusively in the countries of Europe suggests that they were, at least, made for the Western market. (Christian figures occur on nos. 38, 39, 42, 44, 80 in Cott; for crosiers see Cott, nos. 148, 149. The Arabic inscription on the “Granadan” casket in the Instituto de Valencia de Don Juan states that it was made to contain the consecrated Host (Cott, no. 138). It is usually agreed that the combs were for liturgical
Probably there was more than one centre where painted ivories were produced, and the poorer examples were copies of finer prototypes. But until we possess a documented piece, there can be no certain solution of the problem.

By far the most remarkable of the mediaeval Islamic ivories are the carved ivories made in Muslim Spain and among them are masterpieces which rival the Byzantine and Western ivories. Fortunately there are enough documented pieces to make it possible to trace their history over a period of little less than a century. Unlike most of the ivories which have been discussed so far, they were produced under royal patronage and include some made for presentation to royal personages. During the first half of the period, the centre of production was in Cordova and then moved to Madinat al-Zahrāʾ; thus they belong to the declining years of the Caliphate of Cordova. The earliest of the Hispano-Arabic ivories were probably made in Cordova and are characterized by the exclusive use of plant ornament (see Ferrandis, nos. 1-3). In the earliest surviving products of the new workshop at Madinat al-Zahrāʾ the decoration of one consists of paired birds and animals amid flowering plant scrolls and that of another includes paired dancers (see Ferrandis, nos. 4-5). The artists of both these groups were evidently familiar with the carved marble panels in the Great Mosque of Cordova and the marble revetments found at Madinat al-Zahrāʾ. Another group consists of pieces made in the Madinat al-Zahrāʾ workshop by an artist who signs himself Khalaf (Ferrandis, nos. 7-10). His masterpiece is the circular box belonging to the Hispanic Society in New York. His style is quite distinctive; birds, animals and figures are conspicuously absent and the flowers and leaves which are deeply cut are rendered with exuberance and a close attention to detail.

But undoubtedly the greatest achievement is the series of ivories with scenes with figures and animals which, indeed, must be numbered among the most precious examples of Hispano-Arabic art; for not only are they first-rate in artistic quality, but as social documents the scenes of court life and of chase which they depict give us a rare picture of the refinements of Andalusian civilisation. The three finest examples (Ferrandis, nos. 13-4, 19) are the two cylindrical boxes in the Louvre and the Victoria and Albert Museum, the first dedicated to al-Mughira, brother of al-Ḥakam 1 I and dated 357/968, and the second dedicated to Ziyād b. Aflah and dated 359/970, and the casket in the Cathedral of Pamplona, dedicated to a son of al-Manṣūr and dated 399/1008. The latest is the latest surviving piece from the Cordovan workshop. With these are associated some five other pieces (Ferrandis, nos. 15-6, 20-2). Scenes are enclosed in lobed circles, polygons or arcades. The plant decoration is subordinated to the animals and human figures which are proportionally large; the symmetrical arrangement of these does not preclude naturalistic effect. Scenes include the prince with attendant servants and musicians, huntsmen with falcons or at grips with their quarry and men performing rustic tasks such as gathering the date harvest, animals struggling with their prey; and in one case an elephant is depicted. None of these pieces is signed except the Pamplona casket which bears the name of more than one artist.

After the fall of the Caliphate of Cordova, the workers founded a new establishment in Cuenca where they were given an asylum by the Dhu 'l-Nūnis, rulers of Toledo. The earliest surviving product (Ferrandis, no. 25) is dated 417/1026 and signed with the maker’s name Muhammad b. Zayyān. From this it is clear that the workshop was already established before Ismāʿīl al-Żāfīr won the kingdom of Toledo in 427/1036. The last documented piece (no. 26) bears a dedicatory inscription to Husam al-Dawla son of Yaḥyā al-Maʾmūn and governor of Cuenca and is dated 441/1049. It is also signed with the maker’s name ‘Abd al-Raḥmān b. Zayyān and shows that the workshop was in the hands of a single family. The Cuenca ivories lack the vitality and invention of the Cordovan ivories. Cordovan motives recur but their presentation is monotonous. Animals and scenes are not enclosed by the lobed circles and polygons but are arranged in horizontal or vertical registers in which they are often repeated in identical form.

After the middle of the 11th century it seems that the Christian kingdoms of the North took the lead in ivory carving, although their products show the influence of Andalusian techniques. Yet the tradition of ivory carving was not entirely lost in Muslim Spain, for among the surviving examples of the decorative arts of the Nasrid kingdom of Granada are sword and dagger handles which incorporate carved ivory with floral and geometric designs and inscriptions resembling those of the Alhambra stucco revetments. (The most important pieces are illustrated in L. Torres Balbás, Arte Almohade — Arte Nazari — Arte Mudéjar (Arts Hispaniae iv), figs. 256B and C, and 257; also a bow with ivory in-crustations, fig. 255, and the staff of Cardinal Cisneros, said to be the sceptre of the Nasrid kings, fig. 246. For two other sword handles see Miguel, op. cit., fig. 167. Also attributed to Granada are the “eared” daggers with carved ivory plaques in the handles and “ears” of the pommel (see Torres Balbás, op. cit., figs. 256D and B.)

Besides ivory carving, Cordova had acquired a preeminence in ivory in-crustation which was to survive the fall of the Umayyads. Muslim historians and travellers describe the minbar, or pulpit, made by order of al-Ḥakam II for the Great Mosque. But neither this nor the minbar made some years later for the mosque at Fez by order of Hishām II have survived though from the descriptions both were evidently formed of wooden panels with ivory in-crustations. One of the earliest surviving Maghribi minbars with this kind of decoration is the magnificent example in the Kutubiyya of Marrakush. According to the inscription (see J. Sauvaget, in Hesp., 1949, 313 fl.) this was made in Cordova and dates from the time of the Almoravids. Technically derived from mosaics, the decoration consists of interlaced bands incrusted with contrasting wood and ivory cubes enclosing polygons of carved arabesques, larger flowing floral or geometric patterns and a frieze with inscription in which the letters are formed of ivory sheets. The ivory is either natural colour or stained. (For detailed study and illustration see H. Basset and H. Terrasse, in Hesp., 1926, 108-204; also Ferrandis, no. 159.) Other minbars, it technically less perfect, reveal a rich inventiveness. (The earliest is the minbar in the Mosque of al-Karawiyīn, Fez, made at the close of the Almoravid period in 1145. Others are the minbars in the mosque of the Kaṣaba, Marrakush, for which see Basset and Terrasse, 244-70, and Ferrandis, no. 160, and the minbars in the mosque of Tāzā (1292-3) and in the Madrasa Bā Ṣīnāniyya, Fez.
There is a copy of the Kasaba minbar in the mosque of al-Mawwasin, Marrakush, dating from the 16th century. In Spain, few large-scale works of incrustation have survived; but there is a particularly fine pair of doors from a cupboard in the Museum of the Alhambra (Torres Balbas, fig. 244-5; Ferrandis, no. 167; other examples, Torres Balbas, fig. 243, Ferrandis, nos. 172, 174). Equally remarkable are caskets with ivory incrustations, decorated either with figural representations or geometrical designs (Ferrandis, nos. 161-3, 168-71). All these caskets have been found in Spain and because of the similarity of their decoration to certain Toledan stucco work have been attributed to Andalusia and the 12th to 13th century. Finally the handle of the so-called raper of Boabdil in the Museo Historico Militar, Madrid, has delicate ivory incrustations, see above.)

The works of incrustation have survived; but there is an eloquent witness of the skill of the Granadan craftsmen. (See Torres Balbas, fig. 240, and E. Kühnel, **Maurische Kunst**, Berlin 1924, pl. 124. The staff of Cardinal Cisneros has also ivory incrustations, see above.)

6. In this account of ivory products in the Islamic world, Persia figures scarcely at all. No piece has yet appeared that can be attributed to pre-Mongol Persia. It would be rash to assume for this reason that the art of working in ivory was unknown for there are references in contemporary literature which suggest the opposite. (Monneret de Villard, *op. cit.*, 15, quotes al-Kazwini (Wüstenfeld), ii, 273, who remarks that the inhabitants of Tark, in the district of Iṣfahān, are skilled in making objects of ebony and ivory. M. de V. suggests that this implies a local industry of incrustation.) We can only blame the accidents and ravages of time for this absence. That incrustation was practised in later times is proved by the pair of wooden doors inlaid with ivory from the Gūr-i Mīr, Samarkand, now in the Hermitage Museum, Leningrad (Survey of Persian Art, vi, pl. 1470). Made about 808/1405, their decoration is typically Timurid. A pen-box (S. Lane-Poole, *The Art of the Saracens of Egypt*, London 1886, fig. 72) and dagger handles dating from the 18th century or later (P. Holstein, *Contribution à l’étude des armes orientales*, Paris 1931, ii, pl. lxi) imply the existence of a native school of ivory carving.

**ADJA** and **SALMA**, the two main ranges of the central Arabian mountain group of Djabalā Tāyyī, modern al-Dijabal. An old tale of the type of “metaphor as punishment for sin” is attached to them; the tale is connected with reality insofar as Adja and Salma occur in Old Arabic and in early North Arabic dialects as personal names.—According to Ibn al-Kalbi’s “Book of Idols”, and one of the two versions in the *Djambara* by the same author, the God Fals/Fils/Fulus was worshipped in the guise of one of the clifs of Adja. This cult is probably of great antiquity, as the cult of a certain cliff (Ra’n) in the valley of al-Ola/Dēdān, in the 2nd century B.C., and later between 30 and 130 A.D., is attested by the evidence of some proper names. **Adja** and **Salma**, the two main ranges of the central Arabian mountain group of Djabal Tāyyī, modern al-Dijabal. **Bibliography:** W. Caskel, *Liyyan und Liyyanisch*, Köln and Opladen 1954; Ibn Hishām, 56; R. Kühne-Kleinberger, *Das Götzentuch*, R. al-Asnām, des Ibn al-Kalībī, Leipzig 1941, 61 f.; J. Wellhausen, *Reste arabischen Heidentums*, 52 ff.; Yākūt, i, 122 ff., iii, 912. (W. Caskel) **'Adja** and **'Salma**, “marvels”, are in the first instance the marvels of antiquity. In addition, the term and its derivatives comprise, already in the Kur’ān, the marvels of God’s creation. **'Adja** and **'Salma** are thus any kind of casual data about extraordinary monuments, the three realms of nature and meteorological phenomena, and the two aspects under which they are viewed come from the Greek spirit on the one hand and the eastern biblical ideas on the other.

Islam, the continuator of the classical tradition as it was formulated in the East, was interested in exceptional monuments, but in a spirit different from that of the Greek. Among the surprising buildings described as marvellous by the Arab authors, the Pharaohs of Alexandria acquired great notoriety. The monument, described by them in greater detail than by the Greek and Latin authors, existed until the 8th/14th century and was erroneously attributed to Alexander the Great. In general the Macedonian king represented a universal symbol, a mixture of Greek conqueror and of the spirituality of the ancient Orient, and many famous monuments were attributed to him.

As to the marvels of God’s creation, these are no wanton inventions of fancy, but are often based on a minute and exact observation of nature. Thus in the *al-Hayawan* of Dībhīz, there are rudiments of “Darwinism”, and Abū Ḥāmid describes beavers’ dams, which he considers to be miraculous; Ibn al-Fakhrī gives an account of the phenomena of magnetic and electrical phenomena to be observed on a mountain near Āmid.

It was, however, inevitable that these two conceptions of the **'Adja** and **'Salma**, so different from the ideological point of view, should fuse together to give rise, especially in the Arabic geographical texts, to a peculiar literary genre. The **'Adja** and **'Salma** by the captain Buzurg b. Shāhiyār (q.v.) deserves to be mentioned in the first place by its early date and by its incontestable documentary value for its period. It starts with the statement: “God has divided the marvels of creation into ten parts, of which nine belong to the East, one to the other points of the compass. Of the nine parts belonging to the East, eight belong to India and China and one only to the other regions of the East...” The book consists of stories by the navigators of East Africa, India, and the islands of S.-E. Asia; some of them show an admixture of real observation while others can be explained only by study of the folklore of the people in question. While the marvels of far-away countries found their literary form already in the 4th/10th century, the curiosities of the various Islamic countries were only described in excursus in the geographical treatises (e.g. in al-Maqrīzī). It was only in the 6th/12th century that these isolated zoological, ethnological, archaeological etc. accounts acquired a particular literary form, especially through Abū Ḥāmid al-Gharānī (q.v.) who collected them in his *Tuhfat al-Adab*. The Arabic literature of the 4th/10th and 5th/11th centuries called “classical”, is characterized by an equilibrium between erudition and aesthetic creation. When this equilibrium was disturbed by the decadence of Arabic literature, the writers increasingly disregarded science; the **'Adja** and **'Salma** thus came into greater favour and reached their full development in the cosmographies of the 8th/14th century. The greatest
author of this period was al-Kazwini [q.v. whose work is divided into two parts: *adjal* al-Maklukdt, "The Marvels of Creation", and *Adjāl al-Bulūdūn", "The Monuments"; thus the best representative of the genre bears witness, centuries later, to the two forms of *adjal* mentioned above. At this epoch the cosmographical works increasingly neglect geography; what remains are collections of entertaining stories. It was also in this period that the Sindbād cycle, which is but a literary adaptation of the accounts of Buzurg b. Shahriyar, was introduced into it.

In the first centuries of the *hijra* the *adjal* were correctly situated in geographical space by those who observed them or by the authors who copied the former; this is also the case with the earlier Arab geographers and with Abu Ḥamīd. As the scientific interest decreased, however, and the popular interest in amusing literature grew, the data lost their precision and their exact geographical localization. The items of real knowledge acquired in Islam and unknown in antiquity recur in general in the descriptions of the *adjal*; yet these *adjal* acquire a particular role in the history of thought in that they transport us from tangible reality to the realm of fancy constituted by the oriental tales. Abu Ḥamīd, the precursor of the popular cosmographers, is one of the authors who had most influence on the Arabic and Persian writers in the age of decadence of Islamic literature in the late Middle Ages; it is not for nothing that his books were among the main sources of al-Kazwini. On the other hand it is through the popular cosmographies that the *adjal* stories sought an essential contribution of the Muslim genius to world literature in the form of the tales of the *Arabian Nights*.

---

ADJAL, the appointed term of a man's life or the date of his death; a topic regularly discussed in the earlier *kalām* along with that of *rizk* or sustenance. The idea that the date of a man's death is fixed presumably belongs to pre-Islamic thought. The word *adjal* is used in the Kur'ān in a variety of ways, e.g. for the date when the embryo emerges from the womb (xxii, 3), for the period Moses had to serve for his wife (xxviii, 28 f.), for the date when a debt is due (ii, 282), etc. In creating the heavens and the sun and moon, God fixed an *adjal* for them (xlvi, 3; xxix, 5 etc.); with this is connected the coming of the Last Day. More especially it is used for the term of existence decreed by God for communities (xxiii, 43 etc.) and for individuals (ix, 5 f.; vi, 2). This term is neither to be anticipated nor deferred; its fixity explains why the wicked are not punished at once. "No one has his life prolonged or no one has his life cut short except (as it is written) in a book of God's decrees" (xxxv, 12). The *adjal* is not shortened even through sinning (xxxv, 44, xlii, 13), while on the other hand it may be concluded that Muhammad presupposed the shortness of the *adjal* as a punishment, but it might be restored to the original length through repentance (xi, 3, xiv, 11). The Kur'ān very often emphasizes the expression of *adjal* as the irrevocable period of life assigned by God with the epithet *musamamā* (xxxix, 43; xl, 69, and elsewhere), "enunciated" (without ambiguity) "through a word which had proceeded from God" (xlii, 3); the same epithet is applied to the course of the unchangeably operating phenomena of nature (xxxi, 28, xxxv, 14, xxxix, 7). The decreed duration of the world is also often designated by the same formal expression (vi, 2, 61, xxxv, 44). One may notice in the commentaries to the Kur'ān the tendency to refer the *adjal* *musamamā*, where it is possible, to the period of the end of the world.

According to tradition (al-Bukhārī, *Kadar*, 1; Muslim, *Kadar*, 3 etc.) *adjal* and *rizk* are two of the four things determined for a man while he is in the womb. Some of the early Mu'tazīlīs apparently suggested that a man who met a violent death had not reached the term decreed for him by God. Perhaps they said this because they hesitated to ascribe the evil of killing to God, just as they did not assert that sustenance consisting of stolen goods came from God. In a passage like Kur'ān xli, 67, *adjal* is capable of being interpreted as natural term or, as they put it, "the time at which God knew the man would have died had he not been killed" (cf. *Ibnāna*). This view, however, offended the deep-rooted feeling that the date of death was fixed. Even Abu 'l-Hudhayl said that, if the man had not been killed then, he would have died in some other way. Al-Nāḍждīdīr insisted that, whatever the mode of death, a man died at his term; and he was followed by the opponents of the doctrine of *kadar*, including al-Asbārī. Al-Albānī tried to avoid ascribing evil to God by distinguishing between the death and the killing. No fresh points were raised after this, but the old points were frequently repeated by theologians. — The dogmatists discussed in connection with *adjal* also the question, in how far God lengthens or shortens the *adjal* as a reward for obedience or as a punishment of disobedience respectively, a question to which the answer results in the harmonizing interpretation of the Kur'ānic verses quoted above and puts the problem of *adjal* in the domain of the debates on *kadar* (q.v.). An aspect of the problem of *adjal* concerns the death of great masses by elementary catastrophes, war, persecution, etc.

Jewish religious philosophy treats the problem from the same point of view.

(I. Goldziher-W. Montgomery Watt)
'ADJALA, Arabic word borrowed from the North-Western Semitic languages (Hebrew 'agîlâh, Phoenician ʿgîl, Jewish-Aramaic ʿgâlāt, Syriac ʿgâlāt, Old Egyptian loan-word of the New Empire ʿgrt = *ʿgâlta, whence Coptic âûlûc). See references in L. Kohler, Lexikon der Väterischen Texte, Leiden 1953, 679), derived from a root denoting rotundity or swiftness. In Arabic, as in these languages, it designates wheeled vehicles (chariots, carts, wagons) drawn by animals; but in Arabic it is a generic term. It is for this reason that the use of these vehicles in the Islamic Orient will be treated here, if only in a fragmentary way.

Before Islam, the use of various kinds of cars (among them those termed 'agîlâh, etc., in the Semitic countries of the west and in Egypt) is well attested in the whole of the Near East (cf. e.g. V. Gordon Childes, Wheeled Vehicles, in A History of Technology, i, Oxford 1954; A. G. Barrois, Manuel d'archéologie biblique, ii, Paris 1953, 98-100, 233; A. Salonen, Die Landfahrzeuge des Alten Mesopotamiens, Helsinki 1951; Erman and Ranke, Ägyptien, Tübingen 1923, 584; P. Montet, La vie quotidienne en Égypte, Paris 1946, 169). In spite of the decline of the chariot of war as early as the Persian period (Salonen, 21), chariages are frequently mentioned in the same region during the Hellenistic and Roman periods (cf., e.g., for Egypt, C. Prévost, L'économie royale des Lagides, Brussels 1939, 214; W. E. Crum, A Coptic Dictionary, Oxford 1939, 26; Jewish texts in S. Kraus, Talmudische Archäologie, Leipzig 1910-2, ii, 336-8 and G. Dalman, Arbeite und Sitte in Palästina, ii, 115-7, iii, 58 f., 88-90, vi, 193 etc.). The same applies for pre-Islamic North Africa (R. Capot-Rey, Géographie de la Circulation, Paris 1946, 87).

In Islamic times, the texts concerning wheeled traffic seem much less frequent. The word 'agîlal occurs but rarely in the Middle Ages. None of the passages allows the technology of these vehicles to be determined; at the most they mention the animals which draw them. The lexicographers do not seem to deal with the subject. The reference in Kalâla wa-Damna (Cheikhho), 54, to a vehicle drawn by two oxen is derived from the Syriac carraige, which is written in Middle Arabic carraige; so that 'agîlal is derived from ʿgâlāt. In historical and geographical texts one comes across references, e.g. for Egypt, to such vehicles used for heavy loads (Umâyjâd period: Yâkût, i, 260; al-Masâlik (Murâdî, iii, 28 f.) in the 4th/10th century mentions large wagons drawn by buffalo in the Syrian jâbgh; 7th/13th century: Ibn Saʿyid, in al-Mâlikâr, Anâlecès, i, 691; for Morocco in the 8th/14th century: al-Dzamâ, Zakrât al-Ās (Bel), 27, transl. 69 f.).

Most of the references, however, concern vehicles used in exceptional circumstances, and which appeared to cause considerable astonishment. E.g. in 424/1035, a pilgrimage from Basra to the holy cities on an 'agîlal drawn by camels (Ibn Taghrîbîrî, Cairo, ii, 307); a few years later, an 'agîlal drawn by men, which carried the sick Ahmad b. Tûlûn from Antioch to Egypt (Ibn Abî Uṣaybîs, ii, 84); in 307/919 the large vehicles prepared in Baghdad for the public humiliation of the rebel Yûsûl b. Abî ʿSâdî (K. al-Ṣûyûnî, in Ibn Miskawayh, ed. Amelodroz, i, 49, n.). The Christians during their feasts used state carriages, e.g. in Edessa on the eve of the feast of the cross (Husayn b. Yâqûbî, in al-ʿUmrî, Mâskâlî, i, Cairo 1924, 265). The animals mentioned as drawing these vehicles, which were perhaps of very different shapes, are varied: horses of several breeds, camels, oxen, mules, donkeys, buffaloes, perhaps also elephants; as noted above, human traction also was used on occasion.

The word often serves to designate foreign vehicles: Byzantine racing chariots (Ibn Rusta, 120, Ibn Khuwarîdâbhîb, 112), wagons of the Christians of the Iberian peninsula (Ibn ʿIdhârî, iii, 86; Aghbar al-ʿAgir, ed. M. J. Müller, Die letzten Zeiten von Granada, Munich 1863, 44, transl. 147-8), later Turkish arabas.

In Muslim Iran, literary references to carriages (garden) seem to be equally rare (B. Spuler, Iran in fruhislamischer Zeit, Wiesbaden 1952, 428-9, notes no examples). Firdawsî, however, transposes into the world of myth wagons drawn by buffaloes or oxen (refl. in F. Wolff, Glossar zu Ferdosîs Schahname, Berlin 1935, s.v.). A wooden chariot used by Isfandîyâr (Shâh-nâmâsh (Mohîl), iv, 500-2, 510) is often shown in miniatures (e.g. Survey of Persian Art, v, 832 D; La guirlande de l'Iran, Paris 1948, 30), generally as a cart with two spokeed wheels drawn by a horse tied between two shafts. Persian miniatures occasionally show other illustrations of wagons: a four-wheeled wagon drawn by a horse (MS from Tabrîz, end of 7th/13th century, in E. Blochet, Musulman Painting, London 1929, pl. xii); a cart with two spokeed wheels drawn by a horse tied betwveen two shafts on which are carried materials for building a mosque (miniature of Bihzâd, A.D. 1457, in E. Kühnel, Miniatures in the Islamic Orient, Berlin 1922, pl. 51); a kind of yurt probably mounted on wheels, drawn by horses, and used to carry to Tabrîz the corpse of Ghâsân Khan in 703/1304 (MS of 9th/15th century, reproduced in E. Blochet, Les peintures des manuscrits de la Bibl. Nat., Paris 1914-20, pl. xix, cf. p. 272).

On the other hand, carts (bâgghî, later also arabâ, arabâ) were very frequently used by the Turco-Mongols of Central Asia until the 14th century, after which the economic decline of the nomad world led to a lessening of their use. Ibn Battûta, ii, 361, mentions them in Southern Russia. This vehicle, the name of which was arabicised as araiba and even ʿaraibiyâ ("Arabian"), was introduced in particular into Mamlûk Egypt (see araiba). Its name supplanted in popular use the word 'agîlal as a generic term for carriage; so that 'agîlal is used not only for modern Arabia, but also for modern Egypt as a name for bicycle. In turcised Anatolia the byzantine wagon (kâghmûn) remained in use.

The medieval situation survived in the countryside up to modern times. In Syria, Volney states in the 18th century: "It is noteworthy that in the whole of Syria no wagon or cart is seen; this is probably due to the fear lest they should be seized by the government's men and a heavy loss should be suffered in a moment" (Voyage en Egypte et en Syrie, Paris 1825, ii, 254). In Palestine, before the first world war, only Circassians and foreigners had peasant vehicles (Dalman, Arbeite und Sitte, ii, 96 and fig. 40-2; A. Ruppin, Syrien als Wirtschaftsgebiet, Berlin-Vienna 1920, 424-5). On the whole, the situation was the same all over the Near East, except in Anatolia. For Morocco at the beginning of the 20th century, see Ch. René-Leclerc, Le Maroc septentrional, Algiers 1905, 87, 251-2; idem, in Renseignements colonies, 1905, 248; R. Le Tourneau, Fès avant le Protectorat, Casablanca 1949, 415. Various explanations have been offered, the most common being the bad state and insecurity of the roads (K. Brunschvig, La berberie orientale sous le Hafsid, ii, 256; J. Weulersse, Paysans de Syrie et du Proche-Orient, Paris 1946, 133-6; cf. Mes, Renaissance, 461, Lévi-Provençal, Hist. Esp. mus., ii, 98). Yet the comparison with the condition of the same countries
in antiquity and with the Turkish countries makes this an unsatisfactory explanation. The increasing scarcity of wood, due to the loss of forests, should perhaps be taken into consideration, and one could perhaps establish a parallel with the degeneration of the plough (cf. A. G. Haudricourt, *L’homme et la charrue*, in the press, and Mihrath). Also the improvement of transport due to the increasing use of the camel and the pack-saddle must be taken into account.

Nevertheless, sooner or later in the various countries, European vehicles were introduced, together with their usually Romance names (in Persia with a Russian name, kâleşe), but were often adapted to local techniques and customs. Restricted to urban, official and military use, to public transport (for Persia, numerous descriptions and illustrations in C. Anet, *La Perse en automobile*, Paris 1906, 122, 180, pl. 19, 25, 36, etc.), they rarely penetrated into the countryside. As early as the 17th century, the Murādī bāy of Tunis travelled in a karrūṣa (Italian carrozza) (Ibn Abī Dīnār, Munīs, Tunis 1286, 224); this word is now in common use in North Africa and is found even in Berber dialects (L. Brunot, *Textes arabes de Rabat*, ii, Paris 1952, 712). Similarly karrūṣa (Italian carrozza) is used in Algeria for carts and wagons (Dessauier, *Dict. pratique arabe-français*; Algiers 1931, 793); the word was already used, in the plural form karrūṣā, to designate Portuguese wagons in the 16th century, *Chronique anonyme de la dynastie sa’dienne* (Colin), 59. In Egypt, the *‘arabīyyat bâṣūr, “cab”*, (from Hungarian hinto through Turkish hinto, cf. F. Miklosich, *Sehīn*. Wien, 1885, 5, 1889, 8) and the *‘arabīyyat kârîr* (Italian carro) were used (V. A. C. G. Haudricourt, *L’Atlas paritaire de l’Égypte*, Milan 1913, 247: cf. Ahmad Amln, Kā 홈 al-*‘addī wa’l-Takdīd*, Cairo 1953, 333 and pi. xvii).

(M. Robinson)

*‘Adjala* — *‘Adjami oğlan*, a term, meaning “foreign boy”, applied to Christian youths enrolled for service as Ottoman kapî bâsîs [q.v.], originally, according to the Pencî hâdîn of 1362, by the reservation of one in every five of those taken prisoner of war, and later by dewzîrme [q.v.] conscription. They were first placed for from five to seven years at the disposal of feudal sipâhs and others in Anatolia, and later also in Rumelia, in order to learn Turkish and accustom themselves to Muslim usages, and then posted to the *‘adjami oğlaq* of Gallipoli and, after the conquest, to that of Istanbul, being simultaneously selected for subsequent service, according to their abilities, in the sultan’s palace or in one or other of the odâks of the standing army, infantry and cavalry, or of the bostândîs [q.v.] of Edirne and Istanbul. Their actual appointment—known as *kapîlyâ čâmâ*—to the palace service or these various corps was by seniority on the occurrence of vacancies.

After preliminary training at Ghalaşar Sarây or Ibrîhim Paşa Sarây in Istanbul or at Edirne, *‘adjami oğlaq* appointed to the sultan’s household (and hence thereafter called *iç oğlaq* or *iç aghas*) might gradually rise from its lowest bokhûsh or dormitory to the kâhs oda [q.v.], from the chief posts in which those who attained them might be appointed beylerbeys and servetsirs. The two most important standing cavalry regiments (sipâhs and stâhârs) were likewise recruited from among the *iç aghas*, the other four (*‘ölêfişis and ghrâbâ*) being recruited from among those *‘adjami oğlaq* who, though selected for the palace service, were not in the event appointed to it.

Most of the *‘adjami oğlaq* not chosen for the palace were destined for service as Janissaries (see Yeni ğerî), whether after preliminary service in the ojak of the bostândîs or by immediate admission into one of the thirty-four oras [q.v.], under the command of the Istanbul aghaş, which were reckoned as forming part of the Janissary ojak.

The gradual abandonment during the 17th
the disappearance of Ṣa'di, one of the subdivisions of the Nadjadat (q.v.). Ḡālib al-Kārim was a native of Balkh and was imprisoned by the governor of Ṣīrāq, Khālid al-Kasrī (105-20/724-38).

The main religious tenets attributed to the Ḡāribādīyya were: the exclusion from ʿĪlām (baraʿa) of children (even of one’s own, according to Ibn Ḥazm) until they grow up and become believers; the duty to invite them to embrace the true faith when they reach puberty. The conclusion that ʿĀṣira is a meritorious act, not a duty; the profession of friendship (wādiʿa) towards the quietists (al-ḥaḍāda); the affirmation that sūra x (surat al-Yūsūf), which by its frivolity could not be the word of God, did not belong to the ʿArafā.

The prosperity of the town seems to have been lost following the great Hiālī and Sulami invasion in the 5th/11th century. The travelers (al-ʿAbdārī, al-ʿAyyābī, al-Warthōbī) who passed Ḡālibādīyya on their way from the Maghrib to the East, describe it as a town long since ruined, without any vegetation in the vicinity, with only a few visible, but abandoned, vestiges of habitation. During the Turkish, and especially the Italian, occupation, Ḡālibādīyya became a small village, serving as a stage between Benghāzl and Misrāṭa.

AL-ʿĀBDULLAH, Abu ʿL-ṢĀTĪR ṢABĪHLU, Arab poet of the Tamīl tribe, who resided mainly in al-Baṣra; it is probable that he was born during the caliphate of al-ʿUthmān (300/912-3) and died in 375/985. Little is known about his life, except that he had to joust with his Rūbā (q.v.)—is the constant and exclusive use of the ṭarjāt metre in poetical compositions marked by a very rich vocabulary and a laborious construction made more difficult by the poet’s respect for the rules of prosody and the unusual number of lines (239 in one urdūjī). His arādīt on the model of the pre-Islamic ʿaṣīdī generally comprise a traditional nāṣib (replaced in one case by religious subject-matter), then descriptions of the desert and the animals found there (camels, horses, onagers, wild bulls), and end with the panegyric of a man, of the poet himself, or his tribe. The Al-ʿĀbdārī never cultivated either the satire or the elegy. His praises are addressed to eminent personages such as Yazīd b. Muḥtār, ʿAbd al-ʿAzīz b. Marwān, Bishr b. Marwān, Sulaymān b. Ḥālid b. Yūsuf, Ṣāfī b. ʿUbayd Allāh b. Maʿṣūr, a b. al-Zubayr. The Arabic critics unanimously praise the verbal richness of al-ʿĀbdārī, whose verses are frequently cited by the lexicographers; but he was guilty of an exaggerated use of alliteration, and an excessive addiction to rare words.

(Ch. Pellat)

*ʿAdliyn*, district of Transjordania, bounded on the north by the Yarmūk, to the east by the Ḫammād, to the south by the Wādī al-Zārakṣ and to the west by the *Ghawr*, partly corresponding to the old territory of *Gilead*, and included in Roman times by the towns of the Decapolis. The name seems to be of Aramaic origin. A mountainous and wooded district, it was first called *Djaḥbal Djarash*, later *Djaḥbal Awf* from the name of the turbulent *ancient monastery* a fortress which was since then dedicated on the north by the Yarmūk, to the east by the *Hamad*, to the south by the Wadi al-Zarka, and a small township near *Fīl* [q.v.]. The principal town, which occupies the site of an ancient monastery, a fortress which was since then dedicated on the north by the Yarmūk, to the east by the *Hamad*, to the south by the Wadi al-Zarka, and a small township near *Fīl* [q.v.], was probably *Thamugaih* (56 ft. high) of seven pointed arches gives the central arch, which stands higher than the others, is surmounted by two small minarets for the *muʿadhthin* similar in style, like the rest of the mosque, to the *Kūṭh Minār* and mosque at Delhi. Constructed by Sultan Ilutmish (probably in place, or as an extension, of an earlier mosque started in 1200), it represents one of the finest examples of early Indo-Muslim architecture. Other monuments include a fortified palace built by Akbar, a garden laid by *Djaḥāṅgr*, and marble pavilions erected by Shāh *Djaḥān on the embankment of Anāṣṣagār.

History. Founded by the Ṛājīpūt Ṛājḍa Aḍjlāya Cāwānīn around 1100, Aḍjnīṃr was conquered by Muʿizz al-Dīn Muḥammad Qūṭ in 1192, and annexed to the Sultanate by Kūṭh al-Dīn Aybak in 1193. Shortly after 1398, the Ṛājīpūts of Māwār captured it, but in 1455 the Sultans of Mālwa ousted them and held the place till 1531, when Rājīdī Mālāvyā occupied it. Aḍjnīṃr was annexed by Akbar early in his reign and attached to a *ṣūba* of that name. Surrounded as it was by Ṛājīpūt principalities, and lying on the route to Mālwa and Guḍrā, the town soon became a strategic and trading centre; while Akbar's frequent visits to the shrine of Khāṣṣa Muʿīn al-Dīn made Aḍjnīṃr one of the most important places of pilgrimage. After 1721, it was occupied first by the Ṛājīpūts and then by the Mahrattas, who ceded it to the British in 1818.

*Aḍjnādāyn*, the traditional name for the site of a battle fought in *Djumādā I or II, 13/July-August* 634, between the Muslim Arab invaders and the Greek defenders of Palestine. Although located by the literary sources between Ramla and Bayt Dibyn, no place of this name is attested by the geographers. On topographical grounds, the site of the battle was located by Menedikoff on the Wādī al-Ṣaṃt in the vicinity of the two villages of al-Djannābā (Gharbiyya and Sharldyya), 34° 57' E., 31° 41' N., from the dual form of which (al-Djannābatayn) the traditional name seems to have arisen by conflation with the Ar. plural *ajnād* ("armies"). The Greek forces were commanded by Theodorus, brother of the Emperor Heraclius; some early Arabic sources mention also a certain Arṭābdūn (? Aratyūn = Aretion). The Arab forces were composed of the three separate contingents which had been operating in Palestine and Transjordan (see *Abū Bakr*), temporarily united under the command (most probably) of Khālid b. al-Walīd [q.v.], who had reached Syria from the Euphrates three months before. (A less probable version represents *ʿAmr b. al-ʿĀṣ as the commander of the joint forces.) The numbers of the combatants, especially on the Greek side, are highly exaggerated in the Arabic sources; and it is probable that in reality the forces on either side scarcely reached 10,000 men. The Greek army was severely defeated and withdrew to Damascus, leaving the whole of the coast of Palestine open to the invaders, who again broke up into separate columns, until a further attempt by the Greek command to establish a defensive position at Fīl [q.v.] led to the renewed junction of their forces six months later.

**ADJNADAYN — CADL**

In a great number of *kūrān*ic passages, *adīr* denotes the reward, in the world to come, for pious deeds. This concept seems to derive from Christian rather than from Jewish sources, and it has become one of the fundamental ideas of practical ethics in Islam. According to *kūrān*, vi, 160, ten good deeds are credited for each one accomplished, though the term *adīr* does not occur here. It is often stated in traditions that the well-intentioned, though imperfect, fulfilment of religious obligations gives right to one reward, whereas their successful accomplishment is rewarded twice or several times. The fulfilment of the religious duty of *idāfah* ([c.v.], and of the parallel duty of giving judgment according to religious law, in particular, entitles the judge to be rewarded twice or several times. The adjective is also employed substantively; it then means a *person* of good morals (pl. *adāl*).

*Adāl* enters into various juridical categories. In the theory of public law, *adāla* is one of the principal conditions for carrying out public functions recognized by the doctrine of the School. But it is in private law, in the theory of evidence, that the idea has been most fully developed and involves a most detailed system of regulations. The witness must be *adāl*; it suffices, however, that his *adāla* should be substantiated at the time when his evidence is given and not at the time of his observation of the fact in question. It is a disputed point, nevertheless, whether the witness is presumed to have *adāla* so long as it is not contested by the adversary, or whether, even if it is not called in question, it should be the subject of verification. The latter course has prevailed in practice and in doctrine. Consequently a procedure has been evolved for substantiation of the *adāla* of witnesses; it is known as *tazkiya* or *ta'dil*. In the latest stage of the law, this procedure involves two phases. In the first, the judge proceeds to a secret investigation, by sending a question in a sealed envelope to qualified persons; this is *al-tazkiya al-sirāyya*. It is afterwards necessary, in certain cases, for these persons to appear at the public hearing to confirm their former attestation; this is *al-tazkiya al-`aldniyya*. The substantiation of the *adāla* of a witness is called *ta'dil*; contestation of this *adāla* is called *gāhr*. However, the *tazkiya* procedure is not used exclusively as an accessory or as incidental to a law-suit. It functions also independently and as an end in itself, for recognizing in a positive and final manner the quality of *adāla* in given persons. Because of the small reliance placed on writing, as such, once its use became widespread, recourse was had, in order to give it once and for all conclusive force, to the procedure of testimonial proof. However, this method was not altogether reliable, for the witnesses of the instrument could always themselves be challenged on the ground of lack of *adāla*. This difficulty was overcome by the use of a preliminary *tazkiya*; the judge recognizes once and for all the *adāla* of a certain number of persons, who thus become in principle irreproachable witnesses, and has numerous applications. However, agreement has never been reached on a definition of the term, as the Mālikite jurist Ibn Rushd observes. Furthermore, the various definitions that have been formulated are too comprehensive and imprecise. In al-Māwardi's definition, *adīla*, the quality of *adāl*, is described as a state of moral and religious perfection. For Ibn Rushd it consists in not committing major sins, and also avoiding minor ones. But another author observes that such a state can be found only very exceptionally, in the saints; that *adīla* simply describes the state of a person who in general obeys the moral and religious law. This last conception is the one that came to be finally accepted. In the latest stage of Muslim law, as it appears in the codification undertaken in the Ottoman empire about the middle of the 19th century, the following definition is given: "The *adīl* person is one in whom good impulses prevail over bad" (*Magāsila* art. 1705). In short, one can translate *adīl* by “person of good morals”, with the essentially religious sense that this has in Islam. Whether this quality must be a natural inclination, innate or acquired, or whether it is sufficient for it to be achieved by an effort of will, is however a theoretically disputed point.—The antonym of *adīl* is *fāsik*.

14
ADRAR, Berber geographical term meaning "mountains" and applied to a number of mountainous regions of the Sahara.

1. Adrar, 650 km to the south-east of Colomb-Béchar, capital of the Tawât (Touat) and main ksar (baştı) of the tribe of Timmi.

The centre of Adrar, on its present site, dates from the French conquest (30 July 1900). Since that time, the town developed as an administrative and commercial centre. In 1951, Adrar had 1,795 inhabitants.

Agriculture plays but a small part in the life of the baştı. Craftsmanship (fabrication of woolen and cotton wall covers called dokhali) is in decadence. The main role was always played by commerce, but the caravan traffic to the Sûdân (dates, tobacco) and to the oases of Algeria (skins, butter, live sheep) has greatly diminished owing to the competition of motor transport.

2. ADRAR OF THE IFOGHAS, an ancient massif in the southern Sahara (Sûdân), between 21° and 18° N, 30° and 3° E. Like the Ahaggar range of which it is an extension, it is made up of crystalline rocks of the pre-Cambrian age, but there is no trace of recent volcanic action.

The monsoon rains from the Gulf of Guinea come annually to the Adrar of the Ifoghas (Kidal: 123 mm.) and the vegetation already approximates to that of the coastal region, at least in the valleys; but the water points are rare because of the impermeability of the soil.

The massif is inhabited by Tuareg tribes, among which the noble tribe of Kidal, that of the Ifoghas, supplies the amenokal [g.v.]; by extension, the name Ifoghas is applied to all the tribes who inhabit the Adrar and its confines. In 1949 the subdivision of Kidal had 14,574 inhabitants, all nomads, breeding camels, oxen, and sheep. They nomadize close to the massif, but go to Tidikelt and Tawût (Touat), crossing the Tanzerift, to sell their sheep. The principal administrative centre is Kidal (683 inhabitants); not far from there the ruins of the ancient Songhay town of al-Sûk (Es Souq, Tademkett) can still be seen.

3. ADRAR OF MAURETANIA (also called Adrar Tmar to distinguish it from the Adrar of the Ifoghas).

A group of plateaus in the southern Sahara between 19° and 23° N, 10° and 15° 30' W, having a surface of 150,000 sq. km. These plateaus are formed by sedimentary layers, gravel, schist and limestone...
and are limited by graded slopes which overlook schistous depressions followed by wadis or traced by sebkhas; the main slope, the Qarār, reaches the height of 830 m.

By the scanty rainfall (81 mm. in Atar, 52 in Chinguitti), the absence of permanent drainage, the steppe vegetation consisting of thorny shrubs, the Adrar forms part of the desert. Nevertheless, the climate, the hydrography and the vegetation have features which are different form those of the Sahara. In the summer the humid air of the Gulf of Guinea invades the Adrar and tornadoes occur in July and August; the wadis flow and fill the closed depressions called gra’ir.

The first inhabitants of the Adrar were the Bafur about whom one knows scarcely more than that the Adrar was called by the Portuguese, as late as the 16th century, “Mountains of the Bafur”. From the 10th century, the Lamtuna [q.v.] penetrated into the Adrar and their chief Abū Bakr b. ʿUmār made himself master of Shinkīt [q.v.]; modern Chinguitti) and finally of Ghāna, though this conquest did not last. Three centuries later the Maʿṣilī [q.v.], driven by the first Marinids, retraced the steps of Abū Bakr and subjugated the Berber tribes. The maraboutic movement of the 15th century also contributed to the arabization of the western Sahara. At this period arose the hierarchical organization characteristic of the society of Mauretania; at the summit of the scale the warriors (Hasan), descendants of the Arab conquerors, followed by the Marabouts (Zwayā) and the Tributaries (Zenaga), both Berbers; finally the Ḥarkīn, the slaves and smiths, Bafur, negroes or of mixed-race. This organization survived up to the French penetration. In 1909 the Adrar was occupied by the column of Gouraud. In 1932 the amir of the Adrar rebelled and the region was only pacified two years later.

Animal breeding is the main source of livelihood. Warriors, Marabouts and Tributaries possess numerous herds of camels and sheep, which disperse during the cool season in the ergs, while in the summer they are assembled near the wells or graze in the coastal zone. Agriculture assumes two forms: raising of sorghum and water-melon in the graras, after the harvest, of millet, corn and barley under the palm-trees in irrigated gardens; the dates, harvested in July (gatna), are the object of a lively trade. There are a number of small oases, Azougui, Ksar Torchane, Toungad, Oujeft, Chunguiti, which used to be a religious and intellectual centre, the (gatna), harvested in July and August; the wadis flow and fill the closed depressions called gra’ir.

having overcome Abū Taghlib, ʿAḍūd al-Dawla determined on ensuring the subservience of all these, sending two expeditions against ʿImaraʾs son and successor al-Ḥasan, which resulted in the following year in his agreeing to pay tribute, and another against the sons of Ḥasanawayh, who had also died in the interval. On his addressing a letter of admonishment to Fakhhr al-Dawla, moreover, the latter replied with such truculence as to prompt ʿAḍūd al-Dawla to lead a force in person into the Ḏihat against him; on which so many of Fakhhr al-Dawla’s supporters deserted him that he fled to Karzin, whence he entered into a compact with Kābūs to oppose ʿAḍūd al-Dawla with Sāmānīd help, and moved to Nīshāpūr to obtain it. Whilst on this expedition ʿAḍūd al-Dawla fell gravely ill with epilepsy, and though he was able to reduce all the local Ḥasanawayhīd fortresses, he was then obliged to return to Baghdād. Finding, however, that, in contrast to Fakhhr al-Dawla, his other brother, Muʿyāyīd al-Dawla, was ready to acknowledge his suzerainty, he first conferred on him the government of Hamadān and Nīshāwand, and in 371/981, after receiving a defiant reply to his approaches from Kābūs, secured from the caliph a commission for Muʿyāyīd al-Dawla to replace Kābūs as governor of Tabaristān and Ḏūrdān. Muʿyāyīd al-Dawla, in due course drove Kābūs from both these provinces; and though Kābūs and Fakhhr al-Dawla obtained Sāmānīd assistance, they failed to dislodge him as long as ʿAḍūd al-Dawla and he remained alive.

In the last years of his reign ʿAḍūd al-Dawla was involved in negotiations with both the Byzantines and the Fāṭimidis. In 369/980 the rebel commander Basaras Sclerus sought refuge in Dīyāt Bāk and solicited ʿAḍūd al-Dawla’s support; but on the arrival in Baghdād of an embassy from Constantinople, to which a favourable reply was sent by the hand of the ḏābi Abū Bakr al-Bakillānī, ʿAḍūd al-Dawla not only refused it but held the rebel and some of his relatives captive for the rest of his reign. In the same year there likewise arrived in the capital an envoy from the Fāṭimid al-ʿAzīz, who had been disturbed at rumours that ʿAḍūd al-Dawla intended invading Egypt—a project that he in fact abandoned only because of his preoccupation with the defiance of Fakhhr al-Dawla and Kābūs, but which, despite ʿAḍūd al-Dawla’s eventual assurances of his good will, continued up to his death to occasion alarm in Čaʿīr.

ʿAḍūd al-Dawla’s death occurred in his forty-eighth year on 8 Shawwāl 372/26 March 983 at Baghdād, by which date he had not only united all the territory ever held by princes of his family in a single dominion, but had greatly enlarged it by the various conquests referred to above. He is generally regarded, with justice, as the greatest amīr of the Buwayhid dynasty, whose power reached its zenith after his acquisition of al-Ṭāʾīk. He then exacted from the caliph al-Tāʾīk, who married his daughter, various privileges not enjoyed by his predecessors in the amirate, namely designation by a second imāb, Tāḏi al-Milla; the introduction of his name after that of the caliph into the makhra; and the beating of drums before the entrance to his palace at the hours of prayer. These distinctions were well deserved. ʿAḍūd al-Dawla had been early instructed in the duties of monarchy by his father’s wāṣir Abū ʿl-Ḥaḍr b. ʿAmīd; and first in Fārs, and later in the other provinces which he acquired, he not only introduced such security and administrative order as had long been unknown in them, but exerted himself in the construction of public works, of which the most notable were the Band-i Amīr, a barrage across the river Kīr in Fārs, and the hospitals, called ʿAḍūd after him, in Shīrāz and Baghdād. To Baghdād indeed he restored much of its lost prosperity and magnificence. He also built a new mausoleum over the supposed grave of ʿAll b. Abī Taḥlib at Nāḍjīf, where he himself was buried. For various references to other buildings etc. of his, see in particular the indices to the Fārs-nāma of “Ibn al-Balajh” and al-Maḏkīsit and for references to his library at Shīrāz see both al-Maḏkīsit, 499 and Yākūt, Irštād, v, 446. ʿAḍūd al-Dawla was a liberal, though exacting, patron of the learned and of poets, including al-Mutanabbi, and himself wrote verse, some of which is quoted by al-Thaʿlībī in the Yūṭim al-Dbr. A convincing account of his character, daily life, and methods of government, is supplied by al-Rūḍūrwarī, iii, 30 f.

Ḥilāl al-Sabī), the Fārs-nāma index; Ibn al-Aḍūr, index; Ibn al-Kaḏībī, Dhikr Tāḏī b. kufr (Amedroz), index; Ibn Khallikān, no. 543 (transl. de Slane, ii, 481 f.); Yākūt, Irštād, i, ii, iv, indices; cf. also buwayhīds. (H. Bowen)

ʿAḍūd al-Dīn, Abū’l-Faraḍī Muhammad b. ʿAbū Allāh, of the family of Ibn Muslima [q.v.], held the office of wāṣir dīr under al-Mustandīd until he had the latter assassinated in the bath and homage paid to al-Mustandī (566/1170). He was appointed vizier by the latter, but one year later he was dismissed and shortly afterwards re-established in his office. When ʿAḍūd al-Dīn prepared himself for the pilgrimage to Mecca in 573/1178 he was killed by the Ismāʿīls. — Ibn al-Taʿwīnsīhī [q.v.] was one of the poets who glorified him.

Adultery [see zīnā].

Adwiya, pl. of adwiya, every substance which may affect the constitution of the human body, every drug used as a remedy or a poison. In accordance with Greek ideas, Muslim pharmacologists distinguished between simple drugs, adwiya mufrada (fāʿīma ḵalīlaughter) and compound drugs, adwiya muʿarrafika (fāʿīma ḵalīlaughter) and mineral (maʿdīnīyya).

Like medicine in general, Muslim pharmacology depends on Greek learning. An element of Persian tradition is also revealed in the pharmacological nomenclature. In many cases these Persian names of plants and drugs, some of them still in use (see e.g. Ahmed Issa Bey, Dictionnaire des noms des plantes, Cairo 1930) may date from the time of the celebrated medical school of Djiundisbūr, where Greek science flourished on Persian soil. This learning began to exercise an effective influence on the Muslims in the year 148/765, when the caliph al-Maṣrūq summoned to attend him the chief physician of the hospital of Djiundisbūr, Djiundisbū of the family of Bukhtyashîgī. Greek pharmacological learning was transmitted through Syriac translations of the fundamental works of Dioscorides, Galen, Orbiāsius and Paul of Aegina.
For the history of the Arabic translation of the *Materia Medica* of Dioscorides, see DIYUSKURIDIS. The Dioscoridean idea, clearly expressed by the great Iranian scientist al-Biruni in his pharmacological work cited below, that, theoretically, every plant had some medicinal virtue, whether actually known or not, caused pharmacological writers to include in their works plant descriptions which had a purely botanical interest, derived especially from Abû Hanîfa al-Dinawari. There is thus in Muslim tradition no clear difference between *materia medica* or works on *al-Adwiyah al-Mufrada* etc., and botany, *Nabût* (*q.v.*).

According to the autobibliographical *risâla* of Ḥunayn b. Isḥâq (*Über die syrischen und arabischen Galen-Übersetzungen*, (Bergstrasser), no. 53), the first five *makdâlât* of the *Book of Simple Drugs of Galen* were translated into Syriac, rather unsatisfactorily, by Yûsuf al-Khûrî, later on by Ayyûb (Job of Edessa, about A.D. 765–855), and, finally, in an abridged form (?) by Ḥunayn himself, who also made an Arabic translation of the text; of the second part a Syriac translation made by Sergius (Sargis of Rish'aynî, d. 536; a MS of the text in Brit. Mus., 1004) was corrected by Ḥunayn and turned into Arabic by his nephew Ḥubaysh. The *Book of Compound Drugs* also was translated into Syriac by Sergius and Ḥunayn, then into Arabic by Ḥubaysh; Ḥunayn, op. cit., no. 79. The synopsis and the *Ad Eunapium* of Oribasius were translated (into Arabic?) by Ḥunayn, who translated also, together with Ḥusâbî Yahyâ, into Syriac the first part of the *Collections* (= *al-Kunnâd al-Kabîr* mentioned by Ibn Abî Usaybi'â, i, 107). These translations are lost but frequently quoted by later authors.

The *Pragmatia* of Paul of Aegina was highly appreciated by Muslim physicians, who used an (abridged?) translation of its seven books by Ḥunayn (*al-Kunnâd al-Kabîr*), *Fihrist* 293; *Kunnâd al-Thurâyyâ*, Ibn Abî Usaybi'â, i, 103). Apart from small fragments no manuscript survives in Arabic, but there are frequent quotations in the works of later authors.

According to Bar Hebraeus (*The Chronography*, transl. by E. A. W. Budge, Oxford 1932,57), Aḥron the priest wrote his medical.pandect in Greek, and his work was translated into Syriac. An Arabic translation was made by Mâṣârdîjî (Mâṣârdîjâwî). The *Kunnâd* of Aḥron *al-kabîr* is often quoted by pharmacological writers, and its author had a great reputation as a scholar (*Dîhîz, al-Hayawân*; Cairo 1356, i, 250). Mâṣârdîjî/Mâṣârdîjâwî (see Steinschneider, in *ZDMG*, 1899, 428–34), the first translator of medical works into Arabic, was also the author of two books, one on food and the other on simples (*al-Akâshîr*), perhaps identical with the two *makdâlât* added to his translation of Aḥron (cf. Ibn al-Khîfî, 80).

After the time of Ḥunayn, pharmacology rapidly developed in the Eastern countries of the Muslim world. About a hundred Arabic authors on *materia medica* are mentioned in the bibliographical works of Ibn al-Nâdim, Ibn Abî Usaybi'â and Ibn al-Khîfî. Some thirty are represented by manuscripts in Eastern and Western libraries. Only a few of these works have been studied by Western scholars. For the history of the Greek text of Galen etc. these Arabic texts will certainly prove to be of importance.

In the course of time, many hundreds of names of simple drugs, not known to the Greeks, were incorporated in the body of learning transmitted by the Greeks to their Arab and Persian disciples. (For a preliminary list of such drugs see L. Leclerc, *Histoire de la médecine arabe*, Paris 1876, ii, 232–3.) Serious confusion in terminology inevitably followed from the great influx of names of Arabic, Iranian, Greek and Indian names of plants and drugs which were current in theory and practice. In the course of time many works were written with the purpose of determining their true significance and of putting together synonyms. For practical purposes the translation of Dioscorides made in Baghhdâd was of little use to readers, as long as the Greek names were for the most part only transliterated in Arabic characters. Arabic equivalents were introduced into the text by Spanish scholars in the middle of the roth century. About the same time the Arab translator of the Syriac *Kunnâdât* of Yûbânnâ b. Sarâbiyûn (Serapion, Ibn Abî Usaybi'â, i, 109) gave Arabic equivalents to the great number of Greek and Syriac names of simples contained in that work (MS Aya Sofiya 3716; P. Guiges, *Les noms arabes dans Sârâpión*, JA, 1905–6). One of the oldest prose works written in Persian is the *al-Abnîsî 'an Hašâbbî al-Adwiyah* of Abû Maṣûr Muwaffak b. 'All al-Harawi explaining, in alphabetical order, the Arabic, Persian, Syriac and Greek names of 584 different simples (ed. F. R. Seligmann, Vienna 1893; German transl. by A. C. Achundow, Dorpat 1893).

The most interesting work on pharmacological synonyms written in the East is certainly that of al-Bîrûnî (361/972–1048), *al-Seydana il-Tibb* (M. Meyerhof, *Das Vorwort zur Drogenkunde des Beruni*, Quellen und Studien zur Gesch. der Naturwiss. und der Med.*, iii, Berlin 1933; idem, BIB, 1940, 133 ff., 157 ff.). Apart from two MSS of a Persian translation, this work has come down to us in a single, mutilated MS in Brusa, representing the author's rough draft of the work, probably written in his old age and never completed by him. In its unfinished condition it contains 720 articles, in the common order of the Arabic alphabet, dealing with vegetable, animal and mineral simples with numerous remarks on their names in Greek, Syriac, Persian and other Iranian languages, philological notes on the meaning of plant names and their synonyms used in Arabic poetry, and copious quotations from medical and botanical works (many of them quite unknown to us) on the quality and origin of the drug, its substitutes (*abdîl*) etc. This work certainly deserves further study.

Among the numerous works on medicine written in the East and containing also chapters on pharmacology only the most important can be mentioned here. The *Firdaws al-Ilkâm* of All b. Rabban al-Tabarî, written in 235/850 (ed. M. Z. Siddiqi, Berlin 1928), quotes the translations of Ḥunayn and his disciples and is of special interest as aiming to introduce also Indian medicine (*cf. A. Siggel, in Abh. der Akad. der Wiss. und Lit.*, Berlin 1950). The large medical encyclopaedia (*al-Hawi*) of Abû Bakr al-Râzî (250/864–925) describes and names of drugs. The corresponding chapter in the immense *al-Kânûn il-Tibb* of Ibn Sinâ (Bûlûk 1294) treats of eight hundred remedies. The 10th book of *Dakhîhâ-ya Khârîmgihsî* (not yet printed), a medical encyclopaedia written by Zayn al-Dîn Isamî al-Dîjurdjânî in the 6th/12th century, contains a special treatise on the names of drugs and their operation.

In very many cases the descriptions of Dioscorides, Abû Ḥanîfa al-Dinawari, etc., were certainly inadequate for the recognition of the plant. Thus, in the
absence of technical terminology — a want shared by Muslim as well as ancient science — it was a most valuable device to depict the plants in figures.

In ancient time this method was introduced by the "zhizotomist" Crateusus (1st century B.C.), and a part of the synonyms and figures of his herbal passed into the recension of Dioscorides represented by the Juliana Anicia codex of A.D. 512 (in which later hands introduced also Arabic synonyms). It was the gift of an illustrated Dioscorides by the Byzantine Emperor to Abd al-Rahman III in Cordova in the year 948 that inspired a new and most fruitful study of the text in Spain. (For illustrated MSS of Dioscorides see divyuskurdis.) By Ibn Abi Ujaylif (ii, 216-9) we are told that his teacher Râshîd al-Din al-Manșur b. al-Sûrî (d. 639/1241) prepared a herbal illustrated with figures depicted from living plants.

For the botanical chapter of Ibn Fadîl Allah, see B. Farès, Un Herbar arabë illustré du XIV siècle, Archéologie Orientale in Memoriam E. Herzfeld, 1952, 84 ff.

The Muslim inhabitants of the Iberian Peninsula were the inheritors of a country famous in antiquity for its wealth of minerals and plants useful for preparing remedies. At first, pharmacological knowledge in Spain was, however, an import from the Orient, and Western students went to Bagdad for medical studies. A strong impulse to pharmacological studies in Spain was given by the revised text of Dioscorides introduced by A. al-Bustani, Tangier 1939.

In a vast encyclopaedia, al-Djumîdî li-Muwaradî al-Adwîya wa'l-oghîdîya (bad edition of the Arabic text, Bûlak 1921); French transl. by L. Leclerc, Notices et Extraits de la Bibliothèque Nationale, xxii, xxv, xxvi, xxx, 1877-93, Ibn al-Baytâr (d. 646/1248) put together all information available to him, quoting about 150 previous authors from Dioscorides to his own teacher, Abu'l-Abbâs al-Nabâtî, whose Rûhâ, or "Botanical Journey," he often quotes. Most of these works Ibn al-Baytâr certainly knew from secondary sources, al-Ghafîkî above all. In 2324 articles the Djamît treats of about 1400 different drugs and plants, 400 of which were not different drugs and plants, 400 of which were not.

To these works, written in the West, containing descriptions of the drugs and directions for their use, may be added also a number of others, containing lists of synonyms written in order to explain the meaning of the different names given to simples and drugs. Such are e.g. the Sharh Asmâ’ al-Ukhâr of the famous Jewish theologian, philosopher and physician Mîsâ b. Maymûn (Maimonides, A.D. 1135-1204), ed. M. Meyerhof, Cairo 1940, and the anonymous Tuhfat al-Ukhâr, ed. H. P. J. Renaud and G. S. Colin, Rabat 1934, treating especially of the names current in Morocco and written probably in the 18th century.

Bibliography: M. Meyerhof, in the introduction to Maimonides, Sharh Asmâ’ al-Ukhâr; for a list of drugs, M. Steinschneider, Heilmitelnamen der Araber, WZKM, x1 (2043 items). (B. Lewin)

AF'â means not only the viper, as it is commonly assumed, but also other similar kinds of snakes (Nâdeke, in Wiedemann, 272). The descriptions, however, which are given in Arabic zoological works (spotted or speckled, broad head, slender neck, short tail, sometimes furnished with two horns, etc.) fit well with specific kinds of vipers (echis carinatus, echis coloratus, aspis cerastes cerastes). Most sources state that af’d denotes the female, whereas the male is called af‘awân. The first term, however, is always employed in a generic sense. Corresponding forms in Hebrew and Ethiopian suggest that the word belongs to the oldest stock of the Semitic languages.

The af’d is often mentioned in Arabic literature, from ancient poetry, proverbs and hadith down to those later works in which zoology and zoological items are treated systematically. In ancient poetry it is represented as the emblem of the mortal enemy, of one who seeks revenge for murder. Its noxiousness is illustrated by the proverb: "He who has been stung by an af’d is afraid to take hold of a rope". Rich information is offered by al-Dîhîgî. The af’d had a market value since theriac was prepared from it. Certain people made a living from this trade importing the af’d chiefly from Siđjîstân. In al-Dîhîgî’s time thirty af’d sold for two dinârs. With certain Bedouins the af’d was sold as food, and this habit was satirically alluded to by some poets.

A good deal of information on the af’d is fabulous: e.g., that it lives to an age of a thousand years, that it becomes blind and recovers its sight after sixty years, that it becomes blind and recovers its sight after sixty years, that it is represented as the emblem of the mortal enemy, of one who seeks revenge for murder. Its noxiousness is illustrated by the proverb: "He who has been stung by an af’d is afraid to take hold of a rope". Rich information is offered by al-Dîhîgî. AFĀMIYA, or FĀMIYA, the Seleucid city of Apamea on the right bank of the Orontes (ʿAshī), at its northward bend 25 m. N.W. of Hamāt. During the Syrian campaign of the Sānid Khusraw I (540) it was captured and laid waste. After the Arab conquest of Syria it was colonized by tribesmen of ʿUdhrā and Bahrā. It regained importance as a fortified outpost of Aleppo only in the Ḥamdānid period and during the early Crusades. After the disintegration of the Sālidik power in Syria, AFĀMIYA was occupied by the Arab Khāl al-Mulāʿ in the Fatimid interest in 489/1096. On his murder by Asmāʿī it was captured by Tancred in 500/1106, and became the seat of a Latin archbishopric. It was recaptured by Nūr al-Dīn Māh|mūd on 18 Rabīʿ I, 544/26 July, 1149, after his victory at Inab, but its fortifications were destroyed in the great earthquake of 552/1157. The ruins of the old city still exist, flanked on the west by the later citadel, now named Kāʾl al-Muḥalk (for al-Madik, i.e. the shallows or ford).

**AFĀR** [[see Danakil]]

AL-AFDAL B. SALĀḤ AL-DĪN, in full AL-MALIK AL-AFDAL ABU ʿL-ḤASAN AḤŪN NŪR AL-DĪN, the eldest son of Salādīn (Ṣalāḥ al-Dīn, [q.v.]), b. 565/1169-70, d. at Sumaysāt 622/1225. On Salādīn's death he was recognized as ruler of Damascus and head of the Ayuʾbdī family, but owing to his incapacity and self-indulgence he lost successively Damascus, Egypt, and all his Syrian fiefs, and ended as a dependent of the Sālidik sultan of Rūm. See AYYUBIDS.

AL-AFDAL, Rāṣūlid ruler [[see Rasūlids]]

AL-AFDAL B. BADR AL-DJAMALĪ, ABU ʿL-KĀSIM ṢĀHANSHAH, Fatimid vizier, commonly known in history by his vizierial title. His birth is placed about 485/1090, and it is known from an inscription of 482/1090 that he was associated with his father in the vizierate. On the death of Badr, the aged caliph al-Mustanṣir was forced by the army to accept AL-AFDAL as his chief minister, and himself died a few months later.

The accession of the caliph al-Mustanṣir assumed a capital importance by its indirect repercussions. While al-Mustanṣir was still alive, but of great age, the problem of his successor had been debated, and an Ismaʾīlī missionary from Persia, Ḥasan b. al-Ṣabbāh, had concluded in favour of Nīzār, one of the caliph's sons. AL-AFDAL, being the vizier in office, raised to the throne a younger son of al-Mustanṣir, Ahmad, who was given the title of ʿl-Mustanṣir. The dispossessed heir, Nīzār, who had fled to Alexandria to raise an army, was seized and immured in a dungeon. Some persons, however, believed that he succeeded in escaping, and he was recognized as Imām by Ḥasan b. al-Ṣabbāh, who founded the formidable sect of the Assassins. The coinage of the latter bore for some time the name of Nīzār, and their partisans in Egypt were called Nīzārīs. AL-AFDAL had not foreseen these consequences, and his attitude had been dictated by considerations of personal ambition, which induced him to place on the throne a young man who would be submissive to his will.

Badr Al-Djarmālī, who had saved Egypt from disaster, had set up a dictatorial regime, and AL-AFDAL now followed in his footsteps, confining the caliph al-Mustanṣir, who was about twenty years of age on his accession, to his palace. AL-Mustanṣir resigned for less than eight years (490/1097-498/1104), and some historians have suggested that he may have been poisoned by Nīzārīs. AL-AFDAL then placed on the throne a son of al-Mustanṣir, a child five years old, who was given the title of al-ʾĀmir bi-ʿĀkām Allāh, and the all-powerful minister went on to govern without interference. But as the caliph grew up he became restive under his vizier's tutelage, and succeeded in hiring the services of assassins who rid him of AL-AFDAL in 515/1121. The latter had held the office of chief minister for twenty-seven years, marked by an internal tranquillity which is the more impressive by contrast with the unprecedented disorders of the following years.

AL-AFDAL's dictatorial power justifies the laying at his door of the responsibility for the Egyptian negligence in face of the invasion of Palestine by the Crusaders. The Fatimid government may be partially exonerated if its unpopularity outside the borders of Egypt is taken into account. It has certain actions to its credit: some fortresses were restored (we have epigraphic evidence at least for the port of Sidon in 491/1098); in the previous year the Fatimid army had regained Tyre from a disloyal governor; finally, Jerusalem was forcibly captured in 491/1098 from the Artukid officers who had established themselves in it. The Egyptians were not unaware that Jerusalem was the essential aim of the Crusaders, and it cannot be believed that they captured it in order to hand it over to the Franks. Ambassadors from Egypt had in fact appeared in 490/1097 in the Crusaders' camp before Antioch, and the latter in turn sent envoys to Cairo, possibly to negotiate an agreement. As a matter of fact, northern Syria was occupied by princes of Sunni obedience; the Fatimids had no desire to interfere with them, and the Sālidikids would have viewed their intervention with bad grace. In the absence of precise documents we are reduced to putting forward these hypotheses.

Nevertheless, the inaction, or at least the lack of vigour, of the Egyptian troops cannot be ignored. They did not move to the defence of Jerusalem. Its fall was deeply felt, and AL-AFDAL led an army corps to a position north of Ascalon; there, however, he
held them immobile, while he waited for reinforcements which were expected to arrive by sea and for the concentration of his bedouin contingents from Palestine. The Franks took the opportunity to massacre the Egyptian army; al-Afdal fled to the protection of Ascalon and hastily returned to Cairo. The year 494/1101 witnessed the Frankish occupation of Palestine, whose population sought refuge in Egypt. The vizier continued, in the following and later years, to show a certain activity against the Crusaders, but in fact the expeditions generally went beyond the outskirts of Ascalon and never gained more than booty and prisoners. The main ports of Syria were at the time in the hands of overlords, who sported Sunni or Shi'a colours according to the interest of the moment. One of the more important raids, led by a son of al-Afdal, succeeded in taking Ramla. In 497/1105 'Akki (Acre) fell, surrendered by its Fatimid commandant because of lack of support. The stubborn resistance of the autonomous prince of Tripoli induced al-Afdal to send a naval squadron, which arrived too late. In 512/1118 the Frankish threat redoubled when the town of Farama was burnt down—an episode which became famous because of the accidental death of Baldwin I, king of Jerusalem, who led the expedition. During this lamentable period the Muslim princes were full of mutual suspicion, but al-Afdal had solicited, and obtained, the cooperation of the Búids of Damascus.

Clearly, a very bad impression is made by the luxury which surrounded the caliph al-Amir and his vizier; ceremonies and feasts seemed to multiply in direct ratio with the number of cities that fell into the hands of the Franks. Whatever responsibility rests on the government of Egypt for this indifference cannot be placed on the caliph, still a mere child, but on his all-powerful minister, who was given over to frivolous heedlessness. There is in particular a striking contrast between the kind of edifices built by Badr—of which only the wall and the monumental gates of Cairo need be mentioned here—and those erected by his son al-Afdal. The latter was concerned with his own wellbeing, and multiplied pleasure-pavilions in Fustat and Cairo. On his death, the caliph al-Amir appropriated the minister's property; it required no less than two months to transfer the precious objects, jewels and silks. On the credit side, however, the historians record al-Afdal's financial readjustments, which notably increased the revenues of the State.

For al-Afdal's son, surnamed Kutayfát, see the following article. The vizier did not propose to outlaw it, and even showed it a certain consideration; in the college of kadís appointed by him there sat an Ismá'íl in addition to a Hañafí, a Shí'í and an Imamí. The Ismá'íl elements evidently did not relish the idea of being relegated to the status of a disestablished religious sect. Kutayfát was killed while riding outside the city, and 'Abd al-Madíd was brought out of his prison (16 Muḥarram 526/8 Dec. 1131). The event was commemorated annually, right to the end of the Fatimid dynasty (Ma'rizí, Khašš, i, 357, 490). 'Abd al-Madíd first ruled as regent, but after a brief interval was proclaimed caliph under the title of al-Hāfíz il-Din Alláh.

**Bibliography:**

**AL-AFGHÁN** (see ALIAMAL IL-DUN AL-AFGHÁN).

(i) The people; (ii) The Pashto language; (iii) Pashto literature.

(i) The people.

Racially, there is a considerable difference between the various Afghan tribes. According to B. S. Guha, *Census of India*, 1931, i, iii A, p. xi, the Patháns of Bágáwar are closely related to the Kaláshes of Cítral, probably because they are to a large extent áfghánized Dárds. On the other hand the broad-headed Patháns of Bálústán resemble their Bálúsh neighbours. In the plains of Pégáwar and the Dérágáts there is some admixture of Indian blood, and among some tribes we find traces of Turko-Mongolian influence. But in general it may be said that the Afghaní belong to the Irano-Afghaní branch of the dolichocephalic Mediter-
renean race. According to Coon, *Race of Europe*, 419, the skull index is 72-75, and the average height 170 cm. (Frontier Patháns), and 163 cm. (Afghaní of Afghanístan). The nose is prominent, frequently convex, of the so-called "Semitic" type. Similar noses are found also among Bálúshes, Káshmiris, etc. The Afghaní are usually brunes, but at the same time show a persistent minority of blondism, which in this case reflects Nordic admixture. They are heavy- bearded" (Coon, 420).

A distinction is sometimes made between Afghaní and Patháns, the former name being applied to the Durrání and allied tribes. But the difference is probably only one of nomenclature, the Persian designation Afghaní (of unknown etymology) being naturally applied chiefly to the western tribes,
while Paθān, the indianized form of the native name is used about the eastern ones.

The native name, employed by all tribes, is Pašhtūn, or Pashtūn (north-eastern dialect Pašhtūn), pl. Pašhtūnān. Lassen and others after him, compared Pashtūn to the Πάκτυς of Herodotus, and the name of the Afrīds has been identified with that of the 'Αραχνητα. This latter identification is possible, if by no means certain. The first one, however, must be rejected, for phonetic and other reasons. (The ending -un goes back to -ana, and the ancient sound-group which has resulted in Pashto gh (gh is a later dialect form), could scarcely have been rendered by Greek κτ.) More probable is the connection first suggested by Marquart, with Ptolomy's Παρανυμπη, a tribe inhabiting the Paropamisus. Paštū can go back to ancient rs (see Morgensterns, "Pashto", "Pathan", etc., A0, 1940, 138 ff.), and the probable ancient form was *Parswe-anā, derived from *parsu, cf. Assyrian-Babylonian Parsu(a) Persian. This does not imply any specially close relationship between the two Iranian tribes in question. (Cf. also Pusht, Pulkht, the name of the supposed seat of the Afghān tribe in the Waziri country.—Pashto (Pakhto) the native name of the Afghān language, probably goes back to a fem. adjective *Parsəwəd (sc. language).

The Afghāns are called Kāḏ by the Omurs of Logaš, and the Wazirs Kesi (pl.) by the Omurs of Kāgūrān. The origin of this word is unknown, but it is connected with Kāš, the name of an Afghān tribe near Quitta (Masson, Travels, i, 330) and with the Pashto name of the Sulaymān Mountains: (dā) Kase Ġhar.

The word Pashto is used also as a synonym of Paṣhunaiči, etc., the special social code of the Afghāns, the main pillars of which are: nanandais, right of asylum, badal, revenge by retaliation, vendetta, mēmastāy, hospitality. The causes of feuds leading to badal are said to be "women, gold and land" (zan, sar, sāmin). Among most tribes the organization is democratic, the hereditary khrān having restricted power. More important matters are settled in consultation with the chiefs of the sub-tribes and clans, and the tribal or village council (dīrga) plays an important rôle. But the semidependence of many tribes has become constantly more curtailed as well in Afghanistan as in India (Pakistan). Afghān or non-Afghān clients (kamsāyas) are attached to, and living under the protection of most tribes.—The ancient custom of periodic redistribution of land (wēd) is now dying out in most places.—Even while politically disunited, and fighting amongst themselves, the Afghān tribes had a feeling of some kind of unity, based upon their sharing language, customs and traditions. On the other hand, each tribe is split up into sub-tribes, septs and clans. The names of such sections are often formed with the word khd, or with the suffix -ay, but in some cases -ay denotes a whole tribe.

The Afghāns are first referred to (in the form Avaqagān) by the Indian astronomer Varāha Mīhira (early 6th cent.) in his Brhatsamhitā. A little later is the probable reference to them in the Life of Hiuen-Tsang, which mentions a tribe A-p'o-kien (*Avagon?) located in the northern part of the Sulaymān Mountains (see A. Foucher, La vieelle route de l'Inde de Bactres à Taxila, ii, Paris 1947, 235, 252 note 17). The earliest Muslim work mentioning them is the Hudud al-Shām (372/982), followed by al-Uṭbi's Ta'rīkh-i Yāmīnī, and al-

Biruni. The name Paθān does not occur till the 16th century, but the change of gh to ḍh shows that it must have been borrowed into Indo-Aryan at a considerably earlier date.—According to al-

Uṭbi, Cairo 1286, ii, 84, Mahmūd of Ghazni attacked Tukhāristān with an army consisting of Indians, Khulādji, Afghāns and Ghaznawīs, but on another occasion he attacked and punished the Afghāns, and this is corroborated by Bayhaḏ who wrote shortly afterwards. Al-Biruni mentions the various tribes of Afghāns as living in the western frontiers of India (India, transl. Sachau, i, 1, 208, cf. 190). This points to the Sulaymān Mountains as the earliest known home of the Afghāns. It is uncertain how far they extended towards the West, but no Afghān settlement west of Ghazni is mentioned by early authors. There is no evidence for assuming that the inhabitants of Ghūr were originally Pashto-speaking (cf. Dames, in E1). If we are to believe the Pīya Khatāni (see below, iii), the legendary Amir Karōr, grandson of Shanasb, (8th century) was a Paštō poet, but this for various reasons is very improbable. The origin and early history of the westernmost Afghān tribe, the Durrānīs (Abdālīs) [g.v.], is quite obscure.—Regarding the Ghaltays (g.v.) it seems possible that their name is based upon a popular etymology ("Thief's Son")—Thus the tribal name Khlādji, Khaladji, located by al-Īstakhri on the middle course of the Hilmand and by the Hudud in the region of Ghazni [see Khaladī]. But the Ghaltays themselves may have been partly, perhaps predominantly, of Afghān origin. At any rate the Afghāns do not appear to have acquired any political significance during the Ghaznawī period. Some early references which follow were noted by M. Longworth Dames (E1) and have been supplemented by P. Hardy. In 431/1039-40 Musāfīr sent his son Izadhār into the hill country near Ghazna to subdue the rebel Afghāns (Garḍīzī, ed. M. Nazīm, 109). In 512/1118-9 an army composed of Arabs, adjam, Afghāns and Khaladji was assembled by Arslān Shaḥ. In 547/1152-3, Alīf says, Bahārām Shāh assembled an army of Afghāns and Khaladji. With the rise of Gūrī power, the same state of things continued in 588/1192 according to Firīqshā, Bombay 1831, 100 f., the army assembled by Muʿizz al-Dīn Muhammad b. Sām consisted of Turks, Tadjiks and Afghāns, and his Indian opponent Pithoray (Prithvī Rādī) assembled a force of Rājpūt and Afghān horsemen. Thus in this great war between Muslims and Hindus Afghāns are represented as fighting on both sides, which probably indicates that they were not yet completely converted to Islam, although the manufactured legends represent them as having been converted from the days of Khūlid. It is not clear whence Firīqshā obtained his statement. It does not appear in the account of this war given by Minhādī Sirāḏī in the Tabakht-i Nāṣīr. This author does not mention the Afghāns throughout his account of the Ghaznawī and Gūrī kings. His first and only mention of them is in his own time in the year 658/1260 in the reign of Nāṣīr al-Dīn Maḥbūb of Dīhil. He there says (transl. Raverty, 852) that Ulugh Khān employed 3000 brave Afghāns in subduing the hill-tribes of Mēwāt in Rājpūtāna. According to Dujawīnī, i, 142, Khaladji, Ghaznawīs and Afghāns formed part of the Mongol army which sacked Marv in 619. During the next two centuries we find occasional mention of Afghāns in Indian history. For instance Barānī says in the Ta'rīkh-i Firāshtānī, 57, that Balban in 664/1265 established small forts in the neighbourhood of Gopālpur and entrusted
them to Afghans; three other towns, particularly afflicted by robbers, were also given the protection of forts entrusted to Afghans. According to the same author (p. 482) in the reign of Muhammad b. Tughlak there was a rebellion at Multan of a body of Afghans headed by Multan Mall (this name means in the Multani dialect “the champion of Multan” and is probably not the proper name of an Afghan). Sirhind, Ta’rikh-i Mubarakshahi, Calcutta 1931, 106, says that this revolt was in 744/1343. Again Maḥḥ Afghan was one of the foreign amirs who rebelled at Dōgīrī. In 778/1376-7 the sief of Bihār was given to Malik Bīr Afghan (Ta’rikh-i Mubarakshahi, 133). Tīmūr found them still hill robbers and in the Mafṣūdāt-i Tīmūrī, the Zhaj-nāma and the Malāʾ al-Sa’dayn it is related that he ravaged the country of the Awhānī (or Aghānī) who inhabited the Sulaymān Mountains. Thus except as occasional soldiers of fortune they remained a fierce race of mountain robbers until the rise to power in India of one of these adventurers made them famous. This leader was Dāwlat Khaṇ Lōdī of the Lōdī clan of Ghalzays; he rose to be one of the most important persons in the empire. Bahlūl Lōdī occupied the throne of Delhi in 855/1450 [see 1450]. The dynasty was overthrown by Bābur in 932/1525, but for a short time (944-63/1537-55) Shahr Shah Sūr reinstalled the Afghans in power [see Shāh] and a large number of Ghalzays and other Pathāns settled in India. At a later date Awrangzīb made grants of land to Pathāns of various tribes in Rohilkhand (p.v.; see also Rāmpūr) (Bareilly division, etc.), so called from Pashto rōhīlī (Rohilla), “hillman”, “Pathāṅ”. At the court of the Nawāb of Rāmpūr some Pathān traditions were still alive at the time of Darmesteter’s visit in 1886. But gradually the Afghān settlers in India were assimilated, except in the extreme North-West.

The immigration into India was part of the great expansion of Afghan tribes during the late Middle Ages. This expansion was on such a scale that it is difficult to believe with Dames (EP) that the Afghans were still at a period as late as that of the Ghūrid dynasty only an unimportant hill-tribe inhabiting a restricted area.—The Lohanīs were expelled from the Ghazni mountains by the Sulaymān Khaṇ Ghalzays, who also pressed the Bitāns eastward through the Gōmal Pass in the 15th cent. The main outlines of the tribal traditions of the Afghan tribes are mentioned by Abu ’l-Faḍl, Akbar-ndma; slightly different versions are given in Sulaymān Mākī’s Tadhkrīt al-Awliya (allegedly of the 15th century) and in the Pura Khaṣṣāna (cf. these below, iii). Our main source for the tribal traditions is Niẓāmat Allāh’s Maḥkān-i Afghānī (completed A.D. 1613). The genealogies given there and copied in later works such as the Ḥayāl-i Afghānī, cannot be relied upon as historical sources, but are valuable as a testimony to the traditions current among the Afghāns in the 17th century. According to this tradition the common ancestor of the majority of the Afghan tribes was Kays ʿAbd al-Raḥḥīd who was converted to Islam by Khaṇīl and descended from Afghān, a grandson of King Tālīt or Sārūl (Ṣaul). Kays had three sons: Sarbān, Bāṭan (Bīṭan) and Ghurghush. Sarban had two sons: Shahrbūn and Kharshbūn. The further ramifications may be tabulated as follows:

Most of the remaining tribes are said to be descended from Karrān (or Karlān), of doubtful ancestry.

According to some traditions also the Bangash (Bangāsh) and Wazirfs are descended from Kakhay; according to other, the Wazirfs and the Dawr tribes are not attached to any of these genealogies.

Certain clans claim to be sayyids by descent; such are to be found among the Sherāns, Kākār, Karraiān, Dāway, Tarīn, Miyyāna and Bītanān. The same descent is claimed by the tribes of Gandāpur and Ustārānā; these were originally subdivisions of the Sherāns.

In the Makhzan-i Afghānī all these tribes are expressly acknowledged as Afghāns, with the exception of the Bangash, Wazirfs and those Karraiān which belong to the Kakhay division (Afrīdl, etc.). The last seem to have remained unknown to him.

It is of interest to note that all the Pashto dialects which change the long vowels (a > α, etc., see below ii) belong to the Karraiān group or to the Wazirfs.

The extreme complexity of the tribal system may be exemplified by the ramifications of the Yūsufzays. One of their five sub-tribes, the Akōzayz, are divided into Rānizayz and other sections. One of the five Rānizayz clans is in its turn divided into Ghaiby Khel and three other clans. And one of the two Ghaiby clans are the Nūr Muhammad Khelz, divided into Gharīb Kh. and Dwār Kh.—It may also be noted that the name Tōrmān, one of the ancestors of the Khātsaks, is probably identical with that of Toramānā, a Hūnā king of India, and also a member of the Shāhī dynasty. This does not imply any historical connection between the legendary Afghān and these princes, but only a survival of the name in local traditions.

Geographical distribution of the Afghān tribes. Durrāns [q.v.] in the lower river valleys from Sabzawār and Zamān-dawār to south-east of Kandahār and Čāman. Among the sections are the Pōpolzayzs (including the royal clan, the Sadōzayzs) and the Bārakzayzs.—Next to the Durrāns, the Ghālzayzs [q.v.] are the most powerful tribe, and were for a long time their rivals. They occupy the country between Kālāt-i Ghilzay and Djalālābād. The Hōtaks were formerly the leading clan. The most important section is now the Sulaymān Khel from whom are recruited the Pōwindas, nomads moving in autumn down through the Gōmal and Tōčī passes to the banks of the Indus, and returning in spring to Afghānistān. The Kharotis are related to the Ghālzayzs.—Kākār and Tarīns inhabit the Pishin and 2ōb districts in Balūclstān. The Panis of Sibi are their neighbours.—North-west of 2ōb, around the Takht-i Sulaymān, we find the Sherāns. —The Wazirfs [q.v.] (divided into Darwēsh Khel and Mahsūd) live in the mountains between the Gōmal and the Kurram on both sides of the frontier. In the foothills to the East we find the Bītanāns and Lōhāns, and in the plains south of the lower Kurram the Marwats. The Tōčī valley is inhabited by the Dawrīz and Banūfs.—The Khātsaks occupy the plains of Kōhāt and extend right up to Attock. In the upper Kurram valley live the Bangash, the Shīrā Turfs and other tribes, and on the Afghan side of the frontier the Dīdılı̇s, with their neighbours the Mangals and Khostwāls.—North of the Bangash are the Orakzayz (with some Shīrā clans), and in Tirah, the Khaybar and Kōhāt pass the Afrīdls [q.v.], with Shinwārs to the north of them, on both sides of the frontier.—The Mahmān [q.v.] occupy a large tract of land north of the Kābul river in...
Afghanistán and in the Pesháwar district. Related to them are the Khálís in Pesháwar. — East of the Mahmands are the Yúsufzays (q.v.) and allied tribes (Mándán), etc., in Pesháwar and in the mountains to the North (Bunér, Swátt, Dír, etc.), where they are pushing back and assimilating the Dardic population. — The so-called Swáttis are a mixed lot, driven by the Yúsufzays across the Indus into the Hazrár district. — In the Kunar valley and in other places in N.E. Afghanistan we find the Sáfís. — In recent times many Pashto speaking Afghans have settled, or have been settled, in various places north of the Hindú-kush and in the Harát region.

Bibliography: see the works of Muhammad Háyát, Belléw, Raverty, quoted in the Bibliography to Afghánistán, section ii; the work of Elphístone, quoted in that to Afghánistán, section i; H. A. Rose, A Glossary of Tribes and Casts of the Punjab and the N.W. Frontier Province, Lahore 1911-9, especially s.v. Páthán; H. C. Willy, From the Black Mountain to Wástírán, London 1912 (on the Páthán frontier tribes).

(ii) The Pashto Language.

Pashto is spoken in south-eastern Afghanistan from north of Djalálábáb to Kándáhár, and from there westwards to Sábszawár. (The Kábúl area is mainly Persian-speaking, and so is Ghánz.) Pashto is also spoken by settlers in northern and western Afghanistan. In Pakistan Pashto is used by the majority of the inhabitants of the N.W. Frontier Province from Dír and Swátt southwards, in some localities in the Pándíáb, and in Bálústán as far south as Quetta, probably in all by over 4 million people.

Pashto is in its origin and structure an Iranian language, although it has borrowed freely from Indo-Aryan. It shares all the common Iranian sound-changes. It sides with the other Eastern Iranian languages e.g. in having fricatives corresponding to W.Ir. initial b, d, g, and in the sonorization of intervocalic -gh-. In its origin it is probably a "Saka" dialect, introduced from the North, but it has been examined, containing the manuscripts are made available for philological investigation. Even if the authenticity of the Kházína cannot be finally settled until the manuscripts are made available for philological investigation. Even if the authenticity of the Kházína is admitted, however, Muhammad Hótak's dating of the oldest poems may be doubted. According to Raverty, Sháhíb Mllí in 1417 wrote a history of the Yúsufzays, but nothing more is known about this work (cf. Yúsufzay). A manuscript exists, and has been examined, containing the Kháyr al-Báyan of the arch-heretic Búyáyd Anár (d. 1585). From the early 17th century we possess the theological and historical works—rich in invectives—of the south-western group (the so-called "soft" dialects) from the north-eastern ("hard") group (Bángásh, Órákzay, Afrúdí, Yúsufzay, Mahmand, etc.). The so-called "dialecets" preserve ɬ, ž with the original quality of back ɣ, ʃ, while the "hard" ones they merge with respectively ɣ and ʃ. Thus: Pákhto = Pashto and Pákhto, ffrí bead ffrí or frí (in the other sections of this article ɬ has been rendered by ɣ in tribal names and in the word Pákhto, etc.). Some Chalzay dialects occupy an intermediate position. The exact date of the change is uncertain, but it is probably later than the great northward migration of tribes.—Dialects also vary a good deal in their treatment of ɬ, ż, ɣ, ɬ (partly owing to the influence of an Indian sub- or adstratum), and palatalization, assimilation, dissimilation and metathesis act differently according to dialect (e.g. nmar, rmar, mar, etc. sun, wasána, nimánd, mannáz, coonb, pása, páfo foot). — Cutting across the line dividing "soft" from "hard" Pákhto runs an isogloss enring a number of dialects (from Afrúdí to Wázírí) changing ō > ŏ; ŏ > ŏ and in some dialects further to ā and ā > ŏ (e.g. Wázírí mór father, ñór father; ír daughter).—The Wápetí dialect of north-eastern Balústán (Harnái-Sháhrír region) occupies a rather independent position and must have split off from the bulk of Pákhto earlier than any other dialect. It has retained ŏ before ɬ, e.g. in yrír bear, and it shows a different development of -t (piýár father, etc.).

Important morphological features of Pashto are e.g.: 1. Distinction between two genders, masc. and fem. 2. A great variety of declensions and traces of case-inflection. 3. No distinction between 3rd sing. and plur. 4. So-called passive construction of the preterite of transitive verbs (s tā wakhram I strike you, but s tā wakhšam you struck me).

(iii) The Pashto Literature.

Until recently no Pashto literary work older than the 17th century had been published. But in the Almanác de Kábúl, 1940-1 (Da Kábúl Sálimána) Abd al-Háy Hábíl published fragments of the "Akh-kirát-i Awísád" by Sulaymán Mákh, containing poems said to go back to the 11th century. In 1944 he published in Kábúl the Píta Kházína by Muhammad Hótak, which professed to be written in Kándáhár (finished 1729), and to be an anthology of Pashto poets from the 8th century down to the time of the compiler. But these works raise a number of grave linguistic and historical problems, and the question of their authenticity cannot be finally settled until the manuscripts are made available for philological investigation. Even if the authenticity of the Kházína is admitted, however, Muhammad Hótak's dating of the oldest poems may be doubted. According to Raverty, Sháhíb Mllí in 1417 wrote a history of the Yúsufzays, but nothing more is known about this work (cf. Yúsufzay). A manuscript exists, and has been examined, containing the Kháyr al-Báyan of the arch-heretic Búyáyd Anár (d. 1585). From the early 17th century we possess the theological and historical works—rich in invectives—of his orthodox opponent Aklándár Darwésa (see Rawsháníyá) (Mahkán-i Afgání and Mahkán-i Islám). The 17th and 18th centuries are rich in poets,
but most of them are imitators of Persian models. The most remarkable according to European standards, the most popular were Abd al-Rahman and Abd al-Sider. His spontaneousness, force of expression and independence of mind lend a special charm to his best poems. Several of his descendants were also poets, and his grandson Afjal Khan wrote the 'Abd al-Rahman and 'Abd al-Sider. Abd al-

Kalid-i-Afghdnt, patriot, warrior and prolific writer, was also poets, and his grandson Afjal Khan, the founder of the Durrani dynasty, was a poet. There are also numerous translations from the Persian and versified versions of Persian and Afghan legends, e.g., Adam Khan and Durrandal. Of considerable interest are the folk-songs, ballads, etc., collected and published by Darmesteter. Recently the Afghan Academy (Pašto Tölama) in Kābul has published a volume of folk-songs, chiefly so-called landais or mizrāds, lyrical distichs in a peculiar metre, and some of them of great beauty. There is a considerable output of modern poetry in Afghanistān, and the Pašto Academy publishes also other literary works.

AL-AFGHĀN [see Djamāl al-Dīn al-Afgān].

AFGHANISTĀN.

(i) Geography; (ii) Ethnography; (iii) Languages; (iv) Religion; (v) History.

(i) Geography.

The country now known as Afghanistān has borne that name only since the middle of the 18th century, when the supremacy of the Afghan race became as- sured: previously various districts bore distinct ap-pellations, but the country was not a definite political unit, and its component parts were not bound together by any identity of race or language. The earlier meaning of the word was simply "the land of the Afghāns", a limited territory which did not include many parts of the present state but did comprise large districts now either independent or within the bound-

ary of Pakistan. As at present constituted, under the rule of the Bārakzay kings (formerly amirs), Afghanistān consists of a territory of irregular shape lying between 29° 30' and 38° 30' N. and between 61° and 75° E. or, if the long strip of Wajhān is omitted, 71° 30' E. Geological formation. This country forms the north-eastern portion of the great Iranian plateau (cf. Irān), which is bounded to the north by the Central Asian depression, and to the east by the plains of Sind and the North-West Frontier Province of Pakistan, while to the south and west it slopes away into the depressed tract which occupies the central portion of the plateau, and on the south-east is connected with the mountain system of Balūchistān. The northern barrier of the highlands is the mountain range extending westwards from the Pāmir, with its outlying ridge, the Band-i Turkistān, beyond which the plain of sand and loess extends to the Oxus. On the east there is a sudden drop into the Indus valley. It will be seen therefore that, with the exception of the loess plain of Turkistān, the whole country belongs to the plateau, which is itself a late geological formation of the tertiary period, mainly sandstones and limestones. The north-eastern part of the plateau formerly formed part of a great ocean connecting the Caspian depression with the plains of Pakistan. The process of upheaval which has raised it still continues, and Holdich considers that the extra-

ordinarily deep river gorges are due to the fact that the erosive action of the rivers is too slow to keep pace with the upward movement.

Orography. The most prominent feature of the mountain system is the northern range running east and west above alluded to as forming the northern boundary of the plateau. It divides the Turkistān districts on the north (the ancient Bactria) from the provinces of Kābul, Harāt and Kandahār (the ancient Ariana and Arachosia) on the south. This main range is known by various names such as Hindū-kūsh [q.v.] on the E. where it branches from the Pāmir, Kūh-i Bābā further west, and Kūh-i Saffād and Sīyāh Bukur near Harāt; the latter is generally known as Paropamisus, although the true Paropamisus (or Paropamisus of Ptolemy) included the Hindū-kūsh. The greater part of the country south of this range is occupied by a number of subsidiary chains or long spurs which run from east to west or more generally from north-east to south-west. These ranges and the intervening valleys form the greater part of the Harāt and Kandahār provinces, while the tangled mass of mountains lying to the south of the eastern Hindū-kūsh comprises the valleys of the Kābul and Kurām rivers and forms the provinces of Kābul and Nūristān. The highest elevation in the northern range is the Shāh Fulād peak (16,870 ft./5158 metres) in the Kūh-i Bābā, and the long spur running to the south-west contains several peaks of about 11,000 ft./3353 m. The ridges dividing the Hilmānd, Tarnāk, Arghandāb and Arghān are outliers of this system, and it may be traced further south-east into Balūchistān. The Sulaymān [q.v.] range (highest peak the Taqht-i Sulaymān, 11,200 ft./3145 m.), which drops finally into the Indus valley and is the eastern edge of the plateau, is beyond the political limits of Afghanistān. The mountains further
north on this eastern flank of the plateau between the Kuram and Gumal rivers are a more irregular mass with peaks over 11,000 ft. (3353 m.), while further north still between the valleys of the Kābul and the Kuram is the Safīd Kūh, the highest range in Afgānīstān after the Hindū-kūsh and Kūh-i Bābā (highest peak Sīkārām, 15,600 ft./4543 m.).

Rīver system. Northward from the Hindū-kūsh the level of the country falls rapidly towards the Oxus valley, while southward the valleys fall more gradually towards the Sīstān depression containing the Hilmān Hāmūn (H. Lake) and its extension the Gūd-i Zirāh, into which flow, with the exception of those belonging to the Indus system, all the rivers south of the Hindū-kūsh. Thus the rivers fall naturally into three groups, which may be called the Indus group, the Hilmān group and the Oxus group.

The Indus group comprises the Kābul [q.v.] river and its affluents, of which the most important are the Tagāo and Kunār flowing from the Hindū-kūsh on the north and the Lūghār flowing from the Gul Kūh on the south. South of this the Kuram rising in the Paywar, and its tributary the Točī, called in its lower course the Gambīla, which joins it in Pakistan territory below the mountains. Still further south separates the Wārizmān mountains from the Taḵht-i Sulaymān is the Gūlīm formed by the junction of the Kundar and Zūb. These rivers though of small volume drain extensive tracts and mark important military and trade routes through the mountains between India and the plateau. Other small streams such as the Wānu, Lūnī, Kāhā and Nārī further south serve a similar purpose. It may be noted that many of these streams flow not along the natural valleys formed by the mountain range but transversely across the sandstone and limestone ridges of the Sulaymān Mountains, through which they cut deep precipitous gorges.

The second or Hilmān group consists of the Hilmān and its tributaries, and of the other rivers running towards the south-west into the Sīstān depression. The Hilmān [q.v.] or Hirmand (the Ḥaṭūmanat of the Avesta, the Etymandrus of classical writers) is the principal of these. It rises near Kābul and flows through narrow mountain valleys into the more open country of Zāmīn-dāwar, where it is joined on the left bank by the Arghāndāb (Harahwaiī, Arachotis). The latter in its turn is formed by the junction of the Upper Arghāndāb, the Tarnak, and the Arghāsan (or Arghaṣṭān), which drain a series of nearly parallel north-easterly and south-westerly valleys. Another member of the same system is the stream flowing southward from Ghazna which never joins the Hilmān system but is absorbed by the Aūštābī Salt Lake. Other rivers west of the Hilmān with the same general south-westerly flow, which also discharge into the Hilmān, are the Khaṣṣ Rūd, the Farāb Rūd, and the Harāb Rūd.

The Hāmūn [q.v.], a basin sometimes of small extent, expands enormously to the south in seasons of high flood, when the hill fort of Kūh-i Khādīja becomes an island. It then discharges itself through a channel called the Shīraḥgha into a still lower depression known as the Gūd-i Zirāh. Part of the Hāmūn is in Afgānīstān territory and part in Persia, according to modern demarcations which have divided Sīstān. The Hāmūn is only 1560 ft. above sea-level, and the Gūd-i Zirāh is still lower. The Hāmūn on the average overflows once in ten years into the Gūd-i Zirāh. Its water is only slightly brackish, and can be drunk, a circumstance due no doubt to its occasional overflow. The level of Sīstān does not appear to have risen since ancient times in spite of the enormous volumes of silt discharged by the rivers which have no other outlet. The cause for this is probably the prevalence of violent north-west winds through a great part of the year, which remove the light surface soil.

The third or Oxus group comprises the Oxus [see Aμάν Daryā] and its southern tributaries, as well as the Murghāb [q.v.] and Harī Rūd which also flow northward into the plain but never reach the Oxus. All of these rise on the northern flank of the great mountain barrier, with the exception of the Harāb Rūd [q.v.], which rises on the south of the Kūh-i Bābā and flows westwards through a narrow valley between the Kūh-i Safīd and Kūh-i Siyāh into the Harāt plain where it turns to the north and after passing through a depression in the mountains loses itself in the plains of Russian Turkistān beyond Dhu'ul-Fīkār.

General formation. The mountain ranges generally become less lofty towards the south and west and the difficulties of communication that exist further north disappear. Hence the easy route for trade or military expeditions from Harāt to Kandahār has in all ages been circuitous via Sabzawār, Farāb and Girīškh, while from Kandahār to Kābul and Ghazna the direct line of the Tarnak valley is followed. From Harāt where the Paropamisus drops to an insignificant elevation the Turkistān province is easily accessible, and the same country can also be reached from Kābul directly by difficult passes, the Khaʿwāk, Bāmiyān and others, through the Hindū-kūsh.

Thus the three towns Harāt, Kandahār and Kābul are marked out by natural position as the most important points in the country. Each of them lies in a fertile valley and is self-supporting, and each of them commands important routes to the others as well as to India, Persia and Central Asia. If therefore Afgānīstān is to be an independent whole the possession of these three points is essential to its rulers. There can be no stability if they are in separate hands. In this political sense Ghazna and Dialālabbād must be classed with Kābul, the old capitals Bust and Girīškh with Kandahār, and Sabzawār with Harāt. Sīstān lying on the easy route from Harāt to Kandahār has always been a debatable land.

Kābul is in every way the strongest position, and has generally in consequence been more independent than other districts. Harāt on the contrary is much exposed to attack from the west and north, and when Harāt has been conquered by a foreign invader Kandahār is immediately threatened. As long as Harāt is held Kandahār is safe from an attack on the western side and it has also a strong position towards the Indian side, though not so strong as that of Kābul.

The district of Sīstān adjoining the Hāmūn is fertile and suited for irrigation. Occupying a commanding position on the route leading eastward to Kandahār and westward to Harāt, it is of great importance to the rulers of Afgānīstān, and its present division between that country and Persia is unfortunate.

Climate. The whole country is liable to great extremes of temperature ranging from the intense summer heat of Sīstān, the Garmsīr district and the Oxus valley to the great winter cold of the high exposed regions, where violent snowstorms are
not uncommon. Instances of armies suffering from such cold are well known in history. The march of the emperor Bābur from the neighbourhood of Harāt through the Hazāra mountains to Kābul is a case in point, and the Hindū-kush (lit. Hindu-slayer) is popularly supposed to derive its name from the death of the Indian troops of the emperor Shāh Djiāhān. More recent instances are the sufferings of 'Abd al-Rahmān’s army in 1865 and of the British Boundary Commission in Bādghīs in 1885. The daily range of temperature is everywhere very great, the difference between maximum and minimum varying from 17 to 30 degrees of Fahrenheit. In the spring and autumn the upland valleys have a temperate and pleasant climate, which is very favourable to the growth of fruit, especially grapes, melons, peaches, plums, apricots, walnuts and pistachio-nuts. Modern travellers have found the neighbourhood of Kābul to be not unworthy of the praises lavished on it by the emperor Bābur.

In the more lofty part of the Hindū-kush inhabited by the Kāfīr tribes a truly Alpine climate is found resembling that of parts of the Himalayas.

The vegetation generally speaking is that of the Persian plateau, and is quite distinct from that of the Indian plains. In the plains few trees are found except those cultivated in gardens, fruit trees, planes and poplars, while on the higher mountains many varieties of pines and evergreen oaks are found with wild vines, ivy and roses. On the lower and dryer ranges the wild pistachio (Pistacia khitnik), wild olive (Olea eurpaeus), juniper (J. excelsa) and the reedan (Tecoma undulata) are the most characteristic trees. The angūsa or king (Ferula assafoetida) is very abundant in many parts. Wild flowers also abound in the spring, especially the iris, tulip and poppy.

Political divisions. The divisions of the country follow its physical formation.

Kābul. The province of Kābul contains the fertile high-lying valleys round the upper waters of the Kābul, Lōghar and Taga rivers and Ghazāna, also the lower part of the Kābul valley near Dīlālābād [q.v.]. Ghazāna [q.v.] was the most important town in this tract formerly, but Kābul [q.v.] has taken its place during the past four hundred years. Kābul was recognized as the centre of government under Mughal emperors, and was adopted by the Durrānī kings as their capital taking the place of Ghāzni [q.v.]. Kābul was the most important town in this tract formerly, but Kābul [q.v.] has taken its place during the past four hundred years. Kābul was recognized as the centre of government under Mughal emperors, and was adopted by the Durrānī kings as their capital taking the place of Ghāzni [q.v.].

Kandahār. Kandahār includes the old province of Zamīn-dawar, and comprises the lower valleys of the Helmand, Tarnak, Arghandāb and Arghāšān, the principal home of the Durrānīs. The modern town of Kandahār [q.v.] on the Arghandāb has been the capital of the province since the 14th century, and has taken the place of older towns such as Girishk [q.v.] and Bust [q.v.].

Sīstān. Sīstān [see Sīstān] is the hot and fertile irrigated district lying around the Hámmūn. A large part of it, however, belongs to Persia. It contains no large town.

Harāt. The Harāt province includes the fertile valley of the Hari Rūd and the open country lying between the Hazāra Mountains and the Persian border; also a considerable part of these mountains which are inhabited by the Hazāra [q.v.] and Čahār Aymāk [q.v.] tribes. The town of Harāt [q.v.], one of the most famous in eastern history, is its capital; although fallen from its ancient glory it is still and must remain a place of importance and will no doubt develop greatly with peace and improved communications. Sabzawār [q.v.] is also a thriving town in the south of the province.

Hazārāstān [q.v.]. The country of the Hazāra and Čahār Aymāk tribes in the mountainous mass bounded to the north by the Kūh-i Bābā, to the west by the open country of Harāt, to the east and the south by the Helmand valley. It is the country of the Hazāra tribes. The hills of Hazāra (lit. Hindū-kush) lying north of the Kabul valley and west of the Kunar are inhabited by the Kāfīrs. It was known as Kāfīristān [q.v.], but after its conquest by 'Abd al-Rahmān Khān in 1887 its name was changed to Nūrīstān.

(M. LONGWORTH DAMES *)
(ii) ETHNOGRAPHY.

The population of Afghanistan is divided into the following main groups: (1) Afghans; (2) Tadjiks and other Iranians; (3) Turkic-Mongolians; (4) Hindū-kūsh Indo-Aryans (including Kafirs). According to an estimate made in 1947 the population amounts to twelve millions, of which 53% are said to be Afghans, 36% Tadjiks, 6% Uzbeks, 3% Hazaras and 2% others. But the figures are by no means certain. No "pure races" are to be found, each linguistic community being composed of several anthropological types, and interchange and secondary adoption of Persian and Pāṭho having to a great extent blurred whatever clear distinctions may have existed at some earlier date. Apart from the theoretical difficulties in defining race, the meagreness of anthropological data, dealing with clearly defined local groups, warns us to be cautious in our statements.

1) For the Afghans, see the separate article AFGHĀN.

2) Tadjik is the general name [cf. TADJIK] of the Persian-speaking population of Afghanistan, often also called Fārsḵwān, or, in the East and South, Dīghāns and Dīhvāns. They are villagers, and also the inhabitants of most towns speak Persian. The Tadjiks have no tribal organization, except in some remote regions. In the villages they are peaceful tenants. In Harāt and Sāstān they are a direct continuation of the Persians of Persia, while in Northern Afghanistan (from Maymana to Badakhshan) they are in contact with the Tadjiks of the Soviet Union. In South-eastern Afghanistan they occupy some of the most fertile agricultural districts around Ghazna and in the Kābul region (Kūh-i Dāman, Pāndāshīr, etc.). Anthropologically they are very mixed, but the hill-Tadjiks of Badakhshan, and of Northern Afghanistan in general, are of the Alpine type. South of the Hindū-kūsh many Tadjiks probably belong to the Irao-Afghan race. Some of the hill-Tadjiks of Badakhshan still retain their ancient Persian languages. The same is the case with the Parādās north of Kābul and the Ormurs in the Lōgār valley. — The Kūtibāsh are descended from Persian Turks settled in Kābul and Harāt by Nādir Shāh.

3) Turkish and Mongolian tribes. In the plains of Northern Afghanistan Turkish tribes form an important, or even dominant part of the population. The majority are Uzbeks [q.v.], settled in villages and towns, and estimated by Jarring at about 500,000. West of them, between Andkhūy and Bālā Murghāb we find Turkmen [q.v.], nomads, chiefly Ersārs (estimated at up to 200,000). In Ḍān Pāmir there are about 30,000 Kūrgiz [q.v.] nomads. Also some other Turkish tribes are represented in Afghanistan. — The Turks settled in the Kūstān and Kūh-i Dāman north of Kābul have now all probably given up their national language. The central massif, from Ghazna to Harāt, and from north of Bāmiyān to the middle Himaland, is occupied by tribes of Mongol or mixed Turko-Mongol origin and type, extending also into Persia. The eastern part of this territory is the home of the Hazāras [q.v.] (or Bārbarīs). They are divided into a number of tribes, Day-Kuadi, Day-Zengi, Dārghūf, etc. The Hazāras are settled in villages, their formerly very powerful chiefs living in baronial castles. They are Shiā, and up to the time of the Amir ʿAbd al-Rahmān they retained semi-independence. Their orthodox neighbours accused them of practising the infamous "lamp-extinguishing" ceremonies, and of laxity in sexual behaviour in general. When finally subdued by the Afghan Amir, many of them sought refuge in Quetta and other places outside Afghanistan. A large number of Hazāras work as labourers in Kābul and other cities. They have decidedly mongoloid features, but are usually distinguishable from the more flat-faced Uzbeks. Further west, on both sides of the Hari Rūd, we find the half-nomadic Sunnī Ċāhār Āmyak [q.v.] ("Four Tribes"), a term apparently used somewhat loosely, but usually including Taymans (south of the Hari Rūd), Frūzkūhs (north of this river), Dījamshīdīs (Kūshk), Taymūrs (west of Harāt, in Persia) and Hazāris (Kalûs-i Naw), probably not to be confounded with the eastern Hazāras. —

The Hazāras are often assumed to be descended from Čīngiz Khān’s soldiers, but more probably Mongol and to some extent also Turkish elements have gradually occupied the territories laid waste by him and his successors (see Bacon, op. cit.).

4) Indo-Aryans and Kafirs. Among the Indo-Aryan "Dārdic" tribes of Afghanistan the most important are the Pāṣaḥs (locally also called Dīgāns) in the Kūstān of Kābul, Lahmān and the lower Kunar Valley. They are the remnants of the ancient Hindu and Buddhist population of Kāpāśa and Nagarāhāra. There are also some smaller communities of Indo-Aryan origin in the Kunar region. — Nūristān (formerly Kāfīrland) is inhabited by a number of tribes, linguistically distinguished from the true Indo-Aryans [cf. KĀFĪRISTĀN]. They were finally conquered by ʿAbd al-Rahmān in 1896, and converted to Islām. Some of the Dārdic tribes also remained pagans till comparatively recent times. The Kafirs are now called Ṣūrīasts or Dījamshīds, i.e. "Recruits (of Islam)". Their ancient religion was a polytheism of an Indian type, with pantheons varying from tribe to tribe. They had also preserved many ancient social customs. There is no evidence of their being of Greek origin as sometimes asserted. Their neighbours divided them into Siyāh-pūsh "black-clad" (Katis and Kāns) and Safd-pūsh "white-clad" (Wāyahs, Āfghūns and Prāsūns or Parūns). Anthropologically the Kafirs contain Oriental, Dinaric and Nordic elements, beside a short, dolichocephalic type with connections in the West Himalayas. Among some of the tribes the ratio of blondism is rather high.

There are some Dīs [q.v.] "gipsies" in Afghanistan, and a few Ghūļārs [q.v.] in the Kunar valley. Hindus are settled as traders and money-lenders in Kābul and other towns, and as horticulturists in the Kūh-i Dāman north of Kābul.

Languages, Babur mentions eleven languages spoken in the Kabul region, and the actual number for the whole of the country is considerably higher. The majority of the inhabitants speak either Pashto or Persian, both of them Iranian.

For Pashto see Afghanistan.

Other Iranian Languages. Most of the Persian dialects [cf. also Kuran, section on language] spoken in Afghanistan are of the eastern type, retaining the distinction between madżābul 1, 2, and ma-rāf 1, 2, in the northern, and of the western, and the dialect of the Hazaras presents traits of its own. Babur just crosses the frontier into the southern deserts. In the Lōgar Valley, south of Kabul, Ormuri is dying out, but it is still spoken in Kānīsārām in Wardhān. Another ancient local Iranian language is Parāfī, which is found in a few villages north of Kabul. North of the Hindū-kūsh, in the mountains of Badakhshān, the so-called Pāmir or Qalača [q.v.] languages have survived, but they are probably remaining and being gradually replaced by Tadjik Persian. They include: Mundgī spoken in Mundgī (with an offshoot called Yidgha in Citrāl), the very archaic Wakhā in Wakhān (overflowing into Gilgit and Citrāl), Sanglī, Zēbākī and Isjākshīmī at the bend of the Oxus and in the upper Wardōdī valley; Shugnī and Rōshānī in the Oxus Valley, north of Isjākshīm.

Indo-Aryan and Kafirī. Apart from Lahndā spoken by Hindus, we find a number of Indo-Aryan languages and dialects on the fringes of Nūristān in North-Eastern Afghanistan. They belong to the so-called Dardic branch of Indo-Aryan. The most important is Pāshā which has several widely diverging dialects, and is rich in popular poetry. In the Kunār Valley, close to the frontier of Citrāl, Gāwar-Bātī is spoken.—The Kāfīr languages (Kātī, Wāgīrī, Aghkūn and Prasut) occupy a somewhat separate position and must have split off from Indo-Aryan in pre-Vedic times. But they have now been heavily overlaid with purely Indo-Aryan elements.

Non-Indo-Iranian Languages. Turkish dialects are spoken by Uzbeks, Turkmen and Kirghiz in Northern Afghanistan. Most Hazaras have now given up their ancient language, and the same is probably the case with the Čahār Aymāks. But (acc. to a private communication) F. Mackenzie was still able in 1951 to collect lists of words, containing many of Mongolian origin, among the Hazaras of Blāsūd and the “Moghols” north of Maywāna.—Some nomads west of Mazār-i Sharif are said to be still speaking Arabic, as is also the case with some Arabs in Tadjikistan [see ʻArab].

Religion. Since the conversion of the Kafirs practically the entire population of Afghanistan are Muslims, and the great majority are Sunnis. Shiʼite are the Hazaras, Kizilbash, the Yakānūs of Sīstān and Harāt, a few Pathan frontier tribes (Tūrfs, and some sections of Orakzays and Banggah, beside the Savyds of Tirāh), and some Kūhīstānis and Badakhshis (especially the Qalačas). Of these inhabitants of Badakhshān (with Shugnī, Wakhān, etc.) and many Pathals of Laghmān and adjacent valleys are Kizilbash, the so-called Badakhshis calling themselves Mullās and the Pathals being known under the name of 'All-Ihāhs (cf. Ivanow, Guide to Ism. Lit., p. 9). Among the Shiʻī Pathāns there may still be secret adherents of the great heretic Bāyazīd Anṣārī (cf. Rawshānīyya).

Orthodox Islam is now very firmly established in Afghanistan, and the Islamic law (šari'a) is recognized. Hindus and Shiʻīs are tolerated, but Ahmāds are not allowed to enter the country, and Christian missions are prohibited. Local saints and their tombs are worshipped. Among the Pathān tribes of the Frontier the muallīs have often played an important role in local politics and in preaching the dīkā (holy war). (G. Morgenstierne)

History. Pre-Islamic. The territories now known as Afghanistan were occupied by Iranian tribes during the Aryan migrations in the second and first millennia B.C., incorporated in the Achaemenid empire by Cyrus, and after the conquests of Alexander (cf. e.g. W. W. Tarn, Alexander the Great, Cambridge 1918) disputed between the Greco-Bactrians and the Parthians (cf. W. W. Tarn, The Greeks in Bactria and India, Cambridge 1952). In the first century B.C. there was a fresh influx of Iranian tribesmen under the leadership of the Kushan tribe of the Yuezhi. The Kushan empire, which attained its zenith under Kujula Kadphises in the 1st century A.D. and Kanishka in the 2nd (cf. Cambridge History of India, iii, 1935; R. Ghirshman, Bélagram. Recherches archéologiques et historiques sur les Kouchans, Cairo 1946), eventually fell to the Sasanids under Shāhpūr II, probably before the middle of the 4th century. Shortly after 350 the Yuezhi tribes which had remained in Kāshgāria, pressed from the East by Turko-Mongol elements, appeared in Bactria, supported by a confederation of tribes known as Chionites (see R. Ghirshman, Les Chionites-Hepthalites, Cairo 1948, 69 ff.). Shāhpūr, though at

Encyclopaedia of Islam
A war with Rome, marched against the invaders, but was obliged to come to terms with them and to establish them in Bactria and its peripheral regions, in return for their aid against the Romans. Kidara, the king of the Yueh-Chi or "Lesser Kushans", soon extended his conquests to the south of the Hindu-kush and annexed the Faropamisad and Gandhara. It is in the period of this expansion that the establishment of a tribe of Chionites, the Zabuls, in the region of Ghazni is to be placed. When, later on, Kidara's efforts to assert his independence led to a deep conflict with Shahrūr, the Chionites sided with the latter. Kidara lost his kingdom, and probably his life; and Bactria passed into the hands of the Chionites known as Hephthalites from the name of their ruling dynasty. About 400 the lands both to the north and to the south of the Hindu-kush were held by the Chionites-Hephthalites, divided into two branches by the mountain-chain, but whose southern branch, the Zabuls, recognized the supremacy of the northern branch—both, however, remaining vassals of the Sāsānids. This vassal status was preserved so long as the Persian dynasty remained strong, but already by the beginning of the 5th century the Hephthalites, exploiting the difficulties experienced by Persia in the struggle against Rome and in defending the passages of the Caspian Sea against the barbarians, attempted to throw it off, only to be resubjected by Bahram Gōr, just as their pressure towards India was halted by the Gupta kings.

The middle of the 5th century was a turning-point in the relations between Persia and the Hephthalites. During the reign of Pērōz, the Hephthalites won, in 484, a victory which transformed them almost from the vassals into the masters of Iran, to whom the Sāsānids paid tribute for more than half a century. It was only c. 560, when a new people, the Western Turks, had appeared on the chessboard of Central Asia, that a coalition between them and Khosraw I put an end to the central power of the Hephthalites. (For the relations with the Sāsānids, cf. A. Christensen, L'Iran sous les Sassamides, 1944.)

The kingdom of Zābul, or of the southern Chionites, followed its own course. At the end of the 5th century a new dynasty reigned to the south of the Hindu-kush. Its two kings, Toramana and Mihirācula (c. 515-544), made extensive conquests in India; the latter, devoted to a religion with a solar divinity, Mihira, left a memory of cruel persecutions which were pursued until he was crushed by an Indian national coalition. The disappearance of the kingdom of the southern Chionites preceded by a few years the destruction of Hephthalite supremacy in the northern lands.

After the destruction of these two kingdoms, their territories remained in the hands of a number of minor princes, some of whom became vassals of the Sāsānids, others of the Turks. The political condition of Eastern Afghanistan about the middle of the 7th century is portrayed in the account of the travels of the Chinese pilgrim Huien-Tsang, where the Afghan people are mentioned for the first time in a historical source under the form of the country of A-p'o-ki, located in the northern part of the Sulaymān mountains (see A. Foucher, La vieille route de l'Inde de Bactres à Taxila, i, Paris 1947, 235, 254 n. 17). Shortly after the passage of Huien-Tsang, the Chinese T'ang dynasty crushed the Western Turks and extended its suzerainty to the west of the Pāmr. For a whole century (659-751) sixteen kingdoms north and south of the Hindu-kush recognized the authority, more nominal than real, of the Chinese emperor. The Arab invaders who rapidly overran Iran, were checked in this part of Afghanistan by the tenacious resistance of the last kinglets, seconded by the civil wars and dissensions between the conquering tribes, and it was only at the end of the 9th century that Islam finally triumphed south of the Hindu-kush. Nevertheless, the Hephthalite element did not disappear without leaving its traces in the ethnic composition of modern Afghanistan, and there still exists in Badakhshān an important group bearing the name of Haytal. See, for a fuller account of the Chionites-Hephthalites the articles Haytal, Zabulistan, Zūn. For the background of the early history, cf. also W. M. McGovern, The Early Empires of Central Asia, 1939. (R. Ghirshman)

(2) ISLAMIC—TO THE RISE OF THE AFGHAN NATIONAL STATE.

To the Mongol period. The territories that form modern Afghanistan belonged in the first thousand years of Islamic history to different provinces, and although these neighbouring provinces, often shared common vicissitudes, they did not at any time form a separate entity. Nor did the Afghāns form a state of their own until the days of Mir Wazīr, more especially Ahmad Shāh Durrānī. The little that is known of the earlier history of the Afghāns has been summarized in the article Afghān; here a short sketch will be given of the history of the country. (For further details see the articles on the various provinces, e.g. Khurasan, Sidjistan, Zabulistan, Zāmīn-Dawar, Turkestān, Kābul-istān, and on the various dynasties that ruled these lands, as well as the articles on the most important towns, e.g. Balkh, Ghazna, Harat, Kābul, etc.)

At the time of the Islamic conquest the provinces belonging to the Sāsānīd empire were quickly overrun. One wave of the invasion passed through Sidjistan, but the attempts made during the first three centuries to conquer Kābul from this base produced no lasting results until the rise of the Šaffarid [q.v.] dynasty. The province of Kābul resisted Islamization much longer than the other eastern Islamic provinces, and it was only under the Ghaznavids that this was fully achieved. In the middle of the 9th/10th century Alp-takīn [q.v.] seized Ghazna from its former ruler Lawik, conquered Zābulīstān and built up an independent principality, which was inherited by his son Ishāk, then by a slave of his, Balka-takīn, then by another slave, Subuk-takīn, the founder of the Ghaznavid [q.v.] dynasty. The dynasty had its seat in Ghazna, and it was from that town that the greatest Ghaznavid ruler, Māmūd [q.v.], set out on his expeditions to Persia in the west and India in the east. Yet, while it is about this time that the name Afghan first appears in the historians, the Ghaznavid dynasty was in no sense a national Afghan one. The armies were probably composed mainly of Turks. When Māmūd marched to Balkh against the Kara-khanīd ruler, his army comprised, according to al-ʿUtbi, Indians, Khalaǰī [q.v.], Afghāns and "Ghaznavīs", the last term no doubt meaning Iranians ("Tādīk" [q.v.]) of the province of Ghazna. In 414/1023 Māmūd attacked the Afghāns of Sulaymān Kūh and sacked their country.

By the end of his life Māmūd ruled over an extensive territory comprising in the west Khurasan, part of Dībāl and Tabaristan and in the east the whole of the Pandjab; to the north his influence
extended beyond the Oxus while the core was formed by the whole of what is now Afghanistan. The personality of the great conqueror made a deep impression, and he became in a way a national hero in the land which formed the centre of his empire. For the further history of the dynasty, see Ghaznawids. Bāhrām Shāh (512-52/1118-57) had to acknowledge the suzerainty of the Sāḥīhābids; therefor, after the chieftains of Ghūr became increasingly stronger, and after long struggles drove out the Ghaznawids. The Ghurids (q.v.) dynasty was probably of "Tadzik" origin. The fortunes of this dynasty were checked by invasions of Afghanistan by the Ghuzz and the Khāzīrīm-shāhs, so that the Ghurids lost their power in their native land, but succeeded in building up an empire in India, which was inherited by their Turkish slaves. Dīālāl al-Dīn Manukūrīnī, the last scion of the house of the Khāzīrīm-shāhs, after strong resistance, had to vacate Afghanistan before the Mongols of Cingiz Khan.

Mongols, Karts. Harāt and Sitān were conquered by Cingiz Khan's son Tulūy, Ghazna by Uguday. Uguday also entered the Ghūr country and, making it the centre of his operations, conquered the mountains of Fīrūz Kūh and Ghardjistan as well as the plains of Garm-sīr and Sitān. The last Ghūrīm kings were subdued and the Ghurid dynasty was completely destroyed. Tulak and other mountain fortresses offered resistance but to no effect. A leader of the resistance in Ghūr was the awār Muhammad of Ghardjistan, descendant in the male line of the Ghūrīm kings. He was killed in 620/1223 in the fortress of Aghγar. The founders of the Kart dynasty were his descendants. The greater part of Afghanistan was incorporated into the Mongol empire. In the east, however, a Turkish chieftain, Sayf al-Dīn Ḥasan Karlūgh, who had perhaps been allied to Dīālāl al-Dīn Manukūrīnī, managed for some time to get possession of Bāmīyān, Ghazna and Ghūr. He must have exercised his rule in 622/1225, in which year he issued coins in the name of the caliph al-Zahir. In 636/1238 he submitted to Uguday, and was placed under the control of a Mongol qādī (intendant). Nevertheless, he was expelled through the Kuram valley to India. In Sind he and his son Nāṣīr al-Dīn reigned for a further twenty years. Ghazna and the Kuram served as a base for the further incursions of the Mongols into India. We do not hear of Afghans in these movements, perhaps they had not yet reached as far north as the Kuram valley. After Uguday's death the Mongol empire was divided and Afghanistan fell to the lot of the Ilkhāns of Persia. Under their sovereignty a Tadzik dynasty, named Karts (q.v.) came into power and ruled for nearly two hundred years over the greater part of the country. It was Timūr who put an end to the dynasty of the Kartīs, who reigned as last rullers of the Tadzik element in Ghūr and Harāt to establish in their country an independent state. From this time until the rise of the Afghan 13th century no native dynasty held rule in Afghanistan.

Timūr, Timūrīs. In the course of Timūr's invasion Sitān suffered terrible destruction; Kūbāl and Kandahār (which now began to be of importance) were quickly subdued and the whole country formed part of Timūr's empire. In 800/1397 Timūr turned to the east and left his grandson Ptir Muhammād as governor of Kūbāl, Ghazna and Kandahār, while his son Shāhrukhīf received in fief the kingdom of Kūrāshān, with Harāt as its capital. Ptir Muhammād attacked the Afghāns of Sulaymān Kūh and then advanced into India. On the news that he was resisted in Multān, Timūr himself advanced from Andarāb over the Hindū-kuhrī turned aside from Laghūm to attack the Sīyāh-pūghī and the Kator-Kāfirs. After this expedition, he attacked the rebellious Afghāns and then passed over the Indus. Both on his outward march and on his return he passed Banī; he therefore probably followed the road of Točī, which leads through the country of the Ghalejā and the Waziris. We do not hear of Afghans serving in his army, though it comprised Tadziks.

When Timūr died (807/1405), Ptir Muhammād reigned in Kūbāl; it was, however, Khālīf who took possession of the throne of the empire. (For fuller details concerning the history of the descendants of Timūr cf. Timūrīs.) The war that ensued ended with the murder of Ptir Muhammād. Shortly afterwards, Khālīf was deprived of the throne and Shāhrukhīf became the supreme ruler. His reign, which lasted for about forty years, was a period of peace and the country was able to recover from the devastations of the last years. He was followed by Ulūgh Beg, 'Abd al-Latif, 'Abd Allah, Bābūr Mirzā, all of whom reigned for a short time only. In 861/1456 Abū Sa'id ascended the throne, but the possession of Kūrāshān and Afghanistan was contested by Husayn Baykara. The last of the family came to an end in 1465, but Abū Sa'id died two years later, and his successor, Sultan Ahmad, did not possess Kūrāshān at all. Husayn Baykara ruled uncontested, from his capital Harāt, over Kūrāshān, Sitān, Ghūr and Zamin-dāwar. Under the long reign of Shāhrukhīf and Husayn Baykara, Harāt reached the zenith of its fame as a centre of poetry, learning and art. During the latter years of Husayn Baykara, his capital was menaced from the north by the growing might of Shāyβānī and his Uzbeks, while other parts of Afghanistan showed a tendency to dissolve into separate principalities, though not under indigenous rulers. Bābūr (q.v.) established himself in Kūbāl and assumed the title of pādshāh. Until then Kūbāl had been governed by more or less independent members of the Timūrī house; Mūkīm, the son of Arghūn, had just taken possession of it when Bābūr appeared before the city and occupied it (910/1505). Kūbāl remained under Bābūr and his successors, the emperors of India [see MUGHAL] for more than two hundred years, until the invasion of Nādir Shāh.

Bābūr, Arghūn, Uzbeks, Shāh Ismā'īl. More dangerous for the kingdom of Kūbāl was the rise of the dynasty of Arghūn (q.v.). Its founder, Dhu 'l-Nūn Beg Arghūn, a descendant of the Ilkhāns, governor of Ghūr and Sitān, received also, after defeating the tribes of Hazāra and Nikūdār, the regions of Zābulistān and Garm-sīr. Taking Kandahār as his capital, he made himself independent, and with the help of his son, Shāh Beg, extended his rule southward to the Bolan pass and Siwastān. In 904/1498-9 he even invaded Harāt, recruiting his army from the population of Ghūr, Zamin-dāwar and Kandahār—probably Tadziks and Afghāns. His son Mūkīm, as mentioned above, occupied Kūbāl, though only for a short time. Shāyβānī's invasion, however, proved the undoing of Dhu 'l-Nūn Beg; in the first battle against the Uzbeks he was killed and in 913/1507 Shāyβānī took Harāt and Siwastān.

Dhu 'l-Nūn's sons Shāh Beg and Mūkīm were now between Bābūr and Shāyβānī. Bābūr with some right claimed to be heir to Timūr's empire and advanced against Kandahār, while the Arghūn princes allied themselves with his old enemy Shāyβānī. Bābūr defeated them and took Kandahār.
He left there as governor his son Nāṣīr Mīrzā, who was immediately attacked by Shaybānī. Bābur himself had been on his way to Ḥarāt to concert measures of defence against the Uzbeks with Sultān Ḥusayn when he heard of the latter's death. He joined the Sultan's sons in their campaign on the Murghāb, and then after visiting Ḥarāt returned in winter by the mountain road to Kābul, a journey during which he and his troops underwent great hardships. He returned to Kābul in 912/913 just in time to suppress a dangerous plot amongst his own relations. Then followed his expedition to Kandahar in the summer, and he was back in Kābul by Dīnjādār 1 913/Sept. 1507, arranging an Indian expedition, and had already started when he was recalled by the news that Ḥarāt had fallen and that the Afgānīs had been restored by Shaybānī. When the news reached him he was actually engaged in war with the Afgān tribes of Dījadalāk and Nangrāhār, tribes recently established in the Kābul valley. He had great difficulty in holding even Kābul, where his authority was threatened by rebellion and mutiny. Shaybānī was now possessor of Khurāsān and overlord of Ḥarāt, but his power began to decline. His armies suffered severely during an expedition into the mountains of Ghūr, and another warrior king, Shāh Ismā'īl, founder of the Sāfawī kingdom of Persia, threatened him from the west. In 916/1510 Ismā'īl invaded Khurāsān and Shaybānī was defeated and slain near Marw. Ḥarāt passed into Ismā'īl's possession and the Shi'ite doctrines were enforced there by a severe persecution. Bābur now allied himself with Ismā'īl and recovered for a time possession of his hereditary dominions in Central Asia, leaving the kingdom of Kābul to his brother Nāṣīr Mīrzā. The alliance with the Sāfawī king was unpopular, however, and the Uzbeks rallied. In the end Šāh Būr, after a severe defeat at Ghāzdāwūn near Bukhārā (918/1512) from which he barely escaped with his life, had to fall back upon Kābul, which he found in great disorder, and he had to suppress outbreaks among his own Mughal troops and among the Afgān tribes. The Yūsūsfāys had moved down from the mountains into the Peshāwar valley, and expelled their predecessors the Dīladāks from the mountains of Bādījar and Swāt. Bābur put them down severely and took Bādījar with great slaughter. He also had to put down risings among the Ḥārātarās. He then turned his attention to Kandahar where Shāh Bēg Aṛghūn was still established. He had tried in vain to make terms with Shāh Ismā'īl, had been imprisoned at Ḥarāt, but escaped, and had since been endeavouring to establish a kingdom for himself in Sīnd, which he invaded with the assistance of some Bālūţ tribes in 917/1511. Bābur made two attempts to take Kandahār before he finally succeeded in 918/1522. Shāh Bēg then removed his headquarters to Şāh (Quetta) in summer and Sībl in winter, and pursued his schemes in Sīnd, while the whole Kandahār province remained in Bābur's possession. Bābur now felt himself strong enough to embark on the series of enterprises which ended in the overthrow of the kingdom of the Lōdī Afgāns in India. He always preferred Kābul to the plains of India, and was buried at Ghāzāna where his tomb is marked by a column.

Between the Mughal and Sāfawī empires. Afgānistān entered upon a more settled period under the influence of the two great empires of India and Persia between which it was divided. Ḥarāt and Sīltān remained with Persia though still for a time troubled by Uzbek raids. Kābul remained part of the Mughal empire while Kandahār belonged sometimes to one and sometimes to the other. The power of the Mughal emperors was gradually restricted to the south of the Hindū-kūsh. North of it Sulaymān Mīrzā, established by Bābur as governor of Badakhsān, founded something like an independent dynasty, and the rest of the country remained under the Shaybānīs. Ismā'īl died in 930/1524, and Bābur in 937/1530. Bābur's son Humayūn succeeded him and his brothers Kamran, Hindal, and ʻAskari held various governments. Kābul and Kandahār were united with the Pāñjab under Kamran. On the Persian side Ţahmāsp the successor of Ismā'īl had made his brother Sām Mīrzā governor of Ḥarāt. The Sāfawīs regarded Kandahār as an appanage of the kingdom of Khurāsān now in their possession, and considered its occupation by the Mughal emperors to be a usurpation. In 941/1535 Sām Mīrzā made a sudden attack on it, but it resisted him successfully, and after eight months Kamran arrived and raised the siege. During Sām's absence the Uzbeks under Ţubayd Allāh invaded Khurāsān, and the unfortunate town of Ḥarāt was again taken and sacked. Ţahmāsp recovered it, deposed Šāh Bēg and himself annexed Kandahār which he took; but it was recovered by Kamran. Meanwhile Humayūn lost his throne in India through the rising of the Sīr Afrāns under Shīr Shāh, and in 950/1543 he made his way from Sīnd through the desert south of Kandahār to Sīltān and Persia, where he was treated hospitably by Ţahmāsp. In 952/1545 with the assistance of a Persian army he last retook Kandahār which was held against him by his brother ʻAskari on behalf of Kamran, and took it after a prolonged resistance. In accordance with his engagement with Ţahmāsp he made the town over to the Persians, but this excited great discontent among his own followers, and Humayūn at last retook Kandahār from the Persians, and treated the province as part of his own dominions, greatly to the anger of Ţahmāsp. Shortly afterwards Humayūn took Kābul and with it obtained possession of his young son Akbar now three years old. During the next few years the war between the brothers went on with varying fortunes. Kamran twice regained possession of Kābul but could not hold it long; on one occasion he is said to have exposed the young prince Akbar on the battles. Ţahmāsp then spent some time among the Mahmār and Khaḷl tribes of Afgāns, whom he incited to plunder the Kābul valley. At last in 961/1553, he surrendered to Humayūn and was deprived of his sight. Humayūn now held the kingdom of Kābul and Kandahār and found himself strong enough to attempt the reconquest of India. This resulted in his victory over the Sīr kings, but soon afterwards, in 963/1556, he died from the effect of an accident. While the young king Akbar was occupied in completing the reconquest of India Ţahmāsp took the opportunity (965/1558) of seizing Kandahār, and it remained under Persian rule until the prince Muṣaffar Ḥusayn surrendered it to Akbar thirty-eight years later in 1003/1621. Shāh ʻAbbās recovered it, but it was lost again by his successor Shāh Saft I, in whose time the governor ʻAli Mardān Khān surrendered it to Shāh Dzhahān (1047/1637). Gīrīṣḵ was also taken after a siege, and Zamin-dawar occupied. In 1058/1648 the young Persian king ʻAbbās II, then only sixteen years of age, led an army to Kandahār and took it, and it never again formed part of the dominions of the Mughal
empire. Shāh Djahān’s armies in vain attempted the reconquest. The rival princes Awrangzib and Dārā-shikōh both conducted expeditions against it, but were equally unsuccessful, and after the failure of the last (1062/1652) no further attempts were made.

With the exception of the vicissitudes of Kandahār, there is little to record in the history of Afghanistan during the time it was divided between the Mughal and Šafawī empires. The Afghan tribes were steadily increasing in numbers and influence, and it was probably in this period that the Abdālīs and Ghazālys spread from their mountains over the more fertile lands of Kandahār and Zamīn-dāwar and the Tarnak and Ārghandāb valleys. The decline in the position and influence of the Tadjik races which had borne the brunt of the Mongolian invasions, and the occupation of their mountain fortresses of Ghūr by a semi-Mongolian population (cf. Nāzārā), gave the Afghān race the opportunity of rising into prominence. In their eastern mountains they had been but little affected by invaders, eager chiefly to press on through the passes to the plunder of India, and the same need of an outlet for their increasing population which led them to spread into the plains of India on the east also led the pastoral tribes to spread westwards. The mountain tribes continued to maintain practical independence at all times. The Mughal government of Kābul ruled nominally, but its actual power was confined to the open valleys. In 1545/1546 for instance Akbar’s army met with a disastrous defeat at the hands of the Yūsufzays of Swāt and Bādγāwār, and the general Rāḍār Blbbl was slain. Rāḍār Mān Singh afterwards defeated the mountaineers but they were never really conquered; they often raided the plains and sometimes took sides in dynastic quarrels, as when the Yūsufzays took up the cause of the pretended prince Shudjā against Awrangzib. When Shāh ʿAlām I before his accession was governor of Kābul under Awrangzib in 1114/1702 one of his commanders Purdīl Kān himself an Afghān, was killed with all his troops when trying to pass from Khost to Kābul, and he had to bribe the tribes to keep open the road between Kābul and Peshawar.

Abybāls, Ghazālys, Nādir Shāh. In the Kandahār province the frequent changes of government between India and Persia fomented dissensions and intrigue, and enabled the powerful tribes to play off one against the other. The Abdālīs [q.v.] near Kandahār succeeded in this manner in obtaining concessions from Shāh ʿAbdāl the Great. Sadō was recognized as chief, and his descendants the Sadāzays became the ruling family. Nevertheless their misconduct led to part of the tribe being removed to the Harāt province. This removal led to the extension of the influence of the Ghazāly [q.v.] tribe near Kandahār, and their power continued to increase until the accession of the Emperor Shāh ʿAlām I, when the Ghazālys of the Kandahār province began to intrigue with him against the Persian government. The plot was discovered and Gurgīn Kān, a Georgian chief, was sent to Kandahār at the head of an army, and arrested Mr Wāys the Ghazāly chief. During his imprisonment, however, Mr Wāys succeeded in gaining the confidence of Shāh Husayn the Persian king, and was allowed to return to his tribe. Shortly afterwards he treacherously murdered Gurgīn Kān whom he had invited to a banquet, seized upon Kandahār and defeated all attempts to subdue him. He died soon after, and his brother ʿAbd al-ʿAzīz, who showed an inclination to submit to Persia, was murdered by Māḥmūd, son of Mr Wāys, who established himself as ruler. (For further details of their conquest of Persia see Ghazāly.)

At the same period the section of the Abdālī tribe in the Harāt province became practically masters of that province, defeated a strong army sent against them under Šafi Kuli Kān, and held their own till the time of Nādir Shāh, even taking Farāh from the Ghazālys after the latter had conquered Persia. While the Ghazāly Māḥmūd fought in Persia, the Abdālīs spread over Kūrūsān and laid siege to Māḥhad. The Ghazāly dynasty was in no way fitted to reign over a country like Persia, and had not sufficient force behind them to oppose any truly national movement. Even the support of the Kandahār province was lost when Aṣhāf succeeded his cousin Māḥmūd, whose brother was able to retain Kandahār. The Abdālīs too remained independent in Harāt. Thus when Nādir [q.v.] put himself at the head of a national movement Aṣhāf’s government collapsed rapidly, and few of the Ghazālys survived to reach their native country. Aṣhāf was killed while wandering in Balzōlīstān in 1142/1729. Nādir now turned his arms against the Abdālīs under Malik Māḥmūd Kān who held Māḥhad (1142/1728). He thoroughly defeated them and took many prisoners. Nevertheless he perceived their value as fighting men and secured their support by restoring them to their old home near Kandahār, from which he removed the Ghazālys when he had the opportunity. He banished them to the Harāt province, but very few, if any, seem to have really settled there, and there are none there at the present day. When Nādir Shāh had made himself king of Persia he laid siege to Kandahār which resisted him for a year, but at last fell (1150/1738). The Ghazāly power was thoroughly broken, but towards the Afghān tribes in general and especially the Abdālīs he pursued a policy of conciliation, and enlisted large numbers in his army. Many Ghazālys took refuge in the Kābul province of the Indian empire, and Nādir Shāh, asserting that his remonstrances had received no reply, advanced on Kābul which fell at once (1151/1738). Thus it was finally severed from the Mughal empire. The last known date of any coin of the emperor Muhammad Shāh struck there is 1138/1725. Nādir Shāh apparently did not use the Kābul mint, but struck coins at Kandahār in 1150/1737, the year of his conquest, and others struck at Nādirābād (which he built during the siege outside Kandahār) no doubt refer to the period of the siege. The whole of Afghanistan was now in his hands and afforded him the necessary base for his invasion of India in 1152/1739. As a result of his victory over Muhammad Shāh the whole Mughal territory west of the Indus including Peshawar and the DēRotāt with the suzerainty over the Kalhūzā or Abybāl rulers of Sind was ceded to him as well as the province of Kābul. On his return from India (1152/1739) he first crossed the Indus at Attock and attacked the Yūsufzays who had been giving trouble, and then went to Kābul. Thence he descended via the Kūrām valley and the Bangāsh country, and went through the DēRoṭāt to Sind, returning by the Bolān to Kandahār and thence to Harāt. During the remainder of his life he relied to a great extent on his Afghān troops and but little on the Persians, from whom he was alienated by his Sunnī creed. The Abdālīs were especially favoured and their young chief Ahmad Kān rose to a high position in his army. Tradition says that Nādir himself prophesied that Ahmad would be king after him. When Nādir Shāh was assassinated by Persians
and Kızıl Bash, Ahmad Shâh who was near by with a strong body of Abdâlîs seized on a treasure convoy and made his way to Kandahâr, where he made himself king. (M. LONGWORTH DAMES *)

(3) THE AFGHÂN NATIONAL STATE. (A) THE SADO-ZAY DYNASTY.

Ahmad Shâh made himself king in Kandahâr and obtained possession of all the eastern portion of Nâdîr’s empire up to the Indus. Harât soon followed, and in the general break up of the Persian monarchy Ahmad Shâh acted as the protector of Shâhrukh, grandson of Nâdir Shâh, who was blinded by his enemies, and maintained a principality for him in Khurâsân. This province in reality formed part of the dominions of Ahmad Shâh and his son Timûr Shâh, both of whom occasionally struck coins at Mashhad, but Shâhrukh continued to rule in name until he was seized and killed by Ağhâ Muhammad Kâdjar after Timûr Shâh’s death. Harât was however treated as an integral part of the Durrânî monarchy, and the ancient kingdom of Khurâsân has remained divided between Persia and Afghanistan.

Ahmad Shâh made Kandahâr his capital and gave it the name of Ahmadshâhî which appears on his coins and those of his successors. He took the title of Durr-i Durrânî, and his tribe, the Abdâls, have since been known as Durrânîs [see]. His family had long been looked up to, and this fact, combined with his tact and energy, enabled him to hold his own. The tribes were treated mildly, and he relied upon foreign war rather than taxation to provide him with a revenue. The Durrânîs were proud of him and followed him willingly, but they were not an easy race to govern, and his son Timûr Shâh on this account moved his capital to Kâbul where the population is mainly Tûdîlî. In his Indian conquests Ahmad Shâh not only rivalled but excelled Nâdir Shâh, and extended his dominions far beyond the Indus. He added the provinces of Kâshmir, of Lahore and Multân, that is the greater part of Pandîjâb and the suzerainty over the Dâ’udpotos or Bahâwâlpur to his dominions. He invaded India several times, and occupied Dâhiy more than once. His defeat of the Mahrattas at Pânpât in 1174/1761 was a turning point in Indian history, but he did not add any provinces beyond the Pandîjâb to his own dominions. His wars with the Sikhs were perpetual and led to the eventual loss of the province. The Khân of Kâlât too, the Brahdî Nâsîr Khân who had become feudatory to Nâdir Shâh declared his independence in 1172/1758. Ahmad Shâh besieged Kâlât without success, and on being called away to India accepted a purely nominal submission. Nâsîr Khân, however, supported Ahmad Shâh in his wars in Khurâsân, and contributed greatly to his victory over Karîm Khân Zand in 1182/1766. On this occasion the blind Ağhâ prince took the side of Karîm Khân and suffered him in Mashhad which Ahmad Shâh reduced by blockade.

For further details about Ahmad Shâh see AḤMAD SHĀH DURRĀNĪ; he died at Murghâb in the hills near Kandahâr in 1187/1773, leaving his successor a very extensive but insecure empire.

Timûr Shâh had held important posts under his father, such as the Niţâmshîp of Lahore and Multân, which is marked by a distinct series of coins. At the time of Ahmad Shâh’s death he was at Harât, and only obtained possession of Kandahâr after seizing and executing his brother Sulaymân, who had been set up as his rival. He soon moved his capital to Kâbul, and reigned uneventfully for twenty years, during which the monarchy declined steadily in strength and stability, although externally it remained unimpaired. The authority of the central government over the outlying provinces was precarious. The Sikhs grew in power and took Multân in 1196/1781, but Timûr Shâh retook it the same year. In Sind the feudatory Kâlbârâs were overthrown and replaced by Balîc amîrs of the Tâlbûr tribe (commonly called Tâlpurs), who waged successful war against Timûr Shâh’s generals from 1197/1782 to 1201/1786, and remained independent, although they accepted a nominal suzerainty. The Mangît amîr of Bûhirâr Ma’âsîm, who had been encroaching on the Turkistân province, especially Marw, also made a nominal submission when attacked by Timûr Shâh, but retained all his conquests. In Kâshmir also there was a revolt which was suppressed. Internally the power of the Bârâkzây clan of the Durrânîs became gradually greater. Timûr Shâh died in 1207/1793 and was succeeded by his son Zamân Shâh, who, though reigned till he was dethroned by his brother Maḥmûd Shâh in 1215/1800. Short as his reign was he was able to concentrate in it crimes and follies enough to wreck the Durrânî monarchy. Although weakened at home by the rivalry of his brothers Maḥmûd and Shûdja’-al-Mulk, threatened in Khurâsân by the Kâdjar, and in the north by Shâh Murâd Mangît, supported by the Khân of Kâlât and the amîrs of Sind, yet he could not refrain from wasting his strength in foolish attempts to rival Ahmad Shâh’s conquests in India, and to pose as the champion of Islam against Sikhs and Mahrattas. This brought him into collision with the English now rapidly becoming the ruling power in North India. His first invasion (1209/1795) was cut short at Hasan Abdal by the news that Ağhâ Muḥammad Kâdjar had captured Mashhad and murdered the blind old Shâhrukh. Having been appeased by an embassy from the Persian king he began a second invasion of India, which was interrupted by the rebellion of Maḥmûd at Harât. After defeating this rising he invaded the Pandîjâb, and this time reached Lahore and received the nominal submission of the Sikhs, now headed by Randîj Singh, but the Kâdjar encroachments in Khurâsân again called him back. Maḥmûd meanwhile led a wandering life intriguing with discontented persons in Harât and Kandahâr. Among these was the powerful leader of the Bârâkzây clan, Payinda Khân, known by the title of Sârîrâz Khân, who was jealous of the authority wielded by the viceroy Wafîdâr Khân. The conspiracy was detected and Payinda Khân was executed. His son Fath Khân fled to Maḥmûd in Khurâsân and induced him to throw himself on the sympathy of the Durrânî tribe with whom Zamân Shâh was unpopular (Zamân Shâh’s mother was a Yûsûfzay while Maḥmûd’s was a Popalzây Durrânî). This advice was justified by the result. Maḥmûd obtained possession of Kandahâr while the infatuated Zamân Shâh was preparing for another invasion of India. Maḥmûd advanced on Kâbul and Zamân Shâh fled, but was soon captured and blinded (1215/1800). Simultaneously with Maḥmûd’s accession at Kâbul Shûdja’-al-Mulk proclaimed himself king at Pêshâwar. He was assisted by a Ghâzâlî rising against Maḥmûd and in 1218/1803 he took Kâbul, imprisoned Maḥmûd and released the blind Zamân Shâh, his own whole brother. For a time Kandahâr was held by Maḥmûd’s son Kâmîrân supported by Fath Khân, but the latter made terms for himself and submitted, but discontented with his position almost immediately set up a rival king Kâysâr Shâh son of Zamân Shâh.
The next few years were occupied by constant intrigues. Path Khan changed rapidly from one pretender to another, sometimes supporting Mahmud and Kâmrân, sometimes Kayser, while Shudjâ³ al-Mulk dissipated his strength in expeditions to Sind and Kashmîr. Finally Fath Khan, who was now supporting Mahmûd, defeated Shudjâ³ al-Mulk at Nimla (1224/1809). He fled into India and Mahmûd’s second reign began. He was however absolutely dependent on Fath Khan, whose power became very great. His brother Dûst Muhammad held high office, another brother Muhammad A’sam became governor of Kashmîr, and another Khânûndîl governor of Kandahâr. Harât which had become independent under another prince was reconquered by Fath Khan and Dûst Muhammad in 1232/1816. Soon afterwards Dûst Muhammad incurred the enmity of Kâmrân, who had become governor, by entering his harem and insulting his sister. He fled to Kashmîr and Kâmrân took his vengeance on Fath Khan, whom he blinded and afterwards killed with the consent of Mahmûd. Although perfidious and unscrupulous Fath Khan was greatly admired by the Afghans, and his brother Dûst Muhammad had no difficulty in raising a large force and defeating Mahmûd in 1235/1818 near Kâbul. Mahmûd lost Kâbul which he never recovered. He held Harût till his death in 1243/1829 and Kâmrân continued to rule there till he was murdered in 1258/1842.

(M. Longworth Dames *)

(b) THE BâRKAZAY (OR MUHAMMADZAY) DYNASTY.

The Muhammaddazy, a small subdivision of the Durrânî Bârkazay of Kandahâr, derive their name from Muhammads, a contemporary of Malik Sadozây, chief of the Abdâf class, with whom he lived amongst his small tribe at Arghasân, SE of Kandahâr, about 1000/1591. His descendants held the title of chief among the Bârkazay tribes of Kandahâr, and came into prominence with Hâjdi Dûmân Khan b. Hâjdi Yûsuf b. Yâro b. Muhammads, who served under Shâh Shâh and died in 1186/1770–1. His son Fâyinda Khân rendered important service to Timûr Shâh in the suppression of rebellions, but in consequence of his intrigues with Muhammads against Shâh Zamân was executed in Kandahâr in 1214/ 1800. He left a number of sons, the eldest of whom, Fath Khân, was installed as vizier, with the title of Shâh Dûst, on Muhammads’ occupation of Kâbul (1215/1800). With the increasing power of the Muhammaddazy their ambitions clashed with the ruling Sadozây family and plunged Afghanistan into strife and bloodshed until finally, after the execution of Fath Khân in 1234/1818–9, his brother Dûst Muhammads drove Muhammads out of Kâbul.

The Bârkazay chiefs, who by now held most of the country, ruled at first in the name of various puppet kings of the Sadozây family, such as Ayyûb and Sultan ‘Ali (who took the name of Sultan Muhammads on his coins). It was not until 1254/1838 that Dûst Muhammads formally assumed the style of amir of Kâbul; but neither he nor any of his successors before Habib Allâh took the title of shâh or king. During the early years of his rule the outer provinces of the empire were rapidly lost. The Sikhs took Multân in 1233/1818, Kashmîr in 1235/1819, Dûrâ Gâzî Khân in the same year, and Dûrâ Ismâyîl Khân in 1242/1824. Peshawar long resisted them under Dûst Muhammads’ brother, Sardâr Sultan Muhammads, but it too fell in 1250/ 1834. The amirs of Sind threw off the last sign of Afghan rule by taking Shikâr-pûr, and to the north of the Hindû-kush Balâk was lost also. Dûst Muhammads therefore became the ruler of a compact Afghan kingdom; the loss of the outlying provinces, which had always been a source of weakness to the Sadozây kings, tended to consolidate his power. Although without scruples of any sort in attaining his ends, yet he had the reputation of a just man and was popular among the Afghans. But his progress was checked by the inevitable rivalries of his brothers. While he made Kâbul his capital, Kâhûndîl Khân held Kandahâr and defeated an attempt by Shudjâ³ al-Mulk Sadozây to recover it in 1250/1834. Harût was taken by the Persians after the murder of Kâmrân by his vizier Yâr Muhammads Khân (1258/ 1842), and was only recovered by Dûst Muhammads in 1280/1863, just before his death. Shudjâ³ al-Mulk, after his failure at Kandahâr, endeavoured to obtain British assistance, and political events led to his ultimately obtaining it. Attempts by Alexander Burnes to negotiate a treaty with Dûst Muhammads had broken down, and the growth of Russian influence led the Indian government to favour Shudjâ³ al-Mulk’s claims. The Persians had at this time (1253/1837) laid siege to Harât. It was believed that their operations were directed by Russians and an English officer conducted the defence. This brought matters to a climax. An Anglo-Indian army advanced through Sind and the Bolân Pass on Kandahâr (end of 1254/Feb. 1839) and after taking the city marched on Kâbul. Dûst Muhammads fled to Bukhârâ and Shudjâ³ al-Mulk was placed on the throne of Kâbul (1 Dûjumâdâ II 1255/17 Aug. 1839). Dûst Muhammads, after some unsuccessful operations in the north, surrendered to the British in the following year and was sent to Calcutta.

Shudjâ³ al-Mulk’s reign was a troubled one. Kâbul was abandoned by the British-Indian army in 1841, and on its retreat the army was almost annihilated at the Khurâd Kâbul pass. These operations were conducted by Muhammads Akbar Khân, son of Dûst Muhammads. The British continued to hold Djalâlabad and Kandahâr, and recouped Kâbul in the autumn of 1256/1842. Shortly before this, Shudjâ³ al-Mulk had been murdered, and his son Fath Djang was recognized as king by the Popalzays but opposed by the Bârkazays. The British soon afterwards left Afghanistan, and Fath Djang, knowing that he could not hold his own, went with them, accompanied by the blind old Zamân Shâh, who was still living. Dûst Muhammads was sent back to Afghanistan, as he was the only man who could establish a firm government. His sons and brothers were reestablished in their governments, but rifts continued from time to time to breach the solidarity of the clan, and even Akbar Khân, now vizier, was on bad terms with his father till he died in 1266/1849–50. Dûst Muhammads maintained friendly relations with Britain except at the time of the Sikh war of 1849, when the Afghan contingent covered itself with ridicule by its rapid flight after the battle of Gudrât. During the mutiny of the Indian army in 1857, Dûst Muhammads gave them no support. He occupied himself in strengthening his own country, and from 1267 to 1272/1850–55 he reconquered Balâk, Khûlm, Kunduz and Bâdakhshân. In 1280/1863 he succeeded in driving the Persians from Harât, and he died there immediately afterwards, having been a good ruler on the whole in spite of obvious faults. [See also Dûst Muhammads Khân.]

Shîr ‘Ali, his fifth son, who had been nominated by him as his successor, became almost at once
involved in civil war with his own elder brothers Muhammad A'zam and Muhammad Afdal, and with 'Abd al-Rahman, the able and determined son of the latter. (For an account of these wars see 'Abd al-Rahman Khan). Shīr 'All was defeated in 1283/1866 and lost first Kābul and then Kandahār. Afdal and A'zam reigned in succession until 1283/1868, but never held possession of Ḥarāt, whence Muhammad Ya'qūb, Shīr 'All's son, advanced in the latter year and recovered Kandahār and Kābul for his father. Shīr 'All now held the whole of Afghanistan, and was recognized by the Indian government, and met the viceroy Lord Mayo at Āmbālā in 1286/1869. He was not, however, satisfied with his treatment, as he could obtain no definite promise of support against other powers. At this period he imprisoned his enterprising son Muhammad Ya'qūb and refuted the viceroy's attempt to intercede for him. He agreed to an arbitration by British officers as to the Sīstān border, regarding which there was a dispute with Persia. According to this arbitration (1290/1873) a considerable part of the most fertile lands was awarded to Persia, and this was another cause of resentment. Finally he began to negotiate with Russia and refused to receive a British embassy. These causes led to the war of 1878-80. The British army took Kābul, and Shir A1I fled to Mazar-i Sharif, where he died in 1296/1879. [See also Shir A1I]. His army, organized on the European model, was defeated by Lord Roberts at the Paywār pass. Muhammad Ya'qūb, released from prison and proclaimed 'Amīr on his father's flight (Rabī‘ I 1296/ Feb.-March 1879), met the advancing British forces at Gandamak, and there concluded a treaty (4 Dūmādār 1296/26 May) by which he ceded to British India certain territories near the Bolān pass and the Kurām valley, and agreed to receive a mission at Kābul. A few months later a rising in Kābul resulted in the massacre of the members of the mission headed by Sir Louis Cāvagnari. This led to a fresh outbreak of war. Roberts took Kābul a second time, but was besieged there by a tribal army headed by Muhammad Dāmān and Mūshk-i 'Alam. After its defeat Ya'qūb Khan was deposed and removed to India, and the government was offered to 'Abd al-Raḥmān, a separate state being constituted at Kandāhār. Part of the army at Kandahār under Stewart marched to Kābul, as a preliminary to evacuating the country, and in passing through the Ghālzāy country was attacked at Aḥmad Khyāl by a large force of men of that tribe, who were only defeated after a most desperate conflict. Scarcely had 'Abd al-Raḥmān been proclaimed when Ayyūb, a son of Shīr 'All, who had been collecting an army at Ḥarāt, marched on Kandahār, defeated a small Anglo-Indian force at Maywand, and laid siege to Kandahār. Roberts marched rapidly from Kābul and defeated Ayyūb. After this the British army withdrew and the whole country including Kandahār was made over to 'Abd al-Raḥmān (1297/1880). In spite of internal difficulties and external problems [see 'Abd al-Raḥmān Khan], he preserved the independence and integrity of the country, and on his death (15 Dūmādār II 1319/1 Oct. 1901) transmitted an undisputed authority to his son Shīr A1I. His son Muhammad 'Alī, then aged 19, was at once proclaimed as successor by the brothers of Nādir Shāh, the eldest of whom, Sardār Muhammad Hāshim Khan, exercised a virtual regency until 1946. Several tribal risings in the course of which king Nadir Shāh was assassinated (20 Rādīj 1352/8 Nov. 1933) in the palace of Dilkushā. His son Muhammad 'Alī, then aged 19, was at once proclaimed as successor by the brothers of Nādir Shāh, the eldest of whom, Sardār Muhammad Hāshim Khan, exercised a virtual regency until 1946. Several tribal risings in the following years were sternly suppressed, and an active programme of military, educational and economic development was pursued. In 1934 Afghanistan entered the League of Nations, and in 1937 signed with Turkey, 'Irāk and Iran the pact of Sa'ādābād; a trade agreement was negotiated with the USSR in 1936. During the second World
War it again maintained a strict neutrality. The remaining frontier disputes were settled in 1947—that in the north by agreement with the USSR, and that with Iran over the Helmand river by American arbitration. Since the constitution of Pakistan in the same year, however, the problem of the unsubdued tribes of the former “North-West Frontier” (see the articles AFGHANISTAN and MAHMAND), which for a century bedevilled relations between Afghanistan and British India, continues equally to obstruct those between the two Muslim States.

(1) L. Longworth Dames—H. R. Gibb)

‘AFLAJ or AL-DIN AL-TILIMSANI (see AL-TILM-SANI)

AFLADI (AFLADI AL-DAWASIR), a district in southern Najid, almost the great cuesta of Tuwayq, roughly bounded by Wadi Birk (N), the plain of al-Bayadh (E), Wadi al-Makan (S), and the sands of al-Daby (W). The most populous oasis and present capital is Layla (46° 44' 35" E, 22° 16' 45" N). The district contains a remarkable group of spring-fed pools called ‘Uydn al-Sayh and the extensive remains of a system of channels which once irrigated a more prosperous land. The pools, the largest of which is nearly a kilometre long, are the most noteworthy features of this kind in the Arabian Peninsula. The district, in older times also known as al-Falaijd, takes its name from falaj (pl. aflaj), the term still used in ‘Uman for an underground aqueduct with surface apertures to facilitate cleaning of the channel, though strangely enough this type of aqueduct, which may be of Persian origin, is now called saddi (pron. sadji, pl. sawadjji) in al-Aflaiid. The poorly kept aqueducts of Samhan, Barbir, al-Wadjdajj, and three smaller ones, all of which water the oasis of al-Sayh, are still flowing.

The northernmost village of al-Aflajid is Usayliia. Layla comprises the settlements of Qashiba, the present seat of the amir, al-Mubarrar, the former seat, and al-Diufaydiriyia. Farther south are the oases of al-Ammar (not to be confused with Al ‘Ammar, a section of the Dawasir), al-Sayh, which is the most extensively cultivated of all, al-Kharfa, and al-Rawda. The pools lie south-west of al-Sayh. South of the pools are the tiny oases of Suwaydan, al-Rukaykyiya, al-Ghawta, and Marwan. The southernmost oases are al-Badda in Wadi Hachradj, which descends from al-Haddar, and al-Shubta in the upper reaches of al-Makan. In the highlands of Tuwayq are al-Sittara (al-‘Idara in al-Hamdan), Hurada, and al-Ghayl, all ancient places. Along the western escarpment of Tuwayq are al-Hamar (al-‘Amar) (N) and al-Haddar (S).

At the dawn of Islam the dominant tribe in al-Aflajid was Dja [q.v.], whose ancestor was a brother of Kushayr and al-Hashir, sons of Ka'b, a descendant of ‘Amir b. Sa‘a‘a of the Northern Arabs. In 630-1 Dja‘da embraced Islam and sent an envoy to Medina, where the Prophet confirmed the tribe’s position in the district (Caetani, Annali, ii, 1, 297). In 126/743-4 Dja‘da and their allies of Banu ‘Amir on the First Day of al-Falajid killed a governor of Banu Hanifa who had been set over them. Banu Hanifa, after defeating Banu ‘Amir on the Second Day of al-Falajid, had their power broken on the Day of al-Nishah in 176 (Caetani, Chronographia, v. 1601).

Three centuries after the Prophet, Dja‘da remained the foremost tribe of al-Aflajid, followed in importance by Kushayr and al-Hasir (al-Hamdan, i. 549). Dja‘da’s chief centre was Sukkan al-Falajid, a city with iron gates and walls 30 cubits thick enclosing an area said to contain 260 wells of sweet water. Also within the territory of Dja‘da was al-Kar al-‘Adi, reputed to date back to the time of ‘Amza and ‘Iraqid—perhaps the same as the ruins now known as Kuşyayrat. ‘Ad just south of al-Sayh. Kushayr occupied the city of al-Haysamiyya with walls broad enough for four horses to run abreast along the summit. Among the towns belonging to al-Hasir was al-Haddar, but many members of this tribe had already moved to the Yemen.

In 443/1051 Naisir-i Khusrav found al-Aflajid in a state of virtual ruin as the result of internal dissensions so severe that men wore their shields and swords even while praying. During this medieval age the tribe of Dja‘maya, said to be a branch of ‘Anza, became the leading power. ‘Al Salabb and ‘Al Khalfa, the present ruling houses of al-Kuwayt, who eventually supplanted Dja‘maya in control of the whole district.

In 1199/1785 the people of al-Aflajid, following the lead of their kinsmen in Wadi al-Dawasir, adhered to the Wahhabi cause and have since remained staunch in its support, though the district has played only a minor role in modern history. In 1348/1920 ‘Abd al-Alir al-Saad bordered the rebellious leaders of the Hazazina of al-Para at Layla and executed them. The district is now under an amir responsible to the central government of Saudi Arabia in al-Riyadh. In addition to the Dawasir, small numbers of Subay, the Suhul, and the Fu‘ul live in al-Aflajid. Remnants of Dja‘maya are found at al-Haddar. Aflajid form an important part of the population of al-Sayh. Negro blood is often seen in the towns, and there are many folk of Banu Khadlr (q.v.), mainly tillers of the soil (hadda, pl. havadda).

The dates of al-Aflajid are famous. Both al-Hamdan and Philby mention the sfire variety (called by al-Hamdan sayyid al-tumur, though the present inhabitants regard the siri as the sayyid),
and Nāṣīr reckoned the dates of al-Aflādī better than those of al-Bagār.

**AL-FALĀTŪN Arabic** for Plato, the Greek philosopher, who became, together with Aristotle, the standard philosopher in late Greek philosophy. (i) Works and doctrine; (ii) Lives; (iii) Sayings. (i) Plato is known to Arab authors according to the different ways in which his genuine works or those erroneously attributed to him were read and studied in the Greek sections of the Roman Empire during the centuries preceding the Arab conquest of Hellenized lands in the Eastern Mediterranean. Most Arab thinkers did not consider Plato the main representative of Greek thought as St. Augustine e.g. had done (Civ. Dei, viii, 4, 12) but subordinated him to Aristotle; they were however like e.g. Porphyry, Ammonius and Simplicius aware of an identity of purpose and a basic agreement between the two great philosophers.

Just as commentaries on Aristotle written outside the Neoplatonic schools survived in Arabic translations and, partly, in Arabic translations only (as in the case of certain writings of Alexander of Aphrodisias and Themistius, etc.), interpretations of Plato, untinged by Neoplatonism, found their way to the Arabic philosophers and were studied by them. Part of Galen's *Dīllūnīs (q.v.)* Παντοκράτωρ διάλογων συνόψεως in eight books, lost in the Greek original but still partly accessible to Ḥunayn b. Iṣḥāḳ (Mā Tūrgīmūn min Kūṭub Dīllūnīs (Bergsträsser), no. 124) and his school, has been traced and recently published, viz. the summary of the whole of the *Timaeus*, with many verbal quotations, a fragment of his paraphrase of the *Republic*, a fragment of his summary of the *Laws* and a reference to his summary of the *Parmenides* (P. Kraus and R. Walzer, *Plato Arabus*, i, 1951). Fragments of his medical commentary on the *Timaeus* (Ḥunayn, no. 122) have been recovered from Arabic medical writers (H. O. Schröder and P. Kahle, Corpus Medicorum Graecorum, *Supplementum*, i, 1934). Many quotations from Plato and references to him reached the Islamic world through translations of other works by Galen. As had happened in the case of Aristotle, late Greek philosophers tried to arrange Plato's dialogues in systematic order. An otherwise unknown work of this type, completely free from Neoplatonic influence and still fully aware of the political aspects of Plato's thought, was used and partly reproduced by al-Fārābī (F. Rosenthal and R. Walzer, *Plato Arabus*, ii, 1943). The author of the Greek treatise, who had even regarded this systematic ordering of the dialogues as a chronological arrangement by date of composition, is unknown. A commentary on the *Republic* of similar provenience was widely used by al-Fārābī; it constitutes the main part of Ibn Rūghād's commentary which is available in a Hebrew translation and a 16th century Latin one (edition in preparation by E. J. Rosenthal). A summary of Plato's *Laws*, of a similar type, was used by al-Fārābī in his compendium of the work (F. Gabrieli, *Plato Arabus*, iii, 1951). Al-Rāzī commented on Plutarch's commentary on the *Timaeus* (S. Pines, *Atomenlehre*, 90) and Yāḥyā b. ‘Adī copied Plutarch's book *μεταφυσικά* (Bibliography, 246). But, in general, Arabic philosophers look at Plato through the eyes of his Neoplatonic interpreters, Plotinus (cf. *AL-SHAYKH AL-YŪNĀN*), Porphyry (Furfuriyūs (q.v.)), Proclus (Burūlus (q.v.)) and others. In the preface to his translation of a fragment of Proclus' commentary on the *Timaeus* (89E–90C: E. Pfaff, Corpus Medicorum Graecorum, *Supplementum*, iii, p. xiii, 1941) Ḥunayn b. Iṣḥāḳ (cf. also Mā Tūrgīmūn, no. 45) says: "Galen is the standard interpreter of Hippocrates, and the man who is best entitled to explain the meaning of Plato's words is Proclus the most famous of scholars". An instructive example of this Proclean interpretation of Plato is to be found in Miskawayh's *al-Fawās al-Asghar*, in the section on the immortality of the soul (F. Rosenthal, 399 ff.), based probably on Proclus' work *On the immortality of the soul according to Plato* in three books, which was known to the Arabs (Fīhrīst, 252). A tradition of this kind is followed by al-Kindī, in whom the Platonic element is strong (cf. Rasā'il (Abū Rida), nos. 10–13) not only in psychology but also in his extremely orthodox neoplatonic metaphysics of the One and in his ethics. The Plato to whom al-Fārābī (with the exception of his theory of the ideal state), Ibn Sīnā, Ibn Bīḍār and Ibn Rūghād refer is, whether explicitly or implicitly, always the Plato of Plutinus and his followers. Yāḥyā b. ‘Adī had Olympiodorus' (6th century A.D.) commentary on the *Sophist* (lost in the Greek original) in his library (Fīhrīst, 256) in the translation of Iṣḥāḳ b. Ḥunayn. We find an interesting account of Plato's metaphysics, cosmology and psychology, derived from an unknown but valuable neoplatonic source, in al-Shahrastānī, 283 ff. (German transl. by Th. Haarbrücker, ii, 177).

On the whole, since Neoplatonism claims to be a reinterpretation of Plato, influential Neoplatonic writings deserve to be mentioned here as well, the *Theology of Aristotle*, in which Aristotle is supposed to have become a Platonist in his old age, the *Liber de causis* based on Proclus' *Elements of Theology*, the new Plotinian text discovered by P. Kraus (cf. Bibliography) and the Arabic Plotinus source discussed by F. Rosenthal (cf. *ARISTOTELES* and *AL-SHAYKH AL-YŪNĀN*).

A new development starts with al-Suhrawardī al-Maktūl (q.v.) and the Ḥirākhīs (q.v.), who, criticizing al-Fārābī and Ibn Sīnā, emphasize the mystical aspects of Platonism or rather Neoplatonism, and make Plato the mystic the chief authority in philosophy. The Şūfis now become the true followers of Plato (cf. e.g. al-Suhrawardī, *Opera Metaphysica et Mystica* (Corbin), i, p. viii, xxxix ff.). An anonymous book *On the Platonic Ideas* (ed. 'A. Badawi,
AFLATON

235

 Cairo 1947), written probably in the 14th century
(Corbin, op. cit., a, n. 79), depends on al-Suhrawardi's
strange interpretation of the Platonic ideas.

Another special tradition of Platonism is repre-
sented by Muhammad b. Zakariyya' al-Razi [g.v.]
who also claims to follow Plato as his main author.
His Platonising ethics (cf. al-Tibb al-Ruhand) may
be connected with his study of Galen, and his
rejection of the eternity of the world with the
interpretation of the Timaeus put forward by Plato.
Galen, but his five eternal principles
are of Neopythagorean provenience, although he
considered them to be Platonic. His theory of the
atomic structure of matter may go back to Plato's
lecture On the Good, it is certainly found in a
neopy-
thagorean version of Plato's metaphysics (Sixtus
Empiricus, Adversus Physicos, ii, 249 ff.).

The Arabic bibliographers list the titles of all
the dialogues to be found in the Greek Corpus Platonicum,
but give little information about Arabic translations.
They mention a commentary on the Republic
(translated by Hunayn b. Ishah); translations of the
Timaeus by Yahyâ b. al-Bdtik, Hunayn b. Ishah and Yahyâ b. 'Adî. (Hunayn wrote also a
commentary which that ought to be read before Plato's
works.) Ibn al-Nadîm also mentions a copy of the
Cratylus in Yahyâ b. 'Adî's handwriting. Proclus' comment-
ary on the Phaedo (lost in the Greek
original) was translated from the Syriac by Ibn Zur'a.

No manuscripts of these or other Arabic transla-
tions of a Platonic dialogue have so far been traced.
A verbal quotation from the Republic (apart from
the more or less verbal references in Ibn Rushd's
paraphrase and references to its contents in works
of other philosophers) occurs e.g. in the Rashd
Ikhwdn al-Saf', Cairo 1347, iv, 134 (the story about
Al-Kindî wrote a treatise on the Platonic number
(Rep., viii; Fihrist, 256). Quotations from the
Timaeus occur frequently, but it is difficult to
decide whether they are taken from Plato or from
some intermediary. For the quotations from the
Laws to be found in al-Bubrûn's India cf. F.
Rosenthal, 359 f. and F. Gabrieli, Plato Arabus, iii, p. xii,
n. 2. There are numerous quotations from the
Phaedo in the same work. The closing section on
Socrates' death is to be found e.g. in Ibn al-Kifês' a, 100-6 and Ibn Abi Usaybi'a, i, 45. A Persian
version of the dialogue exists in Brusa (Bell., 1952, 114).
The Akbâdî-speech from the Banquet has been
translated by F. Rosenthal in Istanbul, Köprüli 1608,
fol. 216. Persistent research will no doubt trace more
quotations of Platonic dialogues in Arabic philo-
sophical and non-philosophical writings.

Among the pseudopigrapha of a philosophical
kind can be mentioned: the neopythagorean
interpretation of Plato's Eskortation of young men, probably
of Greek origin (F. Rosenthal, Orientalia, x, 383-95),
a letter by Plato addressed to Phormvy (!) about
the banishment of grief, depending on a treatise on
consolation by al-Kindî (Magh., 1922, 884-9, see
H. Ritter-R. Walzer, Memorie Ac. dei Lincei, 1940,
388 n. 2) and Plato's will addressed to Aristotle.
But the Arabs are acquainted not only with the
different interpretations of Plato's thought which
are familiar to the student of Greek philosophy but
also with a Plato who had been associated with the
superstitions which had become an integral part of
the teaching of most of the neoplatonic schools:
magic, astrology and alchemy (Olympiodorus
and other late Neoplatonists had dabbed in alchemy
and made Plato their patron). The Arabs went a
step further and made Plato the author of alchemical
works. Djâbir quotes a Musahhahâd 'Afâlân in
which Plato initiates his disciple Timaeus in the
secrets of alchemy; but the passages of the Timaeus
referred to by Djâbir have nothing to do with the
original dialogue of Plato (P. Kraus, Jabir et la
science grecque, 48 ff.). Another work of a similar
character, a philosophical alchemical book attributed
to Plato is the Rasâbî 'Afâlân known to the West
as Liber Quaurtorum and preserved in two Arabic MSS.
It contains a dialogue between Ahmad b. al-Husayn
djâbir Buqhtâr and the well known Harranian
mathematician and astronomer Thabit b. Kurra
(P. Kraus, op. cit., 31, 339). Another alchemical
treatise, the Liber Platonis de XIII clavisibus, is
supposed to have been translated from the Arabic
into Latin in A.D. 1301 (L. Thurnhike, A History
of Magic, iii, 57). Cf. also Kraus, op. cit., 31, n. 9.

Among the magical treatises ascribed to Plato the
Al-Nawâmîs, which deals with artificial generation,
appears to be worth mentioning (P. Kraus, op. cit.,
or, n. 12) as well as al-Sirr al-Khafi (Ibid., 52).

The Arabic "Lives of Plato" do not add
anything substantial to the material to be found in
the Greek tradition as represented by Diogenes
Laertius, book iii, Olympiodorus, and the Prote-
gomena to the Platonico philologico (cf. H. Breitenbach, F.
Buddenhagen, A. Debrunner, F. von der Miehl,
Diogenes Laertius III, 1907; J. Kirchner, Prosopographia
Attica, no. 11835). There is, however, no direct connection
between them and any of the Greek texts known.
Partial of the Arab tradition can be traced back to
an introductory work by Theo of Smyrna (2nd
century A.D.), referred to by the Fihrist, 245,
and quoted at length by Ibn al-Kifês, 17-9 (cf.
J. Lippert, Studien auf dem Gebiete der griechisch-
arabischen Übersetzungsliteratur, i, Braunschweig
1898, 39 ff.). The Fihrist refers also to (Ps.-) Plutarch,
see H. Diels, Doxographi Graeci, 287, Al-'Amîr, a
philosopher of the 4th/10th century (quoted in the
Abbreviation of Abî Sulaymân al-Manîjî's Studi
al-Eikma, introduction), probably following some
lost Greek tradition, made Plato one of the five
pillars of wisdom, the others being Empedocles,
Pythagoras, Socrates and Aristotle (Ab Andréullls,
Fûthaghûrûs, Sukrât, Aristotulls [qq.v.]); these
philosophers derived their wisdom from the Prophets.
According to him Plato retired in old age into
solitude and prayer. He also gives an account of
Plato's solution of the Delian problem (cf. Plutarch,
De gen. Socr., 7, p. 579; idem De Ei ap. Delphos, 6,
p. 386; Tannery, La Gnomèria grecque, 110;
Alaxwîl, Untâhâr al-Bildâl (Wüstenfeld), 45; Lutfi al-
Maktûl, Ta'dîl al-Ma'âbûk (S. Yalikaya, A. Adnan,
H. Corbin), Paris 1940). On him depends Sûfîd al-
Andalus, Tâbahdî al-U'mam, 25; Sûfîd life was used,
as a minor source, by Ibn al-Kifês, passim.

The life in Mubâshshîr b. Fâtîk's Muhâjr
al-Eikm (MS Brit. Mus. Add. 25893, fol. 44 ff.; on
this work cf. F. Rosenthal, in Orientalia, 1937,
21 ff.) was copied by Ibn Abi Ushbi'a, i, 50 ff.
He made both Plato's parents descendants of
Asclepius, probably misinterpreting the epigram
to be found in Diog. Laertius, iii, 45 (cf. E. J. and
L. Edelstein, Asclepius, Baltimore 1945, i,
o. 322, ii, 127). Alone among the Arab biographers
he mentions Plato's supposed stay in Egypt. For the

Ibn al-Kifât based his long and detailed life
(17-27) on the Fihrist, on Theo of Smyrna (cf. above)
and on an unidentified Greek source (19 line 16-25
There are Greek parallels to almost everything mentioned. Stories similar to the discussions reported to have taken place at Dionysius' court (21) are to be found in Olympiodorus' Life and in Plutarch's Dio. There are a very few confusions, such as the story of Socrates' stay in Sicily and the introduction of Plato's two female disciples as his wives and the inclusion of Proclus among his pupils. The section 257-264 is taken from al-Farabî (cf. the anonymous Froll. Phil. Plat., cap. 7-16); 264-274 reproduces Sâ`id al-Anslawi, q. Plato's prayer in neoplatonic language (274-5) is worth mentioning (cf. also MS Oxford, Hunt. 162, fol. 202r).

Al-Shahrazûri's account of Plato's life in his Nuzhat al-Amrûshî (in MS) is based on Mubâshshîr.

In later centuries Plato's tomb could be visited at Konya (F. W. Hasluck, Christianity and Islam under the Sultans, Oxford 1929, 363 and passim).

(iii) The main source for the various compilations of sayings of Plato is Hunayn b. Ishaq's Na`wdat al-Falâsîsa wa l-Hukami` (cf. the Hebrew transl., ed. by A. Löwenthal, Frankfurt 1896, and translated by him into German, Berlin 1896; and K. Merké, Sinnsprüche der Philosophen, Leipzig 1921). Another primary source is Ibn Hindû, al-Kalâm al-Kânûnîyâ, fi l-Hikm al-Yûnûnîyya, Cairo 1918. The life in the Abbreviation of Abû Sulaymân's Sîrîn al-Hikma contains only sayings. Ibn Abi Usaybî, i, 517-518, reproduces the section on sayings to be found in Mubâshshîr. Sayings attributed to Plato occur very often in Arabic literature.

**AFRASIYAB**

Afrasiyab founder of a line of governors of Basra (Al Afrasiyab). He was an officer of unknown racial origin, who purchased the government of Basra from the local pasha about 1021/1612. Afrasiyab was succeeded by his son 'Ali in 1034/1624-5, during an attack on Basra by Persian forces, which failed in face of 'Ali's resistance. A second Persian attempt in 1039/1629 was equally unsuccessful. During the Turco-Persian struggle for Baghdad, 'Ali Pašâ took neither part and continued to govern his province independently. The succession of his son Husayn (c. 1062/1652) led to internal conflicts, of which advantage was taken by Murtadâ Paša of Baghdad to evict Husayn in 1064/1654 and replace him by 'Ali's brother Ahmad. Murtadâ's subsequent execution of Ahmad led to a rising of the local population and tribesmen and the restoration of Husayn Paša. His attempts to extend his power over al-Hasâ' were followed by a full-scale expedition against him led by İbrahim (Tawîl), pasha of Baghdad, in 1076/1665. After a prolonged siege of Kurna, Husayn abdicated in favour of his son Afrasiyab, but continued to govern as regent until a second expedition from Baghdad under Kara Muṣṭafa (Firûrî) Paša drove him out and restored the imperial government in 1078/1668.

AFRASIYABIDS, also called (by Rabino) the Kiyas of Culab or Culab (after one of the eight bukhah of Amul, and (by Sachau), the Kiyas Djialawi, minor dynasty of Mazandaran. The eponym of the clan, Afrasiyab b. Kiyas Hasan, was a sipahsalar in the service of his brother-in-law, Fakhr al-Dawla Hasen Bawand [see BAWAND]. Kiyas Afrasiyab conspired with his sister, who had a daughter from a previous marriage, accused the Bawand of taking this girl as his mistress, and obtained from the wali of Amul a fatwa authorizing the death of the culprit. At the same time, the Bawand put to death his minister, Kiyas Djialal al-Din Ahmad b. Djialal, a member of the powerful family of the Kiyas-yi Djalali. This filled the nobles with anger and consternation and obliged the Bawand to seek the friendship of the Kiyas of Culab, old rivals of the Kiyas-yi Djalali. The reconciliation of the two families gave the Kiyas Afrasiyab liberty of action, and finally the Bawand was assassinated in a bath, on 27 Muharram 750/17 April 1349, by 'All and Muhammad, sons of Afrasiyab (or by the latter alone, according to Justi). With the death of Fakhr al-Dawla, the dynasty of the Bawand, which had ruled for 750 years (45-750/665-1349) came to an end, and Kiyas Afrasiyab took over the power in Amul (and Sari; J.A., 1943-5, 237). Seeing that most of the officers of his former master refused to submit to him, he tried to make use of religion and became the disciple of the darwishes Kavam al-Din Marashli, called Mir-i Buzurg, hoping that the veneration of the population of Amul for him would restrain them from rebellion. After ten years of rule, however, Kiyas Afrasiyab was defeated and killed, together with his three sons, by the same darwishes in the battle of Djialalchmarparin, in 760/1359.

Mir-i Buzurg established himself as governor of Amul and thus founded the dynasty of the Marashli (q.v.) sayyids (760-989/1359-1581). In the same year, a member of Afrasiyab's clan, Kiyas Fakhr al-Din Djialati, murdered 'Abd Allah, son of Mir-i Buzurg, and was himself executed with his four sons; Kiyas Gushatsa (Wishatsa) also, another brother-in-law of the last Bawand, was killed with his seven children.

The Kiyas of Culab re-emerge only with Iskandar-i Shaykhli, eighth son of Kiyas Afrasiyab, who took refuge at Harat, led an adventurous life and eventually entered the service of Timur. In 795/1392-3 Timur invaded Mazandaran, took the fortress of Mihana-Sar near Amul, sacked Amul and Sari, deported the Marashli sayyids and appointed Iskandar as governor. Having returned with the invader, Iskandar enjoyed little popularity, all the less that he ordered the mausoleum of Mir-i Buzurg at Sari to be demolished. In 802/1400-1 Iskandar accompanied Timur on his expedition to Irak, Afghanistan, and Syria, then, having obtained permission to return to Amul, he rebelled. In 805/1403-4 Timur marched into Mazandaran in pursuit of Iskandar, who fled into the forest with his wife and two small children, and fearing that he might be betrayed by their cries he killed them together with their mother. Finally he was killed at Shirud Dui-Hazir, and the officers of Timur sent his head to his son Husayn Kiyas who was holding out in the fortress of Firuz Kuh and now hastened to surrender it. Another son, 'Ali Kiyas, had fallen into the hands of Timur's troops. Timur pardoned the two brothers and Husayn Kiyas continued to rule over Firuz Kuh. His son, Luhrasp b. Husayn b. Iskandar ruled over Talakan in 880/1479-80. In his turn, amir Husayn (Hasan; J. B. Tavernier, Les Six Voyages, Paris 1676 etc., Eng. trans. London 1678; S. H. Longrigge, Four Centuries of Modern 'Iraq, Oxford 1925, 99-117; Abbas al-Azawi, Ta'rkh al-'Irab bayna Itiballayn, vol. v, Baghdad 1953, 21-101.

(H. A. R. Gibb)

AFRASIYABIDS, also called (by Rabino) the Kiyas of Culab or Culab (after one of the eight bukhah of Amul, and (by Sachau), the Kiyas Djialawi, minor dynasty of Mazandaran. The eponym of the clan, Afrasiyab b. Kiyas Hasan, was a sipahsalar in the service of his brother-in-law, Fakhr al-Dawla Hasen Bawand [see BAWAND]. Kiyas Afrasiyab conspired with his sister, who had a daughter from a previous marriage, accused the Bawand of taking this girl as his mistress, and obtained from the wali of Amul a fatwa authorizing the death of the culprit. At the same time, the Bawand put to death his minister, Kiyas Djialal al-Din Ahmad b. Djialal, a member of the powerful family of the Kiyas-yi Djalali. This filled the nobles with anger and consternation and obliged the Bawand to seek the friendship of the Kiyas of Culab, old rivals of the Kiyas-yi Djalali. The reconciliation of the two families gave the Kiyas Afrasiyab liberty of action, and finally the Bawand was assassinated in a bath, on 27 Muharram 750/17 April 1349, by 'All and Muhammed, sons of Afrasiyab (or by the latter alone, according to Justi). With the death of Fakhr al-Dawla, the dynasty of the Bawand, which had ruled for 750 years (45-750/665-1349) came to an end, and Kiyas Afrasiyab took over the power in Amul (and Sari; J.A., 1943-5, 237). Seeing that most of the officers of his former master refused to submit to him, he tried to make use of religion and became the disciple of the darwishes Kavam al-Din Marashli, called Mir-i Buzurg, hoping that the veneration of the population of Amul for him would restrain them from rebellion. After ten years of rule, however, Kiyas Afrasiyab was defeated and killed, together with his three sons, by the same darwishes in the battle of Djialalchmarparin, in 760/1359.

Mir-i Buzurg established himself as governor of Amul and thus founded the dynasty of the Marashli (q.v.) sayyids (760-989/1359-1581). In the same year, a member of Afrasiyab's clan, Kiyas Fakhr al-Din Djialati, murdered 'Abd Allah, son of Mir-i Buzurg, and was himself executed with his four sons; Kiyas Gushatsa (Wishatsa) also, another brother-in-law of the last Bawand, was killed with his seven children.

The Kiyas of Culab re-emerge only with Iskandar-i Shaykhli, eighth son of Kiyas Afrasiyab, who took refuge at Harat, led an adventurous life and eventually entered the service of Timur. In 795/1392-3 Timur invaded Mazandaran, took the fortress of Mihana-Sar near Amul, sacked Amul and Sari, deported the Marashli sayyids and appointed Iskandar as governor. Having returned with the invader, Iskandar enjoyed little popularity, all the less that he ordered the mausoleum of Mir-i Buzurg at Sari to be demolished. In 802/1400-1 Iskandar accompanied Timur on his expedition to Irak, Afghanistan, and Syria, then, having obtained permission to return to Amul, he rebelled. In 805/1403-4 Timur marched into Mazandaran in pursuit of Iskandar, who fled into the forest with his wife and two small children, and fearing that he might be betrayed by their cries he killed them together with their mother. Finally he was killed at Shirud Dui-Hazir, and the officers of Timur sent
established in Tirah long before the advent of those Pashto-speaking Afghan invaders who gradually pushed their way into the belt of hills and alluvial plains to the west of the Indus between the 13th and 16th centuries.

Their position athwart the Khyber Pass connecting India with Afghanistan made it extremely difficult for the Mughal emperors of Hindustan to maintain safe communications with their outlying province of Kabul. In the reign of Akbar, incited by the preaching of Bāyāzīd, the founder of the Rawshāh-nīyya [q.v.], sect of heretics, and of his son Djiālāl al-Dīn, they attacked Mughal troops and caravans passing through the Khyber. They were forced into submission by Akbar’s forces in 1587 and in the following year agreed, in return for allowances, to keep the pass open for traffic. They were however only temporarily subdued and expeditions had to be undertaken against them in the reigns of Djiālānīr and Awrangīb. Djiālānīr deported many Afridis to Hindustan and Deccan, where their descendants are still to be found. After the establishment of the Afghan kingdom by Ahmad Shāh Durrānī the Afridis were nominally subject to him and are mentioned in the register of his army; according to it the tribe counted 19,000 fighting men.

The first skirmish of British troops with the Afridis dates back to the invasion of Afghanistan during the first Afghan War of 1839-42. From the annexation of the Pandjāb in 1849 to the formation of the North-West Frontier Province in 1901 no less than eight expeditions were required against these unruly clans. The first was against the Kohāt Pass Afridis in 1850. In 1853, troops were sent against the Djiāwākī Afridis, a clan of the Adam Khel Afridis. Punitive measures were necessary against the Akā Khēl Afridis in 1855. Expeditions were necessary against the Djiāwākī Afridis in 1877 and 1878, and against the Zakka Khēls in 1878 and 1879. The Zakka Khēls of the Khyber and the adjacent Bāzār valley of Tirah have been the most contumacious of all the Afridi clans. Inhabiting lands stretching from the slopes of the Safīd Kūh to the border of Peshāwar they have been able to force their neighbours to pay exorbitant tolls for the privilege of passing through their territories. The first agreement with the Zakka Khēls was during the Indian Mutiny of 1857 (Aitchison, xi, 92-6). This was observed until the Second Afghan War, 1878-80, when the peace of the Khyber and the whole frontier zone was abnormally disturbed. Zakka Khēl attacks on the Khyber lines of communication forced the British, in 1878 and 1879, to enter their country, destroy their crops, and raze their forts and villages to the ground. On 17 Feb. 1881, the Khyber Afridis, together with the Loargi Shinwarīs of Landī Kotal, accepted responsibility for the safety of the Khyber; and in return for the recognition of their independence, agreed to have no dealings with other foreign powers. At the same time arrangements were made for the protection of the Khyber by a force of Djiārīdīs (tribal levies), to be paid by the Government of India (Aitchison, xi, 97-9). The Afridis were the last to join in the general frontier conflagration of 1897 and were only forced to come to terms after extremely severe fighting in the Tirah campaign of 1897-8. At the end of this campaign the previous system of allowances which had proved so successful for seventeen years, 1881-97, were once more adopted. At the same time the Khyber Rifles were reorganized under British officers supported by a movable column at Peshāwar. This agreement, under which the British became responsible for the Khyber Rifles and for the safety of the pass, regulated British relations with the Afridis until the year 1908 (Parliamentary Papers, 1908, lixxiv, Cd. 4210, pp. 14-5).

Towards the end of 1904 large numbers of Afridis visited Kābul. This was followed by small marauding incursions into British territory, in which the Zakka Khēls, assisted by other Afridi clans, by Orāka-yays, and even by bands of Afghan outlaws, such as the Hazārnāo gang, were the chief offenders. From 1905 to 1908 bands of well-armed Afridis ravaged the British borders. An attack by a gang of about eighty men upon Peshāwar city, on the night of 28 January 1908, exhausted the patience of the Government of India, and in that year, the Zakka Khēls were speedily coerced by troops under the command of Major-General Sir James Willcocks. The entry of Turkey into the First World War, in November 1914, created considerable excitement on the frontier. One of the great dangers on the frontier has always been the possible attitude of the Afridi clans whose lead in the war the other tribes are usually prepared to follow. Fortunately for the peace of the Peshāwar borders and possibly of the whole frontier, the mission of the so-called Turkish generals to Tirah failed because of a shortage of funds. The danger of an Afridi rising was averted when, on 1 February 1915, the Government of India decided to double their allowances.

Quickly following the wake of the 1914-18 war came the Third Afghan War of 1919 which was the signal for risings along the entire frontier, and for the collapse of Lord Curzon’s militia scheme. By 1921 the Afridi clans had made full submission. The Khyber Rifles were disbanded and their place taken by Kāpūsādas, tribal levies paid by the Government of India but providing their own arms and ammunition. But there was a great danger of a recrudescence of Afridi raiding because of the intrigues of the Akā Khēl mulla, Sayyid Akbar, who denounced all tribesmen who had accepted British terms. His activities were checked when, in April 1921, the Afridi tribal digirī accepted new allowances in compensation for the increased tribal responsibility involved in the construction of the Khyber railway (Secret Border Report, 1921-2, p. 1). In February 1922 the Zakka Khēls agreed to pay a substantial fine for their past misdeeds. In the following year the peace of the Afridi country was rudely disturbed by the exploits of the Kohāt gang. Members of this gang were forced to seek refuge in Afghan territory where their immunity from punishment led to a diplomatic protest on the part of the Viceroy. The opening of the Khyber Railway from Djamrud to Landī Khāna did not make for peace. The construction of this line had been a source of profit to the tribesmen but its completion reduced their allowances. From 1927 to its settlement in March 1930 Tirah became the scene of a religious struggle between its Sunni and Shiīte clans. In the spring of 1930 the Afridis came under the influence of Indian National Congress agitators with the result that Afridi lashkars (tribal forces) entered the Peshāwar district and attacked the city of Peshāwar in June and August of that year. By the end of August all raiding gangs had been expelled from the district. Since 1947 the Government of Pakistan has been responsible for the control of the Afridi clans. As recently as December 1952 the Afghan government has been accused of granting asylum to Afridi outlaws who had been organizing depredations into Pakistan.

AFRIDI [see PARIDON].

A'FRIN important right tributary of the Orontes (al-‘Aṣfī [q.v.]), which it reaches after joining with the Nahr Yāghrah (Murād Paša) in the Lake of Antioch and the Nahr al-Aswād (Kāra-šāh), in the ‘Amm. Its wide middle valley, between the Djalal Simān and the Kur-dag, was known in the Middle Ages as the district of the Diğmā. The importance of the valley was due to the crossing of the road, which used it to connect Antioch with the districts of the upper Euphrates, with the roads which led from Cilicia and Asia Minor towards Aleppo and inner Syria. One of these roads, after passing the Amusa or the col of Baggāt (q.v.) and following the shore of the Lake of Antioch, crossed the ‘Afrin at the ford near modern Bellane (the “Ford of the Baleine”) of the Crusaders. In the first centuries of Islam it was guarded on the south side by the small fortresses of Tīzan, Artāh, ‘Imm and since the time of the Crusades by that of Hārīm (q.v.), which lay nearer to the Orontes. The other, more northern roads issued, after passing the Kur-dag, at the gap of ‘Aṣāz and passed the ‘Afrin either at the bridge of Kībār (now ‘Afrīn) or further up below the old capital of the region, Küriş (Cyrrhus). The new capitals were ‘Azāz, outside the real basin of the ‘Afrīn, and ‘Āyandān—of which important ruins are still preserved near one of the ‘Afrīn’s sources. Thus the valley of the ‘Afrīn served in the classical period of Islam as the main longitudinal line of communication in the western part of the military district of the ‘Awṣām (q.v.). It was temporarily captured from Islam by the Byzantines in the 4th-10th centuries, and by the Crusaders in the first half of the 12th century. At present it lies athwart the political and ethnical boundary between Turkey and Syria.

AFRIT [see ‘IRRĀT].

AFSANTIN, AFSINTIN or, more rarely, ISFINTIN (from Greek ἄφιντος) mostly denotes the common wormwood (Artemisia Absinthium L.) but also other similar kinds of plants. In medical writings it is often called khashāth ṭumī. The cognate form isfīn (absinth-wine) already occurs in ancient Arabic poetry (Nōdeke, in Lōw, 386).

A good deal of the information which Arab authors offer on the afsantin goes back to classical sources. Its different kinds were generally classified according to their origin: Persian, Nabataean, Syrian, Egyptian, Khurāsānī etc. That from Tyre and Tarsus was considered the best. The yellow flower in particular was put to diverse medicinal uses. Not only tonic and vermifugal but also laxative, diuretic and other properties were attributed to the plant. It was also recommended as an antitoxin. Externally it was used in plasters, oils etc. Its juice mixed with the ink was said to preserve the paper. In addition to many other applications it was also employed against the loss of hair (dā‘ al-tha‘lab).

AFSHAR

Ya'qūb b. Arslān al-Afshār; "Husam al-Dīn ShuhH" in Hamd Allah Mustawfl, Ta'rikh-i Guzida, i, 547—whence to be due—merely to a textual error). §humla, to iktd* (tiyul) of the Afshar. Afshar chieftains are mentioned during the rule of the Afl Koyunlu (e.g. Mansūr Beg Awshār, 877/1472-3, Hasan Rūmū, Afsan al-Tawārīkh, in MS, chapter on the Afl Koyunlu; Dawwānī, 'Ard-nāma, MTM, v, 298, Engl. transl. in BSOS, 1940-2, 156, 174, Mansūr Beg, district of Shīrāz, 904/1498-9, 906/1502-1, idem, ed. Seddon, Baroda 1931, 21 ff. 69; Fīrūz Beg, Shīrāz, 904/1498-9, ibidem, 24). The Afshar played a part in the establishment of the Safawid dynasty (cf. kīlīq bāsh, ismā'īlī). High dignitaries of Afšār origin are often mentioned in the Safawid chronicles (e.g. Afsan al-Tawariikh, 236, 332, 339, 345, 438; Iskandar Munghi, Ta'rikh-i 'Alam-ār-yi Abbās, i, 155, 185, 190, 251, 309 ff., 400, ii, 765; Tahkhir al-Mulāk (Mirmosky), 16).

Under the Safawids we find Afšār clans in various districts, and their chieftains occupied provincial governorships. Afšār khāns ruled in the district of Kūh Gūlī; the tribesmen of this region belonged mainly to the Gūndūzli and Arafshu clans (see Ta'rikh-i 'Alam-ār-yi Abbās, 199, 340-4, 358 and 1ūr). After the revolt of 1005/1596-7 their rule came to an end, most of the clans that escaped punishment were scattered and only small remnants survived by the beginning of the 17th century.

The Gūndūzli and Arafshu played an important role in the Khūrāstān. In the beginning of the 17th century we find in Dīzfūl and Shūshṭar Afšār governors like Mahdī Kūlī Sūltān and Haydar Sūltān. When the governor Mahdī Kūlī rebelled in 946/1539-40, the Afšār, Alwādšt (Gūndūzli) and Urmīya, while a smaller portion were settled in Shūshṭar and Dīzfūl, Afšār governors ruled for two and a half centuries, from the time of 'Abbās I till about 1250/1834-5, in Kāzārūn [q.v.]. We find governors belonging to various Afšār clans also in other regions: Inālu in Yazd, Kīrmānšāh, Mosul and Rūmīyā, Alpū, Kūse Aḩmadlu and Kīrīkh in Kūrūsān (Abbārd, Farāh, Isfīzār).

In the vicinity of Urmīya, Afšārs were settled in the time of 'Abbās I (the tradition in the text translated by Nikitine, that they came there with Timūr in 802/1400, has no foundation). Kāsim Kūshān, a distinguished general of 'Abbās I, chieftain of the Inālu, settled with his tribe, shortly after 1032/1622-3, in the regions of Urmīya, Sāmn Kūšān and Sīstān. (Ta'rikh-i 'Alam-ār-yi Abbās, 762). His son, Kābul 'All Kūshān, was governor in 1027/1617-8, and was followed by other Afšār governors; Kūshādād Beg Kāsimlu (the Kāsimlu clan probably derived its name from Kāsim Kūshān) took the title of begārān Beg in 1119/1707. (For further details see B. Nikitine, Les Afsar d'Urmuyeh, J.A, 1929, 71 ff. and Urmuyeh; cf. also Sām Kūšān.)

In general, the Afšārs played an important role in the wars of the Safawīs against the Ottomans and the Uzbeks, though, as we have seen above, 'Abbās I, according to his policy in general, tried to break the particularist tendencies of the clans. During the reign of Nādir Shāh, who himself came of the Kūšān branch of the Abīward district, Afšār amīrs were prominent. Some Afšār chieftains played important roles during the troubled period after Nādir's death. Afšār contingents were an important element in the Kādrār army and were used in the suppression of revolts as well as against external enemies.

According to Joannin (quoted in Langles, Voyages du Chevalier Chardin en Perse, Paris 1811, x, 243) the Afšārs counted at the beginning of the 19th century 80,000 souls (repeated by Ritter, Asien, vili, 400-5; etc.—this may, however, refer to the total of tents. [Detailed statistics according to localities are also given there.] For the same period, cf. also P. A. Jaubert, Voyages en Arménie et en Perse, 225; Zayn al-'Abidīn Shīrwānī, Bustān al-Siyāsā, 106 (the numbers seem exaggerated). For more modern times see Māfic Rūshā, Diwārīyā-yi Muṣalāsā-i Irān, Teherān 1301-2, ii, 86 (Inālu in Fārs, as part of the lūd-i khamsa); 106 ff., 112, 265 (Inālu and Afšār in the vicinity of Ardabil, Mīshkīn, Zarand, and especially Sāwā and Kāzwīn [cf. also gīmīn khamsa and gīmīn sāwā]; 90 (clan called Afšār as part of the Akādīrī in Kūh Gūlī—cf. also Fārs-nāma-yi Nāsīrī, ii, 270); 92 (Gūndūzli near Shūshṭar and Dīzfūl, completely assimilated); 92, 253 (Afšār in Kūrsan); cf. also 75 and 371 (their name in geographical and administrative nomenclature); Mēhmed Ḫāsan Bābūr, Astarābādī, Bakū 1301, 73 (Afšār in the Republic of Astarābād; for an earlier time, cf. Ewīlīyā Cēlēbi, Siyāhāt-nāma, ii, 259, 859, iv, 284, 337); G. Jarring, On the distribution of Turk tribes in Afghanistan, Lund 1939, 61 (some Afšār settled in Andūkū); by Shībah I, others by Nādir Shāh).—Just as Afšār elements were (as noted above) attached to other tribes, so also we find Afšār clans, which, to judge by their names, must have originally belonged to other tribes: the Shāmānu and Dīlārī in Urmīya (mentioned by Nikitine) who were probably detached from the great tribes of the same name; the same is true of the Tekelī and Innīlū (O. Mann, Das Mu'mūn et-Tairīkh-i ba'd Nāsīrī, 31).

Afšārs figure among the Turkmen who lived during the Mamlūk period in Syria, especially round Aleppo (cf. e.g. al-Kalkashandī, Subh al-Aṣkā; Ibn Taghrībirdī (Popper), vi, 225, 364, 386, 557). They seem to have played a role in the establishment of the principality of the Rāmān-oghlu (g.v.); see C. Cahen, in Byzanzion, 1939, 133). In the Ottoman period various branches of the Afšār are mentioned (Rādāb-oghlu near Kāl'at Ḡūrār; Ḥaddīl Khāli, Dīkhān-nāma, 593; in documents: Radjour Abu-Ṣawārī, A. Refik, Anadoluad Türk aşireleri, Istanbul 1930, 145, 165-7, 186, 209, 239; Kārā Awshār, Kārā Gūndūzlu Awshārī, Bahrīl Awshārī, ibid., 106, 102). These tribes, who were also known under the
collective name of Yeni II, spent the winter in Syria and the summer in Anatolia, near Zamanti. The government made continuous efforts to settle them in the regions of the Çukur Owa, Marash (cf. Besna Khani, Marash, H. M. Barlow, Istanbul 1340, 70 ff.), Icel and Kayseri in Anatolia, and near al-Ra'kka in Syria (Ali Riza Yalman, Cemüpti Türkmen Oymaklari, Adana 1939, ii, 105 ff.).

**AFŞUS** (Afsos), poetical name of Mīr Shīr Ṭāli, the son of Sayyid ʿAlī Muẓaffar Khaṇ, and descendant of the Prophet through ʿĪmām Djaʾfar al-Sādik. His ancestors dwelt at Khānāf in Persia. One of them, Sayyid Badr al-Dīn, the brother of Sayyid ʿĀlīm al-Dīn Ḥāḏīqī Khaṇ, came to India and settled at Naurābād Agra. Sayyid Ghiyāḥ Muṣṭafā, the grandfather of Afsūs, came to Delhi during the reign of Muḥammad Shah (1719-48), and was an associate of Nawwāb Šamsān al-Dawlah Khaṇ. Afsūs was born at Delhi and received a liberal education. On the assassination of the Nawwāb (1747), when Afsūs was 11 years of age, his father took him to Patna; later on, after 1760, they removed to Lucknow, where Afsūs settled, supported by Nawwāb Šāhīn the son of Iḥāṣān Khaṇ, and became an associate of Mīrzā Djaḥān-baqhṭ (Djahān-dār Šāh), the eldest son of the emperor Šāh ʿAlām.

After living some years at Lucknow, he was brought to the notice of the Resident, Colonel W. Scott, at whose recommendation he went to Calcutta in 1215/1800-1, and was appointed Head Munṣiq in the Hindustani department of the College at Fort William.

Afsūs wrote a Hindustani Diwān during his residence at Lucknow. He also made there a translation of the Gulistān of Saʿdī, which was completed in 1226/1810, under the title of Bāṭh-i Urdū. The introduction to this translation contains an autobiographical sketch, which is the principal source of our information regarding his life. Whilst at Calcutta, he edited the Kulliyāt of Sawāda, and revised the Hindustani translations of Persian works, which had been prepared by munṣiqs of the College. He also made a translation of the first part of the Ḥadiṣat al-Tamārīk or a Persian history of Hindustan written by Mīrzā Ṣudjān Rāʾe of Pātiala in 1207/1695-96. This work, undertaken at the instance of J. H. Morington, was completed in 1220/1805 under the title Aḏāḥ-i Mahfīl, and was first printed at Calcutta in 1808. John Shakespear translated the first ten chapters of this work into English and included them in his Munṣiq-i Hindī, Dublin 1847. A complete English translation was made by M. J. Court and published at Allahabād, 1871 (and ed. Calcutta 1882). According to Garcin de Tassy and Sprenger (Urdu Catalogue, 158), Afsūs died in 1809.

**Bibliography:** Garcin de Tassy, Histoire de la Littérature Hindouie et Hindoustani, Paris 1868, i, 348; Encyclopaedia of Islam, ii, 16.
and of the whole region between the rivers of Douro (Douro) and Mondego, marked one of the decisive stages of the Reconquista.

At the death of al-Mu'azzafar, who only survived for a short time this grave amputation of his dominions, he was succeeded by his son Yahyä al-Manšūr, who was challenged by his brother 'Umar, governor of Evora (Yābūrā) and soon disappeared from the scene. 'Umar, who took the lākāb of al-Muta-wakkil, was exposed, like all the mulāk al-lāwâdih of his epoch, to the increasing demands of the Christian king Alfonso VI, who in 471/1079 took from him the fortress of Coria (Kūriyā). He seems to have been the first, even before the capture of Toledo by Alfonso VI, to solicit the intervention of the Almoravids in Spain, but eventually, like all his neighbours, he was unable to resist the growing aggressiveness of the Christian king, and had to comply with his demands for tribute. His attempt in 472/1080 to add the kingdom of Toledo to his dominions, following on the offer made to him by the inhabitants of Toledo themselves, failed in spite of the fact that he stayed for ten months in the Dhu 'l-Nūnīd capital. He was present at the battle of al-Zallākā [q.v.], which took place within his own territory on 12 Rādpā 479/23 Oct. 1086, and had a hand in the intrigues which finally decided the Almoravids to dethrone all the mulāk al-lāwâdih of al-Andalus and annex their possessions. Feeling himself menaced, 'Umar al-Mutawakkil turned towards Alfonso VI and solicited his help, in return for the cession of Santarem (Shantarān), Lisbon (al-'Ushbūna) and Cintra (Shintara). But all this was in vain, and Badajoz was taken at the end of 497/1095 by the Almoravid general Sir b. Abl Bakr, with the connivance of the inhabitants, who had had enough of the fiscal exactions of their king. Al-Mutawakkil and two of his sons, al-Fadil and Sa'd, were taken prisoner and sent to Seville, but even before their arrival there they were executed. Another son of al-Mutawakkil, al-Manšūr, escaped, fortified himself for some time in the castle of Montanchez, in the modern province of Cáceres, and finally, together with his followers, migrated into the dominions of Alfonso VI and was converted to Christianity.

(E. LEVI-PROVENÇAL)

Cheikh, *Sha'arî al-Nasrâniyya*, 70-4; it was introduced into Spain by al-Kâlî, who had received it from Ibn Durayd (*BAH*, ix, 396). Verses and biographical notes are to be found in *Dîbâj*, *Hayawan*; index; *idem*, *Bayân* (*Sandbûl*, i, 177; Ibn Kutayba, *Sârî*, 110-1; *idem*, *Uyun al-Akhâr*, iii, 113; *Kâlî*, *Amâlî*, i, 125; *Afhân*!, xi, 41-2; Barbir de Meynard, *Swans* 15 (offprint from *J.*, *Soles*); Brochelmann, *S.* i, 57; Nallino, *Solihi*, vi, 29 (French transl. 48). (Cf. *Pellat*).

**AFYUN**.

*Opium*, from Greek ὀπίσμον, diminutive of ὄμοσ, "vegetable juice". Opium is the dried resinous juice of the unripe capsules of the oppy (*Papaver somniferum L.*, in Arabic *khâkhâbîd*), the preparation of which is already described by classical authors, e.g. by Dioscorides, iv, 64. (For opium in Antiquity see Fauluy-Wissowa, s.v. Mohn.) In Islamic times it was used officially and as a narcotic (also by *darwîshes*). The poppy had long been cultivated in Upper Egypt: according to Kûhîn al-ʿAtţâr, 128, in his time (7th/13th century) the best opium was prepared in Aabû Tâdî, S. of Assûût. The cultivation of the poppy and the preparation of opium flourished in Egypt until the beginning of the 19th century. (Cf. Lane, *Modern Egyptians*!, i, 118, ii, 35). The cultivation of the poppy in Asia Minor does not seem to go back to the Byzantine period. It apparently spread after the Crusades, and under Turkish rule the plant was acclimatized especially in the neighbourhood of Kara Hisâr, which received the nickname of *Afyûn Kara Hisâr* [*q.v.*]. This town was the centre for the cultivation and the export of the opium as late as the 19th century. (Cf. O. Blau, *Entwus über das Opium*, *ZDMG*, 1869, 280). In Persia, as well as in Turkey, opium is often called *tirâg*, "antidote". When ʿAbbâs II tried to enforce the prohibition of wine, the consumption of opium grew to such dimensions that he was forced to soften the prohibition and take measures, instead, against the trade in opium (1621; P. della Valle, *ii*, 108). Yârûd and Iṣfâhân used to export opium to India and Turkey. (See Chardin, *Les six voyages*, 1735, iii, 14-5, 282 ff.; Houtsma, *Chronogr.* 1116, ii, 67; E. Polak, *Perien*, Leipziger, 1865, ii, 248-55; and the vivid description of opium-eating by E. G. Browne, *The Poppy in China*, 5; E. Bretschneider, in A. de Candolle, *Origine of Cultivated Plants*, 400; Yule and Burnes, *Hobson-Jobson*, 641; Giles, *Glossary of Reference*, 200, who derive the Arabic name of opium from the obopic).—For the adulteration of opium by dishonest merchants (by admixture of various resins, or sandarac, etc., see E. Wiedemann, in *SBPMs Eri*, xi, 1914, 176-206).

**AFYUN KARA HISAR** (modern spelling: *AFYON KARAHISAR*), more correctly *AFYON KARA HIŞAR*, "Opium Black-castle", at present also simply *AFYON*, formerly *KARA HISAR-ı Şâbîh* (in Neshîr, ed. Ankara, 64 = ed. Berlin, 21 = Leuindavius, *Hist. Myst.*, 644, 1931, col. 140: Şâbihiy Kara Hisârı[!] *Principia Maurocraticarum*, *Sulbarcarcas in Baron* Zâlêi (1758), *Commentariorum del Viaggio in Persia*, Venice 1558, 14b), town in western Anatolia, 38°50' N, 30°30' E, about 1007 m. above sea level, on the stream Akârçay, which flows into the Eber Gölü, and then into the Akshêhir Gölü, at the foot of an isolated and steep trachyte cone which rises from the plain to a height of 200 m. above the town surrounding it. *Kara Hisâr-ı Şâbîh* was the capital of a *sandâq* of the eyalet Anadolu (Hâджî Khaîîfî, *Die Flora der Asie Mineure*, 641, since 1281/1864 of a *sandâq* of the eyalet Khudâwendiğâr (Brusa); in modern Turkey *Afyûn Kara Hisâr* is capital of the eyalet of the same name, comprising the kadâd (*ilî*), Afyûn Kara Hisâr, Bolwadin, Dînâr Emirêdâgh (*Ašiziyê*, Şandîkli and Shuhût. In 1943 the town had 29,030 (1950: 29,826), the kadâd 136,667, the *milâyêt* Khudâwendiğâr (Brusa); in modern Turkey *Afyûn Kara Hisâr* is capital of the *milâyêt* (*il*), called the kadâd (*ilê*). Afyûn Kara Hisâr, Bolwadin, Dînâr Emirêdâgh (*Ašiziyê*, Şandîkli and Shuhût. In 1943 the town had 29,030 (1950: 29,826), the kadâd 136,667, the *milâyêt* Khudâwendiğâr (Brusa); in modern Turkey *Afyûn Kara Hisâr* is capital of the *milâyêt* (*il*), called *Aphion*.

Kara Hisâr-ı Şâbîh is identified with the Byzantine fortress of Akroûnos, Akroûnos, near which in 740 A.D. the emperor Leo III defeated the Arabs, and the legendary hero Sayyid Bâtîl and his armies met their death (Theophanes, *Chronogr.*. de Boor), i, 390, 411; and where the emperor Alexius I Comnenus negotiated in 1116 with the Saltûk prince Malikshâgh (Anna Commena, *Alexiens* (B. Leib, Paris 1555, i, 118, ii, 35). The name *Afyûn Kara Hisâr*, formerly only in popular, but at present also in official use (Tavernier, *Les six voyages*, 120 has: Aphion Carassar; Ch. Texier, *Asie Mineure*, Paris 1834: *Aphionum*) comes from the rich production of opium in the district, already mentioned by Belon, *Les six voyages*, 1735, iii, 14-5, 282 ff.; Houtsma, *Chronogr.* 1116, ii, 67; E. Polak, *Perien*, Leipziger, 1865, ii, 248-55; and the vivid description of opium-eating by E. G. Browne, *A Year amongst the Persians*, *ZDMG*, 1869, 280). According to B. Laufer, in *Toung Pao*, 1916, 462 (cf. also O. Franke, *Geschichte d. Chines. Reiches*, ii, 551, iii, 428) the knowledge of preparing opium came to the Chinese from (medieval) India and not from the Muslims (contrary to the assertions of scholars such as J. Edkins, *The Poppy in China*, 5; E. Bretschneider, in A. de Candolle, *Origine of Cultivated Plants*, 400; Yule and Burnes, *Hobson-Jobson*, 641; Giles, *Glossary of Reference*, 200, who derive the Chinese names of opium from the obopic).—For the adulteration of opium by dishonest merchants (by admixture of various resins, or sandarac, etc., see E. Wiedemann, in *SBPMs Eri*, xi, 1914, 176-206).

another, p. 36 and 37, that Karasari was in the possession of Ibn al-Sayib—by which no doubt the descendant of the Sāhib is meant—under the suzerainty of the Germiyans; cf. also Ahmed Tewhīd, in TOEM, 1st series, ii, 563 ff. After this Kara Hisār shared in the vicissitudes of the principality of Germiyan [q.v.], which soon became a dependency of the Ottomans and under. Bāyazīd I actually belonged for a time to the Ottomans, from 7Q2/1390 until its restoration under Timūr, 805/1402. Khādīr Pasha (d. 790/1389), son of Sulaymān-šāh of Germiyan, and other members of this princely family, are mentioned as heads (célebi) of the Mewlewī colonies in Kara Hisār (see Şāhlīb Dede, Tebūkhi-yi Şū-war-yi Mewlewīyye, MS Vienna, no. 1257, fol. 54r, 90r = ‘Ali Enwer, Sevātšāh-yi Edeb, Istanbul 1390, 48 f., 102). During Timūr’s invasion of Asia Minor after the battle of Ankara (1401), Kara Hisār also suffered from the raiding parties of the conqueror (Şaraf al-Dīn ‘Ali Yazdī, Zafar-nāma, Calcutta 1887-8, ii, 446, 457, 484, 492 = Histoire de Timur-Bec, transl. Pétis de la Croix, Delft 1723, iv, 21, 31, 60, 68; Dukas, Hist., Bonn, 77).

In 832/1428-9 the principality of the Germiyan-oghlu definitely fell into the hands of the Ottomans, and Kara Hisār with its territory became a ṣancād (sandjab) of the eyālet Andolū (cf. Dhīlān-nāma, 643). As a fortress near the Karamān frontier, it was, as long as Karamān remained independent, of military importance. At the beginning of the war with Uzun Ḥasan (878/1472-3) the prince Muḥṣafāt retired to Kara Hisār and used it as a base for his expeditions against the Karamān-oghlu, the allies of the Persians (‘Ashīkhpāsha-zāde, Ta’īlīhī (Giese), 169; Sa’d al-Dīn, Ta’īlīhī, i, 534; Caterino Zeno, loc. cit), and in 853/1449-50 it served as a base for the operations of Hersek-zade Ahmed Pasha against the Egyptians who had invaded Karamān (Sa’d al-Dīn, ii, 65). Kara Hisār is often mentioned in connection with the revolts and struggles of contending pashas in the 17th century (1011/1602, revolt of Dehlī, 1041/1631, revolt of Baba ʿOmār, 1069/1658, revolt of Abāzā Ḥasan Pasha). In 1833 the town was temporarily occupied by Ibrahim Pasha, son of Muḥṣafāt ‘Ali Pasha. In the Greek-Turkish war in 1921-2 it was occupied by the Greeks twice (28 March-7 April 1921 and 13 July 1921-27 August 1922). The war caused great damage to the town, which was, however, restored by reconstruction on a large scale under the republic.

The greater part of the scanty antiquities from the classical period seems to have been removed to the town from the ruined sites of the vicinity, notably Seydiller (Prymmessus), İse Şera Hisaş (Docimium) and Çifet Kaşabası (Symmada). The town’s land-mark, the steep trachyte cone with the late Byzantine fortifications restored by the Germiyan-oghlu (described by Ewliya Celebi, Seyyāh-nāme, ix, 29-34) bore as late as at Niebuhr’s time (1766) the name Bek Bara Kāfe’si (“the fortress which gives refuge to the Beg”). It was never properly inhabited, and is now derelict, but was used occasionally for the internment of political prisoners (‘Ashīkhpāsha-zāde, Ta’īlīhī, ed. Istanbul, 243 f., not in ed. Giese), and as late as 1802 for the imprisonment of the French prisoners of war from Egypt. The other monuments from the epoch of the Sāhibs and the Germiyan-oghlu, such as the Şāhlīb Türbesi, the Ulu Djànīn of Khohī Beg and the mausoleum et Sultan Djwānāl, as well as the Ottoman monuments, such as the mosque of Ahmed Gedik Pasha with its annexes (the medrese at present used as a museum; Ekrem Hakki Ayverdi, Fāṭih devari mimarisi, Istanbul 1928, 25-58), still await detailed examination.—In addition to the inscription on the Altıgöz köprüsü, mentioned above, other inscriptions from the town are published in RCEA, nos. 4132, 4329, 4540 and 4667.

**AGADIR**

AGADIR, one of the names of a fortified enclosure among the Berbers, whose chambers are allotted to the various families of the tribe for storage of grain, and where the tribe takes refuge in times of danger. The following are the areas where this ancient Berber institution survives: Diabal Naftûsa (under the name of gasr = ṣābus, or temiṭel); Southern Tunisia (ghurfa); and in Morocco the Rīf and more especially the Great, Middle and Anti-Atlas and the Sirwa (agadir among the Şāhibs and amongst the Berbers of the Middle Atlas). The word agadir probably goes back to Phoenician gadar = Hebrew ḥadar “wall” (in fact the word has in the Sōs the meaning of “strong wall”).

**AGADIR-IGHIR.** Moroccan town situated at the junction of the Moroccan High Atlas with the plain of Sūs, on the Atlantic coast. The town stands at the northern end of a large bay, at the foot of a hill some 800-900 feet high which is surmounted by a fort. The population numbers 30,111, of whom 1,518 are Jews and 6,062 Europeans (1932 census).

It is not clear whether a settlement existed there before the arrival of the Portuguese, although a letter from the inhabitants of Massa to Emmanuel I of Portugal, dated 6 July, 1510 (Sources indéédées de l’Histoire du Maroc, Portugal, i, 243) speaks of an agadir al-arba’āt at that site. This suggests that an agadir existed there near which a working market was held every Wednesday. At all events, it was of no great importance. Leo Africanus mentions the

**AGA [see AĞHA].**
same settlement under the name Gartguessem ("Cape Ksima" named after a Berber tribe living round about the town).

In the second half of 1505, a Portuguese nobleman João Lopes de Sequeira, built a wooden castle there, perhaps to protect a fishing fleet, perhaps also, with the approval of his sovereign, to thwart the Spaniards in the Canary Islands who had designs on the southern coast of Morocco. The castle was situated near a spring, at the foot of the hill commanding the roadstead. This site still bears the name of Funti, although its official designation seems from the first to have been Santa Cruz del Cabo de Aguar, by reason of its relative proximity to Cape Ghir. This castle was purchased by the King of Portugal on 25 January 1513.

The establishment of the Portuguese at Santa Cruz caused a strong reaction among the Berber tribes of the Sūs. The members of the Darḍūlya order, which had established itself in the Sūs 50 years previously, were able to exploit this antipathy for the purpose of a holy war, and some of them promoted the rise of the Sa'dīds (Banū Sa'dī), a family of guwarafīya coming from the Dar'[a] (Dra'a). The chief of this family, Muḥammad, later entitled al-Kā'īm bi-Amr Allāh, was proclaimed war leader about the year 1510.

From that date the Portuguese fortress was subjected to an intermittent, but nevertheless irksome, military and economic blockade, and to attacks which grew in severity as the power of the Sa'dīds increased. In September 1540, the Sa'dīd king of the Sūs, Muḥammad al-Šaykhk, son of al-Kā'īm, captured the hill which dominated Santa Cruz and concentrated there a strong force of artillery. The siege began on 16 February 1541 and ended, on 12 March, with the surrender of the garrison. A very detailed and lively account of these events can be found in the Chronique de Santa Cruz, the work of one of the besieged who, after 5 years' captivity at Tarāḍānt and elsewhere, wrote this account of his adventures.

For many years Santa Cruz-Agadir was left deserted until the Sa'dīd al-Ǧhalīl bi-lbāb (1555-74) built a fort on the top of Agadir hill to protect the anchorage from the Christian fleets. From then onwards Agadir was one of the points at which European traders regularly landed, principally to take on cargoes of sugar (see especially Sources inédites de l'Histoire du Maroc, 1ère série, France, iii, 361). Agadir retained its role of trading port up to the founding of the Muslim town of Mogador (Agadir) in 1773. Since that date, Agadir harbour has been little used.

The settlement achieved momentary renown in 1911 when the German gunboat "Panther" cast anchor in the roads to assert German claims there at a time when General Möničer's column had just occupied Fez (1 July 1912). After the signing of the Protectorate agreement, Agadir was occupied by French troops in 1913. Its population was then less than 1,000.

Since then, the town has developed greatly. It has become the chief town of one of the administrative regions of Morocco which comprises nearly 700,000 inhabitants. It owes its growth chiefly to the development of its agriculture and fisheries, and to the exploitation of its mineral wealth. The port of Agadir, constructed since 1914, has recently been enlarged.

Bibliography: Leo Africanus, Description de L'Afrique, (Schefer), i, 176 (Guarguessem); Chro-
father" and "uncle", and in Cuwash "elder sister". Among the Mongols it appears already to have been used as an honorific, the princesses of the imperial family being designated by it (cf. Quatremère, Histoire des Mongols, xxxix-xl).

In Ottoman Turkish agha (usually pronounced ä'ä or even ä) means "chief", "master" and sometimes "landowner". It is also used for the head servant of a household and occurs in combination with many words, e.g. çarşîîi aghasi ("market inspector"), şahîîi aghasi ("inkeeper"), köy aghasi ("village headman") and aghäey ("elder brother"—cf. above—"or "senior"). As a title, up to the reform period and in some cases even later, it was given to many persons of varying importance employed in the government service, for the most part in offices of a military, or at least a non-secretarial, character, being contrasted particularly with efendi [q.v.]. The most notable aghas of this kind were the Yeniseri Aghast (see YENISERI) and most of the principal officers of the standing as opposed to the feudal army, and the Öncesi or Rikhâ Aghalar (also most officers of both the "Inside" and "Outside" Services of the sultan's household. But the kâhya (ked-kudud) of the Grand Vizier was also entitled aghä, though his duties were entirely administrative and secretarial—whence, in his case, the word efendi was usually added to his title and he was called Agha Efendims; and so were the eunuchs of the palace service headed by the Bâb-ul-Sefadet Aghast or Kapî Aghast (white) and the Dâr-ul-Sefadet Aghast or Klâr Aghast (black), and the eunuchs attendant on the Wâlide Sultan and princesses of the imperial blood. Hence eunuchs employed by officials and the well-to-do in general came usually to be known as harem or Kâddim aghalar, till the word agha alone might sometimes mean "eunuch".

After the abolition of the Janissaries in 1826 and the formation by Mahmûd II of the 'Asâhir-i Memûsr, it became the custom to entitle agha illiterate officers up to the rank of hâ'im-mahâm, literate officers of corresponding rank being addressed as efendi; and this usage was maintained among the people up to the end of the Ottoman regime. Until the establishment of the Constitution there existed a military rank intermediate between the people up to the end of the Ottoman regime.

In consequence of intrigues at the court under the reign of Muhammad Shah, Hasan 'Ali Shah revolted in 1836 in Kirmân, but was defeated and fled in 1840 to Sind, where he rendered valuable services to Sir Ch. Napier in the Sind campaign. After an unsuccessful attempt to establish himself in Persia from the Bunpore district, he went to live in Bombay, but was removed to Calcutta at the instance of the Persian government. In 1848 he returned to Bombay, which has remained, except for a brief period at Bangalore, the headquarters of the movement headed by him and his successors. Internal troubles among the Khojis [q.v.] concerning the leadership of the Imâm, led to lawsuits, culminating in the famous judgment of Sir Joseph Arnow in 1866 in favour of the Agha Khan. It was this case, during which a great deal of information about the sect was elicited, which called the attention of western scholarship to the continued existence of the Nizâri Ismâ'îlîs; cf. M. H. B. Freer, The Khojas, the Disciples of the Old Man of the Mountain, Macmillan's Magazine, 1876, 431 ff.; St. Guyard, in JA, 1877, 337 ff.). Hasan 'Ali Shah (d. 1881) was succeeded by his son 'Ali Shah (d. 1885), and the latter by his son, the present Agha Khan, H. H. Sir Sultan Muhammad Shah (b. 2 Nov. 1877), the spiritual head of the Nizâri Ismâ'îlîs in India (including the Khojis), Persia, Central Asia, Syria and East Africa. Under his guidance, the organization of the Nizâri community has been greatly developed. The Agha Khan has also occupied a prominent position in public life. His heir (wali 'a'âd) is 'Ali Khan (b. 1910).

Bibliography: J. N. Hollister, The Shî'a of India, London 1953, 364 ff. The memoirs of the present Agha Khan were published under the title of World Enough and Time, London 1954. (H. A. R. Gibb)

A GHÂ MUHAMMAD SHAH, founder of the Kâdîr [q.v.] dynasty of Persia, who was born in 1555/1742, was the elder son of Muhammad Hasan Khan, hereditary chief of the powerful Kâdîr tribe. When a child he was castrated by order of 'Adî Shah, Nâdir Shah's nephew, an act which warped his character in later life. On his father's murder in 1758, he became chief of the Kâdîrs. He spent his youth at Khurshâd's court at Shâh-âb; on Khurshâd's death in 1779 he fled to Ashtâbâb and engaged in a long struggle with his descendants. By 1785 he had made himself master of the north and centre of the kingdom, and in that year he made Teherân his capital because of its central position and its proximity to the Kâdîr territories. In 1794 he captured the gallant Lûf 'Ali Khan, the last of Karim Khan's descendants, and put him to death after inflicting fearful tortures. In the following year he re-established Persian authority over Georgia. He was crowned Shah in 1796. He subsequently added Khorasan to his dominions, deposing Shâhrukh, Nâdir Shah's blind grandson; by means of torture, he forced Shâhrukh to disclose where he had hidden his grandfather's jewels, So dreadful were the unfortunate prince's sufferings that he died. Nemesis soon overtook Aghâ Muhammad, for he was assassinated in 1797. He showed great skill as a statesman and also as a military leader, but his reputation was sullied by his revengefulness, his revolting cruelty and his insatiable avarice.

(C. Huart-L. Lockhart)

AGHAČ, meaning in Ottoman Turkish "a tree", "wood", in Eastern Turkish (in which the forms yľghâ, yľghât are the more frequent) means also "the male member" and "parasang"; cf. al-Kâşghârî, Divân Luktî al-Turk, Istanbul 1933, iii, 6, and Brockelmann, Mittelorientliche Wortschatz, Budapest-Leipzig 1928, 87. Al-Kâşghârî shows only the forms yľghâ and yľghât, but W. Radloff, Versuch eines Wörterbuchs der Turk-Dialekte, 1893, 1, 150, shows also aghâd and other forms of the word such as aghâts, aghâs and yaghat, as signifying not only "title" and "wood" but also "a measure of distance". The measure thus referred to by al-Kâşghârî as a "parasang" is said (cf. Pavet de Courteille, Dictionnaire Turc-Oriental, Paris 1870, 554-5) to be three times the distance at which a man standing between two others can make himself heard by them. An aghâd in this sense is equal, according to a verse of Mîr 'Alî Shîr Naw'âkî, to 12,000 double cubits (kârt); according to Pietro della Valle, Voyages, iii, 141, to a Spanish league, or four Italian miles; according to Flandin and Costa, or four Italian miles; according to Flandin and Costa, as well as more serious distortions. In Latin translations from Arabic we find various representations of different accurateness, e.g. in the Turba Philosophorum: Agadimôn, Adimon, Agmon.

The Graeco-Egyptian god Agathodaemon (see Ganschinietz, in Pauly-Wissowa, iii. Suppl.-Bd., ii, 280; Ibn Kutayba, Shîr, 389; Aghânî, xviii, 164-7; Baghdâtî, Khâzâma, i, 322-4; Ibn Hadîjar, Isbâ, no. 225; Ibn al-Kiflî, 2, Agathodaemon was the teacher of Asclepius. Jâdîb and Asma'î, Asbâh, in ZDMG, 1911, 466-7; Dîbîr, Hayawânt, ii, 280; Ibn Kutayba, Shîr, 389; Aghânî, xviii, 164-7; Baghdâtî, Khâzâma, i, 322-4; Ibn Hadîjar, Isbâ, no. 225; Amidi, Mu'talif, 22; Ibn Durayd, Ishbâk, 208; O. Rescher, Abrîs, i, 114; Brockelmann, S I, 90; Nallino, Scrilli vi, 96-7) (Fr. trans. 149-51).

(Ch. Pellat)

AGHALABIDS or BANU 'AL-AGHALAB, a Muslim dynasty which throughout the 3rd/9th century held Ifrikîya in the name of the 'Abbásids and reigned at al-Kayrawân.

(i) General Survey; (ii) Religious Life; (iii) Chronological Survey.

(i) General Survey.

In 184/800 the founder of this dynasty, Ibrâhîm b. al-Aghlab, who, as governor of the Zâb, had displayed skill and energy in restoring law and order in his province, was invested with personal power by the caliph Hârûn al-Rashîd on terms advantageous to the latter. His vassal relinquished the subvention of autonomy, especially in the matter of the succession. "He bequeathed his dominions to a son or a brother as he pleased" (al-Nuwârî), making his choice without interference from Baghdad, and this practice was followed by each of the amirs who succeeded him.

Our knowledge of these Arab rulers of Ifrikîya is considerable, and it is possible to discern their
characters with reasonable clarity. In these high officials of the caliphs who had become independent princes, one finds the merits and defects of their masters. Although the majority were devoted to pleasure and addicted to drink, which at times incited them to outbursts of violence and bloodshed, there were among them men of culture who had a sense of greatness, shrewd statesmen, at once stern and humane, and leaders anxious to promote public works and to devote the revenues accruing to them to the welfare of the state. Under them, ifrīkiya experienced a genuine renaissance, and many magnificent foundations still testify to their beneficent rule.

They needed energy and political skill to overcome the difficulties which confronted them. Ibrahim b. al-Aghlab (184-97/800-12) had to extinguish the last outbursts of Berber revolt. On the borders of Aghlabid territory, Kharidjism was in control of Southern Ifrikiya, of the Awrās and nearly all of Central Maghrib, the Zāb forming the western boundary of the kingdom. The adherence of the Kutāma of Lesser Kabylia to Shi‘ism was to cause the downfall of the dynasty. The gravest crises, however, were centred round the very heart of the Aghlabid kingdom. Tunis and even al-Kayrawān were centres of opposition; and the most troublesome elements were the Arabs of the ġundūn, who ought to have been the strongest supporters of Aghlabid power. In the towns in which they were garrisoned, they treated the indigenous population with contumely, and proved exacting and contentious in their dealings with the rulers of the country. Ibrahim I had to suppress two Arab revolts: that of Hamdis b. ʿAbd-al-Rahmān al-Kindī (186/802) and that of Ibrahim II, as ascetics, they criticised the morals of the amirs.

The Aghlabids were enthusiastic builders. Under Ziyādat Allāh's successor, Abu ʿUṣūl al-Aghlab (223-6/837-40), the small mosque named after Abū Fateṭā was built at Sūsā, which acquired other new foundations about the same time. Abu ʿUṣūl ʿAbd Allah and Ibrahim II, who constituted an imposing coloured guard. The Aghlabids carried out many of these in order to restore prosperity to regions possessing only a poor water supply, notably to the south

b. Ibrahim (197-201/812-7) promulgated a financial reform which was contrary to Islamic tradition, namely, the levy on crops of a fixed sum in cash instead of the tithe in kind. This measure aroused strong protests, and the death of the amīr soon afterwards was regarded as a divine punishment. On the whole, the Aghlabid rulers treated the religious classes with respect and tried to conciliate them, but they rarely induced them to relax their uncompromising attitude. Apart from various architectural creations and public works which will be described later, which may be considered to owe their origin to this religious policy, the conquest of Byzantine Sicily can also be attributed to the same cause.

Although this conquest, the supreme military achievement of the Aghlabid amīrs, was undertaken by Ziyādat Allāh immediately after the revolt of Mansūr al-Tunbuḏī, and was doubtless inspired by the desire to divert the energies of the Arabs to an external theatre of operations, the expedition of 211/827 assumed the guise of a holy war. The army was entrusted to the learned jurist Asad b. al-Furat ʿq.v., and Sūsā ʿq.v., where the fighters for the Faith and their followers embarked, already had the character of a tābiʿa port, as the town had been furnished with a ribāʿi system previously.

This ribāʿi still exists. An inscription at the foot of the signal tower bears the name of Ziyādat Allāh and the date 206/821. The rebuilding of the Great Mosque at al-Kayrawān ʿq.v. is attributed to the same amīr. This splendid building, founded by ʿUkba b. Nādir about 670, twice remodelled or rebuilt in the course of the 8th century, was in fact the work of the Aghlabids. In addition to Ziyādat Allāh, two other amīrs, Abū Ibrahim and Ibrahim II, carried out work there and enlarged the prayer-hall. The Aghlabids were enthusiastic builders. Under Ziyādat Allāh's successor, Abū ʿUṣūl al-Aghlab (223-6/837-40), the small mosque named after Abū Fatýāta was built at Sūsā, which acquired other new foundations about the same time. Abu ʿUṣūl ʿAbd Allah and Ibrahim II, who constituted an imposing coloured guard. The Aghlabids carried out many of these in order to restore prosperity to regions possessing only a poor water supply, notably to the south

The hostility of the Kayrawāns and the policy of the Aghlabids towards them constitute another aspect of the internal history of the dynasty. This hostility was fostered mainly by the religious classes, scholars and devotees who enjoyed the confidence and regard of the people. These doctors of religion, exponents of hadith, jurists and theologians who, for the most part, were of eastern origin, lived close to the people and guided public opinion. As professing ascetics, they criticised the morals of the amīrs; as champions of orthodoxy, they protested against their illegal decisions and their abuse of power. The second of the Aghlabids, Abu ʿUṣūl ʿAbd Allāh
of the “Tunisian chain”. A recent work by M. Solignac, based on an examination of the constructional methods employed and the nature of the materials used, and a comparison with those used at the neighbouring reservoirs at al-Kayrawân, leaves no doubt on this point.

For their public works, their defence installations, and, in general, for their buildings, the amirs evidently relied on a labour force recruited locally. The superintendence of the workshops was entrusted to non-Muslim freedmen, their names recorded on the buildings themselves. On their coins are mentioned officials of the same origin who controlled the Mint.

Although the inherited traditions of Christian Africa had a considerable influence on the construction and ornamentation of buildings (the Roman mosaic style of paving being still employed), Aghlabid architecture draws also on Oriental sources. The influence of Syria, Egypt and Mesopotamia is apparent, and a new and specifically Muslim art emerges which finds its most striking expression in the Great Mosque at al-Kayrawân.

The dynasty enjoyed its last years of prosperity in the reign of Abu l-I š hâk Ibrâhim II, who succeeded Abu 'Abd-Allâh Muhammad called Abu 'l-Ghârânîk ("Father of the Cranes"), a frivolous and extravagant prince. Ibrâhim II, in whose strange character were blended in exaggerated form the merits and defects of his line, was by turns a just sovereign, concerned for the welfare of his people, and a sadistic tyrant, whose cruelty spared no member of his family. On the command of the 'Abbâsîd Caliph al-Mu'taḍid, who had received complaints about him, he abdicated in 289/902 in favour of his son Abu 'l-‘Abbas 'Abd Allâh, and devoted himself to a most edifying life of penitence. Being unable to perform the pilgrimage by the overland route, he travelled to Sicily, made himself master of Taormina, and then went on to Calabria, where he died before Cosenza (19 Dhu 'l-Ka‘da 289/29 Oct. 902).

During the reign of Ibrâhim II there appeared in Hîriyâ the Shi‘îte missionary Abu 'Abd Allâh (q.v., who was to bring about the precession of the dynasty and secure the triumph of the Fâtimid al-Mahdî 'Ubây al-Laâh. Supported by the Kutâma Berbers, whom he had converted to Shi‘ism, Abu 'Abd Allâh set out to conquer the Aghlabid kingdom. The posts on the western frontier, some of which had been imprudently denuded of their Arab garrisons, victims of Ibrahim’s severity, were incapable of checking these fanatical mountaineers. The amir Abu Mudar Ziyâdat Allâh III perceived the danger, but his measures lacked any rational plan and were insufficient to delay the catastrophe. He restored the walls of al-Kayrawân and sent against the Kutâma several forces which were defeated. Then, announcing a great victory, he made preparations for flight. He left Rakkâ, the royal city which Ibrâhim II had founded 4½ m. south of al-Kayrawân, and, taking with him what treasures he could, set out for Egypt. From there he went to Râkkâ, but later returned to Egypt, and died at Jerusalem.

(ii) Religious Life.

Al-Kayrawân under the Aghlabids was a great centre of Islamic religious life, scholarship and literature, both in its own right and as a half-way house between the Islamic East and West. Whilst they did not elaborate a common local interpretation of religious law of their own, the scholars of al-Kayrawân followed one or the other of the Eastern schools of thought, sometimes adopting an eclectic attitude. This eclecticism is attested not only by the Asâdiyya of Ibn an-Furfâ but by other works as well. ‘Irâkian and Medinese doctrines were equally well represented in al-Kayrawân of the Aghlabids, but the teaching of al-Shâfi‘î never took root there. In particular, al-Kayrawân under the Aghlabids became the most important centre of the Mâlikî school, superseding Medina and Cairo as such. Some of the most prominent scholars in religious law of the period, whose works have to a greater or lesser extent survived, are: Asad b. an-Furfâ (q.v.), d. 251, Saḥân (q.v.), d. 240, author of the Mudawwana, the great digest of Mâlikî doctrine, Yûsuf b. Yaḥyâ (d. 288), Abu Zakariyya Yaḥyâ b. ‘Umar al-Kinânî (d. 289), ‘Isa b. Miskín (d. 295), and Abu Ḥūmân Sa’d b. Muhammad b. al-Hâdîd (d. 302). Manuscripts dating from the time of the Aghlabids, of the works of these and of other scholars, are still preserved in the library of the Great Mosque of al-Kayrawân.

In the field of dogmatic theology, too, al-Kayrawân under the Aghlabids was the meeting-place of many opinions and the stage of lively discussions, occasionally, too, of violence and persecution, between the orthodox, the Dâ‘ârîyya, the Murji‘îa, the Mu’tazîla, and last but not least the Išâ‘îyya (see these artt.). Asad b. al-Furfâ, for instance, assaulted Suleyman al-Farrâ who denied that the believers would see God, and when Saḥân became ḫâdî, he had slowly beaten to death his predecessor ‘Abd Allâh b. Abî ‘l-Dja‘awîd, who was of the opinion that the Kur‘ân was created. Concerning this last proposition, the religious policy of the Aghlabids followed that of the Caliphs of Bagdad. Shortly after the mi‘âna (q.v.) in the East, the upholders of the orthodox doctrine had to undergo a similar, though milder, tribulation under the pretender Aḥmad b. al-Aghlab; Saḥân himself had been in danger on that occasion, but escaped serious trouble. In the same way as in the East, an orthodox reaction soon asserted itself, but Mu’tazîlite doctrines were not eradicated, and a profession Mu’tazîlite, such as Ibrâhim b. Aswâd al-Shâdînî, was appointed Ḫâdî of al-Kayrawân at the end of the reign of Ibrâhim b. Aḥmad, shortly before the end of the dynasty. Religious life proper is represented by a great number of pious persons and saints who were often
in opposition to, but still in contact with the religious scholars. Both groups were very influential under the Aghlabids, and both showed a spirit of independence and held a critical attitude towards the government. Occasionally, the kâdis were at the same time governors and military commanders. Several collections of biographies, the oldest of which are very near to the period in question, give a vivid picture of the religious and intellectual life in al-Kayrawân (and in the other cities of Ifriqiya) under the Aghlabids.

(iii) Chronological Survey.

The dynasty consists of the following eleven princes:

1. Ībrâhîm I b. al-Aghlab b. Sâlim b. ‘Īkhâl al-Tamâmî (12 Dhul-Qa‘dah 184/79 July 800—21 Shawwâl 1965/850), the founder of the dynasty. His father al-Aghlab, a former associate of Ābû Muslim, was one of the commanders in the Khurasanian corps sent to Isrâ‘îliyya by al-Mânsûr; in 148/763 he had succeeded Muhammad b. al-Ashâ‘îh as governor, and was killed in 150/767 during the revolt of al-Ḥasan b. Ḥarb. In 179/795 Ībrâhîm was appointed governor of the Zâb, and in return for his assistance in putting down a revolt against the governor Ibn Mu‘âtîl was granted the province as a hereditary fief by Ḥârûn al-Rashîd. Energetic and wise, prudent and shrewd, a brave fighter as well as skilful diplomat, Ībrâhîm gave Isrâ‘îliyya an excellent administration. He was a man of wide culture, being, it is said, a good fâkîh as well as a fine orator and poet. At the time of his death, his son Ābû Allâh, who had been sent in 1866/1011 to suppress a rising of the Khârijjite Huwwârâ in Tripolitania, was besieged in Tripoli by the Rustamîd Ābû al-Wâhâbî of Tâbât, and made peace with the latter by ceding the entire hinterland of Tripoli.

2. Ābû ‘l-‘Abbâs ‘Ābû Allâh I b. Ībrâhîm (Safar 197/Oct.-Nov. 812—6 Dhū l-Hijjâja 202/25 June 817) had a reputation for beauty and illiteracy; he was blamed more especially for having imposed non-kurâ’ânic, and particularly heavy, taxes.

3. Ābû Muḥammad Ziyyâdât Allâh I b. Ībrâhîm (201/817—14 Radjab 223/10 June 838) was one of the greatest princes of the dynasty. Apart from the revolt of al-Tunbûshî, the outstanding event of his reign was the conquest of Sicily, from 217/837 onwards, under the command of the kâdî of al-Kayrawân, Asâd b. al-Furîdî (q.v.). Two and a half years later he granted an amnesty to the former rebels, and Isrâ‘îliyya entered on a period of general peace. To him is due also the restoration of the mosque of al-Kayrawân and other public works.

4. Ābû ‘l-‘Ikâl al-Aghlab b. Ibrâhîm (223/838—Rabî‘ II 226/Feb. 841) was a brilliant and cultured prince, who devoted his attention to the administration of Isrâ‘îliyya and gave a further impetus to the dîwâh in Sicily.

5. Ābû ‘l-‘Abbâs Muḥammad I b. al-Aghlab (226/841-2 Muḥarram 242/10 May 856). Six years after his accession he was ousted by his brother Āḥmad, whom, however, he managed to defeat a year later and banished to the East, where he died. His reign was marked by two rebellions: those of Sâlim b. Ḥâlbûn in 233/847-8 and of ‘Āmîr b. Sâlim al-Tuḏûbî in 235/850. Muḥammad was a warm supporter of the Mâlikîs and especially of the kâdî of Sânîn (q.v.).

6. Ābû Ībrâhîm Āḥmad b. Muḥammad (242/856—13 Dhū l-Ka‘da 243/28 Dec. 863) was a nephew of the preceding. He had a peaceful reign, marked especially by public works.

8. Ābû ‘l-Ghârânîl Muḥammad II b. Āḥmad (250/863—6 Dîjumâdâ I 261/16 Jan. 873), son of Ābû Ībrâhîm, was noted for his great passion for hunting. His reign was marked by the conquest of Malta (255/868).

9. Ābû Isâhî Ībrâhîm I b. Āḥmad (261/873—17 Dhū l-Ka‘da 288/18 Oct. 902) was raised to the throne by popular acclamation in place of his nephew Ābû ‘l-‘Ikâl. In 264/878 he built himself a new residence, Raḵkâda (q.v.), which he later abandoned for Tunis. The main events of his reign are the capture of Syracuse (264/878), the defeat of an invasion of Isrâ‘îliyya by Ābîbâs, son of Āḥmad b. Tâlûn, by the Îdâhidât of Dîjabil Nâfûs (266-7/879-80), the suppression of a revolt of the Berbers of the Zâb (268/881-2), and of another rising in the north of Isrâ‘îliyya (280/893). His son Ābû Allâh, appointed governor of Sicily in 287/900, captured Palermo and Reggio, and was recalled on Ībrâhîm’s abdication (see above).

10. Ābû ‘l-‘Abbâs 3 Ābî Allâh II b. Ībrâhîm (289/902—29 Ṣa‘îbân 290/23 July 903). He endeavoured to check the Shi‘îte menace, but was assailed at the instigation of his son Ziyyâdât Allâh.

11. Ābû Mudâr Ziyyâdât Allâh III b. 3 Ābî Allâh (290/903—295/909). Ascending the throne after the murder of his father and other members of his family, he was completely lacking in courage. Nevertheless, he proclaimed the dîwâh in 291/904, but, driven to despair by the fall of Laribus (18 March 909; see Ābû 3 Ābî Allâh al-mu‘īn), he incessantly fled from the country.

ĀGHMÂT, a small town in Southern Morocco, about 25 m. south of Marrákkush, on a small watercourse Wâdî Ūrîkâ or Wâdî Āghmât, at the edge of the Great Atlas range (the Djabal Daran of the Middle Ages). From the 5th/6th century the name of this place, according to the statement of the geographer Ābû ‘Ubayd al-Bakfr, applied to two distinct settlements ½ m. apart, namely Āghmât an-Waylân (the spelling given by al-Baydâq, Doc. inédits d’hist. almohade) or Āghmât of the Aylân (a Berber tribe: arabîc Haylânâ) and Āghmât Īrîkâ, or Āghmât of the Īrîkâ (Warikâ). To-day the latter is a small country town named simply Īrîkâ. Al-Bakfr and al-Idrîsî describe Āghmât as a flourishing town surrounded by well-irrigated gardens and inhabited by a considerable and highly industrious population. It is a fact that before the foundation of Marrákkush, at the beginning of the
Almoravid expansion beyond the Great Atlas range, this town was the chief urban centre in southern Morocco and even, if one accepts the tesquency of certain biographical notices in the Andalusian dictionaries, an extremely active cultural centre. In the 25 years prior to the accession of Yusuf b. Tashfun [q.v.], many scholars and jurists flocked to Āgmāt from Cordova and even from al-Kayrawān, the latter having been forced into exile in large numbers by the disturbances which had just devastated Irfikīya. At that time Āgmāt was the capital of a small Berber state, in the hands of a chief of the Maghrāwa [q.v.], Laḫkūṭ b. Yusuf, who married the celebrated Zaynab al-Nafzawīyya, the daughter of one of the emirates from Irfikīya. The latter afterwards became successively the wife of the Lamtūna chief Abū Bakr b. ʿUmar [see al-Murābīṭūn], and of his lieutenant and successor Yusuf b. Tashfun. This intelligent and cultured prince who, according to certain chroniclers, was also something of a magician, speedily assembled at Āgmāt a literary entourage and introduced the rough Lamtūna chieftains from the Sahara and their wives also to a more cultured mode of existence. Once it had been founded and become the capital of the Almoravids, Marrākūsh attracted many members of this select circle from Āgmāt, and this mania of its decline which, however, seems to have been summoned only much later. The Almoravids chose Āgmāt as an enforced place of residence for two of the rulers whom they had deposed in Spain, namely the Zirid ruler of Granada ʿAbd Allāh b. Bulūgūn, and the famous al-Muṭamīd of Seville. Later, Āgmāt was the last stage on the journey of the Mahdī Ibn Tūmart on his return from the East, prior to his “rising”, in both a religious and a political sense, in the Great Atlas Mountains. By the time of Leo Africanus the old Berber capital was in a state of complete decline.

(Formerly Aleghkird or Alashgird), Patmos (formerly Antāb), Tutik. The name is spelled Aghrī DAGH sometimes also EGHR! DAGH, mountain (extinct volcano) with a double peak on the eastern frontier of the Turkish Republic, 39°45′ N 44°20 E, the highest point in the plateau of the region of the Aras (Araxes) and Wan (high plateau of Ararat), in Armenian Masis or Marsik, in Persian Kūh-i Nūh; by Europeans it is called Ararat, as it was identified with the mountain of this name (Hebrew Arārat, originally the name of the country of Urartu, later understood as the name of a mountain), on which Noah’s ark is said to have alighted. (Originally Ararat was identified with Diabal Dīdī [q.v.], near Diyarbakr ibn ʿUmar in Mesopotamia.)

The mountain rises, almost without any intermediate ridges, over the flat plain of the Araxes, which is just over 800 m. high and extends to the east and north of the mountain. To the south and the west there extends an undulating high plateau from 1800 to over 3000 m. high, from which rise other extinct volcanoes, and ridges from which to NW and W form the transition to the system of the Eastern Taurus. The Ararat group covers an area of over 1000 square kms. and has a circumference of over 100 kms. It culminates in two summits, Great Ararat (5172 m.) in the NW and Little Ararat (3906 m.) in the SE; these are connected by a narrow, smooth-rounded saddle (2687 m.) 13-14 kms. long, called, after a spring c. 8 km. below, Serdar Bulak. A pass leads over this ridge. In absolute height Ararat surpasses all the mountains of Europe, and with its relative height of over 4300 m. also many famous giants of the other continents. Seen from the north, the mountain, towering over the whole landscape, offers a majestic sight.

Great Ararat (Diabal al-Huwawīrī) has the form of a slightly rounded cone. From its summit, which forms an almost circular plateau with a circumference of 13-14 kms. long, called, after a spring c. 8 km. below, Serdar Bulak. A pass leads over this ridge. In absolute height Ararat surpasses all the mountains of Europe, and with its relative height of over 4300 m. also many famous giants of the other continents. Seen from the north, the mountain, towering over the whole landscape, offers a majestic sight.

The district is afflicted by frequent earthquakes. The most terrible earthquake of recent centuries was that of 20 June 1840; this caused an enormous landslide, which destroyed a flourishing settlement, the ancient Argurī (old Armenian Akor; cf. Hübschmann, in Indogerm. Forsch., 234, 236, 295), with all its inhabitants (c. 1600), the small monastery of St. James. Lesser Ararat (Diabal al-Huwawīrī) has the form of a beautiful regular cone.

The district is afflicted by frequent earthquakes. The most terrible earthquake of recent centuries was that of 20 June 1840; this caused an enormous landslide, which destroyed a flourishing settlement, the ancient Argurī (old Armenian Akor; cf. Hübschmann, in Indogerm. Forsch., 234, 236, 295), with all its inhabitants (c. 1600), the small monastery of St. James. Lesser Ararat (Diabal al-Huwawīrī) has the form of a beautiful regular cone.

The whole of the Ararat district, owing to the porosity of the cinder- and slag-stone, suffers from a considerable scarcity of water; in spite of the abundant cover of snow, there are only two springs of importance on the slope of Great Ararat (the Sardar Bulak, 2290 m.); and the famous well of St. James, which emerges since 1840 at a different spot), none on Little Ararat. The latter does not
reach the region of eternal snow. It is only in the districts at the eastern and northern feet of the mountain, in the plain of the Aras, that the water oozes out and forms in parts marshy patches.

The dearth of water results in scanty vegetation. Apart from some birches, Ararat, like all the neighbouring mountains, is completely bare of forests; in this extreme form, however, this is caused by human agency. A poor fauna corresponds to the scanty flora. Since the destruction of the human settlements in the valley of St. James the district of Surmalu, Kulp and Igdir in the Eastern slope of Little Ararat (cf. MSOS, 1934, ii, 116); thus at present the whole territory of the Central-Caucasus and Bashan, which was ceded by Persia to Russia. Thus the northern slopes together with the summit of Great Ararat fell to Russia, while Little Ararat formed the gigantic boundary stone between the three empires of Turkey, Persia and Russia. By the treaty of Moscow, 16 March 1921, between Soviet Russia and Turkey the plain of the Aras was ceded to Turkey; and in the Turco-Persian agreement (cf. MSOS, i, 138 ff.) of 23 Jan. 1932 (which came into force on 3 Nov. 1932) Persia also ceded to Turkey a small territory, comprising the eastern slope of Little Ararat (cf. MSOS, 1934, ii, 116); thus at present the whole territory of the immense mountain belongs to Turkey. (Cf. G. Jäschke, Die Nordostgrenze der Türken und Nachbarvölker, Vol. I, 1835, 394 ff.).

(M. Streck-F. Taeschner)

AGRA, town, headquarters of a division and district of the name in the state of Uttar Pradesh, is situated on the banks of the river Yamuna, 27° 59' N, 77° 59' E. Pop. (1951) 375,665, of whom 15.6% are Muslims. The city was for a long time the seat of residence of the Mughal emperors, and is renowned especially for its remarkable monuments of Mughal architecture.

History. Little is known about the early history of Agra, but there is no doubt it was founded long before the Muslim invasions of India. The first reference to the city, and to an ancient fortress in it, is contained in a hāsida written in praise of the Ghaznavid prince Mahmūd b. Ibrāhīm by the poet Mās'ud b. Sa'd b. Salmān (d. 515/1121 or 526/1131), wherein the conquest of the fortress (presumably during the reign of Sulfān Mas'ud III, 493-508/1099-1113) is mentioned. The town was ruled by Rādgātānī, or his successors, who, upon making their submission to the Sultanate of Delhi, were allowed to keep their control over it, under the overall command of the governor of Bībīya province. It remained unnoticed until Sultan Sikandar Lōdī (894-923/1490-1517) rebuilt the city in 911/1505 and made it the seat of his government. The place quickly gained in importance and attracted scholars and learned men from many parts of the Muslim world. Commanding routes to Gwalior and Māluwā in the south, Rādgātānī, the west, Delhi and the Pāndjāb in the north-west, and the plain of the Ganges in the east, it soon became a strategic and trading centre. It continued to be the capital of Ibrāhīm Lōdī (923-32/1517-26) and, on his defeat in 932/1526, it became the capital of Bābār. In addition to building his palace of Cārbāgh, Bābār laid out a number of gardens in the city and constructed many mosques. His nobles followed his example, and a considerable portion of the old city was levelled down. The city remained Humāyūn’s and Shīr Shāh’s capital, but neither Humāyūn, nor Shīr Shāh or his successors were able to spend much time there. It again became the seat of government in the third year of Akbar’s reign (965/1558), when he took up residence in the citadel formerly known as Badal Gadh, and his nobles built their houses on both banks of the river. In 972/1565 the construction of the fort on the site of Badal Gadh was undertaken, but before it could be completed, the building of Pathpūr Sīkīr [q.v.] was commenced. From 982/1574 to 994/1586 Akbar lived mostly in the new city, and latter, till 1006/1605, his headquarters were generally at Lahore. In the latter year he returned to Agra. On his death in 1014/1605, Dzhāhāngīr ascended the throne in that city and lived there almost continuously from 1016/1607 to 1021/1613. He spent another year at Agra in 1027/1618, but later, until his death in 1037/1628, he spent most of his time in Kashmir and Lahore. Like his father, Shāh Dzhāhān also ascended the throne at Āgra, but had to leave for the Deccan in the following year. From 1041/1623 to 1042/1623 he again resided in the city, but after that, except for brief visits, he did not stay there for long. Thereafter, he lived mostly at Delhi, where he built...
the new city of Shahdijahanabad. (The name of Agra was also changed to Akbarabad, but the latter name was never widely used.) In 1067/1657 he fell seriously ill and was brought to Agra by his eldest son, Dara Shikuh. In the war of succession that broke out, Agra was victorious and ascended the throne in 1068/1658. Shah Djahân was imprisoned in the Fort, where he died in 1076/1666. On hearing the news, Agra was returned to Agra and held Court there for some time. Later, he again stayed in Agra from 1079/1669 to 1081/1671. However, Agra's use as a place of residence was first, Delhi, and then, in the Deccan. Though, in the 17th century, the court did not remain at Agra for long, the place was nevertheless regarded as one of the capital cities of the Empire. Most of the European travellers who visited India considered it to be one of the largest cities they had seen, comparable in size to Paris, London and Constantinople. It was a centre of trade and commerce and was well known for its textile industry, gold inlay work, stone and marble work and crystal. However the population as well as the trade diminished considerably when the court was away.

The successors of Agra lived mostly in Delhi, though Agra continued to be important politically. During the second half of the 16th century, it suffered much from the depredations of the Dâts (q.v.), the Maharrats and the Rohlilâhs. Though nominal Mughal sovereignty over the town continued till it was annexed by the British in 1803, except for the years 1774 to 1785 when Nadjaf Khan (d. 1782) and his successors were its governors, Agra was under the occupation of the Dâts (1761-1770, and 1773-74) and the Maharrats (1758-61, 1769-73, and 1785-1803).

Monuments. The Fort. The present fort of Agra was built by Akbar on the site of the Lodî fortress of Badal Garh on the right bank of the Yamunâ. It was constructed in about eight years (1565-73) under the superintendence of Muhammad Kâsîm Khan Mir-i Bahir at a cost of 35 lacs of rupees. It is in the shape of an irregular semi-circle with its base along the river. The fort is surrounded by a double wall, loop-holed for musketry, the distance between the walls being 40 ft. The outer wall, just under 70 ft. high and faced with red sand-stone, is about 1/4 miles in circuit and represents the first conception of dressed stone on such a large scale. The principal gateway, the Delhi Gate, is one of the most impressive portals in India. Within the fort, according to Abu'l Faḍl, Akbar built “upward of 500 edifices of red stone in the fine styles of Bengâl and Gudîrât”. Most of these buildings were demolished by Shah Djahân to make room for his marble structures, among those that still stand Akbari and Bangâlî Maâball are the earliest. Akbar's buildings are characterised by carved stone brackets which support the stone beams, wide eaves and flat ceilings, the arch being used sparingly. Similar in design is the Djahângîrî Maâball, a double-storied construction, 261 ft. by 288 ft., supposed to have been built by Akbar for Prince Salim (later Djahângîr) but very probably built by Djahângîr himself for the Râjpût princesses of the haram, though Cunningham thinks it was built by Ibrâmî Lodî. After the accession of Shah Djahân architectural style underwent a radical change. With the discovery of marble quarries, red sand-stone was practically eliminated and large-scale use of marble made carved line and flowing rhythm of style possible. Instead of the beam and brackets, foliated or cusped arches became common and marble arcades of engraved arches distinguished the buildings of Shah Djahân. Among the most important of his buildings in the Fort are the Kâhî Mâball and its adjoining north and south pavilions; the Shâh Mâball a bath whose walls and ceilings are spangled over with tiny mirrors of irregular shape set in stucco relief; the Mûhammadan Bûrdî built for the Empress Mumtâz Mâball (in which building Shah Djahân breathed his last); the Dîwân-i Khâs (or private assembly chamber); the Dîwân-i Âm (or public audience chamber) having a court 500 ft. by 73 ft., and a pillared hall 201 ft. by 67 ft. with an alnove of inlaid marble being the throne gallery (built of red sand-stone plastered with white marble stucco which is artistically gilded); the Motî Masjîd (or Pearl Mosque) a magnificent structure of white marble standing on a plinth of red sandstone.

Not far from the fort stands the Dîwânî Masjîd, built by Djahânh Ahrd Bégam, the eldest daughter of Shah Djahân, in 1058/1648, a red sand-stone building having three domes and five gracefully proportioned arches, the central archway being a semi-domed double portal.

The tomb of Akbar at Sîkandara, constructed in Djahângîr's reign on a site selected by Akbar himself, stands in the middle of a well-laid garden about five miles from Agra. Very probably some idea of the design was settled by Akbar, but the building lacks that correctness which is characteristic of the construction undertaken by that monarch. The building is 340 ft. square, consisting of five terraces diminishing as they ascend. The lowest storey is arcaded and in the centre of each side is inserted a large portico with a deeply recessed archway. The next three storeys consist of super-imposed tiers of pillared arcades and kiosks built mainly of red sand-stone. The topmost storey is of white marble and is screened with perforated lattices. Each corner of this storey is surmounted by a slender kiosk.

The tomb of Djahângîr's minister, Mirzâ Shîyâh Bég, entitled lîtimâd al-Dawla (d. 1622), constructed by his daughter, the Empress Nûr Djahân and completed in 1628, stands in the middle of a well-laid garden on the left bank of the river. The mausoleum consists of a square lower storey 69 ft. wide with a gracefully proportioned octagonal turret, like a dwarfed minaret, thrown out from each corner; while the second storey rises in the form of a traceried pavilion covered by a canopy shaped vaulted roof sending out broad stepping eaves, surmounted by two golden pinnacles. It is the first large building in India built entirely of marble and is remarkable for the richness of its decoration and profuse pietra dura work.

Tâdî Mâball. The most famous building at Agra is the Tadî Mâball, the beautiful mausoleum erected by Shah Djahân for his dearly loved wife, Arjdumand Bânû Bégam, entitled Mumtâz Mâball, popularly known to her contemporaries as Tâdî Mâball. She was the daughter of Asaf Khan, son of lîtimâd al-Dawla, and was married to Shah Djahân in 1612 at the age of nineteen. She bore him fourteen children and died in June 1631 at Burhânâpîr after giving birth to a daughter. Work on the mausoleum was started almost immediately after her death and was completed in about twelve years at a cost of five million rupees, though some later writers have put the figure at 30 million rupees. According to the contemporary European traveller,
Tavernier, the structure, together with its subsidiary buildings, was completed in about twenty-two years during which period twenty thousand workmen were continuously employed on it. The best architects and craftsmen, each a specialist in his own field, available in the Empire as well as in the neighbouring countries were engaged for the work, which was carried on under the general supervision of Makramat Khan and Mir Abd-al-Karim. The tradition that the architect of the Tādī Mahāl was a Venetian, Geronimo Veroneo, based on a statement made by Father Manrique, finds no corroboration either in the Mughal chronicles or in the writings of the other contemporary European travellers like Tavernier, Berneri, and Thevenot, who regarded the building as a purely oriental work. Its close resemblance with the tomb of Humayun at Delhi, and an analysis of its architectural as well as decorative features, suggest that it was undoubtedly the culminating point in the evolution of the Indo-Muslim style of architecture, though no other building in India is quite as exquisite, elegant or beautiful.

The tomb, built of white marble from Djodhpūr, stands on a raised platform, 18 feet high and 313 feet square, faced with foliated arches. At each corner of this platform there is a beautifully proportioned cylindrical minaret, 133 feet high with three galleries and finished with an open domed fair throw out broad eaves. In the centre of the platform stands the mausoleum, a square of 186 feet, with angles canted to the extent of 33 feet 9 ins., the façade rising 92 feet 3 ins. from the platform. In each face of the building is a high arched recessed porch. On either side of each porch, and at the canted angles, there are arched recesses of uniform size arranged in two stories. These recesses and the porches are vaulted. Above each of the canted angles stands a domed pillared kiosk, while the centre is occupied by a beautiful bulbous dome, rising from a high circular drum, and surmounted by a gilt pinnacle finished with a crescent. The central dome, 58 ft. in diameter and rising 94 feet above the roof or 192 feet from the platform, is one of the finest in the world. Beneath the dome is the central chamber, octagonal within, buttressed at each angle by small octagonal rooms of two storeys, with the great domes of two storeys, with the great porches in each pair. In the middle of the central chamber is the cenotaph of Mumtaz Mahall, and beside it that of her husband. Immediately beneath these, in the crypt, are the two graves. The cenotaphs are enclosed by a remarkable screen of trellis-work of white marble. The porches are framed in ornamental inscriptions from the Kurān, and the beauty of the whole is enhanced by copious and graceful ornamentation in piëstra dura. All the spandrels, angles, and important architectural details are inlaid with semi-precious stones combined in wreaths, scrolls, and frets, as exquisite in design as beautiful in colour. The tomb is surrounded by a formal garden of great beauty, with long lily-ponds, also of marble, containing a row of fountains, leading from the principal entrance to the mausoleum. The river, which bounds the garden on the north, provides marvellous reflections of the building.

the region to vassal status. The problem of the origins of these peoples is still not solved [see BERBERS], and the local traditions and the theories formulated by writers at different periods about the populating of the Ahaggar must be treated with reserve. It is clear however that the country has been inhabited from remote antiquity, as witness the traces of work rupestre au Hoggar, Art during the course of the 19th century. After the massacre of the Flatters mission (1880) and the Foureaux-Lamy expedition (1898), the aménokal [q.v.] Mūṣa ag Amāṣtan surrendered to Commandant Laperrière in 1904, and Ahaggar was placed under the control of France. It forms part of the Oasis Territory and its chief centre, Tamanrasset, comprises less than 1,000 inhabitants.

The population of the Ahaggar does not exceed 5,000. The noble tribes of the Kal Ghała, Taytok and Tégéh Mollat, with their subdivisions and subject tribes constitute the Ahaggar confederacy, the aménokal being chosen from amongst the Kal Ghała.

The Touareg of the Ahaggar live in tents. Society is divided into three classes: the noble and suzerain tribes (Ihaggar or Imhuaghā), the subject tribes (Amghid, pl. Imghad) and slaves (akli, pl. ikla). The Ihaggar, especially warriors, levied tribute from the Imghad in exchange for their protection. They were the suzerains, and they themselves lived by warfare and pillage. By putting an end to their warlike activities, the occupation of the country by France had some what curtailed the resources of the Ihaggar, who nevertheless retain their prestige and continue to be supported by the Imghad.

For their writing (timnahā), language (tamahākk), the subject of a masterly study by P. de Foucauld, and literature, see BERBERS.

Lhote, Les Touaregs du Hoggar, Paris 1944, which has a detailed bibliography, is an essential work. (Ch. PELLAT)

"AHD, injunction, command; hence: obligation, engagement; hence: agreement, covenant, treaty. The term (as well as the 1st and the 3rd forms of the corresponding verb) occurs frequently in the Kurān. It is used there over the whole range of its meanings, of Allāh's covenant with men and His commands, of the religious engagement into which the believers have entered, of political agreements and undertakings of believers and unbelievers towards the Prophet and amongst each other, and of ordinary civil agreements and contracts (xvii, 34; xxiii, 8; lxx, 32); occasionally, the agreement is personified: it "will be asked" to give evidence (xvii, 34; xxiii, 15). From the idea of God's covenant derive the Christian Arabic terms al-'ahd al-ṣaḥīḥ and al-'ahd al-ṣaḥīd for the Old and the New Testament respectively. The basic concrete concept is "joining together", whereas the synonym 'ahd derives from the concrete idea of "binding". In later usage, the latter term is commonly used in commercial engagements and contracts, whereas 'ahd is generally restricted to political enactments and treaties, in particular to the appointment of a successor, a wali al-'ahd [q.v.], by a ruler, and to treaties of alliance with non-Muslims outside the Islamic state, who are therefore called aḥl al-ṣaḥīd; this last term is occasionally extended, on one side to the musta'āmin [see AḤMĀN], and, on the other to the dhimmis [see DHIHMA]; both aḥmān and dhihmān are, indeed, a political 'ahd with religious sanction.

AL-AHDAL (plur. Mahādilā, < Mahdall for am-Ahdahl?); on etym. cf. al-Muhibbi, I, 67, Wüstfeld, 6), a family of sayyids living mostly in SW Arabia, descended from the sixth 'Aīl dīmān Dhaf'ar al-Ṣaḏīk. Their ancestor, 'Abd b. 'Umar b. Mūḥ. al-Ahdal, called Ḥūb b. Yaman, and his son Abū Bakr (d. 700/1300) were famous šūfīs, living in the little town of Murūwa'(TA) or Marāwī' (al-Muhībbī) N (sibiyā) of Bayt al-Fakht Ibn ʿUdāyīl, where their graves are visited by pilgrims. To this clan belong the following šūfī scholars:

2. Ḥusayn b. ʿAbīl-Dīlīk b. Ḥusayn (grandson of 1) (b. 850/1445 in Abyāt Ḥusayn, d. 903/1497 in 'Adūn) abridged, according to his pupil Abū Majhrīm, his grandfather's Taʾrīkh (i.e. Tuhfāt al-Zaman). A mosque was built in 'Adūn in his memory in 1847. Cf. Brockelmann, S II, 251 (incorrect), Nūr, 27-30, Daʾūd iii, 144.

3. Tāhir b. Ḥusayn b. ʿAbd al-Raḥmān, Ḥūmāl al-Dīn (b. 914/1508 in Murūwa', d. 998/1590 in 'Adūn), a jurist and traditionist, abridged a work of his ancestor Ḥusayn (no. 1) called Muṣālāb Ḥūr b. Ẓahr Duʿāʾī al-Wālī Aḥī Harba (Nūr, 447 ff., cf. Daʾūd iii, 146). His son

Mūḥ. b. Tāhir wrote Bughyat al-Tālid bi-Maʿrījat Ašīlād ʿĀli b. Aḥī Tālíb (Wüst, 7; Brockelmann, S II, 239 is incorrect).

5. ʿĀṭīm b. ʿAbd al-Muḥ. Mūṣa b. ʿAbīl-Kāsīm b. Mūḥ. (d. 1013/1604 in the seaport Makhbāh (Mukha), where he had lived for 32 years), famous šūfī and scholar, "the Ibn 'Arabī of his time", according to his disciple ʿAbd al-Kādīr al-Šaḏarī (Nūr, 161-473), who published their correspondence in the work al-Darr al-Bāsim min Raʾūḍ al-Sayyid ʿĀṭīm. His improvised poems were collected into a diwān. Cf. Brockelmann, II, 407, S II, 565; al-Muhībbī, i, 496-500, Wüst, 114, Serjeant, Materials, ii, 585 f.

7. ʿAbd al-Raḥmān b. Sulaymān (d. 1250/1835) is mentioned with eight titles in Brockelmann, S III, 131. Another work, al-ʿNafaʿ al-ʿAmāl (Igīs, Bani l-Shawālānī, cited by Serjeant, Materials, ii, 587,
For two more members of this family, with the nisba al-Musawi, Muh. al-Kazim in the 9/15th century, the other in recent time, see Brockelmann, S II, 239, 865. A collection of traditions on South Arabia, Nafs al-Durr al-Maknun min Fad'il al-Yaman al-Maymun, was published ca. 1350/1931 in Cairo by Muḥ. b. 'All al-Ahdali al-Ḫusayni al-Azhari.

Aḥdāth, literally "young men", a kind of urban militia which plays a considerable role in the cities of Syria and Upper Mesopotamia from the 4th/10th to the 6th/12th centuries, and is particularly well known at Aleppo and Damascus. Officially, its role is that of a police, charged with public order, fire-fighting, etc., and also, in time of need, with military defence in reinforcement of the regular troops. For these services the aḥdāth receive stipends allocated from the product of certain urban taxes. The only distinction between them and any ordinary police is the local nonprofessional nature of their recruitment, but it is precisely this which gives them an effective function, much more useful, in this case has generally been aḥdāth but the term was responsible for public order, aḥdāth and logically also, have the same fīyaḍ. This ra's forces the authorities to recognize him as ra's al-balad, a kind of mayor, whose influence counterbalances, and sometimes exceeds, that of the kādī, also a local notable. Out of this there may thus emerge finally veritable urban dynasties, such as (parallel to the Banū 'Ammār of Tripoli, arising out of the bādis of that city) the Banū Nisān of Ḍāmīd, hereditary chiefs of Ḍāmīd in the 6th/12th century under the nominal suzerainty of the Īnlād Turkman princes. The portrait of the cities of Syria and the Ḍāmīzra furnished to us by these facts is evidently at some remove from the common view which presents them as lacking any kind of municipal structure. The aḥdāth were, of course, most active at times and places in which a professional police (šurtā [q.v.]) could not be maintained, and for this reason neither Baghdād nor Cairo offer us a comparable picture. Their final decadence begins with the establishment by the Sālṭāhids or their successors of military commandants (šibātā [q.v.]) at the head of each city, supported by garrisons drawn from the regular army. About the same period the term aḥdāth is applied also to armed bands of the Bāṭinīyya or "Assassins" in Syria.

The term is found in earlier centuries in Irāk, especially in Basra and Kūfah in the 2nd/8th century, but also in Baghdād and elsewhere. The officer in charge of the aḥdāth was responsible for public order, but the term aḥdāth in this case has generally been taken (following the opinion of Dozy, s.v.) in the other sense, equally justified by etymology, of blameworthy "innovations" of such a nature as to disturb public order and whose authors should be seized and punished. In usual use, the term certainly has in given contexts the sense of "crime", but equally certainly in other contexts the sense of groups of "young men", vaguely specified. In the light of the materials described above, Dozy's view must be regarded as open to question; but up to the present time no text has come to notice which allows of a definite decision.

The further question arises of the relations between the Syrian and Mesopotamian aḥdāth and the fīyaḍ (see Fāṭa) and ṣaydarūn (see Ṣayyār) whose existence is documented in Irāk and the Iranian regions throughout the Middle Ages, and who also were especially active from the 4th/10th to 6th/12th centuries. These certainly played the role of "active wing" of the popular oppositions to the official authorities, parallel to, but more vigorously pressed than, that of the aḥdāth; the Iranian cities, moreover, all had apparently a ra', who seems sometimes to have been the ra's of the fīyaḍ in his city. Etymologically also, aḥdāth and fīyaḍ have the same meaning. Nevertheless, though there is often convergence in fact, the two institutions differ in their origin, and these differences persisted. Fīyaḍ and ṣaydarūn were essentially private groups, recruited from the depressed classes and more violent in action, and it was only by gradual stages that they sometimes succeeded in drawing certain bourgeois or aristocratic elements in their train, or in replacing the military police. They often formed organized bodies with initiatory rites, within which there developed the peculiar ideology of the fīshwāna [q.v.]. No parallel to this has yet been found among the aḥdāth. It may not be accidental that the boundaries between cities with fīyaḍ and those with aḥdāth corresponds very closely to the ancient Byzantine-Sasanid frontier, a fact which suggests that the aḥdāth may possibly be related to the ancient "factions" of the Later Roman empire. The whole question can, however, only be investigated in the framework of the general social study of the Islamic cities, on which little work has yet been done.

(CL. CAHEN)
AHl, Turkish poet, whose real name seems to have been Belhi Hasan (“Hasan with the mole”). His father Sidi Khodia was a merchant in Trstenik (not far from Nicopoli). After the latter's death Ahl went to Istanbul and chose for himself the career of a scholar, but for a long time advanced no further than the rank of candidate (mulāsim), because he declined the position of mūderīs in Bayazid Pasha’s madress in Brusa. Finally he obtained the less important position of mūderīs in Kara Feyya (Berrhoea), where he died in 923/1517. He left two unfinished poetical works, of which the titles are: Shırin ve Persus (imitating Sheykh’s Khawass u-Shırin), and Hzun u-Dīl (Istanbul 1277). The latter work is an allegorical poem written in prose interspersed with verses, and is an imitation of Fattahi’s (muldzim), and is therefore synonymous with the jurds, the positive law as opposed to legal theory or jurisprudence [see tafsir]; but as it also means judicial decisions, the term is more specifically used of the application of legal rules to concrete cases.

Bibliography: Sehi, 108; Latifi (Chabert), 105; Āshg Celebi and Khnall-zade, s.v.; Gibb, ii, 286 ff.; Hammer-Purgstall, Gesch. d. Osman. Dichtkunst, i, 209; Yemi Memsıma, 1918, no. 54; Istanbul Kitaplkları Türkçe Yasma divanlar katalogu, no. 33.

AŁ-AHAKh, the title of Sūra xlvi of the Kur’ān, and a geographical term the meaning and application of which have been generally misunderstood. The Sūra derives its title from verse 21, which speaks of Ād as warning his people in al-Ahkāf. The word ahhāf is usually interpreted in dictionaries, books of tafsir, and translations of the Kur’ān as meaning curved sand dunes. Medieval Arab geographers considered al-Ahkāf to be the name of a sand desert in Southern Arabia, said to lie between Hadrāmawt and Qumān, i.e., in the eastern part of al-Ramla or al-Rub’ (q.v.). Modern Western geographers, on the other hand, have inclined towards the identification of al-Ahkāf with the whole of al-Ramla or just its western half. C. Landberg (Hadrāmaut, 146-160) showed that al-Ahkāf as a regional name is used in Southern Arabia as roughly synonymous with Hadrāmawt in the broadest sense and is not applied to the sands farther north. The southern beduoin tribes define Banū al-Ahkāf as the mountainous area running behind the coast from Zufar west to Aden, the central valley of which is Wādī Hadrāmawt; to them the word ahhāf means simply mountains and is not associated either with dunes or, as suggested by Landberg, with caves (khuft). A statement made to ‘All b. Abī Tālib by a man of Hadrāmawt, as recounted by Ibn al-Halbī and repeated by al-Bakrī and Yākṣī (s.v.), indicates that even in ancient times ahhāf may have been used in Southern Arabia in this connection rather than as a name for dunes in the Great Desert.

(A. Khambiz)

AHH.Kām, pl. of āhkm, decision, judgment. [See also HAKAM.] In the Kur’ān, the word occurs only in the singular, and is used (as is the corresponding verb) of Allah, the Prophets, and other men. Used of Allah, it denotes both individual ordinances and the whole of His dispensation (iii, 79; xliv, 16; li, 10). In the ultimate sense, final jurisdiction belongs to Allah alone [see AL-MUKAKIMA], but He has given authority to make decisions to His Prophets. The jurisdiction of Muḥammad, in particular, is opposed to that of paganism (v, 50). So āhkm comes to mean the authority, imperium, of the Islamic government and, on the other hand, the judgment of a kādī on a concrete case.

From āhkm in the sense of a judicial decision derive the meanings of a logical judgment concerning a thing, of a status to be predicated of a thing or of a person, and of a rule in religious law, in grammar, and in other sciences. In all these meanings, the term is freely used in the plural. In particular, one speaks of ahhām al-ḥammās, the “five qualifications” (obligatory, recommended, indifferent, reprehensible, forbidden), by one or the other of which every act of man is qualified in religious law [see šar’ā]. In a broader sense, ahhām means the sum of the rules pertaining to any given subject (cf. the titles of books such as ahhām al-aqāf “On Wa’f”, ahhām al-sulām-iyya “On Government”, also ahhām al-āhāf “On the Next World”; ahhām al-nudīm “astrology”, etc.). In the field of religious law, ahhām is therefore synonymous with the jurds, the positive law as opposed to legal theory or jurisprudence [see tafsir]; but as it also means judicial decisions, the term is more specifically used of the application of legal rules to concrete cases.

Jeffery, in MW, 1952, 121 f.; R. Bell, Introduction to the Qur’ān, 153; L. Gardet, La Cité musulmane, index, s.v. ahhâm and āhmām. (J. Schacht)

AHL (A.), originally meaning “those who occupy with one the same tent (Hebrew šādāl)”, thus “family, inmates”. Therefore ahl al-Bayt means literally “the household of the Prophet”. When the ahl (pl. aḥāl) of a town or a country is spoken of it denotes its inhabitants, sometimes, as in Medina (according to Burton), specially those who were born there and own houses. But this word is often connected with other concepts, and in these combinations it may come to mean “those who occupy with one the same tent”, “sharers in a thing, belonging to it”, or “owner of the same”, etc. Some of the compounds with ahl most in use follow here.

AHL AL-AHWA (A.; sing. āwâd, “predilection, inclination of the soul”; comp. Kur’ān vi, 51) is a term applied by the orthodox theologians to those followers of Islam, whose religious tenets in certain details deviate from the general ordinances of the Sunnite confession (cf. ZDMG, 1898, 159). As examples there are mentioned: Djabariyya, Kadariyya, Rawāfīd, Khawāriji, anthropomorphists, Muṣṭilla. From the above definition it may be inferred that in the sense of Muslim theology it is not proper to designate these tendencies as sects.

(A. Khambiz)

AHL AL-BAYT, ĀL-BAYT, “the people of the House”, ĀL-NABI, “the family of the Prophet”, all mean the same; the term Āl Yāsīn also occurs. The origin of the phrase is to be found in the strong clan sense of the pre-Islamic Arabs, among whom the term al-bayt was applied to or adopted by the ruling family of a tribe (by derivation from an ancient right of guardianship of the symbol of the tribal deity, according to H. Lammens, Le Culte des Diydles, in L’Arabie occidentale avant l’Hégire, Beirut 1928, 136 ff., 154 ff.), and survived into later centuries in the plural form al-bayta for the noble tribal families [see AHL AL-BUYUTA and Aį]. In early Islamic times the term bayt was applied to themselves by a number of families, e.g. by ʿAbd Allah b. ʿUmar to the house of Ummayyah (Ibn ʿAbd al-Hakam, Strad ʿUmar b. ʿAbd al-ʿAṭś, Cairo 1927, 19), and by ʿUmar II to the Umayyad house (innamā li-ʿl-bayt: ibid. 24). In the Kur’ān the phrase ahp “l-bayt” occurs twice: once in xi, 73, applied to the house of Ibrāhīm; the
second passage, xxxiii, 33 ("God desires only to remove filthiness from you (masc. pl.), ahl 'l-bayt", and with cleansing to cleanse you"), serves as the proof-text for its application to the house of Muhammad (but see R. Paret, in Orientalische Studien Enno Lüthmann ... übersieht, Leiden 1935, 127-20).

The precise interpretation of the term in xxxiii, 33, gave rise to differences of opinion. In one tradition, according to which Salmān al-Fārisī [q.v.] is included among the ahl al-bayt (Ibn Ḥāšām, Sīra (Cairo), iii, 244; Ibn Saʻda, i, 59), it is opposed to muhādīrūn and ansār. Among the Shī‘a (and generally in circles friendly to ʻAlli) it was applied to Muhammad, ʻAlī, Fāṭima, al-Ḥasan and al-Ḥusayn (cf. already al-Kumayt, Ḥāşimīyyāt (Horovitz), 38 l. 30; cf. 92, 1. 67) by interpreting the verse through the well-known "tradition of the mantle" (ḥadīth al-kisā‘, ḥadīth al-ʻabā‘), which was accepted also in Sunni circles (see ahl al-kisā‘). In keeping with an explanation of the Kūrānic phrase as referring to the Prophet's wives and dependents, attributed to Ibn ʻAbbās and ʻIkrīma, Umm Salama is, in some versions of this tradition, recognized by the Prophet as belonging to the ahl al-bayt. It is given a still wider application in a version of the so-called ḥadīth al-thāqālayn, where the term is applied to those to whom (including their maṣūli‘) a share in the ṣādah is given. In this verse the Prophet extended it to include all the Banū Ḥāṣim and al-Shī‘a, extended it to the Banū Muttalib also, and of al-ʻAbbās. In this tradition, therefore, the ahl al-bayt includes the Ṭalibids and Ṭabāsids, historically the most important families of the Banū Ḥāṣim; and in order to strengthen their claim to inclusion in the verse of purification, the Ṭabāsids also had their counterpart in the ḥadīth al-ʻabā‘ and ʻAbbās extended it to include all the Banū Ḥāṣim and al-Shī‘a extended it to the Banū Muṣṭafī also, while others make it include the whole community.

The current orthodox view is based on a harmonizing opinion, according to which the term ahl al-bayt includes the ahl al-ʻabā‘, i.e. the Prophet, ʻAlī, Fāṭima, al-Ḥasan and al-Ḥusayn, together with the wives of the Prophet.

The Shī‘a limit the family (which they call by preference ʻitrā) to the ahl al-kisā‘ and their descendants, making devotion to them an essential, or even the main, part of religion. In one version of the "Farewell Sermon" Muhammad is represented as saying that God has given two safeguards to the community that it will not go astray; "God has given a still wider application in a version of the hadith al-kisā‘, hadith al-ʻabd‘, which was accepted also in Sunnī circles [see ahl al-kisā‘]. In keeping with an explanation of the Kurānic phrase as referring to the Prophet's wives and dependents, attributed to Ibn ʻAbbās and ʻIkrīma, Umm Salama is, in some versions of this tradition, recognized by the Prophet as belonging to the ahl al-bayt. It is given a still wider application in a version of the so-called hadith al-thāqālayn, where the term is applied to those to whom (including their maṣūli‘) a share in the ṣādah is given. In this verse the Prophet extended it to include all the Banū Ḥāṣim and al-Shī‘a, extended it to the Banū Muttalib also, and of al-ʻAbbās. In this tradition, therefore, the ahl al-bayt includes the Ṭalibids and Ṭabāsids, historically the most important families of the Banū Ḥāṣim; and in order to strengthen their claim to inclusion in the verse of purification, the Ṭabāsids also had their counterpart in the hadith al-ʻabā‘ and ʻAbbās extended it to include all the Banū Ḥāṣim and al-Shī‘a extended it to the Banū Muṣṭafī also, while others make it include the whole community.

The current orthodox view is based on a harmonizing opinion, according to which the term ahl al-bayt includes the ahl al-ʻabā‘, i.e. the Prophet, ʻAlī, Fāṭima, al-Ḥasan and al-Ḥusayn, together with the wives of the Prophet.

The Shī‘a limit the family (which they call by preference ʻitrā) to the ahl al-kisā‘ and their descendants, making devotion to them an essential, or even the main, part of religion. In one version of the "Farewell Sermon" Muhammad is represented as saying that God has given two safeguards to the world: His Book and the Prophet's sunna; in another version, this is replaced by: His Book and the Prophet's ʻitrā. The official creed of the Shī‘a does not go beyond this, but popular belief ascribes cosmological importance to the family as in traditions like: "The stars are a pledge to the world that it will not be deserted, and my family are a pledge to the community that it will not go astray"; "God would not have created heaven, earth, paradise, Adam, Eve, the angels, nor anything else but for them (the family)". They have the same saving function as Noah's ark. The heads of the family are the Imāms [q.v.], infallible and sinless. The extreme Mānṣūriyya called the family heavy and the Shī‘a earth (al-ʻAsh’ārī, Māḥālād), 9.

The ideas of the Shī‘a found their way into later collections of hadith, although the Sunna declares that love for the family is of no avail without obedience to the sunna. Al-Mālikī legal thesaurus (cf. ʻAbbās b. ʻAbd Allāh, ibn Maṣūli‘, An Nāfi‘, the book on sunna) also speaks of finding fault with one of the family, for no heresy, no default in the performance of religious duties, and no sin deprives him of his sons' share."

The form al is used more especially in the invocation: "O God, bless (salī ‘alā) Muhammad and his family!" (cf. I. Goldziher, in ZDMG, i, 114-7). The definition of those comprehended in this expression has produced controversies similar to those about the ahl al-bayt. Ibn Khālawayh enumerated twenty-five classes in his K. al-ʻĀl (G. Flügel, Die grammatischen Schulen d. Araber, 231; citation in Bahrānī, Manār al-Hadd, Bombay 1320, 200). See also al-ʻUtsi, List of Shī‘a Books, no. 294.

AHL AL-BUYUTAT (al.), originally denoted those that belong to Persian families of the highest nobility (Nöldcke, Gesch. d. Perser u. Araber zur Zeit der Sassaniden, 72); then, the nobles in general. Other meanings are given by Dozy, Supplément, i, 131.

AHL AL-DĀR (al.) = "the people of the house", in the Almohad hierarchy the 6th order (see al-Muwāhidūn).

AHL AL-DHIMMA (al.), the Jews and Christians, between whom and the Muslims there is according to Muslim law a certain legal relation [see dhimma].

AHL AL-FARD [see mālikī]

AHL AL-HADITH, also ʻAṣbāb al-Hadīth, the partisans of traditions [see hadith]. Traditionalism in Islam manifested itself first in the re-emergence of the old Arabian concept of sunna [q.v.], the normative custom of the community, which was in due course identified with the sunna of the Prophet. This normative custom found its expression in the "living tradition" of the ancient schools of religious law, which came into being at the very beginning of the second century of Islam. In opposition to the ancient schools and their extensive use of human reasoning and personal opinion [see ʻAṣbāb al-ra‘ī and ra‘ī], the ahl al-hadīth, who appeared on the stage a little later, claimed that formal traditions from the Prophet, even though they were transmitted only by isolated individuals [see ʻAbbās b. al-Wāḥih], superseded the "living tradition". The traditionalists themselves were responsible for putting into circulation many traditions which purported to go back to the Prophet, and they specialised in collecting, perfecting, transmitting and studying them; long journeys were made in search of traditions. Though hardly any of this material, as far as religious law is concerned, can be regarded as authentic by the standards of historical research, the Muslims, from the 3rd/9th century onwards, have accepted its essential parts as genuine.

The movement of the traditionists was the most
important event in the history of Islamic religious law in the second century of Islam. The ancient schools were those which issued traditions on the authority of the Companions of the Prophet. They have thus earned the name of *ghayar mukallid*, which appellation, though disowned by them, nevertheless admirably defines their position in relation to other sects. They reject also the common notion that the *idijihad* or legal conclusions of the founders of these schools are of final authority; and rather contend that every believer is free to follow his own interpretations of the *Kur'an* and the traditions, provided he has sufficient learning to enable him to give a valid interpretation. Consequently, they do not regard the *idijim* or consensus of the preceding generations of Muslims as binding on them. As a result of their characteristic attitude, they have found themselves in conflict chiefly with the *Hanafis* or followers (*mukallids*) of Abū Ḥanīfa, who constitute the majority of Sunni Muslims in India and Pakistan. Their controversy has, however, been confined in actual practice to certain minor points of ritual (such as *raj* al-ya'dayn, *ādmin bi-l-jahr*) and belief, there being a substantial agreement on really important theological and doctrinal questions.

The Ahl-i Ḥadīth try to go back to first principles and to restore the original simplicity and purity of faith and practice. Emphasis is, accordingly, laid in doctrinal questions. There is free to follow his own interpretations of the *Kur'an* and the traditions, provided he has sufficient learning to enable him to give a valid interpretation. Consequently, they do not regard the *idijim* or consensus of the preceding generations of Muslims as binding on them. religious life of the Muslims by ridding it of its innovations, superstitions and unnatural accretions, (2) their active promotion of the study of Hadith literature, the importance of which had already been recognized by Shāykh Ṣā‘īd al-Ḥāḍīth Mubaddījī of Delhi [q.v.], and (3) their polemics against the Ārya-Samājīst Hindus, the Christian missionaries and their active promotion of the study of Hadith innovations, superstitions and unnatural accretions, Abd al-Hakk Muhaddith of Ahl-i Ḥakīka.

Abd al-Hakk Muhaddith of religious life of the Muslims by ridding it of its innovations, superstitions and unnatural accretions, is also used by the Ahl-i Ḥakīka. In the strict sense, fiṣūrub, 1909, 40), and because it has an affinity with furūsī, prevalent mainly in western Persia. Ahl-i Ḥakīka, because it is used, for example, by the IJurufls would seem to be a rather imprecise name for this sect, because its neighbours is an unsuitable title, because Ahl-i Ḥakīka is not the dominant figure in the religion described in the present Textes persans relatifs a la secte des Aḥl-i Ḥakīkī, and further because the term Aḥl-i Ḥakīka, and because the term Aḥl-i Ḥakīka has not yet been established. (v. infra), but there are branches which are not included in this list, cf. the Sayyid Djalālī (Minorsky, Notes, 48 [35]) and the Tāmārī (a highly abnormal group) (Minorsky, Estudes, I). The account by Gobineau, the Firkān and the text published by W. Ivanow reveal a religious system more philosophical than the naive legends of the Sarangīm (in the Ātāsh-begi version). Since, at the moment, however, this branch is better known to us, the following account will be based primarily on the Ātāsh-begi documents, to be supplemented later by material from the Firkān, the author of which was a Khamūshī (?).

The Dogmas. The central point in the dogmas of the Ahl-i Ḥakīk is the belief in the successive manifestations of the Divinity, the number of these being seven. The manifestations of God are compared to garments put on by the Divinity: “to become incarnate” means “to come to dwell in a garment” (libīb, ḥāmam, dön < Turk. *dom).

On each occasion the Divinity appears with a following of Four (or Five) Angels (yārān-i ĭrāmalak) with whom he forms a close group.

The table of theophanies according to the MS. of the Sarangīm is given below.

In pre-eternity (azal) the Divinity was enclosed in a Pearl (durr). He made his first external appearance in the person of Khwāndaqār, the Creator of the world. The second avatar was in the person of ‘All. From the beginning of the third epoch the list becomes quite original and typically Ahl-i Ḥakīk. The first four epochs correspond to the stages of religious knowledge: shāri’a, farīka, ma’rīfa and ḥabība. According to all branches of the sect, the representative of the last and the highest stage is Sultān Suhkār. On the other hand, several differences of opinion regarding the successors of Sultān Suhkār are recorded.

Just as the divine essence reappears in each of the seven “garments”, the angels (cf. the vertical columns in the table) are avatars of one another. For this reason their names are interchangeable and Salmān is often spoken of in the epoch of Sultān Suhkār or Benyāmīn in the epoch of Khwāndaqār. The angels are emanations of the Divinity: the first of them was produced by Khwāndaqār from his armpit, the second from his mouth, the third from his breath, the fourth and

fifth from his perspiration and his light respectively (cf. the Sarandism). According to another version, Benyâmn was created from the perspiration, which is characteristic of modesty; Dâwûd — from the breath (anger); Mûsî — from the moustache (pity); Razbâr — from the pulse (fear). The angels play the part of ministers to the Divinity: Benyâmn is the deputy (waqîl) and the pîr; Dâwûd is the overseer (nâsîr) and judge (?); Pir Mûsî is the wazir who records good and evil; Muṣâṣâfâl Dowdân (= Nuṣait) is the Angel of Death.

The angels are usually said to be four in number (in some lists and in certain periods this number is reduced to three) but in fact a fifth angel is especially charged with the supervision of worship. This angel's symbolic name is Razbâr, Razbâr or Ramzâbâr ("entrusted with mysteries") and her feminine character is indisputable; but the sex in Razbâr is not emphasized. One of the informants even alleges that Razbâr is a hermaphrodite (khu'ntûhâ). Razbâr is the informative name of Khu'ntûn Dâyira, mother of Sultan Şohâk, and the compiler of the list quoted above is wrong in relegating her to the fifth epoch.

Metempsychosis and Eschatology. The belief in the reincarnation of the theophanies finds its parallel in the general belief in metempsychosis. "Men! Do not fear the punishment of death! The death of man is like the dive which the duck makes!"

Human beings must pass through the cycle of 1,001 incarnations, in the course of which they receive the reward of their actions (Notes, p. 131 [251]). According to the Firkân (i, 32, 35, 57, 68), however, the possibilities of purification are essentially limited by the very nature of beings; of whom some, created out of yellow clay (zard-gil), are good, and the others, created out of black earth (siyâh kâhû), are evil. "The more (the former) go through the world of garments and the more they suffer, the more they approach God and the more their luminous state increases". While the "Dark ones" shall never see the Sun. As a complement to these beliefs, the Ahl-i Ḥâkk eagerly await the advent of the Lord of Time which announce the "Five (sic!) Angels" stand round the infant. A Muscat nut (gâna-us-hawad) is broken by the celebrant as a substitute for the head. It is then worn as an amulet, with a piece of silver called hauvisa bearing the Sh'â'a form of the profession of faith (hauvisa from the Sh'â'a town of Hauzîn in Khuzistân; cf. Notes, p. 227 [107], and W. Caskel, Ein Mahdi des 15. Jahrhunderts, in Islamica, 1931, 48-93, and the art. Nûsq'a'sma'). Links recalling blood relationship are established between him whose head is commended and the line of the zahâkh to whom the head has been commended. This spiritual relationship carries with it the prohibition of marriage between the individual dedicated and the family of the pîr.

5. With the object of attaining moral perfection special unions (nuclei) are formed between a man (or several men) and a woman who are called brother and sister (shârî-i šîrâr). The union is said to be formed in anticipation of the Day of Resurrection: Notes, p. 230 [110]; cf. the akh wa-빅히 al-âkhira among the Yazidis [q.v.].

6. Fasting is rigorously observed but lasts only for three days, as among the Yazidis [q.v.]. It takes place in winter and is followed by a feast. Among the divisions of the sect, only the Ātâgh-begî do not observe the fast "for the days of the (final) advent are near" and instead of fasting they say one ought to feast.

For the other rites and customs see the Notes by Minorsky (Bibl.).

Firkân al-Âkhbâr. The author of this treatise was Hâđîdji Nî'mat Allâh of Dâyîbûn-âbâd near Dînawar (1871-1920) who belonged to the Kâmûshi division and who believed the time had come to reveal the Real Truth (ḥâkîkat). His son Nûr-Allâh (b. 1313/1895) wrote the biography of his father and an introduction to the Firkân under the title of Kâhî al-Âkhbâh. While confirming much that was already known, the Firkân represents a tradition different from that of the Ātâgh-begî in as much as it makes no mention of "seven" epochs and reserves a special position for Khâwandâgâr and Sultan Şohâk while the number of manifestations of less importance is increased (Bâbâ Nâsîh, etc.).

The Firkân consists of 4 parts. The first deals with the fundamental principles of the baḥîkat established in pre-eternity by the Divinity who in the stage of "yâ-ya zahâkh" became externalised in the garment of Khâwandâgâh. The law required concealed till the coming of Sultan Ishâk (Şohâk). Then the daftardârs recorded these doctrines but each in his own way and according to the sources which were accessible to him. As a result the Ahl-i Ḥâkk community has no [single?] sacred book and
its divisions are distinguished by different views. The Ahl-i Ḥakk required a ḥubb-i kull which would be unique. So after 1524/1526 Nīmat Allāh, by God’s command, abandoned the world and became the “messenger of the Lord of the Hour”, i.e. of Pir Benyāmīn (explained as bin yā + amin “faithful son of Yā”). Then comes the explanation of metempsychosis (gardish-i dān bi-dān = “going from one garment to another”).

The creatures of the world are divided into two distinct categories according to their original element (sardārî or ḥakk-i ayī). To the first belong the Saved and Luminous beings whose respective sardārs are Benyāmīn and Sayyid Muhammad (in his avatar of Buzurg-sawār). To the other category belong beings of Fire and Darkness whose respective sardārs are Iblīs and Khannās, with whom are associated the first three caliphs, Muʿawīya, ‘Alī, etc. The intermixture of the two categories of beings produces combinations which may be recognised even externally.

The second part of the treatise is mainly concerned with the correspondence of the avatars through the ages. Thus the manifestations of Benyāmīn are Noah, Jesus and provisionally (mihmān Rustam of the Persian epic; those of Razbār: Bīlīs, the queen of Sabaʾ, Mary, etc.; those of Sayid Muhammad: Zoroaster, the prophet Muhammad, etc. Next we are given the history of Sultān Ishāk (Ṣohāk) and of his successors.

The third part relates the personal experiences of Nīmat Allāh and the commandments which he received from God during his journey “to the beyond” (ṣafar-i ʿubd), notably his mission to unite the khānadāms, to give absolution from sins (as khlīvānat pāk namiddān) and to intercede (ghīrād) with the Lord of Time.

The fourth part is the full description of the rites and customs (amr wa-nahy), with the Guran text of the formulae recited on each occasion.

Distribution. The principal centres of the Ahl-i Ḥakk are in the west of Persia, in Luristan, Kurdistān (land of the Guran east of Zohāb, town of Kerend) and in Adharbaydjan (tribes of Māzandarān and the provinces in Transcaucasia especially Karabagh). Little colonies of Ahl-i Ḥakk are found almost everywhere in Persia (at Hamadhan, Teheran, at Māzandarān, Fārs and even in Khurāsān, to which, according to tradition, one of the brothers of Khān ʿAtaš had gone). In ʿIrāq there are Ahl-i Ḥakk among the Kurd and Turkoman tribes of the region of Karbūl, of Sulaymāniyya and probably at Mosul.

Very little is known of the connection between the Ahl-i Ḥakk and the sects popularly known under the name of ʿAll Ilahi or by contemptuous terms like čirāg-sūndārīn (“extinguishers of lights”), khūrās-kushān (“slaughterers of cocks”) etc. (see ʿertašt, khlīl-bahš, sārī, shabbāk). In any case, it is a striking fact that the direct influence of Ahl-i Ḥakk preachers of the district of Zohāb could be traced among the ʿAlawī (Khlīl-bahš; cf. Trowbridge, The Alevi, Harvard Theol. Review, 1909, 340–55, repr. in MW, 1921, 253–66).

Religious History. The Ahl-i Ḥakk possess a wealth of legends arranged according to the manifestations of the Divinity. The collections of these legends are known as Sarāndājm. The epoch of Khwāndqār is interesting only for its cosmographic myths. The traditions relating to the epoch of ʿAll (which does not in any way form the central point) are inspired by the extreme Shiʿa. The epoch of Khoshūn is placed in a typically Lur (q.v.) environment, the geographical nomenclature showing an excellent knowledge of the localities of Luristān. One of the angels of Khoshūn is Bābā Tāḥir (q.v.) whose quatrains in dialect are quoted. The fourth epoch is placed in the land of the Gūrân close to the river Sirwān. The sayings attributed to Sultān Ṣohāk are in Gūrân, which is the sacred language of the Ahl-i Ḥakk (cf. Firdōs, i, 3; see Minorsky, The Guran, BSO, 1943, 77–103). The greatest sanctuaries of the sect: Bābā-ʿAqādār and Perdiwar, are situated in the same region. In the later epochs the scene is transferred to Adharbaydjan and the hādāms relating to these epochs are in Adhar Türkish. From these facts it may be concluded that the stages of propagation and development of the religion have been: Luristān — land of the Gūrân — Adharbaydjan.

Exact dates are naturally difficult to obtain and we shall endeavour to proceed from the known to the unknown. Khān ʿAtaš, born at Aḏājang (north of Māzāṅgā) and buried in the village of Aḏājang-beg in the district of Ḥaṣhta-rūd, northeast of Mount Sahand, is said to have lived at the beginning of the 18th century (Notes, p. 41 [27]). This line was continued by his direct descendants of whom the seventh was called Sayyid ʿAbd al-ʿAṣīm Mirzā (Agā-ḥālshāq) and lived at Garabān (also called Dūrū) on the Gāmāṣāb to the south of Bīšābān, where O. Mann visited him in 1917, and was succeeded by his son Muhammad Ḥasan Mirzā. The popularity of the Turkish poems of Shāh Ismāʿīl ʿṢafawi is significant; the hālam, known as Kūb-nāma, calls Shāh Ismāʿīl the “pir of Turkistān” (= Adharbaydjan where Turkish is spoken). The spread of Ahl-i Ḥakk doctrines among the Turkoman tribes seems in any case to go back to an earlier period, that of the Kara Köyunlu rulers. The remnants of these Turkomans who live in a district in the centre of Mākū are Ahl-i Ḥakk. Similarly in Transcaucasia the Kara Köyunlu in the region of Gandja live in the close neighbourhood of the Gūrān (< Gūrân). Shāh Ibrāhīm, whom many of the Ahl-i Ḥakk regard as the successor of Sultān Ṣohāk, and who lived in Bagdād and whose acolyte angel was Kushū-oghī (author of Turkish songs), is perhaps responsible for the dissemination of Ahl-i Ḥakk teaching among the Turkomans north of the Tigris.

Tradition places immediately before Shāh Ibrāhīm the famous Sultān Ṣohāk who (outwardly) was the son of Shaykh ʿIsā and Khatūn Dāyira (Dāyārāk, daughter of ʿAbbās Beg Dālād, chief of the tribe of Dījavī Murūd. His real name is said to have been Sayyid ʿAbd al-Ṣayyid. Barzīndāja, north of Sulaymāniyya, is said to have been his birthplace. He is said to have had seven sons from his wife Khatūn Bāšīr, who are named ḫastān. His tomb is at Perdiwar (in Awramān-i luḥūn, see senne), on the right bank of the Sirwān.

The Kāhāl chiefs of Taʿbīk claim to be his direct descendants (see al-Azāwi, al-Khākāyya, Shaykh Mahmūd, who after the World War proclaimed himself “King of Kurdistān” [cf. the article konu], claimed to be descended from the brother of Sultān Ṣohāk in the twelfth generation. At Kūrk Minorsky found a MS containing a genealogy of that family.

The only definite indication of Bābā Khoshūn’s date would be his association with the poet ʿAbbā Tāḥir (11th century) but here tradition is on very uncertain ground.

The Elements of the System. The religion of the Ahl-i Ḥakk is typically syncrétist. At its foundations we find Shiʿa extremism. It should be
noted that the Ahl-i Ḥakḵ always speak of the 12 imams and as a result ought not (at least directly) to be connected with Ismaʿīlism. According to the
Fīrḵān, the “religion of Truth” simply re-establishes the contents of the 10 ġūz̄ which were suppressed in the received text of the Kurān, but in fact the Ahl-i Ḥakḵ deviate from the orthodox Shīʿa to the extent of forming a separate religious system. The religion of the Ahl-i Ḥakḵ has in common with those of the Druzes and the Naṣʿyīrīs the worship of ‘All, but ‘Ašr is completely overshadowed by the Šāh ʿAlī." 

The other obvious element in the formation of the Ahl-i Ḥakḵ is the rites of the Sūfī darwīshes: election of the pīr, agapes with ġūdrī and distribution of food, brotherly unions.

From the social point of view, the religion of the Ahl-i Ḥakḵ is professed particularly by the lower classes, nomads, villagers, inhabitants of the poorer quarters, darwīshes etc. From this probably comes the hope that on the day of the last judgment “the sultāns” will be punished (Notes, p. 44 [31]). On the other hand, the eminently popular character of the religion is apparent in the exuberance of the miraculous and folklore element in the traditions of the Ahl-i Ḥakḵ. Amid the country people in the remote provinces which have at all times been outside the control of central governments, it is natural to expect a development from olden times.

The Divinity enclosed in the Pearl is a Manichæan idea (personal communication by Th. Nöldeke), like the belief in the purification of the "Luminous" in the course of their transmigrations. The belief in metempsychosis cannot be directly Indian for it was already in existence in Ismaʿīlism. The division of beings into two distinct categories is perhaps a later development of Zoroastrian ideas. The sacrifice of the cock has been several times connected with the corresponding Jewish rite (cf. I. Schefelowitz, Das stellvertretende Huhnopfer, Giessen 1914), while the Biblical names (Dāwūd, Mūṣil) may have come through the intermediary of the Kurān. The alleged Christian influence ought not to be exaggerated: if the Ahl-i Ḥakḵ in their conversations with the Christians talk of Jesus and Mary, it should be remembered that, apart from these possibly being simply reminiscences of the Kurān, the Ahl-i Ḥakḵ regard them merely as avatars of their own pantheon. For the agapes it is not necessary to go farther back than the known darwīsh practices (e.g. the Bektaghi). The elasticity of the system of metempsychosis is responsible for the appearance of unexpected names in the myths.

W. Ivanow has called attention to the name of Malak Ţāʿūs (cf. vazarūs) in a fragment containing traditions, found at Shīrāz.

another ruler [see BAY'А]. They must be Muslims, male, of age, free, 'adl [q.v.], and capable of judging who is best qualified to hold the office. No fixed number of "electors" is required; according to the prevailing opinion, even the appointment made by one "elector" in the presence of two qualified witnesses is valid. This is the theory; in fact, all through the history of Islam, the ahl al-hall wa'l-akd have consisted of the persons who wielded political power in the capital, acting in association with the notables and prominent religious scholars. The thought of modernists and reformers occasionally identifies them with the whole of the community, or nation, with parliament, or with the body of religious scholars. 

AHL AL-KAHF [see ASHÅB AL-KAHF].

AHL AL-KIBLA (А.) = "the people of the kibla" [q.v.], appellation of the Muslims.

AHL AL-KISÅ', the people of the cloak. According to a tradition Muhammad went out one morning—at the time of the visit of the Nadjran delegation in 10/631 [cf. MURÅBah]—wearing a figured black cloak; first Fätimä, then 'Ali and then al-Hasan and al-Husayn came and he took them under his cloak, hugging them and quoting from Kür'än, xxxiii, 32: "God only desireth to put away filthiness from you as his household, and with cleansing to cleanse you". The Sunnis explains filthiness as unbelief but the Shi'a explains it as intercourse with the impure world, a parallel to the Jewish saying: "I hide them with my cloak". Another version says that Muhammad threw his cloak over his uncle 'Abbås and his sons saying: "Hide them from hell fire as I hide them with my cloak".

AHL AL-KITÅB, "possessors of the Scripture" (or "people of the Book"). This term, in the Kur'än and the resultant Muslim terminology, denotes the Jews and the Christians, repositories of the earlier revealed books, al-Taurâd [q.v.] = the Torah, al-Zabår [q.v.] = the Psalms, and al-InÅhål [q.v.] = the Gospel. The use of this term was later extended to the Sabéans (al-Såbå'å [q.v.])—both the genuine Sabéans, mentioned in the Kur'än alongside the Jews and the Christians (= Mandeans), and the spurious Sabéans (star-worshippers of Harârn)—to the Zoroasterians (Ma'dås [q.v.]), and, in India, even to idolaters.

This article deals only with the doctrinal position of the Kur'än, the šâdîhå and the controversialists concerning the Jews and the Christians. For their legal status as protected persons (ahl al-dhimma) on the fringe of the Muslim community, see DHIMMA and DlYAN.

In the Kur'än, the term does not occur before the end of the Meccan period. A possibly slightly earlier expression is ahl al-dhåhir, "possessors of edification", witnesses of previous revelations (xv, 43 (45), xxii, 9), but dhåhir also denotes generally the Pentateuch and the Psalms. The Kur'än emphasises the community of faith between the possessors of the earlier scriptures and the adherents of the new revelation. It occasionally pays tribute to their religious and moral virtues and calls on the Prophet to interrogate them. More often, however, as a result of his dissatisfaction with the conduct of Muhammad at the intransigence of the Jews of Medina and of the Christians with regard to his mission, he puts the emphasis on their failure to comprehend the message which they possess but do not put into practice, just as they fail to comprehend the new teaching which fulfils that message, on their exclusiveness, and on their impotent jealousy; they are therefore not to be treated as allies, but to be fought with: xxxiv, 45-7 (44-6); xlii, 14 (13); x, 93-5; ii, 105 (99), 109 (103), 111 (105), 135 (129); xviii, i, 4, 6; iii, 19 (17), 23 (22), 64-5 (57-8), 69-73 (62-7), 75-6 (68-9), 77 (71), 98-100 (93-5), 110 (106), 113 (109), 199 (198); lviii, 29; lv, 152 (152), 173 (169); lix, 11; ix, 29; v, 7 (5), 15 (18), 19 (22), 57-9 (62-4), 65 (70), 68 (72). The Kur'änic texts which mention the adherents of these two religions by their proper names (lbarå Isåri'âl [q.v.] and Yahåd [q.v.] for the Israelites of biblical history and the contemporary Jews of Medina respectively, Na'sårå [q.v.] for the Christians) adopt similar viewpoints and determine the entire future attitude of Islam towards these two groups. The children of Israel are God's chosen people, recipients of his bounty, admitted to his covenant, beneficiaries under his law, to whom Paradise is assured. The Kur'än recognises several episodes of their history: the bondage in Egypt, the crossing of the Red Sea, their wanderings in the wilderness, their sojourn before the Mount, their division into twelve tribes, their entry into the Promised Land and into the Holy City and the City by the Sea. But they distinguish themselves by their rebellious spirit and unbelief; they worship the golden calf; they demand to see God and they clamour for idols. Instead of believing in the prophets, they persecute them. They violate the Sabbath and infringe the Law; they are uncircumcised in heart. Though guardians of the Scriptures, they alter them, conceal them and pervert their meaning; they are signalized by their opposition to all further revelations, and they are themselves divided into factions. Curse be the Lord, metamorphosed into apes, punished in this world where they are doomed to humiliation, they are moreover consigned to Hell. They can only be saved by righteousness; they have on the other hand given rise to a just community.

This picture is coloured, like all Muhammad's conceptions of religious history, by his experiences and disappointments, which are expressed still more clearly in his pronouncements concerning the contemporary Jews and Christians.

At first the Kur'än admits that Jews, Christians and Sabéans can, like Muslims, achieve salvation through the performance of the rites of their respective religions, but this standpoint is not maintained. At Medina, the Kur'än admonishes the Jews (recalling especially the divine protection vouchsafed to their ancestors) and summons them to Islam. Although certain Jews are praised and granted forgiveness, the tension, and finally the breach and conflict between the Jews and Muhammad, are reflected by the condemnation of their doctrines, by maledictions, and the ban on association between them and believers. Their sins fall into the moral as well as the religious category. Their attitude resembles that of their ancestors: eager to enjoy life, they fear death; ungrateful for God's blessings, they are careless too of the welfare of their doctors of religion; they practise usury, war among themselves, and
rush into iniquity and corruption. They preserve and study their Law, but do not hesitate to transgress it, taking advantage of its multiplicity and to conceal the truth. The prohibitions concerning food have been imposed on them as a punishment. Their enmity towards the Christians is not forgotten. Even their monotheism is questioned; they believe in the Djiht and Tashht and deify 'Uzayr [q.v.]. They Ally themselves with the polytheists. Their attitude towards the Kur'anic revelation, the advent of which has caused disunity amongst them, is compounded of hostility and unbelief. They are the worst enemies of Islam; they bandy words with the Prophet, are jealous of the believers, and are conspicuous for their mockery, their machinations, and their treachery. Assured of obloquy in this world, they are destined to Gehenna. [See also YAHUD.]

As regards the Christians, God has made a convenient with them, and their salvation through their faith is admitted in several passages. Muhammad at one time credited them with a leaning towards Islam, and they are declared to be superior to the Jews, to whom they are opposed. But the condemnation of their doctrines is no less outspoken. Their exclusive claim to salvation and to the true religion is severely criticised; it would be a grave error to adopt their religion. The divinity of Jesus ('Isa [q.v.]), the reality of His Passion, the Trinity, and the monasticism are all rejected. They are threatened with Hell; affiliation with them is forbidden, and recourse to imprecation (mustahala [q.v.]) is proposed to them. The dissension between the Christian sects is not forgotten. [See also NADJRAN, NASARA.]

The attitude of Islam towards the Jews and Christians, as reflected in the hadith, is one of mistrust. It stresses the importance of differentiating at all costs, as regards religious and social conduct, between the believers and these two religious groups, which are rather superficially understood. Moreover there is noticeable in Muslim tradition a clear tendency to stress the originality of those Muslim institutions which invite comparison with similar (mainly Jewish) institutions. Finally, the hadith sometimes puts into a poletical context the condemnation of various abuse prevalent among the Muslims, as well as certain positions taken up in many internal controversies within the Muslim community. The principles and processes employed betray more than once their Jewish origin. The basic rule is: "do not act as do the people of the Book" (ahl al-kitab), which corresponds to the Talmudic ban on following the practices of the Gentiles (habkhot ha-goy). By virtue of this principle, the hadith condemns numerous practices of little consequence in themselves. But to Jewish rorism it opposes a certain degree of Muslim laxity, especially in sexual matters. It claims as purely Muslim (if it does not date back to "Israelite" antiquity or to pre-Islamic Arabia) an institution like the fast of Yom Kippur and is moreover virtually supplanted by Ramadan [q.v.], which again is found to have its origin in Jewish and Christian institutions. Developing and aggravating the grievances uttered in the Kur'an, Muslim tradition willingly underlines above all the enmity of the Jews, but also that of the Christians, ranging from certain episodes in the Prophet's life to eschatological disputes. Although Muslim tradition rarely gives evidence of direct acquaintance with large portions of the Judaeo-Christian Scriptures (information of this type stemmed from intercourse with the ahl al-kitab or was supplied by converts), this does not prevent it from accusing the inheritors of those Scriptures of suppressing certain portions which had fallen into desuetude (capital punishment for adultery in Deuteronomy) or which foretold the mission of Muhammad, and also of interpreting passages falsely and even of materially altering their sense. Discussion with the ahl al-kitab is regarded with dislike, and consultation of their religious documents is deprecated as much by reason of the probable fraudulency of their own texts, as from the fact of the spiritualism of the Kur'anic revelation, which abrogates all that is antiquated in previous revelations and renders the remainder superfluous by superseding it. In contrast, the edifying stories connected with the antiquity of the ahl al-kitab (fryadith [q.v.]) are tolerated.

The anti-Jewish and anti-Christian polemics of Islam display a remarkable consistency in their major themes from the writings of the controversyists of the 3rd/9th-4th/10th centuries down to contemporary apologetics. Unlike the hadith, they make use of a scriptural, theological, historical and sometimes liturgical knowledge which is ample if not always exact.

As regards their use of the two Testaments, Muslim polemics continually waver between two opinions: (a) the Judaic-Christian Scriptures in their existing form are authentic documents which only require a suitable exegesis; (b) they are not to be trusted, either because their actual meaning has been falsified [see TAHRIF], or because their recension and transmission do not afford the necessary guarantee of sincerity and authenticity, so that they cannot be accepted as the Torah and Gospel as actually revealed to Moses and Jesus. The first view prevailed in the 9th-10th centuries (whatever one thinks of the authenticity of "The Book of Religion and Empire", attributed to 'Ali b. Rabbân al-Tabari, which includes a huge mass of scriptural arguments), whereas Ibn Hazm wrote the most penetrating literary, historical, theological and moral criticism of the Judaeo-Christian Scriptures. This method has been followed down to the modern polemic writers, who in addition utilise the rationalist bible-criticism of the 19th century in their attacks on Judaism and Christianity.

In the anti-Jewish polemics the chief theological problem is the abrogation (nasâgh [q.v.]) of previous divine revelations, which does not imply baddâ [q.v.](alteration of God's purpose). The principal charge levelled at Judaism, in most of the traditional compositions, is that of the anthropomorphic conception of the Deity.

The anti-Christian polemics are much richer in historical and theological argument. The message of Jesus has been altered by Paul, and the historical position of the Christian community has been falsified by Constantine. The christological controversies between the Melkites, the Nestorians and the Jacobites afforded ample material to the Muslim polemic writers. The Trinity, taken to mean tritheism, is irreconcilable with divine unity; the incarnation is a blasphemous offence against divine transcendence. Jesus may have had the prerogative of theophaetic speech, but nothing more than a moral union can be involved (al-Ghazzalî). Muhammad is the Paraclete foretold by the Gospel [see AHMAN], and in addition several messianic and eschatological prophecies of the Old Testament are similarly fulfilled in his person. Historically and sociologically, the astonishing success of Muslim arms and the superiority
of Muslim civilization are proofs of the truth and superiority of Islam. In al-Djahiz, there is a "socio-
the framework of Muslim society.

AHMAD I, fourteenth Ottoman sultan. Eldest son of Mehmed (Muhammad) III, born at Manisa 22 Dijumada II, 998/18 April 1590, succeeded his father 18 Radjab 1012/22 Jan. 1603. The chroniclers have noted that on his accession, contrary to established custom, he did not put to death his brother Murads, and the latter later succeeded him. One of the first acts of the sovereign was the confinement in the old Seray of his grandmother Şafiya Sultan (the Venetian Baffa), the prime mover in the Ottoman administration under Murad III and Mehmed (Muhammad) III. Ahmad sent an army under the command of Cihâle-zâde Sinân Pasha [q.v.] against the Persian troops of Shah 'Abbâs I, who had just gained possession of Erivan and Kar and had been repulsed in front of Akalska. Sinân Pasha, however, was defeated at Salmâs (9 Sept. 1605) and shortly afterwards died of chagrin in Diyarbekir, while Şah 'Abbâs profited by his victory to recover Gandja and Shîrwan. In Hungary the Grand-Vizier Lâlâ Mehmed Pasha [see MÜMÂM PASHA], after experiencing setbacks before Pest and Esterhögen (Esterghem, Gran), captured Vác (Vác, Waitzen). In a second campaign, in which he was supported by the ruler of Transylvania, Stephan Bocskay, he was able to isolate and storm the fortress of Esterhögen (4 Nov. 1605), while Tiryâkî Hasan Pasha entered Wesprim (Veszprém) and Palota. Bocskay was invested with the principalities of Transylvania and Hungary. Soon afterwards the Grand-Vizier died, and his post was held successively by Darvish Pasha and Murad Pasha, in which he succeeded Kuyudju ("the well-sinker"), who signed the treaty of Zsitvatorok (11 Nov. 1606) with the Austrians, whereby the Ottomans were left in possession of the territory which they had conquered and received in a single, definitive payment an indemnity of 200,000 hârâ əlmâr, but contracted to accord the Austrian sovereign the title of "Emperor" and not merely "King", a step which would give him equality of status with the Sultan. Conferences were held at Neuhäusel in 1608 to settle the final details of the treaty, and at Vienna in July 1615 and March 1616 to extend its validity. Internal difficulties had forced the Ottomans to sign it; revolts, caused by repeated military levies and by the exactions of certain governors, had broken out in various parts of the empire. Kuyudju Murad Pasha was despatched against the rebels, and triumphed over Mustâ Ali Pasha at Lâranda, over Djamshid at Adana, and notably over Djanbûlîd-oglu 'All Pasha in the plain of Orûdî, near Beylân (24 Dec. 1607). In the west, he attacked Kalender-oglu Mehmed (Muhammad) Pasha, who held the districts of Brusa and Manisa, and defeated him at Alâçayrî (5 Aug. 1608). In Syria, the Turkish forces launched themselves against the Druse amir Fâkhr al-Dîn b. Ma'n [q.v.], but could not win a decisive victory. The Grand-Vizier, at the age of 90, then set out for Tabriz, but shortly after opening peace negotiations with the Şah of Iran,
he died. His successor Naṣīb Paşa [q.v.] concluded in 1611 a peace treaty which fixed the demarcation of the frontier on the basis of the settlement made during the reign of Selim II, but hostilities were resumed four years later. At sea, the Grand-Admiral Khalil Paşa [q.v.] achieved important successes against the Florentine and Maltese fleets. In 1609, six Maltese galleons were captured in Cypriot waters, including the "red galleon" of Commander Fursinet (battle of Kara Djiakhmet); in 1610, the Turks suffered a setback at Lepanto, and the Maltese Corsairs were checked at Cos; in 1612 a Florentine squadron raided the Cilician coast, near the port of Aqghâlim, and in 1614 Khalil Paşa inflicted some losses at Malta. In the Black Sea, the Cossacks, who had sacked Sinope, were overtaken and defeated at the mouth of the Don by Shâhshâfî Ibrahim Paşa; another Cossack attack in Moldavia was checked by Iskender Paşa, and peace was signed at Bussa, on the Dniester, on 27 Sept. 1617. Under Ahmad I, the capitulations with France, England and Venice were renewed (1604), and similar capitulations were concluded for the first time with the Netherlands (1612). The use of tobacco became widespread in Turkey during his reign. Ahmad I devoted himself to the promulgation of a hâkim-nâme designed to establish an authoritative code of the administrative and commercial regulations of the empire, hitherto not co-ordinated. He constructed (1609-1616) in the At Meydânâ at Istanbul the magnificent mosque which bears his name. He died 23 Dhu'-Ka'da 1026/22 Nov. 1617 after a two months' illness. Of a violent and changeable nature, and easily swayed, Ahmad I was not always capable of appreciating the services of his most able ministers; a pious man, he established numerous religious foundations, and even furnished and took a close interest in the Ka'ba with ornaments. He was passionately fond of hunting and divârîd, and took a close interest in poetry.

AHMAD II, twenty-first Ottoman sultan, son of Mehmed IV (Muhammad IV, [q.v.]). Born in 1084/1673, he succeeded his brother Mustafâ II [q.v.] on 10 Rabî‘ II 1115/21 August 1703, when the latter abdicated in consequence of a rising of the Janissaries. The leaders of this rising were soon got rid of by the new sultan on his immediate re-establishment of Istanbul as the habitual residence of the court; and for the next few years large numbers of persons known to have, or suspected of having, been implicated in it continued to be dismissed, banished, or executed, to the detriment of governmental efficiency. Ahmad's resolve to break the power of the soldiery was also shown by his dismissal from the palace service of 700 bostandîlis and their replacement by dewshîrme conscripts (this being the last application of the dewshîrme), as well as by his later drastic reduction of the Janissary establishment. Nevertheless during the first half of his twenty-seven years' reign in particular he lived in a morbid dread of "revolutionaries" (fitnedêler); for three years he was unable, though making four changes in the Grand Vizierate, to find a capable minister; and it was only with the appointment in Muhammâr 1118/May 1706 of Corlulu 'Alî Paşa [q.v.] that the government regained some stability. During this period, and indeed for the following eight or nine years, his actions were largely influenced by a palace camarilla, headed by the Wâlide Sultân, the Kizlar Ağası, and the sultan's favourite, later to be known as Şehidî Şûhâbîlî Dûmâd 'Alî Paşa [q.v.]. The sultan and the camarilla were always uneasy at the appointment to the Grand-Vizierate of "outsiders"—i.e. persons not of the palace service, such as Köprüllû Nu'mân Paşa (see below), and took fright at any initiative they might display.

No event of much note occurred during the reign until 1709, when, after being defeated by Tsar Peter the Great at Poltava, King Charles XII of Sweden, nicknamed in Turkish demir baş, "Iron Head", sought refuge at Bender on the Dniester in Ottoman territory. The Porte had so far made no attempt at profiting either by the preoccupation of Austria and the western powers with the War of the Spanish Succession to recover any of the territory lost to the sultan in 1699 by the Treaty of Carlowitz, or by the preoccupation of Russia with the "Great Northern War" to nullify the concessions to the Tsar's Black-Sea ambitions agreed to in the Russo-Ottoman treaty of 1700. Charles, however, in order to retrieve his fortunes, soon began urging the
sultan to take up arms against Peter, an action to which the Porte was also incited by successive ambassadors of Louis XIV and the Venetian representative at Istanbul, with the result that in June 1710 Corlulu ʿAli, who had but recently renewed the Russian treaty, was dismissed, and that though his successor, Köprüülü [q.v.] Nuʾmān Paşa, proving too independent for the taste of the camarilla, fell in turn two months later, his replacement in September by the plant intriguer Bâltâdî Mehemet Paşa [see MUHAMMAD PASHA], who had shown his incapacity when in office earlier, was followed on 20 Nov. by a a declaration of war, the main Ottoman grievances being the Tsar's construction of warships at Azov, his erection of a number of fortresses along the Ottoman frontiers, his interference with the Tatars subject to the Khan of the Crimea, and his incitement of the sultan's Orthodox subjects to disaffection.

The opposed armies met only in July 1711, after Peter had been enabled to overrun most of Moldavia owing to the treachery of the Hospodar Demetrius Cantemir [q.v.]. But by then he had run gravely short of food supplies and was surprised by the main Ottoman army when marching south along the Pruth with the intention of seizing Ibrāʾīl; was forced to retreat; and was eventually surrounded and obliged to sue for peace. A treaty was signed forthwith by which Peter agreed to retrocede Azov and raze the other objectionable fortresses, to interfere no further either with the Tatars or in the affairs of Poland, no longer to maintain an ambassador at Istanbul, and to cease intriguing with the sultan's Orthodox subjects. Since, however, the Grand Vizier could have forced the Tsar to almost any concession, he fell under suspicion of having been bribed into the acceptance of such lenient terms and was dismissed three months later, largely as the result of further intrigues on the part of Charles, whose hopes had been disappointed by the treaty. Charles continued indeed for most of the next three years to incite the Porte to a renewal of hostilities, a task made easier by Peter's failure to observe his undertakings. Largely as a result of the king's efforts war on Russia was again actually declared no less than three times (in Dec. 1711, Nov. 1712 and April 1713), though it was always averted by Russian concessions. A final agreement with Peter was reached only in June 1713, with the signature at Adrianople of a treaty, to remain in force for twenty-five years, whereby the terms of the Treaty of the Pruth were confirmed and peace with Russia was in the event established for a long period. Charles, persisting in a refusal to quit Ottoman territory unless provided with money and troops with which to recover his losses in Poland, was at length, in the spring of 1714, removed forcibly from Bender to Demotika and then to Demirtaş by ʿAli, who was mortally wounded on the field. Eugène followed up this victory with the reduction of Temesvár and the occupation of the Banat and Little Wallachia in the autumn; and in the summer of 1717 laid siege to Belgrade, where on 16 August he completely routed a superior Ottoman relieving force. The Belgrade garrison surrendered three days later, after which, though the Austrians failed in an attempt to overrun Bosnia, there was no fighting of importance. The Porte soon made proposals for an armistice; and peace was finally signed, on 21 July 1718, at Passarowitz (Passarófás, Pozarevac), whereby Belgrade and the region about it, the Banat, and little Wallachia were ceded by the Porte to Austria, while the Morea, the Cretan ports and Tenos, as well as the south-eastern districts of the Hercegovina were ceded to the Porte by Venice, which for its part received Corfu and the strongholds the Venetians had captured in Albania and Dalmatia. A commercial treaty further secured to Austrian and Venetian traders certain advantages they had not till then enjoyed.

The Grand Vizier responsible for this treaty was another favourite of Ahmad's: Nūshehrîlî ʿIbrāhîm Paşa [q.v.], who by marrying the sultan's thirteen-year-old daughter, Fâṭīme Sultan, formerly the nominal wife of ʿAli, had also become a dāmâd; and for the remaining twelve years of the reign, which with this entered upon its second phase, he entirely dominated the court. Ahmad was of a pleasure- and art-loving nature, and with ʿIbrâhîm, who shared his tastes, was able, as he had not been able with the warlike Silâhdar, to indulge them and set new fashions for Ottoman society. The general abandonment of the deşâkûrs during the 17th century had led, with the occupation of the chief governmental posts by free-born Muslims, to a growth of interest among the powerful in the arts and learning, side by side with a decline in military and administrative efficiency. Moreover the Greek community of the Phanar quarter had at the same time acquired both a stronger influence than before in metropolitan society and some familiarity with contemporary western thought. In consequence the twelve years ensuing on the peace of Passarowitz witnessed a remarkable change of taste in poetry, music and architecture and a new inclination to profit by European example. During this short
period—known as İkle demari, “the Age of Tulips”, the cultivation of which became for some years a “craze”, and the secular spirit of which is exemplified by the poet Nadım [q.v.] in the verse “Let us laugh and play and enjoy the world!”—pavilions and gardens were more often built than mosques and mausoleums, and they were built to designs imported from the west. An ambassador accredited to Louis XV received specific instructions to study French institutions and report on those adaptable to Ottoman use; and in 1724 his son assisted İbrahim Muteferrika [q.v.] to establish the first printing press in Istanbul. A French officer of Engineers was invited by the Porte to prepare plans for the reform of the army on western lines, while a French convert to Islam organized a fire service (the qofak of the İslahumbagi); and though the reform of the army came to nothing, the organization of the Admiralty was overhauled and the building of three-decker men-o’war was undertaken for the first time. Some of the İslahum further founded a society for the translation of books (from Arabic and Persian); the export of rare manuscripts was prohibited for educational reasons; and no less than five libraries were founded at the capital, including the sultan’s own Enderun-i Hümâyûn Kiitiib-khanesi, of which Nadım was made curator. China factories at Küçükâya and İzmid were revived and a new one founded at Tektür Saraylı at Istanbul; extensive repairs to the Byzantine walls were carried out from 1722 to 1724; and a barrage was built to provide water for the capital from springs at Belgrade. The most notable extant architectural monuments of the period are the mosque built by İbrahim III for his mother at Üsküdar and his çeşme outside the Bâb-ı Hümâyûn of the Topkapı Saraylı, for which he composed the chronogram himself.

It was İbrahim Paşa’s policy to avoid war. Nevertheless the Tulip Age saw the temporary extension of Ottoman rule over large tracts of western Persia. The decline of the Şafawids and the Afghân invasion of their dominions, culminating in the capture of Isfahan in 1135/1722, had plunged the country into a state of anarchy tempting to both Russia and the Porte. In 1135/1723 Ottoman forces occupied Tiflis, and on Russia’s seizing Darband and Bâkû in the same year, in 1724, after a period of tension during which a fresh war between Ahmad and the Tsar came near to breaking out, another Russo-Ottoman treaty was concluded, providing for a partition that should leave Peter in possession of Darband, Bâkû and Gilân and the sultan in that of Georgia, Eriwân, Şirwân, Aqharbaydjan and all Persian territory west of the line Ardabil-Hamadân. Ottoman forces in fact took over all this vast region, the Porte forming it into ten provinces all of new syilâs. But when in April 1725 the Afshar Ahşaf proclaimed himself şâh, he demanded the relinquishment of these conquests; and on the Porte’s refusal eventually, in November 1726, defeated İbrahim Paşa [q.v.] commanding the Ottoman forces in Persia. However, a year later Ahşaf was obliged to make peace; and the sultan’s sovereignty over the conquered provinces was recognized. From then until 1730, accordingly, these regions formed part of the Ottoman Empire. But in 1729 Ahşaf was overthrown by the future Nâdir Şâh, who in the following year also defeated the Ottomans and obliged them to relinquish all their gains.

The result was a revolt of the people at Istanbul, to suppress which İbrahim and the sultan hesitated until it was too late. The Muslims of the capital, though they had at first disapproved the Persian conquests, were now indignant at their loss. But İbrahim Paşa was anxious to avoid further fighting and prepared for it only under pressure from public opinion; moreover he was already unpopular for the nepotism he practised to secure his own position and for the fiscal policy he had pursued; the new luxurious and “Frankish” manners of the court were disliked by the conservative and resented by the poor; and the project of army reform had alarmed the Janissaries. The leader of the revolt was a Janissary “affiliate”, an Albanian, formerly a levêné and hence [cf. Bahriyya] called Patrona Khâlî, who acted under the influence of two disaffected İlâsmâ and with the approval of many Janissary officers. It began on 28 Sept. 1730; and in a few hours a partially armed crowd of thousands had gathered in the At Meydân. Ahmad and İbrahim were in camp at Üsküdar; but on learning of the outbreak in the evening, they returned to the palace at night. For the next two days fruitless attempts were made to parley with the rebels, who demanded the delivery up to them of the Grand Vizier, the Şâhâr al-Islâm, the Kapudan Paşa, the Kâhya Bey and others, till, during the night of 30 Sept., the sultan, finding no support in any of his troops, decided to sacrifice his favourite, whose corpse, together with those of the Kapudan and the Kâhya, was brought out to them in the morning. Ahmad himself agreed to abdicate on condition that his own life and the lives of his sons should be spared, and was accordingly succeeded on 1 Oct./18 Rabî‘ I 1143/1730 by his nephew Mâmûd I [q.v.]. He died, in the retirement that was henceforth his lot, in 1149/1736.

Ahmad III was handsome of person and an accomplished calligraphist, letter-writer and poet. Though normally of a mild disposition, he was ruthless in the treatment of those whom he feared or who had incurred his displeasure. He had no taste for war, partly because of the expense it entailed; for he was exceedingly fond of money and applied himself to the accumulation of treasure. His love of amusement and display ran counter to this propensity. But Dâmid İbrahim Paşa contrived to minister to both his avarice and his extravagance by increasing the revenues and curtailing other expenditure in ways that contributed to his unpopularity. Ahmad was greatly attached to his harem, to which he gave much of his attention, but he did not allow its members to influence public affairs as some of his predecessors had done. He had no less than thirty-one children; and his reign was consequently distinguished by frequent festivities to celebrate the circumcision of his sons and the marriage of his daughters, which lent it a special air of gaiety.

Minor events of the reign were a revolt of the Muntafîk [q.v.] Arabs in the neighbourhood of al- Başra in 1117/1705; the suppression of another Arab revolt in the same region in 1727–8; the affirmation of Ottoman sovereignty over certain areas of the Caucasus bordering on the Black Sea early in the reign; the conquest of Oran (Wahrân) from Spain by Algerian forces in 1708; recurrent troubles in the Armenian millet occasioned by Jesuit propaganda (particularly in 1706–7 and 1727–8); and two insurrections in Egypt (in 1712–3 and 1727–8). Successive kânas of the Crimea played a considerable part in the events of the period, more especially in the war with Russia, the kânah Dewlet Girîyâ [q.v.] in particular strongly supporting Charles XII in his anti-Russian schemes. During the war with Austria
the Porte accepted an offer of assistance from Francis Rakoczy, the Prince of Transylvania, after the final failure of his attempts to secure the independence of Hungary, but he reached Istanbul too late to be made use of. Finally the treachery of Cantemir and his fellow-Bosporus of Wallachia during the campaign of the Pruth resulted in the appointment from 1716 onwards of Phanariote Greeks to the governorship of the Principalities.

(H. Bowen)

Ahmad III — Ahmad b. Abī Khālid al-ʿAlwāl, secretory to al-ʿAmmūn, was of Syrian origin and the son of a secretary of Abū ʿUbayd Allāh. He took advantage of his former connections with the Barmakids to enter the service of al-Fadl b. Sahl. Indeed the Barmakids were already under an obligation to his father, and he himself had managed to be of service to the disgraced Yahyā. Apparently even before the capture of Baghdaḍ he went to Khurāsān and, as the result of a letter of recommendation which Yahyā had given to him before his death, he was placed in charge of several diwāns at Mawr. After the return of the caliph to Irāq, profiting by the support of Thumāmā b. Aḥrās, he assisted al-Ḥasan b. Sahl in the direction of the administration, and later replaced him. A man of doubtful integrity, easily corrupted, notorious for his greed and his harshness towards his subordinates, he was, nevertheless, up to his death in 211/826-7, the right-hand man of al-ʿAmmūn. It is not possible, however, to state definitely whether he acquired the rank of waṣir. Doubtless his ability was the reason why the Caliph, who was fully aware of his faults, still retained him in his service.

He played an important part in the political intrigues which secured in 205/821 the nomination of Tāhir b. ʿAl-Ḥusayn, then governor of Baghdaḍ, to the governorship of Khurāsān in place of ʿAbd al-
AHMAD B. ABI KHĀLID AL-AHWAL — AHMAD B. HANBAL

‘Abbad. When fahir asserted his independence in 207/822, al-Ma’mun ordered his secretary to proceed at once to Khurāsān and to bring back the governor whose loyalty he had guaranteed. Ajmān with much difficulty secured a respite of 24 hours, and, before his departure, the news of the death of Tāhir is said to have reached the city. Everything points to the fact that, as some chroniclers aver, Ajmān was privy to this sudden death. He secured the appointment of Tāhir’s son Talḥa as governor, but al-Ma’mun sent Ajmān himself to Khurāsān to assist, or rather to keep watch on Talḥa. The secretary, furnished with military powers, penetrated on this occasion as far as Transoxania, and conquered Uṣūrān. Ajmān also used his influence to obtain a pardon for al-Ma’mun’s uncle, Ibrāhīm b. al-Mahdī, who had laid claim to the throne and who had for several years succeeded in eluding the caliph’s police.

AHMAD B. ABI TĀHIR ṬAYFŪR [see Ibn ABI TĀHIR]}

AHMAD B. HĀBIT (rather than Ḥābit, if the position in the alphabetical order given to him by al-‘Askālānī is taken into consideration), a theologian ranked among the Muʿtaṣilis; he was the pupil of al-Naẓẓām [q.v.], and the teacher, in particular, of al-Fadl al-Hadathl. Nothing is known about his life, and only his “innovations” are partly known to us. His doctrine, evolved before 232/846-7, seems to differ from Muʿtazilite teaching on the following two fundamental dogmas, which are borrowed from systems alien to Islam but which, in the eyes of Ibn Ḥābit, found justification in the Kurʾān. (1) On the basis of Kurʾān (xxix, 22-23), ii, 210 (206), and v, 110, he affirms the divinity of Jesus, from which heterodoxies infer three, four, or five creators, God and the Messiah. (2) He professes the doctrine of kurūr, or the reincarnation of souls, sprung from the Universal Spirit, in forms which will be more beautiful or more ugly according to the merits they have acquired in their previous incarnation. This theory involves the existence of five stages: a place of damnation (Hell); a place of testing (this world); two places of relative reward; and, finally, Paradise, where the souls were created. According to Kurʾān vii, 34 (33); x, 49 (50); xvi, 61 (63), souls which have “filled to the brim the cup” of good or evil will eventually go to Paradise or Hell. Ibn Ḥābit, who accepts reincarnation in animals, is obliged to reconcile its corollary, the doctrine of the taklīf of animals, of their individual responsibility, which can be justified only if they have had prophets to teach them; verses vi, 38; xvi, 68 (70) and xxxv, 24 (22), enable him to put forward this opinion. The heterodoxers, of course, have passed a severe judgement on this theologian, to whom they deny the name of Muslim.

AHMAD B. HANBAL, “the imām of Baghdād”, celebrated theologian, jurist and traditionalist (164-241/780-855), and one of the most vigorous personalities of Islam, which he has profoundly influenced both in its historical development and its modern revival. Founder of one of the four major Sunnī schools, the Ḥanbalī, he was, through his disciple Ibn Taymiyya [q.v.], the distant progenitor of Wahhābism, and has inspired also in a certain degree the conservative reform movement of the Salafīyya.

life. Ahmad b. Hanbal was an Arab, belonging to the Banū Ṣayyābān, of Rabī‘a, who had played an active role in the conquest of al-Ṭrāk and Khurāsān. His family, first resident in Basra, moved to Marw with Ahmad’s grandfather, Hanbal b. Hūlāl, governor of Sāraqūs under the Umayyads and one of the early ‘Abbasid propagandists. Ahmad was born in Rabī‘a ii 164/Dec. 780, a few months after his father Muhammad b. Hanbal, who was serving in the army of Khurāsān, had removed to Baghdād, where he died three years later. Ahmad inherited, however, a small family estate which allowed him a modest but independent livelihood. After studying in Baghdād lexicography, juridical and tradi-

Bibliography: Fisal, iv, 293 ff., v, 424; Shahrastānī, Milal (Cureton) 42 ff.; Baghdadī, Statio, 197 ff.; Baghdadī, Futūh, 164-241/780-855, and one of the most vigorous personalities of Islam, which he has profoundly influenced both in its historical development and its modern revival. Founder of one of the four major Sunnī schools, the Ḥanbalī, he was, through his disciple Ibn Taymiyya [q.v.], the distant progenitor of Wahhābism, and has inspired also in a certain degree the conservative reform movement of the Salafīyya.

tion, he devoted himself from 179/795 to the study of tradition, in pursuit of which he made a series of journeys in al-Ṭrāk, Hijaz, and Syria. His visits to Iran, Khurāsān, and even to the distant Maghrib must be dismissed as legendary. Already in 183 he had visited Kūf. He stayed more frequently in Basra; after a first visit in 186, he returned there in 190, 194 and 200. He was more often still at Mecca, where he made the Pilgrimage on five occasions: in 187, 191, 196, 197 (followed by a pious retreat (mudājāwara) at Medina), and 198, followed by a second mudājāwara into the year 199, after which he visited the traditionist ‘Abd al-Razzāk at Sān’ā. (Manābīb, 22-3; Tārdjama, 13-24).

His studies of ḥīḏ and Ḫāḏrī were made under a great many teachers, whose names have been preserved (Manābīb, 33-6; Tārdjama, 13-24). At Baghdād he attended the courses of the kāfī Abū Yūsuf [q.v.] d. 182/798, by whom he was not profoundly influenced, and studied regularly under Hughaym b. Baḡṣīr, a disciple of Ibrāhīm al-Naḥḍī, from 179 to 183 (Manābīb, 52; Bidāya, x, 183-4). His principal teacher thereafter was Sufyān b. ‘Uyayn (d. 198/813-4), the greatest authority of the school of the Ḥijāz. Others of his more important teachers were ‘Abd al-Raḥmān b. Mahdī of Ba顼 (d. 198/813-4) and Wāḥīd b. al-Djarrāḥ (d. 197/812-3) of Kūf. But, as Ibn Taymiyya noted (Minhādī al-Sunna, iv, 143), his juristic formation is due, above all, to the school of Ḫāḏrī and of the Ḥijāz. He cannot therefore be regarded, as is sometimes done, simply as a disciple of al-‘Askālānī, whose juridical work he knew, at least partially, but whom he seems to have met only once, at Baghdād in 195 (Bidāya, x, 251-5, 326-7).

The policy adopted by the caliph al-Maʾmūn, towards the end of his reign, under the influence of Bishr al-Marīṣī, of giving official support to the doctrine of the Muʿṭazila [q.v.], inaugurated for Ibn Ḥanbal a period of persecution, which was to gain for him a resounding reputation [see AL-MAʾMŪN, AL-MINHA]. Ibn Ḥanbal vigorously refused to accept the dogma of the creation of the Kurʾān, contrary to orthodoxy. Al-Maʾmūn, then at Tarsus, on hearing of this, ordered that Ibn Ḥanbal should be sent to him, together with another objector, Muhammad b. Nūh. They were put in chains and sent off, but shortly after leaving Raḵja they
received the news of the caliph's death. They were then sent back to Baghdad; Ibn Nuh died on the journey, and Ibn Ḥanbal, on arrival in the capital, was imprisoned first at the Yāsiriyā, then in a house of the Dār ʿUmrā, and finally in the common prison of the Darb al-Mawsīl (Mandābīb, 308-317; Tārdāmā, 40-56; Bidāyā, x, 272-280).

The new caliph, al-Ḥūṣain, beamingly inclined to abandon the inquisition, was, it is said, persuaded by the Muʿtaṣīlīs to keep Ahmad b. Abī Duʾād of the danger to the authority of the State of surrendering a position now officially taken up. Ibn Ḥanbal was therefore summoned to appear before the caliph in Rāmāḍān 219. Still stoutly refusing to acknowledge the creation of the Kūrān, he was severely beaten but permitted to return to his home after an imprisonment of some two years in all. During the whole of al-Ḥūṣain’s reign he lived in retirement and disbanded from giving lectures on Tradition. On the accession of al-Wāḥībī (227/842), he attempted to resume his courses of lectures, but almost at once preferred to discontinue them, though not officially forbidden to give them, lest he should be exposed by further reprisals by the Muʿtaṣīlīs. He continued therefore to remain in retirement, sometimes even (it is said) in hiding, in order to escape from his enemies (Manākbīb, 349).

With the reinstatement of Sunnism by al-Mutawakkil on his accession in 232/847, Ibn Ḥanbal was able to resume his teaching activity. He does not, however, appear among the traditionists appointed by the caliph in 234 to oppose the Dājmīyya and the Muʿtaṣīlīs (Manākbīb, 356). The disappearance of the leading figures of the era of persecution opened the way to an association between the caliph and the independent-minded theologian. Abī Ḥūṣain, Abī Duʾād was removed from office in 237/853, and his successor Ibn Ḥṣam is even said, in certain traditions, to have been recommended to the caliph by Ibn Ḥanbal (Bidāyā, x, 315-6, 319-29). After a first unsuccessful approach to the court, the date and circumstances of which remain obscure (Manākbīb, 359-62), Ibn Ḥanbal was invited in 237 to Sāmārā by al-Mutawakkil. It appears that the caliph wished him to give lessons in ḫadīth to the young prince al-Ḥāfīz, and it may also be supposed that he had some idea of utilizing the famous theologian for his policy of restoration of the sunna. This journey to Sāmārā gave Ibn Ḥanbal the occasion for making contact with the personalities of the court, without danger of compromise. The extant narratives show him welcomed on his arrival by the ḫādīḥī Waṣīf, installed in the luxurious palace of Ṯākhl, loaded with gifts, presented to al-Ḥāfīz, but eventually exempted, on his own request, from any special charge on account of his age and health. After a short stay, he returned to Baghdad without seeing the caliph (Manākbīb, 372-8; Tārdāmā, 58-75; Bidāyā, x, 316, 337-40).

Abūd al-Ḥādīth died in Rabīʿ 1 241/July 855, at the age of 75, after a short illness, and was buried in the Martyrs’ cemetery (Maḥābir al-Ṣahādāʾ) near the Ḥar gate. The traditions which surround the account of his funeral, although partly legendary in character, convey the impression of a genuine popular emotion, and his tomb was the scene of demonstrations of such ardent devotion that the cemetery had to be guarded by the civil authorities (Manākbīb, 409-18; Tārdāmā, 75-82; Bidāyā, x, 340-3). His tomb became one of the most frequented places of pilgrimage in Baghdād. In 574/1178-9 the caliph al-Ḥustadī furnished it with an inscription glorifying the celebrated traditionist as the most faithful defender of the Sunna (Bidāyā, xii, 300). It was washed away by a flood on the Tigris in the 8th/14th century (Le Strange, 166).

By each of his two legitimate wives Ibn Ḥanbal had one son, Sāliḥ and ʿAbd Allāh, besides six children by a concubine, who are not otherwise known (Mandābīb, 295-306). Sāliḥ (born in Baghdād 203/818-9, died as ḫāṣīf of Isfahān 206/879-80) is said to have transmitted a large part of Ahmad’s fiqh (Tabādālī, i, 173-6). ʿAbd Allāh (b. 213/828) was chiefly interested in ḥadīth, and through him the major part of Ahmad’s literary work was transmitted. He died in Baghdād in 290/903 and was buried in the Kūraysh cemetery, and to his tomb was transferred the venera/ion enjoyed by that of his father when the latter was swept away (Tabādālī, i, 180-6). Both sons, who were closely associated with the intellectual life of their father, were amongst the chief architects of that collective structure which constitutes the Ḥanbali madhhīb.

2. Works. The most celebrated of Ibn Ḥanbal’s works is his collection of traditions, the Musnad (1st ed., Cairo 1311; new edition by Ahmad Shākir in publ. since 1368/1948). Although Ahmad himself gave an exceptional importance to this work, it was his son ʿAbd Allāh who collected and classified the enormous accumulation of material, and himself made some additions. His Baghdād disciple Abū Bakr al-Ḵaṭṭār (d. 368/978-9) transmitted this recension with some further additions. In this vast collection the traditions are classified not according to subjects, as in the Ṣaḥīḥ of al-Bukhārī and Muslim, but under the names of the first guarantor; it thus consists of a number of partcularly juxtaposed, and include those of Abū Bakr, ʿUmar, ʿUṯmān, ʿAll and the principal Companions, and ends with the musnads of the Anṣār, the Meccans, the Medinians, the people of Kūfa and Baṣra, and the Syrians.

This order, though evidence of an effort of intellectual probity, made it difficult to use by those who did not know it by heart. It was therefore sometimes reshaped. In his K. al-Dawāt, al-Mutawakkil classified in alphabetical order the Companions, the traditions contained in Ibn Ḥanbal’s Musnad, in the “Six Books”, al-Ṭabarānī’s Muḥdjam and the Musnads of al-Bazzār and Abū Yaḥyā al-Mawsīl (Ṣaḥāḥī, vi, 231). Ibn Ṣaḥibūn (d. 837/1433-4; Ṣaḥāḥī, vii, 222-3) follows, in his K. al-Duʾā, the order of the chapters of al-Bukhārī, and has the great merit of having inserted among the hadīths which he quotes extracts from numerous Ḥanbalī works, especially of Ibn Ḥudāma, Ibn Ṣaḥibūn, and Ibn al-Kayyīm. This voluminous compilation, preserved in the Ṣaḥīrīyya in Damascus, has served as a mine for numerous editions of Ḥanbalī texts in the last fifty years.

Within the framework of Tradition, Ahmad b. Ḥanbal is to be regarded as an “independent muḥtahīd” (mustakhill), who as Ibn Ṣaḥibūn has remarked (Mināḥīd, iv, 143), was able, from amongst the mass of traditions and opinions received from many teachers, to form his own doctrine (iṣbāḥa il-najīsā). In no sense can he be regarded, in the manner of al-Ṭabarī, as merely a traditionist, and nothing of a juristic consult (ṣalāḥ) concerned with normative rules. As already pointed out by Ibn ʿAṭīlī, “certain positions adopted (iṣbīḥa ydrā) by Ibn Ḥanbal are supported by him on traditions with such consummate skill as few have equalled, and certain of his decisions bear witness to a juridical subtlety without parallel” (Manākbīb, 64-6). “Fol-
followers of tradition" (asbāb al-hadīth) must not be too systematically contrasted with "followers of opinion" (asbāb al-ra'y), since it is hardly possible to acquire an understanding of hadīth and to resolve their contradictions and divergences, or to deduce from them the consequences which may derive from them, without using a minimum of personal judgment.

The two fundamental treatises for the study of Ibn Hanbal's dogmatic position are the short Radd 'ala'i'Dhimmiyuwa wa't-Zandikā and the K. al-Sunna (both printed together, Cairo n.d.), a longer version of the K. al-Sanā' (d. 251/866-7). In the former of these, he expounds and refutes the doctrines of Dhimmī and Sīwān (q.v.), whose ideas, widely circulated in Kūrāsān, were adopted by certain disciples of Abū Ḥanīfa and of 'Amr b. ʿUbayd. In the K. al-Sunna he re-examines some of the theological questions already raised in the Radd and unequivocally defines his own position on all the principal points of his creed (cf. also Tabākāt, i, 243-36). Of his other surviving doctrinal works, the K. al-Salāt (Cairo 1323 and 1347), on the importance of the communal prayer and rules for its correct observance, was transmitted by Mūḥānna b. Yābūyā al-Shāmī, one of his early disciples, and extracted from the biblio-bibliographical repertory of the kādī Abu ʿI-Husayn (Tabākāt, i, 345-80). Two unpublished MSS should be noted: the Musnad min Mads'il Ahmad b. Hanbal (B.M.; cf. Brock., S I, 311), possibly be a fragment of the Musnad, (see Tabakdt, i, 345-80). Two unpublished collections, and in addition the Tabakāt of Ibn Abī Ya'la contains the replies given by Ibn Ḥanbal to numerous visitors.

These dispersed materials were assembled in the K. al-Ḍāmīs (li-ʿUlām al-Imām Ahmad), by a disciple of Abū Bakr al-Marwāzī, the traditionist Abū Bakr al-Khallāl (d. 311/923-4), who taught at Baghdad in the mosque of al-Mahdī (Tab., i, 11-15; Taʾrikh Baghadād, v. 112-5). Al-Khallāl's role has been quite appreciated by Ibn Tāmīyya, who says (K. al-Imān, 158) that his K. al-Sunna is the fullest and best source for a knowledge of Ibn Ḥanbal's dogmatic views (wsūl diniyya), and of his fīl-ʿIlm the most valuable repository for the study of law (wsūl fiḥlīyya); these are doubt subdivisions, or a rehandling, of K. al-Ḍāmīs. According to Ibn Kāyīm al-Djawziyya (Ṭāhir al-Manṣūkhet b. ʿAbd Allah and of Ibn Tribal, Cairo, i, 31), the K. al-Ḍāmīs consisted of twenty volumes. To our present knowledge, the work is lost, except for the fragment referred to above; but as it has entered deeply into the output of Ibn Tāmīyya and Ibn Kāyīm, the study of these two writers may partially compensate for its loss in assisting an evaluation of Ibn Ḥanbal's thought.

Ibn Ḥanbal's work was completed by his disciple ʿAbd al-ʿAzīz b. Ḍiyāfī (d. 363/973-4), better known as Ghalūm al-Khallāl, who did not always accept his master's interpretations of Ibn Ḥanbal's thought, and whose Zād al-Musāfīr, though less important than the Ḍāmīs, presents a body of supplementary materials often consulted. The divergences which this Corpus has allowed to remain in the exposition of Ibn Ḥanbal's thought explain why the Ḥanbalis distinguish between the text (nass) of the founder of the school, the teachings ascribed to him (risaḍāyāl), the indications (tanbihāt) suggested by him, and what are simply points of view (awāḍīkh) of his disciples.

Ibn al-Djawzi (Manṣūkhet, 191) cites a Taṣīr based upon 120,000 hadīth, and other works now lost. See also Brockelmann, I, 193; S I, 309-10.

3. Doctrine. Ḥanbalism has sometimes suffered from a slightly fanaticized turbulence among certain of its followers, or an extravagant literalism adopted by others through ignorance or as a challenge. It has been exposed throughout its history to numerous and powerful opponents in the various schools whose principles it opposed, who, when they did not deliberately disregard it, have united to attack it or to muffle it with insidious suspicions. Western orientalism has taken little interest in it, and has been less severe. It has become the received opinion to see in Ibn Ḥanbal's doctrine a ferociously anthropomorphist theodicy, a traditionalism so sectarian as to be no longer viable, a spirit of individual variations, any systematic codification, such as to impose it in the terms of the thought of any particular representative or to conceal it by fixation, was to change its inner character.
ments that the governing objectives of his teaching are to be sought.

The Attributes of God. For Ibn Hanbal, God is the God of the Kur'ān: to believe in God is to believe in the description which God has given of Himself in His Book. Not only, therefore, must the attributes of God, such as hearing, sight, speech, omnipotence, will, wisdom, etc., be affirmed as realities (ḥākīm), but also all the terms called "ambiguous" (mumālikā) which speak of God’s hand, throne, omnipresence, and vision by the Believers on the day of resurrection. In conformity with tradition, also, it must be affirmed that God descends to the lowest heaven in the last third of every night to hearken to the prayers of his worshippers, and at the same time, with the literal text of the Kur'ān (cf. sūra cxii), that God, the Unique, the Absolute, is not comparable to anything in the world of His creatures (K. al-Sunna, 37; Manābīb, 153). Ibn Hanbal therefore vigorously rejects the negative theology (taʿtiil) of the Dījahmiyya and their allegorizing exegesis (taʿwil) of the Kur'ān and of tradition, and no less emphatically rejects the anthropomorphism (tasbīḥ) of the Mughabbīla, amongst whom he includes, in the scope of his polemics, the Dījahmiyya as unconscious anthropomorphists. In the fideism of Ibn Hanbal, one must believe in all that God without seeking to know the "mode" of the theologoumena (bild kayf), and leave to God the understanding of his own mystery, renouncing the vain and dangerous subtleties of dogmatic theology (kalām) (K. al-Sunna, 37; Manābīb, 155-6). So simple, and at the same time so strong, was this position from the Kur'ānic angle, that al-Ṭashīzī, on abandoning Muʿtazilism, seeks, either for tactical reasons or in sincere acceptance, to place himself under the patronage of Ibn Hanbal before making certain concessions to his former creed, concessions successively enlarged by his disciples, on the problem of the attributes, the Kur'ān, and the legitimacy of dogmatic theology.

The Kur'ān. The Kur'ān is the uncreated Word of God (kalām Allah shayr maṣḥūḥ). To affirm simply that the Kur'ān is the Word of God, without further specification, is to refuse to take up a position, and to fall into the heresy of the wāḥshiyya, the "Abstentionists", which, because of the doubt which it inspires, is a graver sin than the more open heresy of the Dījahmiyya (K. al-Sunna, 37-8). By Kur'ān is to be understood, not just an abstract idea, but the Kur'ān with its letters, words, expressions, ideas— the Kur'ān in all its living reality, whose nature in itself eludes our understanding.

The Pronunciation of the Kur'ān. It is difficult to define Ibn Ḥanbal's position on this question. Some traditions assert that he regarded its pronunciation as uncreated (lafz biʿl-Kur'ān shayr maṣḥūḥ). In K. al-Sunna (38) he goes no further than to say: "Whoso asserts that our words, when we recite the Kur'ān, and that our reciting of the Kur'ān are created, seeing that the Kur'ān is the Word of God, is a Dījahmi". While formally condemning the lāfzīyya, who held the pronunciation of the Kur'ān to be created, he gives no more positive formulation of his own doctrine, to the embarrassment of the later Ḥanballahs. Ibn Taymiyya regards this question as the first on which a real division existed among the Ancients (cf. H. Laoust, Essai sur . . . Ibn Taymiyya, 178) and states that Ibn Ḥanbal avoided taking up a position. He himself gives, in al-Wāṣīṭiyya, the cautious formula which appears to him to be in conformity with the spirit of Ḥanbalism: "When men recite the Kur'ān or write it on leaves, the Kur'ān remains always and in reality the Word of God. A word cannot in fact be really attributed except to the one who first formulated it, and not to anyone who transmits or carries it."

Methodology. Ibn Ḥanbal, unlike al-Ṭashīzī, wrote no treatise on ethico-juridic methodology (wusul al-ṭīb), and the well-known later works of his school, composed with elaborate technique and in an atmosphere of discussion with other schools, cannot be accepted as rigorously expressing his thought. His own doctrine, as it may be elucidated from the Masāʿīl, is more rudimentary than the later elaborations, but has the merit of setting out the first principles of the methodology of the school.

Kur'ān and Sunna. This doctrine claims to rest above all on the Kur'ān, literally understood, without any allegorical exegesis, and on the Sunna, i.e. the total of traditions which can be regarded as deriving from the Prophet. From his own statement (Musnad, i, 567), Ibn Ḥanbal aimed to collect in his Musnad the hadīths generally received (maẓḥār) in his time. In this work, therefore, there are found, to use his own terminology, hadīths whose authenticity is properly established and which may be regarded as perfectly sound (ṣaḥīḥ), and hadīths which benefit only from a presumption of authenticity and for whose rejection (daʿī) there is no positive reason, or, to use the classification established by al-Tirmidhī, sound hadīths and "good" (ḥasan) hadīths. It was only much later, when the criticism of Tradition had reached, with Ibn al-Djawzī, the climax of formalist rigour, that Ibn Ḥanbal was reproached with admitting apocryphal (maṣhūr) hadīths—an accusation contested by many traditionists, as, for example, Ibn Taymiyya and Ibn Ḥadījī al-ʿAskālānī. The opinion which has come to prevail is that in the Musnad there are found, along with "sound" traditions, "good" or "rare" (zāhir) traditions, none of which, however, are strictly speaking unacceptable.

The Fatāwā of the Companions and Ijtīmaʿ. Kur'ān and Sunna find their continuation in a third source, derived and complementary: the consultā (fattāwā) of the Companions. The reasons which, for Ibn Ḥanbal, sustain the legitimacy of this new source of doctrine, are clear: the Companions knew, understood, and put into practice the Kur'ān and the Sunna much better than later generations, and all of them are worthy of respect. The Prophet also, in his wāṣīyya, had recommended the Muslims to follow, together with his own Sunna, that of the "rightly-guided" (rasīḥīdān) caliphs who should succeed him, and to avoid all innovation (bidʿa). Where the Companions disagree, it is easy to determine the juster view by reference to the Kur'ān and the Sunna, or by taking into account their order of pre-eminence (Manābīb, 161).

In hierarchical order (lafzī), Ibn Ḥanbal puts Abū Bakr first, then ʿUmar, then the six ʿasḥāb al-ṣārād appointed by ʿUmar “all of whom were worthy of the caliphate and merit the title of imām”: ʿUthmān, ʿAll, Zubayr, Talḥa, ʿAbd al-Rahmān b. ʿAwī, and Saʿd b. Abī Waqās; then the fighters at Badr, the Muḥājirs and the Anṣār (K. al-Sunna, 38; Manābīb, 159-61). This doctrine of Sunnī reconciliation acknowledges the eminent position of ʿAll and the legitimacy of his caliphate, but also rehabilitates his enemies, and in the first place Muḥājiya, whose historical role in the consolidation of Islam has always been indulgently evaluated in the Ḥanballah school, and whose decisions are not necessarily to be discarded.
The decisions of the most authorized representatives of the later generations (tābi‘un) also deserve to be taken into consideration as evidence of plausible interpretations. The consensus of the Community, in such a doctrine, expresses a general concentration around a truth founded on Qur'ān and Sunna; it does not constitute in itself, properly speaking, an independent source of law. A community may well fall into error collectively, if not guided by the light of revelation transmitted by the Tradition (cf. Essai, 239-42).

Function of the muftī. The first duty laid upon the jurist consists to follow faithfully the spiritual legacy transmitted by the Elders, by avoiding any spirit of creation or innovation. Ibn Ḥanbal therefore condemns ra‘y, the gratuitous expression of personal opinion (Abū Dā‘ūd, Masā‘il, 275-7), but without requiring as a rule of conduct an absolute and impossible passivity in face of the texts. He does not reject analogical reasoning (biyās), but does not fully appreciate its value as an instrument of juridical systematization and discovery, as Ibn Taymiyya and Ibn ʻAbī al-Dabbāh were to do later, under intellectualizing influences.

Ibn Ḥanbal made an extensive use of idīṣīṭḥāb, a method of reasoning which consists in maintaining a given juridical status so long as no new circumstance arises to authorize its modification, and of dharāḍī, another method of reasoning to the effect that, when a command or prohibition has been decreed by God, everything that is indispensable to the execution of that order or leads to infringement of that prohibition must also, as a consequence, be commanded or prohibited.—The notion of maṣlaḥa, or recognized common interest, which allows the limitation or extension of a juridical status, is also in conformity with his doctrine, although he did not himself extend and regulate its use as Ibn Taymiyya and his disciple al-ʻĀmilī were to do.

To repeat a comparison of Ibn ʻAbī al-Dabbāh’s, which seems to us to characterize very successfully the double care for tradition and for realism shown by Ibn Ḥanbal: the muftī, like the physician who must adapt his treatment to the state of his patient, must make a constant personal effort (idīṣīṭḥāb) to draw from the sources of the law the moral prescriptions which should be applied to a given case. Thus, if the great Ḥanbalis have never called for the reopening of idīṣīṭḥāb, it is because they have held that its continual use was indispensable to the understanding and application of legal doctrine.

The Caliphate and the Arabs. Ibn Ḥanbal’s political views, directed essentially against the Khaṭābirites and the Shi‘ites (rubā‘iyyah) affirm first and foremost the legitimacy of the Kura-yūhite caliphate: “No person has any claim to contest this right with them, or to rebel against them, or to recognize any others until the Day of Resurrection” (K. al-Sunna, 35).

In the quarrel of races (gharībīyya) which was raging in his time, he defended the Arabs, but without proclaiming their superiority: “We must give the Arabs credit for their rights, their merits, and their former services. We must love them, by reason of the very love which we bear for the Apostle of God. To insult the Arabs is hypocrisy; to hate them is hypocrisy” (ibid., 38)—hypocrisy because, behind the insults or the hatred, there was concealed a more secret aim, to destroy Islam by reviving the ancient empires or reinstating other forms of culture.

On the precedents furnished by Abū Bakr and ʻUmar, Ḥanbal founded the legality of a caliph’s designation of his successor, but any such designation, to become effective, should be followed by a contract (mushāya’ah) in which the imām and the authorized representatives of public opinion swear to mutual fidelity in respect for the Word of God (cf. Essai, 287). His view of the functions of the imām follows the general lines of the legal expositions, but leaves to the imām, within the framework of the prescriptions of the Qur’ān and the Sunna, a wide freedom of action to take, for the common good (maṣlaḥa), all the measures which he considers necessary to improve the material and moral conditions of the community. In this lies the germ of that important concept of “juridical policy” (ṣiyāsah ḥarī‘yya), which was methodically taken up by Ibn ʻĀmilī, Ibn Taymiyya and Ibn ʻAbī al-Dabbāh.

The members of the community owe obedience to the imām and may not refuse it to him by disputing his moral quality. “The dīshk should be pursued alongside all imāms, whether good men or evildoers; the injustice of the tyrant or the justice of the just matters little. The Friday prayer, the Pilgrimage, the two Feasts should be made with those who possess authority, even if they are not good, just or pious. The legal alms, the tithe, the land taxes, the fay’, are due to the amirs, whether they put them to right use or not” (K. al-Sunna, 35). If the ruler seeks to impose a disobedience to God (muṣy’ya), he must be met on this point with a refusal to obey, but without calling for armed revolt, which cannot be justified so long as the imām has the prayer regularly observed. But every member of the community has also the duty, according to his knowledge and his means, of commanding to the good and prohibiting the evil. By their apostolate, therefore, the doctors of the law, while remaining within the limits of loyalty, may revive the Sunna, keep public opinion vigilant, and impose on the prince respect for the prescriptions of religion.

The Spirit of Community. Ibn Ḥanbal’s policy is one of communal concentration and confessional solidarity; to the fitna, disunity, which weakens the community, he opposes the concept of djīhd, group unity and cohesion. He goes so far as to adopt, on the problem of excommunication (ba‘hīr), an attitude of tolerance which links up with the laxism of the Murdžii’a. One may not exclude from the community, he states, any Muslim guilty of a grave sin except on the authority of a ḥadith which must be interpreted with a restrictive literalism (K. al-Sunna, 35-6). He cites only three sins which involve excommunication: non-observance of prayer, consumption of fermented liquors, and spreading of heresies contrary to the dogmas of Islam, among which he mentions none but the ʻIkhmīyya and the ʻAbīwādīyya. As to excommunication properly speaking, he replaces it by a systematic refusal to associate with the heretical within the bosom of the community. “I do not like (he wrote) that prayer should be made behind innovators, nor that the prayer for the dead should be said over them” (K. al-Sunna, 35-6).

Ethics. Ibn Ḥanbal’s doctrine is entirely dominated by ethical preoccupations. The end of action is to serve God (ibādah). In opposition to the ʻIkhmīyya and the Murdžii’a, he asserted that faith (al-imān) “is word, act, intention, and attachment to the Sunna” (K. al-Sunna, 34). It may therefore vary in intensity, “increase or diminish”, and it implies so total an engagement of the being that no man may possibly call himself a Believer without making his affirmation in a conditional form (istīṣṣuṣḥād), by
adding "if God wills". Faith is, therefore, not a simple body of rites, but implies a whole system of strong moral convictions: an absolute sincerity brought to the service of God (ikhlās); renunciation of the world, with refinement of feeling and a spirit of poverty (suhd, fiṣr); a moral courage which lies in "relinquishing what one desires for what one fears" (futuwa); fear of God; a scrupulous mind, which leads one to avoid dubious things (ḥabībād) between the two well-marked limits of the licit and the illicit (cf. Mandābīh, 194-260). Ibn Ḥanbal's belief has, therefore, nothing of a pedantic juristic literalism.

Religious practices and Customs. This is not the place in which to analyse in detail the juridico-moral prescriptions which constitute the applied doctrine of Ibn Ḥanbal (furu') in the two domains which come within this discipline: that of religious practices (ṣibādāt) and that of usages and customs (ṣādāt, mu'tamālāt). The methodical exposition of them contained in al-Muḥbūsar of al-Khārkhāt does no more than reproduce single opinions of Ibn Ḥanbal and presents a restrictive codification of his thought. The same is to be said of the 'Umda of Ibn Kuḍāma, precious as it may be for a knowledge of Ḥanbalism in the 7th/13th century. (See Laoust, Précis de droit d'Ibn Qudama, Damascus 1950.)

But there is one very important rule which Ibn Taymiyya has brought out and which seems to us characteristic of primitive Ḥanbalism: nothing is to be regarded as imposing social obligations but the religious practices which God has explicitly prescribed; inversely, nothing can be lawfully forbidden but the practices which have been prohibited by God in the Kurān and the Sunna. This is the dual principle which Ibn Taymiyya resums in the formula: lawfh fī 'l-ṣibādāt wa-ṣāfīw fī 'l-mu'tamālāt, i.e. the most rigorous strictness in regard to religious obligations and a wide tolerance in all matters of usage (cf. Essai, 444). A wide liberty should therefore be left to both parties in drawing up the conditions of a contract, especially in regard to transactions, in which no stipulations can be nullified except those contrary to the formal interdiction in the Kurān and the Sunna of speculation (maysir) and usury (ribā). In the Kitāb al-Sunna (38), Ibn Ḥanbal, reacting against al-Muhāsibī, regards the free pursuit of an honest profit as an obligation of conscience and of usages which have been prohibited by God in the Kurān and the Sunna. This is the dual principle of the Ḥanbalis by which Ibn Ḥanbal and the Muhāsibīs are visited by pilgrims. His grandsons, Yaḥyā al-Wāṣilī al-Yamānī, Tarīkh al-Yaman, Cairo 1346, 338-43. (L. Massignon)

AHMAD B. İSĀ B. M. B. ʿALĪ B. AL-ʿARĪF B. DĀʾIR AR-ṢĀDIK (the great-grandson of 'Aṭī), called al-Muhādīrī "the Emigrant", saint and legendary ancestor of the Ḥadrami sayyids. He left Babṣr in 317/930 accompanied by Muhammad b. Sulaymān (alleged ancestor of the Banū Ahḍāl [q.v.]) and Sālim b. Abū Ṭālib (ancestor of Banū Kuḍām) who was forced to submit to Ṣaʿūdī Arabia by a protectorate agreement, negotiated by the Sanūsī leader Ahmad Sharīf [see İsrāʾīls].

The İsrāʾīliya order is at present strongly represented in former Italian Somaliland (Merca), in Djibuti, among the Banū Ṭāmir (Kaṭhmiyya) in Eritrea, and among the Gallas (where their missionary, Nūr Ḥusayn, enjoys great veneration). The İsrāʾīliya order maintains fraternal relations with the other congregations derived from the Khādirīya, particularly the Mirḥāniyya of the Sudan.

AHMAD B. İSĀ B. M. B. ʿALĪ B. AL-ʿARĪF B. DĀʾIR AR-ṢĀDIK, Moroccan sharif and mystic, a disciple of Abū al-ʿAzīz al-Dubbāh, the founder of the Khādirīyya order, himself founded a religious congregation, the İsrāʾīliya, in ʿAsīr, where in 1823, he initiated the founder of the Sanūsīyya [q.v.]. He died in Saʿūdī Arabia by a protectorate agreement, negotiated by the Sanūsī leader Ahmad Sharīf [see İsrāʾīls].

Ahmad b. İsā, ʿĀmīd al-Dīn, ancestor of the Ḥadrami family al-ʿAmdūl, see v. d. Berg, Hadramauw, 41, 85.

AHMAD B. İSĀ, Moroccan sharif and mystic, a disciple of Abū al-ʿAzīz al-Dubbāh, the founder of the Khādirīyya order, himself founded a religious congregation, the İsrāʾīliya, in ʿAsīr, where in 1823, he initiated the founder of the Sanūsīyya [q.v.]. He died in Saʿūdī Arabia by a protectorate agreement, negotiated by the Sanūsī leader Ahmad Sharīf [see İsrāʾīls].

The İsrāʾīliya order is at present strongly represented in former Italian Somaliland (Merca), in Djibuti, among the Banū Ṭāmir (Kaṭhmiyya) in Eritrea, and among the Gallas (where their missionary, Nūr Ḥusayn, enjoys great veneration). By his bravery he gained the favour of the caliph al-Musta'īn, who, on his abdication in 251/866, chose to go into exile under the guard of Ahmad. The latter had no hand in the subsequent murder of al-Musta'īn, probably because his cooperation had not been invited. In 254/868 the caliph al-Mu'tazz gave Egypt as apanage to the Turkish general Bakkāb, who had married Tūlūn's widow. Ahmad was appointed as lieutenant of his father-in-law, and entered Fustat on 23 Ramaḍān 254/15 Sept. 868.

For the next four years Ahmad was engaged in seeking to obtain control of the administration from Ibn al-Mudabbir, the powerful and skilful intendant of finance, whose intolerable exactions, cunning and greed had earned the hatred of the Egyptians. The struggle was fought out mainly through the medium of their agents and relations at Sāmarrā', and ended with the removal of Ibn al-Mudabbir. After the murder of Bakkāb Egypt was given as apanage to Yārdūkh, who had married one of his daughters to Ibn Tūlūn; he confirmed Ahmad in his post as vice-governor, and invested him also with authority over Alexandria, Būrkā, and the frontier districts, which had hitherto lain outside his government. The revolt of Amādīr, governor of Palestine, gave Ahmad the opportunity to obtain the caliph's authorization to purchase a large number of slaves in order to subjugate the rebel. Although the task was subsequently confided to another, this intact army constituted the foundation of Ibn Tūlūn's power. For the first time, Egypt possessed a large military force which was independent of the caliphate. By liberal gifts, Ahmad gained the favour of the ʿAbbāsīd courtiers, and succeeded in obtaining the annulment of an order of recall issued by the caliph. It was at this time that Ibn Tūlūn, and not to Ibn al-Mudabbir's successor, that the caliph addressed his requests for the Egyptian contributions to the treasury. In order that he might have the personal use of them by keeping their sum a secret from his brother al-Muwaṭṭāl, he placed the financial administration of Egypt and the Syrian Marches under Ahmad. In 258/872, the caliph's son Djafer (later entitled al-Muwaffak) succeeded Yārdūkh as apanagist of Egypt; al-Muṭtamid had recognized his brother al-Muwaṭṭāl as heir to the throne after his own son and had divided the empire between the two heirs-presump-tive, al-Muwaṭṭāl receiving the eastern provinces as his apanage, and al-Muwaṭṭāl the western; a regent, the Turk Mūsā b. Būghā was appointed as coadjutor of the latter. In fact, al-Muwaṭṭāl exercised the supreme power. But while the caliphate was threatened in the east by attacks making a stand against Ibn Tūlūn, was threatened above all by the disorders in the administration and by the internal conflicts between the caliph and himself on the one hand, and the captains of the Turkish regiments on the other.

Such was the state of the caliphate at the moment selected by Ibn Tūlūn for his essay at independence, after gaining the financial control of his territories. On account of the long and costly campaigns against the Zindj which engaged the forces of al-Muwaṭṭāl, he, himself, the only man capable of making a stand against Ibn Tūlūn, was threatened above all by the disorders in the administration and by the internal conflicts between the caliph and himself on the one hand, and the captains of the Turkish regiments on the other.

Such was the state of the caliphate at the moment selected by Ibn Tūlūn for his essay at independence, after gaining the financial control of his territories. On account of the long and costly campaigns against the Zindj which engaged the forces of al-Muwaṭṭāl, he, himself, the only man capable of making a stand against Ibn Tūlūn, was threatened above all by the disorders in the administration and by the internal conflicts between the caliph and himself on the one hand, and the captains of the Turkish regiments on the other.
by Ibn Tulun’s forces led to the abandonment of the attempt. Ahmad was now encouraged to occupy Syria (655-1258), under the pretext of engaging in the holy war and of defending the frontiers in Asia Minor against the Byzantines. But he had to return to Egypt shortly after to deal with a revolt by his son ʿAbbās, whom he had appointed as his lieutenant in Egypt.

After the Syrian campaign, Ibn Tulun began to add his own name to those of the caliph and of Dīnār on his gold coinage. (It should be noted that Ibn Tulun always recognized the caliph and Muʿtamid himself, perhaps just because he was powerless.) In 357/968 Ahmad invited the caliph to take refuge with him, aiming by this means to concentrate the whole sovereign authority in Egypt and to gain the merit of being the saviour of the caliph, now a shadow. But the latter’s flight was intercepted, and al-Muwaffak nominated Ishak b. Kandjādī as governor of Egypt and Syria. Ahmad retaliated by proclaiming through an assembly of jurists which met at Damascus the forfeiture of al-Muwaffak’s succession to the throne. Al-Muwaffak thereupon compelled the caliph to have Ahmad cursed in the mosques, while Ahmad had the same measure applied to al-Muwaffak in the mosques of Egypt and Syria. But al-Muwaffak, though finally victorious in his war with the Zindj, sought to have the sultan who recognized him as the saviour of the state were no longer drained off to the metropolis; they were thus in spite of the heavy charges which were still laid upon their produce. He put an end to the exactions of the officers of the fiscal administration for their personal profit. The prosperity of Egypt under Ibn Tulun was due principally to the fact that the greater part of the revenues of the state were not longer drained off to the metropolis; they were thus employed to stimulate commerce and industry and to found, to the north of Fustāṭ, a new quarter, called al-Κaṭa‘, which was the seat of government under the Tulūnids and in which the great mosque built by Ibn Tulun was situated.

AHMAD AMIN, EGYPTIAN SCHOLAR AND WRITER, B. IN CAIRO 2 MUBARAM 1304/1 OCT. 1886, D. 30 RAMAṍḌĀN 1373/30 MAY 1954. After studying in al-Azhar and the School of the Gnostic Leaders he served as a magistrate in the Native Courts, and in 1926 was appointed to the staff of the Egyptian University (U. of Cairo), where from 1936-1946 he was professor of Arabic Literature. In 1947 he became Director of the Cultural Section of the Arab League. Ahmad Amin was one of the founders and most active members of the Lajmat al-la‘īl wa-l-talā‘ama wa-l-masāk (see U. Rizzitano, in OM, 1940, 31-3), for which he edited and produced (in collaboration) a number of classical Arabic texts and general works on literary history. As a scholar, his most important production was a book of Islamic civilization to the end of the 4th/10th century (three parts: Faḍr al-Ilm, 1st ed., Cairo 1928; Duhā’īl Ilm, 1st ed., Cairo 1933-6; Zuhar al-Ilm, Cairo 1945-53), notable as the first comprehensive attempt to introduce critical method into modern Muslim Arab historiography. From 1933 he collaborated in the weekly literary journal al-Risāla, and from 1939 edited a similar journal al-Ṭhabāṭa; his essays on literary, social and other topics in these journals were later collected and issued in book form (Faḍr al-Khāṣir, 8 vols., Cairo 1957 ff.). Of his many other works special mention should be made of his dictionary of Egyptian folklore (Khmus al-ʿĀdhāt wa-l-Tāḥādīd wa-l-Misyrīyya, Cairo 1953), and his autobiography Hayyāl (Cairo 1950).

AHMAD B. YŪSUF B. AL-ḴĀṢĪM B. ṢUBAYH, AND DIYĀR, SECRETARY TO AL-MAʾMūN. He belonged to a movement of secretaries and poets originating from the neighbourhood of al-Kūfa. His father, Yūsuf, was secretary to ʿAbd Allāh b. ʿAll, then to Yaḥyā b. Dāwūd, and finally to Yaḥyā the Barmakid. It appears that Ahmad held a secretarial post in Irāk at the end of the caliphate of al-Maʾmūn. He was presented to al-Maʾmūn by his friend Ahmad b. Abl Ḥālid, and soon attracted notice by his eloquence. He became an intimate of al-Maʾmūn, and at a date impossible to determine accurately, was placed in charge of the dīnān al-sīr, (rather than the dīnān al-raṣūl), which was entrusted to ʿAmr b. Masʿūd. As private secretary to the caliph he occupied a position of such importance that some historians have styled him ‘vizier’, a title, however, which he does not appear to have held. He came into conflict with the future caliph al-Muṭaṣīm, and died, it seems, in Ramaḍān 213/Nov.-Dec. 828. Various letters, terse remarks, aphorisms and verses by which he achieved fame as a ‘secretary-poet’ are attributed to him.

AHMAD B. ZAYNĪ DAILĀN (See DAILĀN).

AHMAD AMIN, EGYPTIAN SCHOLAR AND WRITER, B. IN CAIRO 2 MUBARAM 1304/1 OCT. 1886, D. 30 RAMAṍḌĀN 1373/30 MAY 1954. to recognise the authority of the court of Marrakush and, two years later, the governor Maḥmūd Ṣārūn arrested him. He retained his freedom, and accused him of fomenting a revolt at Tinb ukūt against the new rulers. Taken in chains to Morocco with several of his compatriots, Ahmad Bābā was not long in regaining his liberty, but he was required to reside in Marrakush (1004/1596). He began to give instruction in ḥikb and ḥaddīth, and formulated legal opinions (jūṭāw). His renown soon spread throughout the Maghrib. At the death of Ahmad al-Mansūr in 1016/1607, his successor Mawlāy Zaydān allowed Ahmad and the other Sudanese exiles to return to Tinbukūt. It was no doubt at this time that he went on pilgrimage to Mecca, and returned to his native town where he died on 6 Ṣaḥābān 1036/22 April 1627.

Ahmad Bābā was the author of some 50 works on Mālikite law, grammar and other subjects. But his chief work is his supplement to the biographical dictionary of the faḥīs of the school of Mālik b. Anas, composed in the second half of the 14th century by Ibn Farḥūn [q.v.] and entitled al-Dībuydī al-Mudhahbān fi Maʿrifat Ayyān al-Majhīb, Ahmad Bābā gave his supplement the name of Nayl al-Ibīyīdī bi-Taṭrīs al-Dībuydī. He completed it at Marrakush in 1005/1596, and later issued an abridged version dealing only with those Mālikite faḥīs not represented in Ibn Farḥūn, called Kiṣyāyat al-Muḥāzadī li-Maʿrifat mā layya fi l-Dībuydī. The Nayl was lithographed at Fas in 1317 and printed at Cairo in 1329, in the margins of the Dībuydī.

Ahmad Bābā’s dictionary is one of the main sources for a bibliographical survey of the Maghrib up to the 16th century, and contains, apart from the Mālikite doctors, a certain amount of information on the great Moroccan saints (awliyā’). The extensive library which he built up in the Sudan has still not been entirely dispersed, and it was one of his own copies of which particular use was made in the publication of the materials relating to Spain in al-Rawd al-Miḥarrīb of Ibn ʿAbd al-Munīm al-Ḥimyārī (Lévi-Provençal, La Péninsule ibérique au Moyen Âge, Leiden, 1958 p. xii-xiii).

Ben Chenab, Ijdāna, § 94; idem, in EID, i, 191 (with a complete list of the works of Ahmad Bābā); Brockelmann, II, 618, S II, 715-6. (E. Lévi Provençal)

AHMAD AL-BADAWĪ (in modern Egyptian Arabic al-Bedawi), with the kunya Abu ʿl-Fātīyān, is the most popular saint of the Muslims in Egypt and has been so for about 700 years. By the people he is often called simply Saʿyāwī; in a song in his honour (ed. Littmann) he has the title of sīkhī al-Marībī because of his name al-Badawi, and this name was given to him because he wore a veil like the bedouin of the Maghrib. As a Sūfī he was called al-buḥ, the pole.

Ahmad was probably born in Fez in 596/1199-1200, and he seems to have been the youngest of seven or eight children. His mother was called Fatima, his father ʿAll (al-Badri); the occupation of his father is not mentioned. His genealogy was traced up to ʿAll b. Aḥb Tālib. In his early youth Ahmad went with his family on a pilgrimage to Mecca where they arrived after four years' travelling. This is placed in the years 603-7/1206-11. In Mecca his father died. Ahmad is said to have distinguished himself in Mecca as a daring horseman, and he received there, according to tradition, the surnames al-ʿAṭṭābī, "the intrepid horseman", al-Ḥaḍībānī, "the furious, raging one". His name Abu ʿl-ʿAbbās may be a miswriting for Abu ʿl-Fātīyan; and the latter would have much the same meaning as al-ʿAṭṭābī. Other names that were given him later are al-Ṣāmnīt, "the silent" and Abū Farrāḍī, "liberator", namely of prisoners. About 627/1230 he allowed to have undergone an inner transformation. He read the Kurān according to all the seven readings and studied some Shāfi’ite law. He gave himself up to devotion and declined the offer of a marriage. He retired from men, became taciturn, made himself understood by signs. According to some authorities Ahmad was summoned in 633/1236 by three consecutive visions to visit ʿIrāk, and he went there in company with his eldest brother Ḥasan. They visited the tombs of the two great "poles" Ahmad al-Rūfīfī and ʿAbd al-Ḵādīr al-Dīlānī and of many other saints. In ʿIrāk he is said to have subdued the indomitable Fāṭima bint Ṣarrī, who had never yet surrendered to any man, and to have refused her offer to marry him. This incident has been turned into a highly romantic story in popular Arabic literature; it may go back to ancient Egyptian mythology. In 634/1236-7 Ahmad had another vision which told him to go to Ṭanṭā in Egypt. His brother Ḥasan returned from ʿIrāk to Mecca. In Ṭanṭā Ahmad entered on the last and most important period in his life. His mode of life is described as follows: He climbed in Ṭanṭā to the roof of a private house, stood there motionless and gazed up into the sun so that his eyes went red and sore and looked like fiery cinders. Sometimes he would maintain a prolonged silence, at other times he would indulge in continuous screaming. He went without food or drink for about forty days. (The forty days fast is also known from Christian saints. The standing on the roof is reminiscent of Symeon Stylites; and the followers and disciples of Ahmad: Shāṭḥiya or Aṣḥāb al-SAṯār, "the roof men", of the Christian "pillar saints", the followers of Symeon.) Those saints who were still worshipped at the time of Ahmad's arrival in Ṭanṭā (such as Ḥasan al-Iḫmānī, Sālim al-Maghribī and Wāḏīh al-Ḵamarī), found themselves eclipsed. His contemporary, the Mamlūk sultan al-Ẓāhir Baybars, is said to have worshipped him and to have kissed his feet. A boy called ʿAbd al-ʿĀl came to him when he was searching for a cure for his sore eyes, and this boy became afterwards his friend and his khalīfa (successor); the saint is therefore called Abū ʿAbd al-ʿĀl in popular literature. Ahmad died on 2 Rabī I 675/24 August 1276.

Ahmad al-Badawi is the author of (i) a prayer (ḥaḍīb); (ii) a collection of prayers (ṣalāḥāt), commented by ʿAbd al-Rahmān b. Muṣṭafā al-ʿAydūrī under the title of Fath al-Rahmān; and (iii) a spiritual testament (waṣāyāt), containing admonitions of a rather general character.

Ahmad al-Badawi is a representative of the lower type of the dervishes, and his intellectual qualities seem to have been of small importance. After his death ʿAbd al-ʿĀl (d. 733/1332-3) became his khalīfa and built a mosque over his tomb. The veneration of Ahmad and the pilgrimage to Ṭanṭā were often disapproved by more highly educated scholars and other opponents of the sūfis. These
opponents were partly men who were averse to all sufism, partly politicians who objected to the sufis as people would not forsake their old customs. The rulers of the people. in Algeria and to put an end to the illicit arms traffic, took care that the Porte should not interfere in Tunisian affairs. In 1846, Ahmad went to France and was warmly welcomed in Paris. As a reward for his stubborn resistance, he succeeded in obtaining from the Porte in a khātāt-i sherif which recognized him individually as an independant sovereign.

Ten miles from Tunis, on the banks of the Sebīla Sefjūmi, Ahmad built the Muhāmmadiyya palace, a huge mass of enormous buildings which were still incomplete at the end of his reign and which soon fell into ruins.

This extravagances, and the prodigality of the Bey’s favourites, the Geneoese Raffo, the minister of foreign affairs, and above all the Greek Muṣṭafā Khāznādār, minister of finance from 1837 to 1873, exhausted the Treasury. The farming of the tax on tobacco and increased taxation generally caused revolts in 1840 at Tunis and in the region of Kābis, and in 1842 at La Goulette. They were suppressed, but the Bey was unable to impose his will on the mountain tribes. Beneath an outwardly brilliant display, a love of ostentation coupled with chaotic administration set Tunisia on the road to decadence.

It must nevertheless be recognized that Ahmad, sincere in his desire to confer on his country western institutions, introduced some beneficial reforms. In 1837, he prohibited the sale of negroes, and emancipated his household slaves. In 1846 he formally abolished slavery throughout the Regency. He abrogated the laws discriminating against Jews. Finally, he promoted the development of education. The abbé Bourgade, in charge of the chapel of Saint Louis of Carthage, the construction of which a nursery school was attached, as well as a small printing press. The abbé later opened other schools and dispensaries. Various archaeological excavations were begun. French influence became dominant in Tunisia, as a result both of their educational activities and of the flourishing trade conducted by the merchants of Marseilles.

**AHMAD BIDJĀN** [see BIDJAN AHMAD].

**SAYYID AHMAD BRĪLWI,** a militant religious reformer of Muslim India, was the son of Muhammād Irfān and the 36th direct descendant of Ḥasan, the son of All. He was born on 6 Safar 1201/28 Nov. 1786 at Bareilly (Brēlī), where he received his early education. He then went to Lucknow and after a few months’ stay there, he proceeded about 1235/ 1819 to Delhi, where he became a disciple and constant companion in his chequered career were Mawlawī Muḥammad Ismā’īl, the nephew of Shāh ʿAbd al-ʿAzīz, Mawlawī ʿAbd al-Ḥāyy, the son-in-law of Shāh ʿAbd al-ʿAzīz, and Mawlawī Muḥammad Yūsuf al-Phulhat, a descendant of Shāh Aḥl Allāh, the elder brother of Shāh Wali Allāh.

In 1236/1821, Sayyid Ahmad set out on a pilgrimage to Mecca, staying a few months at Calcutta on the way. On his return to India in 1239/1824, he began to make active preparations for a religious war. It is clear from his letters that the ultimate object of his reformist movement was to overthrow the rule of the British and the Sikhs and restore Muslim dominion in India. His first aim was to oust the Sikhs from the Pandjāb. Having enlisted the sympathy and promised aid of his co-religionists at Kābul and Kandahār, he started on his expedition in 1241/1826 with an army of enthusiastic followers, and reached Peshāwar via Ragāpātāna, Sind, Baluchistān and Afghanistan. He attacked and repulsed the Sikh army at Akora Khattak (20 Nov. 1826); but lost the battle of Saydo through the desertion of Yār Muḥammad Khān Durrānī and his brothers. Although he succeeded in occupying Peshāwar in 1830, he was discouraged by the treachery of the Durrānīs and other local khans, and decided to proceed to Kāshmir. On the way, however, he was encountered by the Sikhs in 1246/1831 at Bālākot where he was killed along with Shāh Muḥammad Iṣmā’īl and his army was dispersed. Nevertheless, the remnants of his army continued their struggle in the North-West Frontier Province for the cause for which their leader had laid down his life.

His numerous disciples continued his reformist movement in India, and were responsible for the production of a vast religious literature. In order to reach the masses, they adopted the Urdu language as their medium and were incidentally instrumental in promoting the growth of a simple, direct and vigorous style. His adherents preferred to engage themselves in commercial pursuits rather than seek service under the British government.

A few short epistles and pamphlets on religious topics are credited to Sayyid Ahmad. He is also said to have inspired the composition of Sīrāl Mustakīm, a work written in Persian by his two foremost disciples, Shāh Muḥammad Iṣmā’īl and Mawlawī ʿAbd al-Ḥāyy. Several collections of his letters (in Persian) also exist in manuscript.

SAYYID AHMAD BRÈLWI — AHMAD-I DJÂM

(Sh. Inayatullah)

AHMAD DJĂLÂ’IR [see DJÂLâ’IR].

AHMAD-I DJÂM, “Ahmad of Djâm”, also Ahmâd-i Djâm, PERSIAN ʿSUFI in the Saljuq period, contemporary of al-Ghazâlî, Adîr b. Mūṣâfîr, Ayn al-ʿUqâd al-Hamâdînî, and Saṅârî, in full ʿSNÂRÂH AL-DIN ABû NÂRJ AHMâD B. L-HÂSAN B. AHMâD B. MUḤ. AL-NAṽâR AL-DJÂMÎ. He is also known by the nickname of ʿZaďâ al-Pîl, “Elephant-colossus”. He claimed descent from the Prophet's colossus”. He claimed descent from the Prophet's

This may well be the case here. The above-mentioned al-Kûsâwî is later said to have claimed to wear the same robe. Ahmad wrote the following works, all in Persian: Uns al-Ṭâbîn, Sirāḍî al-Sâʿîrîn (professedly written in 513/1120), Fūṭîh al-Kulûb (= Fūṭîh al-Râhî?), Râwâjî al-Muḥâbibîn, Bâhâr al-ʿUkâbî, Kûnnâ al-Ḥiḥmâ, Miṣrâf al-Nâdîrî—written in 523/1128. Of these only the first and last-named works have so far been recovered, although Mîrzâ Mâṣûm ʿAli Shâh (1901) had still read the second. The biographers' information on the dates of the first six writings (Ivanov, in JRAS, 1917, 303 f., 349-52) must be false in part, since all these works are listed in Miṣrâf al-Nâdîrî, and must be earlier than 522/1128, unless the list is an interpolation or the works mentioned were subsequently revised. There has been preserved further a Risâla-yi Samarkandîyya (also called Suwâl u-Djâsâbî), in reply to a question. Two or three other works listed by the biographers, together with the Fūṭîh al-Râhî, are said to have perished in Djâm in consequence of the Mongol invasion. Only the library (in Dihlî) of Firûzshâh, of the Tughlakid dynasty (752-90/1351-88), still possessed all Ahmad's works. The Miṣrâf al-Nâdîrî (MS Rûdî Fâṣâha 3009), mentioned in the I A, s.v. Camî, is probably not a work by Ahmâd.

On his conversion Ahmâd, as himself states, possessed no theological training, and what he later learned and published on this subject was professedly acquired by revelation. This is to be taken cum grano salis. Even his early dicta betray some theological knowledge and still more his writings, where he positively requires it. His views, or at least his formulations, are, however, not exempt from contradictions and inconsequences. His theology is firmly grounded on Kurâʿ and Sunna, and on the şarîʿa in the şûfî sense, and in it he shows himself a pronounced Sunni; he allows, for example, the masâḥ al-ḥâshiyya. Right action includes, however, also ḫududiya; unlawful conduct accompanied by ḫududiya is, according to him, better than lawful conduct without ḫududiya. His doctrine of the tarîba recognizes the purification of the soul through the stations ammârâ, lauwâstina, mulhâmsa, up to muṣâfîna, and aims to clarify the relation of the last stage to the heart (ḥub); Ahmâd defines the “soul at rest” (muṣâfîna) as the sheath in which the heart is fixed (gûlîʿ-e ḥub). The aim of mystical endeavours is according to him—to pick out only one of many expressions—to find the “spirit” (rûḥ, djân), the “real being” (ḥabîbat-i tu), to which only two ways lead: remembrance of God (ḥâdîr Allâḥ) and waiting (intîsâr) until God in His grace discloses this being to one. An assumption of God's qualities in concrete, as certain şûfîs have taught, is regarded by Ahmâd, in agreement with al-Sarrâjî, al-Kâlabâdhî, and al-Kûsâwî, as impossible, since this implies indwelling (buṭîl), and only effects (aṭhâr) of God's qualities, not these themselves, can inform the creature (incommensurability of the eternal and the temporal). True belief in lauhâd consists in Ahmâd's view of referring all action and event back to the one original cause, God (muḥaddârî—ṭâhir—ḥâdîr—aṭhâr). For the rest, conditions in mystical love are much the same as in ordinary love; no person can really become one with another. The representation which one may take on oneself from the Beloved is rapidly dissipated,
and one immediately returns to daily life. Should it reappear, so in reverse one loses again one's con-

Ahmad expresses the dignity and the spiritual power of şii life in poetic tones. He cites the case of Fuḍayl b. Ḥyāḍ who, when converted from highway robbery, returned their possessions to those whom he had robbed and when he had nothing more left, still brought gold from beneath his robe for a Jew, the earth having been turned into gold. One who is converted, he says in the same treatise (Miftāḥ al-Najḍ, which was written on the occasion of the conversion of one of his sons), him does the water praise over which he journeys; him do the stars praise and for him they pray. The ṣidq, ʿabdāl, ṣāḥid, is the sun, from whom all men derive their light. The şii should distil a dew of blessing around him, as musk and aloes distil their scent. True poverty (fakr) is, according to Ahmad, the elixir which has the faculty of colouring everything which comes into contact with it.

The picture of Ahmad's spiritual personality acquired from his prose writings and sayings is in contradiction with the Diwan which goes under his name, and which would make him out to be an ecstatic pantheist intoxicated with self-deification. As already remarked by Ivanow (JRAS, 1917, 295), and expressed in a private letter by H. Ritter, there is room for suspicion that the Diwan is at least partly a falsification, but the question still awaits fuller investigation. It is preserved in several MSS, not all of which are complete (list in Meier, Bibl., and has been lithographed (Cawnpore 1898, Lucknow 1923). Taḥkhalīṣ Ahmad and Ahmadī. A book of 'Poems' is also mentioned, however, by his biographers.

Ahmad b. ʿAbī l-ʿIṣārān al-Nāμākī thumm al-Dżāwī, composed ca. 600/1204, MS Nāfīdī Pasha, Istanbul, 399, 388-132v. It is almost worthless for Ahmad's real biography and thought, being full of miracu-

lous legends appealing to the primitive masses; al-Ghaznawi must have interpreted in a concrete sense certain poetical utterances of his master. It is, however, interesting for the typical forms of the şii legend and for certain historical circum-
stances, as well as geographical names, of eastern Persia. (3) Ahmad b. ʿTārakhistānī, a contem-

porary of the skayḥ, whose work is apparently not preserved, but was used, together with that of al-Ghaznawi, by: (4) Abū ʿI-l-Makārim b. ʿAlī al-ʿIṣārān džāwī, Khāṣṣāt al-Maḥbūbāt . . . Abū ʿAlī ʿIṣārān al-Nāμākī thumm al-Dżāwī, composed in 840/1436-7 and dedicated to Shahrukh, MS of the Asiatic Society of Bengal (Ivanow, Cat., i, no. 245), and two incomplete MSS in Russia, one of which was published by Ivanow, in JRAS, 1917, 291-365. (5) ʿAlī of “Būzdžan” (probably = Būzdžān), of 929/1523, probably depending of Abū ʿI-l-Makārim, was used by Khunakoff.—The articles in Diwān's Nāfīdī al-ʿUns (Calcutta 1859, 405-7) on Abū ʿI-l-Dżāwī and Abū ʿAbd al-ʿIṣārān džāwī, as well as certain other notices, are drawn from al-Ghaznawi.—See also Ibn Baṭṭūṭa (Defrémery-Sanguinetii), iii, 75 ff.; Mūsā Maḥbūb ʿAlī Shāh, Taʿrīkh al-Hādżah, Lith. Teheran 1316, 261.

AHMAD DJEWDET PASJA eminent Ottoman writer and statesman, born on 28 Dżumādā i, 1237/22 March 1822, at Lofča (Lovloc) in northern Bulgaria, of which his father, Hādżi ʿIsā Ḥaşiba, was a member of the administrative council, and where his earliest known ancestor, a native of Kiğaš in Crimea, (Kiğaš Külise), had settled after taking part in the campaign of the Pruth in 1711. Ahmed early displayed unusual aptitude and diligence, and in 1839, on reaching the age of seventeen, was sent to continue his education in a medrese at Istanbul. There, as well as following the traditional medrese courses, he not only studied modern mathematics, but devoted his spare time to learning Persian with the poet Sulejman Fehim and himself took to composing verse in the traditional style. It was from Fehim that he received the maḥfīlah Djewdet that he thenceforth added to his name.

After obtaining the igāzī that permitted him to enter the judicial profession, he received his first paid but nominal appointment at ûbdî in 1260/1844-5. When Muştafa Reshīd Pasha, on becoming Grand Vizier in 1846, applied to the office of the skayḥ al-ʿīlām for an open-minded ʿIsmāʿil to provide him with the knowledge of the šairā necessary for the proper drafting of the new kāmāns and nisām-nāmes he had it in mind to promulgate, it was Djewdet who was chosen. From this time to Reshīd Pasha's death thirteen years later Djewdet remained closely attached to him, even living in his house and becom-

ing his children's tutor. During this period he also became acquainted with ʿAlī and Fuʾād Pasjas, and under Reshīd's influence was persuaded to undertake political and administrative duties. In August 1850 he received his first appointment proper as Director of the recently founded ʿDīr al-Muʿallīmin, with membership, as its chief secretary, of the Medjīs-i Muʿārif.

During his directorship of the ʿDīr al-Muʿallīmin, which seems, however, to have come to an end in the following year, Djewdet achieved reforms in the admission, maintenance and examination of the students attending it; and as secretary of the Medjīs-i Muʿārif he wrote the report that led to the foundation in July 1852 of the Endijmen-i Dīnāşh, to which, after accompanying Fuʾād Pasha on a state visit to Egypt in March 1852, he devoted his attention, beginning his best known work, the Taʾrīkh-i Wāḥeṣ-i Dmvot-i ʿAlīyeh, of which he completed the first three volumes during the Crimean War, under its auspices. On his presenting these to ʿAbd al-Medjdī he received promotion to Sulejman Mānīyeh rank; in February 1855 he was appointed waṣaʿ-āmiṣ; in 1856 he was appointed molla of Galata; and in 1857 he attained Mecca rank in the judicial hierarchy. Meanwhile, during the war, he was made a member of a commission set up to compose a work on the prescriptions of the šairā regarding commercial transactions, which was dissolved, however, after publishing only a Kitāb al-Buyūṭ. In 1857 he was appointed to the Council
AHMAD DJEWDET PASHA

of the tanzimat, taking a lead in the composition of a new criminal bānān-nāme, and, as a president of the Arādi-yi Seniyye Komisyonu, participated in that of a bānān-nāme on tapu.

After the death of Rüşd Pasha in 1858 it was suggested to Djewdet by Āli and Fu'tād Pāças that he should abandon the learned profession in favour of the government service by accepting the wakāliq of Vidin. It was not for another eight years, however, that he took this step, although in the interval he was twice charged with important administrative missions as an “Extraordinary Commissioner”, the first in the autumn of 1861 to Iļışkodra, and the second (in company with a general commanding a division) in the summer of 1865 to Kozan in the Taurus region, to pacify those areas by the introduction of needed reforms. So successful was he in the first that he was sent in March 1863 as müfettis, with the judicial rank of hādi-asker of Anatolia, to Bosnia, where he was again markedly successful during the ensuing eighteen months in restoring order. During this period he was also made a member, first, of a commission appointed to reform the official newspaper Taksir-i Wakālā'ī, and secondly of the Medjlis-i Wāld. His abandonment of the learned profession took place in Jan. 1866, when he ceased to be vâkâ's-münet. His “learned” rank was then replaced by that of vizier, and he was appointed governor of the wilāyet of Aleppo, as reconstituted under the Ordinance of wilāyet. In Febr. 1868, however, he was recalled to the capital to become president of the Diwān-i Āhām-i ʿĀlīyye, one of the two bodies that then replaced the Medjlis-i Wāld, the other being the Shurā-yi Derbelt. It was chiefly owing to Djewdet’s efforts in this post that the Niğāmī courts were instituted; that this Diwān was in due course divided into a Court of Appeal (Temyis) and a Court of Cassation (Istīmād); and that the presidency was converted into a ministry. It was also during this his first term as a Minister of Justice that on the one hand Djewdet instituted law courses at the Ministry for the better instruction of judges and the improvement of judicial procedure, and, on the other, a beginning was made with the composition of a legal code (Medjelle [q.v.]) based on Hanafī fiqh, under the auspices of a society for the purpose. In securing approval for such a code (that is one based on Islamic prescriptions) Djewdet had the support of Fu'tād and Şeriwān and of Rüşd Pasha in opposition to Āli Pasha, who favoured rather the adoption of the French Code Civil.

Djewdet Pasha (as he now was) remained Minister of Justice up to the end of April 1870, by which time four volumes of the Medjelle had been published. Just as the fifth was completed, however, he was dismissed, and though appointed wālī of Brusa, was almost immediately relieved of that post also. He remained unemployed until August of the following year, when he was recalled to the presidency of the Medjelle society and of the tanzimet department of the Şurā-yi Derbelt. In the interval, as well as the fifth volume of the Medjelle, a sixth, in which Djewdet had had no hand, had been published. It was largely the deficiencies of this volume, which he at once superseded by a new version, that led to his recall; and from this date until the publication of the final volumes in 1877 he continued to supervise the composition of the code, though also otherwise employed in a variety of important offices, sometimes in the provinces. One of the chief of these was his assignment in April 1873 as Minister of Education, in which capacity he achieved a reform of the primary schools for boys (şeb-i mêhellerî); drew up curricula for the Rüşhüdiyye, and the still to be created İdâdiyye, schools—measures that necessitated the composition of new manuals of instruction, three of which he wrote himself; and reorganized the Dar al-Mu'allimin to meet the demands of these three educational grades. On 2 Nov. 1874, however, after the appointment as Grand Vizier of Hūseyen ʿAwnî Pasha, who was apparently already meditating the deposition of Sultan ʿAbd al-ʿAzîz, Djewdet was made wālī of Yanya (Jannina) in order to remove him, as a likely opponent of the move, from the capital; and it was not until June of the next year, after Hūseyen ʿAwnî’s fall, that he was restored to his former post. In Nov. 1875 he became for the second time Minister of Justice, and as such secured the transference to his Ministry of the commercial courts, which had till then depended on the Ministry of Commerce. But he incurred the displeasure of Mâmmûd Nîdîm Pasha, during the latter’s second Grand Vizierate, by opposing his grant of customs concessions to foreign capitalists; and after first being sent on a tour of inspection through Rumelia in March 1876, he was dismissed from the Ministry of Justice and was on the point of proceeding to Syria as wâlî, when on the fall of Mâmmûd Nîdîm he was for a third time made Minister of Education.

Djewdet played no part in the deposition of ʿAbd al-ʿAzîz, which occurred at the end of May, and in November, after the accession of ʿAbd al-Ḥamîd II, he returned to the Ministry of Justice. It was now that he and Midhat Pasha became permanently estranged, owing to what Midhat regarded as Djewdet’s reactionary attitude to the constitution, in the discussions upon which the latter began by taking part. Yet throughout his Grand Vizierate Midhat maintained Djewdet in office; and it was only on Midhat’s disgrace and replacement by Sâkîzîzd Edhem Pasha that Djewdet left it for newly created Ministry of the Interior. In this he remained near the end of the war of 1877 with Russia, after the involvement of the Porte in which he disapproved, when after a short term as Minister of the Imperial Ewâlî, he was for a second time appointed wâlî of Syria.

He remained in Syria nine months, during which, having special knowledge of the area, he suppressed another revolt at Kozan. In December of the same year he was replaced by Midhat and recalled to the capital to preside over yet another ministry, that of Commerce. On the dismissal of the Grand Vizier Khayr al-Dîn Pasha in Oct. 1879 Djewdet acted for ten days as President of the Council of Ministers, and on the appointment of Kûlûk Saʿîd Pasha he was for a fourth time made Minister of Justice. This was, so far, his longest term in that position, lasting three years. It was during that which Midhat was put on trial. Djewdet appears already to have denounced him as treacherously pro-Christian, and went out of his way, as ex-officio head of the body appointed to arrest Midhat and bring him to the capital, himself to travel for the purpose to Smyrna.

His fourth tenure of the Ministry of Justice came to an end in Nov. 1882, on the appointment of Aşmed Wefîk Pasha as Grand Vizier; and it was only in June 1886 that he was given office again, for the last time, in the same post. He held it on this occasion for four years, during which he also became one of the three members of the special conclaves.
convened by 'Abd al-Hamid for the discussion of political problems, and presided over a commission set up to compose a firman embodying various modifications in the regulations for the government of Crete, introduced after the suppression of the rebellion of 1828. In May 1890 he resigned, owing to differences with the Grand Vizier Kâmil Paşa; and thereafter played no further part in public affairs. During the last thirteen years of his life, nine of which were spent in retirement, he devoted most of his attention to literary work of various kinds, including the last volumes of the Ta'rikh. He died on 25 May 1895 after a short illness at his yâllı at Bebek.

Djewdet Pasha, both in his conduct and in his works, exhibited a curious mixture of the progressive and the conservative. While he consistently advocated the greater enlightenment of Ottoman society and fiercely condemned any manifestation of ignorance, bigotry and self-seeking in the ruling class and the erroneous beliefs prevalent among the people, his outlook was fundamentally shaped by his early medrese education. Whereas in the writings of his earlier years he criticizes the shortcomings of his contemporaries in a hopeful tone, those of his declining age exhibit a disillusionment with the lanzimât, about which his language is often bitter. It would appear that this change of attitude was due at least in part to his quarrel with Midhat, who antagonized him in particular by mocking Djewdet's imperfect command of French and consequent mispronunciation of European thought. Thenceforth he would seem to have been more or less forced by events, and above all by the unhandsome part he played in connection with Midhat's trial, into a reactionary attitude, which harmonized all too well with the prevailing spirit of the Hamidian regime.

Of Djewdet Pasha's numerous works the most important are historical. Apart from his Kisaâ-i Enbiyâ va-Tawârettî Khulefâ, an educational compilation in 12 vols. (starting with Adam and ending with the sultan Murâd II), he composed towards the end of his life, and Kifîm va-Kawdî Kârib ta'rikhesi (largely based on the Gulbûn-ı Khânân of Hallim Giray), three deserve particular mention. These are (i) his Ta'rikh, commonly called Ta'rikh-i Djewdet, also in 12 vols., covering the period between 1774 and 1826 (from the Treaty of Küçük Kaynardja to the abolition of the Janissaries). Thirty years elapsed between his beginning and finishing it, during which his outlook altered with the great contemporary changes that took place in Ottoman life. This is exemplified in particular by his adoption from vol. 6 onwards of a simpler, less traditional style. In most of the various editions brought out since the composition of the work progressed, while making corrections and additions, he followed his original plan. But in the final edition (telif-i gjedî), completed between 1853 and 1851-2, the whole was more radically altered, so that it, for instance, the original vol. 1 figures wholly as an introduction. (ii) The Ta'rîkh-i Usâyen, a collection of memoranda made by him on contemporary events as wâka-nâwi and for the most part handed over by him to his successor Lutfî. Only four of those so handed over have survived. They have been published in OTEM, nos. 44-7 and in the Yeni Medjmûa, ii, 454. The memoranda he retained are preserved in manuscript in the Sehir ve İnkâlîp Muzeesi at Istanbul, but the form of his daughter Fatma 'Aliyye Khanîm's Djewdet Paşa ve-Zamanî. (iii) His Mat'âlardî, a long series of observations submitted to 'Abd al-Hamid at the sultan's request on the events of the period 1839 to 1876, in 5 parts, the 2nd, 3rd and 4th of which have been published in OTEM, nos. 78-80, 82, 85, 87-9, 91-3. Part 5 appears to be lost. Part 5 deals with the fate of 'Abd al-Âzîz.

Djewdet's purely literary works date from his medrese days and are of little interest. Most of the poems that he collected at 'Abd al-Hamid's request into a Divânî were composed at this early period. Of more consequence were his Turkish grammars: the Kawûdî-î 'Hâfîîniyye (the first version of which he wrote in collaboration with Fu'âd Paşa in 1850); an introduction to the same work for primary schoolboys called Medhkûl-î Kawûdî; and a much simplified version of the first called Kawûdî-î Turîkîye (1292/1875). Other works are the Belâgâtî-î 'Hâfîîniyye, a manual on eloquence composed for his students at the Law School; the Ta'rikh-î Edavî (1897-1870-1), in which the question of calendar reform was first raised; and his completion of Pîr-zâde Mehmed Sâ'b's Turkish translation of the Mukadvisa of Ibn Khaldûn, by which Djewdet's own historical writing was much influenced. The publication from 1862-3 of the collection of hânûns called Dûstûr was also due to Djewdet's initiative; and, as has been indicated above, he took the lead in the composition of the Medjlîlî-î Âhâmî-î 'Hâfîîniyye.

AHMAD FâRîS AL-SHIDYÂK [see FâRîS AL- SHIDYÂK]

AHMAD GHLÂM KHÂLÎL [see GHLÂM KHÂLÎL]

AHMAD GRÎN b. İRâHÎM, leader of the Muslim conquest of Abyssinia, whence he was called sâhib al-fath and al- qâdî. The Amharans nicknamed him Grîn 'the left-handed'. According to tradition he was of Somali origin. Born (c. 1506) in the Hābat district of the state of Adal he attached himself to al-Djâdî Abûn, leader of the militant party opposed to the pacific policy of the Walashma rulers towards Abyssinia. On Abûn's death Ahmad became leader of the opposition, defeated and killed Sultan Abî Bakr b. Muhammad, and assumed the title of imâm. His refusal to pay tribute to the Negus Lebna Dengel precipitated the war. After defeating the governor of Bâli he welded his Somali and 'Afar troops into a powerful striking force, won a decisive victory over the Abyssinians at Shemberâ Kurî (1529) and within two years had gained control of Shoa. Six more years of remarkable campaigns sufficed for him to conquer most of Abyssinia. But he was unable to consolidate his successes. The centrifugal forces working within his army of nomads and the setback given by the early successes of the Portuguese campaign which had arrived in 1542 after Lebna Dengel's death, led him to send to the Paşa of Zâbdî for disciplined musketeers.
With their aid he defeated the Portuguese, but then sent away his mercenaries. The new Emperor Galawdewos, joining up with the Portuguese remnant, took the offensive and won a decisive victory at Zantera in 1540/1543, when Ahmad's death in battle brought about the complete collapse of the nomad invasion.

J. S. Trimmingham

Ahmad Hijmet (1870-1927), Turkish novelist and journalist, was surnamed Müfti-Zade, his ancestors having long served as Müftis in the Peloponnesian. Born in Istanbul on 3 June 1870, he began his career as a writer while still a pupil at the Galatasaray lycée. He entered the Foreign service after leaving school (1889) and held several consular and vice-consular appointments, until 1896, when he was transferred to the Foreign Office. He crowned a distinguished career by becoming director-general of the Consular department (1926). At the same time he had been teaching literature at his old school and, from 1910 onward, at the Dâr al-Funun. For a time he acted at Ankara as head of the cultural section of the Türk Ocakları.

He wrote for İhdam and Therwet-i Funun, but did not conform to the prevailing literary fashion: his style and themes were Turkish and he was a pioneer of the language reform movement. A volume of his stories was published under the title of Khârisîyân av-Geîslân (Istanbul 1317/1899-1900); German translations of three of these, by Fr. Schrader, were published as Türkische Frauen in vol. vii of Jacob's Türkische Bibliothek, Berlin 1907. Some of his later writings appeared as a volume entitled Câhlâyânur, Istanbul 1922. His subtle humour is best exhibited in his monologues, a genre which he introduced into Turkish literature. He died at Istanbul on 20 May 1927.

Bibliography: Schrader’s introduction to his translation (see above); Türk Yurdu, 1927, no. 30; IA, s.v. (by A. H. Tamphar); F. Tevetoglu, Büyûk Türkü Müftüoğlu Ahmed Hijmet, Ankara 1951, critically reviewed by H. Dizdaroglu in Türk Dili, 1952, 429-31.

F. Giese-G. L. Lewis

Ahmad Ihsan, Turkish author and translator, was born in Erzurum on 24 Dhul-Hijjah 1285/7 April 1869. Passing out of the school of administration (Mülkiye) at the age of 17, he was appointed interpreter to the Commander-in-Chief of the artillery, but soon abandoned this post, despite strong family opposition, to become a journalist. At the age of 18 he founded a shortlived fortnightly, Umurân, and at the same time embarked on his career as a translator of French novels, including many of the works of Jules Verne and Alphonse Daudet. While working as a translator on the staff of Therwet, a Constantinople evening newspaper, he conceived the idea of publishing a weekly illustrated magazine. He persuaded his Greek employer to let him bring out a scientific supplement to the paper, under the title of Therwet-i Fünûn. This new review for the most part fought shy of politics. Realizing the potentialities of an illustrated magazine as a propaganda weapon, the authorities at first gave it every assistance, including financial subsidies, but this support was soon transferred to another illustrated paper, Baba Tahir’s Mûsawwar Ma’tûmât. Therwet-i Fünûn continued to devote itself to making known and imitating the intellectual life of the west, especially of France. Almost all the young literary men of the time wrote for it: Ekrem Bey, Khalil Dîvâz (Ziya), Ahmad Râsim and Nabi-zade Na‘im were among the regular contributors and in 1896 Tewfik Fikret was given full editorial control. But in 1901 he quarrelled with Ihsan and resigned; their estrangement lasted till 1907. In 1901 a worse disaster befell: the sultan’s anger was roused against the paper because of a translation by Huseyin Dîhâh of a French article, some sentences in which touched on the French Revolution and were held to be seditious. Therwet-i Fünûn was closed down for some weeks but then reappeared, thanks to the influence of Mehmed 4Arif, a member of the Palace staff who had been at school with Ihsan. But all the writers who had worked for the paper severed their connection with it, and although Ihsan continued to publish it the old enthusiasm was gone.

Ihsan’s original literary production was not outstanding. An account of his travels in Europe was published in 1894, and under the title of Mülûbat Hâltralar, Istanbul 1930-1.

Late in life he became a member of the Grand National Assembly and died in 1942.

K. Süßheim-G. L. Lewis

Ahmad Khân, educational reformer and founder of Islamic modernism in India (1817-98). Ahmad Khân (often called after his two titles of honour Sir Sayyid) sprang from an ancient Muslim family of high nobility. His forefathers came from Persia and Afghanistan, settled down in India about the reign of Shah Jahan (1628-66), and became closely connected with the Mughal Court. He was born on 6 Dhul-Hijjah 1232/17 Oct. 1817 at Delhi. His mother, a sensible woman, gave him a good education, but the schooling he had was no more than that taught in a maktab. On the death of his father Mir Muttaki in 1838, the emoluments from fictitious posts at the Court stopped, and Ahmad Khân had to seek his livelihood. He entered the service of the East India Company and had to content himself with a minor clerical appointment in the court of justice at Delhi. Soon, however, his industry and sense of duty were rewarded with promotion to the rank of munsif (sub-judge).

To his first literary products belong half a dozen religious treatises, mainly in defence of Sunni belief. More important are the historical and archeological studies he published in this period. The best known of them is the work on the old buildings and monuments in Delhi and its environs Âbdâr al-Sânâdîd (1847). Its translation into French by Garçin de Tassy in 1861 won him fame. Three years later on he was elected an honorary Fellow of the Royal Asiatic Society of London.

A second decisive change of his life and outlook was effected by the Indian Revolution, known as
the Mutiny (1857). The unhappy outcome of it, especially for the Indian Muslims, decided him to work for the future of his compatriots; in the first place by earnest attempts at reconciliation between the British and the Indian Muslims, who, rather than the Hindus, were considered to have been the actual rebels. Ahmad Khan, who himself had proved his loyalty to his government by saving the European colony in Bijnawr through personal intercession, wrote two treatises to calm the resulting passions, viz. ʿAbd Bāqī Bahārāwī Hind, 1858, and Loyal Muhammadans of India, 1860-1. He put the blame on both sides, and in his opinion the Mutiny was caused by the Indian people's misunderstanding of English rule as well as by the government's ignorance of the conditions of the ruled.

Keeping aloof from political agitation he sought the uplift of his nation with spiritual means derived from 19th century European mode of life. On a visit to England (1869-70), he had been much impressed by the standard of civilization of the ordinary Englishman. Back in India he started a periodical Tahdhib al-Ākhlah with the object of educating the public by removing prejudices. His next and still more admirable achievement was the establishment of a Muhammadan Anglo-Oriental College at Aligarh (q.v.) 1878, modelled after Oxford and Cambridge (later to become a university). Thirdly he instituted The Muhammadan Educational Conference (1886), which held annual meetings in various cities and afforded opportunities for exchange of thought and propagation of reforming ideas.

Ahmad Khan perceived that in the process of westernization religious ideas needed to be reconsidered. In a speech at Lucknow: "To-day we are, as before (i.e. when Islam came into close contact with the Greek world of ideas), in need of a modern ʿilm al-kalām, by which we should either refute the doctrines of the modern sciences or undermine their foundations, or show that they are in conformity with the articles of Islamic faith". The last way of approach, however, gained so much the upperhand in his own re-interpretation of Islam that it was felt to injure the specific character of religion, in spite of his sincere intentions to counter secularism. The axiom of his theology was the adage: "The Work of God (Nature and its fixed laws) is identical with the Word of God (Kūrān)".

A violent reaction was provoked in the camp of the ʿulamāʿ, who heaped abuse on him as a Nizārī (Urduized form of Naturist), and fiercely attacked his demythologizing of the Kūrān and his teaching about the ḍuʿāʾ (the effect of it would be merely psychological, i.e. of setting the mind at rest, and not "real!", in the sense of exerting any influence on the divine decrees), but in the end his tenacity and disinterested work for the welfare of his people overpowered the opposition. About the eighties he became the acknowledged leader of his community. This found expression, when in 1887 he advised the Muslims not to join the National Congress and the Muslim League, to whom he promised pay and rewards; he took the honorific laḥab of al-Mansūr, "the victorious."

The new sovereign acceded to the throne under the most favorable auspices. From all sides, felicitation poured in, from the Grand Turk, the pāša of Algiers, even from Spain and France. Nevertheless he had to overcome many difficulties at home; these he faced with skill and energy, reinforced by the considerable sums which he realized by the ransom of the prisoners of Wādī ʿl-Makhzūn. With this money he engaged, in the customary manner of Islamic rulers, a reliable bodyguard commanded by morisco officers and organized in the Turkish fashion, and built fortifications in Tāzā, Fez and the kasbah of Marrākūsh. At the same time, he Turkicised to a certain degree his court and administration (māḥāz [q.v.]), as well as his military cadres, under the command of bāys and pagāsā. He also had to repress various troubles stirred up by the Arab tribes and to overcome the opposition of some members of his family who rose against him. But in general, Ahmad's reign, which lasted for a quarter of a century, was peaceful and allowed Morocco, at last, to enjoy for a time a relative tranquillity.

It was in foreign affairs that Ahmad al-Mansūr showed real diplomatic talent. We have ample materials at our disposal for estimating his abilities in the incomparable collection of documents made by H. de Castries in his Sources inédites de l'Histoire du Maroc. First of all, the sultan had to give some
pleads to the Porte, without completely yielding to its demands; then he had to negotiate with Philip II of Spain, and he did this in such a way that Spain achieved no positive results. On the contrary, the practically-minded sultan encouraged the development of smuggling, or even piracy. In 1585 a "Barbary Company" was founded by British merchants in order to monopolize the external trade of Morocco. After the destruction of the Armada in 1588, Ahmad al-Mansur gave up the friendship with Spain and entered into relations with Queen Elizabeth.

To Ahmad's credit stands also the conquest of the Sūdān, which, though it was ephemeral, gained for this ruler, greedy for riches, a considerable booty in gold and procured him his second surname of al-Dhahabi, "the golden". It was prepared by reconnoitring and the conquest of the oases of Touat (Touat) and Tigzagrin in 990/1581, and was decided upon by the advice of al-Mansur's Morisco general staff. It is related in detail by all the historians of the Saʿdīid dynasty and by three Sudanese chronicles. The expedition, commanded by the pasha Djawdhar, left Marrakesh in the autumn of 999/1590 and reached, not without difficulties, the Niger three months later. The Sudanese aṣḥīa of Gaṭ, Iṣbāk, after a battle near that town, had to seek for peace and shortly afterwards the Moroccan troops entered Timbuktū (q.v.). After the pasha Djawdhar had been replaced in his command by another morisco officer, Maḥmūd Zarḫūn, the conquest of the whole country was continued, while the most important fakhs of Timbuktū, amongst them Ahmad Bābā (q.v.), were deported to Marrakesh. Thereafter, for some years, there was an incessant afflux of gold and captives to the Saʿdīid capital.

Ahmad al-Mansūr, who hardly left Marrakesh during the whole of his reign, wanted to build there a residence worthy of himself: the palace called al-Kaṣr al-Badhī, the construction of which was begun soon after his accession and lasted for about twenty years. This sumptuous mansion was later mutilated by the sultan Mawlay Ismail. At the same time, the Moroccan ruler made a point of assembling a literary court, in which shone various writers, especially the secretary of the chancery, ʿAbd al-ʿAzīz al-Fīṭrī (q.v.), author of a panegyrical chronicle, Māhdbī al-Sūṭī (q.v.).

The last years of Ahmad's reign were troubled by the intrigues of his sons to obtain the succession, and by an epidemic of cholera which began, from 1007/1598 onwards, to decimate the population of the capital. Deserting Marrakesh to escape the scourge, the sultan went to the north of the country and, after his arrival at Fez he died there on 12 Rabiʿ I 102/20 August 1603. His body was transferred to Marrakesh and buried in the sumptuous mausoleum which he had built for himself and his family and which still exists.

(A. Lévi-Provençal)

AHMAD MIDHAT, Ottoman Turkish writer, was born in Istanbul in 1260/1844, the son of a poor draper called Sulaymān Aghā and a Circassian mother. He lost his father in early childhood, and was for a while apprenticed to a shopkeeper. When he was 10 old the family moved to Vidin, where his half-brother Ḥāfīz Aghā was the mūḍir of a kadī. Ḥāfīz, however, fell into disgrace, and in 1859 Ahmad returned to Istanbul, where he began his schooling. In 1277/1861 Ḥāfīz Aghā, having won the favour of Midhāt Paşa, was reinstated and given an appointment in Nish, to which he brought the family. Ahmad entered the Rüşdiyye school there, and graduated in 1280/1863. In 1281/1864, when Midhāt Paşa took over the newly constituted wīlāyet of Tuna, the family followed him to its capital, Rusçuk, where Ahmad was apprenticed as a clerk in the provincial chancery (wīlāyet mutasaddīb ḥālem). While working, he continued his studies privately, and also studied French and western knowledge under the guidance of a Christian colleague. He won the favour of Midhāt Paşa, who gave him his own name, and, after appointing him to various offices, made him, at the age of 24 or 25, editor-in-chief of the wīlāyet newspaper Tuna. In 1285/1868, when Midhāt Paşa became wāli of Baghdad, Ahmad Midhat followed him there, taking charge of the government printing-press and newspaper (Zawra). During his stay in Baghdad he continued his private studies, and began to write school-books and stories. In 1288/1871 his brother Ḥāfīz, who had meanwhile become mutasaddī of Baṣra, died, and Ahmad returned with the whole family to Istanbul. Abandoning the state service, he devoted himself entirely to writing and printing. For several years he contributed articles to various papers, and also ran a printing-press where he himself printed and published his numerous books. His journalistic activities brought him into an apparently fortuitous association with the Young Ottomans, and in 1289/1872 he was arrested and summarily exiled to Rhodes, together with Abūʾ-Disa Tewfīq. There he wrote a number of books, some of which were published in Istanbul under a pseudonym. In 1293/1876, after the deposition of Sultan ʿAbd al-ʿAzīz, he was pardoned, and returned to Istanbul, where he resumed his activities as a writer and printer. His cautious attitude during the following months won him the good will of Sultan ʿAbd al-Hamīd, and in 1294/1877, after publishing the Uṣūl-i ʿInkbī (an historical justification of ʿAbd al-Hamīd's accession), he was promoted to the direction of the official gazette and printing-press. This led to a permanent breach with the Young Ottomans. During the reign of ʿAbd al-Hamīd he held various state offices, and from 1295/1878 onwards edited the Tergûmān-i Ḥāfīz, a periodical of some importance in the intellectual history of that time. In the summer of 1888 he went as official Ottoman representative to the International Congress of Orientalists in Stockholm, and spent some 3½ months in Europe. (This trip is described in his Aurupada bir Dizelân, Istanbul 1307/1889.)

In 1908, after the Young Turk revolution, he was retired from his official positions under the age-limit, and was subjected to vigorous attacks. He attempted to resume the literary work which he had long since sacrificed to his official career, but abandoned the attempt in the face of hostile opinion and altered tastes. For a few years he held teaching posts at the University, the Female Teachers' Training College, and the School for Preachers. He died in Muharram 1331/Dec. 1912-Jan. 1913.

Besides playing an important role in the development of Turkish journalism in the 19th century,
Ahmed Midhat also wrote an enormous number of books, estimated at about 150. These fall into two main groups, fiction and popularised knowledge. His novels and short stories, many of them first published as serials in periodicals, were widely read among the generation of Turks that grew up under the tanzimat, and played no small part in developing new tastes and interests among a public still entirely unacquainted with western literary forms and aspirations. His novels were in every sense popular, simple in both style and sentiment, intended to entertain and sometimes also to instruct a reader of unsophisticated and unliterary tastes. Some are romances of adventure, others deal with his own and the immediately preceding periods, and at times manage to achieve a certain liveliness and realism. Ahmed Midhat was much influenced by the French popular novelists, and also translated a number of their works. Apart from fiction he wrote or adapted a considerable number of popular and semi-popular works on history, philosophy, religion, ethics, science, and other subjects, the purpose of which was to bring modern European knowledge to his compatriots in a simple and attractive form. The most important of his historical works are Usul-i İnjihat (2 vols., 1294/1877-8), already cited, and Zewadi al-İlahb (1300/1883). He also wrote a universal history in 3 volumes (1303-5/1880-2), and a series of separate histories of European countries (Kâmi, 14 vols, 1292-1303/1871-81).

Bibliography: IA, s.v. (by Sabri Esat Siya-vgil), on which much of the foregoing is based. Further Turkish publications are cited there. A contemporary judgment on the work by M. Hartmann, Une Yesiktiche Briefe aus der Türkei, Leipzig 1910, 70, 208; J. Östrup, Erindringer, Copenhagen 1937, 47-44.

AHMAD B. KHALID B. HAMMAD AL-NAŞIRI AL-SALAWI, Abü'Abbâs Shâhâb al-Dîn, Moroccan historian, born at Salé (Salâ) 22 Dhul-Hijja 1293/12 April 1835, died in the same town 16 Djamâ- dá 1 1315/13 Oct. 1897. The genealogy of this writer descends in a direct line from the founder of the Moroccan brotherhood of the Nâşiriyya, Ahmad b. Nâşir, who was buried at his zâwiya at Tâmgrot in the valley of Wâdi Dar'a (Darâ). He pursued his studies at Salé, and, without neglecting his religious and juridical studies, delved deeply into Arabic prose literature. At the age of about 40, Ahmad al-Nâşir entered the judicial branch of the Sharîf administration as a notary or as a steward of State lands. Intermittently, he held relatively important posts. He lived first at Dâr al-Bayâd (Casablanca), from 1292-3/1875-6, and had two periods of residence at Marrâkush, where he was employed in the Steward's department of the royal household. Later, he lived for a time at al-Dîdâtâ (Mazagan), as a customs official. He then stayed successively at Tangier and Fes, and, at the end of his life, returned to his native town, where he devoted himself to teaching. At his death, he was buried in the cemetery at Salé situated outside the gate known as Bâb Ma'allâka. In short, al-Nâşir was a minor official under the Sharîfs, and at the same time a man of letters and a historian. Apart from his historical writing, which gained him a name even outside Morocco, he left several works which without doubt would have sufficed to draw attention to him and to assure him an honourable place among contemporary Maghribi men of letters. These are, in addition to six short works (Chorfa, p. 353 n. 1); i) a commentary on the Shâmak-şâkhîyya, a poem by Ibn al-Wannân, which he called Zahr al-Âdân min Ithâbik Ibn al-Wannân (lithographed at Fâs in 1314/1896); ii) a survey of the schisms and heresies of Islam, entitled Ta'žîm al-Minna bi-Nusrat al-Sumna (Ms. Rabat; cf. Catalogue, i, 23); iii) a monograph on the alleged sharîfi house of the Nâşiriyya, to which he himself belonged, entitled Ta'âl al-Mushtari fi'l-Nasa'î al-Dîsîrî (lithographed at Fâs; French summary by M. Bodin, La Zoïa de Tamagrt, Archives Berberes, 1918). This work, which the author completed in 1300/1881, is an excellent history of the zâwiya of Tâmgrot, containing a great deal of interesting information which compensates for the lengthy arguments by which the author seeks to demonstrate the authenticity of the family's genealogy.

The major work of Ahmad al-Nâşirî is the Kûdâb al-Istikâşâ il-Âdâbâr Duwal al-Maghrib al-Âzîz. Its publication was an unprecedented event in Moroccan historiography. The author produced, not a chronicle of limited scope, but a general history of his country, printed, moreover, in the Orient. Hailed, ever since its appearance, by the orientalists of Europe, this work speedily attracted the attention of the North African historians, who frequently had recourse to it in the course of their studies—the more so when a French translation, in the Archives Marocaines, rendered the last part of the work, containing the history of the ‘Alid dynasty, available even to non-Arabists. It was quickly realised that this chronicle was akin to other productions of western Arab historiography; it was no more than a compilation, the main virtue of which was to have combined in a connected narrative the fragments of political history scattered throughout the chronicles and the biographical anthologies previously produced in the country. But it must be recognized that al-Nâşirî was the first of his countrymen to deal exhaustively with a subject which his predecessors had treated only in part. This, however, was not his original aim. Elsewhere (Chorfa, 357-60) it has been explained that the starting-point for the compilation of the Kûdâb al-Istikâşâ was a work of considerable length on the Marinid dynasty of Morocco, composed mainly with the aid of the historical works of Ibn Abî Zarî and Ibn Khaldûn, and entitled Kâfi al-Arin fi Luyâh Bani Marîn. His successive transfers from one capital of Morocco to another enabled him to extend his knowledge of the sources for the history of other Moroccan dynasties, and he conceived the idea of writing a full history of Morocco. He completed his work on 15 Djamâdâ II 1298/15 May 1881, and dedicated it to the reigning prince Sultan Mâwlây al-Hasan, but received no reward for his action. On the death of this ruler, the author decided to have his history printed at Cairo, after bringing it down to the accession of Sultan Mâwlây ‘Abd al-Azîz, and the Istikâşâ duly appeared at Cairo in four volumes in 1312/1894.

For an analysis of the Arabic historical sources of al-Nâşirî, and for a list of the works from which he adapted or quoted verbatim numerous passages, the work previously cited should be consulted. It is
AHMAD AL-NASIRI — AHMAD PASHA BONNEVAL

sufficient to say here that, apart from documenting his work from the Arabic sources, he was the first Moroccan chronicler to call on European sources which, however, only became known to him by chance. These were the history of Mazagan under Portuguese domination, entitled Memorias para historia de praza de Mazago, by Luis Maria do Conto de Albuquerque de Cunha, Lisbon 1684, and Description historia de Marruecos y breve resena de sus dinastias, by Manuel P. Castellanos, Santiago 1878; Orihuela 1884; Tangier 1898.

In the presentation of his history, al-Nasiri follows the usual method of his fellow-countrymen but he does occasionally demonstrate a critical sense. On the whole, however, he gives the impression of being a historian by accident, but a man of letters by vocation. Sometimes he gives indication of considerable intellectual independence and breadth of outlook. His style is lucid and polished, and he rarely resorts to the artificial use of metaphor and rhymed prose. He gives the impression of being the modern Moroccan historian who has perhaps handled his language with the greatest ease and elegance. Vol. iv of the Arabic edition of the Istiḥṣāṣ has been translated by E. Fumey, with the title of Chronique de la dynastie alaouite au Maroc, in Archives Marocaines, Vols. ix and x, Paris 1906-7. The remainder has been translated in the same journal, Vols. xxx ff., Paris, 1923-35, by A. Graulle, G. S. Colin, I. Hamet and the sons of the historian himself.

AHMAD PASHA, Ottoman governor of Baghdad, son of Hasān Pasha (q.v.), also governor of Baghdad. In 1715 he was appointed governor of Shahrizur and Kirkūk, and subsequently of Baṣra; in 1719 he was made vizier. After the death of his father (at the beginning of 1724) he was appointed governor of Baghdad and charged with the continuation of the expedition undertaken by the former against the Persians. In the spring of 1724 he took Hamadān, and although he was defeated (owing to the desertion of the Kurdish chieftains) by Ashraf, the Ghulayr ruler of Persia, he achieved in 1727 favourable terms, acquiring for the Ottoman empire Kirmānshāh, Hamadān, Tabriz, Rawan, Nakhībewān and Tīfīl. After losing these conquests to the Šālaḏwī Taḥmāš, Ahmad Pasha undertook another campaign and captured Kirmānshāh and Ardalān, and in 1732, after winning the battle of Kurījāk, reached Ḥamadān. By the treaty of 1732, some of the conquered territories were kept by the Ottomans, others returned to Persia. Hostilities, however, were soon resumed and Ahmad Pasha had to defend Baghdad itself from Nādir Shāh. In 1733 he was made governor of Baṣra in addition to Baghdad. The following year he was transferred first to the governorship of Aleppo, then to that of Rakkā. After the death of Köprülü-zade ʿAbd Allāh Pasha, he, though retaining the governorship of Rakkā, was made commander-in-chief in the east and succeeded in reaching an armistice with Nādir Shāh.

He was appointed governor of Baghdad for the second time, and was engaged, in addition to the Persian affairs, in subduing rebellious tribes. He died in 1747, on his return from an expedition against the Bakhūn ruler Salīm, and was buried at the side of his father near the tomb of Abu Hanīfa. He had governed Baghdad first for a period of eleven, and on the second occasion for twelve years.

AHMAD PASHA KARA, Ottoman grand vizier under Sulaymān I. He was of Albanian origin, was educated in the palace and rose to the post of Kapid-i bashi, mir-i ʿālem (in 927/1521) to the grand-vizierate.—According to the historian himself.

On the whole, however, he gives the impression of having the wish to reappoint Rustam Pasha, governor of Egypt, the sultan's main motive seems to have been his intrigue against ʿAlī Pasha, governor of Egypt, the sultan's main motive seems to have been his wish to reappoint Rustam Pasha, his son-in-law, to the grand-vizierate.—According to Hādīkāt al-Dīwānī, i, 143; Sīdīl-i ʿOṯmānī, i, 259, Ahmad Pasha married Fāṭima ʿUṯman, daughter of Selim I. He began to build a mosque near Top Kapl, which was, however, finished only after his death.

AHMAD PASHA BONNEVAL. Claude-Alexandre Comte de Bonneval was born in 1675 into a noble family of the Limousin. During serving with
great distinction in the French army at the beginning of the War of the Spanish Succession, in 1704, regarding himself as insulted, he changed sides and soon won a European reputation as a general in the Austrian service under Eugene of Savoy in a succession of campaigns against his own countrymen, the Pope, and finally the sultan, being wounded at Peterwardein in 1716 and participating in the siege of Belgrade in the following year. He later, however, fell out with Eugene and, after being imprisoned for a year, in 1727 fled to Venice, whence, after offering his services in vain to various powers inimical to Austria, he resolved to place them at the disposal of Ahmed III. In 1729 he accordingly travelled by way of Ragusa to Bosnia Sarayli, where, to avoid being extradited to Austria, he turned Muslim, taking the name Ahmed; and after the accession of Mahmud I was first given a daily allowance while resident at Gümüldüje in Thrace, and then, in Sept. 1731, summoned by the grand vizier Topal 'Ogmen Pasha, who aimed at training the Ottoman army on European lines, to reform the oğlak of the khumbaradžis. Although on 'Ogmen Pasha's fall in the following April, Bonneval was at first neglected by his successor Hekim-oghlu 'Ali Pasha, in 1733 the latter sought his advice on the course to be followed by the Porte in relation to the problem of the Polish succession, and in Jan. 1735 appointed him Khumbaradži Bašçi with the rank of a pasha of two fugals (mîrdrîån). After the dismissal of 'Ali Pasha in July of the same year, however, Bonneval was excluded from the counsels of the Porte until 1737, when he was again called on by Muhîsin-zade 'Abd Allâh Pasha to advise on the conduct of the war against Austria. But although he eventually accompanied the grand vizier Yeğen Mehmed Pasha to the front, a plan he had put forward for the fomentation of a revolt in Hungary was a failure, and on his return to Istanbul in 1738 he fell from favour and in the following year was deprived of his command and exiled to Kastamonu. Moreover, although he was restored in less than a year, he never regained his former influence, and up to his death in 1747, by which time he was casting about for means to return to France, he was employed only in the continued management of the khumbaradžis and in furnishing the Porte with comments (some of which have been preserved in Turkish translation) on European political developments. He was buried in the cemetery of the Mewleül-khane in Galata, and succeeded in his command by his adoptive son, also a French convert, who went by the name of Sîleymân Agha.

**AHMAD PASHA,** called **BURSALI,** Ottoman poet of the second half of the 15th century, the most important after Seyyidl and before Nedjatl. He was the son of the bâetti 'âsher Well al-Din b. Ilîyas (who claimed descent from Hüsâny) and was most probably born in Adrianople (according to some authorities in Brusa). He was appointed müdderris at the madrasa of Murad II in Brusa and in 855/1451 succeeded Molla Khedim in the latter's place. After the accession of Muhammad II he became bâetti 'âsher, and tutor of the new ruler, obtaining the rank of vizier. He accompanied the sultan during the conquest of Constantinople. Though his wit made him a great favourite of the sultan, he fell into disgrace (allegedly because of a love affair with a favorite of the sultan, but possibly merely in consequence of the sultan's well known capriciousness) and was held in custody, but was pardoned and appointed as mučelâvî of the Orkhan and Murâd mosques in Brusa, afterwards even as sanâdjak beyî of Sultan Ömmü, Tire and Ankara, and after the accession of Bâyâzid II, as sanâdjak beyî of Brusa. He took part in the suite of Sinân Pasha, beylerbeyî of Anatolia, in the battle of Aghacayiri against the Mamluks (8 Ramadan 893/17 August 1488; cf. Sa'd al-Din and Hammer Purgstall). He died in 902/1496-7 in Brusa; the ruins of his turbe could be seen not long ago in that town.

Among his poems there are many composed for Mümmâdad II, Bâyâzid II and Sultan Ömmü; he also composed a dirge on the death of Mümmâdad II's son, Mustaфа. He was closely connected with various scholars of his time, and while governor of Brusa, he drew into his entourage poets such as Harîrî, Resmü, Mîrî, Çâkhsîdîrî Şeykhîlî and Shehdi. Ahmed Pasha was influenced by Turkish poets such as Ahmedî, Nîâyî, Melliî and especially Şeykhîlî and 'Atâli (cf. Yeni Meşgîma, 1918). Like the other poets of his age, he was also under the influence of Persian poetry (his models were especially Salmân Sâwâdî, Hâféz, Kamîl Khudîândî and Kâtîbl); on the other hand, the very widespread opinion (which we find for the first time in the Źëdzhûr of Hasan Celebi) that he began his poetical career by making nasîres on some poems of 'Ali Shîr Nawâ'î is quite erroneous (cf. M. Fuad Köprûlî, in Türk Yurdu, 1927, no. 27; idem, Türk dili ve edebiyati hakkında araştırmalar, Istanbul 1936, 264 ff.). Ahmed Pasha was acknowledged as the greatest poet of his day and was imitated by many poets of the late 15th and early 16th century; and his influence can be felt even after his poetry lost its preponderant position owing to the new trends initiated by Nâşîtâ and especially by Bâktî. Apart from his divân, which was compiled by order of Bâyâzid II, and the numerous manuscripts of which are rather different from each other, Ahmed Pasha's poems (some of them written in Arabic and Persian) are to be found also in the great nasîre collections of the 15th and 16th centuries.

(HALIL İNALÇIK)
himself by capturing Koyun Hisar (1461). In 1469-72 he subdued the mountainous part of Karaman-ili and its coastal area, taking 'Ala'iyya in 1471, Silifke, Mokan, Gorigos and Lulye (Lulun) in 1472. In 1472 a dangerous attack of the Ak Koyulu forces, which, led by the Karamanid prince Piri Ahmed, had advanced as far as Hamsili-ili, was repelled by Gedik Ahmed, who subsequently reconquered Karaman-ili. According to Neshri, 211, he played an important part in the victory over Uzun Hasan [q.v.] in 878/1473. Later we find him in Icliili fighting successfully against the Karamanid princes who had retaken it with the help of a Christian fleet. During this campaign Ahmed captured Minan, Silifke, massacred or banished the local chieftains in Tashili (1473-4). Having been the second vizier up to this time, he became the first after the execution of the Grand Vizier Mahmud in 1474 (Kemal Pasha-zade). He was sent by Mehmed II against the Genoese in the Crimea, where he took Kaffa (June 1475), Soldaya and Tana, and besieged Mangup (which was to be captured later by Ya'qub Beg (December 1475)). Ahmed also signed an agreement with the new khan Mengli Giray whom he had saved from prison in Kaffa, by which Mengli Giray accepted the sultan's protection. Ahmed's self-confidence roused the sultan's displeasure and when he dared to disagree with the sultan on the subject of an expedition to Scutari in Albania, he was imprisoned in Rumeli Hisar (1477). In 1478 he was released and made Kapudan of the fleet. In 1479 he seized Santa Maria from Leonardo Tocco (who fled to Apulia), and setting sail from Valona, he captured Otranto on 21 August 1480. When in the next spring he gathered in Valona a new army to make further conquests from Otranto, he was persuaded to uphold the new sultan, Bajezyd II, against his brother Djem Sultan, and he played a decisive part in securing the throne for Bajezyd. But as he could not, or would not, capture Djem in his flight to Mamlik territory, the suspicious sultan put him into prison. This, however, led to a tumult among the kapti-bulu, so that he had to be rehabilitated. After the failure of Djem's second attempt to seize the throne, Bajezyd felt himself strong enough to put Ahmed to death (6 Shawwal 887/18 Nov. 1482), though this caused a new tumult among the kapti-bulu.—A district in Istanbul is called after Gedik Ahmed because of his pious foundations there and the mosque of Gedik Ahmed in Afyon is a fine example of old Ottoman architecture.

Angiolello), 'History of Turcosca, Buckeeao, 1910; Hammer-Purgstall, index; S. Fisher, 'The Foreign Relations of Turkey', Urbana 1948; Fr. Babinger, 'Mehem der Eroberer, Munich 1953; IA, s.v. (by M. H. Yinan). (Halil Inalcik) AHMAD PASCHA KHA'RIN, Ottoman Vizier. Georgian in origin, Ahmed entered Selim I's palace as ic-oglan; later, as bayik emir-i dokhr he took part in the campaign against the Mamliks in 1516-7 and became beşlerbeg of Rüm-ili in 1519. In the campaign of Suleyman I against Belgrade Ahmed's plan of operations was accepted. Accordingly he took Bogürdelen (Sabac) (2 Shaw 927/8 July 1521) and invaded Syria. As a reward for his services in the siege of Belgrade the sultan appointed him vizier of the dieçin (autumn of 1521). In the campaign against Rhodes he, as commander-in-chief, was responsible for the successful operations during the landing and the siege. Subsequently he negotiated with the knights of St. John the terms of surrender of the castle (2 Shawar 929/21 Dec. 1522). Ahmed Pasha was instrumental in causing the fall of the Grand Vizier Piri Mehmed Pasha [q.v.], and expected to be promoted from the third viziership to the first, as the second vizier was in Egypt. But, contrary to custom, the grand vizierate was given to the kha'ss oda-beg Ibrahim [q.v.]. Deeply disappointed Ahmed asked the sultan for the governorship of Egypt (19 August 1523). There he reconciled the discontented Mamlik as well as the bedouin chieftains who were in a state of great agitation after the death of Khayr Beg, Suleymán, still under Ibrahim's influence, appointed Kara Mesi governor of Egypt and charged him with Ahmed's execution. On discovering this, Ahmed decided to declare his independence with the title of Sultan (January 1524). He massacred and dispersed the Janissaries in the castle of Cairo and established relations with the Christian powers against the Ottomans. Suleymán sent an army to Egypt under the vizier Ayas Pasha, while Ahmed's troops were secretly encouraged to turn against him. One of his officers, Kadi Mehmed Beg, made an attempt on his life in a public bath. Though wounded, Ahmed succeeded in escaping to the Banû Bakr Bedouins, who, however, finally delivered him to be beheaded.

Bibliography: Djelal-zade Mustafa, Tabakht al-Mamlûk we-Dere'azat al-Maslîk (MS Fâth 4423); Süheyl, Ta'wil-i Misr al-Dîdât, Istanbul 11457; Perdiin Beg, Mumi, Istanbul 1274, 507-40; Pečewi, l. 71-9; Marino Sanuto, I Diari, vols. XXXV-XXVIII, Venice 1879-1903; Hammer-Purgstall, index; J. W. F. Stripling, The Ottoman Turks and the Arabs, Urbana 1942. (Halil Inalcik) AHMAD RAF'IK (he assumed the family name of Arîkai), Turkish historian. He was born in Beshiktash, Istanbul, in 1880, and educated in the Kuleli military lyceum and the military school (Harbiye Mektebi), became an officer, but for most of the time was engaged in teaching geography and French. In 1910 he was appointed to the General Staff, as editor of the 'Ashkeri Meclis'ı, in which he himself published articles on military subjects. After becoming a member of the Ta'wil Endjunên, he retired and devoted himself entirely to his studies. From 1917 to 1933 he was professor of history in the University of Istanbul. He died on 10 Oct. 1937. He wrote a very large number of historical books, partly of a scholarly, partly of a more popular character, and published many documents concerning Ottoman history from the archives. Among his best known books are those on life in old Istanbul (Herc X unc.—or respectively XI unc., XII unc., XIII unc.—Aş'îrda Istanbul Hayatlı), and the series of monographs: Gömleğ 'Aş'îrda Türk Hayatlı. Numerous articles by him were published in TOEM, Yeni Meclis'ı, Hayatî, Edebiyat Fakültesi, Türkîyat Mecmuası.

Bibliography: Reşad Ekrem Koç, Ahmed Rafik, Istanbul 1918; Ismail Habib, Edebiyat Turki, Istanbul 1942, 384; O. Spies, Die türkische Prosaliteratur der Gegenwart, Berlin 1943, 83-7 (with full list of his works). (A. Tietze) AHMAD RASIM, Turkish writer, b. 1864 in Sargiuzel or Sarligz, a quarter of Fâthî, Istanbul, d. 21 Sept. 1932 in the island of Heybeliada and buried there. In early life he lost his father Bahâ al-Din, who belonged to the family of Mentegh-oglu from Cyprus, and was brought up by his mother.
From 1292/1875 to 1300/1882-3 he attended the school Dar iil-Shafaka in Istanbul, where he was attracted to art and literature and decided to become a writer; and to this profession (or, as he himself calls it, "the Sublime Porte Road", Bâb-i 'Ali Diâdêssî) he remained faithful throughout all later political changes. Like many other writers he began as a journalist, and almost all the more important Turkish papers received contributions from his pen. He afterwards collected his numerous articles and sketches, for example in the two volumes of Mahâllât ve-Mûşâhabâtî (1325) and the four volumes entitled 'Omrî Edâbi (1315-19). The latter is not an account of his life but reflects his spiritual development and the feelings and emotions reflected in his publications of different years.

Ahmad Räsim's output became in time very extensive; in all, he is said to have produced about 140 works of larger or smaller size. Nevertheless he was not a polygraph in the depreciatory sense of the word; before dealing with a subject he always studied it thoroughly and then wrote on it seriously, or sometimes in the lightly humorous fashion of which he was a master, or again in a pleasing conversational way, but always with artistic feeling and in his particular style, which was new and independent of existing schools and coteries. He had a great success with his public; he himself created a school of writers, and his influence has been strongly felt in Turkish literature.

His literary work in the fields of the novel, short story and tale, includes his early novels Meyî-i Dîl (1890) and Teğribî-i Hayâtî (1892) (short analysis of both in P. Horn, Gesch. der Türkischen Moderne, 46 f.), the patriotic novel Maşhîkî-i Hayâtî (1901), the stories Teğribîsî 'Asâkî (1311) and Mehteb Arkaşağîm (1311), a little later Nâhâm (1315) and another patriotic novel *Aşker-oghlu (1315) and the more lyrical *Kıdâbe-yi Gham (1315) and *Andâlî (in verse).

At the same time he had from the first a preference for history and sought to arouse an interest in it among his fellow-countrymen by presenting his carefully prepared compilations in popular form. After earlier works on the history of Rome, of civilisation, etc., he devoted himself to the history of Turkey, and produced a work on Turkish history from Selim II to Murâd V, entitled İstibdadât-i Hayâtî (1911-21) and a general survey, *Ötlümânî Ta'lih-i (1936-30). A valuable supplement to these is formed by his "City Letters", Şehir Mehtablarî (1328-29), which contain an unsurpassed description of old Istanbul life in all its variety, written in a vivid and stimulating manner. In Menâkıb-i İslâm (1325) the Muslim festivals, mosques, and other religious matters are dealt with. To the history of literature belongs his book on *Şınâ (e.g.), which was intended as an introduction to the history of the Turkish Moderns (Matbâ'âtî Ta'lihine Mehtâgal. Ihl büyük Muhtar-rîlerden Şınâ, 1927). Matbâ'âtî Khâfirînardan (1924) contains his personal recollections of Turkish writers, and *Fâlakâ (1927) of his own schooldays and the old system of education in general.

Ahmad Räsim was also a prolific writer of school books on grammar, rhetoric, history, etc., and composed also a work on model letters (İlahîî *Khasîne-yi Mehtebî 1887, 5th ed. 1938). In addition he translated many western works, and a large collection from his early period is called "Selections from Western Literature" (Edebiyât-i *Ghârbiyeyden bir Nebâî, 1887). He was a talented composer as well, and left 65 songs now preserved in the Dâr ül-Shafaka library.

For this great literary activity Ahmad Räsim required a measure of freedom which did not exist under 'Abd al-Hâmid II, and such as he could hardly have enjoyed at all as a state official. He was, however, twice a member of a commission of the Conseil de l'Instruction Publique (Endijîmen-i Teşîî bî ve-Mu'dâyanâ); but only for a short time. He showed his interest in religious matters in 1924, when after the abolition of the caliphate he wrote an article in Wabîtî on 4 March 1924 on the relics (amâna, müba'âlâtî) of the Prophet, cloak (şâkmârî), banner (lîwâ), praying-carpet (sadîfîsâda), etc., which also appeared in Cairo and Damascus in Arabic. He proposed to make these relics accessible to the public in a museum (cf. C. A. Nullino, in OM, 1924, 220 f.). From 1927 he was a deputy for Istanbul along with men like 'Abd al-Ḥâki Hâmid and Khâlîl Edhem (cf. OM, 1927, 416; 1931, 227 and Mehmed Zeki, Encyclopédie biographique de Turquie, i, 1928, 23 and ii, 1929, 88), but suffered from ill-health in his last years.

(by S. E. Suyavuşgil); Suat Hizarîlî, Ahmed Rasimî (Türk Klasiykerî, 30), 1953.

AHMAD RASIM, Ottoman statesman and historian. Ahmad b. Ibrâhîm, known as Resmi, came from Rethymno (Turk. Resmi; hence his name) and was of Greek descent (cf. Hammer-Purgstall, viii, 1939, 1358-62). He was born in 1765 and in 1767 he was sent to Europe, this time as ambassador to the Prussian court in Berlin. He also wrote a very full account of this mission, which early attracted attention, in the West also, for its views on Prussian policy, its description of Berlin and its inhabitants and all sort of observations on related topics. After filling a number of important offices he died on the 2 Shawâdî (1197) in Istanbul. Where he was educated, married a daughter of the Re's Efendi Ta'âlîqî Mustâfâ and entered the service of the Porte. He held a number of offices in various towns (cf. *Sidîgî-i *Öltümânî, ii, 380 f.). In Safar 1177/Oct. 1773 he went as Ottoman envoy to Vienna and on his return made a written report of his impressions and experiences. His book on *Şinnâ (e.g.), which was intended as an introduction to the history of the Turkish Moderns (Matba'âtî Ta'âlîqine *Mehtâgal. *Ilk büyük *Muktar-rîlerden *Şinnâ, 1927). Matba'âtî Khâfirînardan (1924) contains his personal recollections of Turkish writers, and *Fâlakâ (1927) of his own schooldays and the old system of education in general.

Ahmad Räsim was a prolific writer of school books on grammar, rhetoric, history, etc., and composed also a work on model letters (İlahîî *Khasîne-yi Mehtebî 1887, 5th ed. 1938). In addition he translated many western works, and a large collection from his early period is called "Selections from Western Literature" (Edebiyât-i *Ghârbiyeyden bir Nebâî, 1887). He was
Kaynardje (1769-74) a treatise entitled Khuldset ul-I’tibdr, in which as a participant in the campaign and eye-witness, he gave his impressions of this important period in the history of Turkey. Of especial value are his biographical collections, particularly his Khaufs ul-Rüeså? (composed in 1157/1744) with the biographies of 64 re’s ul-kullâb (re’s efendiler) and his Hamilet ul-Küberå?, in which he gives the lives of the chief eunuchs of the imperial harem (hizâlar askalar). Of a similar nature is his continuation (written in 1172/1760) of the Wefayât of Mehmed Emin b. Hâdijî Mehmed called Alay-beyl-zâde, in which he gives in twelve lists the deaths of famous men and women (cf. the accurate list of contents in Hammer-Purgstall, ix, 187 f.). He also wrote several other works on geology and proverbs.

Bibliography: Siqâlii-i Othmâni, ii, 380 ff.; Brusali Mehmed Tâhir, ‘Othmâni mû’dûsîleri, iii, 58 f. (with list of works); Babinger, 309-12 (add to the list of the MSS of his sefer-name’s: Berlin, Or. 4° 1502, fol. 27v-46v (incomplete), Paris, Suppl. Turc 510 (?); Paris, collection of Cl. Huart and the MSS described in Istanbul Kitâbîklâri Tarih-Cografya Yazmalari Kataloglari, i, no. 483; add also the Polish trans. Podroz Resmi Ahmd al-Mulk Ghazi ‘1-Dîn Khan caused him to be assassinated by KizilbashI conspirators at Kudan in 1751. He was crowned at Kandahar where coins were struck in his name. Like the Persian conqueror who served as his model, he organized a special force dependent on himself, known as the Ghulâm Šâhûs, a heterogeneous body recruited from Tâdîks, Kizilbash, and Yûsufzays; but he naturally relied chiefly on his immediate followers the Durrâns. With Kandahâr as his base he easily extended his control over Ghaznî, Kâbul, and Peshâwâr. His aims were to consolidate his power in Afghanistan and to increase his prestige and provide employment for his turbulent followers by means of foreign wars in which course he was favoured by the anarchical conditions prevailing in India. Regarding himself as heir to Nâdir Šâh’s eastern dominions, he laid claim to the provinces which Nâdir had wrested from the Mughul emperor. In accordance with this policy, but with no intention of founding an empire in India, he invaded India nine times between 1747 and 1799. He set out from Peshâwâr on his first Indian expedition in December 1747. By January 1748 Lahore and Sarhind had been captured. Eventually Mughal forces were sent from Delhi to resist his advance. Lacking artillery and greatly outnumbered he was defeated at Manûpur, in March 1748, by Mu’nîn al-Mulk, the son of the waiz Kamar al-Dîn, who had been killed in a preliminary skirmish. Ahmd Šâh retreated to Afghanistan and Mu’nîn al-Mulk was appointed governor of the Pandîjkât. Before Mu’nîn al-Mulk could consolidate his position, Ahmd Šâh, in December 1749, again crossed the Indus. Receiving no reinforcements from Delhi Mu’nîn al-Mulk was forced to come to terms. In accordance with instructions from Delhi, Ahmd Šâh was promised the revenues of the Čahâr Makäll (Gudrâät, Awrangbâd, Siâlkoit, and Pasûr) which had been granted by the Mughul emperor Muhammâd Šâh to Nâdir Šâh in 1739. While he had been absent in the Panjâb, Nûr Muhammâd Alîzay, a former Afghan general of Nâdir Šâh, had conspired to dethrone him. On his return to Kandahâr the conspiracy was suppressed and Nûr Muhammâd executed. He next turned his attention to his western frontier. By 1165/1751 Harât, Maqâhid, and Nîshâpur had been captured. Mirzâ Šâhrûkh, the grandson of Nâdir Šâh, was forced to surrender several districts bordering on Harât and to acknowledge Afghan suzerainty on his coins. In the same year Ahmd
Shah came into conflict with the rising Kadjar power but was repulsed at Astarabad beyond which he was unable to advance. He was more successful across the Hindú Kush where he annexed Balkh and Badakhshán after which the Oxus roughly formed his northern frontier.

The non-payment of the revenues of the Čahár Makhñál was the reason for his third Indian expedition of 1752-3. Lahore was besieged for four months and the surrounding country devastated. Mu'in al-Mulk, without reinforcements, was defeated in March 1752, but was reinstated by Ahmad Sháh to whom the emperor formally ceded the two súbas of Lahore and Multán. During this expedition Kashmír was annexed to the Durrání empire. By April 1753 Ahmad Sháh was once more back in Afghanistan. Mu'in al-Mulk found the Pandjáb a troublesome charge and his death in November 1753 only served to intensify the anarchy. All power was for a time in the hands of his widow Mughalání Bégásm whose profligacy led to constant rebellions. The Mughal wástr 'Imád al-Mulk took advantage of this anarchy to recover the Pandjáb for the empire and entrusted its administration to Adína Beg. Ahmad Sháh immediately set out to recover his lost provinces. Lahore was reached towards the end of December 1756, and, after an unopposed march, Delhi was entered on 28 January 1757. The city was plundered and the defenceless inhabitants massacred. A similar fate befell the inhabitants of Mathúra, Brindában, and Ágra. Towards the end of March 1757, an outbreak of cholera amongst his troops forced Ahmad Sháh to leave India. Before leaving he married Hadrát Bégám, daughter of the late emperor Muhammad Sháh, while his son Túmír was married to Zuhra Bégám, daughter of the puppet emperor 'Aliamgír II. The territory of Sarhind was annexed to his empire. Nagáb al-Daulá, the Rohillá leader who had supported him, was left in charge of Delhi and Túmír remained as viceroy of the Pandjáb. He had no sooner left India than the Sikhs, together with Adína Beg, rose in revolt against Túmír. Early in 1758 Adína Beg invited the Marathás to expel the Afghans from the Pandjáb. This was accomplished by the Marathás who actually crossed the Indus and held Pesháwar for a few months. (The evidence which corroborates Grant Duff's History of the Mahrattás, 1921, 507, is to be found in the Persian manuscript agháráts (news-letters) in the archives of the Bharat Íthasa Sambhodhí Mandal and in the Chandráchuda Daśtar, i, 1920, ii, 1934. See also H. R. Gupta's Studies in Later Mughal History of the Panjáb, 1944, 175-6.)

These events brought Ahmad Sháh to India a fourth time (1759-61). Before setting out he marched against Náṣir Kán, the Brahíí chief of Kalát in Balúcistán who had declared his independence. Despite Ahmad Sháh's failure to capture Kalát, Náṣir Kán agreed to acknowledge his suzerainty and to furnish contingents for his army. The Marathás rapidly evacuated the Pandjáb before the Afghan advance and fell back on Delhi. Sádáshív Bhíí, the brother of the Marathá peshwá, was entrusted with the formidable task of ousting the Afgháns from northern India. The Marathás had not only to face a coalition of the northern Muslim chiefs who had joined forces with Ahmad Sháh but they had to fight without the assistance of the Rájdúps and other Hindu powers whom their ex- tortionate demands for chaukh and sardeshmukhi had estranged. The Marathás occupied Delhi (22 July 1760) but it was of little use as a base since food, fodder, and money were unprocurable. The situation, so far as supplies were concerned, was temporarily relieved by the capture of Kunjípúra (17 October 1760). But this advance proved disastrous as the Afghan army crossed the Jémmn to cut off Marathá communications with Delhi. The Bhíí now decided to entrench his forces at Panipat. Deprived of all supplies by more mobile forces he was compelled to leave his entrenchments and attack the Afgháns. Although the Marathás fought desperately they failed to withstand the fierce Afghan onslaught under Ahmad Sháh's expert generalship and were routed with enormous losses at Panipat on 14 January 1761. Ahmad Sháh made no attempt to consolidate his position and in March of the same year was once more on his way back to Afghanistan.

The Afghan victory at Panipat had far-reaching consequences. It enabled the Nísháám to recover from his defeat at Údgir (1760), and probably saved the state of Hyderábád from extinction. It also contributed to the rise of an independent Muslim power in Mysore under Haydár 'Allí. It is usual to regard Panipat as a temporary set-back from which the Marathás rapidly recovered. This view ignores the real importance of the victory which granted the English the respite needed for the consolidation of their power in Bengal.

After Panipat the main factor in the history of northern India was the growing strength of the Sikhs whose attacks on Ahmad Sháh's lines of communication gradually led to a cessation of the Afghan menace. It was against the Pandjáb Sikhs that his sixth expedition (1762) was directed. They were defeated with enormous slaughter near Grúddjárwal in a battle known to Sikhs as the Ghallghára. Ahmad Sháh remained in the Pandjáb for nine months during which Kashmír whose Afghan governor had revoked was re-annexed to his empire. But the Sikhs were by no means crushed. Their attacks on Afghan garrisons necessitated three more expeditions between 1764 and 1769. Ahmad Sháh had also to contend with serious revolts nearer home. The Aymák near Harát rebelled in 1763 and, in 1765, serious disturbances broke out in Khurásán. At Ahmad Sháh's death, in 1184/1773, his empire roughly extended from the Oxus to India and from Tibet to Khurásán. It embraced Kashmír, Pesháwar, Multán, Sind, Balúcistán, Persian Khurásán, Harát, Kandáráh, Kábul, and Balkh. Even in his lifetime it was apparent that he would be unable to maintain distant conquests like the Pandjáb. Balúcistán was practically independent, and Khurásán was obviously destined to become a Kádjar possession. Under his successors the Durrání empire rapidly disintegrated.

Bibliography: Abd al-Karím 'Alawi, Ta'ríhk-i Ahmad, Lucknow 1206 (Urdu transl.: Wa'háli-i Durrání, Cawnpur 1929; Mirzá Muhammad 'All, Ta'ríh-i Sultáni, Bombay 1928; O. Mann, Quellenstudien zur Geschichte des Ahmad Sáh Durrání, ZDMG, 1898; Storey, i, 395 (on the historians of Ahmad Sháh); H. Elliot and J. Dowson, History of India, viii. London 1877; M. Elphínstone, Caubul, ii. App. A., London 1839; H. R. Gupta, Studies in Later Mughal History of the Panjáb, Lahore 1944; C. J. Rodgers, Coins of Ahmad Sháh Durrání, J. As. Bengál, 1885; J. The period from 1878-84 witnessed the amir of many. In 1874 he assumed the title of amir shaded for Letters (Maktilbdt), several sufl orders, he avoided their extravagances, Laduniyya; Mukdshafdt Ghaybiyya; Risala fi Ithbdt al-Mabdd* wa'l-Ma^dd, where his tomb is an object of veneration to this day. Shaykh Ahmad wrote a number of tracts on religious topics, viz., al-Mabda\* waw-Ma'add (Delhi 1312); Risala Tahliyya, published as an appendix to the Lucknow edition of his Maktubbd; Ma\*rim Ladauniyya; Mwagghafat Shaybqibyya; Risala li l\*baddi al-Nubuwwa; Adadh al-Muradi; Shahr-i Rau\*sa\*yi K\*hadja Baki bi'illah, etc. But he is chiefly remembered for Letters (Maktubbd), which he wrote (in Persian) to his disciples and other persons and in which he explained a large number of points, ranging over a wide area of Islamic faith and practice. These letters have exercised a great influence in favour of orthodoxy and, in their collected form, constitute one of the most important classics of religious literature produced in Muslim India. It was in recognition of his services to the cause of orthodox Islam that Mulla 'Abd al-Hakim al-Siyalkot\* [q.v.] gave him the title (lakab) of Mudjaddid-i Alf-i Thanl, i.e., the Renovator of Islam who appeared at the beginning of the second millennium of the Islamic era. Even in his life time, his influence spread as far as Afghanistan and Central Asia. After his death, it deepened still further, when his descendants and disciples, now called Mudjaddidis, were dispursed, as a result of the unfavourable conditions produced by the rule of the Sikhs in the Panjdb. Although Shaykh Ahmad was connected with several s\*f orders, he avoided their extravagances, especially their pantheistic tendencies; and in fact he tried to bridge the gulf between the monotheistic and pantheistic groups of s\*fs by putting forth the theory of wahdat al-\*shud\* in place of wahdat al-wuj\*d (pantheism). This theory is regarded as his special contribution in the field of religious thought.

**Bibliography:** The Maktubbd, about 530 in number, have been repeatedly lithographed in India (Lucknow 1913; Delhi 1888, 1920; Amritsar 1351-4); Urdu translation by K\*ddi \*lim al-Din, Lahore 1913; Tasaw\*k-i D\*shangiri, Aligarh 1864, 272-3; 308; 'Abd al-K\*dr Badayuni, Munthhabat al-Tawvur-kh, Calcutta 1868; Muhammad H\*shim Kashm\*i, Zubdat al-Muk\*mam, composed in 1037, lithographed at Cawnpore, 126-282; Badr al-Din Sirhind\*i, Hadadh al-Kuds composed in 1057, still in MS, Urdu translation by Ahmad Husayn Kh\*n, Lahore 1922; Muhammad Amin Nakshband\*i, Mahmud\*i Ahmadiyya, composed in 1668.

AHMAD TĀʾIB (see ʿUṭmān-zābī).  

AHMAD TAKUḌĀR (see ʿUṯmāns).  

AHMAD WAḤĪF PĀSHA, (AHMAD WAḤĪF PĀSHA), O Tuṭşīm e șaṭrī nāma and leading Turkish Turkologist, born 23 Shawwāl 1238/6 July 1823, died at Istanbul 22 Sha'ban 1308/2 April 1891. He came of a family of interpreters, grandson of Bulgar-zāde Yahyā Nādi, a dragoman of the Porte converted to Islam, of rūmī origin according to the historian Ṣanāʾī-zāde ʿĀṭā ʿAlāʾ ʿAbdī, of Jewish origin according to A. D. Mordtmann. Ahmad Waḥīf accompanied his father Rūḥ al-Dīn Mehmed ʿAbdī, the Turkish chargé d'affaires in Paris, studied for three years at the Lycée Saint-Louis, and returned at the age of 14 to Turkey where he already had a varied career lay before him (for details see Sīqīlī-i ʿUṭmānī, i, 308). After initial employment on the interpreting staff, his most important posts were as follows: ambassador in Paris (1860); inspector of the Western Anatolian provinces; legendary president of the first and ephemeral Ottoman Parliament of 1876, with the rank of ṯawīr and title of pāşah; twice Grand Vizier (for periods of 25 days and one day respectively); governor-general of Brusa. As a diplomat, he successfully defended Turkish interests at the time of the Russian occupation of the Danubian principalities and the French occupation of the Lebanon. He edited the first Imperial Year Book (1295/1876), and the newspaper *Taṣwīr-i Eḥkār* (in collaboration with Shiḥāṣī). He was responsible for the restoration of the Yeshīl ʿDīmāʾi mosque at Brusa (by the French ceramist Parvīlī) and for effecting the transfer of the Burgaz Owa estates in the Izmir region, which were granted to Lamartine by ʿAbd al-Maḍīd (1849). It was he who was responsible for the celebrated incident in the Paris theatre concerning the production of Voltaire's *Mahomet*.  

A strong personality, he was an energetic, honest and conscientious man, frank to the point of rudeness; at the same time he was whimsical and an eccentric, and possessed a dry wit. Extremely studious, and with long periods of leisure at his disposal as a result of being debarred from office by the enmity of ʿĀli Ṭāḥṣārī, he immersed himself in the library of his famous villa in Rumelihī Ḥiṣār, and there produced works to which, however, he scorned to subscribe his name. Turkish studies were his special province. He was self-taught, but acquainted with Western studies which, paradoxically, he underestimated; as one of the first "Turkicists", he made an impressive contribution to the Turkish purist movement. His *Lehjī-yi ʿOlmānī* (1st edition 1293/1876; 2nd edition 1306/1920), the first Turkish dictionary in Turkish worthy of the name, a concise work of which the fullest use has not yet been made, formed a basis for the work of Shams al-Dīn Sāmī Bey Frasheri and many others (see the preface to the *Supplement* of Barbier de Meynard, i, p. v). His translation, or rather adaptation, of sixteen comedies of Molière (2nd edition in Latin script, 1933) is a masterpiece. (He produced them on the stage at Brusa.) He also translated *Telmaze*, *Gil Blas de Santillane* and the *Micromégas* of Voltaire. In Eastern Turkish, he published Abu 'l-Qāṭār and, in collaboration with Belin, the *Mabkūb el-Kulūb* of Mir ʿAll ʿṢir Nawāt (1828/1872). A collection of proverbs (Aṭālar Sōsū) figures among his other works. For his historical works, see Babinger (see below) and Enver Koray, *Türkiye tarih yazınları* bibliography, Ankara 1932.  

Ahmed Wefīk was buried in the Kayalār ("Rocks") cemetery at Rumelihī Ḥiṣār, allegedly by order of ʿAbd al-Ḥamīd II, but once again there are probably no grounds for this assertion. Ahmed Wefīk's grandfather, who owned estates in the neighbourhood, was buried in the same cemetery. The Sultan's displeasure may be explained by the fact that Ahmed Wefīk had sold land to the American institution Robert College.

(Ş. DENİS)  

AHMAD WAŞİF (see ʿWAṢĪF).  

AHMAD YASSAWI, Turkish sūfī ʿṣāḥīḥ of Central Asia. His life story is shrouded in legend like those of many popular saints. Son of a certain Shaykh İbrahim, he was born at Sayrām (İsfīqāb) in Türkistan during the second half of the 11th century. He lost his father at the age of the family settled at Yasl. There, he began his education (it is said as a disciple of Arslan Baba),
AHMAD YASAWI — AHMADI

Later moving to Bukhara where he became a disciple of the great Shaykh Yusuf Hamadhanī, and eventually succeeded him in 555/1160. He returned to and remained in Yasl until his death in 562/1166.

Ahmad Yasawi's tomb became a place of pilgrimage for kings and princes and was especially venerated by the Turks of Central Asia and the Volga region. A sumptuous mausoleum was erected in Yasl (later known as Turkistan) by Timūr [see Yasl] and the court of Yasawi has never decreased.

Among the Turkish nomads Yasawi's doctrine was adapted to local trends and was strongly influenced by pre-Islamic Turkish creeds and rituals. The 'skīyāt's first hālīta was Arslan Baba's son, Mansūr Ata (d. 594/1197) great-grandfather of Zengī Ata [q.v.]; the second, Sa'd Ata (d. 615/1218), the third Ḥakīm Ata [q.v.]. (d. 582/1188). His other successors also bore the title of atā. Yasawism established itself in Eastern Turkistan, later spread to Mā warā al-Nahr, Khārākim, as far as Buğkāp, Khūrasān and Persia, and penetrated into Anatolia with the migration of Yasawi skīyāhs, among whom Hādīqī Bektāsh and Sālī Saltuk [q.q.v.] are outstanding.

We know that Ahmad Yasawi wrote vernacular Turkish verse in the old syllabic metre in order to popularize and spread his mystic doctrine. But the poems to be found in the extant collection called Dīvān-i Ḥikmet attributed to him (ḥikmet = "religious poem"), can hardly be genuine. The original work of Ahmad Yasawi has not come down to us and the oldest MSS belong to the 17th century. But we can safely assert that these poems reproduce the true spirit and style of Ahmad Yasawi, since we know that the verses of many a mystic leader were often faithfully imitated, for centuries, by later disciples (cf. Yūnus Emre and his followers). The poems in the Dīvān-i Ḥikmet are of a didactic character and express, in popular language, Islamic and mystic precepts. They gave rise to a new genre in Turkish literature: mystic folk literature which, in the following centuries, flourished side by side with secular folk literature and classical literature.

Ardā AHMAD YUKNAKI (the nisba may possibly refer to the village of Yūghnak, south of Tashkent), early Turkish poet of the 12th century, author of the didactic poem in quatrains, ‘Ayašt al-Ḥakā’īh, dedicated to a certain Dād Sipāhsālār Beg. Its subject matter is related to that of Yusuf Khuwājadīh's [q.v.] Kuwatli̇ghū Būlīg; its language is also akin to, though not identical with, that of the Kuwatli̇ghū Būlīg. The content is, however, more Islamic in character, and more Arabic and Persian words are used. It was edited by Nejīb ‘Āsim, under the title Ḥibāt al-Ḥakā’īh, Istanbul 1334. Critical edition by R. Rahmati Arat, Istanbul 1951.

AHO MDI — AHMANDIS

elegy on the death of Sulayman (814/1411) the poet did not neglect to add a prayer for the new sultan. Mbmed, to whom he subsequently dedicated some of his poems. He died at Amasia in 815/1413.

His main works are the following. (1) Iskender-nâme, on the life and deeds of Alexander the Great, the subject matter of which is borrowed from Firdawsi and Nizâmi, but is expanded by many didactic digressions. The language is singularly pure Turkish and the metre is the native parmasb-hipâ. The poem ends with a trivial sketch of Islamic history, the last part of which, however, is a highly important versified history of the Ottomans, the first we have, on which later historians frequently drew. (The story is brought down to different dates in different versions.) (2) Diri Madâne-eh Khursâdî, a mathnâwâi on the theme of the love of a Chinese prince for a Byzantine princess, based on Salâmân Sâwâdlî’s poem of the same title. (3) Tarwîth al-Arnâwî, a didactic mathnâwâi on medicine and preservation of health, apparently written for the edification of Salûyâmân Celubi. (4) A diwân.

AHMANDIS (see SIKKÂ).

AHMANDIS, a dynasty of princes of Mârâgha. Distinction must be made between the eponym Ahmadî and his successors. Ahmadî b. İbrahim b. Wâhsûdân al-Rawwâdî al-Kurdi was a descendant of the local branch of the originally Arab family of Rawwâd (of Azd) established in Tabrîz (see RAWWADIS). In the course of the time the family became Kurdicized, and even the name Ahmadî is apparently formed with an Iranian (Kurdish) diminutive suffix -î. Ahmadî took part in the anti-Crusade of 505/1111. During the siege of Tell Bağûr, Jôcêyn made an arrangement with him and he withdrew from the town (Kâmâl al-Dîn, Ta’rîkh Halab, RHC, iii, 599). Shortly afterwards he left Syria altogether in the hope of winning the succession to the Şhâhî Arman [9.e.] Sûkmân (d. 506/1112). As Sûkmân had subjugated Tabrîz, Ahmadî was probably interested in recapturing the basic fief of his ancestors. According to Sihti b. al-Dawwâlî (RHC, iii, 556), Ahmadî could muster 5,000 horses and the horse revenue amounted to 400,000 dinars yearly. In 510 (or 508) he was assassinated in Bağdâd by the Ismâ’llîs, to whom he had caused much harm (RHC, ibid.; Ibn al-Ahîr, s.a. 510).

The study of his successors is complicated by the variants of their names and titles used in different sources. Ahmadî was apparently succeeded by one of his slaves, bearing the Turkish name Âk Sûnkûr (al-Abâmî) who is often mentioned in the struggles between the sons of Sultan Muhammad (d. 511/1118). In 514 Mas’ûd b. Muhammad appointed his former âtâbek Kasm al-Dawla al-Bursûqûl to Mârâgha, but Sultan Mûhâmûd b. Muhammad restored Âk Sûnkûr (who had come to Bağdâd) to Mârâgha. After the death in 515/1122 of Kûntûghî, âtâbek to Malik Tughrîl b. Muhammad, Âk Sûnkûr was anxious to succeed him; Tughrîl ordered him to raise 10,000 horse and went with him to conquer Ardablî. During the unsuccessful siege of this town, Mârâgha was occupied by Dîvûsh-beg, sent by Sultan Mûhâmûd. Under 516/1128 the Georgian chronicle (Brosset, i, 368) mentions the defeat of the âtâbek of Armân Ağhûndul (Âk Sûnkûr), whom Tughrîl had directed to carry out a raid in Shîrwan. In 522 he was employed to frustrate the intrigues of the Mazyadid Dubays. Under 524 we hear of Âk Sûnkûr, âtâbek to Dâ’dû b. Mûhâmûd, supporting the candidature of this prince. In 526 Tughrîl defeated his nephew Dâ’dû and occupied Mârâgha and Tabrîz (al-Bundârî, 161). Âk Sûnkûr fled to Bağdâd and then helped Dâ’dû’s other uncle Mas’ûd to recoup Ardashâryân. He also captured Hamadân but in 527/1133 was killed by Ismâ’llîs instigated by Tughrîl (ibid., 159).

Âk Sûnkûr’s son and successor is usually called Âk Sûnkûr (Ibn al-Ahîr, xi, 166, 177; Ta’rîkh-i Gurûda, 472), but is called also Ârsûn b. Âk Sûnkûr (Akûbûr al-Dawla al-Salûdijîyya), and referred to by ‘Imâm al-Dîn as ‘Usrât al-Dîn Khasb-bek (al-Bundârî, 231, and even, p. 243, as ‘Usrât al-Dîn Arslân-Âhà 7). At this time the authority in Ardashâryân was divided between Eldûz, âtâbek to Arslân b. Tughrîl, and Âk Sûnkûr II, who was associated chiefly with the family of Mûhâmûd b. Sultan Mûhâmûd. An enemy of Âk Sûnkûr, Khasîb-bek Arslân b. Belînî-erî, besieged Mârâgha in 541/1146 (al-Bundârî, 217). In 547/1152 Sultan Mûhâmûd executed Ibn Belînî-erî, but in point of fact this execution alerted the two lords (âtâbek of Ardashâryân, Eldûz and Âk Sûnkûr), who proclaimed another candidate (Sulaymân). When Mûhâmûd was restored he appointed Âk Sûnkûr as âtâbek to his son Dâ’dû. This led to a rift with Eldûz. With the help of the Şhâhî Arman, Âk Sûnkûr defeated Pahlûwân b. Eldûz on the Safîd Rûd. In 556/1161 he supported Inandj of Rayy, who was hostile to Eldûz, but this amir was defeated by Eldûz in 557, and Âk Sûnkûr subsequently accompanied Eldûz on his expedition to Georgia (557/1162). In 563, however, Âk Sûnkûr obtained from Bağdâd the recognition of his charge, Malik Dâ’dû, and this led to a new clash with Pahlûwân (Ibn al-Ahîr, xi, 218). Soon afterwards, Âk Sûnkûr fades out of the picture. According to Ta’rîkh Gurûda, 472, his brother Kutlûq revolted in Mârâgha, apparently with the encouragement of the amir Inandj of Rayy (d. 564/1168-9; see Ibn al-Ahîr, xi, 230). Pahlûwân suppressed the revolt and left Mârâgha to Âk Sûnkûr’s brothers ‘Âlî al-Dîn and Rûnû al-Dîn.

Under 570 Ibn al-Ahîr (xi, 280) mentions in Mârâgha Falâk al-Dîn, son of Âk Sûnkûr (II), who must have cherished some designs on Tabrîz, but after a clash with Pahlûwân had to desist from this claim, although the hereditary rift between the two families persisted. In 602/1205-6 the lord of Mârâgha ‘Âlî al-Dîn made a pact with the lord of Irâbî Gîbûrî to depose the incapable Eldûzûd Abû Bakr, but the latter, with the help of the former slave of the family Ay-doghmisji, expelled ‘Âlî al-Dawla from Mârâgha, giving him Umiya and Uguhîn in compensation. In 604 ‘Âlî al-Dawla (whom Ibn al-Ahîr, xii, 157, 182, this time calls ‘Kâr âl Sûnkûr) died, and a courageous servant of his took charge of his minor son who died in 605. The servant remained in the castle of Rûyîn-dîz, while Abû
Bakr occupied the remaining territories of Maragha. It seems certain that 'Ali al-Dawla was the patron to whom Nizām dedicated his Haft Āyāk (completed in 593? and whom the poet calls 'Ali al-Dīn Krb (Korp.-"young")-Arsālān (see Rieu, Cat. Pers. MSS, ii, 567, and Suppl., 1985, 154). Nizām refers to his two sons Nuṣrat al-Dīn Muḥammad and ʿAhmad (one of whom may be the son who according to Ibn al-Athir died in 605).

After this we find the line continued by women. When in 618/1224 the Mongols took Maragha the mistress of the town survived in the fortress of Rūyān-dīz. In 624/1224 Nūr al-Mulk, wasir of the Kharaqām-šāh Djalāl al-Dīn, besieged Rūyān-dīz, whose mistress was a granddaughter of 'Ali al-Dīn Khraba (Nasawī, 129; possibly *Korp-apā-i*). She was married to the de facto son of the Eidsugūd ʿUzbek (called Khamush, "silent"), but probably was separated from him because Khamush had joined Djalāl al-Dīn and later went over to the Ismāʿīlīs (Nasawī, 129-30). The princess was ready to wed Nūr al-Mulk when Djalāl al-Dīn himself arrived on the spot, married her, and appointed his own governor to Rūyān-dīz (ibid., 157). Khamush had a numerous family and it is not clear whether his son "ʿūzbek Nuṣrat al-Dīn" was born to him of the Ahmādī princes. According to Dhuwaylī, Nuṣrat al-Dīn was hiding in Rūm, but towards 644/1246 he obtained an al tamgha from Ghiyūk Khān for the governorship of Tabrīz and Aḥgbarjavān.

(V. Minorsky)

**AHMADIYYA** is the name (i) of an organized religious community, standing in continuity with its eponym, Mīrzā Ghulām ʿAhmad of Kādīyān; and (ii) of a small organization or movement derived from (i).

Ghulām ʿAhmad was born into the leading family of the small town of Kādīyān, Gurdaspur district, Pandjāb, India, about 1835/1839. The title Mīrzā relates to the family's having come in with the conquering Mughals, in this case under Bābūr. The boy received a good traditional education, in Arabic and Persian, and was from childhood studious and reflective. Rather than follow his father as kālim, or this father's wishes by going on in British government service or practising law, he soon gave himself up (on his landlord income) to quietude in his native place. Along with meditation and religious study he developed apparently a propensity for hearing voices. At the age of about forty he began to publish (1880) a considerable work Barāhīn-i Ahmādīyya, which was well received. On 4 March 1889 he announced that he had received from God a revelation authorizing him to accept bayāt; and a small group was forthcoming of formal disciples, who were devoted and in some cases remarkably able men. Opposition from the Muslim community began two years later when he announced that he was the Masīḥ and the Mahdī. From that date (1881) until his death (24 Rabi’ II 1326/26 May 1908) there was continuous increase both in opposition to him and in his own claims; also in his following. Controversy raged; chiefly with Muslims, though also with Hindus and Christians. He claimed to receive revelations (both śāhīm and wahi are used), including foreknowledge; to perform miracles (including both raising the dead to life, and vice-versa: he boasted of bringing about, through prayer, the death of rivals); and to be an Avadār of Kṛṣṇa (1904) as well as Jesus returned to earth and the Mahdī; also the burūs ("re-appearance") of Muḥammad. Whether he claimed to be a nabī, and if so what he meant by it, is disputed between the two groups into which his followers later divided (see below). His teachings, over his last twenty years, are multifarious: sometimes curious (as, e.g., that Jesus died and is buried in Srinagar) or well-informed, sometimes inconsistent, often polemical and crude, sometimes remarkably spiritual. One discerns in them, in addition to peripheral Hindu concepts and a reaction against Christian influences, but more especially in the pattern of his life and the positive response evoked, a late Indian sūfī version of Islam activated by modern-Western infiltrations.

When he died, his followers thereby ceased to be a body of disciples; they became instead a community of believers, and, rather than disintegrating, elected a khilīfa (Mawlāw Nūr al-Dīn) and proceeded to exist as an independent community. The validity of this, or at least of its form, was doubted by some; and when this first khilīfa died (1914), most of the executive and westernized minority seceded, to set up at Lahore a society propagating the new teachings (as they saw them), while the majority remained at Kādīyān rather as a community embodying those teachings (and propagating itself). There was a political difference also: the sellectionists (dissociating themselves less from the wider Muslim community) were beginning to feel and to participate in the nascent anti-imperialism of Indian Islam (Kānprū mosque incident, 1913), while the major group explicitly clung to the traditional loyalty of the founder and his family. They chose the founder's twenty-five-year old son as Khilīfat al-Masīḥ II. The forty years of his khilīfat have been the story of the gradual forging of the virtually new movement that exists to-day. Similarly in the case of the Lahore party, which had as leader a young lawyer and religious intellectual, it has been rather the gradual working out of a virtually new system of ideas.

Both groups were—and are—dynamic, and have developed much, each in its own way. They have travelled far, from their common starting point, and also from each other. They will, accordingly, be separately described.

(i) The community. Name: Urdu, DJAMA-AT-I AHMADIYYA; English, AHMADIYYA MOVEMENT IN ISLAM. An Ahmādī is also commonly referred to as Ḵādiyānī (which since 1947 has become less appropriate; see below), and sometimes—usually to his own annoyance—as Mīrzāʾī. Membership is by birth within the movement, or by joining, on formal profession of faith and acceptance of duties. According to their own figures, there are some half-million members; about half of these being in Pakistan, the rest somewhat evenly divided between India and the remainder of the world (chiefly West Africa; but there are Ahmādī congregations from Indonesia to the Arab world, with small bands of converts also in Britain, the continent of Europe, and the United States). Members pay monthly dues (from each a minimum of 1/4% of his income is required; with various further contributions expected and often given). The movement accordingly handles considerable sums; and its organization is strong and centralized. The community also operates and enforces (on traditional "Islamic" lines) its own internal judiciary (*kadd*) so far as feasible. New headquarters of the community are at Rabwah, Pakistan. There is a central Advisory Council (Majūdi-i Muḥāwarat), largely elected; and a strong central secretariat. However, all power is finally vested in the head of the movement, who for the last
Ahmadiyya

Forty years has been, as already indicated, the founder's son, Hazrat Mirza Bashir al-Din Ahmad (b. 1906/1889). So largely have direction and control been in his hands that the movement in its present form may be said to be in significant degree his creation.

The above organization binds the community together; and strikingly vigorous, well-planned missionary activity throughout the world continues to expand it. These externals, however, are manifestly informed by a spiritual quality, a faith and religious life. Four, overlapping, aspects of this may be noted: the memory of the founder, reverence for the present head, doctrine, and the intensity of corporate life. The teachings are those of the founder, as interpreted (expanded, modified) by the present head. At the present stage of development they are most effectively presented in his Ahmadiyyat or the True Islam (1924; 3rd ed., Washington 1951; also available in other languages), and in his vast Kur'ān commentary, now in process (Tafsir-i Kābir, in Urdu). In the formula currently signed on joining the movement, a statement addressed to the head, these sentences figure: "I bear witness that God alone is to be worshipped. He is One having no partner. /I will try my best to act upon all the Laws of Islam. /I will obey you in everything good that you tell me. /I consider the Holy Prophet Muhammad to be the Seal of the Prophets, and also believe in all the claims of the Prophet Ahmad of Qadian (peace be on them) ..." (from the English version used in the Washington, D. C., mosque). The core of Ahmadi belief is that their community embodies the only true form of Islam (the one true religion, sent by God), it having been launched in this revitalized and newly revealed form by Ahmad, who was sent by God for the purpose, and it is being further divinely guided through its present head. Other Muslims, by rejecting this heaven-sent re-formation, are pronounced kāfir. Of the veneration in which the present head is held by his followers a compelling illustration is the reasoned tribute by one who is to-day a world figure: Zafrullah Khan, The Head of the Ahmadiyya Movement in Islam (offprint, Chicago, n.d. [c. 1945]).

The activities of the community, apart from their zealous and efficient propaganda, include such internal matters as the establishing and running of schools and colleges (the former centre, Kādiyān, appears to have been much the most literate town in India, with almost total feminine literacy). They produce great quantities of literature (see below); have their own exclusive mosques; and sustain a telling esprit de corps.

Ahmadi relations with Hindus and Sikhs have been chiefly attempted proselytism, with very limited success; with Christians there was also at first a spirited polemic on both sides, not without acerbity, though the situation appears gradually to have improved. It is with other Muslims that the Ahmadiyya have had primarily to deal: from them has come the overwhelming body of their converts, and also their opposition, often bitter and at times violent. The ambiguities of their situation became particularly vexed with the establishment in 1947 of Pakistan, into which both geographically and ideologically they almost, but not quite, fit. They transferred their headquarters perforce from Kādiyān (in India, because of the controversial Radcliffe award) to a site, previously barren, in Pakistan, which they named Rabwah (cf. Kur'ān, ii, 265) and where they are now constructing a town (about 90 miles south-west of Lahore). The political issue was less easily settled: whether they, who called other Muslims kāfir, should be fully admitted into the Muslims' new state, was a question that flared up in 1953 and brought riots, bloodshed, and the fall of governments.

The Bibliography is enormous. The most important source is the movement's own voluminous publications. A few of the founder's more than 75 books (in Arabic, Persian, Urdu) have been republished by the present community in several languages (perhaps most important today: The Teachings of Islam, various editions); the first bālija wrote some half-dozen, and the present head is the author of over thirty works (two most important noted above; add: Introduction to the Study of the Holy Quran, London 1949; Economic Structure of Islamic Society, Qadian 1946). Other members have written about the community, and its leaders; also lives of Muhammad, etc. (e.g. Sufi M. R. Bengalas, Life of Muhammad), and translations of the Kur'ān in several languages. Moreover, the community has produced and produces large numbers of periodicals—daily, weekly, and monthly—from India, West Pakistan, East Pakistan, Ceylon, Indonesia, Lagos, Israel, Zurich, London, Chicago, Washington, and elsewhere. Sunni Muslim and Christian missionary writing on the movement has often, though not always, been polemical; the former often important and revealing (e.g. Muhammad Ibqal, Islam and Ahmadism, Lahore, 1936), the latter often informative (e.g. H. A. Walter, The Ahmadiya Movement, Calcutta and London 1918; numerous other studies; articles in MW every few years). Almost all books on Indian Islam (e.g. M. Titus, Indian Islam, 1930, 226 ff.; W. C. Smith, Modern Islam in India, 1946, 298 ff.) or Modern Islam mention the community. Objective descriptive studies, of an academic sort, do not seem to have appeared in significant or comprehensive form since L. Bouvat, in JA, 1928, 159-81.

(ii) The Ahmadiyya An'umman Islām (headquarters in Lahore). This group accepts Ghulām Ahmad as muddādd, not as prophet, and affirms that he never claimed to be a prophet. It has always been incomparably smaller than (i); but comparatively zealous in its activities. It has differed, for instance, in trying more to win converts to Islam than to itself. It has been active in a systematic and effective fashion, chiefly in three overlapping fields: publishing, organized foreign missionary work, and leadership in intellectual modernism (liberalism) in Islam, especially of English-reading Islam. It has produced and circulated throughout the world (chiefly in English and Urdu, but also in a half-dozen and more other European and well over a dozen Asian languages) translations of the Kur'ān, lives of Muhammed; impressive expositions of Islam, many monographs and essays, and innumerable pamphlets. Its foreign mission stations, in London, Berlin, Indonesia, have been influential; especially the first (the Woking Mission, an independent entity from 1930, but from 1947 again semi-officially related to the Lahore movement). The leader of the movement from its inception until his death in 1951, prolific author of much of its literature, and chief creator of its distinctive intellectual contribution was Maulānā Muhammad 'Ali. Also to be mentioned is the equally prolific but shorter-lived idām of the Woking mosque, Khādja Kamāl al-Dīn (1870-1932).

Bibliography: The movement's own publications are again the main source: see the writings.
Ahmadnagar is the capital of the district to that name in India (Presidency of Bombay) on the river Siva. In 1901 the town numbered 42,000 inhabitants, the district (6586 square miles = 17,058 square kilometres) 837,695 inhabitants. The town in 1901 the festival of the breaking of the fast; a contribution from slaves for the provisioning of the army; the *wugar* (fulbe: *wurru*), a 10% customs duty. Every spring military expeditions were organized. Each village had to provide a fixed quota of men for these military operations, a third of this quota being mobilized each year by roster. The troops, free men, received subsistence for the maintenance of their families during their absence. There were five high-ranking military officers, each responsible for the defence of a particular sector. There existed a right of appeal from the regional *kadis* to the *kadis* at Hamdallahi, and from the latter to Ahmadu himself, aided by a "marabout tribunal" in an advisory capacity.

Ahmadu I died in 1844 and his son Ahmadu (Hamadu) II succeeded him, despite the native customary law of succession. In 1846 he reimposed, in a modified form, the sovereignty of Mäsa over Timbuktü, which had rebelled at the death of his father. Ahmadu II was similarly succeeded in 1852 by his son, Ahmadu III. He died, by diplomacy or by force, to check the expansion of the great Tokolor conqueror, al-Hadidj Umar Tal, but the latter took Hamdallahi in June 1862. Ahmadu III fled towards Timbuktü, but was captured and put to death at Umar's orders. His uncle Ba Lobbo continued the fight against Umar and his successors. The Mäsa State had been a centre of strict Islam, inimical to infidels, as the European travellers René Caillé and Heinrich Barth had discovered.

Ahmar, Banu 'L', genealogical name of the nasrid dynasty (see MAŠRIDS).

Al-Ahnaf b. Kays, the usual cognomen of a Tamimite noble of Busra named Abu Bakr Şaghër (sometimes, but erroneously, called al-Dahhák). B. Kays b. Mu'awiya al-Tammi al-Sadî, of the family of Murra b. 'Ubayd; through his mother, he was descended from the Bahlite clan Awād b. Ma'n. He was born before Islam and, probably at an early age, lost his father, killed by the Banu Mäzin. His biographers state that he was deformed from birth and that he had under himself a huge and abnormal stammer. His cognomen (al-ahnaf) derives from the fact that his feet were misshapen, but he also had other abnormalities (see the description of his physical appearance in al-Djahiz, al-Bayan, i, 56).
At the advent of Islam, the Tamimites did not respond immediately to the Prophet's overtures, and it was the Ahnafite (al-Ahnaf b. Kays) who was instrumental in procuring their conversion. He then presented himself to Umar, and was among the first inhabitants of Basra, where he soon emerged as spokesman and leader of the Tamimites who, during the 1st/7th century formed the intellectual, religious and political élite of the city. Under the command of Abu Mūsā al-Aswāfī, he took part, notably in 23/644 and 29/649-50, in the capture of Kūmm, Kāghān and Isfahān. He was later one of the best generals of 'Abd Allāh b. 'Amīr [q.v.], under whose orders he conquered Kūhistān, Harāt, Marw, Marw al-Rūdgh, Balkh and other districts (near Marw al-Rūdgh, his memory was perpetuated by the Қaṣr al-Ahnāf and the Rustāk al-Ahnāf). He even led his troops as far as the plains of Tukharistan, thus preventing the last king of Persia from organising further resistance against the Muslims. For a time governor of a district of Kūhsrān, he afterwards returned to Basra where his position as head of the Tamimites enabled him to play an important political role. Although a neutral at the battle of the Camel (36/656) between the partisans of 'Ali and those of ʿĀlī and 'Iqṣāḥ, he fought on the side of 'Ali the following year at the battle of Siffin. From then on he appears to have devoted himself to local political affairs, but the Umayyads considered his influence to be such that they consulted him on general political problems, and it was in this way that he came to give his opinion on the question of Muʿāwiya's successor. At Basra there was latent hostility between the Rabi'a faction, represented by the Bakrī and the Mudar faction, represented by the Tamlīm. At Basra where his position as head of the Tamimites had been kept alive by the Tamlīm who considered him one of their greatest leaders. He was something of a poet, but above all he left a reputation for sagacity, which is conveyed by a large number of aphorisms and maxims, some of which have become proverbial; his ʿilm is compared to that of Muʿaṣira, and is also proverbial; hence the saying: ʿalm min al-Ahnāf (al-Dībiḥī, al-Hayyānī), ii, 92; al-Maqrīzī, i, 293-300, 53-57; ʿAbd Allāh b. Ziyad, Sarfy al-ʿUyun, i, 274; Aḥbānī, index; Goldzinner, Muh. St., ii, 96, 205; Ch. Pellat, Milleu bāšris, index. (Ch. Pellat)

AL-AḤSĀʾ [see AL-ḤASA and ḤUḤŪF].

AL-AḤSĀʾ, Shāykh Ahmad b. Zayn al-Dīn b. Ibrāhīm, founder of the theological school (later, after his excommunication by the Shiʿī mujtahids, more properly speaking "sect") which, from his designation, took the name of Shāykh [q.v.]. He was born in al-Āhsāʾ (Arabia) in 1166/1753. His biographers record his great piety from his years of infancy. At the age of twenty, already learned in the religious sciences, he went on pilgrimage to the Shiʿī sanctuaries in al-ʿIrāq, where he had his first successes in obtaining from the mujtahids "licences" to teach the religious sciences. After establishing himself with his family in Bahrayn, and later in Basra, he made several journeys in al-ʿIrāq and, from 1221/1806 onwards, also in Persia, where he made the pilgrimage to Mashhad and, on his return, settled at Yazd as a teacher, enjoying the greatest veneration. Even the šāh (Fath ʿAll Shah Kāgār) summoned him to Teherān, and loaded him with honours. This, together with his great popularity, roused the jealousy of the divines of Yazd, and several reports began to circulate on the unorthodoxy of Shāykh Ahmad's teachings; more particularly challenged were his eschatological doctrines, in which, according to the "orthodox" Shiʿī theologians, he had denied the resurrection of the body and interpreted it as a purely spiritual resurrection (see sāyyādī). After a final pilgrimage to Karbalāʾ, he settled in 1229/1814 in Kirmānsāh, whence he made several journeys (into al-ʿIrāq and, in 1232/1817-18, to Mecca). His definitive rupture with the mujtahids took place at Kazmān about 1235-40/1824, after his return from another pilgrimage to Mashhad, in consequence of a discussion with the fiery Hājjī Mullā Tākī Barakānī, uncle of the famous Bābī poetess Tāhirā (or Kurrat al-ʿĀyn, see bāllī). The hostility of the mullās towards him steadily increased, and he was even accused of professing theories which never entered his head (e.g., the divinity of ʿAll, the doctrine of tawfīq, according to which God had entrusted the care of the worldly creation to the imāms, etc.). After many wanderings, interspersed with teaching and the composition of his numerous works, he died in the course of a pilgrimage to Mecca, at the age of 75 years, near Medina, in 1241/1826, and was buried there. His theological works (including minor treatises) number about a hundred. For his doctrines see art. sāyyātī. The school founded by him was guided by his successor Sayyid Kāẓim Rāshī [q.v.], and out of it there developed at a later date the Bābī [q.v.] movement. Bibliography: A. L. M. Nicolas, Chakh Ahmad Lāḥiṣānī, Paris 1910 (Essai sur le Chékhisme, i); Brockelmann, S ii, 844-5. For further bibliography see sāyyātī. (A. Bausani)

Sociological theories. The collective work of the Arab genealogists is based implicitly on the assumption that the tribe is a family on a larger scale. Robertson Smith has made a just appreciation of this over-simplified conception, which is ostensibly based on common sense, and, more recently, Bich Frères (L’Honneur chez les Arabes, Paris 1932, 49-50) has recognized "that it appears impossible to study the social morphology of the ancient Arabs". This picture corresponds to that given by the nomads regarding their social structure. But does it correspond to reality? The existence of ancestor-worship and of the cult of the dead among the Semites, disputed by Renan, has been proved by A. Goldziher as regards biblical antiquity, and by I. Goldziher as regards the Arab world. The cult of the dead concerns the family because the natural ministers of such a cult are recruited from within the family, and because it implies a posterity for its own perpetuation. It is not impossible even that this cult may have played some part in the formation of the family, and especially in establishing it as a religious unit, endowed with social functions. Earliest-recognizable traces of the cult of the dead, to which Islam has been opposed since its inception, persist even to the present day, with unmistakable signs of propitiatory rites. The need, still felt to be imperative, for descent in the male line could be a final relic of this cult. On the other hand, to liken saint-worship and the veneration of holy places to ancestor-worship is to invite disagreement. The interconnection between divine and human genealogies has been amply demonstrated by Dhorne (La Religion des Hébreux nomades, Brussels 1937, Ch. xviii). It confirms the identification of legal relationships involving protection or alliance, with kinship, an idea which still exists among the nomads, and which is typical of the patriarchal system.

The basic social unit among the Semites was the clan (Hebrew mishkahba, Arabic hujjat [q.v.]). The totemistic theory of an exogamous organization between maternal clans has been brilliantly developed by Robertson Smith (Kinship and Marriage in early Arabia, Cambridge 1889). In his review of this work, Nöldeke (ZDMG, 1886, 148-89) disputes the importance of the naming of clans after animals "which occurs, relatively speaking, much rarer than the expect of the author would imply". But, in addition to the linguistic arguments based on the words indicating the clan by allusion to a uterine relationship, and on two parallel series of names of kinship, agnate and cognate, all the facts so far advanced hardly seem to provide a better explanation. Marriage customs of a matriarchal character seem to have persisted relatively late in the Peninsula. The lack of a prohibition of incest in the paternal line is also adduced as evidence by R. Smith (ibid., 163), but Wellhausen (Die Ehe bei den Arabern, Nachr. von d. königl. Ges. d. Wiss. u. d. Georg-August Univ. zu Göttingen, 1893, 431-82) is of the opinion (441) that this has not been sufficiently proved. Even if one admits the existence of a totemistic period during remote antiquity, the patriarchal régime is firmly established from the dawn of the historical era, and the notable survivals of earlier practices pose a difficult problem. According to Gertrude H. Stern (Marriage in Early Islam, London 1939), certain marriage alliances of a political nature, contracted by the Prophet with the tribes, were of a different character from the others, and the women continued to reside amongst their own clan (appendix A, 151-7). In fact it is possible to find, up to the contemporary epoch, evidence of this type attested in Assyrian legislation. It is, however, indisputable that the family regime has become patriarchal.

The family in Islam. Islam did not create the practices of the social milieu in which it appeared, and to begin with it concerned itself only with improving the moral standards governing these practices. In the second period, at Medina, the Prophet, now head of the State, is led to dispense justice and to create, in progressive stages, a system of rules, called into being by judgements in individual cases, with the force of statutory law. The work by G. H. Stern quoted above shows that he followed a plan of reform, by unifying the chaotic practices of pagan Arabia. This unification could not have been completed, as is clear from monographs on present day customs. Elements borrowed from conquered peoples have been incorporated in the original Arabic background. But if the lack of unity displays itself in a marked discrepancy between fact and theory, the overall picture nevertheless reflects the type of patriarchal family which has maintained its position with remarkable stability throughout the Near East, and which is already depicted in the ancient Hittite, Babylonian, Assyrian and Sumerian systems of law. In its most primitive forms, the authority of the head of the family is entirely unrestricted; it becomes weaker among the settled populations of the great cities. This patriarchal authority is the origin of the laws on divorce, polymony etc. The veil (hidjâb [q.v.]), which goes back to remote antiquity, is not strictly relevant to the subject of family institutions, although it is in keeping with their patriarchal character. In short, the Muslim family recalls in certain respects though with some notable points of difference that portrayed in European literature in the heyday of the Middle Ages. See also MARIM, MARRA, MUKHÂNA, TALIK.

Bibliography: In addition to the works mentioned above, the following works on Semitic antiquity should be consulted: Robertson Smith, Lectures on the Religion of the Semites, London 1889 (re-ed. S. A. Cook, 1927); I. Goldziher, Le Culte des ancêtres et le culte des morts chez les Arabes, in RHR, 1884, 332-59; A. Lods, La croyance à la vie future ... et spécial Le Culte des morts dans l'antiquité hébraïque, Paris 1906; for the modern period, see H. A. R. Gibb, Modern Trends in Islam, Chicago 1947 (French trans. Paris 1949); R. Paret, Zur Frauenfrage in der arabisch-islamischen Welt, Stuttgart 1934; Lane, Manners and Customs of the Modern Egyptians, London 1895; Kâzım Daghestâni,Ėtude sociologique sur la famille musulmane contemporaine en Syrie, Paris n. d.; for a full bibliography, see J. Lecerf, Note sur la famille dans le monde arabe et islamique, Arabica, 1956/1. (J. Lecerf)
of the ʿAlīn-nāma, translated by Ibn al-Muqaffāʿ, are preserved in the Uyun al-Akhbār of Ibn Kutayba, and the most important of these, relating to military tactics, archery and polo, have been studied by Inostranzev. It is possible that, co-existent with the large official ʿAlīn-nāma, there were lesser works of a specialized nature dealing with each branch of court education. This belief arises from other titles quoted in the Fihrist, namely, ʿAlīn al-Rāmy and ʿAlīn al-Darb bi-ʾl-Ṣaḥādiyya, although these could be considered merely as portions or extracts from the larger work. The Sāsānīd ʿAlīn-nāma is also mentioned by al-Masʿūdī (Tanbih, 104-6); (pseudo)-Dībih, in the Kitāb al-Tādīfi fi ʿAbdāb al-Mulāk, which has very full materials concerning the manners and etiquette of the Sāsānīds, also refers to, but does not quote directly, an ʿAlīn al-Furūʿ. The title of ʿAlīn was used later in other works on Persian Islamic history and institutions, such as the ʿAlīn-i Akbari, being that part of the Akbar-nāma of Abuʾl Fadl ʿAllāmānī (q.v.) (16th century) which is devoted to the institutions of Akbar’s court.

(A. F. Gabrieli)

AIR (AYR), also called ASHEN, mountainous district of the Sahara, falling between lat. 25°-31° N., and long. 7°-9° E. It comprises three distinct regions: 1) the northern Air, consisting wholly of plateau and plain; 2) the central Air, which is a homogeneous unit, has a rugged landscape, with peaks rising to 5,000 ft.; 3) the southern Air, consisting of rocky plateaux sloping towards the Sudan. The rainfall, more abundant in the Air than in the rest of the Sahara (rainy season from June to August) feeds underground basins which support a fairly rich vegetation (gum trees); agriculture is, however, on a small scale, and the country owes its important place in the economic life of the Sahara primarily to its position on caravan routes (azalay). It possesses strata of slate, and hot springs; primitive handicrafts are still carried on.

The population of the Air is composed of two main elements: negroid (Hausa) and Berber—the Kel Air who form one of the seven principal Tuareg groups; they comprise the Kel Geres and the Kel Ui (Ewey), the latter having intermarried to a considerable extent with the Hausa. According to the censuses of 1933-8, the Kel Air number 27,765. They are a semi-settled people, and live in villages or in groups; they comprise the Kel Geres and the Kel Ui who, in the Air, had just supplanted the Kel Geres. Agades is now the chief town of a region (Niger Territory) of which the Air is a part. The whole population is Muslim (the Kel Geres since the 9th/15th century), and religious activity is relatively keen, owing to the presence of religious brotherhoods with considerable numbers of adherents.

Aisha Bint Abi Bakr — Aisha Al-Mannubiyya

(Kur’an, xxiv, 11 ff.) implying her innocence and rebuking those who had gossiped. 'Abd Allah b. Umar was publicly humiliated.

A number of stories about A'isha have been preserved from the later years of Muhammad’s life. They depict Muhammad as having genuine affection for A'isha, and A'isha as being devoted to him. They do not, however, justify the view (cf. H. Lammens, Le Triomphe de Abou Bakr etc., MFOB, iv) that she engaged in political intrigue and influenced Muhammad’s decisions. Nevertheless, there seems to have been two factions among Muhammad’s wives, one led by A'isha and Hafsa, the daughter of 'Umar, which supported the policy of their fathers, and another led by Umm Salama of the Meccan clan of Makhzum; but their rivalry probably had little political effect. When Muhammad realized that death was near, he asked his wives to agree that he should go to A'isha’s chamber and remain there. She nursed him for the few days of his illness, and his grave was made in the floor of her chamber. Abū Bakr and 'Umar were also buried there.

As Muhammad’s power increased, his wives had a more comfortable life and a higher status in the community, including the title “mothers of the believers” (cf. Kur’an, xxxxi, 6); but they were forbidden to remarry (ibid. v, 53). A'isha was thus left a childless widow about the age of 18. For two years her father was caliph, and then for ten 'Umar, with whom she was on good terms, but she does not seem to have played any part in public affairs. As opposition grew against 'Uthman, the third caliph, however, A'isha came to have a leading part in it, though she was not in agreement either with the group of insurgents responsible for 'Uthman’s assassination nor with the party of 'Ali. She openly declared her opposition to the killing of 'Uthman, but left Medina for Mecca to take part in the pilgrimage. Many motives have been alleged for this flight by A'isha at a critical juncture. Perhaps the chief one was to help in organizing in Mecca a party of like-minded Persons.

'Uthman was assassinated in Dhu 'Al-Hijja 35/ June 656. About four months later A'isha met Medina for Bagr along with about 250 men of Kuraysh, professing to be taking vengeance for 'Uthman. Shortly before this she had been joined by Taḥa and al-Zubayr. The three were now leaders of a movement in opposition to 'Ali. They obtained control of Bagr, and with many of the Muslims of that city marched to the outskirts to meet 'Ali who had meantime left Medina for Kūfa, and was advancing against them. The battle (in Djamād II 35/December 656) came to be known as the Battle of the Camel, since the fiercest struggle was round the camel bearing A'isha’s litter. 'Ali was victorious, and the opposing army was scattered. A'isha herself was treated with respect, but Taḥa and al-Zubayr lost their lives.

After this failure A'isha lived quietly in Medina for over twenty years. She took no further active part in politics, but became reconciled to 'Ali and did not oppose Mu'awiya. Her approval and disapproval, however, still seem to have counted for something. She died in Ramadān 58/July 678. In later times she was depicted as a model of piety, but it is difficult to know what is the basis of fact for this view.

It is said that 1210 traditions were related on her authority, but barely 300 of these were retained by al-Bukhārī and Muslim. She is said to have had a codex of the Kur’an, and a few readings are given on her authority (cf. A. Jeffery, Materials for the History of the Qur'an, Leiden 1937, 231 ff.). She was noted for her knowledge of poetry and ability to quote it, and also for her eloquence; and she was versed in Arab history and other subjects.

(W. Montgomery Watt)

Aisha Bint Talha, one of the most famous of Arab women. Daughter of a Companion of the Prophet, Taḥa b. 'Ubayd Allāh al-Taymi [q.v.], who had already won great renown, grand-daughter of Abū Bakr through her mother Umm Kūlhām, and niece of A'isha, the Prophet’s favourite wife, she combined nobility of birth with an imperious spirit and a rare beauty, which she was anxious should not go unnoticed. By nature a coquette, she courted the praises of the ghassal poets ('Umar b. Rabī'a, i, 80; Kūthayyir 'Azza, Ibn Kūtayba, Shīr, 322; 'Urwa b. al-Zubayr, Ahdanī, x, 60), and knew how to use to the best advantage the emotions which she inspired. She even occasionally disposed of the Governor of Mecca, Al-Hārīr b. Khālid al-Majzūmī, who had agreed to postpone the hour of prayer in order to allow her to complete her jawāl (Ahdanī, iii, 100, 103, 113; see Dāhib, Bigkal, ed. Pellat, in course of preparation) § 20, and Ahdanī, x, 60, for an anecdote concerning the brilliant retinue which she had obtained from the caliph for the purposes of her pilgrimage). She is reckoned as one of the mutawwidad, i.e. women who have had several husbands; she married successively her cousin 'Abd Allāh b. 'Abd al-Raḥmān b. Abī Bakr, Muṣ'ab b. al-Zubayr, and after the latter’s death, 'Umar b. 'Ubayd Allāh b. Ma'mar al-Taymi. The date of her death is not known.

Aisha Bint Yusuf [see Al-BA'QUN].

Aisha Al-Mannubiyya, Tunisian saint of the 7th/13th century whose name was A'isha bint Imrān b. al-Hādij Sulaymān. The niṣaḥ by which she became known derives from her native village of Mannūba (La Manouba), situated 5 m. W. of Tunis. She is also commonly known, especially at Tunis, by the reverential title of al-Sayyida. The contemporary historians of the Ḥafṣid dynasty, under which she lived, maintain complete silence about her, but we possess a small anthology of her mandīth written in a style strongly influenced by the colloquial, by an anonymous semiliterate author; the latter appears to have made use of another anthology, composed during the saint’s lifetime or soon after her death by an imām of the mosque at Mannūba. While still young, A'isha gave evidence of her future vocation by a number of karāmd. When she reached a marriageable age, her mystical ideal caused her to refuse the counsel of her parents who wished her to marry and to flee to Tunis, where she took refuge in a kaysariyya (a kind of caravanserai) situated outside the old Bāb al-Fallāk (S.E. of the
A'ISHA AL-MANNUBIYYA — AK HIŞAR

1. Ak Hisar. 

2. Ak Hisar in the Marmara district, now called Panul-ova, in the ḫadd of Geyve, wilāyêt of İzmir (Koja-eli), situated on the left bank of the Şakarya river, and a station on the Anatolian railway. It was captured by the Ottomans in 708/1308-9. The fortress, now deserted, commands a vast plain. The remains of many ancient columns and other buildings in the town and its neighbourhood bear witness to its earlier prosperity, but its ancient name is unknown. In 1935 it had 1,668 inhabitants, and its nābiye 9,324.

3. Ak Hisar was formerly also the name of a small locality in western Sarajevo, at the outlet of the Prusekota in the Semeskilitza; its modern name is Polyni (i.e. Lower) Wakuf. It was conquered by Muşafa Paşa in 907/1501-2 (J. von Hammer, Rumûlût und Bosnîa, 166; Ch. Per- turur, La Bosnie, Paris 1822, 222. (K. SUSSHEIM*)

-town, later known as Bab al-Gurdjani). There she passed her life, enjoying, especially among the lower classes, a great reputation for saintliness, although certain doctors of law showed hostility towards her. Oral tradition relates that she received mystical teaching from the celebrated sūfī Abu'l-Hasan al-Šâhdîlî, who was at Tunis during her lifetime, but neither the manâkıš of the saint herself, nor those of the disciples of Abu'l Hasan, make any reference to this. She died at an advanced age, 21 Rağbiy 655/20 April 1255, or 16 Shawwâl 653/19 Nov. 1255. She was buried in the cemetery which, in her time, was known as Mâkbarat al-Šaráf, and at the beginning of this century, a fervent devotee believed he had discovered her tomb. He erected there a wooden mausoleum which soon became a place of pilgrimage for the women of Tunis. However, the locality where A'isha lived continues to attract believers, especially women, and to-day bears the name of al-Mannubiyya. Around the old hâsâsîyya has grown up in the course of centuries a small group of buildings comprising an oratory, rooms for visitors, private dwelling-houses, and even a few shops. The visit (mi'âd) to the sanctuary is performed by women on Thursdays, by men on Saturdays. The house in the village of al-Mannîba where the saint was born has similarly been made the object of special veneration. During the reign of the Huşaynî Bey Muhammed al-Šâdîl (1859-82), it was in 1343 a Venetian possession and in 1395 passed into the hands of Castoria. It is still famous as the residence of Scanderbeg (Iškender Beg [q.v.]), and withstood vigorous sieges in 1450, 1466, and 1468, before it was finally taken by Muhammed II in 883/1475 July 1478. Later on it was the centre of the Bektâşî [q.v.] order of darwishes in Albania. One of the graves of Şarî Şâltî Dede [q.v.] is shown to the public, and the number of graves of Bektâşî saints around the town is considerable. Special reverence is paid to the tombs of Hâdîdî Hamza Baba and Baba 'All (with a tekke). The citadel was demolished in 1248/1832 by order of Raşîd Paşa. In the Albanian state the town became the centre of a sub-prefecture, and had in 1938 4,500 inhabitants, mostly Muslims.

Hasluck, in Annual of the British School at Athens, 1915, 121 f.; F. Babinger, in MSOS, 1930, 149; idem, Mehmed der Eroberer, index, s.v. Krueje. — For the date of the capture of the city see especially the contemporary chronicler Benedetto Dei (in Della decima e delle altre grazze, della moneta, e della mercature de' Ficorenzi, ii, Lisbon-Lucca 1765, 270 ff.).

(K. SUSSHEIM-F. BABINGER)

AK HIŞAR, nisba of several authors originating from one of the places called Ak Hisar. To Ak Hisar in Aydınl belong:

(a) Ilyâs b. 'Isa, commonly called İbn 'Isâ n. MAĞDUB, d. 720/1321, author of a Turkish book of prophecies (Kâşi-i Rumâsî Kûnû) which, composed in 965/1557-8 when the Ottomans had reached the summit of their power, foretold the continuation of their empire until the end of the world and, from the numerical value of the letters of proper names, predicted the fate of the nation until the year 2035 A.H. (Cf. Fertsch, Cat. Berlin, No. 45, 9; Krafft, Cat. Vienna Acad., No. 301; Flügel, Cat. Vienna, 1915. 121 f.) A few other works of his in prose and in verse are mentioned by Hâdîdî Khalifa (Flügel), iii, 480, iv, 155, 412, 440 and by Mehmed Tahir (see bibliography). He died in 967/1559-60.

Bibliography: Bursali Mehmed Tahir, Ufhamîlî Mu'aallifleri, 1, 18.
a. AK HİŞARİ — AK KIRMÂN

(b) MUHAMMAD B. BADR AL-DÎN, Muhyi '1-DIn i
al-Munshi3, also called al-$arukhani, al-Ruml, or al-
Mufassir. He was at that suggestion of Sâdi wrote
his commentary on HâfiZ. His main work is a
popular commentary on the Kur'ân under the title
Naslî al-TanSî (or TanSî al-Naslî), begun in Aku
Hîşar in 981/1574 and completed in 999/1590. The
author dedicated it to Sultan Murâd III. He became
Şayyâh al-Dârâm in Medina in 981/1574, was later
in Damascus, where in 989/1580-90 he wrote an
Arabic commentary on the Burda of al-Bâşîr
(Ahlwardt, Cat. Berlin, No. 2708), and died in
Mecca towards the end of the year 1000/1592 (sic,
according to the oldest sources).

Bibliography: Brockelmann, II, 439, S II,
651; 'Atâî, 'Hâdâ'îk al-Tabâ'î, 321; Na'îmâ,
Ta'ârîh, 40; Hüdâdî Khalîfa (Flügel), ii, 380,
iv, 358, vi, 399; Muhibbi, Khuldsat al-Athar, iii,
490; Mehmed Tâhir, ii, 20.

(c) Nasîhî, called Nâwâili, became in 990/1582
 tutor to the future Sultan Muhâmmad III, when
the young prince was governor of Mağfînîa. For him
he wrote a Farâh-nâme on the duties of a ruler
(Rieu, Cat. Br. Mus., 121); this work claims to be
the Turkish version of the Kûdâb al-Ri'yâsâ mu'l-
Siyâsây, allegedly written by Aristotle for Alexander
the Great (Hüdâdî Khalîfa, Flügel), iv, 417, v, 86).
He also translated the Ahhâdîk-i MuhiSini. To Nâwâili
is further attributed one of the Turkish translations
of al-Ghazzâlî's Kimyâ' al-Sâ'dda, but this is
perhaps a confusion with the work of Muhâmmed
b. Muş'târî al-Wânî (d. 1000/1591). Nasîhî died in
1003/1594-5.

7. To Ak Hîşar in Bosnia belong:

(d) Hasan, called Kâîî. He was born in 951/1544
and died in 1025/1616, having been kâîî in his
native town for more than twenty years. His tomb
became a place of pilgrimage. He took part in the
campaign of Egrî (Erlau) in Hungary in 1004/1595,
and during the campaign composed in Arabic a
treatise on good government and on the necessity
of reforms in the Ottoman administration, entitled
Uşûl al-Şîkamât fi Nîşâm al-Âlam. In the following
year 1005/1597 he translated it himself into Turkish,
at the request of high officials. He further wrote
a popular compendium of theology, directed against
the Şûfls and other innovators, called Raawdât al-
Dhannâât fi Uşûl al-I'blâhâdi (completed in 1014/1605),
which he himself wrote a commentary called Akhâr al-Raawdâ (completed in 1015/1606),
a commentary on the 'akida of al-Ţâhâwî entitled
Nûr al-Ţâbîn fi Uşûl al-Dîn, and a commentary on
the Mukhtasar al-Kuduru.

(Flügel), index, s.v.; Ewliyâ' Celebi, Siyâsây-nâme,
v, 443 ff.; Mehmed Tâhir, i, 277. For printed
editions and French, German, and Hungarian
translations of the treatise on government, see
Babinger, loc. cit.

(e) Hüdâdî NASÎM-ÔGHUL Ahmad b. Hasan
described in 1186/1772-3, whilst prisoner in Germany,
the campaign and the subsequent events in Bosnia
of 1148-1153/1735-44 (cf. Babinger, 276, n. 1).

AÇ KÎRMÂN (Kîrmân), "White City" (or
"White Emporium"), in Romanian Cetatea Albă,
in Russian Belgorod, town on the western bank of
the Dniester estuary. In antiquity it was called
Tyrs. According to Constantine Porphyrogenetus
(ed. and transl. Moravcsik-Jenkins, 168, 62), the
fortress was called "the White Castle". The anonymity
"Toparcha Gallicus" (in B. Hase's ed. of Le
Diaconus, 496 ff.), however, calls it Maurokeraston,
"Black Fortress". Subject to the Mongols after 1241,
the town was frequently visited by Genoese traders,
who called it Mauroakraustro (Malvastra, Mon-
castrum), but also Album Castrum. Abu 'l-Fîdâ',
following Ibn Sa'id, calls it Akî Kirmân; 'Âli (Kûnî
al-Ashârî, vi, 218) referring to Abu 'l-Fîdâ', writes :
"Akî Kirmân is known at present as Akî Kirmân.
In the 14th century Maurocastro-Moncastrum was a
Genoese fortress, under the administration of the
Oﬃcium Gazarie (Kharazia), which comprised the
Genoese colonies on the northern shores of the
Black Sea. The Genoese fortress was restored by the
Moldavians and the Turks, and still exists. Towards
the end of the 14th century the town was occupied
by the ruler of the newly established state of Mo-
lavia (in Turkish Boghdan [q.v.]), and remained
under Moldavian domination until 1454. The fortress
was attacked by an Ottoman fleet in 1420, and
another attack was made in 1454. In 1455 the
Voivoda Petru III recognized Ottoman sovereignty
over Moldavia; the sultan Muhâmmed II, by a
firman dated 5 Radjab 860/9 June 1456, gave the
merchants of Cetatea Albâ permission to frequent
Adrianople, Brusa and Istanbul.

The town was captured by Bâyezid II on 4 August
1484; the sultan directed the operations in person.
(Çf. Feth-nâmé-i Kara Boghdân, MS Cairo, adab
turkî, 131, 103 f.; I. Ursu, Şefan cel Mare, Bucarest
1925, 202-4 f.; I. Bogdan, Cronice inédite atingătoare
de istoria Românilor, Bucarest 1893, 43, 58). Most
of the inhabitants of the town were deported to
Istanbul and Anatolia, and Akî Kirmân became a
sandjak under the jurisdiction of the beylerbeyi
of Rumelia. It was included in the eyâlet of 6tsû
(q.v.), when this was created in 1593. According
to 'Ayn-i 'All, 6nasûn-i Â-i 6shâmu (Istanbul 1280,
12), the sandjak contained 914 fîmovâri. The custom
duties of the port were regulated at the same
period. The town is described by Ewliyâ' Celebi
(v, 108 f.) who visited it in May 1658. He mentions
the fortress (read darân instead of 6trân) on the
sandjak's road built by Bâyezid II, Mengli Girây K等着,
Selmî I, a Fâisz Dîmâ'i, a medrese built by Selim I, and a ham-
mâm built by Bâyezid II. He also mentions (vii, 501)
the sanctuary of Mayak Baba Sultan near the ford of
the Dniester. Muhâmmed Elendi Akî Kirmân, a well-
known Turkish philosopher, was a native of the
town (cf. Bursall Mehmed Tâhir, '6shâmu 6dîlîsîfere
i, 214). In addition to the original inhabitants,
Akî Kirmât and its district was inhabited by
Turks and Crimean and Nogay Tatars; the Tatars
were settled there after the attempt of the Voivoda
Arman of Moldavia to capture the fortress in 1595.
In 1502 the last chief of the Golden Horde, Şayyâh
Ahamd, fled to Akî Kirmân, in order to rally his
forces. Selim I made Akî Kirmân the base for his
operations against his father Bâyezid II (1 April
1511). The brothers Mehmed Girây and Şâhîn
Girây of Crimea in 1610 made the town their basis
for raiding the Ukraine; they were, however, ousted
by their brother the Kânî Dînabeî Girây (cf.
I. H. ÜrunçarSlî, Osmani Tarhi, iii, 176). Between
1618 and 1636, Kântemir, Pasha of Silistria,
controlled the region between the Danube and the
Dniester and defeated the kalgays Girây of Crimea
in the plain of Akî Kirmân" (Hüdâdî Khalîfa, Feßbaka,
i, 187); Murâd IV, however, had his head cut off
(UruncarSîlî, 180). Ewliya' Celebi (vii, 497) describes
the battle between the Tatars of Mehmed Girây Kân
and those of Adil Giray, under the walls of Ak Kirman.

In 1683, the Cossack chief Kunicki advanced as far as Ak Kirman, but was pushed back by the serdar Bosnak Şarl Süleyman Paşa (Findikllî Mehmed Ağa, Şükâdar Ta'rikhî, İstanbul 1928, i, 397, ii, 127, 185). The Russian general Igelstöm captured the town in 1770, but it was returned to the Porte by the treaty of Küçük Kaynardja (art. 16). The fortress was repaired in 1760 (Topkapı Arşivi, E 70, 416; for other repairs from 1645 onwards, see ibid. E 5860, 6237). In 1789 Potemkin occupied the town again (Diewdew, Ta'rikhî, iv, 332), but it was returned to Turkey in the peace of Yassi (1792), after which the fortress was strengthened.

In 1806 the town was captured by the Russian colonel Förster and Prince Kantakuzino; the Tatars left the district and passed to the eastern bank of the Dnieper. In the peace of Bucarest (1812), Ak Kirman was transferred to Russia. It was there that the short-lived Convention of Ak Kirman between Russia and Turkey, concerning the Rumanian principalities and Serbia, was signed in 1826. Subsequently the town shared the vicissitudes of Bessarabia.

It was there that the short-lived Convention of Ak Kirman between Russia and Turkey, concerning the Rumanian principalities and Serbia, was signed in 1826. Subsequently the town shared the vicissitudes of Bessarabia.

At the end of the 15th century, the Turkish emirs of the Erzurum region, the Doğere, the Bayat, the Doger, the Cepni, etc., who had apparently arrived with the Sâljuqs, but under the Mongols, led an inconspicuous existence. Among these clans must be particularly distinguished the Bayundur clan, to which belonged the rulers, who, with their immediate followers, must have taken the leadership and organised the federation. The early period of these Turkmen (both Ak and Kara Koyunlu) is reflected in the Turkish epic poem Dedê Korîbet (Rossi, Vatican 1932, 46-9). The Bayundur family ("the amirs of Âmîd") are first mentioned by the Byzantine chroniclers in 1340. They were, however, the chief among the Ak Koyunlu who were attacked twice by the Ottomans, during the latter's invasion of Persia in 920/1514 and in 922/1516, but finally died in the same year near Urfa. The following is the genealogical tree of the Bayundur rulers:

1. Kara Uthmân b. Kulu b. Tur 'All
2. 'Ali
3. Hamza
4. Djiâhîngir
5. Uzun Hasan
6. Khall
7. Ya'qûb
8. Baysunur
9. Rustam
10. Alwand
11. Muhammad
12. Yusuf
13. Murâd
The chronology is as follows. Kara Uthman was killed in 839/1435 at the age of eighty. Of his sons who disputed his succession 'All died in 840/1438 and Hamza in 848/1444. Dihângir ruled in the west 848-74/1444-69. Uzun Hasan, b. 828/1424, ruled from 857/1453, overthrew the Kara Koyunlu in 872/1467 and died in 882/1478. Ya'qub ruled 883-74/1478-90; Baysunqur 867-74/1462-8; Rustam 897-902/1492-7; Ahmad Gâwe 902-3/1397. After Ahmad Gâwe's death the struggle went on (903-7/1497-1502) between Muhammad, Alwand and Murad. Alwand, defeated by Shah Isma'il in 907/1502, retreated to Diyar Bakr and died in 910/1504. Murad, defeated by Shah Isma'il in 908/1503, fled to Baghdâd, where he ruled for four and a half years, and then went to Dîyâr Bakr and Turkey. He died at the age of 25 and with him the dynasty came to an end.

Bibliography: The special history of the beginnings down to Uzun Hasan is in the Ta'rikh-i Divânikbrrisiyé (being prepared for publication in Ankara by F. Sûmer); for the reign of Sultan Ya'qub 'Álam-ârâ (first appearance in a dream, an attempt to attach himself to Zayn al-Ámmârî, to be a forgery of Feridun. Afd Shams al-Din had seven, according to others twelve, sons, the most of the inhabitants was transferred by Muhammad II to Istanbul after its conquest and a quarter in the capital received the name of Ak Sarây after them. The town is an agricultural centre and has in ruins, was built under the Saljûks and restored by the Karamân-oghlu Ibdrîhîm Beg, the Nâzîshâhi Dîjmâni (modern, but with a minaret from the 14th century) and various hamâmns; on the Erval Tepe near the town there is a turbe in briquets from the 13th century.

Réclus, Nouv. géogr. mun., ix, 571; Hamilton, Researches, ii, 22; Gülâmî-i Male'îîî, i, 521, 524; All Djêwâd, Memâlik-i 'Othmdnîyênin Ta'rikh we-Dîjâbrîlysâ Lughât, 21; W. Ramsay, Asia Minor, 284; Ewilîyâ Celebi, ii, 191.

AK SARAÎ, palace near Gurgândî (Urgench), still mentioned in the "Shaybânîade" (ed. Vânbéry, 392). For the palace of the same name erected for Timûr in Şahr-i Sab, see KASH.

AK SHAMS AL-DIN, properly MUHAMMAD SHAMS AL-MILLA WA'-L-DIN, sâiînt of the Bayrâmîyya [q.v.] and discoverer of the tomb of Abû Ayyûb al-Anşârî near Constantiopolis. He was the son of a certain Hamza, who acquired fame in Syria as a worker of miracles and later died in the district of Kâwâk (near Amasîa). Ak Shams al-Din was born in 792/1389-90 in Syria (Damascus) and came with his parents to Kâwâk in 792/1389-90. After the early death of his father (when Shams al-Din was seven years old) he engaged in theological studies; Badr al-Din b. Kâdî Samawâîn is reputed to have been among his teachers. Later he obtained a post of Kur'ân teacher (müderrisî) in 'Othmanîddîlî. Not satisfied with the rational outlook of orthodox Islam, he sought a spiritual leader, undertaking for this purpose long journeys, extending to Persia and Transoxania. He gave up, following an exhortation in a dream, an attempt to attach himself to Zayn al-Din al-Ákhâfî, and about 830/1426-7 he turned, after some initial hesitations, to Hâçâtî Bayronî (q.v.), who shortly afterwards appointed him to his succession (khiyât). The scenes of his later activities as Shaykh of the order and nature-healer were Szeghâzâr (west of Ankara), where he built a small mosque and a min, the district of Ískîbî (near 'Othmânîddîlî) and Göyûmek (near Brusa). The dates of his seven pilgrimages to Mecca are not known. Between 851/1447-8 and 855/1451-2 he was called to Adrianople, to treat Sâhîyânî Celebi, Âdî 'Ashar of sultan Murât II. He took part in the conquest of Constantiopolis as a preacher in the army; according to a later legend he discovered the tomb of Abû Ayyûb al-Anşârî (q.v.) and worked other miracles of fîrâsa. He healed a daughter of Mehmed II and in general gained the favour of the sultan. After the conquest Ak Shams al-Din returned to Göyûmek, where he died at the end of Rabîî I 865/1459.

The story of his interpretation of a dream of the sultan before the battle of Togrûl against Uzun Hasan (1 August 1473) cannot refer to him and seems to be a forgery of Ferîdûn. Ak Shams al-Din had seven, according to others twelve, sons, the most
important of whom was the poet Hamdl [q.v.]. He
also wrote several medical and sufi works, which
have not yet been published. In the history of the
Bayrāmiyya, Ak Shams al-Dīn seems to have played
a fatal part, because a quarrel between him and
some of his companions caused the great secession
of the Malāmatiyya, which could not fail to hamper
considerably the development of the whole order.

  authorities).

Aς SHEHR, in modern Turkish orthography
Akşehir, "White Town":
(i) Town in inner Anatolia situated at the
foot of the Sultān Dagh. In antiquity it was known
as Philemelon (see Pauly-Wissowa, s.v.). In old
sources the name of the town occurs as Akgär,
Ağkähr or Akşehirh. It was under Sāfīlāk
and Karaman-oglu dominion and was annexed by
Bāyezyd I. In the 16th-17th centuries it is mentioned
by the travelers Ghazzl, Makī and Ewliya Ĉelebi.
The town, capital once of a sandjak, now of a
besīr, is derived from the name of a river (also
sandīq, ...)

(Ch. Huart-F. Taeschner)

(ii) Aκ ŞEHM (also Akgär or Akgähr; Piz-
zigani, 1367, writes Azaĉar), town in north-east
Anatolia, on the Kélkit İrmak between Koylu
Ḫişar and Sushehri; it is often mentioned by early
authors, and occurs as late as in Ṭābi Tābi's
Dhīḥan-nūmā, 627. It is probably identical with
the modern village of Güzeller or Ezibider. The
name was preserved, even longer than for the
town, for the plain (Aκ Şehrī Owasi), which is
regularly mentioned in the itineraries of the Ot-
tonan armies on their campaigns against Persia
and Georgia.

Bibliography: F. Taeschner, Das anatolische
Wegenteil, ii, 2 (with further references).

Aκ ŞU (Τ.), "white water", (i) technical term
for the original bed of a river (also aβ daryā),
from which a canal (kara şu or karı daryā) is derived;
(ii) name of several rivers in Turkish-speaking
countries; they are sometimes better known under
other names. The following are some of the rivers
that bear in Turkish the name of Aκ Şu: (i) one of
the source rivers of the Amu Darya [q.v.], also called
Murgāb [q.v.] or the "River of Kulâb"; (ii) the
"southem" Bug (in Ukrainian: Boh) in the Ukraine
(so regularly in the Ottoman historians), which,
coming from the T'ien-shan, flows in a S. E. direction
wards the Tarim (Yarkand Daryā) and reaches it
somewhat above its junction with the Khotan Daryā
near Sil. The town of Aκ Şu (see next article) receives
its name from this stream.

(β. Spuler)

Aκ ŞU, town in Eastern Turkistan (Sin-kiang),
about 6 km. to the north of the river of Aκ Şu (see
preceding article), approximately opposite to its
junction with the Tawshkand Daryā; 1006 m. above
the sea; 45° 14'; 7° N, 86° E; on the Bokhara car-
route, between Ma'salbā and Kuča. A little
upstream from the modern town lies another settle-
ment called Aκ Şu, and N. E. of both is the "Old
Town", which possibly both correspond to older
settlements with Chinese names of their own (see
below). Aκ Şu is first mentioned with its Turkish
name in the 8th/9th century only; the usual iden-
tification (current since Dequignes) with Auzakia
in Potlemy is therefore more than doubtful. Its iden-
tification with various Chinese toponyms is not yet
finally settled. W. Barthold had identified it (mainly
on the basis of its present Chinese name, see below)
with the Wôn-su of the Han period and the B.nčūl
(B.čūl ?) of the Budād al-Aleśm (ed. Minorsky, 98)
and Gardzi (in Barthold's Otčüt o povestkte v
Srednyyu Asiju, St. Petersburg 1897, 91); later,
however, he gave up this view. P. Peliot identified
Aκ Şu with the Ku-mo of the Han period (Pa-lu-kia
in Hsüan-tsang, Po-huan in the T'ang period;
al-Idrisī's "Bakhuwan"). Chinese merchants in Aκ Şu
are mentioned already about 1400 (Niżam-Shāmī,
Zafar-nāma), but even in 1475 its importance was
small in comparison with other towns of Eastern
Turkistan (W. Barthold, 22 Vorlesungen, Berlin 1935,
220; according to Ḍayār Mīrzā Ta'ībī-r Rağašī,
however, it was about 1547 one of the capitals of
the country. In modern times the importance of the
town (which did not reach, however, that of Yār-
kan, Kāshāhr and Turfan) lay in its role as a
commercial centre and a junction of roads between
China, Siberia, Eastern and Western Turkistan,
Kashmir, Ladakh and India. It had also a military
importance. It is said that at one time the town had
6000 houses, six caravansaries, five madderas, and
a wall with four gates. As the town was almost
completely destroyed by an earthquake in 1716, no
old buildings have been preserved. By the travellers
of the 19th century (A. N. Kuropatkin, 1876-7;
N. M. Prseval'skiy, 1885-6; Carey, 1885-6; F. E.
Youngusband, 1886; Sven Hedin, 1895) it is
described as having about 15,000 inhabitants and
being about 2 km. in circumference. The livelihood
of the inhabitants was based on metalwork, cotton
materials of very good quality (bazz), saddles,
brides, jewellery and the breeding of camels, horses
and cattle. Between 1867 and 1877 Aş Şu belonged to Ya'qub Beg [q.v.] of Kashghar, since 1877 to Ya'qub Beg [q.v., Küt, Kara Shahr and Üzdürfän]. In the 20th century it shared the changing fortunes of Eastern Turkistan. The number of the inhabitants (presumably mostly Sunni Eastern Turks) is at present given as between 20,000 and 40,000, who occupy themselves also with carpet weaving.

**AŞ SUNKUR,** “White Falcon”, the name of many Turkish officers, of whom the following are the most important:

1. **AŞ SUNKUR B. ʿABD ALLĀH ʿĀSĪ A-L-DANLA,** known as al-Hâdis, mamûlik of Malik-shâh [q.v.], who appointed him to the government of Aleppo in 480/1087. He at first supported the efforts of the Saldjûk prince Tutush [q.v.] to establish himself in Syria, but after Malik-shâh’s death he, with the other governors in northern Syria and the Djaza‘r, declared for Barkiyaruk, and was defeated and executed by Tutush near Aleppo in Diumâdâi, 487/1094. He was the father of Zankî [q.v.], afterwards atâbeg of Mosul, and is highly praised for his justice and good government.

**Bibliography:** Ibn al-Ḳalânisî (Amedroz; tr. Le Tourneau, introduction. (CL. CAHEN))

2. **AŞ SUNKUR B. ʿABD ALLĀH ʿĀSĪ A-L-DANLA** [see A-L-DUN].

**AŞ SUNKUR B. ʿABD ALLĀH ʿĀSĪ A-L-DANLA,** originally a mamûlik of Bursuk [q.v.], and one of the principal officers of the Saldjûk sultans Muhammad and Mahmûd. He became prominent firstly through his activities as military governor (ṣir’â) of al-Trâk, and later, at the end of his life, as governor of Mosul, where office he held simultaneously with the former. Appointed ʿâshâ in 498/1105. His main task was to oppose the Mazyadite Arabs of Dubays [q.v.], who were infesting the environs of Baghâd. In his first government of Mosul (507/1113) his chief duty was the organization of the Holy War in the name of the sultan against the Franks in Syria, combining with this an effort to restore the Saldjûk authority in Diyar Bakr and up to the Mediterranean. After several setbacks, due essentially to the suspicions aroused by these ambitions, and which led to his spending the years 509/1112-1113 in partial disgrace at his fief of al-Rahba on the Euphrates, he finally succeeded, after saving Aleppo from an attack by the Crusaders supported by Dubays, in taking over the government of the entire province (518/1125), by agreement with the leading citizens of Aleppo. He thus realized that union of a part of the Djaza‘r with northern Syria which had served as the basis of Ḥamdânî power, and was to support that of Zankî [q.v.]. His life was cut short by the Batinîs of Alamût, one of whose allies he had opposed in al-Trâk, in 519/1126, before he could display his abilities, and it fell to Zankî to realize, with greater solidity, the task thus begun. But already al-Bursukî had combined, as Zankî was also to do, Saldjûkist legitimism, represented by his dignity as atâbek of a prince, with an almost complete déictic autonomy at Mosul, and had effected that reinforcement of Muslim north Syria by the forces of the Djaza‘r which was to permit the former to break the Frankish encirclement and explains its readiness, despite its particularism, to accept his authority.

**AL-ʾÂKABA,** a mountain-road, or a place difficult of ascent on a hill or acclivity. There are many places of this name: the best-known is that between Minâ and Mecca. Here, according to traditional accounts, Muhammad had secret meetings with men from Medina at the pilgrimages of the years 621 and 622 A. D. In 621, at “the first ʾÂkaba”, twelve were present, and they gave to Muhammad an undertaking known as ‘the pledge of the women’ (bayʿat al-nisâ‘); at “the second ʾÂkaba” seventy-three men and two women promised to defend the woman-kind, if necessary, by arms, in what is known as ‘the pledge of war’ (bayʿat al-barb). Some Western writers have held that there was only one meeting at al-ʾÂkaba, since only one is mentioned by al-Ṭabîr (i, 1224 f.), and since the wording of “the pledge of the women” in the extant sources is based on Kurʾân, ix, 12, which is admittedly later (cf. F. Buhl, *Muhammed*, Leipzig 1930, 186). It is likely, however, that the delicate negotiations involved would require more than one meeting. (For the stone-throwing that takes place at al-ʾÂkaba as part of the pilgrimage, see al-ʿÂmira and ʿÂmira.)

(W. MONTGOMERY WATT)

**AL-ʾÂKABA,** the sole seaport of the Ḥashimite Kingdom of Jordan, lying on the eastern side of the head of the Gulf of ʾÂkaba at the foot of the Diabat Umm Ṣuṣayla.

Al-ʾÂkaba is the successor of Ayla [q.v.], from which it developed as the town grew further to the southeast. The name al-ʾÂkaba is a shortened form of ʾÂkabat Ayla, “the Pass of Ayla”, which refers to the pass through the Diabat Umm Ṣuṣayla traversed by the route from al-ʾÂkaba northeast to Maʿān through the Wâdi Ighm and the Wâdi HīsÎm. This pass, which was improved also to the Tullûn Khumârâwâyû (884-95), ultimately gave its name to the town itself. The term ʾÂkabat Ayla appears as early as the time of al-ʾIdrîsî (d. 1166), but the town was still generally known as Ayla. Ibn Bat’tîtö
At the very end of the Mamlûk period (920/1514-5) al-‘Akkâba, by the beginning of the 20th century, was reduced to a village of some fifty mud-and-stone huts, the inhabitants of which lived from the produce of their gardens and from the fruit of date palms, the latter of which they divided equally with the Huwaytâb bedouin, to whom the palms still belong.

The opening of the Suez Canal in 1869 and the fall of the Mamlûk to the Sa’udi Arabian of World War I, al-‘Akkâba of its only remaining importance as a pilgrimage station. When Musil visited the town in 1896 it was a seat of a Turkish garrison guarding the frontier with British occupied Egyptian Sinai. (It belonged to the province of the Hijaz and was the seat of a muqâbil subordinated to the wa‘îf in Djidda.)

During the sea bombardment by British and French warships which preceded the capture of al-‘Akkâba by Anglo-Arab forces on 6 July 1917, the town was severely damaged. Following the end of World War I, al-‘Akkâba was part of the Hijaz, but with the fall of the Hijaz to the Sa’udi Arabian forces in Oct. 1925 the town, along with the Ma‘ân district, was annexed to Transjordan. Little change to protect pilgrims from the attacks of predatory forces in Oct. 1925 the town, along with the Ma‘ân district, was annexed to Transjordan. Little change in the event of the fall of Egypt to axis armies when new construction was undertaken by the British forces to prepare the port as a supply port in the event of the fall of Egypt to axis armies. In 1942-5 (see T. Baqir, in Iraq, Suppl. 1944, 1945; 1946, 72 ff.) the high tower (the ruins of the ancient ziggurat) drew the attention of the Arabs, and is referred to in connection with the Arab conquest as al-mansâra (al-Baladhuri, Futûh, 250; cf. also al-Tabari, ii, 917, iii, 943). It was said to be the tomb of the “Kayânî” dynasty (Ibn al-Fakîh, in Yâkût), or to have been built by Kay Kâfûs (Hamad Allâh, Nukha, 39) or the Kayânî, son of either Tamûrta (Yâkût, al-Kâfûsî) or of Fâris b. Tâmûrta (Ibn al-Fakîh, 196) or of Sâm (Abû Hâmîd). According to a legend (already found in Hamad Allâh) the stone into which Namûrî threw Abraham [see irrahâmî] was at ‘Akkârkût; for this reason it was sometimes called Tell Namûrûb. Tubb Nuwsîs mentions ‘Akkârkût in a verse (Dârân, Cairo 1958, 100) and al-Mâhdî (258) quotes from al-Kalbî a Persian tradition naming it among the seven towns of al-‘Irâq noted for intelligence (cf. Ibn al-Fâkîh, 210). There was also a village, a prominent family being the descendants of Sa’d b. Zayd al-Khâzîrî (Ibn Sa’d, ii/2, 93; al-Samânî, Yâkût). The European travellers of the 16th century and later who mention ‘Akkârkût (see Ritter, Erdhume, xi, 847-52; Tuch, De Nino urbe, Leipzig 1845, 4) usually call it the “Tower of Babel”.

Bibliography: E. Lévi-Provençal, Chorfa, 200-13 (with bibliography, 200 n. 1); idem, Extraits des historiens arabes du Maroc, Paris 1948, 8-9 and 126-7; Brockelmann, S II, 884-5.

(E. Lévi-Provençal)

‘AKÂNÇUS [see ‘AKÂNS].

AKÂNSAH (see ‘AKÂNSH). A name for the pass of Baghras or Baylân [see BAGHRAS].

‘AKÂD [see ‘AKÂD].

‘AKÂL (see ‘IMÂMA). A MOROCCAN historian and man of letters originating from the Berber tribe of Idrîs (Knûsîs), which inhabited Sûs in southern Morocco, where he was born in 1211/1797. He studied at Fez under several teachers of repartee and then obtained a post at the Sharîfian court as secretary. Promoted to the rank of vizier in 1238/1822, he was entrusted by the Sultan Mawly Sulâmîn (Mîlây Sîlmân) with several official missions, but lost his post on the latter’s death (1238/1822). He retired to Marrâkûsh, where he devoted his time to the composition of poetical and historical works and became one of the most prominent representatives of the Tîjdîânîyya tarîba. He died, at an advanced age and afflicted with blindness, on 29 Muhammân 1294/14 Feb. 1877, in the same town. His tomb, situated outside the Bab al-Rabb, is still visited by initiates of the Order.

The major work of Akânsûs is a general history of Islam up to his own era, in which pride of place is given to the history of his own country and, even more specifically, to that of the ‘Alid dynasty (‘Alawiyya) of Morocco, from its origins up to 1282/1865. This voluminous work, a limited number of copies of which were lithographed at Fez (1336/1852), is entitled al-Dîyâ’ al-‘Arâmram al-Khumâsî fi Daw’al Aasîd Mawla’dnâ ‘Ašî al-Siqî[jîmâsî. Its chief merit lies in the fact that it constitutes the first chronicle of the reigns of the sultans ‘Abî al-Râhîm b. ‘Abî al-Râhîmân b. ‘Abî al-Râhîmân, and was subsequently used extensively by Ahmad b. Khâlîd al-Nâfi’î [q.v.] in his al-Isîrîsî. For the earlier period, the Dîyâ’ plagiariizes most frequently the chronicles of al-Ifrânî [q.v.] and al-Zayyânsî [q.v.].

(E. Lévi-Provençal)

‘AKÂRÎB (see ‘AKÂRÎB).

‘ÂKÂRKÛF group of ruins 30 kms. west of Baghdât; its identification by H. Rawlinson with the town of Dur Kurigalzu, founded by the Kassites in the 14th century B.C., has been confirmed by the excavations of 1942-5 (see T. Baqir, in Iraq, Suppl. 1944, 1945; 1946, 73 ff.). The high tower (the ruins of the ancient zkhrurat) drew the attention of the Arabs, and is referred to in connection with the Arab conquest as al-mansâra (al-Baladhuri, Futûh, 250; cf. also al-Tabari, ii, 917, iii, 943). It was said to be the tomb of the “Kayânî” dynasty (Ibn al-Fakîh, in Yâkût), or to have been built by Kay Kâfûs (Hamad Allâh, Nukha, 39) or the Kayânî, son of either Tamûrta (Yâkût, al-Kâfûsî) or of Fâris b. Tâmûrta (Ibn al-Fakîh, 196) or of Sâm (Abû Hâmîd). According to a legend (already found in Hamad Allâh) the stone into which Namûrî threw Abraham [see irrahâmî] was at ‘Akkârkût; for this reason it was sometimes called Tell Namûrûb. Tubb Nuwsîs mentions ‘Akkârkût in a verse (Dârân, Cairo 1958, 100) and al-Mâhdî (258) quotes from al-Kalbî a Persian tradition naming it among the seven towns of al-‘Irâq noted for intelligence (cf. The European travellers of the 16th century and later who mention ‘Akkârkût (see Ritter, Erdhume, xi, 847-52; Tuch, De Nino urbe, Leipzig 1845, 4) usually call it the “Tower of Babel”.

(S. M. Sterm)

AL-‘AKÂKWÂK, “thick-set”, sobriquet of the poet Ali b. ‘Abdallâh. Born at Baghdât in 156/776, of a family of Khurasânîs (a)shâ, al-‘Akâkwâk seems to have spent most of his life in ‘Irâq, where he was the panegyrist of Abû Dulâl al-Qâ’îl [q.v.]. Hûmâyâd
b. 'Abd al-Hamíd al-Tusi, and the vizier al-Hassan b. Sahl [q.v.]. The exaggerated and almost sacrilegious eulogies addressed to the two first-named excited, it is said, the hostility of the Caliph al-Ma’mún, who had the poet’s tongue torn out. Al-Akawwak died as a result of this mutilation in 213/828. His al-dīwān, a work of considerable proportions (see Fihrist, 16416), has not come down to us, and his poetry is known to us only through the quotations of anthologists; the long poem quoted by al-Thālibī, Yatim al-Dahr, Damascus edition, iii, is ascribed to him, but this is questionable. Al-Dihāzī had a great admiration of his rivals was a usurping Hindu minister named river Tungabhadra, the Hindu empire of Vidjaya-in Sind while his father Humayun, who had been once only in his Kīthāl-Bayān wazīl-Tābīyān. On the other hand, contemporaries of al-Dihāzī such as Ibn Kutayba and Abu’l-Farāq al-Isfahānī consider al-Akawwak to be a poet of exceptional merit.

Bibliography: Ibn Kutayba, Shīr, 550-3; Aghāmī, xviii, 100-14; Ibn ’Abd Rabbih, al-Jahādī, (’Uryān), i, 238, 243; al-Khāṭīb al-Baghdādī, Tārīkh Baghdād, xii, 359; Ibn Khālidīn, Cairo, 1310, i, 348, ed. Cairo 1948, no. 434: Brockelmann, S. i, 120. (R. Blache-Re)

AKBAR, ABDU’L-FATH DZALILL AL-DIN MUHAMMAD (1556-1605), the greatest of the Mughal emperors of India, was born at Unmokr in Sind while his father Humayūn, who had been ousted by the Afghan usurper Shīr Shāh Sūr, was escaping to Persia. A grandson of Bābur, he was both a Timūrid Turk and a Caṭhātāy Mongol. His mother, Ḥamīda Banū, was a Persian. After thirteen years of exile Humayūn, because of the decline of Sūr power, decided to attempt the reconquest of Hindūstān. Little however had been accomplished before his death on 24 Jan. 1556. In fact there was no Mughal empire before Akbar, only an attempt to create one. In his early struggles Akbar owed much to his able guardian and regent Bayram Khān [q.v.]. In addition to the Sūr claimants the most dangerous of his rivals was a usurping Hindu minister named Hēmū who had assumed the title of Rāgha Vikrama-dītya. Hēmū’s forces were routed at Pānīpat on 5 Nov. 1556. The following year saw the surrender of Sikandar Shāh Sūr. In 1560 Bayram Khān fell from power, after which Akbar remained for about four years under the pernicious influence of the ladies of the harem and of a faction controlled by his foster relatives, the ala ḍawla of contemporary Muslim historians. His personal rule therefore dates from 1564.

His annexations. In 1564 his kingdom comprised the Pandžāb and Multān; the basin of the Ganges and Djinna between Pānīpat and Allāhābād; the country between the Gumti and the foothills of the Himalayas; Gawlōr in Central India and Adīmīr in Nadīputana. The country around Kābul was held by his half brother Muḥammad Ḥakīm. Kandahār belonged to Persia. Outside his dominions were the Muslim states of Gudjrāt and Khāndāsh; the five Deccani sultanes of Bājrā, Bīdār, Aḥmādnaγar, Bīlgāpūr and Goloconda; and, to the south of the river Tungabhadrā, the Hindu empire of Viḍjaya-nagar. Kāhīnī, Nadīputana, and Gondwana were under independent chiefs and rādīs. Bīhār and Bengal acknowledged an Afghan ruler, Sulaymān Karānān. The Portuguese were firmly established at strategic points along the coast.

Between 1562 and 1576 he added to his dominions Malwā (1562), the Gond kingdom of Garha-Katanga in Gondwana (1564), Chīтор (1568), Rantambhōr (1569), Kalandjar in Bundelkhand (1586), and Gugjār (1573). The annexation of Bāṇglā in 1576 made him master of the whole of northern India with the exception of lower Sind. Subsequent additions to his empire were Kālmār (1586), Sind (1591), part of Orissa (1592), Bālōṣistān and Makrān (1594), and Kandāshā (1595). As a result of his Deccan campaigns Benār, Khāndesh, and part of Aḥmādnaγar were annexed between 1595 and 1601. At his death, in 1605, his empire comprised the following fifteen sūhrs (provinces): Bālōṣistān (including Kāhīnī), Lahore, Multān (including Sind), Delhi, Oudh, Agra, Adīmīr, Aḥmādnaγar, Malwā, Allāhābād, Bīhār, Bengal, Khāndesh, Benār and Aḥmādnaγar (not fully subdued).

Administrative policy. Akbar was not merely a conqueror. He was in addition endowed with a genius for administration to which the structure of both his central and provincial government bears testimony. The ideas of Akbar can be traced back to his immediate predecessors the Sūr Afghāns and the sultans of Delhi. The chief lesson he learned from the past was the danger of the unlimited wazīrat. In 1564, therefore, the central government was reorganized by entrusting the financial functions of the wakīl-mulāb to the ṣādir or wazir. From this time onwards the power of the wakīl was eclipsed by that of the ṣādir and the importance of the office was further lessened by keeping it vacant for long periods. Other important officers of the central government under Akbar were the mir bakhshī, the mir sāmān, and the ṣadār al-ṣādir. It is extremely difficult to define the functions of the mir bakhshī, who has been referred to as the Paymaster-General or as the Adjutant-General, but the more fitting modern equivalent would be Quartermaster-General. Under Akbar the mir bakhshī as administrative head of the military department was responsible for all transport arrangements during campaigns and could be placed in command of an army in the field. In accordance with Akbar’s policy of separation of powers it was only on active service that the mir bakhshī actually paid the troops. Normally this was the work of the ṣādir. The mir sāmān was in charge of the būyūlī department and was responsible for the organization of the hār-khānas, the factories, workshops, and stores maintained by the emperor. The ṣadār al-ṣādir, the chief spokesman of the ‘ulāma’, was the Chief Kāḏī and head of the judiciary. In the early part of Akbar’s reign this official had extraordinary powers. His reading of the būyūlī in the name of a new sovereign legalized the accession. He also exercised the right of patronage recommending deserving cases to the king for maddās-i ma’āṣī grants. It is incorrect to assert that in 1581 Akbar abolished this office. It is true that six provincial ṣadārs were appointed but the office of ṣadār al-ṣādir continued, though shorn of its former extraordinary powers. All important officers, whether civil or military, were graded as amīrs or mānsābādārs on a military basis. They were divided into 33 classes and their rank and precedence were regulated by nominal commands of horse, ranging from 50 to 5000. Under Akbar there was evidently some connection between an officer’s rank and the number of troops he entertained, but the exact meaning of the terms ḍāḥī and suwār is controversial.

The provincial government was administered by a hierarchy of officials corresponding to those at the centre. The sūhrās (provinces) were divided into sarkārs (districts) which were further subdivided
into parganas or mahalls, the lowest fiscal unit in the empire. Distance and the backwardness of communications necessitated elaborate precautions to prevent fraud and rebellion. The provincial governor was a bureaucratic head and was not allowed to develop into a feudal baron. Not only was the governor's tenure of office short but important provincial officials like the divān and the fāngūdar (executive head of a sarkār) were appointed by the central government. There was also an elaborate system of espionage carried out by the wāda's naubās (reporter) and other officials.

Akbar's revenue policy was the outcome of three experiments. In each case a different set of assessment rules was adopted but in all three the assessment was based on the area sown and varied with different crops. The first two experiments failed and it was not until the 24th regnal year (1579-80) that a stable system was introduced. This was known as the dāh sāla system because the assessment was based on the average of the previous ten years. An attempt was made to deal directly with the peasants who had to pay one-third of their gross produce to the state. It was enforced only in the six central provinces which formed the original nucleus of his empire.

His religious policy was chiefly dictated by political and dynastic considerations. His policy of sulh-i kull (universal toleration), his abolition of the dīdiya and of the tax formerly levied on Hindu pilgrims were aimed at securing the loyalty of his Hindu subjects, who formed the bulk of the population. It was also inextricably bound up with his conception of sovereignty and was an assertion of the supremacy of the state politically, economically, and financially. With this object he curbed the powers of the 'alamās' by the so-called Infallibility Decree of 1579 by which he was recognized as the chief authority in the realm on religious matters. Although illiterate he was genuinely interested in the study of Comparative Religion and built an ibhādāt-khāna (House of Worship) where learned men of all religions assembled for the purpose strange words, whether Persian or vernacular. From the sociological point of view, the main interest of his poetry lies in the fact that it may be regarded as a running commentary on the social foibles of his contemporaries and the political and religious trends of his times. His criticism is not, however, the result of deep or sustained sociological thought, but is the impulsive reaction of a conservative mind to that Westernization of Indian life, which as a matter of fact had been in progress for a long time past. The shafts of his wit and ridicule simply touch the surface of things, and as the phases of life criticised by him pass away in a changing society, a considerable part of his poetry is likely to lose its topical interest for the coming generations.

His poetical compositions have been collected in four volumes and frequently published under the title of Kulīyyāt-i Akbar. The first volume was published in 1909, the fourth in 1948. His letters, too, have been published in several collections. Shortly before his death, he composed Gāngī-ñāma, in which he set down the political views of the various parties, which took part in the anti-British movement led by M. K. Gandhi. It was edited by M. Na'īm al-Rāhman, Allahabad 1948.

(Sh. Inayatullah)
Aspre or asper, from the Greek aspron. The term was already in use under the Seljukids of Irak during the 12th century (see al-Rawanid, ‘Ikhd al-Sudur, 300, where a gift of 1,000 akbes is recorded); and since, when applied to the first Ottoman coin to be struck, under Orhah in 727/1327, it was qualified by the epithet “Othmami”, it would appear to have continued in use either for some other coin or as signifying “money” in a more general sense. In later Ottoman times it certainly came to bear this wider sense, as in such phrases as telded akbes, ‘aadad akbes, and to have been generally used by all the northern Turkish-speaking peoples in both senses (cf. Radloff, Wörterbuch, s.v.). During the 14th and 15th centuries the Ottoman coin was usually called simply “Othmami”, but from the reign of Selim I onwards, this usage being abandoned, it came to be known simply as the akce.

The earliest Ottoman akce was modelled on the dirhem of the Seljukids of Rüm; and although in one issue or another of the sultans down to Murad II there appear most of the elements that were later to make up the final formulae of the akce’s inscriptions, it was not until the reign of Mehemed II that these were all regularly, though not always identically, combined.

The akce of Orhah was weighed 6 kiras, or one-quarter of a mithkdl, measured 18 mm. in diameter; and down to the reign of Murad II, though the akce was somewhat reduced in size, its standard of purity and even its weight were pretty well kept up. Under Mehemed II, Bayazid II, and Selim I, however, its standard was reduced by 5% and its weight to 5/6 kiras; and although under Suleymân I and Selim II this decree was retarded, it continued, till, under Mahmoud III and his successors down to Othmam II, though retaining the same standard and more or less the same diameter, it was reduced by fits and starts to a weight of no more than 3½ kiras, becoming thinner and thinner. Moreover, under Murad IV, Ibrahim, and Mehemed IV, its silver content was reduced first to 70% and then to 50%, though its weight and size remained roughly the same. The effect of these various debasements on its value was that, whereas 40 akbes went to the first Ottoman gold piece, of Mehemed II, by the reign of Mustafâ II, when a currency reform resulted in the first coining of the Ottoman kurush, the rate of the gold piece (whose own weight and standard had been pretty well maintained) had risen to as much as 300 akbes.

As a conventional unit, used chiefly for accountancy purposes, and in the landtax period it was abandoned, except in connection with the akce, even for that.

(by I. R. Usum-Carrell)

**AKD.** The akd, in Muslim law, is properly the legal act, whether it relates to a contract or to a simple unilateral declaration, such as a will. More especially, however, the term akd denotes the legal act which involves a bi-lateral declaration, namely the offer (i’dâb) and the acceptance (i’had). Thus the latter is a legal act binding on itself, and, as such, is one and indivisible. In the absence of an act of acceptance, the offer is not binding. It is necessary to distinguish clearly between the akd and offer, and, simple promises (i’dâa) and also allowances (i’hadâl), which are not binding.

The akd is not merely a simple expression of agreement. Every akd requires a sigha, or form, by which the wishes of each of the parties are expressed. These wishes must in principle be expressed verbally, unless a mute is involved. Writing cannot be used unless the parties are not in the presence of each other. But there is no question of an inflexible formalism. The sigha is not confined to a stereotyped form. Any mode of expression (sûra) is valid, provided it gives the required meaning. It is necessary to realise that akd can in no way validly express the will to contract. Verba de praesenti only bind the contracting party if the will to contract is established independently. There is no necessity to try to establish this intention (niyya) if the verba are in the past tense.

The akd should therefore reflect a mutual understanding which has already been reached. It is concluded in order to secure for this agreement its legal effects. Thus the effect of a contract of sale is the immediate transfer of the ownership of the object of sale to the vendee. This conveyance cannot be deferred. In the definition of the akd, there is no question of obligations being incurred by one party or the other by virtue of the contract. The akd, in Muslim law, is not so much an act giving rise to obligations as a legal act creating a new legal situation or modifying an existing one. The vendor is naturally obliged to deliver the object of sale, just as the purchaser is obliged to pay the price. These obligations, however, are not considered to be effects (hukm) of the contract, but are properly considered to be contractual rights (i’had al-i’dâb).

If the obligations of the two contracting parties are discharged as soon as mutual agreement is reached, then this does not constitute an akd, but only a mu’âldtl, a mutual delivery of the object of sale and of the sale price. This delivery is certainly valid for res vires. It is also valid, according to some legal doctrines, for articles of value, if there has been an effective fulfilment of the contract by at least one party. But, in principle, the akd postulates a sigha which necessarily creates, in law, a new situation.

It should also be noticed that, in certain contracts, the material delivery of the object of sale is regarded as a condition of the fulfillment of the akd. This position obtains as regards loan of fungible and not fungible things, pledge and gift which, in Muslim law, are equivalent to "real" contracts.

The akd must comply with a condition of unity in time and space. The akd constitutes an indivisible whole. The negotium (safa) is one and indivisible, in the sense that the offer cannot be accepted in part, even when it involves two distinct things. Similarly, the offer cannot be accepted by one of its recipients to the exclusion of the other. Finally, the contract is rendered null and void if one of the objects of the contract proves to be an asset extra commercium. This conception of the contract as an indivisible unit gives great rigidity to the structure of the akd. Thus the akd cannot comprehend more than one.
negotium. On the other hand, the *akd must be concluded at one and the same sitting (the contractual meeting or madjlis al-*akd). In short, the contracting parties must assemble in one and the same place. The contractual act thus takes place under the symbol of the three unities (see Ch. Chehata, *Théorie générale*, no. 110).

From this it follows that any clause added to the contract will be declared inoperative unless it is implied by the nature of the contract itself, so that it can be smoothly integrated into its structure. Such clauses are termed essentialia and naturalia. All other clauses (accidentalia) will be considered invalid. Thus the inalienability clause added to a contract of sale will be deemed null and void.

Does this mean that contracts in Muslim law are all formulated contracts, and that the parties cannot, by mutual agreement, conclude contracts which have not been anticipated by the Law (ghar)? The answer usually given is that Muslims are bound by their stipulations (ghurūt) [q.v.]. But at the same time every type of contract is considered on its merits and pronounced legal or otherwise on the basis of the Qur'ānic texts, the hadith and the idāma. It must moreover be realised that the conditions governing the formation of contracts are tantamount to prescriptions of an authoritative nature, and that the various regulations laid down by jurists concerning contracts entail the sanction of nullity, which considerably limits the area of contractual freedom. On the other hand it should not be forgotten that the Muslim social order, in matters concerning contracts, is based on two main principles; the struggle against usury and any suspicion of usury (riḥā and ghubāt al-riḥā), and the exclusion of all risk (gharar) from transactions.

The *akd*, once drawn up in accordance with the requisite conditions, cannot in principle be vitiated by some fault in the agreement, unless there is a question of constraint (ikrāḥ). Constraint is usually the subject for a separate chapter in works on *īkh.* The party which has suffered constraint can revoke its contractual obligations. In the case of fraud, on the other hand, the contract can be challenged only if the fraudulent actions have inflicted on the deceived party excessive loss (ghānī fāhib). Errors, such as a fault in the agreement, pass almost unnoticed. The party which is deceived as to the quality of the article can only withdraw from its contractual obligations if the quality has been made the subject of a special stipulation in the contract. The contract will then have to be cancelled, not on account of the error, but on the basis of the resolutory clause.

An *akd* which does not satisfy the required conditions is in principle ineffectual, and is termed null and void (bāṭil) [q.v.]. Hanafite doctrine distinguishes, however, between the invalid contract and the irregular (fāṣād) contract. The contract will be considered null and void only if one of the conditions (ruḥān) regulating the conclusion of the contract happens to be unfulfilled. In all other cases, the contract will simply be irregular. The irregular contract, however, is, like an invalid contract, an act devoid of legal consequences. The advantage of the distinction between these two categories appears only when the protection of a third party is involved. Thus a person acquiring property by virtue of a fāṣād contract can validly alienate it in favour of a third party, if he has previously taken possession of it. The alienation in this case arises from a non dominus, but it is considered valid, because the third party, which has acquired the property from its owner, could be ignorant of the irregularity (fasād) attaching to that owner's title. This measure of protection is at the basis of the theory of *lās* contracts in Hanafi Muslim law. (See Ch. Chehata, in *Travaux de la Semaine du Droit Musulman*, Paris 1953, 36 ff.)

It should, however, be noted that certain contracts are neither valid nor invalid, but belong to a third category. The *akd* is then said to be ma`ūsul, as, for example, in the case of a contract concluded, without the audtorias of his guardian, by a minor who is not without powers of discrimination. Unless gratuitous transactions are involved, transactions concluded by minors who are not without powers of discrimination are not null and void. They are simply non-effective (cf. Art. 108 of the German civil code). The ratification (idāda) of the guardian gives them full and absolute effect. Similarly a contract agreed to by a non-dominus is considered simply to be non-effective, prior to the ratification of the verus dominus. In the meantime, the contract has no legal effects whatever. It is in a state of suspense (ma`ūsul) between the parties and equally as regards any third party.

If an *akd* is to have effect on other than on the contracting parties, representation is required. In Hanafi Muslim law the agent (ma`ūs) does not, in principle, represent his client. In order that the *akd* may produce its effect directly on the client, the agent must act in the name of his client (alierno nomine). But he then assumes the role of a messenger a spokesman pure and simple (rasūl). If he acts in his own name (proprio nomine), which is the usual function of an agent, the *akd* will still produce its effect in regard to the client, but the obligations arising from the contract will not be binding on the client; they will be binding on the agent alone. Thus the legal representative of a person acquiring property will find himself bound to pay its price himself, while the property will go directly to his client. The distinction, already noticed, between the effects of the contract (ahkām) and rights arising from the contract (bukhāl al-*akd*) is clearly illustrated here. (See Chefik Chehata, *La représentation dans les actes juridiques en droit musulman handîfî, d'après les textes de Shaybānî*, to appear in the Proceedings of the Congress of Comparative Law, Paris 1954.)

The effective *akd* is in principle binding (lāsīm). There are, however, several exceptions to this rule; for instance agency, gratuitous loan, pledge, partnership, suretyship, security and gift are considered, among others, to be contracts which are essentially revocable. In all these contracts one of the parties is free, depending on the circumstances, to withdraw from its contractual obligations by a simple unilateral declaration. (In the case of gift, however, a judicial decree is necessary.) Moreover, contracts of lease can always be rescinded if one of the parties lodges a plea (nabir) on any grounds whatever. Finally, a special clause can be inserted in general in any contract, to confer on one party, or on both parties equally, the right to withdraw (jus paenitendi, called in Muslim law khīyār al-shalī). In conclusion it may be mentioned that mutual agreement between the parties can always put an end to a contract. This is termed shikā (mutus dissensus), and is discussed at length in works on *īkh.* But the *akd* cannot in principle be cancelled on the grounds of non-fulfilment. Thus the vendor, in default of a special clause, cannot demand the rescission of the sale in a case where the purchaser has not paid the agreed price. (See also *shurūt.*)

Doctrinal sources, i.e. those for Hanafite law, which is specially discussed in the article: Muḥammad b. al-Jāṣān al-Shaybānī, al-As, Kitāb al-bayyūd wal-sālam, ed. by Shafīk Shihātī, Cairo 1948; Fārākhshī, al-Mākṣūr, vol. iii, 1928/1946; Kāsānī, Badā‘i‘ al-San‘ā‘ fi Tartīb al-Ṣaḥrā’iyya, 7 vols., Cairo 1938/1940.

But as the sister can after all only lay claim to half the grandfather’s part, the right proportion between these two parts has again to be re-established. Together they inherit $\frac{1}{8} = \frac{1}{16}$, but the grandfather receives $\frac{1}{2}$ and the sister $\frac{1}{3}$.

About the meaning of the name akhāriyya the Muslim scholars hold different opinions. Some say that the question itself is akdar (i.e. troubled, obscure), or that the otherwise generally accepted principles are “troubled, disturbed” in this case; others believe Akdar to be the name of a man, to whom ‘Abd al-Malik b. Marwān submitted this question.

interest since the discovery of the greater part of
the Muktabis of Ibn Hayyan. It is an ill-proportioned
and relatively late work, probably contemporary
with the reconquest of Valencia. In it are found
lengthy passages from earlier chronicles, notably
from that of Ibn b. Ahmad al-Razi. The fact that
this text does not refer to the sources which it
transcribes or transposes has deceived Dozy (preface
to his edition of the al-Bayag al-Mukhrib of Ibn
Iqbar, Leiden 1848-51, 10-12) and Ribera (intro-
duction to his translation of the Itfadah of Ibn al-
Khiyya, Madrid 1926, XII, 11) into believing
it to be an original work. The extremely debatable
study and problematical conclusions reached by
by the non-Arabist Spanish historian Cl. Sanchez
Albornoz, in his work El “Afhur maymaa”, questiones
historiographicae que suscita, Buenos Aires 1944,
need only be mentioned here.

AL-AKHDAR, “the green”, a vulgar form cur-
cently used in North Africa for the personal name
al-Khir (q.v.). Various sants, especially at Con-
tantine, are known by this name.

AL-ALKHAIR, Abu Zayd ʿAbd al-Rahman b.
Suyydi Muhammad al-Saghib, Algerian au-
thor of the 10th/16th century. He wrote (1) al-Sulaim al-
Murawna (composed in 942/1534), a short verifi-
cation of al-Saghib’s (q.v.) works; this little work soon became extremely popular and
acquired numerous commentaries (one by the author himself)
and glosses; it has often been lithographed or
printed, in Fas, Bulaq (editio princeps of 1241
in Majmua al-Majmua al-Mutafun), Cairo and Luck-
now; French transl. by J. D. Luciani, Le Soullam,
Algiers 1921. Very popular, too, is his (2)
commentaries by other writers, it has often been
rently used in North Africa for the personal name
on logic; this

AKHI, designation of the leaders of asso-
ciations of young men organized as guilds
in Anatolia in the 13th-14th centuries, who
adopted the ideals of the futuwa (q.v.) and were
recruited mainly among the craftsmen. Ibn Battuta
(ii, 260) connects the name with the Arabic word
for “my brother”; if this explanation is based on
anything more than an identity of sound, it would
offer an instance of a “title in forms of address”
similar to A. sayyid, T. Ṣanʿun, bagum, etc. It
is more likely, however, that the homonymy of
the two words is accidental, though it was willingly
adopted by the Akhs; occasionally also it is borrowed
in the Persian translation biradar (cf. Taeschner-
Schumacher, Nāṣirī, 38). In reality it is a Turkish
word (cf. J. Deny in JA, 1920, 182 f.; H. H. Schaeder,
in OLZ, 1928, 1049, n. 1), which is already found in
Uyghur in the form akl “generous” (A. von Gabain,
Alltürkischen Grammatik, glossary, s.v.; Turfanische,
vii, 24). The word occurs in the same form and with
the same meaning (cf. also akl, “generosity”) in
Middle Turkish (Kashgharian): in al-Kashghar,
Düzin Lughat al-Turk (abl, “al-djamat”), i, 84 —

Encyclopaedia of Islam
facs. ed. 57; a£J/J£, iii, 129 — facs. ed. 520; C. Brockelmann, *MitteUurkischer Wörterbuch*, s.v.), and in the didactic poem *‘Attebet al-‘Hašab* by Edib Ahmed b. Mahmūd Yūnekht, ix (ed. R. Ramet, Istanbul 1951, 58-61, index, s.v.; under the title *Hībet al-‘Hašab*, ed. Nejīb ‘Asīm, Istanbul 1334, 52-5; cf. J. Deny in *RMM*, 1925, 219, no. 11) *aḥī er*, “the generous one”, and *aḥī bāk*, “the generous”; the opposite is *bākīl* and *bākīlīh*, or *bukhul*, also *ḥasīs* and *ḥasīsīh*). In the latter work the form *aḥīs* occurs also as a variant reading for *aḥī*; and this is the form which is exclusively used in Rūm-Turkish. It is found several times in the oldest Rūm-Turkish literature, as a vocative (“oh generous one, oh noble one, oh hero”) constituting the rhymeword at the end of a line; for instance in the *Kitāb-i Dede Korkut* (ed. E. Rossi, fol. 65°, three times; ed. Kiiäsi Rifʿat, 16; ed. Gökkyay, 9), in two poems of Yūnus Emre (ed. Burhan Ümid, ii, 344, 361; ed. Abdülbaki Gölpinarlı, 117), and also elsewhere (e.g. Enveri, Mürkrimin Khalili, 43). The word passed from the general to the particular meaning, i.e. possessor of *fuṭuwwa* (*P. fuṭuwwa*) or *fuṭuwwat*, by acquiring the full implications of the Persian word *gūwānmār*, which the latter in turn had received as a translation of Arabic *fata*, *al-fata* (cf. H. H. Schaeder, loc. cit.).

*Aḥī*, as a term qualifying its bearer as possessing *fuṭuwwat* (*aḥīb fuṭuwwat* or *fuṭuwwat-dār*), always precedes the name and occurs occasionally with reference to persons even earlier than the 7th/13th century. So for instance it is applied to the sūfī *gāyāh* Aḥī Faradj Zandjanl (d. 1 Radjab 457/836), and the teacher of the poet Niẓāmī (b. 533/1142) is also said to have borne that designation. It is, however, only in the 7th/13th, and more especially the 8th/14th century, that the name occurs frequently, in the whole of the Middle East, but predominantly in Anatolia; it gradually disappears again in the course of the 9th/15th century.

In the more particular sense, Akhism is the specific form assumed by the *fuṭuwwa* organization in late- and post-Salṭūn Anatolia. It is well attested here by a literature of its own (the Persian *Fuṭuwwat-nāme* of Niẓāmī, written in 1204, were members of *aḥī* organization; in prose, by Yabāy b. Khalīl al-Burghazī, probably from the 8th/14th century; the important chapter on *fuṭuwwat* in Gūlscheh’s old-Ottoman version of *‘Attar’s Manṭik al-Tayr*, studied by F. Taeschner in *S.P.A.W.*, 1932, 744-60) as well as by allusions in various authors (the most impressive being Ibn Battūtā’s vivid account, ii, 254-354, especially 330 ff., the chapter on *al-‘akhkhya al-fiyān*, and by inscriptions and documents. (A list of the references, to which many additions could now be made, in *Islamica*, 1929, 29-47; *‘Aḥīkasha-zāde* (Giese), 201, 213 (= Istanbul ed. 205), names the *aḥīs*, together with the *ghayyāh*, *abdālān* and *bādījān*, as the four groups of “travelers” (*muśfīlīrīn wa-sayyādārin*) in Rūm (Anatolia) (for comments on this statement see P. Wittek, in *Bysantion*, 1936, 310). The wording of the sentence seems to imply that these groups came to Anatolia from abroad. They can perhaps be connected with the *flood of daruwalas* and related figures from the east (*Khurāsān* and *Turkistan*), who are known from other sources as well to have come to Anatolia in the Mongol period (second half of the 13th century). Some early mentions of *aḥīs* in Iranian territory in pre-Mongol times would bear this out. The earliest mentions of *aḥīs* in Anatolia (especially in Aflākī, *Manākīš al-‘Arifīn*, cf. Cl. Cahen, see below) also go back to relations with Iran. On the other hand, in considering the forms of organization, the connection with the courtly *fuṭuwwa* at the caliph’s court in Baghdād ought not to be passed over; this is made likely by the relations, repeatedly attested, between the caliph al-Nāṣir li-Dīn Allāh (575-622/1180-1225), the reformer of the *fuṭuwwa* [q.v.], and the Sājdālīl sultan of Rūm.

During the disintegration of the state of the Rūm Salṭūns and the division of Anatolia into a number of Turkish principalities (second half of the 13th century), the *aḥīs*, who according to the contemporary or slightly later authors (such as Ibn Bīlī, Aḵṣarāyī, the Paris Anonymous and Aflākī) were leaders of bands (*rūmsd*, showed a remarkable activity, reminiscent of the activity of the *‘ayyārān* [q.v.] in Baghdād and the *aḥādīs* [q.v.] in Syria a century before. In the first half of the 14th century, the *aḥīs* appear in the account of Ibn Battūtā, to whom the *aḥī* extended hospitality in every town during his journey through Anatolia, ca. 1333, as an important element of cohesion in the motley conglomeration of states in Anatolia at that period. In towns where no prince resided, they exercised a sort of government and had the rank of *amīr* (Aḵ Sarāy, Ibn Baṭṭūta, ii, 286; Kayasıyye, ii, 288 f.); sometimes they exercised judicial authority (Konya, Ibn Baṭṭūta, ii, 281). Their position seems to have been especially strong in Anḵara, at the time when the authority of the Mongol governor residing in Siwās did not reach so far. Sharaf al-Dīn, the richest and most powerful of these *aḥīs* of Anḵara, calls himself in his tomb inscription of 751/1350: *aḥī muṣṣām* (*Mushārak Ghālib, Anḵara, ii, 15 f., no. 20; Islamica, 1929, 44, no. 3b). According to Neghīr (Taeschner), 52 (= ed. Anḵara, 190-2), it was from their hands that Murād I accepted the town in 762/1360-1, We find *aḥīs* also in the entourage of the first Ottoman rulers; some of these *aḥīs* took part in the conquest of Brusa (for details see *Islamica*, 1929, 30). Basing himself on this fact, Fr. Giese (ZS, 1924, 255, 258) considered the *aḥī* as the troops with whose help the Ottomans founded their power, and surmised that they themselves were members of *aḥī* organizations. This is, however, little likely, in view of the urban character of Akhism and the fact that its associations were composed of craftsmen. P. Wittek has shown with much probability that the role attributed by Giese to the *aḥī* belongs in reality to the *aḥīs*, fighters for the faith, who constituted a military counterpart to the *aḥī* (first in *ZDMG*, 1925, 288 f., and then frequently). On the other hand it results from a *wakfiyya* of Murād I, of 767/1366, and an inscription in *Hādīdī Bektash*, of 796/1396, that Murād, probably for political reasons, joined the still powerful *aḥī* organization (see Fr. Taeschner, *War Murād I Grossmeister oder Mitglied des Achibundes*, Oriens, 1953, 23-31). This was followed, however, by the decline, rather than the advancement, of Akhism, as it seems that the Ottoman sultans, when they had no further need of the *aḥī*, dropped their relations with them.

The *aḥī*’s own literature does not allude to any activity in public life. Here the *aḥī* organization appears as a half-religious, *daruwalas*-like society. It comprised three grades: *yigisi* (“young man”), translation of A. *fudā*, designated the ordinary unmarried member of the organization; *aḥī* (president of a corporation of *fityan* and owner of a *sikāya*, meeting-house, of which there were sometimes more than one...
in a town); and shaykh. The latter grade seems to have played practically no active role; probably it refers to the leader of a darugh settlement, to which the members of the corporation felt themselves attached. Such attachments seem to have varied with the individual corporations; there are known to have been relations between akhs and the Mewlewis, Bektaşıs, Khadwetis, and probably yet other orders. The ordinary members were always again divided into two classes: they were either bawalis, "word-members", when they made a general profession only ("by way of speech"), or saylis, "word members", who probably were the active members. The symbol was, according to Ibn Battûta, ii, 264, a knife (şikkîm); they covered their heads with a white woolen headgear (kalanswâs), from the end of which there hung down a piece of cloth one ell long and two fingers in breadth (the resemblance to the head-covering of the later Janissaries, the kele, is noteworthy). According to Ibn Battûta, the members of an akhî corporation met every evening in the house of their leader, the akhî, bringing him their daily earnings, which served to cover the expenses of the club premises and the communal meal, to which also guests, especially passing travellers, would be invited. The lodging and entertaining of travellers was considered by the akhîs as one of their main function. According to Ibn Battûta, they also played a political role by fighting tyrants and murdering their adherents; this statement may be an echo of the frequently attested activities of the akhs in earlier times, which found expression in revolts and similar demonstra tions.

As regards other customs and their code of honour, the akhis accepted the general rules of futuwwa ([q.v.], T. Anjuman, 1905). As in the futuwwa, so also among the akhsîs, the initiation of novices (terbiye) into the association by their girding, the cutting of their hair, the passing round of a cup of salted water and putting on the trousers, was of central importance. Their religious-political position, however, was not fixed: some elements in the custom and theory of the akhsîs, as for instance the intense cult of Allah, showing a Shî'î colouring also, yet they no doubt considered themselves to be Sunnis and like all Turks considered themselves to be Sunnis and like all Turks, fell in Sinob under suspicion of being a Râfî'dî, i.e. Shî'te, because of a minute difference in the ritual of prayer and had to clear himself by eating roasted hare ([i.e. 3522]).

In the 15th century information about Akhism becomes more and more rare and finally ceases. Sometimes the word akhî occurs, but merely as a proper name. A mollâ Akhaywân is named by Mehemed II; a family called Akhî-zâde, whose members occupied high judicial posts, survived into the 17th century. Also place-names in which the word akhî occurs in various combinations are not uncommon in Anatolia and Rumelia. But it seems that Akhism disappeared in the course of the 15th century. Its tradition survived only in some elements of the Turkish guilds ([q.v.], in which organization (which according to Sayyid Mehemed b. Sayyid 'Ali b. Dîn's Great Futuwwet-nâmé (composed in 1524) had nine grades) the akhî, also called khâlisî, occupied the seventh grade. The akhî tradition was especially cultivated in the guild of the tanners, who had as their patron Akhî Ewran ([q.v.], a semi-mythical figure, who, if he is historical at all, must have lived in the first half of the 14th century. The president of the tanners' guild bore the title of Akhî Baba ([q.v.]). Moreover, among the tanners the Futuwwet-nâmé of Yahyâ b. Khalîl al-Burghâzî continued to be read, revised and copied.

Akhî Baba, in popular parlance Akhî Baba or Eht Baba, title of the shaykh of the tekye of Akhî Ewrân ([q.v.]) in Kırîehir. Sometimes also his delegates to the Turkish guilds ([q.v.]). Sometimes also his delegates to the Turkish guilds ([q.v.]), more correctly Akhî Baba wekhî. The main task of the Akhî Baba, or of his delegate or local representative, was to carry out the initiation of apprentices to these guilds by the ceremony of the girding (husbâk or peştemâl hümâlma); this carried with it some fees. The Akhî Babas succeeded little by little in extending their ascendancy over other guilds and conducting the girding ceremony in them also. Thus they brought under their control almost the whole Turkish guild organization, both in Anatolia and the European provinces (but not, however, in the provinces with Arab population), acquiring for themselves a position of considerable power, and for the tekye of Kırîehir great riches. Only a few guilds managed to escape their control; among these were the guilds of Ankara, which had formerly been the stronghold of akhîs. His influence even reached as far as the Crimea, where also the tanners' guild had precedence in all celebrations of the guilds (E. Bulatov, in Oterki Rossii, ed. V. Passek, Moscow 1840, iii, 139-54; V. Gordlewskiy, Organisationsya
The Akhi Babas claimed to be descendants of Akhi Ewran. The local representatives of the Akhi Baba were elected by the members of the respective guilds, but did not necessarily belong to them, and any persons who were in any way notable could be chosen. They had, however, to receive a licence (fikādet-nāme) from the Akhi Baba of Kirsehir and a diploma (berdi), confirming the appointment, from the government. The Akhi Baba of the tanners was at the same time the head of the whole guild organisation in his town. He could, however, be deposed.

With the decline of the Turkish guilds, following on the penetration of Western economic systems, the journeys of the Akhi Babas of Kirsehir, as well as the sending of delegates by him, fell into disuse. A delegate of the Akhi Baba came to Bosnia for the last time in 1886-7 (Hamdija Kreševljaković, Esnaft i Obrit u Bosni i Hercegovini, Sarajevo, 1931, 101-47). In the provinces which remained part of the Ottoman Empire, this practice ceased only at the time of the abolition of the old guilds in 1908.

(A. Fr. Taeschner)

AKHI EWRAN, semilegendary Turkish saint, patron of the Turkish tanners' guilds. His tomb sanctuary in Kirsehir (built in the 9th/10th century, with inscriptions of 854/1450 and 886/1481; in the last in the name of Āli al-Dawla b. Süleyman Beg, probably of the family of the Dhu 'l-Kadhr, and thus brother-in-law of Sultan Mehmed II), connected with a tekke, was a frequented place of pilgrimage. Tashköprü-zade (on margin of Ibn Khallikan, 25; Turkish transl. of Mehdji, 33; German transl. by O. Rescher, 6) mentions him amongst the qaybed-i şeyh of the period of Orkhan. His name first occurs in a Turkish mathnawi, Teramād-i Ākhī Ewrān tába tharāk, by Gūlşehri, which was composed probably after the author's Manṭik al-Tayr (finished in 717/1317)—from which it has many borrowings—and not long after the saint's death. He is next mentioned in the Wilāyāt-i nāme of Hādżdīl Bektāsh, written in the time of Murad II (E. Gross, Das Wilāyat-i name des Hādżdīl Bektāsh, Leipzig 1927, 82-93). While in Gūlşehri's mathnawi Ākhī Ewrān's figure is given only a slight touch of the miraculous (it is noteworthy that there is as yet no mention there of his relation with the tanners' craft), in the Wilāyāt-i nāme it is already fully elaborated with legendary features (there is also mention of relations with the tanners); it is worth noting that here Ākhī Ewrān is presented not as a disciple, but as a friend of Hādżdīl Bektāsh. According to 'All Emdī (OTEČ, 1135, 467 f., note) and M. Djedwed (Dhawī 'āli Fasī al-'Akhīyya al-Fiṣyān), Istanbul 1351/1932, 279-82) there exists a document of endowment (muḥāżirah) by Ākhī Ewrān dating from 706/1306-7 (in a copy published by C. H. Tarim, Kırşehir Tarhi, Kırşehir 1938, it even bears the date of 676/1278), where the full name of the saint is given as Āli Shāhīyāy Nāsīr (Tarīm: Naṣīr al-Dīn Piri-i Pīrak Ākhī Ewrān. The document can, however, easily be recognized as a forgery, as Shaykh Hāmid Well (d. 815/1413), teacher of Hādżdīl Bayrām Well (d. 833/1428-9) is named in it; it was probably fabricated in the first half of the 15th century, in order to give legal sanction to the possessions of Ākhī Ewrān's sanctuary in Kirsehir. The importance of the sanctuary as a place of pilgrimage is attested by Sīdi 'Ali Reis (Mīrād-u-门-Mnābak, Istanbul 1313, 16; Engl. transl. by A. Vambery, The Travels and Adventures of the Turkish Admiral Sidi Ali Reis, London 1899, 105; published by H. B. Kunter, Kitabelerimiz, Vakıflar Dergisi, Istanbul 1351/1932, 279-82) there exists a document of endowment (muḥāżirah) by Āli Kırşehir, and only the sanctuary of Kirsehir retained its position.

In addition to the aforementioned writings, legends of Ākhī Ewrān are occasionally found in authors such as 'Āli Kırşehir, and the saint is given as al-Shaykh Nasrī (Tarīm: Nasrī), who visited it in 964/1556 on his return from India. Also other Anatolian cities besides Kirsehir boasted of the possession of the grave, or at least of a memorial of the saint, for instance Trapezunt (a makām on the Bö Tepe), Konya (in the quarter of Şırçağl), Nigde and Brusa. All these were, however, more or less forgotten, and only the sanctuary of Kirsehir retained its position.

AKHÍ EWRÁN — AKHLÁK

1942, 431 ff. (the inscriptions in the sepulchral sanctuary: 434 f. nos. 8-14); W. Ruben, Khrischir’im akhlaki in dem persischen turkischen him charcoal, in: A. Ewran, Türklesi, Bel., 1947, 616-38 (German résumé in Bel., 1948, 195-9; description of the sepulchral sanctuary and legends about Akhí Ewrán); Fr. Taeschner, G. Scherer’s Memoir auf Ewran, den Heiligen von Khrischir und Patron der türkischen Künste, Wiesbaden 1953. (Fr. Taeschner)

AKHKİLJUK, “little aḫḫ”, an amir of unknown name in Tabriz, in the 8th/14th century, follower of the Čobanid Malik Aghraf, who was defeated and executed by Džani Beg, hân of the Golden Horde. When after Džani Beg’s death his son, Berdi Beg, who had been left by his father as governor in the conquered city, left Tabriz in order to secure his father’s throne for himself (758/1357), Akhkiljuk succeeded in obtaining possession not only of Tabriz, but of the whole of Čagharcaydan, and in defending them for some time from the Djalîurd sultan of Baghdâd, Uways, son of the “Great Hasan” (Hasan-i Buzurg). When, however, Uways captured Tabriz in 760/1359, he ordered the execution of Akhkiljuk, who had taken part in a conspiracy against him. During his short rule Akhkiljuk corresponded with the Mamlûk Empire of Egypt (he was addressed by the Mamlûk chancery simply by the title of “aḫḫ”; al-Kalâshandî, Sukh, 381, cf. W. Björkman, Beiträge zur Geschichte der Staatskanslei im islamischen Ägypten, 128). His fame spread as far as Anatolia, where a chapter was devoted to him by the old Ottoman poet Ahmedî in his famous Iskender-nâme.

TABRIZ and UWAYS; B. Spuler, Die Mongolen in Iran, 137; Fr. Taeschner, Der Achidschuk von Tebriz, in Festschrift Jan Rybka, Prague 1936. (Fr. Taeschner)

AKHIR-I ČARRAMBA [see SAFAZ].

AKHRA, fem. of aḫîr, "the last", is a term used already in the Kurân for the condition to come according to the commentators properly al-dâr al-aḫhrâr, "the last abode", as opposed to (al-dâr or al-bâyâl) al-dunyâ, "the nearer or nearest abode or life", i.e. the present world. A synonym is mu’âdâ. The same antithesis is expressed by the terms dâr al-bâbâb, "the abode of everlasting existence", and dâr al-fanâ, "the abode of transitoriness", and by the roots ʾdîl and ʾdî. Aḫira also denotes the condition of bliss or misery in the hereafter, again as opposed to dunyâ, the lot of man in the present world, and in particular its pleasures. From these meanings derive more technically theological and philosophical definitions, such as the state of resurrection whether corporeal or incorporeal or, if resurrection of the body is denied, a spiritual state. See also DUNYÂ.

Bibliography: Lane, Lexicon, s.v.; A. Sprenger (ed.), Dictionary of the Technical Terms, s.v.; Ghazzâlî, Ikhb’Ullâm al-Dîn, khâb 40 and passim; Fakhri al-Dîn al-Râzî, Muṣâṣal, rubk 3, kîmâ, 2. (A. S. Tritton)

AKHESHA, the Persian and Turkish name of a town, in Georgian ĂGHAL TŞHÎ, “New Fortress”, situated on the Pshów river (left tributary of the upper Kuber), centre of the Georgian province Samtskhe (later Sa-atabago) which is mentioned among the conquests of ʿAbd b. Maslama (under Muṣâwiya), al-Balâdḫurî, 203.

Under the Mongols the local rulers (of the Djalîr-ee family) became autonomous and received the title of atabago. The name Karšûrû found in Persian and Turkish sources refers to these rulers of whom several bore the name of Kuarkuare (see Brosset, Histoire de la Géorgie, ii). In 1579 Āḵal Tšihe was occupied by the Ottomans who succeeded in implanting in this region Islam and Ottoman customs. In 1625 the Turkish pašas took over the administration. Āḵal Tšihe became a considerable strategic point and one of the chief Caucasian slave-markets, cf. Ḥâḥîdîj Khallîfâ, Diţîn-numâ, 408 f. In 1829 the town was incorporated by the Russians. After the revolution it forms part of the Georgian S. S. Republic. (V. Minorsky)

AKHLÁK (plural of khulûk, “innate disposition”), ethics.

(i) Survey of ethics in Islam; (ii) Philosophical ethics.

(i) SURVEY OF ETHICS IN ISLAM.

1. Islamic ethics took shape only gradually and the tradition of the different elements of which it is composed was not finally established before the 5th/11th century. Unlike the Greek world, in which popular ethics were refined and reshaped by philosophical reasoning without any breach between, and with, and with no perceptible influence of any foreign doctrine, so that eventually philosophy came to express the moral values by which the lives of the educated classes were governed, in Islam ethics appear in their mature state as an interesting and, on the whole, successful amalgamation of a pre-Islamic Arabian tradition and Kurdîc teaching with non-Arabic elements, mainly of Persian and Greek origins, embedded in or integrated with a general-Islamic structure. The praise of, and value attached to, good character (husn al-khulûk) is common enough among traditionalists, mystics, philosophers, and those writers who aim at giving practical advice to rulers and “civil servants”. But their ideas of moral perfection are drawn from widely different sources, although all of them, in various ways, try to conform to the basic standards of Islam (which are in themselves not static); hence the process of assimilation and eventual integration of these different and sometimes conflicting trends extended over a considerable time.

2. It would be erroneous to assume that the different kinds of morality which found literary expression in successive periods from the age of the pre-Islamic poets to the 5th/11th century present a cumulative process, in the sense that each new type as it emerged replaced or suppressed the earlier types. On the contrary, they co-existed for a long time, in varying strength. The tribal sunna of the pre-Islamic Arabs, based on usage and custom, described by I. Goldzìher (Muhammedanische Studien), i and others (e.g. B. Fares, L’honneur chez les Arabes) around Islam, Paris 1932), by no means died out with the advent of Islam; and since pre-Islamic literature eventually became part of the accepted Arabic humanities, the values expressed in it were never entirely forgotten: a high sense of personal honour [see ‘IRÁ], courage [see HAMASA], loyalty to one’s fellowtribesmen [see ŠAMS], hospitality [see DAVÉ], endurance [see SABR], self-control [see HILM], and a secular spirit which could never be completely gelded by the prevailing religious morality (cf. also MURUWWA). The preaching of Muhammad obviously produced a radical change in moral values as well, based on the sanctions of the new religion, and fear
of God and of the Last Judgment: kindness and equity, compassion and mercy, generosity, self-restraint, sincerity, moral fellowship of the Believers are among the new virtues to replace tribal morality, and to become the pillars of an ethical society or, at least, the programme for such a society.

The religious ethic of the Kur'ān was subsequently expanded and pointed in immense detail by the traditionists in the form of ḥadīths (q.v.), expressly based upon and expounding the sunna, or model behaviour, of the Prophet, but frequently supplementing this source by traditions of the Companions and by adaptation of materials from the cultural traditions of the older religions. The importance of the Ḥadīth in forming and maintaining the common ethical ideas of the Muslim Community in all ages and all regions has been incalculable; but in addition it was largely responsible for the ethical framework of the developing Islamic Law (see ŞA'r), and for laying the foundations which made possible the process of integration described above. It may be said broadly that the whole corpus of Ḥadīth constitutes a handbook of Islamic ethics, inasmuch as in the general Muslim view the correct performance of religious duties and the right understanding of religious doctrine are inseparable elements of the moral life. Within this comprehensive structure, however, certain forms of conduct were more particularly designated by the term ḏabā (q.v.), which in this early religious context had a definitely ethical connotation (see, e.g. Wensinck's Handbook, s.v. Adab). It is tempting to surmise (though it might be difficult to prove) that it was the capture of this term for the very differently motivated ethic of Persian origin expounded by the 2nd/8th century writers (see § 4 below) which led to the substitution of the term ḥākīd, which appears in various traditions extolling "good ḥākīd" (see Wensinck, Handbook, 11a and B. Farès, Makārim al-ḥāqāq, Rend. Linc., 1937, 417 = Ḥabīd Ṭarībiyya, Cairo 1939, 21 ff.). The tradition of the Prophet used as a proof-text by later writers on Islamic ethics: "I have been sent to fulfill the virtues which go with nobility of character (makārim al-ḥāqāq)", does not occur in the canonical books of tradition (cf. B. Farès, loc. cit.). Under this title several collections of ethical ḥadīths were made from the 3rd/9th century onwards, e.g. by Ibn Abī l-Dunyā (Broek., I, 160), al-Khārašīf (Broek., I, 250), and al-Ṭabarṣī (Broek., I, 213; S I, 709), the last-named being the classical Ḡībīte book on the subject (cf. also B. Farès, 412-2).

3. The refinement and development of moral thought on the basis of the Ḥadīth was carried further by both of the religious movements which began to develop within Sunnī Islam in the 3rd/9th century. In theological circles, on the one hand, the conflict with the antideterminist trend of the Muṭaṣ질īs (q.v.), and the consequent emphasis laid by the Muṭaṣ질īs theologians on moral decision and individual responsibility, produced an elaborate discussion and analysis of these topics (see KADAR); and it was through both the Muṭaṣ질īs movement, which in its turn was connected with Greek thought and Christian-Hellenistic apologetic works, and the orthodox reaction to it (see KALAM) that the reception of Greek philosophical ethics was prepared and made possible. On the other hand, the anti-intellectual and ascetic mystical movement of Şīṣīsī (see TĀRĪKH) produced a somewhat divergent type of Islamic ethics, which was gradually to become more and more influential and eventually almost dominated in the Islamic world. For the ŞīṣI preachers, poverty, self-humiliation, and complete surrender of personality became the highest values in life. It may be sufficient here to mention one eminent early Şīṣī writer, al-Muḥāṣṣībī (d. 213/832), who had a decisive influence on al-Ghazzālī when he made ṣīṣīsī a definite part of Islamic ethics in his fundamental Revisification of the Religious Sciences (see M. Smith, An early Mystick of Baghdad, London 1935, and J.R.A.S., 1936, 65).

4. The introduction of Persian moral thought into the Islamic tradition preceded the acquaintance with Greek ethics. Its main representative is Ibn al-Muṣafīfī (q.v.), and--apart from Kalīla wa-Dīmna, a work which deserves to be mentioned in this context--its main content is to be found in the two ḏabā works ascribed to him, the ḏabā al-Ḵābīr (Fr. translation by C. F. Destree, Brussels 1902, from the Dutch of G. van Vloten; German trans. by O. Rescher, MSOS, 1917) and the ḏabā al-Saghīr (German trans. by O. Rescher, 1915), whose authenticity has been doubted but not disproved by G. Richter (-Isl., 1930, 278) and F. Gabrieli (RSO, 1932, 219 ff.). These works (cf. also ARDAQ, BUZURQMAH) are not based on any philosophical principle, but rather remind the reader of Greek rhetorics, giving the rulers, "civil servants" and persons who wish to advance in life advice how to be successful. The Islamic allusions contained in this literature are at first scanty and formal, but in the connection of this tradition with religion is steadily emphasized; Islam is regarded accordingly in the character of a state religion, linked to the sovereign power as religion had been linked with political power in the old Persian state (cf. A. Christensen, L'Iran sous les Sassanides, Copenhagen 1944, ch. iii): "religion and government are sisters". The advice, conveyed in a pleasing and effective style, is based on opportunistic considerations and the recognition of force, which the intelligent man (al-ṣākil) will know how to deal with properly. In the course of a century or so, however, this originally foreign ḏabā tradition was more or less adapted to Islamic standards, and was finally received into the accepted body of the "Ṭarīqāt al-Ṭabā'ī" of Ibn Ḥākām al-Būzī (Ibn Kuṭayb[a (d. 276/889-90). This work, which may be said to have been the first comprehensive manual of Islamic ethics, brought together and to a remarkable degree integrated the Kur'ānic, Ḥadīth, pre-Islamic and Persian contributions, and by excluding the irreconcilable elements of the two latter, practically defined and standardized the component elements of the orthodox morality in its pre-philosophical and pre-Ṣūfistic stage. Related types of literature are the "Mirrors of Princes" (see MALIK) and popular wisdom in apothegmatic form (see ḤIJKMA).

5. Philosophical ethics, derived from the Greeks, was introduced at first by the limited circles who devoted themselves to the study of philosophy. The details of its development amongst the Muslim šāsīfīs are studied in the next section. As is pointed out in §§ 8-10 of that section, philosophical ethics exercised an influence on ḏabā literature and what is of even greater importance, philosophical ethics in the form given to it by Miskawayh was fully excepted by such an influential theologian as al-Ghazzālī and in this way was integrated with religious tradition. Miskawayh's doctrine became known also through another channel, viz. the Persian works of authors such as al-Tūst and al-Dawāwīn. On the other hand, the purely ṣīṣīsī morality gained through the great Persian poets an
immense influence in the eastern Islamic world, including Turkey—an influence which was paralleled and reinforced in all countries by the powerful social position occupied by the Sufi orders and the extension of their lay membership to all classes.

6. During the last century, the strong revulsion from Sufism in orthodox Muslim circles has had a parallel effect on Muslim ethical thought, which in reaction from the extreme passivity of the Sufi ethic has tended to swing towards an activist ethic, rather guardedly expressed by such leaders as Djamal al-Din al-Afghani and Muhammad 'Abduh, and in more outspokenly "Mu'tazilite" terms by others. Outside theological circles, the same trend, reinforced by the influence of Western philosophies, together with internal social and political developments, has stimulated more evolutionary types of ethical theory, notably those of the Turkish sociologist Ziya Gokalp and of the Indian poet Muhammad Ikh\'al, all of which, however, are most properly to be regarded as representing transitional phases in modern Muslim thought.

(R. Walzer and H. A. R. Gibb)

(ii) Philosophical Ethics.

1. In the classification of the various branches of philosophy, al-Akh\'al is considered, together with politics (al-Sul al-madawi, see MAD\'AN) and economics (tadbir al-manzil [q.v.]), as a part of practical philosophy. Galen's work Fi 'l-Akh\'al is described in Hunayn's treatise on the Syriac and Arabic Galen-translations in the following terms: "Galen dealt in it with different 'f\'by, their causes, signs and treatment" (ed. Bergstrasser, no. 119; cf. Seneca, Epist. xcv, 65). Al-Ghazawi uses almost the same words when he says (al-Munkidh, 99) that al-Akh\'al as a branch of philosophy consists in "defining the characteristics and moral constitutions of the soul and the method of moderating and controlling them". The same definition still occurs in Ibn Sadr al-Din al-Shirwani (d. 1036/1626-7), quoted by Fadlji Khallata, s.v. al-Akh\'al: "It is the science of virtues and the way how to acquire them, of vices, and the way how to guard against them. Its subject is: the innate dispositions (al-Akh\'al), the acquired virtues, and the rational soul as far as it is affected by them". Al-Akh\'al as a philosophical doctrine of ethics appealed at first only to the limited circles of persons interested in Greek philosophy. But since its representatives insist that philosophical ethics are not meant to contradict Islam but either to supplement or confirm it, these ideas could eventually be integrated with the religious tradition and retain some influence even in later centuries.

2. Greek moral philosophy was conveyed to the Arabs in several different ways which eventually converged. Standard works of the classical days of Greece read in the late philosophical schools, like Plato's Republic, Timaeus, Laws, were known in the original and in commentaries and summaries (cf. AFLATON). Aristotle's Nicomachean Ethics, divided into eleven books, were known in Is\'hak b. Hunayn's translation. Books viii-xi of the Arabic text, corresponding to vii-x of the usual division, have been traced in a Moroccan manuscript (cf. A. J. Arberry, in BSOAS, 1955, 1 ff.). The same manuscript contains a summary of the Nicomachean Ethics and of Niclaus of Damascus's (1st century B.C.) Porphyry's commentary (cf. Fibrist, and J. Bidez, Vie de Porphyre, Gand-Leipzig 1913, 56*-58*) was translated into Arabic and most probably extensively used by Miskawayh in chapters 3-5 of his Tahdib.

al-Akh\'al (see § 7 below). The late Greek summary of the Nicomachean Ethics ("Summary of the Alexandrians"): extracts in MS Taym\'ur Pasha, akh\'al, 290, no. 16; this work was translated into Latin by Herman the German in 1243 or 1244 (cf. Aristoteles Latinus, ii, Cambridge 1955, 1308). Al-F\'ar\'abi wrote a commentary on the introduction of the Nicomachean Ethics which is referred to by Spanish authors of the 12th century (cf. M. Steinschneider, Al-Far\'abi, St. Petersburg 1860, 60). Ibn Rushd's Middle Commentary (written in A.D. 1177) is preserved in a Latin translation by the same Herman in 1240 (cf. Aristoteles Latinus, ii, 1308) and in a Hebrew translation of 1321 by Samuel b. Judah of Marseilles (M. Steinschneider, Die hebr. Übersetzungen, 217).

Among Greek works less known in the Western tradition but widely read in the Arab world are three treatises by Galen. (1) Hepl X, Fi 'l-Akh\'al, lost in the Greek original and preserved only in Arabic guise. (Arabic Epitome published by P. Kraus in Bull. of the Fac. of Arts of the Univ. of Egypt, vi/1, 1939; cf. R. Walzer, in Classical Quarterly, 1949, 82 ff.; idem, in Harvard Theological Review, 1954, 243 ff.; S. M. Stern, in Classical Quarterly, 1956). (2) How may a discover his own vices (cf. Corpus Med. Graec., v, 4, 111). Hunayn, no. 152). (3) Good men profit by their enemies (lost in the Greek original; Hunayn, no. 121). Both of these two latter treatises were used by al-Ranz (see § 5 below), all three by Miskawayh (§ 7 below). A treatise by Themistius is quoted under a wrong name by Miskawayh (see below); another one attributed to him survives in Arabic (ed. L. Cheikho, M\'ah\'af, 1920, 889-9, tr. M. Bouyenne, Arch de Philosophie, 1924, 14 ff.). There were, no doubt, some other late Greek books from which middle-platonic Greek thought, only slightly touched by neoplatonic ideas, was handed down to the Arabs. Among other pre-neoplatonic treatises studied by Arabic writers on moral philosophy are the Pinas of Cebes ("Kabis the Platonist"), reproduced in Miskawayh's Tahdib al-Mutanab (ed. Badawi, 1940, 186 ff.). Al-Kindi (cf. Fihrist, nos. 190-1, 195-6, cf. also F. Rosenthal, al-Sarakhi, ii, A, 10-2, 16-7) were apparently appreciated by subsequent Islamic writers. His treatise On freedom from Grief (ed. H. Ritter-R. Walzer, Studi su Al Kindi ii, Rome 1938; M. Pohlenz, in Zeitschr. f. Geschichte der Philosophie, 1938, 404 ff.) was translated into Arabic and extensively quoted by Miskawayh (ed. M. Pressner, Heidelberg 1928); the Golden Verses ascribed to Pythagoras (see PYTHAGORAS) and a pseudo-platonic Exhortation concerning the education of young men, two "pythagorean" documents by which Miskawayh was impressed (cf. F. Rosenthal, in Orientalia, 1941, 104 ff., 383 ff.).

3. Al-Kindi's ethical treatises (Fihrist, nos. 190-1, 195-6, cf. also F. Rosenthal, al-Sarakhi, ii, A, 10-2, 16-7) were apparently appreciated by subsequent Greek writers. His treatise On freedom from Grief (ed. H. Ritter-R. Walzer, Studi su Al Kindi ii, Rome 1938; M. Pohlenz, in Zeitschr. f. Geschichte der Philosophie, 1938, 404 ff.) was translated into Arabic and extensively quoted by Miskawayh (ed. M. Pressner, Heidelberg 1928); the Golden Verses ascribed to Pythagoras and a pseudo-platonic Exhortation concerning the education of young men, two "pythagorean" documents by which Miskawayh was impressed (cf. F. Rosenthal, in Orientalia, 1941, 104 ff., 383 ff.).
different in detail, be compared to the Stoic arrangement of the virtues and vices, or, e.g., to the pseudo-Aristotelian De virtutibus et vitiis (transl. in the 11th century by Ibn al-Tayyib (Brock., S 1, 884). The Aristotelian definition of virtue as the mean between two extremes is combined with the platonising view (cf. Porphyry, Ἀσκοπαῖ, ch. xxxii, 2 and I. Goldziher, Maḏdat al-Nafs, 20). Although the evidence available in the few extant works of al-Kindi is obviously slight, it seems probable that Miskawayh based himself in the first chapter of Taḥdhib al-Akhlaq on al-Kindi’s treatment of the virtues and vices. There is on the whole nothing ultra-neoplatonic in al-Kindi’s platonising popular philosophy, in which platonic, peripatetic and stoic elements are blended in a way not uncommon in hellenistic and later popular Greek moral treatises.

4. The Christian Kuṣṭb. Lūkā’s treatise About the causes of the differences which exist between men with regard to their characters, ways of life, desires and considered moral choice (ed. P. Shath, in BIE, 1941) is based on the Platonic tripartition of the soul and on the whole on ideas to be found in Galen.

5. Al-Kindi’s treatise On Spiritual Medicine appears to be lost but al-Rāzī’s brilliant treatment of the same subject is printed in a critical edition of the Arabic text Opera Philosophica, ed. Kraus, 15-96, Eng. tr. by A. J. Arberry, The Spiritual Physick of Rhazes, London 1950). As was to be expected in this Muslim “Platonist”, it is written in an uncompromisingly platonistic vein, and the Aristotelian elements found in al-Kindi and Miskawayh are missing. It should be studied together with his autobiographical description of the philosophical way of life (Opera, 98-111; French transl. by P. Kraus in Orientalia, 1935, 300 ff.; English tr. by Arberry in Asiatic Review, 1949). Al-Rāzī’s version of Greek moral philosophy did not, however, influence the main trend of philosophical ethics in Islam.

6. The treatise Fi Taḥdib al-Akhlaq of the Jacobite philosopher Yaḥyā b. ʿAdī represents another variant of late Greek thought. There are no specifically Christian ideas in it: Aristotelian influence is, as in al-Rāzī, non-existent. It is based on the platonic tripartition of the soul, but the 21 virtues and corresponding vices are neither specifically referred to the three souls nor subordinated to the four cardinal virtues and their contraries (which are listed among them). This scheme probably depends ultimately on some lost pre-neoplatonic Greek original. His concluding chapter on the perfect man who bases his life on the requirements of his intellectual soul and has trained himself to love every human being combines stoic and neoplatonic language, and is not very different from the thought of al-Fārābī [q.v.]

7. The most influential work on philosophical ethics is Taḥdib al-Akhlaq of Miskawayh (d. 431/1040) (analysis of its contents in de Boer, 507, and Donaldson, 127-133; Eng. tr. by A. J. M. Craig in course of publication). Miskawayh firmly rejects the pre-Islamic Arabic poets as educators, but is not unsympathetic to the Persian tradition of ethics. In many striking passages he insists on the agreement of Greek moral philosophy with the basic tenets of Islam. He tries, however, to reconcile revealed and philosophical truth on the basis of rational thought, and for this reason his views are not acceptable to a primarily religious thinker, except with a certain shift of emphasis. The few Greek writers mentioned by name and quoted, sometimes at considerable length, are all of the later centuries of the Roman Empire: Galen (see § 4 above), Bryson (on the right upbringing of children; ibid.), Porphyry as a commentator on Aristotle’s Ethics, and Themistius, wrongly quoted under the name of Socrates (cf. F. Rosenthal, in IC, 1940, 403). References to Plato and Aristotle occur within the context of these late works. Although al-Kindi is only twice mentioned by name, Miskawayh is probably in al-Kindi’s debt to a much greater extent (see § 3 above). In chapters 3-5 he follows rather closely a neoplatonic commentator on certain sections of the Nicomachean Ethics, which recalls the known teaching of ethics in the later Peripatos and the extant commentaries on the Ethics without being identical with any of them. But at the same time he stresses the platonic elements to be found in the Ethics to make out Aristotle to be a more decided platonist than he was. Miskawayh’s own contribution to this inherited interpretation, if any, was (apart from demonstrating the compatibility of Greek philosophy with Islam) to emphasise the neoplatonic aspects of this moral philosophy still further (cf. R. Walzer, Some aspects of Miskawāh’s Taḥdib al-Akhlaq, Mélanges Levi della Vida, Rome 1956).

8. The influence of philosophical ethics on adab literature has been noted by de Boer, who singles out as an instructive example Adab al-Dunyā wa l-Dīn by al-Māwardi (d. 450/1058). In this work the presentation of the traditional ethical materials is refreshed and “modernized” by the inclusion of materials from the later centuries, including both philosophical and ascetic ideas; these are combined with the older materials somewhat unsystematically, but in a direction not dissimilar from that taken later by al-Ghazzālī. (German transl. by O. Rescher, 1932-3.)

9. A much more far-reaching and fundamental synthesis was carried through by al-Ghazzālī (d. 505/1111), who on the one hand discarded the merely formal and superficial elements of the adab tradition, and on the other firmly based his exposition on the penetrating spiritual analysis developed by the šīff teachers (see sect. i, § 3 above). At the same time, he evidently regarded Miskawayh’s treatise as “reasonable in itself and supported by proof”, and agreed that its contents “did not contradict the Book and the Sunna”. Hence the philosophical ideas of Greek origin which Miskawayh discusses and explains became part of the generally-accepted educational theory to be found in the Ḥikāyāt ʿUlm al-Dīn, in which the section on self-discipline (2nd book of the 3rd quarter) is based on Miskawayh’s Taḥdib al-Akhlaq. Miskawayh’s influence is also unmistakably traceable in other works of al-Ghazzālī, and his ethical theory was in this way eventually integrated with the religious tradition. (Cf. A. J. Wensinck, La Pensée de Ghaṣālī, Paris 1946, esp. chap. ii; M. Pissner, op. cit.; H. Ritter, Al Ghaṣālī, Das Eltzer der Gliickeisgkeit, Jena 1925; and see al-Ghaṣālī.)

9. How successful the Ghazzālīan synthesis was in influencing later ethical literature and thought is a question which still awaits investigation. The literary evidence suggests prima facie that its influence, if anything, was indirect, and that the diverse trends of ethical thought continued to exist side by side. The influence of Miskawayh’s work was perpetuated chiefly in Persian literature; the Shīfite Avcennian, Naṣīr al-Dīn al-Tūṣī, follows Miskawayh closely, as he himself avows, in the section on ethics of his Ākhlaq-i Nāṣirī (completed 633/1233) (cf. Plessner, loc. cit.). Two centuries
later, al-Dawwani (d. 907/1501), the author of the Akhīdīk-i Dialali (Eng. trans., with valuable notes, by W. F. Donaldson, Studies in Muslim Ethics, London 1839; short analysis by Donaldson, 184), selected his basic material from Tūsī's work, but he also refers to al-Ghazālī as an additional Islamic authority. (For Persian akhlāk literature cf. H. Ethé, in Gr. J. Ph., ii, 346 ff.)

Bibliography: (i) and (ii): No comprehensive history of Islamic ethics has yet been written. D. M. Donaldson, Studies in Muslim Ethics, London 1953, is of unequal value. There is a brief but suggestive survey by T. J. de Boer in Hastings' Encyclopaedia of Religion and Ethics, vol. v, 1912, s.v. Ethics and Morality (Moslem). Scattered materials are to be found in a number of works; in addition to those mentioned in the article, different aspects are dealt with in the following: G. Richter, Studien zur Geschichte der älteren arabischen Fürstenstiefel, Leipzig 1932; D. B. Macdonald, The Religious Attitude and Life in Islam, Chicago 1909; C. E. von Grünbaum, Mediaeval Islam, Chicago 1946, etc.; L. Gardet, La Cité Musulmane, Paris 1954. (R. Walser)

AKHLAT or KHALAT, town and fortress at the N.W. corner of Lake Van.

(ii) After the battle of Köse Dağ (642/1244) Akhlat was captured by the Mongols (642/1244; see Tomaseck, in SBWA, 133, no. iv, 32 ff.; Abu 'l-Fida'ī (Reiske-Adler), iv, 472), who, however, confirmed the native princes in their possessions (confirmation of a Georgian princess in her possessions in Akhlat; Cricic of Gandía, 440, cf. B. Spuler, Die Mongolen in Iran, 330, n. 1). The definitive occupation by the Mongols of Akhlat and the neighbouring lands of Upper Mesopotamia and the Armenian highlands followed only after their capture of bagdad (656/1258), in conjunction with Hulagu's advance into Syria in 658/1259-60 (Spuler, op. cit., 55). Thereafter Akhlat belonged to the kingdom of the Ilkhanids and their successor states (Dālā'īrids, Aχ Kayyūnlu), and was also a minor-city of the Ilkhanids. In 644/1246 the city was largely destroyed by a severe earthquake.

In one version of the legend of the foundation of the Ottoman empire Akhlat is mentioned as the starting-point of the Oghuz tribe to which Ertogrul, the alleged father of 'Oghmān, belonged; he is said to have moved westwards from Akhlat under pressure from the Mongols. Neshri, however, denies the identity of this Ertogrul with 'Oghmān's father (Ta'wilād, ed. Taeschner, 21-2; the statement is confirmed by Ewliya Celebi (iv, 140) tombs of the ancestors of the Ottomans were shown in Akhlat. The city appears to have come into Ottoman possession only under Selim I; in 955/1548, however, it was captured by Şah Tahmāsp and levelled to the ground. Sulaymān I, under whom it was finally incorporated in the Ottoman empire, built on the lake shore a citadel (completed in 963/1554-5 according to Ewliya Celebi), in the vicinity of which a smaller new town arose. During the Ottoman period, Akhlat remained under the rule of local Kurdish chieftains, and was brought under direct Ottoman administration only under Mahmūd II in 1847. At the end of the 19th century, according to Cuniet, the kadā (capital) of Akhlat had 23,659 inhabitants (16,635 Muslims, 6609 Gregorian Armenians, 210 Orthodox Greeks, 250 Yazidis). It is now the capital of a kadā (ile) in the wilāyet (ii) of Bitlis in the Turkish Republic; population of the town (1945), 3,124, of the kadā, 13,702.

The mediaeval town (Eski Akhlat), on the slope of the mountain, is in ruins and uninhabited; the new town, with a large Ottoman şahe (in 1568) lies to the E. of it on the lake shore. The latter contains the mosque of the 16th century (İskender Pasha Djamī, with inscriptions from 972/1564 and minaret from 978/1570, and Kâdum Mahmud Djamī, dating from 1006/
AKHLĀT — AKHSĪKATH

1597). Between the medieval and the modern towns there is a famous cemetery with richly ornamented tombstones from the 13th-15th centuries (among them a "ram" stone from 1401) and many funeral buildings (tūbres or kunihs) from the Salqūkids, Mongol and Turkmen periods. The most noteworthy among them are: Ulu Kunih (undated); Shādī Aghā Kūndeli (1273; now disappeared); Iki Tūbre (of Būghtāy Aghā, d. 1281, and his son Hasan Timūr, d. 1279); Bāyīdfur Mesdijl (882/1473) and Tūbre (890/1489; of specially interest, one built by Bāba Dīnān); Shāykh Nāginād Al-Dīn Tūrbesi (1222); Hasan Pādīshāh Tūrbesi (1275); and Erzen Khāṭūn Tūrbesi (1396-7).

Bibliography: In the works mentioned under (i), Hādījī Khāllīf, Dīkhān-nūmā, 413 f.; Ewīliyā Čelebi, iv, 134-42; Sāmīl, Kūmās Al-ʿĀlīm, i, 46a; Récits, Now. geogr. univ., ix, 376; V. Cuinet, La Turquie d'Asie, ii, 564-6. (F. Taeschner)

AKHMIM, town in Upper Egypt on the east bank of the Nile about 312 m. from Cairo. Its name reflects the Coptic name, Šinmin, the Greek Khlemnis, and it is placed on Panopolis in Byzantine texts. It was the chief town of a pagarchy (hora), and later, from the time of the reforms of the Fatimid caliph al-Mustanṣir, of a province. In the 12th/13th century the town lost its position of chief city and was incorporated in the governorship of Būghtāy Aghā, d. 1281, and his son Hasan Dīnān. It was the chief town of a pagarchy (kura), and remained, with the remainder of his works, which embraces every category of classical poetry: ḥaṣāl, elegy, thenody, satire, descriptive verse, personal glorification. He even composed some muwāṣṣāt, and wrote some notable baccic songs which led to his being dubbed the "Abū Nuwās of the 19th century". His dīwān, although incomplete, was compiled through the efforts of the nephew of ʿAbd al-Dādī, Ahmad ʿIssāt Pāšā al-Ākhmī, who published in Constantinople in 1304/1886, under the title: al-ʿIrād al-Anfās fi Ṣāḥīr al-ʿAlhār. Bibliography: Dż. Zaydān, Tarā gid Magābīr al-Shārkh, 3rd ed., 1922, ii, 257-60; L. Cheikh, Le littérature arabe au XIXe siècle, 2nd ed., 1924-6, ii, 9-11; M. M. al-Ṣabīr, Nahdāt al-ʿIrād al-Adabīyya fiʿl-Karn al-Tāsus ʿAshār, Baghdaḏ 1365/1946, 114-29; H. Pīrs, La litt. ar. et l'Islam par les lettres, 28; Brockelmann, S II, 72; and references quoted. (Ch. Fellat)

AKHSĪKATH (see SALĀT). AKHSĪKATH or AKHSHIKATH (Sogdian, "city of the prince"), in the 4th/10th century capital of Farghāňa and residence of the amir and his lieutenants (ʿumūdí), on the north bank of the Sir Darya (Jaxartes), near the mouth of the Kasan (c), with the old citadel, Iski Akhsi, were considered only one of Akhshī's important sisters. The delightful description given by Ibn al-ʿArabī, Ahmad ʿIssāt Pāšā al-Ākhmī, in the 4th/ioth century capital of Farghāňa; according to Ibn Hawkāl (Kramers), 512, it was a large town (1 sq. mile) with many canals and a citadel where stood the Friday Mosque, the governor's palace, and the prison. The city was then enclosed by a wall with five gates, outside of which stretched extensive suburbs and gardens. There was a market-place both in the city and the suburb, and there were rich pasturages in the vicinity (al-Iṣṭakhrī, 333; al-Makhđīs, 271; al-Kazwīnī, ii, 156; Ḥūdād al-ʿĀlam, 72, 116).

The town was apparently destroyed during the wars of the Khārizmshāh Muhammad II, in the beginning of the 13th century, and the succeeding Mongol invasions (Sharaf al-Dīn ʿAll Yazdī, Šafarīmān, Calcutta 1885-8, i, 441, ii, 633; here also the form Akhsīkant). The capital was transferred to Andījān, but for some time Akhsī, as the town was called at the time of Bābur (see transl. of Beveridge, index), still remained the second town of Farghāňa. As late as the 11th/17th century Namānān, as the present capital, was considered only one of Akhsī's less important sisters (lāwādī); cf. Bahr al-Asrār, in H. Eth., India Office Cat., no. 575, fol. 108v. The ruins, near the villages of Akhsī and Shāhand (1000 steps from west to east, 600 steps from north to south, about 150 feet above the level of the Sir Darya), with the old capital, Iski Akhsi, were explored in 1885 by N. ʿI. Veselovskiy (cf. Sredneasiaštški Fvesnīk, Tashkent, July 1890).

Bibliography: Schwarz, Iran, iii, 269 (incidental reference, Farghāňa is not dealt with in the book); Le Strange, 477 f.; 489; K. Miller, Mappeae arabices, Stuttgart 1926-31, iv, 75-82, 86*-91*.

(B. Spuler)
AL-AKHTAL, "the loquacious", the sobriquet of the Arab poet GHIYATH B. GHAWTH B. AL-§ALT, who died probably before 92/710. He belonged to the great tribe of the Taghibi (q.v.) of northern Syria, which remained entirely Christian, of the Monophysite persuasion. By his mother Layla he was connected to another Christian tribe, that of Iyad. He was born either at Hirra (see Aghdni, vii, 170), or near Rusafa (Sergeopolis); his date of birth is uncertain, but may have been about 20640. He remained a Christian all his life, and was unmoved by the efforts of prominent members of the Umayyad dynasty to convert him to Islam. Although a Monophysite, he maintained good relations with the Melkite family of the Sarghun. In his poetry, certain features prove his zeal for his faith and even indicate a certain ostentation in asserting it (see Dinas, passim). His moral standards, however, do not seem to have differed markedly from those of the society in which he lived. He repudiated his wife and married a divorced woman. He seems to have been a heavy drinker, passing his time in taverns in the company of singing-girls of easy virtue.

All his life al-Akhtal followed the fortunes of the reigning dynasty. During the reign of Mu‘awiya, he became enroiled in political affairs. He was the close companion of Yazid I, whom he lauded in his panegyrics, and of other men of rank such as Ziyad and al-^Hajjaj. Under 'Abd al-Malik, he actually became official poet to the Caliph (see Aghdni, xii, 172-6). He remained in the service of the successors of 'Abd al-Malik, and in his poetry attacked all opponents of the dynasty (see Dinas, 58, 73, 93, 204, 277 etc.). Lammens has clearly shown the historical interest of such compositions.

The poet's whole career was dominated by verbal warfare with his contemporary, the poet Djair. In his diatribes he was supported by the poet al-Farazdakh who, although a Tamimite like Djair, was in antagonism with his fellow-tribesman. It is almost impossible to dissociate here the accounts of these three men. It is clear that in this sphere al-Akhtal and Djair perpetuated the pre-Islamic tradition and simply expressed the sentiments of their particular group. In this respect, the poems of al-Akhtal show how the old bedouin themes break between Djarir and al-Farazdak, the poet Abu Ubayda, al-Asma‘i, and Hammad the Reciter (collated in Aghdni, viii, 284 ff., 291, 305). Al-Akhtal does not seem to have left any place in Arabic literature in the eyes of later generations (cf. for example the rather cautious judgement of Taha Husayn in Hadid al-Arba‘a, ii, 77 ff.)

Up to the present time al-Akhtal has, in the West, been the subject only of biographical studies.

(A. Blachère)

AKHTARI is the takehallus of Muslih al-Dln Mustafa b. Shams al-Dln al-Karabashri (d. 968/1561). He wrote an Arabic-Turkish Dictionary (1524-1545), known by the name of Akhtari Kahir (there are also concise recensions, and printed at Constantinople (1242, 1256, 1292). Cf. Flügel, Die arab. pers. u. türk. Hss. zu Wien, i, 119-120.

AKHUND (Aghdn, A^h^n), title given to scholars. In Eastern Turkistan it is used after the name as "Mister", in Western Turkistan it is given to 'ulama' of high rank, in the district of Kazan to the chief muzim of a place. In Persian it is current since Timurid times in the sense of "schoolmaster, tutor". The word probably comes from Persian kh^and (k^h^w^nd, khund), from khudawand (q.v.).

AKHUND-ZADA, Mirza Fatim‘al (1812-78) was the first writer of original plays in a Turkish idiom. The son of a trader who hailed from Persian A^harbajdan, he was born in 1811 (according to Caferoglu) or 1812 (according to the Soviet Encyclopaedia, 1950) in Sheki, the present-day Nukha. Thanks to the assistance of a friend he was able to avail himself of a good literary and philosophical education, which brought him into closer touch with liberal ideas than the actual calling which he intended to follow, that of an
Islamic theologian. After instruction from a divine in Gandja (Karabagh) Akhund-zada finished his training at the newly-opened Russian intermediate school for Muslims at Şêkî. It is possible that Akhund-zada was in his early days brought into touch with modern trends in Islam owing to contacts with the reformers Djamal al-Din Aşqâni and Malkum Kân. Influence of this nature, however, as reported by Köçeri on the basis of communications from Akhund-zada’s family, can scarcely be proved. In his youth Akhund-zada wrote six comedies and a historical narrative in Ağırchi Turkish, the titles being as under: (1) Hisbâyet-i Molla İbrahim Khalil-i Kimiyâgîıer ("Story of M. I. Kh. the alchemist"); 1850; (2) Hisbâyet-i Monsieur Jourdan Hekim-i Nerbâdi wa-Mosta’ull Şah Dîdâqger-i Meğhûr ("Story of M. Jourdan and Mosta’ull Şah, the well-known magician"); 1850; (3) SERgûcîstî-ii Wezîr-i Kân-i Serab ("Adventures of the Vezir of the Khan of S."); 1850; (4) Hisbâyet-i Khârî ("Story of the bear that caught the robber"); 1852; (5) SERgûcîstî-ii Merî-dî Kerâsi ("Adventures of the miser"); 1852-3; (6) Hisbâyet-i Wukandî-yê Murâda’s (Story of the attorneys in the lawsuit’’); 1853; and the historical-satirical narrative, Aðanâmîgî Kewâkhd ("The betrayed stars"); 1857. In the plays and in the narrative the author gave play to his progressive ideas in opposition to feudalism, the practice of highway robbery, the prevalent corruption of justice and the superstition then rife in the Caucasus. Now and again he preaches loyalty to the Russian authorities in order to facilitate the transition of the Transcaucasian Muslims (the term Ağırchi Turks was not yet in use in the 15th century) to modern civilization.

Several of the plays were published in Russian translation in the official Government journal Kavbus, and performed in Russian at Tiflis and St. Petersburg. The first performances in the original language were given by pupils of Ağırçarbaydjin state schools at the end of the 1870’s. A complete Ağırçar Turkish edition of the plays and the narrative appeared in Tiflis in 1879: a second was brought out in 1938 by the Ministry of Culture of the Az.S.S.R. to mark the 125th anniversary of the writer. (In the 1920’s, frequent separate editions for school use had already appeared.) The plays were translated into Persian by Muhammad Dîja’far Munshî; no. 1 was transl. into French by Barbier de Meynard, JA, 1886; no. 2 into German (after the Persian) by A. Wahrmund, Vienna 1889, and into French (after the Turkish original) by L. Bouvat, Paris 1906; no. 3 into English (after the Persian) by W. H. O. Haggard and G. le Strange, The Vauri of Lankurîan; no. 4 into French by Barbier de Meynard, Recueil de textes et de traductions, Paris 1889; no. 5 into French by L. Bouvat, JA, 1904; no. 6 into French (after the Persian) by Aliilère, in Deux comédies turques, Paris 1888; the narrative was edited and transl. by L. Bouvat, JA, 1903. Besides his activity as a dramatist, which earned him the name of the “Caucasian Gogol” or the “oriental Molière”, Akhund-zada wrote treatises on political science against absolutism and theology, and also two memoranda on an alphabetical system of his own invention, designed to render the Islamic tongues, especially the Turkish idiom, more tractable and thus more capable of progress.

(Selected and translated by H. W. BRANDS)
inextricably mingled, but the topic has not been fully investigated. The exclusiveness of the Khawāridjīs was opposed by the inclusiveness of the Murdżīlīs, who refused to treat Muslims who had committed grave sins as unbelievers (and could therefore remain loyal to caliphs of whom they disapproved). As these sects had many subdivisions with differing views, there was a great variety of doctrine by the middle of the 2nd/8th century. In the second half of that century elaborate intellectual arguments about doctrine appeared, inspired partly by Greek and Christian thought. This may be regarded as the beginning of kādām or theology [q.v.]. It influenced the formulation of dogma to the extent that some philosophical terms were introduced into the theologians' creeds, e.g. when they said that God is neither substance nor accident (gāshahr, 'arad), or when al-Sanūsī prefaced his creed by distinguishing between the necessary, the impossible, and the possible. The opposition to this intellectualizing tendency, which probably always existed, found its chief exponent in Ibn Taymiyya. The statements of their position by Şāfīs often contain, besides their specifically mystical teaching, a section dealing with their attitude on matters of dogma.

3. The main Dogmas of Islam. No creedal statement has been accepted even by all Sunní Muslims as the standard account of Islamic dogma. The following brief account has been compiled from various creeds (chiefly those of al-Baghdādī, al-Ghazālī and Naḍîm al-Dīn al-Nasāfī), though not in their precise words. Short comments have been added. For fuller details see the articles referred to below.

(a) God (see Allāh) is one; there is no god except Him; He has no partner nor wife; He neither begets nor is begotten. This article of faith belongs to Muhammad's Meccan period, though it was given no emphasis in the earliest passages of the Qur'ān. It soon became necessary, however, to insist that Muhammad's doctrine was incompatible with the vague monotheism apparently current in Mecca, which, while acknowledging God as supreme, tolerated lesser deities. Hence in the later Meccan sūrah strict monotheism was vigorously proclaimed, and gīrhr (q.v.), the giving of partners to God, i.e. polytheism, became a serious sin. When the Muslims came into closer contact with Christians, they regarded the current interpretations of the doctrine of the Trinity as an infringement of this article of faith. This is the point chosen for emphasis in the first clause of the shahīda.

(b) God exists; His existence is rationally proved from the originated character of the world. When the Muslims had to defend their religion against materialists and other unbelievers, some of them offered rational proofs of the existence of God. These were given at length in the theological treatises, and came to influence the creedal statements (cf. al-Baghdādī, Naḍîm al-Dīn al-Nasāfī). Some schools (cf. al-Sanūsī) treated existence (madījja) as one of God's attributes. This implied a distinction between essence and existence which was opposed by the early Ash'arīyya and Ibn Taymiyya.

(c) God is eternal; His existence has neither beginning nor end. This calls for no comment except on the difficulty of translation. Arabic has no single word for "eternal". Kādīm (properly "old" or "ancient") and asālī mean "being from eternity" or "having no beginning", while bākī and abādī mean "being to eternity" or "having no end" [cf. abād, kīdam]. Consequently the renderings in European languages sometimes puzzle the uninitiated, e.g. "priority" and "continuance" for the hypostatized attributes shī'ām and bākī. Perhaps "pre-eternity" and "post-eternity" might be suggested.

(d) God is different from created things. He does not resemble any of them, and none of them resembles Him. He is not a body nor a substance nor the accident of a substance. He is not bounded nor limited in any way; He does not have a position in space; He may not be said to be in any direction. He sits on the throne (fārīgh), but only in the sense in which He Himself intended. He is above the throne and the heavens, but at the same time is "nearer to man than his jugular vein" (Qur'ān, 1, 16/15). He is not subject to movement or change or suffering. The otherness (mudjālāt) of God is presupposed in Islamic thinking from the Qur'ān onward, but only gradually became an explicit article of faith; al-Sanūsī makes mudjālāt one of the negative attributes of God. At an earlier period the main body of Muslims came to regard the Muḥʃabbīha (those who made God resemble man) as unorthodox [cf. tašāri]. This was chiefly with regard to the interpretation of the anthropomorphic expressions in the Qur'ān, such as God's sitting on the throne and having hands and a face. At the other extreme from the Muḥʃabbīha were those, like the Muṭtaṣilīs, who interpreted the terms metaphorically. The central position was that of those who said the terms were to be taken neither literally nor metaphorically but bi-lā īsāfī ("without how"), i.e. without specifying their manner or modality, or, as it was sometimes expressed, "in the sense in which God intended them" when He used them in the Qur'ān. It was emphasized that God was not corporeal and not material, and those who held that view were sometimes called Muḥjjāsima. From the 5th/11th century onwards the followers of al-Ash'ārī and other orthodox theologians, but not the Ḥanābīla, largely abandoned bi-lā īsāfī and accepted metaphorical interpretations of anthropomorphic terms.

(e) God will be seen by the faithful in the world to come. This article occasioned great difficulty because of God's incorporeality. The Muṭṭaṣilīs and others denied the possibility of any vision of God. Dirār suggested that a sixth sense would be created. Eventually, however, it was generally agreed to accept the doctrine bi-lā īsāfī, and to avoid any inferences from it which involved corporeality.

(f) God is eternally powerful (or omnipotent), knowing (or omniscient), living, willing, hearing, seeing, speaking. He is so by the attributes of power, knowledge, life, will, hearing, sight and speech. These attributes are eternal; they are not God, yet not other than God. His power extends to everything, and no inadequacy or weakness characterizes Him. He knows everything, even what is concealed and secret, even the creeping of a black ant on a rugged rock on a pitch-black night. These seven attributes (siḍā [q.v.]) received special attention from the theologians from the 3rd/9th century onwards. The discussion probably arose out of the question whether the Qur'ān was created or uncreated (see below). If the Qur'ān was uncreated, it was an eternal entity existing in relative independence of God's essence, even though it was His speech. For the Ḥaṭīmīyya and Muṭṭaṣilīs this view was unsatisfactory, and they asserted that God does not possess attributes of power, knowledge, speech, etc. which are distinct from His essence. In their view it is by His essence that He knows. Opponents called this
la'til, ‘stripping’ (sc. God of His attributes), and the upholders of it Mu'attila. Those who held that God knows by an attribute of knowledge, neither identical with His essence nor distinct from it, are sometimes known as Şıfâtiyya, and include the Aş'ârîyya and other orthodox theologians. The points at issue were discussed with much subtlety, and in al-Sanûsî and al-Faḍîlî a further distinction is drawn between God's power and His 'being powerful' (kaum âkîrôm, etc.; the first group re-known as şifât al-ma'sûnî and the second as şifât al-ma'na'îyya (perhaps to be rendered “attributes which are hypositized concepts or aspects” and “attributes connected with hypositized concepts”). It was doubtless because of their importance in popular religion that hearing and seeing were retained among the seven.

(c) The Kur'ân [q.v.] is the eternal and uncreated speech of God. This eternal speech is repeated by men's tongues, written in their copies of the Kur'ân and remembered in their hearts, yet it is distinct from its material embodiments.—The doctrine of the uncreated character of the Kur'ân was doubtless advanced in order to justify its position as the chief foundation of law and doctrine. The opponents, who included the Dîhâmiyya, the Mu'tazila, and the central government of the caliphate from about 217/832 to 234/849 [cf. Mînâ], were sympathetic politically to certain groups of the Shî'a; and the Shî'a tended to set the imamate above the written scripture. (It is still the view of the Shî'a that the Kur'ân is created.) The Maturidiyya and other followers of Abî Hanîfa rejected the Aş'ârîyya's view that the eternal speech of God can be heard.

(b) God's will is supreme and always effective; “what He wills exists, and what He does not will does not exist”. Thus He wills all things, good and evil, though He does not command or approve of all. There is no obligation of any sort upon Him, e.g. to do what is best for men, or to reward them for good works, or to command them to do only what they are able to perform. Actions are good or bad because He commands or forbids them, and not in themselves; He could, if He so willed, change what is good and bad.—The sovereignty of God's will in the world was thought to be impaired by the Mu'tazila's assertion of man's free will, and was vigorously re-asserted by the orthodox. The Mu'tazila also held that God was bound by our (sc. human and rational) conceptions of good and bad. Al-Aş'ârî and some of his followers opposed this, maintaining that good and bad are known only by revelation. They further asserted that God may punish one who obeys Him, that He may change a faithful man into an infidel (and that therefore when one says “I am a believer” one ought to add “if God will” [cf. iṣâfatînâ]), and that God may impose on men duties that are beyond their powers. The Maturidiyya took a contrary view on these and similar problems, though affirming the sovereignty of God's will against the Mu'tazila. The later and more intellectualist theologians emphasize the supremacy of God's will at the time of events, but in the earlier and more popular creeds, the stress is on God’s determination of events beforehand [cf. kadâr]; and thus al-Aş'ârî himself includes in his creed the doctrine that whether a man dies or is killed his death takes place at his appointed term (aḍgâl [q.v.]).

(j) God's acts are created by God, but are nevertheless properly attributed to man. They proceed from a power (kudra, istîlâs) in the man, but this power is created by God; God does so at the moment of the act, not before it.—The leading orthodox theologians all try to find a middle way between absolute determinism (djabr) and absolute free will (kadâr). The argument of the Mu'tazila, that God's justice (ṣadî) presupposed that men could properly be punished or rewarded for their acts, forced orthodoxy to deny that men were mere automatons. The Aş'ârîyya (and others before them—cf. JRAAS, 1943, 234-47) used the vague word kub [q.v.] or istîlâs, “acquiring”, to describe the relation of man to his act. They held that, though the act proceeded from a power in the man, this power was created by God at the moment of the act for this specific purpose and no other. The Mu'tazila on the other hand held that the power was created before the act and was power to do either the act or its opposite. (j) God is also characterized by active attributes (şifâtîsîyya), such as creating and giving sustenance. —Some, especially the Aş'ârîyya, held that God cannot be called creator, sustainer, etc. until He has created or given sustenance; as this implies the existence of originated beings, these attributes cannot be eternal. On the other hand, some, like the Maturidiyya, held that God is eternally creator, etc.

(k) Only those names (or attributes) are applicable to God which are to be found in the Kur'ân and sound traditions, or are sanctioned by ijtîhâd.—The Mu'tazila argued that names might be applied to God by inference. It is commonly held that there are 99 names [cf. al-asma' al-husna], but in fact more are found.

(l) The questioning by Munkar and Nakîr, and the punishment of the tomb, are realities; so also are the signs of the end, such as the slaying of the Dâjîdjal by 'Isâ.—Between death and the resurrection on the Last Day men will be questioned in the graves by two angels, Munkar and Nakîr, and rewarded or punished. Various signs of the coming of the Last Day are also mentioned. These are popular beliefs, based on Tradition and not on the Kur'ân, but they have been incorporated into the creeds [cf. 'adl mâl al-kâtib]. Among the Shî'a special emphasis is laid on the Return (rug'â), i.e. of the Mahdi and of a limited number of very good and very bad people; this is for the punishment of the latter and the glorification of the household of Muhammad (cf. D. M. Donaldson, The Shi'ite Religion, London 1933, 236 f.). This return to earth before the Last Day, though a preliminary judgement", is to be distinguished from God's final judgement.

(m) God will judge all men on the Last Day [cf. kiyâma]. The balance (mi'zân), the bridge (ṣirât) and the pool (hawd) are realities.—The central fact of judgement is prominent in the Kur'ân, and the balance on which men's deeds are weighed is hinted at (cf. Wensinck, Muslim Creed, 157 ff.). The pool or basin of Mu'âammad, from which he quenches for ever the thirst of his followers, and the knife-edge bridge over the pit of Hell, from which the wicked fall down, come from popular conceptions. The various ideas were reconciled with one another only by the later systematizers.

(n) Certain persons, and notably Mu'âammad, will be permitted by God to intercede for others on the Last Day [cf. muara's]. Mu'âammad will intercede for sinners of his community.—This was denied by the Mu'tazila on Kur'ânic grounds, but ultimately gained general acceptance.

(o) Paradise and Hell already exist, and will continue to exist eternally [cf. jannâ, dâhānâm]. Grave sinners of the Muslim community will be
punished in Hell, but not eternally. No monotheist will remain eternally in Hell. —The Djahmiyya and other sects held that Paradise and Hell would not be created until the Last Day and would cease to exist after a time, but the majority rejected this view. There are some divergences about the precise late of Muslims who are sinners, but it is generally agreed that by intercession of otherwise they will eventually be released from Hell, if they enter it all.

(p) Prayers for the dead and alms offered on behalf of them are advantageous to them.

(q) God has sent to mankind messengers (rasul) and prophets (nabiyyā'). The prophets are above saints and angels. Muḥammad is the seal of the prophets and the most excellent of them. —The Fīḥk Akbar ascribed to Al-Shāfi‘ī says there are 120,000 prophets and 373 messengers.

(r) Prophets are preserved (ma‘ṣūm) from all sin by God.—This was the view of the Māturidīyya and the other followers of Abū Ḥanīfa, but the Ash‘āriyya admitted that they might commit light sins.

(s) The best men of after the prophets are Abū Bakr, then 'Umar, then 'Uṯmān, then 'A‘lī. This assertion of the acceptance of the first four caliphs in order is made in opposition to the Shi‘ā who hold that 'A‘lī was best.

(t) No Companion of Muḥammad is mentioned except for good. —This was to bury the quarrels about rights and wrongs of 'Uṯmān, of 'Ṭalḥa and al-Zubayr, etc. It was directed mainly against the Shi‘ā.

(u) Unbelief (kufr), or the status of being an unbeliever, does not necessarily follow the commission of sin by a believer. —This was directed against the Khawārij, who excommunicated anyone guilty of sin.

(v) Faith is knowing in the heart, confessing with the tongue and performing works. It increases and decreases [cf. IMĀN].—Many others, however, notably the Ash‘āriyya, said that works were not a part of faith, and that faith did not increase and decrease.

(w) Faith and unbelief are due to God's guidance and abandonment (ḥikmat) respectively.

(x) (Some later creeds also contain articles about the nature of knowledge and true report, and other philosophical matters.)

ALA’AKI, the name of a number of valleys, mines, and other places in Arabia and elsewhere. When applied to valleys, ‘Akik is used in the sense of a bed cut out by a stream; when applied to mines, it may refer either to stones such as the cornelian (‘akib) or more generally to any mineral cut away from its source. The name is much used by the Arab poets, who do not always make clear which of the many ‘Akiks they have in mind.

The best known of the ‘Akiks is the valley passing just west of Medina, from which it is separated by Harrat al-Wabra. It continues northwards to join Wadi al-‘Hamd (q.v.), the classical Iṣām, which empties into the Red Sea south of al-Wadīh. The mountain ‘Aṣyir south of Medina rises above the right bank of al-‘Aṣik, which draws much of its water from the neighbouring lava beds. After heavy rains the valley is filled with a broad river which has been compared with the Euphrates; when the rains fail, only the wells remain to slake the thirst of men, beasts, and plants.

In the Prophet’s time the first stage of the route from Medina to Mecca ran through al-‘Aṣik to Dhu ‘l-Hulayfah, as does the present road. Numerous traditions speak of the fondness Muhammad had for al-‘Aṣik, the “blessed valley” in which he was once told to pray by a messenger from God. As the valley lay within the territory of Muzayna, Muhammad gave it as a礼物 to Bilal b. al-‘Rahmān of this tribe. Muhammad also established a reserve (ji‘d) for al-‘Aṣik, the “blessed valley”; the valley flourished: wells were dug, gardens and plantations were established, and the poets lavished praise on the lovely scene and the famous well, particularly Bihār ‘Ruma (now known as Bihār ‘Uṭmān after ‘Uṭmān b. ‘Affān, who bought it from its Jewish owner and gave its water to the Muslims) and Bihār ‘Urwah b. al-Zubayr. The water of al-‘Aṣik was so sweet that it was sent all the way to Hārūn al-Raḥīm in ‘Irāq. With the decline of ‘Abbasid power and the increase of insecurity in al-Ḥijāz, the valley lapsed into its old somnolence, to remain there for centuries.

Another ‘Aṣik, sometimes called ‘Aṣik Dhat ‘Irf, by the older authors, extends northwards from the vicinity of al-Ṭā‘if along the inner side of the main mountain range of al-Ḥijāz. Some writers state that this valley is connected with ‘Aṣik al-Madina, but recent hydrographic studies have shown that it empties instead into a large swampy basin called al-‘Aṣik between Mecca and Medina.

A great valley in Central Arabia was known in classical times as ‘Aṣik al-Yamāmā or ‘Aṣik Tamra. Although the descriptions given by the
older authors are meager, there is little doubt about the identification of this valley with the present Wadi'l-Dawasir, a small settlement in which still bears the name Tamra, while a nearby salt flat in the valley bed is still called al-'Akīk. According to al-Handānī (i, 152), Tamra was a town with 200 Jews. The same authority may well be mistaken in connecting the name of this valley with Ma'din al-'Akīk, a mine he places in the vicinity, no trace of which has been found. Other mines with the same name are mentioned, but in such general terms that identifying them may be a hopeless task.

In addition to various other valleys named al-'Akīk in Arabia, there has been at least one in Irāk south of the Euphrates (cf. W. Wright, *Opuscula arab.*, vii, 110; *Hamāsa*, i, 698; *Aghāni*, vii, 123; al-Dinawarī, 260). On the Sudanese shore of the Red Sea a village named al-'Akīk (without the definite article) stands on a gulf of the same name southwest of Sawākīn.

**Aki l** [see Balīgh]

**A kī kī** (A.) is the name of the sacrifice on the seventh day after the birth of a child. According to religious law it is recommendable (*mustāhāb* or *sunna*) on that day to give a name to the new-born child, to shave off its hair and to kill a victim, for a boy two rams or two he-goats, for a girl one of these according to the Shāfī'ī, but in both cases only one according to the Mālikī. If the offering of the *ṭaḥkā* has been neglected on the seventh day, it can be done afterwards, even by the child itself when it has come of age. The greater part of the flesh of the sacrifice is distributed amongst the poor and indigent, but a meal (*waṭīma*) for the family is recommendable.

Some of the older scholars (amongst other Dā'ūd al-Zāhirī) have looked upon the offering of the *ṭaḥkā* as a duty. Abū Ḥanīfa on the contrary regarded it as optional.

The shorn hair of the child is also called *ṭaḥkā*, and the law recommends to the faithful to spend a sum not less than the weight of this hair in silver (or gold) in almsgiving.

The *ṭaḥkā* sacrifice was doubtless derived from old Arabian heathenism. The Prophet is said to have observed: "When some one wishes to offer a sacrifice for his new-born child, he may do so". In heathenish times it was the custom to wet the child's head with the blood of the animal. According to some traditions Muḥammad had allowed the Muslims to do the same. The jurists maintain that this custom is not desirable (*sunna*) but it is done, e.g. in Palestine.

According to Doughty (travels in Arabia Deserta, i, 452) the *ṭaḥkā* is one of the most frequent sacrificial ceremonies in the Arab desert, but there it is only performed at the birth of a boy, never when a girl is born.

**Akhil** [see Balīgh]

**A kīl** n. *Abī Ta'llīb*, elder brother of 'All, who was 20 years his junior. After fighting against the Muslims at Badr, where he was taken prisoner and ransomed by al-Abāṣā, he became a convert to Islam. The sources give contradictory information as to the date of this event (after the capture of Mecca, according to al-Baladhuri; shortly before or after the pact of al-Hudaybiya, according to Ibn Ḥadīj, etc.), as well as on his participation in the Khaybar and Mōtā expeditions, the capture of Mecca, and the battle of Hunayn. During the struggle between 'All and Muṣ'āwīya, he ranged himself on the side of the Umayyad because his brother, it is said, refused to draw on the state coffers in order to pay a debt to him, but the estrangement between the two brothers probably had political causes. Yet 'Akhil would never allow anyone to insult 'All in his presence.

He had "an extremely prosperous household" and a considerable entourage. He died, probably in 50/670, and was buried at Medina. He left several sons who joined al-Husayn at the time of his rebellion against Yazīd; one of them, Muslim, was killed by Ibn Ziyād, and others, either six or nine in number, fell at Karbalā'. 'Akhil left a reputation not only as a great authority on genealogies and the history of Kuraysh, on the strength of which he became one of the four arbiters (bakam) of the law, but also as a man endowed with great natural eloquence; his swift and pungent retorts are often quoted by the historians.

**Aṣkīl**, one of the most significant institutions of Muslim penal law as regards both the origins and the sociological evolution of that law. The term *ṭaḥkā*, pl. *awdāli*, denotes, as its ety-
mology would suggest, the group of persons upon whom devolves, as the result of a natural joint liability with the person who has committed homicide or inflicted bodily harm, the payment of compensation in cash or in kind. This compensation is called diya [q.v.], 'abd, pl. 'aḍābi, and also maṣ'ula, pl. maṣ'ābi, from a root meaning "to bind, shackle": the Arab lexicographers readily explain that it referred originally to the camels of the diya, which were given "shackled" to the victim or his inheritors (cf. Ibn Kutayba, Adab al-Kāthīī, 1346 A. H., 52; LA, xii, 487-8, which has a detailed account); but the classical jurists prefer to relate it to the idea of a "restraint" operating against the exercise of private revenge (cf. Germanic wergeld). The original meaning is perhaps to be found in the classical expression 'abd l-kaṭīb, "to pay the compensation for the victim of a murder", which possibly meant at first "to prevent the victim [from avenging] himself".

This institution has its roots in the ancient Arab tribal principle of joint responsibility (Procksch, Über die Blutrache etc., Leipzig 1899, 56-61; Morand, Études de droit mus. algérien, Paris 1910, 65-7; idem, Introd. à l'étude du droit mus. algérien, Paris 1921, 210-12; Lammens, Arabie occidentale, 189). In Islam, it seems to be a survival not easy to reconcile with the individualist tendencies of religious doctrine which find expression, in the field of moral responsibility, in the Kurān (vi, 164): "no soul bears another's load." Fīhā, however, approved of it (protests were raised by the Mu'tazzilite Abū Bakr al-Asamm, and in Khāridjite circles), and several "kaḍīkh" of the Prophet (conveniently grouped, with a commentary, in al-Shawkānī, Nāṣi al-Asba'ār, 1333 A. H., vii, 80-6) gave it the tardy support of that Tradition: the Muwatta' of Mālik only takes cognizance of such versions as are irrelevant to the question of the 'aḍābi, which it discusses at considerable length without invoking any decision of the Prophet. Its incorporation into Fīhā was accomplished, however, by the imposition of highly restrictive regulations and even, in one of the principal schools of law, by an appreciable change in the principle of joint responsibility.

Firstly, as was to be expected, ta'ḍābi, or joint liability by 'aḍābi, is not permissible between Muslims and non-Muslims (it is allowed between dhimmis, the conditions varying according to the school). Secondly, a factor of much greater importance, four other basic restrictions are laid down in the formula, valid in principle for all the orthodox schools: lā ta'ḥīl 'l-'aḍābi astamwa la-ḥabībī wa-lahubībī wa-lahāsūbī wa-lahā ṣīrāfī;*: "'aḍābi does not intervene in the case of an intentional act, or a slave, or a compromise or a confession". The first of these restrictions, which limits the legal function of the institution to the case of non-intentional homicide or injury ('hāṣa [q.v.]) — and most of those who allow this supplementary category include the quasi-intentional — is extremely important; there is a clear connection between it and the distinction drawn in the Kurān (ii, 178; iv, 92) between intentional and non-intentional homicide. The intentional act of a minor or an insane person is counted by the majority of authors as tantamount to a non-intentional act. The second restriction apparently denotes (the grammatical vindication of this was given by the grammarian al-Asba'ārī to the Ḥanafī kāfūl Abū Yūsuf) that if the victim — and not the guilty party — is a slave, the 'aḍābi of the guilty party does not intervene; but the Ḥanafīs, followed with some hesitation by the Shāfī'īs, see the matter in a different light. The two remaining restrictions mentioned in the formula are represented by the jurists as seeking to prevent any collusion prejudicial to the members of the 'aḍābi.

Even more drastic is the Ḥanafī innovation which affects the members of the 'aḍābi themselves. Among the pre-Islamic Arabs, only the relatives by paternity, real or fictitious, were concerned. The Muslim jurists have not departed from this customary view, with the exception of the Ḥanafīs of 'Irāk, who have accepted and confirmed an Umayyad administrative practice (Schacht, Origins, 207) which gave precedence to the joint liability between companions-in-arms entered on the same pay-roll or diwan. This tallied with the tendency towards state control, because the authorities could in this way directly guarantee compensation for the victim, by means of official deductions from pay. The experiment made by some early Mālikīs, obviously following the example of the 'Irākīs, of taking the diwan into account to a certain extent, was unsuccessful (compare Abī al-Wahhāb, Ḥawlā, ii, 194, with al-Bāghī, Munā'īd, viii, 113-4).

The schools of law are thus virtually unanimous on the point that the 'aḍābi comprise, as in the pre-Islamic period, the 'asaba (cf. waṣaṣra) of the guilty party, that is to say, the group of relatives or acquaintances, after whom come, in the case of a freedman, the patron and his 'asaba (an old Shāfī'ī ruling in favour of the reciprocal obligation of the freedman towards the patron has not been generally accepted). As regards the agnates, the old system of kinship is seen here in all its force and clarity, more plainly even than in the rules governing inheritance; moreover, the agnatic relationship, in such a conservative question of penal law, continues to be interpreted with the greatest strictness: Mālik, for example, stipulates that neither the husband nor the son or a woman who is a guilty party, although they are her heirs, can be a member of her 'aḍābi. The Shāfī'īs are alone in excluding from the 'aḍābi the ancestors and descendants of a man who is the guilty party, though the Ḥanbalis are undecided on this point (Ibn Khudāmā, al-Mughūnī, 1367 A. H., vii, 784). Minor and insane persons are excluded from the 'aḍābi, as are women. As regards the guilty person himself, it is certain that originally he was not party to the 'aḍābi which intervened on his behalf; although certain Mālikīs have incorporated him in it, it can be confidently asserted that this is in imitation of the Ḥanafīs — an additional modification to be attributed to the latter (Brunschvig, in Studia Islamica, iii, 69).

Ḥanafism has not completely excluded from the 'aḍābi either the agnates or the patron by right of manumission; it even includes the contractual patron, to whom it alone of the orthodox schools accords legal status; and it places no limitations of time or degree on the agnatic relationship. But agnates and patrons, under this system, only play a suppletory role. Further, Ḥanafism justifies its theory of the superiority of the military diwan to the 'asaba by declaring itself faithful to the traditional idea of an overriding duty of "mutual assistance" (nusra, ṣalāṣa) as the basis of penal solidarity, and by adding the changes which had occurred during the first century of Islam in the very concept of mutual help, thus there was initiated among the members of this school a development of doctrine which led to the acceptance of the principle that, in default of the diwan, members of the same sub or of the same
profession, in a given locality or district, should between them perform the function of 'əkila. Further developments occurred among the mediaeval Ḥanafis, but the various jurists trod divergent and confused paths (the classical works on ʿibtidād, through being over-condensed, give the illusion of a unified doctrine); some left the judge considerable scope for the exercise of his own discretion, others were inclined to provide a definitely geographical basis for the institution; at least in the absence of agnates.

As a result of the dislocation of the tribes under Islam and their dispersal over vast areas of territory, the problem of a limitation either, again, of a geographical nature, or connected with the degree of kinship, arose in some of the schools, in which the role of the agnates retained its original importance. The Mālikis had early signified their decision (Mudawwana, xvi, 298) that there should be no ʿtaḥbul between the people of Egypt and Syria, for example, because they constituted different ʿiwns (a faint echo of the dīwān theory); and the ʿṢafistīs, who to begin with saw no impediment in any distance, however remote, wondered in their turn whether relations who were near at hand might not be called upon in preference to more closely connected relatives who lived at a distance (see ābd̊gh, ʿibd̊ab, ii, 214, with K. al-Umm, vi, 103). The Ḥanballıs were not inclined to take geography into account at all; but, while the ʿṢafistīs rejected joint liability between tribes considered to be related, they, on the other hand, limited the institution to that fraction of the tribe in which kinship was clearly established (Mugn̊i, viii, 786, 788). Again, within the framework of the social changes occasioned by Islam, and as a mark of its distrust of Bedouin life, there is recorded the attempt of several doctors to prevent ʿtaḥbul between townsmen and nomads: the Ḥanafis al-Sarakhsī emphasizes this point (Mabsūṭ, xxvii, 132-3); the Mālikis, notwithstanding the Mudawwana, loc. cit., on the whole refused to follow this path (al-Badji, al-Muntaka, loc. cit.; Schacht, loc. cit.), a method of assessment among the members. The Ḥanafis, who like accountanty, and who are anxious to embarrass each member as little as possible, have opted for an extremely low maximum, to be the same for all—three or four dirhams per head. The ʿṢafistīs, who aim at relieving the poor, have fixed two rates of contributions according to means, very similar to the preceding ones, but in this case revolving round a minimum—½ dinār for the rich, ¼ for persons of more moderate means, proceeding from the nearest agnates to the most distant. The Mālikis and Ḥanballıs refuse to lay down any fixed amount; each of the agnates, in order of kinship, must pay according to his means; this was undoubtedly the ancient method. In an organized State, if an equal assessment is refused, the case must be referred to a judge; and the schools concerned agree on this.

The ʿəkila reappears in a closely-connected penal institution, the kasāmā (q.v.), but in slightly different forms from the ones just described.

The Imāmī Shīʿītes have made virtually no innovations on the subject of the ʿəkila. Their fundamental solutions are those of the orthodox doctors, with a preference now for one school, now for another. In their eyes, the persons jointly responsible are first and foremost the agnates; the guilty person himself, minors and the insane, and the emancipator too, are excluded; the priority accorded to, or rather imposed upon, relations german to the guilty party. The minimum sum involving the ʿəkila is that laid down by the Ḥanafis; the minimum devolving on each member is fixed either in accordance with ʿṢafī doctrine, or by the magistrate; payment is made, as in the case of the Sunnīs, in three annual instalments.

Finally, can ʿiḥk be said to have succeeded in its effort to preserve, and at the same time to delimit, the function of the ʿəkila? The explanation may lie in the negative. In general, large sections of the old Muslim penal law, even though based on the Kur̊an, fell rapidly into disuse, when faced with competition from the secular, and highly arbitrary, justice of rulers; there was even greater reason why this
should occur in the case of an institution such as the 'akila, which was extra-Kur'anic and no longer corresponded to social reality as far as an increasing number of Muslims were concerned. The evolutionary process initiated during the first centuries of Islam by Ḥanafīsm, in the sense of joint liability on a territorial basis, was indecisive, and unsatisfactory in many respects; taken a stage further by the Ḥanafīs in the course of time, it even went as far as the doctrine put forward by some, that the public treasury, i.e. the state, was responsible in the absence of family or of a military division. Instead of this solution, which was hard to admit, some authors advocated that the diya should be placed to the sole charge of the guilty person—this being the germ of a theory of civil liability which was not further developed (Tyan, Le système de la responsabilité dlictuelle en droit musulman, Beirut 1926, 123-8; Abou Half, Le Droit en droit musulman, Cairo 1932).

It seems that collective responsibility to-day exists only in societies where the joint responsibility of the tribe is still an active force, for example among the Arabic-speaking nomads (the literature on the subject is summarized in Gräf, Das Rechtswesen der heutigen Beduinen, Bonn 1952), or among the settled Berber populations; customary law then predominates, only in varying measure by Muslim law.

*Bibliography:* In addition to the references quoted in the text, all the general works on ʿākīla. For the three principal orthodox schools see Bercher, Les Délits et les Peines de droit commun par le Coran, Beirut 1926. For reference on the Mālikī school see Arévalo, Derecho penal islámico, Madrid 1939, 40-44. Bourham, De la vengeance des Arabes d'avant l'Islam, 1933-44, is of no value. (R. Brunschvicg)

ʿAhnādil, irregular cavalry during the first centuries of the Ottoman Empire, based on and primarily for service in Europe. Their name derives from the verbal noun ʿābin (from ʿāb-mak, “to flow, to pour out”), which means a “raid, incursion into enemy territory”. ʿAhnādil is “the name given to those who carry out ʿābins on foreign territory to reconquer, plunder, or spread destruction”. (M. Zeki Pakalln, Osmanlî tarik deşîmler ve terimleri sölül, Istanbul 1946, i, 36). The treasurer of Meḥmed II, G. M. Angioletto, in his eye-witness account of the campaign against Uzun ʿHasan (1473), gives the best description (trans. Charles Grey): “Besides the five columns we have mentioned, there was also another of the Aganzi, who are not paid, except by the booty which they may gain in guerrilla warfare. These men do not encamp with the rest of the army, but go traversing, pillaging, and wasting the country of the enemy on every side, and yet keep up a great and excellent discipline among themselves, both in the division of the plunder and in the execution of all their enterprises. In this division were thirty thousand men, remarkably well mounted...”.

Tradition ascribes the formation of these auxiliary troops, comprising contingents from the Turcoman tribes of Anatolia, to the Ṣalṭūqids; and in fact, although accurate information is lacking concerning the battle in the plain of Brusa at the end of the 13th century between Erteğrul, supported by the ʿahndil, and the Byzantine-Tatars, it seems probable that this tradition contains the truth. The term ʿābin is also used in connection with naval expeditions. Enver (ed. M. H. Yimanc, Istanbul 1928, 24) records an ʿābin made along the Bosporus with 35 ships. Neshîr mentions the ʿahndil ṭahdilari, or ʿahndil judges’. These irregular units of the Ottoman army established themselves, as the Turks gradually advanced into the northern Balkans, in strategic and wellprotected localities. Frûz Bey of Vidin was ordered by Bâyazîd I to make an ʿābin on Wallachia, and in 1391 the Turks ʿahndil for the first time advanced north of the Danube. Later they numbered not less than 40-50,000 horsemen. They were commanded by what were virtual dynasties of local chiefs (beys); Ewrenos-oghullar (the descendants of Ewrenos Bey [q.v.], at Ůumâldjina, Serez, Iṣhkdrah) in the north-west; Miḥâl-oghullar, descendants of Köłe Miḥâl [q.v.], a Greek renegade of the family of the Palaeologoi (Serbia, Hungary); Türkân-oghullar (Smederevo-Semendire, Greece, Wallachia and in the direction of Venetian territory); Malkoç-oghullar, originally from Bosnia where they were known as Malković (Hungary, Wallachia, Moldavia and Poland); Kâsim-oghullar (at Vienna, 1529).

Towards the end of the 16th century, the ʿahndil lost some of their thrust and importance. In the course of the ill-fated expedition of the Grand Vizier Koçi Sînân Paşa against Mihai Viteazul of Wallachia (1593), they were almost annihilated: at Giurgiu (Yerköyül) on the Danube they remained on Romanian territory, where “the root of the ʿahndil was severed and they withered away”. Again in 1604, Sultan Ahmed I issued orders to ʿAll Bey Miḥâl-oghlu to join the expedition against Hungary. But the ʿahndil rapidly adapted themselves to new forms of warfare. They became artillerymen, armourers, and drivers, and demanded to be entered in the army muster-rolls and to be paid regularly. The statistician of the decline of the Ottoman empire, Koçi Bey, in his Fidâye (ed. A. Wothke, London, 1797/1862, 17) written in 1630, stated that “the ʿahndil contingents (ʿahndil fidâyes) had become either paid troops or regular soldiers, or had relinquished their positions (ʿahndilîlîlî inkar idûb); scarcely 2000 ʿahndil remained”. Their individuality became lost in the main body of the regular Ottoman forces.

ʿAKK, old Arabian tribe, probably identical with the ʿAχ̣̂ṇṭxi (ʿAχ̣̂ṇṭxi) of Poltomy, vi, 7, § 23. H. Reckendorf considered the name ʿAkk as a place-name; but it occurs as a personal name in Thamūdic inscriptions. At the beginning of the 7th century the territory of the ʿAkk in the Tiḥâma of Yaman stretched from Wâd Mawr, over Surdûd, to Wâd Sahîm (i.e. between modern Luḥayya and ʿUqaydayda), where it met that of the ʿAṣ̌ḥar. At that time they
participated in the Meccan cult. Earlier a colony of the Akk was to be found in Akkik (Tamra) = Wadi of Medina, that was to be found in Akkik (Tamra) = Wadi of Medina, that was to be found in the territory of a sub-tribe of Akk (of the same name), but they were annihilated by Tābir and a chieftain of the Akk themselves. During the wars of the conquests some groups from the tribe came to Syria (they settled in the valley of the Jordan), and from there to Egypt and the Magrib, also to Kūfah and Persia. Members of the tribe were prominent in the conquest of Egypt and in the battle of Siffin (on the Syrian side). In Arabia, the tribe preserved its old territory, and even extended it to the north and south.

Wüstefeld, Table A2, shows the divisions of the emigrant Akk, the Turfa those of the tribe in its primitive seat in the 13th century. In the tradition of Medina ( Ibn Ishāk) the Akk are counted among the Adnān, in that of Kūrāsān among the Azd Shānūz (through Uḏdūn, which is often corrupted into Adnān). Both versions are easy to understand: when Kūfah was founded, the Akk were assigned to the "seventh" of the Iyād ( b. Nizār b. Maʿadd b. Adnān), while in Kūrāsān they were assigned to the Azd.

AKKĀ, the Acco (Akkū) of the Old Testament, the Ptolemais of the Greeks, the Acre of the French, town on the Palestinian seaboard. Akkā was captured by the Arabs under the command of Shurabhi b. Ḥasan. As the town had suffered in the wars with the Byzantines, Muʿawiyah rebuilt it, and constructed there naval yards which the Caliph Hisham later transferred to Tyre. Ibn Tūlūn constructed great stone embankments round the port; al-Makdisi, whose grandfather executed the work, gives an interesting description of their construction. The port became subsequently one of the naval bases of the Fatimids in Syria. The Crusades marked a new epoch in the history of the town. After an unsuccessful attempt, Baldwin I succeeded, in 1104, in gaining possession of this important port, which then became the central point in the Christian possessions in the Holy Land. Al-Iṣrārī's description of Akkā belongs to this period: a large straggling town, with many farms, a fine, safe harbour and a mixed population. After Saladin had won the great battle of Kār ʿAntīn, Akkā surrendered to him in 583/1187. But since possession of Akkā was vital to the Christians, they again laid siege to the town. The siege lasted for two years, and finally (1191) the arrival of Philippe Auguste and Richard Coeur de Lion led to the capture of Akkā by the Christians. From 626/1229 onwards, Akkā was the principal centre of Christian power in Palestine, and received the name of Saint-Jean d'Acre, after a splendid church built there by the Knights of St. John of Jerusalem. In 690/1291 the Sultan al-Malik al-Ẓahir gained possession of Akkā and put an end to Christian domination in Palestine. The town was completely destroyed, and for long remained a heap of ruins, with few inhabitants. Towards the middle of the 18th century, a revival took place, when Shaykh Ṭāhir, who had founded a kingdom in Galilee, made Akkā his capital. The town was rebuilt, and flourished still more during the reign of terror of Ahmad al-Dżazzār (1775-1813). It was during his rule that Napoleon conducted a fruitless siege of the town, which was protected by the British fleet. Akkā continued to prosper under the peaceful rule of al-Dżazzār's successors, but in 1832 it was taken by Ibrahim Pasha and razed. It rose yet again, only to be bombardcd in 1840 by the Turkish fleet supported by the British and the Austrians. Since then the town has witnessed a certain revival.

AKKĀRMAN [see Ā KHRMĀN].

AKL, intellect or intelligence, the Arabic equivalent of Greek νοῦς. (1) In neoplatonic speculation, in which in many respects resembles the late Greek doctrine of the Logos and also in many respects corresponds to the Logos christology, ἀγλ is the first, sometimes the second, entity which emanates from the divinity as the first cause, or proceeds from it by means of intellectual creation, νάς and ἀγλα etc. coming after ἀγλ in succession. As first created entity the ἀγλ is also called "the representative" or "the messenger" of God in this world. The neoplatonic idea of ἀγλ as first creation also appears in the ἰδίτ problēma: "The first thing created by God was the ἀγλ etc." (cf. I. Goldzibher, Neuplatonische und gnostische elemente im ἱδίτ, ZA, 1908, 317 ff.). [Cf. also ΦΑΣΑΠΑ, ἸΒΗΜΑΝ-ΑΛ-ΣΑΦΑ; for the role of ἀγλ in ἰσμάλιςμ, ἰσμάλιύσα and δύρος; for ἀγλ in σύλθ theosophy, e.g. ibn ʿArabi and ʿABD AL-RAZZAK AL-KHĀN]. (T. DE BOER) (2) According to the theologians (muḥaddithūn), ἀγλ is a source of knowledge and, as such, is the antithesis of νάς or tradition (see e.g. I. Goldzibher, Vorlesungen über den Islam, ch. iii); the words ἰστρά and ἀγλα (ψόντ) are also used for it. ἀγλ is thus a natural way of knowing, independently of the authority of the revelation, what is right and wrong. (Thus it corresponds to the λόγος of the Stoics, who understood by this term a "natural light" (lumen naturale), which was their criterion for distinguishing between good and bad.) This ἀγλ, possessed by all human beings, is also called ἀγλα μοχαρα (al-Fārābī, R. fi l-ʾAgl (Bouyges); cf. the χονάξ Epsilon of the Stoics and the χονάξ νούς of Alexander of Aphrodisias, De anima (Bruns)). Allied to this meaning of ἀγλ is the view qualified by al-
The philosophers of Islam followed in their accounts of *aql Aristotle and his Greek commentators, more especially Alexander of Aphrodisias. According to them *aql is that part of the soul (for their psychology in general see NAFS) by which it "thinks" or "knows" and as such is the antithesis of perception. Mostly, however, *aql is not regarded as a part of the soul at all, which is then restricted to the lower mental functions, but as an incorporeal and incorruptible substance differing in kind from the soul—an ambiguity which also pervades Aristotle's psychology. *aql is broadly divided into the theoretical (al-nasari) and the practical intellect (al-*amali); the former apprehends the quiddities or universals, while the latter deliberates about the future actions and through the appetitive faculty moves the body to the attainment of the good.

The development of the theoretical intellect in man is the most widely and richly discussed subject of the doctrine. In a brief and rather obscure passage (De anima, iii, 5) Aristotle had said that the potential intellect in man is actualized by an eternally actual intellect (an application of the general Aristotelian principle that for the realization of a potentiality the agency of something already actual is necessary); the latter acts upon it as light acts upon our faculty of sight or art on its material. The disparity between the two analogies obscures Aristotle's view of the relationship between the passive and active intellects, but it was Alexander's interpretation which provided the basis for the Arabs' discussions. According to Alexander (op. cit.) our intellect is initially a pure potentiality which is actualized by the active intellect which is God; when our actualized intellect is not operating, it is *intellectus in actu, or *intellectus in effectu; when it acquires the axiomatic truths (this is called *aql bi 'l-iqm = intellectus in effectu), the second stage (called *aql bi 'l-iqm = intellectus in actu) reflects upon itself and attains to a knowledge of the categories and becomes *aql mustaqfād (*intellectus acquisitus or adeptus). According to Ibn Sinā (al-Shāja', De anima) the potential intellect (*aql bi 'l-suwa, or *aql hayāllāni = intellectus potentialis or materialis) reaches the first stage of its actualization when it acquires the axiomatic truths (this is called *aql bi 'l-malaka = intellectus in habito), the second stage (called *aql bi 'l-iqm = intellectus in actu) when it acquires the secondary intelligibles from the primary intelligibles or axioms, the final stage (*aql mustaqfād = intellectus acquisitus) when it actually contemplates these intelligibles and becomes similar to the active intellect. Ibn Sinā, inspired by Neo-platonism, affirms that the universal cannot be acquired by abstraction from the particulars, but by direct intuition from the active intelligence. The final stage of human bliss comes when the human intellect becomes one with the active intellect, which happens, according to al-Fārābī and Ibn Sinā, only after death, although Ibn Rushd allows such a union during earthly life.

One of the chief difficulties of this whole Greco-Arabic doctrine is the individuality of intellect which they affirm to be incorporeal and therefore; according to their general principle of individuation by matter, universal. Although its individuality is recognized, seeing that the subject of thought is the individual "I", the basic principle of their theory of knowledge, viz. that of the identity of subject and object (a principle laid down by Aristotle in order to ensure the objectivity of knowledge, but rejected by Ibn Sinā), prevented the formulation of the individual ego. This difficulty culminated in Ibn Rushd (De anima), who declared the intellect to be one for all humanity, while recognizing that his theory did not do justice to the individuality of the act of thought.

(4) The Muslim philosophers recognized a hierarchy of separate intelligences (*'āmil mufradāt), each lower one emanating from the higher. These incorporeal beings, usually ten in number and endowed with life, intuitive thought and bliss in varying degrees, create and govern their respective spheres which themselves are regarded as being possessed of souls. Like the Greco-Christian thinkers (e.g. (pseudo-)Philoponus, De anima (Hayduck, 527)), the Muslims identified the separate intelligences with certain angels, the lowest of these, the active intellect, called Gabriel, being the ruling *aql of the sublunar sphere.

**Bibliography:**
al-shar'iyya wa 'l-diniyya (revealed and religious knowledge). According to Mu'tazilite tradition, and Sa'diyya al-mutasharriyyat denotes that which is accessible to the reason and especially, on the ethical level, the natural values of law and morals. Cf. the Mu'tazilite MS al-Madjma 'i?'l-Muhtij (bridged from the Muhtij of the Qadi 'Abd al-Djabbar, end of the 10th century) by Ibn Mattawiyah (Berlin, MS Glaser 526; information supplied by G. Vajda).

In classical kalâm, this distinction operates also within the "religious sciences." Traces of it are found from the time of the first Mu'tazilite disputation, when 'imān diniyyah is sometimes subdivided into 'imān 'akliyyah and 'imān sharhī. In later works (Aghā and Hanafi-Māturidī schools), 'akliyyah denotes the aggregate of subjects in kalâm (i.e. "religious science") which are amenable to reason; that is to say subjects the fundamentals of which, even where they are provided by the gnostics, can be "proved" by "apodictic arguments" (bāhā'). These are contrasted with the subjects called samîyyah, ex aedibus, the fundamentals of which derive only from Kur'ānic or traditional texts (badīth, ijma'). In this latter category, reason only intervenes to resolve arguments of expediency. Two kinds of problems are considered as 'akliyyah: (1) the preliminary subjects of kalâm, which deal with "essentials and accidents," subjects which are in the strict sense "rational," and which assemble the products of logic, natural philosophy, and ontology; (2) 'akliyyah, which deal with (a) the existence of God (wjūd Allāh), and his attributes (ṣifāt), with the exception of the three attributes of Sight, Hearing, and Speech, and of the "vision of God" (ru'yat Allāh), which are considered as samīyyah; and (b) the "acts of God" (al-faḍlah āfādā). The 'akliyyah must always have a scriptural basis, but a basis which reason, for its part, can prove by apodictic arguments. The other subjects, such as prophecy, eschatology, the "statutes and the names," the "command and prohibition" (imāma), are samīyyah. The great classic of al-Djurjani, the Sharh al-Mawdi (8th/14th century for example), has six principal sections; five of these treat of 'akliyyah, and one only, the final section, comprises all the subjects called samīyyah. (L. Gardet)

al-Aкраb (a.), scorpion. This branch of the arachnida, which is met with as far north as lat. 45°, includes, in Asia and Africa, some species whose sting produces effects of a more or less serious nature, and sometimes even death. For this reason the scorpion has always haunted the imagination of oriental peoples; it has found a place among the stars (a constellation and the 8th sign of the Zodiac are named after it), and has played some part in the magic and the interpretation of dreams. As a protection against its sting, magic formulas and, later, verses of the Qur'ān, were used, engraved on rings and other talismans; according to the Traditions, Muhammad saw no objection to this practice. The observer of Arab naturalists, who claimed that the scorpion escaped from pain and intense heat by committing suicide, and that the female carried its young on her back and ultimately perished in this way, have been confirmed in modern times.

Nothing is known of his attitude towards Muhammad up to the time when he joined the Prophet in al-Sukya during the expedition to Mecca in 8/650. He took part in the conquest of Mecca and was one of al-mu'alla al-kububum who were presented with gifts, which gave occasion to a famous verse of 'Abbās b. Mirdā. He took part also in the battle of Hunayn and refused to return his booty, in spite of the Prophet's request. (For Muhammad's somewhat negative opinion of him see also Ibn Hishām, iv, 203.) He participated in the conquest of the vanguard of Tamlīm to the Prophet, the traditional account stressing his arrogant conduct; nevertheless, he was appointed to collect the sadaqát of part of the Banū Ḥānsāla (al-Ansaib, x, 970). Together with other chiefs of Tamlīm, he interceded for the captives of the Banū 'l-Anbar, and was a witness to a letter dispatched by the Prophet to Nadjrān.

During the ridāda, according to Sayf (al-Tabari, i, 1920), al-Aкраb and al-Zibrikān proposed to Abū Bakr to guarantee the allegiance of Tamlīm against the grant of the kharāj of Bahrāyn, and it was only 'Umar who prevented Abū Bakr from accepting the proposal. In view of the situation of Tamlīm at this period, this tradition does not seem trustworthy, but it may reflect 'Umar's attitude towards al-Aкраb (cf. Bayān, i, 253, and Uyūn al-Aṣhār (Cairo), i, 85). Sayf relates also that he took part in the battle of the ridūda alongside Khalid b. al-Walid, and was in the vanguard at the battles of Dūmat al-Djandal and al-Anbār. His name is last mentioned in 32/652-3, when he was sent by Abūnāf b. Kayy to subdue Djūzdān; he must have been a very old man at that time. Al-Baladhurī mentions that his descendants lived in Quraishān.
The behaviour of the scorpion when confronted by human beings, and the effect of its sting on different victims were noted; different species were identified; but above all, efforts were made to discover a remedy against its sting. The best method, apart from sucking the venom from the wound, was to cut the animal open and place it on the affected part. The scorpion played an important part also in Arab medicine; its ashes were an effective remedy against calculi; its roasted flesh would cure the eye complaint known as rih al-sabal. Scorpion oil (dhun al-abhari), prepared in various ways, was considered to possess particularly curative powers; it was used in the treatment of malignant sores, sciatica and pains in the back, orchitis, and falling hair. In addition, cases are quoted in which hemiplegia and fever were cured by a scorpion sting.

On the use of scorpions in war see al-Dakhli, Ḥayawanāt, v, 358; Elliot and Dowson, History of India, v, 550-1. In Arabic literature, the name “scorpion” occurs quite frequently, and always typifies treacherous hostility (Ḥamāsā, ed. Freytag, 195, verse 1; 156, verse 2; Ḥudaydān poems, no. 21, verse 24; Muḥaddithiyāt, ed. Thorbecke, no. 19, verse 12; Nābiqah, ed. Ahlwardt, no. 1, verse 4), or mockery (“Urwā, no. 15, verse 2), or calumny (“Urwā, no. 8, verse 6; Farazdak, Disan, no. 61, verse 3), and similarly in proverbs (Freytag, Proberba, no. 902). The three coldest days of winter (the new moons of November, December and January) were, on account of their “biting” cold, called “the three scorpions” (Calendrier de Cordoue, 10).

**Bibliography:** Dakhil, Ḥayawanāt, v, 353 ff. and the index; Damiri, i, 106 ff.; Kazwini (Wustenfeld), i, 439 ff.; Ibn Masawayh, al-Da’wa; Buluk 1391, iii, 1281; Dozy, Suppl., ii, 152-3; Hommel, Ursprung und Alter araber. **ʻAKRABA** is the name of two localities:
1. A place on the frontier of Yamāma, famous for the bloody battle in which Musaylima and the Banū Hanifa were defeated by Khālid. In its neighbourhood was a grove (ḥadība), surrounded by a wall and, before this battle, known by the name of “Rahmān’s garden”; later on it was called “garden of death”.

**Bibliography:** Tabari, i, 1937-1940; Baladhwur (de Goeje), 88; Yākūt, Maʾāsum li, 220; ii, 694-5. A place of residence of the Ghassānid princes in Dijālān; it is probably identical with the present ʻAkrābā in the province of Dijūrā.

**Bibliography:** Yākūt, iii, 695; Nöeldeke, in ZDMG, xxix, 430; cf. in ZDPV, xii, the map of the Dijāb al-Ḥawrān AB 3. (F. Buhl)

**ʻAKRĀBDHIN,** or ʻArabābdhin from Syriac grābdhān, reproducing Greek γράβδην, “small treatise”, was used by the Arabs as a title of treatises on the composition of drugs, or pharmacopoeias, while the simples which went into the composition were designed by the term al-adnayya al-muhrada [q.v.].

The practice of pharmacology. In the hospitals pharmacological instruction very early made an important part of the medical training. That the big hospitals had a pharmacist on the staff we can infer e.g. from the al-Šaydaḍa fi ʻl-Ṭibb of al-Bīrūnī. The rapid increase in the materia medica, not only of Greek but also of Iranian and Indian origin certainly called for a special body of men and for the separation of the pharmacopoeia from the medical profession. In ordinary outside practice the doctor may have prescribed and compounded his own mixtures (cf. C. Elgood, A medical history of Persia and the Eastern caliphate, Cambridge 1951, 272 f.). As a rule drugs were bought separately from the druggist [cf. al-ʻAttār] and then compounded. The muṣāḥasābīd had to give heed to the various ways in which drugs were adulterated (cf. Ibn al-ʻUkhwāw, Maṣāṣim al-Kitāb (Levy), ch. 25). The practice of preparing substitutes for certain simple drugs is attested by the philosopher al-Kindī who wrote a treatise containing recipes for the preparation of substitutes for rare drugs (Kīmisād al-ʻIr wa ʻl-Taṣāḍdā, (K. Garbers, Leipzig 1948).

**Pharmacological literature.** Galen’s De medicamentorum compositione saevandum locos at genera had been translated into Arabic, under the title Khād Tarkib al-Adnya, by Ḥubayr from the Syriac of Ḥunayn b. Ishāq (cf. G. Bergsträsser, Ḥunain ibn Ishāq über die syrischen und arabischen Galenübersetzung, Leipzig 1925, 231 f.). We are told that surgeons, before they could practise, were obliged to make themselves masters of this work (cf. Ibn al-ʿUṣaybiā, ch. 45).

The first pharmacopoeia to receive universal acceptance throughout the caliphate was written by the Christian physician Sāḥib b. Sahil (d. 255/869), of the staff of the hospital of Ḥunday Sāḥib. According to Ibn al-Naḍim (Fihrist, 297) it contained 22 chapters, according to Ibn Abī ʿUṣaybiā (ʻUyun al-Anbā, i, 161) 17 chapters. It was in common use until the publication of the Aḥrabābdhin of Amin al-Dawla Ḥibat Allāh b. Sa’d b. al-Tilmīḥ (d. 560/1165). Ibn al-Tilmīḥ was a court physician to the famous physician and philosopher Abū Bakr Muḥ. b. Zakariyā al-Rāzī (Brochelmann, i, 269). Of the pharmacopoeias written in the East, the Aḥrabābdhin of Badr al-Dīn Muḥammad b. Bahram al-Kalānīsīt, who wrote in the year 590/1194, is also worth mentioning. In this work, of which several manuscripts have come down to us, the author quoted the Ḥawrān and the Tibb al-Manṣūrī of al-Rāzī, the Kānān of Avicenna and other works (Ibn Abī ʻUṣaybiā, i, 31). Of the great medical compilation written by Naṣir al-Dīn Maḥmūd b. Iyās al-Sāhrāz (d. 730/1330), the 5th part, containing a treatise on compound drugs, was edited by F. F. Guigues (thesis, Paris 1902).

In Egypt the Jewish physician Muṣā b. al-ʻAzār (Moses b. Eleazar) wrote an Aḥrabābdhin for the Fatimid caliph Muṣāṣ (Ibn Abī ʻUṣaybiā, i, 86). In the hospitals of Egypt, Syria and ʻIrāq the al-Dustār al-Bārīsūrīs of Abu l-ʻAṣfāl b. Abī l-Bayān al-ʻIrāsīlī (publ. by P. Shath in BIE, 1933, 13-78) was in common use until it was replaced by the Minādāt al-Dakhdhān of Ibn al-ʻAttār al-ʻIrāsīlī which was published in Kairō in 669/1260 (Brochelmann, i, 648).

In Muslim Spain the study of the text of Dioscorides seems to have inspired an exclusive confidence in the simple drugs. We are informed by Ibn Abī ʻUṣaybiā (i, 49) that the famous physician Ibn
Wafid (d. after 460/1068) very seldom prescribed a compound drug. Like his contemporary Abd Allah b. 'Abd al-Fadl b. Bakr, who wrote an inventory of the plants and trees of al-Andalus (Ibn Abi 'Ubayd, ii, 52), Ibn Wafid seems to have been an enthusiastic adherent of the Dioscoridean tradition in medicine. This is true also of al-Ghafiki, the most important pharmacologist of Muslim Spain. In the Latin tradition the Graeboan of Mesue Junior (according to Leo Africanus this work was written by a certain Masaawayh al-Murindi, who died in Bagdad in 1015, and translated into Latin by a Sicilian Jew) was for centuries the recognized authority on pharmacy throughout Europe and became the basis of later official pharmacopoeias.

For the medical principles underlying the composition and administration of drugs see Tibb.

(A. Lewin)

'AKRABI (plural: 'Akrabi, a South Arabian tribe in the neighbourhood of Aden. Their territory, stretching on the coast line from Bi'r Ahmad to Ra's 'Imran, is very small (a few square miles only). It is crossed by the lower part of the river of Lahidi, which here is nearly always dry; as rain is also lacking, the soil is barren and yields but little fruit. The chief town is Bi'r Ahmad, with a few hundred inhabitants and the castle of the sultan. The 'Akrabi, according to the Rasulid al-Ashraf, Turfet al-Ashraf (Zettersten), 56, 57, belonged to the Kuda (text addt.), and to the expression of "determinative" (= the dlat al-ta*rif addt.), the idea of "syntactic function" (represented by the "particle") may be regarded as signifying also the "instrument of comparison" (= the dlat al-tashbih addt.), the "particle" ka) etc. The term dlat is only met with once. Towards the end of the 4th/9th century the term barf ("particle") may be regarded as signifying also the grammatical "instruments" later called dala and adal. This usage seems to imply a distinction between the idea of "casual action" (connected with barf) and the idea of "syntactic function" (represented by dala and adal), leading to the expression of "determinative", "finality", "comparison".

Bibliography: Ibn Fari, Sabil, 102; al-Tahhawi, Kashshafi Ithlibat al-Funun, ed. Sprenger, Calcutta 1862, art. adal and dala. (R. Bacheere)

ii. In the classification of sciences dala is the name of such attainments as are acquired not for their own sake (as an end in itself), but "as a means to something else", as e.g. philological sciences and law, as ancilliary studies of the religious sciences: al-ulum al-aliyya in contrast to al-ulum al-shar'iyya. Cf. the expression dala al-mundadama, i.e. knowledge and accomplishments which are useful in social intercourse. Consequently that what is called dala differs from what is called adal (q.v.) only in so far as the former takes into account the attainments in their relation to 'ilm; cf. also 'Ulum al-Akhbar (Brockelmann), i, 4. The appellation dala corresponds exactly to the expression dylqawal in the classification of the philological sciences by Tyrannion of Amisus;
ALA — AL-DAWLA AL-SIMNANI

Goldzihcr) iii. Logic is called dâla, following the peripatetic view according to which it is an instrument (bal-gawwâb), not a part, of philosophy (cf. Goldzihcr, in the bibliography of ii, above; S. van den Bergh, Acerroes Epsilone d. Melaphysis, 128; al-Birûnî, introd. to al-Šaydahâ (ed. M. Meyerhof, in Quellen u. Stud. z. Gesch. d. Naturw. u. Med.; 1932) and Mântîk). For other meanings of dâla see HYYAL, NAWBA.

ALA DÂGH (r.), 11 mountain of various colours), name of various mountains. (1) In N.W. Anatolia, near Bolu. (2) In the Taurus range. (3) In E. Anatolia, near the springs of the Murâd Şû, N. E. from Lake Wan; it served as summer headquarters for the Ulkhanids. (4) In N. E. Persia, S. of the Atrak. (5) In Central Asia, between Drunzaria and the basin of Lake Balkhash. (6) Between the Issik Kol and Alma Ata. (7) In Siberia (in Russian Kuznets Mountains), N. of the Altai Mountains. The local pronunciation for the last name is Alawa.

ALA SHEHIR, 11 the motley-coloured town", town in Anatolia at the foot of the Bo Dagh (ancient Taurus), near the town of Cog. In antiquity and in Byzantine times the town, called Philadelphia after its founder, Attalus II Philadelphus, played an important role (see Pauly-Wissowa, s.v.). It was taken, together with the other towns of Phrygia, by Sulayman b. Kutumûsh in 1075 or 1076, but was recaptured by the Byzantines in 1086 and served as an important base in their operations against the Seljukids. According to Ibn Hûd (11th century), this was the battle between the emperor Theodore Lascaris and the Seldjûkî Kay Khusraw I, in which the latter lost his life (607/1210), was fought near the town (here called for the first time Alâ Shehir), but this is not borne out by the Byzantine historians. The town was besieged by the Germiyan-oghlus Ya'rub b. Mâlik khalwa in 1303, but was relieved by the Germiyan-oghlus Ya'rub b. Abîd Allah, who was taught a particular form of remembrance of God 11dâhîb), viz. throwing the head swiftly hither and thither; this resulted after only one night in powerful manifestations of light. Simnani decided to join as a novice Nûr al-Din 'Abd al-Rahmân al-Kasîrî al-Isfârâînî, by whose command Sa'd Allah had visited him; so in Muharram 686/Sept. 1288 he succeeded in reaching Baghdad, where for the first time he met his shaykh, the well-known ascetic Wâlid b. Umar b. Muhammad b. Umar, in whose house he remained until 688/Sept. 1289. Simnani entered the khâlia and was carried to Shariyâz, where Arghun was founding the city of Sultaniyya (later completed by Uldjaytu). He succeeded, as a result of successful disputations with Buddhist monks 11bhâkshas), who played a great role at the court, in appeasing the Ilkhan's anger, so that he was asked to remain at court at least as a Şâfi. After staying, rather unwillingly, for eighty days, Simnânî escaped to Simnânî, where he reached in Ramaân 688/Oct. 1287. Arghun, having ascertained that he had not gone to Bagdad, let him alone. Sa'd Allah, who had in the meantime visited Bagdad, brought for Simnânî the 'âbâka of Kasîrî, in whose name he entered the khâlia in Simnânî, in Shawwâl 689/Nov.-Dec. 1288. After the dismissal of his father and the execution of his uncle (for the date see SIMNÂNI; 'Alâ al-Dawla's own statements vacillate), he succeeded in reaching Bagdad, where for the first time he met his shaykh Kasîrî personally (Ramaân 688/Sept. 1289). Simnânî entered the khâlia in the Masjid al-Khâlija and undertook, in obedience to an order by Kasîrî, the pilgrimage to Mecca and Medina. He returned to Bagdad in Muharram 689/Jan. 1289, entered the khâlia for the second time (in the Şûnîziyya), and finally returned to Simnânî, where he began to instruct Şûfis in the Kânîshkî Sakkâlâ. After a life of extensive educational and
literary activity he died in his monastery, Shi'iyyabād-i Khudādād, in Simnān, on 22 Ḍa'dib 736/6 March 1336.

Simnān was a Sunnite; he condemned the Shi'iite tendencies of UNgjayty and praised the amīr Cūbān, who did not share them. In spite, however, of his zealous advocacy of war against unbelievers, he rejected the idea of a revolt against Shi'iite oppression and advised, with Ḥasan al-Bayrāz, to show patience under oppression, though not to withhold exhortation or prayer for improvement. In the shī'a he appreciated the love of the Prophet's family, but deprecated their hatred of A'isha. He adapted the Shi'iite belief in the disappearance of the twelfth Imām to his doctrine of the abdāl, who according to him, was raised after his disappearance to the grade of dhikr. He accused Ibn Ḥanbal of idolizing a verb (i'ta'b), by his identification of Being (wujūd) and God; he himself considers Being as an attribute (siḥa) or accident, which, though it is eternally inherent in God, is distinct from His essence (dhāt). For this reason the last degree of the mystic is not khudā, but ukūdāhāyī. The only possible share of man in God is the grace of inner experience. He had a particularly refined feeling for the higher things. To become a mirror in this sense is the aim of manhood and mysticism. Simnān's doctrine was later elaborated by the Cīštī Ahmad-i Sirhindī ([q.v.]; d. 1035/1626) who opposed this renovated doctrine, ukūdāhāyī, to the wujūd-diyāya of Ibn 'Arabī.

Simnān shared his Khurābī strongly mediumistic nature and a preference and capability for visionary experience. He had a particularly refined feeling for spiritual vibrations in his environment; out of a deep sense of the living presence of Khādīr, he insisted on saying "the Lord" Khādir; and at places where he attempted to contact the spirits of the great dead (kawdādūn), he registered the slightest oscillations of experience. Like most of the Khurābīs, in mystical training he accepted the so-called "eight conditions of Dijunayid" (see Meier, Pana'īkh, index), about which we have different statements by him. In addition to the particular dhikr of Kasīrī (cf. above) he had another, viz. the recital of the formula lā ilāha illa'allāh, in four beats; the lā being drawn as it were from the navel, the lālā sunk into the right side of the breast, the illā raised from there, and the allāh thrust into the left side of the breast, the heart (cf. for the recital of this dhikr in two beats Nādir al-Dīn al-Dāyā, Marāšd al-Ṭabād, Teheran 1372/52, 151, and for another practice, 'Aṭīz-i Nasāfī, in WZKM, 1953, 156). Simnān also practised listening to music (samād) and fed in his monastery passing travellers. The greater part of his possessions he left as waḍj for the Shi'īs of his persuasion; he disagreed with the view that the Shi'ī must not have any material possessions, though he demanded that each individual should give away all he had. He denounced begging and in general insisted, in the interest of humanity, upon the most intensive cultivation of the soil, another feature which connects him with Kūbārī and his disciple, Sayf al-Dīn al-Bākhārī.

Simnān aspired to a great number of disciples, hoping that there would be amongst them at least one chosen one. His most important, and for a time most beloved, disciple seems to have been 'Allī Dūstī, who became teacher of 'Allī-i Hamadānī. Names of other disciples are to be found in Ikhbāl-i Sīständ's collections of Simnān's apopthegmata, and especially in Dīstī, Nahkāl al-Ḍunī, 510-24 and Ibn Ḥaḍār al-'Askālānī, al-Darūr al-Kūmīnā, 1, 251. Some of them bore the title of aṭā fundraiser.

There exists as yet no critical bibliography of Simnān and none of his works has been published. For the works in Persian, cf. the catalogues of MSS and for those in Arabic, Brockelmann, II, 263, S II, 281 (delete al-Ḥarīrī al-Shārīd etc. and Tāfīsī al-Sālīhīn). Maghrībī Anwāb al-Kūlūs, al-Urwa li-Ḥal al-Khulānī and Sāfīa'a al-Urwa belong together as different versions of the same work and can be exactly dated: the first 712/1312 (MS Shēbīd 'Allī 1378, not 1328), the second Rāmadān 720/Oct. 1320-23 Muḥarram 721/22 Febr. 1321, and the last Dijunayid II 728/April 1328-12 Dhu 'l-Hijja 728/ 24 Oct. 1328. Some of the surviving MSS are excellent; MS 'Ashīrī I 482 of the Urwa reproduces the autograph, Lālīl 1432 of the Sāfīa'a is dated Šīrāz 683/1283 and was thus written in the lifetime and perhaps under the eyes of the author). The book Fadī al-Shāfī'i (MS Fayd Allāh 2135, not 2133) should probably be called more correctly Fadī al-Tarīkā; it is once quoted by Simnān himself, in accordance with the sub-title of part i, as Tābīn al-Maḥbūl wā-Taswīr al-Dārāqūdī and dates from 712/1312-3. The treatise Mā lā būdū 'l-'Īdīn is in Persian and the treatise on Simnān's affilation, the only correspondence with Dīstī of the same name and is called not Tādākhār, but Ta'dhīb al-Maṣā byłīk. For great importance for Simnān's biography and mystical teaching is the collection of his sayings, made by his disciple Ikhbāl b. Sābīk-i Sīständ preserved in several MSS under the titles of Cīštī Maṭālīs, or Malāfīs-i Sāfīa'a 'Allā al-Dawla-yi Sīständ etc. On this is based the greater part of Dīstī, Nahkālī, 504-15.

'ALĀ' al-Dīn [see SHURIDS, MA'ĀRĪMĀH, SALĀTĪ].
'ALA\' AL-DIN BEG (commonly 'ALA\' AL-DIN PAŞA), son of 'Oğmân, the founder of the Ottoman state. His figure remains enigmatic, owing to the absence of reliable documents and the tendentious, and rather legendary, character of the early Ottoman chronicles—the same circumstances which are the cause of so many uncertainties in early Ottoman history. In some sources he is called Erden 'All (Ibn Taghribirdi and Ibn Hâdîyar say: "Erden 'All succeeded his father").

According to tradition 'Alâ\' al-Din for some time occupied the post of vizier and commander-in-chief; in effect, in a waâfiyya by him, dated 733/1333, he bears titles which befit a military position. H. Hüsâm al-Din has put forward the suggestion that in reality the two brothers were rivals for the throne and that this fact was purposely distorted in the historical tradition. (Ibn Taghribirdi and Ibn Hâdîyar say: "Erden 'All succeeded his father").

According to tradition 'Alâ\' al-Din died about 1333; the various accounts concerning the circumstances of his death in late authors (such as Nishandji and Bellgh) are not worthy of credit. His tomb is in 'Oğmân's mausoleum. (S. M. STERN)

'ALÂ'IYYA [see ALANYA].

The establishment of various Ottoman institutions is ascribed to 'Alâ\' al-Din: the choice of the coni- cap of white felt as official costume and the waâfiyya founded by him, dated 733/1333, he is mentioned in a waâfiyya by him, dated 733/1333, he bears titles which befit a military position. H. Hüsâm al-Din has put forward the suggestion that in reality the two brothers were rivals for the throne and that this fact was purposely distorted in the historical tradition. (Ibn Taghribirdi and Ibn Hâdîyar say: "Erden 'All succeeded his father").

The historians relate that after the death of 'Oğmân, 'Alâ\' al-Din (who is said to have stayed during his father's lifetime with Edebali in Bileğlik) refused the offer made by Orkhan to assume the direction of the affairs of the state and retired to his property situated in Krotà (or Kudra) in the district of Kete, between Brusa and Mihâkhâlî. 'Alâ\' al-Din is also credited to him by late historians. [Cf. 'Omar Bey vakfiyesi (724), 1941, 276 ff.]

According to tradition 'Alâ\' al-Din died about 1333; the various accounts concerning the circumstances of his death in late authors (such as Nîshânî and Belgh) are not worthy of credit. His tomb is in 'Oğmân's mausoleum in Brusa. Descendants of 'Alâ\' al-Din are mentioned in the latter half of the 15th century by Nîshânî and 'Ashk-pasha-zâde, in the 16th century in landcadasters, in connection with waâfiyya established by their ancestor. —'Alâ\' al-Din founded a tekhe in the Kükkûrtî quarter of Brusa and two mosques in the fortress of Kapûlîja.

Uzunçarşîlî, Gazi Oğuz Bey waâfiyya (1724), Bel., 276 ff.; IA, s.v. (by I. H. Uzunçarşîlî). (S. M. STERN)
CALAKA — CALAM 349
CALAKA (see NISBA). CALAM, plural ac/am (A), i. “signpost, flag”, used in the latter sense especially with the Arabic liwa?, rāya; the Persian band, dīrāfšā; and the Turkish bayrak = liwā', sandğā: see SANDJAQ, and compare the Latin signa.

It is known that when, before the advent of Islam, the Kuraysh waged war on another tribe, they received from the hands of Kusayy the liwā', a piece of white cloth which Kusayy himself had attached to a lance (Caussin de Perceval, Essai, i, 232-8). During Muhammad’s lifetime, flags were called indifferently liwā' or rāya, less commonly ‘alam. Tradition, however, says that the flag (‘alam) of the Prophet was called ‘ukdā. Other traditions contrast the rāya, the Prophet’s black flag, with his liwā', which was white (Kanz al-‘Ummd, iv, 18, no. 346: 45, no. 995). In another tradition the proposal is made to Muhammad that the faithful should be called to prayer by the raising of a rāya, but he will not consent to this method of summoning them (ibid., iv, 264, no. 5461). In yet other traditions, however, liwā' and rāya appear to be synonymous (ibid., v, 268, no. 5337: 269, no. 15338). The use of the rāya does not seem to have been confined exclusively to Muslims, since, at Badr, Ṭālḥa carried the rāya of the idolaters (ibid., 269, no. 1536). Later, flags played an important part in Islam. The Umayyads adopted white, the ‘Abbasids black, and the Shi‘ites green. Representations of flags occur frequently on various objects, especially in miniatures. One of the oldest representations is that shown on a Persian lustre-ware plate, which unquestionably dates from the 10th century (Survey, pl. 577). For other later drawings of flags, see Underkoweka, 568. Compère also the Moorish flag of the 14th century preserved in Toledo cathedral (Kühnel, Maurische Kunst, pl. 149). Banners and standards were also used in Egypt and Syria during the Mamlūk period (see Leo A. Mayer, Mamluk Costume, s.v. Banners; Mahrzul, Ḥašt, i, 23 ff.: Mārkūn al-bunud). There may at this period have been some differentiation in the use of the various words meaning “flag”.

In epigraphy, an inscription of Kābytāy balances the words sayf and alam with liwā' and alam, which seems to suggest that the first term denotes a military standard, the second a religious flag (see J. David-Weill, Catalogue général du Musée arabe du Caire, Bois d'épigraphes depuis l'époque mamlouke, iv, 193, note 11: Gauduroy-Denomybones, Ihm Fādī Allāh, Matālik al-ābyr fi mamālik al-ansār, XLVD-LVI and 26). Numerous flags with religious inscriptions are preserved in museums; they usually date from the 17th or 18th century and the majority derive from the countries of the Middle East and North Africa. (Cf., among others, a Turkish flag: C. J. Lamm, Mamlūk Mecīn Venetj, Malmö 1940; in Turkish Fana, Malmö 1940.) Some flags are still used in processions conducted by religious orders.

For Turkish standards see TUGH, SANDJAQ. For the emblem of the crescent see HILL, for that of the lion and the sun, aṣṣir u-khurūdī. For heraldic symbols, see ŞĀKH, TANGHA.

‘ALAMA — ‘ALAM 349
‘ALAMA, plural a‘lam (A), i. “signpost, flag”, used in the latter sense especially with the Arabic liwā', rāya; the Persian band, dīrāfšā; and the Turkish bayrak = liwā', sandğā: see SANDJAQ, and compare the Latin signa.

It is known that when, before the advent of Islam, the Kuraysh waged war on another tribe, they received from the hands of Kusayy the liwā', a piece of white cloth which Kusayy himself had attached to a lance (Caussin de Perceval, Essai, i, 232-8). During Muhammad’s lifetime, flags were called indifferently liwā’ or rāya, less commonly ‘alam. Tradition, however, says that the flag (‘alam) of the Prophet was called ‘ukdā. Other traditions contrast the rāya, the Prophet’s black flag, with his liwā‘, which was white (Kanz al-‘Umml, iv, 18, no. 346: 45, no. 995). In another tradition the proposal is made to Muhammad that the faithful should be called to prayer by the raising of a rāya, but he will not consent to this method of summoning them (ibid., iv, 264, no. 5461). In yet other traditions, however, liwā’ and rāya appear to be synonymous (ibid., v, 268, no. 5337: 269, no. 15338). One of the oldest representations is that shown on a Persian lustre-ware plate, which unquestionably dates from the 10th century (Survey, pl. 577). For other later drawings of flags, see Underkoweka, 568. Compère also the Moorish flag of the 14th century preserved in Toledo cathedral (Kühnel, Maurische Kunst, pl. 149). Banners and standards were also used in Egypt and Syria during the Mamlūk period (see Leo A. Mayer, Mamluk Costume, s.v. Banners; Mahrzul, Ḥašt, i, 23 ff.: Mārkūn al-bunud). There may at this period have been some differentiation in the use of the various words meaning “flag”.

In epigraphy, an inscription of Kābytāy balances the words sayf and alām with band and ālam, which seems to suggest that the first term denotes a military standard, the second a religious flag (see J. David-Weill, Catalogue général du Musée arabe du Caire, Bois d'épigraphes depuis l'époque mamlouke, iv, 193, note 11: Gauduroy-Denomybones, Ihm Fādī Allāh, Matālik al-ābyr fi mamālik al-ansār, XLVD-LVI and 26). Numerous flags with religious inscriptions are preserved in museums; they usually date from the 17th or 18th century and the majority derive from the countries of the Middle East and North Africa. (Cf., among others, a Turkish flag: C. J. Lamm, Mamlūk Mecīn Venetj, Malmö 1940; in Turkish Fana, Malmö 1940.) Some flags are still used in processions conducted by religious orders.

For Turkish standards see TUGH, SANDJAQ. For the emblem of the crescent see HILL, for that of the lion and the sun, aṣṣir u-khurūdī. For heraldic symbols, see ŞĀKH, TANGHA.

ii. Proper noun, see ISM.

‘ĀLAM (A., pl. ‘ālamān, ‘awulim), world. i. The word is found as early as the Kur‘ān, where in borrowed formulae we have references to the rabb al-‘ālam and the seven samawāt. Allāh is its lord and creator who has created it for man as a sign of his omnipotence. This transitory world (dunyā) is of little value—not worth the wing of a midge” is the traditional expression—in comparison with the next (akhirā). We are told very little about the structure of the world (cf. the article MĀJlis); the subjects of interest, in the Kur‘ān as well as in Tradition, are God, the spiritual world and man.

This became altered as Islam took over the inheritance of Hellenistic eclecticism and especially through the translation of Indian and Greek works on science and philosophy. The huge figures with which the Hindus operated were, it is true, ridiculed, nor were the fables of the ancient Greeks about an endless plurality of worlds beside or in succession to one another, believed nor, from the theological point of view at least, was the belief in the eternity of the world accepted; on the one whole however, the picture of the world as given by Greek science was accepted. The teaching of Plato and Aristotle that there is only one universe was naturally easy to reconcile with the monotheism of Islam; cf. Kur‘ān, xxi, 22: “If there were in these two worlds gods in addition to Allāh, both (heaven and earth) would perish”.

On the scientific development of the cosmogonic teaching of Aristotle and Ptolemy in Islam, see the articles NDJUM (Astronomy and Astrology) and the article Sun, Moon and Stars in Hastings, Encycl., of Rel. and Ethics (by C. A. Nallino). Here we must confine ourselves to the speculations of the theologians and philosophers regarding the origin and nature of the world in relation to the existence of God and man. They are mainly based on Plato’s Timaeus or Aristotle’s Πείξ οὐράνιος and Book Α of his Metaphysics and also on the commentaries of Simplicius and Johannes Philoponus. Of the greatest importance for the Islamic elaboration of the Greek philosophy we have the neo-Platonic ‘Theology of Aristotle’ and to some extent the tradition of Christian dogmatics. In reference to Aristotle’s work Πείξ οὐράνιος (“On the Universe”), it should be noted that according to Hellenistic tradition the title of the Arabic tradition is fi ‘l-Samā’ wa ‘l-‘Ālam (“On Heaven and the World”). August Müller (Die griechischen Philosophen in der arabischen Überlieferung, Halle 1873, 51) therefore suggested that the Arab translators of the Aristotelian work had added to it the Πείξ κόσμου which is three hundred years later and influenced by the Stoics. But so far no translation of this work ascribed to Aristotle has been found.

All Muslim thinkers asserted that God is the author of the world although they used different expressions for the coming into existence of the world in distinction to the existence of God: creation (fayd) or manifestation (fadhālī). The image most used, whether emanation or manifestation was talked of, was that of light (mūr) which disseminates itself timelessly.

In general the theologian who adhered to tradition said that the reason for the world was the all-powerful will of God. Mut‘azzil thinkers
laid more emphasis on the benevolent wisdom of the Creator, who orders everything well for the good of his servants. Mystics talked a great deal about the overflow of divine love; finally the philosophers in the narrower sense, as well as a few speculative theologians, regarded the world as the product of pure thought, in itself accidental, but necessary on God's part.

The world forms a whole, a unity in plurality. Even the atomist theologians, who denied any interconnection in nature, were of the opinion that no part of the world but only the whole could be destroyed at once by an act or an omission of God.

The world is a plurality. The traditional distinctions between heaven and earth or between this world and the next continued. But Hellenistic mediatorial theories complicated this originally simple universe. From Plato came the division between the visible world of beings (κόσμος ζωτικός) and the spiritual intelligible world (κόσμος νοητός). Aristotle rather emphasised the distinction between our earthly world of origin and decline (ʾālam al-kawn waʿl-faṣād) and the world of the heavenly spheres. The world of heaven controlled by exalted spirits or souls, consisting of one element entirely, the ether, and provided from eternity with the most beautiful motion revolving in a circle, is far more perfect than the earthly world with its four elementary circles and motions of various kinds. Then came the Stoics who brought God and the world together and worked out a theodicy. Finally came the Neo-Pythagoreans and Neo-Platonists, who took over a great deal from Aristotle and the Stoics, but with Plato, and much more decidedly than he, transferred the central point into the world of God and of pure spiritual existence.

This is the starting point of the cosmological speculations of the Muslim thinkers just as it was for the Gnosis and the doctrine of the Eastern Christian church. Since God is the highest being and everything in the most exalted sense, so also is He the first world. The mystics in Islam (cf. al-Dhūlī, al-Insān al-Kāmil, ch. 1 ff. and Horton, Das philosophische System von Schirāzī, Strassburg 1913, 36, 276 ff.) in so far as they were influenced by Christian dogmatics, ultimately talked of five worlds: 1. the world of the divine being; 2. of his names; 3. of his qualities; 4. of his actions; 5. of his works. Others established mediation between God and the world by triads and tetrads. Emphasis on three qualities of God was very common: power, knowledge, and life (in speculation these were no doubt interpreted as the power of the Creator, the knowledge of the ʿābī and the life of the soul). God's spheres of activity in the world were determined according to his qualities. When for example al-Ghazzāl, speaks of three worlds (ʿālam al-mulḥ, ʿālam al-malahūtī, al-djābarūt), this looks like a triad for the spheres of the Creator's power (for Ghazzālī's immediate sources see Wensinck (Bibli.)).

To distinguish three or four worlds the philosophers as a rule used the neo-Platonic terminology from the "Theology of Aristotle": the world of the mind (ʿābī), of the soul (nafs) and of nature (nabīfa). The soul of man is there the centre of interest which, although associated with a mortal body, remains, in so far as it is intelligent, always associated with the highest world, its origin and the goal of its longing, through the mediation of the world soul and the world intelligence. From the point of view of this soul, only two worlds are as a rule mentioned: the physical and the spiritual, the lower and the upper world. If it is desired to define more closely the sphere ruled by the soul it is called the world of the heavenly spheres and its site (awḥid) is transferred to the sphere of the fixed stars. The world of pure intellectual being has a superheavenly site (al-awḥid al-aṣlī) and nature has its special sphere of operation in the sub-lunary world.

It is not possible here to go into the modifications of this cosmogony in the different philosophers. The main object in all cases is to indicate the different stages of being and parallel with them the stages of cognition. The world is a man on a large scale and man a little world. Now man is made up of a natural body, a conceiving soul and a pure intelligence. The sub-lunary world is therefore also called the world of sensual perception (gahāda, biss); the world of the heavenly spheres that of allegorical conception (waḥm, takhsaywu), if we assume, e.g. with Ibn Sina that the souls of the spheres possess a power of imagining (Ibn Rushd denies this); and the super-heavenly world that of pure thought or of intellectual observation (ʿābī, nasār etc.).

Of the great deal that could still be said let us only emphasise one thing in conclusion, that is the optimism of the mystics, who took over a great deal from Aristotle and the Stoics, but with Plato, and much more decidedly than he, transferred the central point into the world of God and of pure spiritual existence.
the diabarut (Aramaic terms); and, transcending them both, the world of the lāhūt (Kur'ānic terms); and, transcending them both, the world of the Idhūt.

Ldhūt (antonym of mdsūt, “humanity”): the incomunicable world of the divine essence—a world occurring frequently in Hallājīan terminology. In general: the world of absolute divine transcendence, and therefore absolutely superior to all other “spheres of existence”. For some supporters of Munit tendencies, mālākūt and ḍabārūt are, as it were, assumed by lāhūt; this is then the ʿdam al-ghayb, the world of Mystery (uncreated).

ʿAlam al-mulk, a term of Kur'ānic origin, “the world of kingship” (synonyms: ʿdam al-khalq, ʿdam al-ghādīhā, the latter expression being frequently used by al-Ghazzālī): it is the world of becoming, the world here below.

ʿAlam al-malakūt, similarly of Kur'ānic origin, (cf. Kur'ān, vi, 75; vī, 185; xxiii, 88; xxvi, 93): “the world of Kingdom, of Sovereignty”, of which the ʿdam al-mulk is the contingent reflection. It is the world of immutable spiritual truths (ḥabībīk), and hence of the angelic beings, to which are added the cutūs of Islamic tradition, the Preserved Table, the Pen, and the Scales (see al-wād‘ wa-l-wā‘īn), and often also the Kur'ān. The spiritual reality (rūḥ) which is in man belongs to it. So too do the separated intellects, and hence of the angels which partake of them. Al-Dūrjānī (Ta‘rīfū, 246) includes the nūsūs (souls) which are sometimes assigned to the ʿdam al-ḡabarūt. Common synonyms: ʿadam al-ghayb, ʿadam al-amr. This “world of Sovereignty” recalls the “City of the Angels” of Gregory of Nyssa.

ʿAlam al-ḡabarūt, a term originating in Tradition, occurring in various ḥadīth (see A. J. Wensinck, La pensée de G Cached, 83 n. 3) “the world of divine Omnipotence”. In general, the place of barzakh, an “intermediate” world (some texts, however, are inclined to put this last near to the malakūt). To it belong, according to al-Ghazzālī, the impressive and imaginative faculties of the human soul. Sometimes, however, as is pointed out by al-Dūrjānī, following Abū Ṭālib al-Makki (Ta‘rīfū, 77), ḍabarūt is the world of the divine Names and Attributes. Al-Rāshī assigns to it ḥād (decree of divine predestination); the Preserved Table has also been assigned to it.

The mutual inter-relation of these various “worlds”.

(1) The ʿalam al-mithāl can coincide either with the malakūt, or with the ḍabarūt, or with both together. It is in fact stated (al-Ghazzālī) that the world of sensual perception is the reflection, the image, the copy of the ʿalam al-malakūt: cf. the “shadows” of the cave of Plato. In so far as the ʿalam al-mithāl denotes the idea of archetypical images, it also recalls the ḍabarūt and the barzakh. To sum up: malakūt is the world of pure self-existent intelligibilia; ḍabarūt, the world of the archetypical images and symbols of the contingent world, evoking the idea of “transcendental imagination”, in Heidegger’s acceptance. According to the Avicennan cosmogony, the active intellects belong to malakūt, the celestial souls to ḍabarūt.

(2) Whether this hierarchy of “worlds” is considered as real or as a privileged myth, the ṣāliṣa, al-Ghazzālī, and the ṣāriḥiyūn teach, from the standpoint peculiar to each school, how man can elevate himself from the ʿalam al-mulk to the two superior worlds. This is the ḥājī (unveiling) or mukhājīfa. Al-Ghazzālī (Iḥyā‘, iii, 17-19) tells us that the heart (kabī) has “two doors”, the one open towards the world of the malakūt, the other towards the world of the mulk or ẓahāhā. Further, referring to the relationship of the macrocosm-microcosm, the same author sees in man—body, psychic faculties, and spirit—a reflection of the three worlds—mulk, ḍabarūt and malakūt. It can happen, however, that the relationship between the two worlds is reversed. The following summary classification can be made: the world of amr is opposed to the (perceivable) world of ḍabarūt, and the amr combines ḍabarūt, malakūt, and mithāl.

(3) Some ambiguity exists regarding the mutual relation between malakūt and ḍabarūt: (a) the thesis of al-Ghazzālī (cf. above): malakūt, the world of intelligible realities to which belong the Angels, “light-substances” (cf. the Ghazzālīan text of the Miṣkīt al-Annā‘): is practically synonymous with ʿdam al-amr, the world of Command, of the divine Logos uncreated. The ḍabarūt becomes therefore a refraction of the light emanating from this higher world into an intermediate world of archetypal images, and is thence accessible to the insight of a prophet or a gnostic (ʿṣrīf), who borrows from it symbols for the instruction of the people. In the Iḥyā‘, al-Ghazzālī compares the journey through the ʿdam al-mulk to the progress of man on earth; that through the ʿdam al-ḡabarūt to a voyage on a ship; that through the ʿdam al-malakūt to the progress of a man with the desire to cross the barzakh which separates him from the waters. Clearly, therefore, the ḍabarūt is the “intermediate” world, “in contact with both the others”. It “can be manifested in the visible world, although the eternal Power has linked it to the world of the malakūt”, says al-Ghazzālī in the Imlā‘. The superioriety of the malakūt is also affirmed by Ibn ʿAtā‘ Allāh of Alexandria, etc. (b) In other texts, particularly, it seems, those representing the Sufi line of thought of the ḍabarūt and the mulk, the ʿdam al-mithāl is held to be the “City of the Angels” of Gregory of Nyssa. Thus in the Turkish dictionary Ma‘rifet-name (cf. Carra de Vaux, in Bīb.) the following hierarchy in descending order is given: (1) ʿsrā‘ (divine Throne or Tabernacle), (2) ḍabarūt, (3) ʿursī (divine Seat), (4) malakūt, (5) human worlds, including Paradise. The (according to W. Montgomery-Watt, apocopral) Ghazzālīan text al-Durrā al-Fākhira states: the race of Adam, and the animals, belong to the world of the mulk; the angels and the djinn to the world of the malakūt; the “elect among the angels” to the world of the ḍabarūt (cf. Wensinck, op. cit., 99). Or again: the Kur’ān (uncreated), the substantial Word of God, “exists personally” in the ḍabarūt, while ʿalam (salāt, sawm, sabr) belongs to the malakūt.

Al-Suhrawardī, “master of the ḥājīk”, brings together in the same passage (Bīḥmat al-İshrāk, ed. Corbin, 156-7) the “light which permeates the world of the ḍabarūt and the entities of the malakūt”. Other passages from the same work sometimes treat of the ḍabarūt, sometimes of the “victorials” of the malakūt, both worlds being the hierarchized places of archangelic or intelligible irradiations (ıshrābkī).

The mutual inter-relation between the suprasensory worlds can thus vary. Each case where the words are mentioned must be considered in its context, while the indications derived from the etymology can serve as a orientation.

AL-ALAM — AL-SHAMATARI [see AL-SHAN- 
TAMARI].

'ALÂMA, mark of ratification or initialling used in the Muslim west, from the time of the Mu'innid dynasty, on all official chancery documents. This 'alâma, in principle inscribed by the sovereign's own hand in the space provided for the purpose at the head of the document, beneath the basmâla, consisted of a doxology, which varied under the different dynasties:

- 'alâma al-bându 'l-ilâhâ, under the Mu'innids and Sa'dids;
- 'alâma al-bându 'l-ilâhâ wa 'l-fâhru 'l-ilâhâ, under the Hâfids; and
- 'alâma al-bându 'l-ilâhâ wa 'l-Nâşrî 'l-ilâhâ under the Nasrids of Granada.

This 'alâma was gradually replaced by illegible arabesque initials, and supplanted, in modern times, by the seal in indelible ink.

At the beginning of the 9th/10th century, the chronicler Abu 'l-Walid b. al-Ahmar devoted a short treatise, Mustawafa' al-'Alâma, to the formula of ratification (cf. Hespéris, 1934, 200).

(E. Lévi-ProvençAL)

ALAMAK [see NUDJUM].

ALAMIC [see AWANGZA].

AL-'ALAMI, the name of an old Jerusalem family, the nishâb being to one al-'Alam al-Dîn Sulaymân (d. 790/1388). The family traces its descent to Ibn Maqâsh and may have been one of the many Maqâsh families which immigrated to Jerusalem in the 14th century, though Muqâr al-Dîn hints (ii, 616) that it was of Turcoman origin. Two sons of al-'Alam al-Dîn: Masûd (d. 802/1399) and Umâr (d. 806/ 
1403), succeeded one another as governors of the city (nâsir 'al-salâma), and keepers of the sacred places of Jerusalem and Hebron (nâsir 'al-haramayn), and at least three other members of the family became chiefs of police (amir hâdîsh) before this post was merged into the governorship by al-Asfâr of Nablûs, 857/1453. Muhammad al-'Alâmi (d. Jerusalem, 1038/1628), the grandson of the latter, was one of the more famous Sufi saints of his day in Syria. He conceived the plan of building a mosque near the site of the Place of Ascension on the Mt. of Olives, which the Christians of Jerusalem at first thwarted by appealing to Const}

stantineople. But Shaykh Muhammad enlisted the support of Shaykh As'ad b. Hasan, the mujtâhids of Constantinople (al-Mu'âbbid, i, 396), after whom the building, when completed, in 1035/1621 was called al-As'âdiyya, and where Muhammad was later buried. Muhammad's teaching was carried on by his nephew Shâhî (d. 1055/1645), who also became the grand imam of the mosque of Constantine. Early in the present century the Alâmis re-entered administrative life with Fâyûd Allah (who was also the author of the Concordance of the Qur'an, Fath al-Rahmân, Cairo 1927, 1955) and his son, Mûsâ (still alive).

(W. A. S. Khalidi)

AL-ÂLÂMI, Muhammad b. al-Tayyib, Moroc-
can poet and man of letters belonging to the branch of the Shurarâ' 'Alamiyyûn (or descendants of the Moroccan saint 'Abd al-Salâm b. Maqâsh [q.v.], who is buried among the 'Jâlibâ), in Djabal al-'Alâm, north Morocco). Born and educated at Fâs, he lived for a while at Mêkinâ, at the court of Mawlay Isma'il, and died at Cairo, on his way to Arabi to perform the pilgrimage, in 1134 or 1135/ 
1721-23. He has left a work, which is at once an anthology of poetry and a compilation on certain technical subjects, in which there is much information on Moroccan literary life at the beginning of the 12th/18th century; this work, entitled al-Nizâ al-Murîf fi-man lakîtuhu min Udâhû al-Maghrib, was lithographed at Fâs in 1315 A. H.

ALÂMÎT. (i) The fortress; (ii) the dynasty and state.

(i) THE FORTRESS.

The ruins of the fortress of Alâmit are situated on the summit of a lofty and almost inaccessible rock in the heart of the Alburz mountains, at the foot of the Caspian, Journal of the Royal Geographical Society, iii; J. Shiel, Itinerary from Teheran to Alâmit and Khurram Abad in May, 1837, ibid., viii; L. Lockhart, Hasan-i Sabbâh and the Assassins, BOSOS, v, 675-96; W. Ivanow (who is doubtful
regarding the identification of Alamūt), Some Ismi'ālī Strongholds in Persia, IC, xii, 382-92; F. Stark, The Valleys of the Assassins, London 1934.

(ii) THE DYNASTY.

Alamūt was the center of a Shi`īte state between 483/1090 and 653/1255 with territories scattered unevenly from Syria to eastern Iran, ruled by the head of the Niẓārī Ismai'īlī [q.v.] sect, sometimes called the Assassins.

The state grew out of an attempt by the Ismai'īlls of Iran to break the power of the Sunnite Saldūqs on behalf of the Fātimid rulers of Egypt. Their revolt began in the last years of Malikshāh's reign, spreading especially during the troubled time of Burqiyūrūq; Ismai'īlls seized strongholds in Kūhīstān, Kūmīs, Fārs, al-Dālāl, Erām, and Syria, and elsewhere, and Ismai'īll troops intervened in the civil war. Among the leaders the most important were the learned 'Abd al-Malik b. 'Aṭṭāṣh, dā'ī (chief propagandist) of Iṣfahān, his son Ahmad b. 'Aṭṭāṣh, who seized Shāhādīz near Iṣfahān in 494/1100, and Ḥasan-i Shābabā at Alamūt. He controlled an Ismai'īll strongholds in Kūhīstān and around Alamūt, of which the fortress of Girdkhū near Dāmghān in Kūmīs, and of numerous towns in Kūhīstān south of Khurāsān. In addition, he was the leader of most of the Ismai'īlls under Saldūq control in Iran and the Fertile Crescent and even a few partisans of Niẓār in Egypt. With a later small addition in Syria, the territory of the state remained substantially the same till its end, while the importance of Ismai'īll adherents in the surrounding lands seems to have declined rapidly.

The history of the state was dominated by a sustained hostility between the Ismai'īlls and the surrounding Sunnite and even Shi`īte populations; a hostility expressed on the one side in repeated massacres of all suspected Ismai'īlls in a town and on the other side in assassinations of their most active enemies, such as Niẓār al-Mulk [q.v.]. Assassination was not in itself unusual at that time, but its systematic use by the Ismai'īlls produced a special terror. Especially in the earlier years, Ismai'īlls owing allegiance to the sect leadership at Alamūt lived interspersed among the people, keeping their unpopular faith secret with Shi`īte tabiyya. Those detailed to get rid of some persecuting kādī or amir sometimes stalked their victim with signal devotion, finally killing him spectacularly in public. Any public murder therefore was likely to be an act of Ismai'īlls; hence a nickname of theirs, al-Hāshibhīyya, has come to mean the word assassins in Western languages. (There is no evidence that the use of the drug ḥabbāsh entered in any way into the assassinations.) Eventually, at least, assassination as a weapon became institutionalized, assassins being kept in readiness at hostile courts and their services perhaps even hired out to friendly rulers. Substitution and war almost never ceased between the Ismai'īll state and the surrounding peoples; raiding Ismai'īll villages and slaughtering their inhabitants was considered a pious act among the Sunnites, while the Ismai'īlls in their isolated districts maintained a united front against outsiders until the end.

Ḥasan-i Shābabā died in 518/1124, leaving the leadership to one of his generals, Buzurg-um-mūd, as dā'ī of Daylamān. Buzurg-um-mūd's son Muḥammād succeeded him in 552/1158. During these two reigns defense against Saldūq rulers, especially Sanjīr and Maḥmūd, alternated with local raids against mountain rivals or nearby towns like ʿAskān. Of symbolic importance were the assassinations of two Ḥābbāsīd caliphs, al-Mustansīr and al-Rāshīd. Meanwhile, after playing a calamitous role in the politics of Aleppo and Damascus, the Syrian Ismai'īlls finally acquired for the state the fortresses of a part of Djabal Bahrā, north of the Lebanon.

Muḥammād's son, Ḥasan II, who succeeded in 557/1162, declared himself in 559/1164 no longer simply dā'ī but bāhīla, plenipotentiary of the long-hidden ṣan`am; and probably hinted that he was himself that ṣan`am. Proclaiming the Day of Resurrection, the spiritual consummation of the world, he abolished the Shi`īte qarṣa law as inconsistent with the mystical life in Paradise to which Ismai'īlls were hitherto called; thus consecrating irrevocably the breach with the Muslim community at large. Some objected to the new order, and in 561/1166 Ḥasan was murdered; but his young son Muḥammād II took firm control and carried through his father's policy. Henceforward the ruler of Alamarin was regarded as an Ḥālid ṣan`am, lineal descendant of Niẓār. But external relations remained much as before; Muḥammād had a long and relatively peaceful reign, troubled toward its end by the enmity of the Ḥūraʿrāmāsh. During his reign Syrian Ismai'īllism was dominated by the able Rāshīd al-Dīn Sinān [q.v.], who acted with apparent independence of Alamūt in his quarrells and rapprochements with Aleppo and Salādin, with the Crusaders, and with the Nusayrī mountain-people about him. But after his death in 589/1193 the authority of Alamūt was unquestioned.

The son of Muḥammād II, Ḥasan III, succeeded in 607/1210 and declared himself a Sunnite Muslim, ordering all his followers to accept the Sunnite qarṣa, and aligning himself with, among others, the caliph al-Nāṣir. The Ismai'īlls accepted his decrees outwardly; he made minor conquests in alliance with Uzbag of Ṭāhār-bāyādīān. But when he died in 618/1221 (perhaps by poison) his young son who succeeded, Muḥammād III, was not brought up a Sunnite; and though officially Ḥasan's decrees probably stood, in fact the qarṣa was dropped and the state resumed its political isolation.

Nevertheless, a broad Islamic outlook was maintained. Naṣīr al-Dīn Tūsī [q.v.] and other scholars were attracted to its fortresses; and ambitious quarrells were carried on with Djalal al-Dīn Mangūbir [q.v.] and then with the Mongols; allies were sought even in western Europe. But the Sunnites' ingrained hatred finally prevailed. The Mongol Hūlāgū's first objective in Iran was to destroy the Ismai'īll state. Muḥammād had developed a degenerate character and his refusal to negotiate frightened his generals, who were evidently hoping to circumvent him when a courtier murdered him, in 653/1255.
After ambivalent negotiations and the fall of many fortresses, his son Khwurshah surrendered unconditionally in 654/1256. He was soon killed, and the Isma'iliyya of Daylamān, Kūmīn, and Kuhistān were massacred; the survivors never succeeded in reestablishing the state. The Syrian fortresses survived the Mongols only to be taken by Baybars of Egypt, who however left them as an autonomous community, furnishing assassins to their new overlords.

M. G. S. Hodgson

ALĀN (in Arabic usually taken as al-Lan), a Persian term (Aṣlan < Aryan) of Northern Caucasus, formerly attested also east of the Caspian sea (see al-Birūnī, Taḥfīḍh al-ʿAḍāmīn, ed. A. Z. Validi, in Birūnī’s Picture of the world, 57), as supported by local toponymy. The Alans are mentioned in history from the first century A.D. In 371 they were defeated by the Huns. Together with the Vandals, a part of the Alans migrated to the West across France and Spain, and finally took part in the creation of the Vandal kingdom in North Africa (428-534). On conquering this kingdom Justinian assumed the title of king of “Vandals and Alans”. The Alans remaining north of the Caucasus became neighbours consecutively of the Bulgars, the Turks and the Khaizar, who pushed them out of the plains towards the mountains. In 1197/98 Marwān b. Mūhammad ‘entered the Khaizar country from the direction of Bah al-Lan (Darial)’ (see al-Baladhurī, p. 207 [Ibn al-ṭabar, v, 160]).

The Alans were the ancestors of the present-day Ossets whose name (in Georgian: Ows-et-c; in Russian: Ovsyetski) is derived from a sandjak, a small administrative district in medieval European sources). From 692/ 1293 ʿAḥlāyya belonged to the princely residence of Karaman; Ibn Bāṭūṭah (ii, 257 f.) found there in ca. 1333 Yusuf Beg as prince of the Karaman. According to al-Maqrīzī (al-Sūdākī, s.a.) the town was sold by the Karaman to the Mamlūk sultan Barsbey in 830/1427; but according to the Ottoman chronicles the town was, later in the 15th century, in the possession of a descendant of the Saljuq dynasty. In 876/1471-2 the town was captured by Gedik Ahmed Paşa, Mehmed II’s general (Nesfrī, Taeschner, i, 205 f.). From then on ʿAḥlāyya remained in Ottoman hands and was the capital of a levān (sandjak) in the eyālet of İdel (Kütb ğeçebi, Dīhān-/name, 611).

The old town of ʿAḥlāyya was situated on the mountain, which slopes steeply to the W. and S., but descends more gradually to the E and N. To the north it is connected with the mainland only by a narrow neck of land, and thus forms together with the latter two bays, of which, however, only the eastern one served, and serves still, as a harbour. The old town on the mountain is surrounded by a wall which starts from a strong octagonal tower in the Alpine range. The Alan capital M.gh.s mentioned in the Murādī, ii, 42, should be read *Magas and explained in Arabic as *diyāma, “a fly” (not diyāma as in the Paris edition).

The Alans (or ʿĀs) are frequently mentioned at the time of the Mongol invasion when they were Greek Christians. Their settlements in the 13th century extended towards Darband and the estuary of the Volga. The Alans had close relations with the Byzantines, the Georgians and the Russians (the latter called them Yash). The Mongol conquest led to a further dispersion of the Alans, whose military contingents and settlers are known even in China. The Persian sources know the ʿĀs as Christians at the court of the Mongol sovereigns, but according to Ibn Bāṭūṭah (Defrémyer), ii, 448, the ʿĀs in Sarāy on the Volga were Muslims.

W. Barthold-V. Minorsky
the NE side of the peninsula on the eastern shore, made of red sand-stone (hence the name Klzil Kule) and dated 623/1226, and ascends up to the summit of the mountain at the southern end of the peninsula. The area so enclosed is further divided by two transverse walls, of which the upper, southern one encloses, together with the outer wall, the citadel (i.e. Kal'e) lying at the summit, the other the outer fortress (Dish Kal'e). In Turkish times, the citadel served as barracks for the garrison; it is uninhabited today, but contains the ruins of a Byzantine church. The outer fortress was the residential area of the old town; it contains a küban (caravanserai; not, it seems, a bedestân, as is often stated) of the early Ottoman period, an old, though in its present state only Ottoman, mosque (Kal'e Džami) and the türbe (from 628/1230) of a certain Akšihebe Sǜlān. The mosque called after 'Alá' al-Din, situated outside the outer fortress, does not seem to be very old. On the shore there is an arsenal (gerdane) built, according to its inscription, by 'Alá' al-Din Kaykubâd I; it consists of five large barrel-vaults with five arched openings in each partition-wall, the only building of its kind as yet known from the Saljûq period.

The old town is at present but sparsely populated; a new town arose at the foot of the mountain on the isthmus and on the mainland. It contains no monu-
ments worthy of mention. Not far to the east of 'Alá'yia in the coastal plain on a rivulet, is to be found the ruin of a small, köşk-like building of the Saljûq period, mainly consisting of a barrel-vault in the middle of an area surrounded by a wall. It was probably the country-house of a Saljûq nobleman with a garden. On the line of the wall lies the ruin of a small Christian church.

ALARCOS [see AL-ARAQ].

ALAVY [see ALABA WA 'L-KILA].

'ALAWI ('Alluwî < Ahi 'All, according to V. Maltzan Reisse, 356), tribe and district on the caravangroute 'Adan-Kaţaba-Şanâ', the smallest among the "nine cantons" of the Western Aden Protectorate. It lies between 'Amîr (N) and Hawshâbî (S) territory and formerly belonged to the Āmîr (v. Maltzan, loc. cit.), but later it became semi-independent and signed a treaty with the British in 1895. Population: 1000-1500. The shaykh lives at al-Sawda, which is the only place of some importance, with a landing ground for aircraft.

'ALAWIS ('Alawîyya), the reigning dynasty in Morocco.

Morocco at the advent of the 'Alawid dynasty. When the 'Alawid Sharif [see SHARIF] succeeded in asserting their sovereignty over Morocco, the country was rent by a serious political, social and religious crisis. The great movement of maraboutism and xenophobia for which the growth of Şâfism and Şarîfism and the development of the religious brotherhoods had for long paved the way, and which had manifested itself as early as the 15th century, the period of incursions by Portuguese and Spanish Christians on the coasts of Morocco, assumed a new form. While the two Sa'did mahâqans established at Fez and Marrâkûsh crumbled into ruin, strong provincial factions, based on a religious allegiance, divided up the country and warred amongst themselves. The marabouts of al-Dilâ' [q.v.], supported by the Berber population of the Middle and Central Atlas, some of whom began to move down into the Atlantic plains, seemed to be the point of establishing a Şinâdja dominance in Morocco. Morocco needed rehabilitation, organisa-
tion, and also pacification, because anarchy and brigandage continued to spread. The 'Alawids, if they were not faced with the task of overcoming the preceding dynasty, had to meet difficult problems on every side.

The establishment of the dynasty. The 'Alawids, of Hasanid descent, had come from Arabia to Tâflâlit at the end of the 13th century. For a long time they played no part in politics. But, in the anarchy which marked the decline of the Sa'did dynasty, the inhabitants of Tâflâlit, threatened simultaneously by Abu 'l-Hasan al-Sâmîlâl and by the marabouts of al-Dilâ', adopted as their leader Mâwliy al-Shârîf. His son Mâwliy Mâhâmmad (sic), who succeeded him during his lifetime in 1045/1635-6, strove for a period of twenty years to organise a small principality in eastern Morocco, but left no permanent structure. Mâhâmmad's brother, Mâwliy al-Râghîd [q.v.], took up his task with greater foresight and determination. The moment was favourable; the country was tired of anarchy and the great marabout organisations were beginning to decline. It was in order to escape from his brother, after Mâwliy Mâhâmmad that Mâwliy al-Râghîd, after the death of their father, al-Shârîf, in 1069/1659, sought his fortune in Morocco. He had managed to collect a small force and, after obtaining funds by killing a rich Jew, Ibn Mâsh'al, he succeeded in establishing himself in eastern Morocco with the aid of the Ma'kil Arabs and the Ayt Inassen Berbers. Gradually he extended his kingdom, and made Tâza his provisional capital. In 1096/1686 he seized Fez; from then on he assumed the role of sultan and applied himself to the subjugation of the marabout powers which shared the Atlantic seaboard of Morocco. First he conquered northern Morocco, and then he defeated the Dilâ'îtes and took possession of their adwîya. In 1079/1669 he entered Marrâkûsh, and occupied Sûs and the Anti-Atlas. But he died at Marrâkûsh in 1082/1672 without having con-
solidated his achievements.

Thus the Filâlî Sharifs had achieved power as a result of a personal venture which for long was situated half-way between banditry and war, and which reached its climax with the conquest of the Morocco of the plains and oases. With a few Arab tribes forming his only genuine support, Mâwliy al-Râghîd, thanks to the weak state of the country and the decline of the great marabout organisations, had successfully carried out the task of regrouping and of imposing law and order. But, in this country, practically everything had still to be put in order. Although the marabout crisis had suddenly ended, the Arab problem, always serious, was about to find a parallel in a formidable Berber problem, the essential phase of which was to be the push of the Şinâdja of the Atlas towards the north and west. The tasks of organizing an army, re-organising a government, and of establishing the place which
Morocco intended to hold in the Mediterranean theatre, still remained.

Mawlay Isma'il (1082-1139/1672-1727) and the consolidation of the dynasty. The work of pacification accomplished by al-Raahid proved impermanent. His brother and successor Isma'il [q.v.] (1672-1727) had to face two rival claimants to the throne and to suppress numerous revolts both in the towns and among the tribes. He deprived Fez and Marrakush, to which he had been obliged to lay siege, of their status as capital cities, and installed himself with his government at Minkasa. Mawlay Isma'il had first of all to solve the problem of the army. He had recourse first to the old expedient of the Arab gisq, to which he added the Ma'qil Arabs of the oases and to which he gave the name of gisq of the Udaya. But more especially he pressed into service the descendants of the black slaves who had been imported in large numbers by the Sa'addzs; these were the 'abid al-Bukhari; but this black militia never had any great military value.

Mawlay Isma'il, who from the beginning of his reign had been unsuccessful in his Algerian ventures and had had to concede peace with the Turks on the usual terms, succeeded in recovering from the Spanish Ma'mu'a, Mahdiyya and al-Arâ'ish (La-rache). The British evacuated Tangier, Mazagan, Ceuta and Melilla remained in Christian hands. Nearly the whole of his long reign was devoted to the suppression of internal revolts, risings by pretenders, and rebellions on the part of the tribes. The task was a heavy one; the country had a long tradition of anarchy, and the crushing financial burdens which the sovereign imposed on conquered territory were a clear incentive to revolt. The hardest campaigns were those against the Singhâjj Berbers. With the aid of some of these, Mawlay Isma'il pacified for a time the Middle Atlas. But he never succeeded in occupying the whole of Morocco.

Mawlay Isma'il's diplomatic relations with Europe have often given rise to misconceptions. The sovereign hated the Christian world. His European policy, based on a desire for holy war and on cupidity, and implemented with reluctance, was fundamentally negative. In spite of the efforts of the European merchants and consular officials in the new town of Mogador, planned by European architects, which was commenced in 1779/1765.

The end of the reign of Muhammad b. 'Abd Allah was marred by the rebellions of his son and heir-apparent, al-Yazid.

The conservative policy of the 'Alawids: prelude to the Moroccan crisis (1204-1311/1790-1894). The short reign of al-Yazid (1204-6/1790-2) was marked by conflict with Spain and a serious revolt in southern Morocco. On the death of this fanatical and bloodthirsty sultan, his brother Sulayman rid himself of two rivals and gave Morocco a brief respite from warfare.

Up to the end of the 19th century, Morocco was spared crises concerning the succession; in each case the heir designate succeeded to the throne without difficulty.

The Sultans Sulayman 1206-38/1792-1822 [q.v.], 'Abd al-Rahmân b. Hishâm (1238-76/1822-59) [q.v.], Muhammad b. 'Abd al-Rahmân (1792-97/1883-97), and Mawlay al-Hasan (1290-1311/1873-94) [q.v.], were practical rulers endowed with common sense. But their policies, though persevering and flexible in detail, were not progressive. Throughout this period the internal problems of Morocco remained the same. The army was weak; the 'abid had been suppressed but the gisq, restored to a position of supremacy, remained undisciplined and largely ineffective. The best troops were the contingents of the adherent tribes, which were mustered on the eve of an expedition. The energies of the sultans were entirely directed, not always with success, to levying the taxes in the subject territories. They had given up all pretensions to the pacification of the bilid al-siba [q.v.], which gradually increased in size.

In order to put down local revolts and to secure payment of the taxes, the 'Alawid sultans of the 19th century spent part of their time conducting barkas over their territories; the effect of these was often limited and temporary. Diplomacy was employed rather than force; and attempts were made to secure the aloof homage of the tribes which lived in actual independence. By all these means, the makhzen endeavoured to save face, if not at home, at least in the eyes of Europe. It avoided headlong collision with the powerful unsubdued
resolve the first of these clashes, proclaimed the independence of the sultan, the inviolability of his empire, and economic equality among the Powers, while, however, recognizing a certain privileged position for France.

The murder of French dependents and agitation on the Algerian border induced France to pacify the Oujda region and to occupy the Chaouia. A new diplomatic crisis ended with the Franco-German agreement of 1909. France and Spain increased their activities in Morocco.

During all these events the 'Alawid dynasty, engrossed in domestic disorders and preoccupied with its own defence, was singularly inactive. 'Abd al-'Aziz was replaced by his brother Mawlay 'Abd al-Hafiz, who had rebelled against him at Marrakush. Finally the incident at Agadir, which for a moment threatened the peace of Europe, led to a new Franco-German agreement which gave the Reich compensations in Equatorial Africa and made possible the signature of the Protectorate agreement (11 Rabi\'I 1335/30 March 1912). The 'Alawid dynasty, which had seemed on the point of collapse, could thus, under French protection, maintain its position and enter a new phase. Mawlay 'Abd al-Hafiz, who showed extreme ill will in promulgating the reforms anticipated in the Protectorate agreements, abdicated in 1913 and was replaced by his brother, Mawlay 'Abd al-Aziz, who was succeeded in 1919 by his brother Muhhammad; the latter was replaced in Dhu 'l-Hijja 1335/August 1953 by Sidi Muhhammad b. Mawlay 'Arafat.

In October 1955, Sidi Muhammad b. Mawlay ‘Ala‘a went to reside in Tangiers, and a Council of the Throne was instituted in the Sharifian Empire; Sidi Muhammad b. Yusuf was installed on the throne again on 16th November 1955. (Ed.)

ALAWITES [see NUŠAVR].

ALAY, a Turkish word probably derived from the Greek allagion, which was applied to certain divisions of the Byzantine army (cf. Köprülüzade Mehmet Fuat, Bisam Müesselerinin Osmanlî Müesselerinin Tarihi, Türk Hukuk Tarihi ve İktisat Tarihi Mecmuası, i, 277), signifying in Ottoman usage “a troop”, “a parade”, and hence “a crowd”, “a large quantity”, and important parades to which the name was given were the hünkâr alayi, held on the occasion of the sultan’s visit to Eyyüb for his girding with the sword of Oğtân; the alay-i hümâyûn, held on his departure from or return to the capital whether in connection with a campaign or for some other reason; the sûrre alayi, held at the sarây on the despatch of his annual gift to the Holy Cities; the Mevîd and Bayram alayi’lari, held for his visitation of mosques on the Prophet’s Birthday and the two ‘id’s; and the wîlîde alayi, held on the translation of a new Wâlide Sulîmân from the Old to the New Sarây. The word also figures in designations such as alay hizayar, applied to officers commanding the feudal cavalry of a sanjîq or eydây and themselves fieer-holders, and alay ’awâshî, applied either to ’awâshî whose duty it was to clear the route for processions or to those who conveyed commands in battle by shouting. The Alay Köşkû was a pavilion in the Topkâpî Sarayî built in the reign of Murâd III from which sultans might view parades.

ALBURZ (now usually pronounced ELBÜRZ), in Old Persian Hara Berezaiti or “High Mountain”, is a mountain chain which, besides separating the Persian central plateau from the Caspian depression, links the Caucasus range with the Paropamisus. The average height of the western portion is just under 10,000 feet, culminating in Damâward (rv.), which is 18,600 feet high. The northern slopes of the range are densely wooded, but vegetation is scanty on the southern side because of the much lower rainfall. Firdawd gives the name Alburz to a mythic mountain in India. The first Persian geographer to apply the name to the range was Hamd Allah Mustawfî.

Alburz or Elburz is not to be confused with Elbruz, the Caucasian peak. Cf. Le Strange, 368 note. (L. Lockhart)

ALF LAYLA WA-LAYLA, “thousand nights and one night” is the title of the most famous Arabic collection of fairy-tales and other stories. One often reads or hears nowadays “like a fairy-tale from the thousand-and-one nights”, and, indeed, the fairy-tales are the most striking part of the collection. Like all Orientals the Arabs from the earliest times enjoyed imaginative stories; but since the intellectual horizon of the true Arabs in ancient times before the rise of Islam was rather narrow the material for these entertainments was borrowed mainly from elsewhere, from Persia and from India, as we gather from the accounts of the Prophet’s competitor, the merchant al-Naḍr. In later times when Arab civilization had grown richer and more comprehensive the literary influence from other countries was, of course, much stronger. An attentive reader of the “Nights” will soon be astonished by the manifold variety of their contents: they resemble in a way an Oriental meadow with many different beautiful flowers intermingled with a few weeds. On the other hand, the reader will notice that these stories comprise a very wide field: there are stories of King Solomon, of the kings of
ancient Persia, of Alexander the Great, of the
Caliphate and the sultans on one side, and stories in
which guns, coffee and tobacco are mentioned on
the other side.

Its appearance in Europe. The entire
work is enclosed in a "frame-story", and this
was known in Italy in the Middle Ages. Traces
of it are to be found in a novel by Giovanni
Sercambi (1347-1424) and in the story of Astolfo
and Giono which is told in the 28th canto of
Orlando Furioso by Ariosto (beginning of the 16th
century); travellers who had been in the East may
have brought this knowledge to Italy. But the whole
Alf Layla wa-Layla came to Europe in the 17th and
18th centuries. The French scholar and traveller
Jean Antoine Galland (1646-1715) published it for
the first time. Travelling in the Near East at first
as a secretary of the French ambassador, then as a
collector of objects for museums commissioned by
amateurs, he had known the world of the Orient,
and his attention was directed to the great number
of stories and fables told there. After his return to
France he began in 1704 to publish his volumes Les
mille et une Nuits contes arabes traduits en
Français. By 1706 seven vols. had appeared; vol. viii appeared in
1709, vols. ix and x in 1712, vols. xi and xii in
1717, two years after Galland's death. This
delay in the appearance of the later vols. is significant
for Galland's difficulties as to material and also
for his indifference to this side of his work as a scholar.
He was a born story-teller; he had a flair for a good
story and a knack of re-telling it well. Thus he
adapted his translation to the taste of his European
readers, changing sometimes the wording of the
Arabic text and paraphrasing things that were
foreign to Europeans. Hence the great success of
his "Nights". But he was also fortunate in the
material which fell into his hands. He began by
translating Sindbad the Sailor from an unidentified
MS; then he learned that this was part of a great
collection of stories called "The Thousand and One
Nights"; then he had the luck to have sent to him from
Syria four vols. of a MS of that work which is,
except for a small fragment found by Nabia Abbott,
the oldest known and contains the best surviving
text. The first three of his vols. are still in the
Bibliothèque Nationale, but the fourth is lost. In
the first seven vols. of his translation he exhausted
his three vols. of Arabic text which we still have
and added Sindbad and Camalzaman (Kamar al-
Zamān) from unidentified MSS. Then for lack of
material he stopped for three years until his publisher
forced his hand by issuing, without authority, vol.
viii containing Ganem (Ghanīm), translated by
Galland from an unidentified MS, and two stories,
Zeyn Alasnam (Zayn al-ASNām) and Codadad (Khudādād), translated by Pétis de la Croix and
intended for his Mille et un jours. Again Galland
was completely out of material and stopped; he was also
tired and disgusted with the whole matter. But in
1709 he met a certain Maronite from Aleppo, Ḥannâ,
bronght to Paris by the traveller Paul Laca and
at once recognized that he had got an oral source
of the story material. Ḥannâ told him stories in
Arabic, and Galland inserted in his Journal
abstracts of some of these. But Ḥannâ also gave him
transcripts of some. In this way the last four vols.
of Galland's translation were filled out; his Journal
gives full details. Ḥannâ's transcripts have vanished,
but two Arabic MSS of Aladdin have since come to
light and one of Ali Baba. This, then, is the origin
of the book which made the "Nights" known to
Europe and which in the French text and in very
many translations from the French became the
"Arabian Nights" for the great multitude of readers.
For details see H. Zotenberg, Histoire d'Alā’
aldîn ... avec Notice sur quelques manuscrits des
Mille et une nuits et la traduction de Galland, Paris
1888. This contains the Arabic text of Aladdin
('Alā’-al-Dîn) and a study of certain MSS of the
Nights and of the entries in Galland's Journal. See
also V. Chauvin, Bibliographie arabes, iv, Libge
1900, and D. B. Macdonald, A bibliographical and
litanem study of the first appearance of the Arabian Nights in
Europe, The Library Quarterly, vol. ii, no. 4,

For more than a century Galland's French version
meant the Nights for Europe, and two of his stories
whose original Arabic texts were not known were even translated into Oriental languages. But mean-
while other MSS, more or less connected with the
Nights, were brought to light and, from these,
various supplements to Galland were translated and
published. Just as the MSS of the Nights themselves
varied enormously as to the stories which they
contained, so these translators were prepared to
attach to the Nights any story that existed in
Arabic. The following supplements, partly separate
and partly attached to editions of Galland, are of
importance in themselves and as signs of the in-
terests of their times. For further details on all of
them see Chauvin's Bibliographie, iv, 83-120.

In 1788 there appeared as a supplement to the
Cabinet des Fêes, vols 38-41, a series of tales translated
from the Arabic by Denis Chavis. It is significant
for the interest at the time in the whole subject of
the Nights that there appeared, 1792-1794, three
separate English translations of this supplement.
In 1793 William Beloe published in his third vol.
of his Miscellanies some Arabic stories which had
been translated for him orally by Patrick Russell,
the author of The Natural History of Aleppo (1794).
In 1800 Jonathan Scott translated in his Tales,
Anecdoté and Letters certain stories from the MS
of the Nights brought from India by James Anderson,
and in 1811 to his edition of an English version of
Galland he added a vol. of new stories from another
MS, the Wortley Montague MS, now in Oxford.
In 1806 Caussin de Perceval had already added two
vols. of supplement to his edition of Galland. But
Edouard Gauttier in his professéd edition of Galland
(1822-1825) went much farther: besides two vols.
of new tales drawn from all manner of sources he
freely inserted others in the course of Galland's
Nights. Von Hammer in his Die noch nicht übersehen
Ereihungen der Tausend und einen Nachtf Stuttgart
1823, had a much firmer foundation and used a
real recension of the Nights. He had acquired in
Egypt a MS of the recension now known as Zoten-
berg's Egyptian Recension, which through numerous
editions has become the Vulgate text of the Nights;
see the editions, below. Von Hammer's French
translation of a number of stories not in Galland is
lost, but Zinserling (1823) translated it into German,
and this version was rendered in English by Lamb
(1826) and in French by Trebutien (1828). In 1825
M. Habicht began to publish 15 volumes professing
to be a new translation but consisting really of
Galland with some supplements from Caussin,
Gauttier and Scott and an ending from a so-called
Tunisian MS. He began also to publish an Arabic
text. From this text, later on also from Galland, from
Gotha MSS and from a text printed in Egypt, Weli
published his translation within the years 1857-1867.
Editions and translations. The main editions of the Arabic *Alf Layla wa-Layla* are the following.

3. The Second Calcutta Edition: *The Alif Laila or the Book of the Thousand Nights and One Night*, Commonly known as *The Arabian Nights Entertainments*, now, for the first time, published complete in the original Arabic, from an Egyptian manuscript brought to India by the late Major Turner, editor of the Shah Nama. Edited by W. H. Macnaghten, Esq. In four volumes, Calcutta 1839-42.

4. The Breslau Edition: *Tausend und Eine Nacht Arabisch. Nach einer Handschrift aus Tunis herausgegeben von Dr. Maximilian Habicht, Professor an der Königlichen Universität zu Breslau (etc.)*, (nach seinem Tode fortgesetzt von M. Heinrich Leberecht Fleischer, ordentlichem Prof. der morgenländischen Sprachen an der Universität Leipzig, Breslau 1839-43). D. B. Macdonald, in his article on Habicht's Recension in *JRA* 1909, 685-704, and in his article *A Preliminary Classification of some MSS of the Arabian Nights*, in the *E.G.Browne Volume*, Cambridge 1922, 304, discussed the value of this edition. His expert opinion is that Habicht wilfully created a literary myth and enormously confused the history of the Nights because a Tunisian recension of the Nights never existed, and out of many stories which had come to him from many sources he constructed a new recension of the Nights much in the same way that he had constructed his translation described above. However, Macdonald acknowledged that Habicht's texts are given verbatim without any attempt at correction, and are, therefore, "vulgar" in the exact sense whereas all other texts have been grammatically and lexicographically "improved" by learned shaykhs.

5. Later Bulaq and Cairo. Editions. In the latter half of the 19th and in the beginning of the 20th century the complete text of the first Bulaq edition, in the main the same as the second Calcutta edition, was several times reprinted. They are representatives of Zotenberg's "Egyptian Recension" which is the result of a compilation made by a certain shaykh in the 18th century, according to a notice in U. J. Seetzen, *Reisen durch Syrien, Palästina, Phönicien, die Transjordan-Länder, Arabia Petraea und Unter-Aegypten*, Berlin 1854-5, iii, 188; the name of the shaykh is not known, but this notice confirms Zotenberg's hypothesis. The Jesuit Press at Bayrāt has published an independent but expurgated edition from another MS of the same recension (1888-90).

From the Egyptian Recension have been made all the modern western translations. Lane's translation, incomplete but with a very valuable and full commentary, began to appear in parts in 1839 and was finished in 1841. It was made from the first Bulaq edition. Payne's translation from the Macnaghten edition, complete and privately printed, appeared in 9 vols. 1828-84. Three additional vols. contained tales in the Breslau and 1st Calcutta editions (1884), and a 13th vol. (1889) contained Aladdin and Zayn al-Asnam. Since Payne's death in 1876 there have been a number of complete reprint. The translation by Sir Richard Burton, also from the Macnaghten edition, is very largely dependent upon that of Payne and often reproduces Payne verbatim (10 vols., 1885; 6 supplementary vols., 1886-8). Besides the Smithers edition (12 vols., 1894) and Lady Burton's edition (6 vols., 1886-8) it has been completely reprinted several times. On the strange relation between the versions of Payne and of Burton see Thomas Wright, *Life of Sir Richard Burton* (2 vols., London 1906) and *Life of John Payne* (London 1913), and for an attempt at a comparative estimate of the above English translations see Macdonald's *On translating the Arabian Nights*, *The Nation*, New York, Aug. 30 and Sept. 6, 1900, in *Reclam's Universal-Bibliothek* (1893-97) Max Henning published a German translation, 24 small vols.; it is somewhat expurgated and rather prosaic and gives only half the verses. The first 17 vols. give the Nights from the Bulaq edition and vols. 18-24 various supplements, largely translated from Burton. In 1890 J. C. Mardrus began a French translation of the Nights famously from the Bulaq edition of 1835. His translation is not very trustworthy, and it incorporates tales from all manner of other collections than the Nights. Moreover there are translations of the Nights in Polish, French, English, Russian, German, Danish, Dutch, Italian. The Spanish translation is by Vicente Blasco Ibáñez; the English by E. Powys Mathers; the Polish translation is incomplete. The German translation by E. Littmann appeared in Leipzig, 6 vols., 1921-8; first re-edition Wiesbaden 1953, second re-edition ibid. 1954. It contains the complete translation of the second Calcutta edition and the following stories: *'Alā' al-Dīn and the Magic Lamp*, from the Paris MS edited by Zoten (cf. above); *'Aīl Bāb and the Forty Robbers*, from the Oxford MS edited by Macnaghten (*JRA* 1910, 221 ff., 1913, 41 ff.); *Prince Ahmad and Pari Bānā*, from Burton, i.e. an English rendering of a Hindustani version derived from Galland; *Abūl-'Asān or the Sleeper Awakened*, from the Breslau edition; *The Craft of Women*, from the first Calcutta edition; *AH Khawadja and the Merchant of Baghdad*, from the Bulac edition; *The Story of Sindbad the Sailor*, from the Oxford MS edited by Macnaghten; *The Romance of Alī Basha*, from the Bulac edition; *The Story of Sindbad the Second*, from the Bulac edition; *The Story of Sindbad the Seven Viziers*, from the Bulac edition; *The Story of al-Malik al-Ghurân al-Dīn Baybars al-Bunduzdār and the Sixteen Guardians*, from the Breslau edition; *The Craft of Women*, from the Bulac edition; *The German translation by E. Littmann appeared in Leipzig, 6 vols., 1921-8; first re-edition Wiesbaden 1953, second re-edition ibid. 1954. It contains the complete translation of the second Calcutta edition and the following stories: *'Alā' al-Dīn and the Magic Lamp*, from the Paris MS edited by Zoten (cf. above); *'Aīl Bāb and the Forty Robbers*, from the Oxford MS edited by Macnaghten (*JRA* 1910, 221 ff., 1913, 41 ff.); *Prince Ahmad and Pari Bānā*, from Burton, i.e. an English rendering of a Hindustani version derived from Galland; *Abūl-'Asān or the Sleeper Awakened*, from the Breslau edition; *The Craft of Women*, from the first Calcutta edition; *AH Khawadja and the Merchant of Baghdad*, from the Bulac edition.—*The Dutch translation by J. Oestrup was published at Copenhagen in 1917. The Russian translation by I. Krâčkovsky appeared in 1934, the Italian translation by F. Gabrielli in 1949. Problems of origin and evolution. When the Arabian Nights first became known in Europe they served only for the entertainment of European readers; but at the beginning of the 19th century western scholars began to take an interest in the question of their origin. Silvestre de Sacy, the founder of modern Arabian philology, discussed this question in several dissertations: *Journal des savants*, 1817, 378; *Recherches sur l'origine du recueil des contes intitulé les Mille et une nuits*, Paris 1839; in *Les Mémories de l'Académie des Inscriptions et Belles-Lettres*, x, 1833, 30. He denied, correctly, the possible authorship of one single writer and believed
that the book was written at a very late period without Persian and Indian elements; therefore, he regarded as spurious a passage in Murūji dī al-Dhahab of al-Masʿūdī (written in 336/947 and re-edited in 340/952) referring to these elements. This passage, published by Barbier de Meynard in Arabic and French (Les prairies d’or, iv, 89), reads in English: “The case with them (viz. some legendary stories) is similar to that of the books that have come to us from the Persian, Indian (one MS has here: Pahlawi) and the Greek and have been translated for us, and that originated in the way that we have described, such as for example the book Hasār Afṣāna, which in Arabic means “thousand tales”, for “tale” is in Persian afṣāna. The people call this book “Thousand Nights” (two MSS have here: Thousand Nights and One Night). This is the story of the king and the vizier and his daughter and her servant-girl; these two are called Shīrazād and Dināzdāk (in other MSS: and her nurse; in again other MSS: and his two daughters)”. In al-Fihrist by Muḥammad b. ʿIsḥāk b. ʿAbī Yaʿkūb al-Nadīm (written in 377/987), ed. Flügel, i, 304, the Hasār Afṣān is mentioned and a résumé of the frame-work story is given. The Fihrist adds that ʿAbū ʿAbd Allāh b. ʿAbdūs dī al-Dhajhiyārī (d. 351/962), the author of the Book of the Viziers, began to write a book in which he selected a thousand stories from the stories of the Arabs, the Persians, the Greek and other peoples. He collected four hundred and eighty stories, but he died before he had attained his purpose, i.e. to complete a thousand stories.

Contrary to de Sacy, Joseph von Hammer (Wiener Jahrbiicher, 1819, 339; JA, 1e sér., x, 3e sér., viii; Preface to his Dichtungen, Erzählungen (see above) maintained the genuineness of the passage in al-Masʿūdī with all its consequences. William Lane tried to prove that the whole book was the work of one single author and had been written in the period 1475-1525 (Preface to The Arabian Nights Entertainments, London 1839-41).

The discussion was resumed by de Goeje (De Arabe Nachtiertellerei, De Gids, 1886, iii, 385, and The Thousand and One Nights in the Encyclopædia Britannia, xxiii, 316). He collated the passage in the Fihrist (see above), in which the Hasār Afṣān are said to have been written for Humāy (var.: Humānī), the daughter of King Bahman, with a passage in al-Tābarī (9th century), i, 688, where Esther is called the mother of Bahman and the name Shahr-razād is assigned to Humāy; and consequently tried to show that the frame-work story of the Nights was connected with the Book of Esther. August Müller seems to have been the pioneer towards a freer attitude in his Sendschreiben on the subject to de Goeje (Bezembergers Beiträge, xiii, 222) and in his article in Die deutsche Rundschau, xiii, July 10, 1887, 77-96. He distinguished various layers in the work, one of which he supposed to have been written in Baghdaḏ, whereas to another and larger one he assigned an Egyptian origin. The idea of various layers was worked out with greater accuracy by Th. Nöldeke (Zu den ägyptischen Märchen, ZDMG, 1888, 68) who gave an approximate definition of the texts, by which each could be recognized.

The contents of the Nights were described and considered by Nöldeke several times. In this respect Oestrup`s Studier over 1001 Nat, Copenhagen 1891, are of special importance; they were translated into Russian by Krymski (Istorievane eng 1001 noći, Moscow 1905, with a long introduction) and into German by Rescher, “Oesterups Studier über 1001 Nacht” aus dem Dänischen (nebst einigen Zusätzen), Stuttgart 1925, and a French résumé with notes was published by Galtier, Cairo 1912. Other ingenious discussions of the subject were given by Horovitz, mainly in his article Die Entstehung von Tausendundeiner Nacht, The Review of Nations, no. 4, April 1927; idem, in IC, 1927. See also Littmann, Tausendundeine Nacht in der arabischen Literatur, Tübingen 1923, and Die Entstehung und Geschichte von Tausendundeiner Nacht in der Anhang to Littmann’s translation (mentioned above).

The earliest testimony to the existence of the book of the Thousand Nights was discovered by Nabia Abbott, A Ninth-Century Fragment of the “Thousand Nights”, New Light on the Early History of the Arabian Nights, Journal of Near Eastern Studies, 1949. After that the work is mentioned by al-Masʿūdī and in the Fihrist (see above). In the 12th century a collection of tales called “The Thousand Nights and one Night” was known in Egypt as we learn from a certain al-Kurīf who wrote a history of Egypt under the last Fāṭimid caliph (1160-71), and al-Ghurud, who died in 815/1412, transmitted in his anthology a tale of the Nights, as Torrey recognized (J A O S, 1894, 42 f.). A MS discovered by H. Ritter in Istanbul which is of the 13th or 14th century contains four stories that are in the Egyptian recension. These stories are not stated to be a part of the Nights; they will be published and translated by H. Wehr on the basis of preliminary studies by A. von Bulmerinco. Then follow Galland’s MS and a number of other MSS of the Nights which cover the period from the 15th to the 18th centuries.

We know then that in the common form of the Nights there are a Baghdaḏ and an Egyptian part. Oestrup grouped the separate tales into three layers of which the first one was to comprehend the fairy-tales from the Persian Hasār Afṣāna with the frame-work of the book, the second those which had come from Baghdaḏ, and the third the stories which had been added to the body of the work certainly tales, as for example the extensive chivalric romance of ʿUmar b. al-Nuʿmān, which was inserted when the number 1001 was taken in its literal sense. But the Story of Sul and Şhumal in a Tübingen MS, which is professedly a part of the Nights and which was edited as such by Seybold, certainly never was an integral part of them, because in it a Muslim is converted to Christianity; in the true Nights Christians, Zoroastrians and pagans often adopt Islam, but a Muslim never adopts another religion. The following forms of the Nights were established by Macdonald (The Earlier history of the Arabian Nights, JRAS, 1924, 353 ff.)—meaning by that any collection of stories fitted into the frame-work which we know: i. The original Persian Hasār Afṣāna, “Thousand Stories”; ii. An Arabic version of the Hasār Afṣāna. The frame-work story of Hasār Afṣāna, followed by stories of Arabic origin. iv. The Nights of the late Fāṭimid period; to its popularity al-Kurīf testifies. v. The recension of the Galland MS. From notes in it that MS was in Syrian Tripoli in 943/1536 and at Aleppo in 1001/1592; it may, of course, be older. But it was written in Egypt. There remains the at present still unsolved problem of the relations between it and the other old and independent MSS; there are according to Macdonald at least six such MSS which must be considered.

Nabia Abbott (see above) stated the following six
forms. i. An eighth-century translation of the *Haizdr Afsdna*. According to her belief this was most probably a complete and literal translation, perhaps entitled *Alf Khwarjā*. ii. An eighth-century Islamized version of the *Haizdr Afsdna* entitled *Alf Layla*. This could have been either partial or complete. iii. A ninth-century composite *Alf Layla* containing both Persian and Arabic materials. While most of the former came undoubtedly from the *Haizdr Afsdna*, other current story-books, especially the Book of Sindbād and the Book of Dīdal, are not improbable sources. The Arabic materials, as Littmann had already pointed out, were not so slight or insignificant as Macdonald believed them to be. iv. The tenth-century *Alf Samar* of Ibn ‘Abdūs. Whether this was meant to include, among other materials, all the current *Alf Layla* and to supersede it is, is not clear.

v. A twelfth-century collection augmented by materials from iv and by Asiatic and Egyptian tales of local Egyptian composition. The change of title to *Alf Layla wa-Layla* belongs, in all probability, to this period. vi. The final stages of the growing collection extending to the early sixteenth century. Heroic tales of the Islamic countercrusades are among the most prominent additions. Persia and ‘Irāq may have contributed some of the later predominately Far Eastern tales in the wake of the thirteenth-century Mongol conquest of those lands. The final conquest of Mamluk Syria and Egypt by the Ottoman Salīm I (1512-20) closed the first chapter of the history of the Arabian Nights in its oriental homeland.

The title ‘Thousand Stories’ may have been changed to ‘Thousand Nights’ when, with the Arabs, the frame-work story and other stories were combined; that cannot have been done later than the 9th century. Originally “1000 stories” meant only a very large number of stories; in the same way it is said of Shahrāzād that she had collected “a thousand books”. For the simple mind even 100 is a high number, and “before 100 years” means—even for Oriental historians—the same as “a long time ago”; therefore the number 100 must not be taken in its exact sense. But 1000 is almost the same as “innumerable”. And the Book of the Thousand Nights which was known at Bagdād scarcely contained a thousand separate nights. But why was 1000 changed to 1001? This change may partly owe its origin to the superstitious aversion to round numbers common among the Arabs as among other peoples. But it is very likely that it was also influenced by the Turkish idiomatic use of *bin bir* “thousand and one” for a large number: in Anatólia there is a ruin called *Bin-bir-khisle* “1001 Churches”, but there are, of course, not nearly so many there. In Istanbul there is a place called *Bin-bir-direk* “1001 columns”; but there are only a few dozens of them there. The Turkish alliteration *bin bir* points to the origin of the Persian idiom *haizdr yah* “1001” and of the title *Alf Layla wa-Layla*. Since the 11th century Persia, Mesopotamia, and Syria and the other countries of Eastern Islam were under the influence of the Turks. Thus the title “1001 Nights” at the beginning meant only a large number of nights, but later on the number was taken in its literal meaning, and it became necessary to add a great many stories in order to complete the number 1001.

The various component elements. If then India, Persia, Mesopotamia, Egypt and in some way the Turks were partners in the origin of the Nights we must assume that materials derived from all these countries and peoples are to be found in them. The first outer tests might be the proper names. There are Indian names like Sindbād, Turkish names like ‘Ilb Baha and Khwarjā, names Šahrāzād, Dināzād, Šahzamān are Persian and occur, as de Goeje has shown, in Persian legends; so also Bahrām, Rustam, Ardashīr, Šāhpur and many others are Persian. However, by far the majority of names are Arabic, i.e. old Arabic names used among the Arabian bedouin and later Islamic names. Greek and European names occur in a few cases in stories treating of the relations between Muslims and Byzantines and Franks. Egyptian names refer to places and to months in their Coptic forms. Of Hebrew names chiefly Solomon and David occur; both play an important rôle in Islamic tradition. Besides them Āṣaf, Barakhīyā, Bulūkīyā and others are named. But since in very many cases stories are transferred to other persons and frequently persons without names act in them the question of the names must not be stressed.

However, the frame-work system, which is very common in India but very rare in other countries, is a test of the Indian origin of certain parts of the Arabian Nights. In the Indian popular books it usually runs like this: “You may not do such and such a thing or else you will go the same way as so and so”—“How was that?” asks the other, and then the admonisher begins his story.

The foreign elements in the Nights have been carefully studied by Oesterp. One of the interesting statements he made was that in the Iranian fairy-tales the demons or supernatural powers act on their own account and independently, whereas in the more recent tales, especially in those from Egypt, they are always subject to some talisman or magic object; hence its owner decides the development of the action, not the Djīnas and ‘Irīfs themselves. Only a short summary of the foreign elements in the Nights can be given here.

The frame-story is of Indian origin. That it consists of three different parts which originally were independent stories was shown by Emmanuel Cosquin in *Études folkloriques*, Paris 1922, 265. These parts are: 1. The story of a man who was treasured by a disloyal wife but whose grief was assuaged when he saw that a high personality had the same misfortune. 2. The story of a demon or a giant whom his wife or his captive betrayed with many other men in the most audacious manner. This is the same as the tale told by the seventh vizier in the *Story of Sindbād the Wise*. 3. The story of a clever girl who by her skilful telling of stories averts an evil threatening her or her father or both of them. Of these three parts only the third one seems to have belonged to the original frame-work story, as indicated by al-Mas‘ūdī and by the *Fihrist*; in it, then, only the cruel king, the clever daughter of the vizier and her true old nurse were known. It is probable that the story of the clever daughter of the vizier came at an early date from India to Persia, where it was "nationalized" and combined with the other two parts of the frame-story. A number of tales in the Nights are of Indian origin: such are the stories of pious men that remind us of Buddhist and Jainist saints, the fables of animals, the story-cycles of *Sindbād* (q.v.) the *Wis*, and of *Dīzāyīd* and *Shimās*. Indian motifs are to be found in different passages of the Nights: such are, e.g., the *Story of the Magic Horse*; the poisoning by means of the leaves of a book (by the physician Duban), a practice which points to Indian customs (cf. Gildemeister, *Scriptorum Arabum De Rebus Indicis loci et opuscula*, Bonn
All this passed through Persian before it reached the Arabs.

Quite a number of tales are of Persian origin, especially those fairy-tales in which the ghosts and the fairies act independently; see above. The tales which Oestrup enumerates as being of Indian-Persian origin are the following: 1) The Story of the Magic Horse; 2) The Story of Hasan of Basra; 3) The Story of Sayyf al-Muluk; 4) The Story of Kamar al-Zamān and of Princess Budur; 5) The Story of the Prince Badr and of Princess Djuwār of Samandal; 6) The Story of Ardaşīr and Hayāl al-Nufās. And according to him the relation between the Story of 'Alī Shār and the Persian original, the former containing many details which recur in the probably later narrative of Nūr al-Dīn 'Alī and the Girdle-girl, also to be found in the Nights, is uncertain. The Story of the Jealous Sisters and the Story of Ahmad and Pari Bānā that are found only in Galland give a strong impression of being originally Persian, but Persian prototypes of them have not become known as yet.

Baghdād is situated in the region of ancient Babylonia: it is, therefore, probable that ancient Babylonian ideas should have survived there until Islamic times and might be reflected in the Nights. Even a whole story, the Story of Hayār the Wise, which in some MSS appears as a part of the Nights, is of Old Mesopotamian origin; it probably dates back to the 7th century B.C., and it found its way through the Jewish and Christian literatures into Arabic literature. Khīḍr the Ever-Youthful, has a Babylonian prototype; the journeys of Bulūkīyā and the water of life fetched by Prince Ahmad may reflect motifs of the Babylonian epic of Gilgamesh. But Khīḍr and the water of life were probably transmitted to the Arabs by the Romance of Alexander, and the journeys of Bulūkīyā became known to them through Jewish literature. Above all, the frequent anecdotes about the 'Abbāsīd caliphs and their court and also some anecdotes about their subjects belong to the Baghdād recension of the Nights. The Story of Sinbad [q.v.] the Sailor found its definite shape probably in Baghdad, the romance of 'Umar b. al-Nu'mān [q.v.] contains Persian, Mesopotamian and Syrian materials; the romance of 'Aǰīb and Ġharī points to Mesopotamia and to Persia; the story of the clever slave-girl Tawaddud [q.v.] originated in Baghdad and was in some respects reshaped in Egypt. The Stories of Bulūkīyā, of Sinbad [q.v.] the Wise, and of Khīḍr and Wīrd Khān were certainly known in Baghdad. But there is no certain proof that all these tales were parts of the Baghdād recension. The same is to be said of the four stories of the Istanbul MS found by H. Ritter (see above); it contains four of our Nights stories but does not refer to Alī Layla wa-Layla. These stories are: 1) The Story of the Six Men, i.e. of the six brothers of the harbor of Baghdad; 2) The Story of Drisālārd and the Sea-girl; 3) The Story of Budur and 'Umāyr b. Djuwār; 4) The Story of Ābā Muhammad the Stōkhuf.

Egyptian origin is to be postulated of the stories in which the tricks of clever thieves and rogues are related, of the tales in which the ghosts and demons appear as servants of talismans and of magic objects, and of stories that might be called "bourgeois novels," some of which resemble modern romances of adultery. All these stories date, of course, in their present form from the time of the Mamlūk sultans and of Turkish rule in Egypt. But some of the motifs go back to Ancient Egypt. The clever rogue 'Alī al-Zaybak and his companion Ahmad al-Danaf have their prototype in the bold condottiere Amasī, and the treasure of Khamsinīt is found in the story of 'Alī al-Zaybak, as Nūdīne pointed out. The monkey-scribe in the story of the three dames of Baghādād may have his prototype in Thot, the scribe of the Egyptian gods who is often represented as a monkey, or in Hanūmān the monkey-leader of the Indian Ramayana. It has also been suggested that the ancient story of the Egyptian shipwrecked person is to be connected with Sindbād's journeys, and that the story of the capture of Jaffa by Egyptian warriors hidden in sacks recurs in the story of 'Alī Baba; but these connections are not very likely; see Littmann, Tausendundeine Nacht in der arabischen Literatur, 22.

For possible Greek influences in the Nights see von Grunebaum, Medieval Islam, Chicago 1946, Chapter Nine, Grece in the Arabian Nights.

The various literary genres. It remains to give a summary account of the different classes of literature represented in the Nights; it is here, of course, impossible to mention every one of all the stories, as has been done in the Anhang to Littmann's translation. There six main groups were distinguished: 1) Fairy-tales; 2) Romances and novels; 3) Legends; 4) Didactic stories; 5) Humorous tales; 6) Anecdotes. A few examples of each group must suffice here.

1. The frame-story consists of three Indian fairy-tales. The tales which come first in all manuscripts (The Merchant and the Dìmīn; The Fisherman and the Dìmīn; The Porter; The Three Calendars and the Three Dames in Baghdad; The Hunchback) belong to this class; they are themselves examples of the frame-work system and contain some traits which remind us of Indian prototypes and even of some motifs which have parallels in stories from farther east. The best known fairy-tales are those of 'Alī al-Dīn and the Magic Lamp and 'Alī Baba. Other examples are Kamar al-Zamān and Budur, The Jealous Sisters, Prince Ahmad and Pari Bānā, Sayyf al-Muluk, Hasan of Basra, Zayn al-Aṣnām.

2. The longest romance is that of 'Umar b. al-Nu'mān [q.v.] and his Sons; it has been discussed by Paret (Der Ritterroman von 'Umar an-Nu'mān, Tübingen 1929), and by H. Grégoire and R. Goossens (ZDMG 1934, 213; Byzantinisches Epos und arabischer Ritterroman). The Story of 'Aǰīb and Ġharī is the model of an Islamic popular romance. The stories of the Porter and the Three Dames, of 'Alī al-Dīn Abu 'l-Shādūd, of Nūr al-Dīn and Shams al-Dīn, of Nūr al-Dīn and Maryam the Girdle-girl might be called "bourgeois" romances or novels, as also the story of Ābā Kīr and Ābā Śīr.

Here the love-stories may be added. There are a great many of them in the Nights, and they comprise three groups: a) ancient Arabian life before Islam; b) urban life in Baghdad and Basra, love-affairs with girls or slave-girls in the cities or in the palace of the caliphs; c) love-novels from Cairo which are sometimes frivolous and lascivious. See Paret, Früharabishe Liebesgeschichten, Bern 1927.

Also the stories of rogues and of seafarers are to be mentioned here. For 'Alī al-Zaybak see above; many short stories of the guardians are told before the rulers of Egypt. The famous story of Sinbad [q.v.] the Sailor is based on a book, The Wonders of India, which contained adventures and sailors' yarns collected by a Persian sea captain at Basra in the 10th century. The first part of the story of Ābū Muhammad the Stōkhuf is composed of sailors' stories and motifs of fairy-tales.
3. There are a few ancient Arabian legends inserted in the Nights: *Ḥātim al-Tawfiq, Iram the City of Columns*, the *Egyptian Nights*, the *City of Lebta*, which refers to the conquest of North-western Africa by the Arabs. Other legends refer to pious men and women, among them to pious Israélites (these need not necessarily be due to Jewish authors); the legend of *The Pious Prince*, who was a son of Hārūn al-Rashīd and became a dervish, is reminiscent of the famous legend of Alexis.

4. Didactic stories, fables and parables, especially of animals, are known to many peoples and have found their way into the Nights also, where most of them seem to have originated in India, e.g. the two long cycles of Sindbad [q.v.] the Wise (Sintjas) and of Diālīyatād and Wird Khādān, and many of the fables of animals, but they were sometimes remodelled in their Arabic forms. The long story of the clever slave-girl Tawaddud [q.v.] (in Spain la doncella Teodor, in Abyssinia Tasedal) with its probable Greek prototype correctly discussed by Horovitz belongs in this category.

5. Humorous tales are the stories of Abu 'l-Hasan or the Sleeper Awakened, of Khalīfa the Fisherman, of Diālī'yar the Barmakid and the Old Bedouin, and of 'Ali the Persian; the latter is a typical story of lies. In the stories of Maḥraṯ the Cobbler and of the *Hunchback* there are many humorous traits.

6. The group of anecdotes comprises here all the stories that are not classified in the preceding groups. Collections of anecdotes are the stories of the *Hunchback* and of the Barber and his Brothers, and they are combined to a comedy of great style. The other anecdotes are to be divided into three groups: those of rulers and their circles, those of munificent men, and those taken from general human life. Those of rulers begin with Alexander the Great and end with the Mamlūk sultans: a few of them refer to the Persian kings, a very large number of them refer to the 'Abbāsīd caliphs, above all to Hārūn al-Rashīd who became the ideal ruler in the opinion of later Muslims. Some of these anecdotes may not originate from Baghādād but from Egypt where they were ascribed to him. The munificent men, about whom the Nights tell are mainly Hātim al-Tawfiq, Ma'ān b. Zā'ida and the Barmakids. The anecdotes from general human life are of several kinds: they tell of rich and poor, of young and old, of sexual abnormities (Wardān and the Woman with the Bear; The Princess and the Monkey), of bad eunuchs, of unjust and of clever judges, of stupid schoolmasters (a type known in Greek and Roman literature as well as in modern Egyptian Arabic tales). The *Nocturnal Adventure of the Calīf*, transmitted only by Galland contains three long anecdotes told at large and intermingled with motifs from fairy-tales.

There are about 1420 poems or fragments of poetry in the 2nd Calculata edition, according to Horovitz (in *Zeitschrift Sachau*, Berlin 1915, 375-9) Of these a number of 170 repetitions must be deducted, so 1250 insertions of poetry remain. Horovitz has been able to prove that those insertions whose authors he could discover are to be dated from the 12th to the 14th centuries, i.e. from the Egyptian period of the history of the Nights. These poems and verses are mostly of the kind that they might be omitted without disturbing the course of the prose texts and, therefore, have been later added to them.

**Bibliography:** Has been given in the course of the article. Here special attention should be called to Oestrup's *Studier* and their annotated translation by Rescher (see above), to N. Elisséeff, *Thèmes et Motifs des Mille et Une Nuits*, Beirut 1949, and to the full bibliography given by Brockelmann, II, 724, S. II, 59 ff. For the influence of the Arabian Nights on European literature cf. *The legacy of Islam*, 190 ff.; *Cassell's Encyclopaedia of literature*, s.v. (E. Littmann)

**ALFARD** [see Nūḏūm].

**ALFŪNŠIHO**, the transcription adopted by the majority of the Arab chroniclers of al-Andalus for Alfonso, the name of several monarchs of Christian Spain in the Middle Ages. The forms Iḏfūnsho and Iḏfūnsho, however, which correspond to the old Latin-Gothic form Ídefonso, are also occasionally found.

**ALGARVE** [see ḤARIṢ AL-ANDALUS].

**ALGAVEL** [see AL-GHAZĀLĪ].

**ALGEBRA** [see AL-DJABR WA'L-MUKABALA].

**ALGECIRAS** [see AL-DJAZIRA AL-KHADRA].

**ALGERIA** [A.: BARR AL-DJAZĀIR], modern term indicating the central part of northern Africa between Morocco in the West, and Tunisia in the East.

(i) **Geography.**

Algeria comprises the central section of North Africa (also called Magrib, Barbary, Africa Minor, the Atlas region [cf. Magrib] and a large part of the Sahara, and has an area of 2,491,645 sq. km. Situated between latitudes 37° and 19° N., it is bounded by Morocco and Spanish Rio de Oro in the West, by French West Africa and French Equatorial Africa in the South, and by Libya and and Tunisia in the East. Algeria proper, which extends roughly to the southern slopes of the Saharan Atlas, covers only 14.6% of this area, or 320,000 sq. km. It is 2000 km. long, with 1,300 km. of coastline; it is 350 km. in breadth at the Moroccan frontier and 240 km. at the Tunisian, and extends from lat. 32° 9' to 35° 1' in the West, and from lat. 34° 9' to 37° 1' in the East. Tlemcen is at the same latitude as the oasis of Biskra. Algeria proper is a plateau with a mean altitude of 900 m. It is traversed by the Atlas Mt.s., a southern branch of the Alpine chain, which were thrown up in a series of folds during the tertiary and at the beginning of the quaternary period, on the edge of the hard Sahara-African platform. They are divided into two main groups, the Tell Atlas in the North and the Saharan Atlas in the South, which come together in the east and enclose upland plains.

The Tell, the Tell Atlas in relief presents a complex picture, by reason of its excessively folded structure and of the extensive erosion caused by the Mediterranean rains and by the fact that its coastline is near sea level. The successive ridges rise parallel to or at an angle to the coast, cut by deep transverse valleys and separated, in the West, by longitudinal depressions. South of the hills of the Sāḥiḥ (Sahel) of Oran, Dahra, and Beni Menes, and the mountains of Zaccar (1,579 m.) stretches a depression 350 km. in length, following the line of the Sébkha of Oran, the low marshy plains of the Macta and the Mina, and the valley of the lower Chelif (Shalaf). It is
bounded in the South by lines of hills which rarely exceed 1000 m.: the Tessala, Ouled Ali, and Beni Chouroun mountains, and the great massif of the Ouargalis (Warghares) and the Matmâta which rises between the Chelif valley and the high plains. To the West of the valley of the Mina, the inner plains are dominated to the South by table-like limestone and sandstone formations, which rise to between 1000-1500 m.: these are the plateaus of Oran.

To the East of Algiers and the hills of the Sahel the mountain formations are higher and more massive. Between the plains of the Mitidja and Bône (Bôna) there is no important depression, except that of the Wâdi Sâhil-Soummam with its western extension. The mountains of Kabylia, between the Mitidja and the Edough, are of great size and are dominated by a "limestone spine" formed by the Djurgura (highest peak Lâla Khadjûlja, 2,308 m.) [see Kabylia], the Babor (Bâbûr) (2,004 m.), and the highest peaks of the Numidian chain. To the South, the Mittîja and the Medea mountains, the Bîbân ranges, and the Constantine and Medjerda mountains, composed of non-durable marl and schistose material, have comparatively soft or deeply-furrowed contours. The littoral, precipitous and rocky nearly everywhere, affords scant natural shelter against the N-W gales; the bays of Mers el Kebir-Oran (Mars al-Kabîr), Arzeu, Algiers, Bougie (Blidjâya) and Bône face East.

The High Plains. The high plains, wrongly termed high plateaus, are monotonous expanses broken by isolated rocky humps whose moderately-folded structure makes them similar to the Saharan Atlas. Situated below the Tell Atlas, and subject to a climate which is already arid, they form a succession of enclosed basins: the wâdis discharge their alluvia...
are half-buried under their own detritus. The Ksour (Ksour: 2,336 m.), the Amour (Amur: 2,008 m.), the Ouled Nail and the Zblan (or Zab) mountains drop towards the N.E.; they are easily negotiated.

East of Biskra, the Aurès [see Awās] is the largest and highest Algerian massif (Djabel Chellia, 2,429 m.), and is a succession of peaks and depressions running SW-NE.

The desert. The varied terrain of the Atlas region contrasts with the extremely monotone expanse of the desert; for instance its severe plateaus or hamāda, its immense plains which constitute enclosed basins and which are partly covered with sandy or pebbly reg, and finally its erg, vast agglomerations of sand-dunes which cover only 1/5 of its surface [see al-Šāhāra].

The climate is Mediterranean in the Tell Atlas, but it deteriorates in the high plains and the Saharan Atlas where it becomes an arid without actually becoming a desert climate. On the littoral the variation in the mean monthly temperatures is small, because of the humidity. The climate is becoming continental; considerable heat has been known in depressions sheltered from the sea winds, with cold winters in the mountains and on the high plains. Everywhere, except on the littoral, where it rarely occurs, the sirocco (ghēlīf) brings temperatures of 104° F and higher several times a year; in winter, on the other hand, snow covers the principal massifs for 2-3 weeks.

The summer is dry, apart from a few storms, and rain falls principally from October to May. The massifs of the Tell Atlas to the East of Algiers receive more than 31 ins. of rain, and sometimes more than 39 ins. The plains of the West, and the Hodna, receive only some 7-11 ins., except on their northern boundary, and the Saharan Atlas 11-15 ins. on its northern slopes. The desert receives less than 7 ins.

Only the main rivers of the Tell Atlas have water all the year round, and even then their summer flow is very small: these are Mediterranean torrents whose spate is sudden and violent. Such are the Tafna, the Macta (formed by the confluence of the Sig and the Habra), the Shfal (Chëlīf), the Sebāw (Sebou), the Wādī Šahil, the al-Wādī al-Kabīr, the Seybūs (Seybouse), the Meġjerda and its tributary, and the Wādī Melleg (the lower courses of the last two belong to Tunisia). Not one of them is navigable; some are used for irrigation. On the high plains and in the Saharan Atlas the wadis contain water for only part of the year, and then only in their upper courses; many only contain water after heavy rains.

The vegetation has been much impaired by man. Thin forests of non-deciduous and resinous trees still cover the Tell mountains and certain more arid massifs; there are cork-trees on the siliceous and well-watered mountains of the Kabylia and the Béja region; evergreen oaks, or holm-oaks, in different to the soil, even in the Awrams; Aleppo pines on the limestone of the humid regions and on mountains already dry; Barbary thuyas and Kermes oaks in the Oran Tell, and thinly-sown junipers on the drier slopes. A few well-watered peaks still support plantations of cedars. Agricultural expansion and the demand for timber and charcoal have caused the forests to recede: the area under cultivation has chiefly increased at the expense of dense thickets of wild olives and mastic trees, a characteristic of heavy, well-watered soils, and of a thin undergrowth of jujube trees on the drier plains of the Tell Atlas and the high plains of Constantine.

The areas which receive less than 13 ins. of rain annually are the regions of the steppe, a formation characterized by the scarcity of bushes and trees, especially of the latter, and by the presence of perennial herbaceous plants such as alfalfa (10 million usable acres) and esparto, of small ligneous plants such as the artemisia, salt-loving plants growing on the saline soil of the shoffs, and of an annual herbaceous vegetation which burgeons every spring. The desert is only an open steppe without alfa.

Algeria, therefore, comprises two great natural regions in addition to the desert: a Mediterranean region, where the cultivation of cereals, wheat and barley, and of trees like the olive, the fig and the almond is practicable without irrigation, and consequently where a sedentary mode of existence possible: it is known to the indigenous peoples as the Tell; and, secondly, the steppes, where cultivation is not practicable without irrigation or flood waters, and which is devoted to the breeding of livestock on a migratory basis, and to nomadism: natives know this area and that of the desert under the common name of Sahara. This distinction between Tell and Sahara is a fundamental one in the history of the country no less than in its geography.

(ii) History.

(1) To the 16th century.

The region which later became known as Algeria presents a framework not readily acceptable to the historian of Muslim North Africa. The frontiers which are shown on the map cannot set bounds to his field of study; they only assume any significance with the establishment of the Turkish regency of Algiers in the course of the 16th century. During the nine hundred years prior to this event, the future Algeria, which comprises what the Arab writers call central Maghrib (al-Maghrib al-Awsat) together with part of Ifriqiya (near Maghrib), was closely linked with the two neighbouring countries, being almost invariably either subject to rulers coming from these countries or in fear of their domination. Although, in comparison with the two other subdivisions of Barbary or Maghrib, this central region appears to be a large rural area with few towns, populated by nomadic shepherds and hill farmers, it has nevertheless throughout the centuries played a not inconsiderable part in the history of the Muslim West. Only the more important episodes in its history will be mentioned here.

In the middle of the 15th/16th century, North Africa was invaded by the Arabs, the propagators of Islam. The military power of Byzantium rapidly
disintegrated; but the reduction of the Berbers was a more difficult task. Resistance was primarily organized in central Maghrib; inspired, it is said, by Kusayla [g.v.], chief of the Awrâbâ, native bands arose which, near Biskra, engaged Uqba b. Nâfi' [g.v.].—a battle in which the latter lost his life (63/682). The Awrâs in particular seems to have been used as a strongpoint in the struggle against the Arabs; it was in the foothills of this mountain massif that the Kâhina [g.v.], legendary queen of the country, witnessed, after a brilliant success, the destruction of Berber independence (74/693).

The central Magribi again became the centre of autochthonous resistance in the 2nd/8th century, when the Berbers had become converted en masse to Kharidjism. Tlemcen, where Abû Kurra, chief of the Banû Ífrân [g.v.], was in command, was at first their chief centre. In the 3rd/9th century Tihert (near the modern Tiaret), capital of the Rustami [g.v.] mâtums, became the centre of Berber Kharidjism.

The position of this central region, on the borders of the territory which the Aghlabids of al-Kayrawân held in the name of the 'Abbâbîd, explains how the Fātimid [g.v.] power was engendered there among the Kutâma [g.v.] Berbers of Lesser Kabylia at the end of the 3rd/9th century. These new masters, however, were not accepted without a struggle; the Awrâs and its environs witnessed the terrible revolt of the Man with the Donkey, in which the Fātimid cause was nearly lost [see Abû Yazîd al-Nukkârî].

Taking over the role of the Kutâma, the Šinâhidja [g.v.; see also Zîrîds] of central Magrib became, in the 4th/10th century, the most useful allies of the Fātimids and supported their policy of opposition to the Banû Ābd al-Wâd, who were vassals of the Umayyads of Spain. The Banû Šinâh were for the most part nomads, and frequented the central and western plains. The Šinâhidja were settled tribes, and inhabited the central and eastern mountain regions; they founded or developed towns, such as Aghir and the Ka'âfa, capital of the Šinâhidja Banû Ḥammâd [see Ḥamâdhids]. This latter kingdom experienced the repercussion of the serious events which occurred in Ifrîqiya. The invasion of the Banû Tihâb [g.v.] of the Banû Ḥārâbâ by the Fātimids in the middle of the 5th/11th century, which destroyed the kingdom of al-Kayrawân, caused an influx into the Ka'âfa of merchants and artisans, and palaces were built there which betrayed the influence of Fātimid Egypt and of Persia. But it was not long before the Arab scourge menaced, in their turn, the Banû Ḥammâd, who emigrated to Bîjâya (Bougie).

While, in what was later the province of Constantine, the power and prosperity of the former rulers increased, the future provinces of Oran and Algiers acquired new masters. Emerging from Morocco, the Almoravids (5th/11th century) [see al-Murâbi'ûn] overran the country as far as Algiers; the Almohads (6th/12th century) [see al-Muwaḥhidûn and Mu'nâwiûn] extended their sway over the whole of North Africa. Both dynasties, which had in addition annexed Muslim Spain, enriched the cities of their Berber dominions, particularly Tlemcen, with the products of the magnificent civilization of al-Andalus.

At the beginning of the 7th/13th century, the great Almohad empire collapsed, and Tlemcen, which had escaped ravage at the hands of the Arabs and the Almoravids Banû Ghârîb [g.v.], became the capital of the Banû 'Abd al-Wâd [see 'Abd al-Wâdîds], formerly Šanâôt nomads. This new kingdom achieved real economic prosperity; but it was constantly threatened by the Marinids, its Moroccan neighbours, and, at the beginning of the 10th/16th century, it was annexed by the Turkish Muslims.

It was the appearance of the Spanish off the small Berber port of Algiers which led to Turkish intervention in the central region of North Africa and made Algiers the centre of a vassal state. For nearly three centuries piracy, a substitute for holy war, provided the Regency of Algiers with important resources. The country itself, which later became Algeria, and which was divided into three provinces, to some extent evaded the control of its Levantine masters, and its nomadic and settled populations pursued in relative independence an archaic mode of existence, the history of which is, and will doubtless remain, obscure to us.

(G. Marçais)

(2) The Turkish period.

The establishment of the Turks in Algiers was not the result of a deliberate policy of expansion planned and carried out by the Ottomans. It was, on the contrary, at least at its inception, a private venture by two trepida corsairs, known in Western sources as the Barbarossa brothers, 'Arûdî [g.v.] and Khâyr al-Dîn [g.v.]. These two, with a great reputation for valor gained in hunting down Christian vessels in the Mediterranean, came to the rescue of Islam in
Africa, which they saved from the hands of the Spaniards. In 922/1516, the inhabitants of Algiers appealed to Arudj who proclaimed himself sultan, and occupied Miliana, Medea, Tunes and Tiemcen. He was killed at Tiemcen after resisting siege by the Spanish for six months (924/1518). Khayr al-Din restored the situation, which had been rendered momentarily critical by the death of his brother, by presenting the Ottoman Sultan Selim with the newly-acquired territories, thus gaining both increased prestige and the military and financial aid which he needed. He extended his authority over Collo, Bône, Constantine and Cherchell, and in 929 forced the surrender of the Péron of Algiers, a fort which the Spanish had erected on an islet some 300 yards from the shore. In 940/1533 Khayr al-Din was appointed commander-in-chief of the Ottoman fleet, and was replaced at Algiers by beylerbeyis who administered the country either directly or through lieutenants until 995/1587. Aspirations to independence on the part of some of these officials led the Ottoman Government, in 1587, to replace them by pashas appointed for a term of three years. The pashas were eclipsed, after 970/1569, by the aghas of the army corps, who in turn were succeeded by a new power, that of the deys, who ruled until the capture of Algiers by France. The triennial pashas, aghas and deys were more often than not tools in the hands either of the army corps (odej), recruited primarily from the townsmen of Anatolia, or of the ta’ifat al-rusāsā, a guild of corsair captains which, for three centuries, furnished the Algerian treasury with the greater part of its resources. The four aghas who reigned successively from 1659-71 were all assassinated, and fourteen of the twenty-eight deys met the same fate.

The internal organization of the Algerian State is obscure; the scant information of a reliable nature which is available to-day deals for the most part with the era of the deys. The deys, when they managed to stay in power, governed as absolute sovereigns assisted by a council (diwan) composed of the khaṣiṣdār or khaznāḏi (treasurer), the aḏaḏ of the camp (commander of the troops), the waḥlit al-khārji (head of naval administration), the bāy al-maḏār (trusted of vacant estates), and the khōdāḏ al-khānūl or athkhōd (recipient of tribute).

With the exception of the district of Algiers itself which constituted the dār al-sulṭān and was divided into seven regions (masāfān) administered by Turkish kādīs under the direct control of the dey, the whole country was divided into three provinces (beyliḵ), each under a bey, which anticipated the dey’s prestige in the newly-acquired territories. These were the province of Tītīrī, with Medea as its chief town; the eastern province with Constantine as its centre; and the western province, the capital of which was successively Māṣūna, Mascara and, after 1792, Oran. The beys, appointed and dismissed by the dey, ruled their provinces with absolute authority, assisted by kādīs. In the eyes of the central government, they were no more than revenue collectors, tax-farmers who contracted, usually having bought their offices, to pay into the state coffers large sums, the size of which was determined in Algiers. The sum contracted was payable during the financial year, the commencement of which coincided with the appointment of the bey; in several instalments, effected by the bey, his lieutenant and a courier. The bey appeared in person at Algiers during the spring following his appointment and thereafter every three years. His lieutenant travelled to Algiers twice a year, spring and autumn, and the courier, whose office was occasionally discharged by an official described in the archives at Algiers as ṣāḥabiydān (a friend of the bey) went to the capital regularly every month, or every two or three months. The sums remitted to the Treasury by each official remained constant, but each official remitted a different amount. This organization seems to have been designed solely to enable the dey to exercise the closest supervision of the provincial governors, and to dismiss them at the slightest sign of any shortcoming.
